CALCUTTA. Great city of India, standing on the Hooghli, the most westerly mouth of the Ganges, some 80 m. N. of the Bay of Bengal. Across the river is Howrah (q.v.). C., which was the seat of govt. of British India from 1773 to 1912, is the cap. of the state of W. Bengal. Area 32 sq. m.; pop. (1961) 2,926,498.

C. is a city of palaces and slums. The quarter E. of the Maidan or Great Park was constructed during the British Raj and is western in style; it contains some splendid mansions. In the centre of the Maidan stands Fort William, begun by Clive in 1757 and completed in 1773. N. of it is Government House; oldest of several univs., C. Univ. has c. 100,000 students; Bose Research Institute; a famous Jain

CALCUTTA. A view of the law courts. Courtesy of the High Commissioner for India, London.

CAREY, William (1761–1834). British missionary. An apprentice shoemaker, largely self-educated, he became a Baptist minister in 1786 and helped to found the Baptist Missionary Society in 1792. Going out to India in 1793, he founded a mission at Serampore in 1799, and was oriental prof. at Fort William College, Calcutta, 1801–30. He compiled dictionaries and grammars of many Indian languages and translated portions of the Bible into nearly 40 languages and dialects.

CARIBBEAN. A sea forming that part of the Atlantic Ocean lying between the N. coasts of S. and Central America and the W. Indies, c. 1,700 m. long and 400 to 900 m. in width; here the Gulf Stream turns in the direction of Europe. Since the opening of the Panama Canal, the C. has become of great importance. It is named from the Caribs.

CARIBOU. See REINDEER.

CARIBS. Name given by Columbus to an aboriginal people of S. America and the islands of the W. Indies in the Caribbean Sea. They were cannibals, distinguished for their ferocity. In 1796 the English in the W. Indies deported most of them to Roatan Island off Honduras. They have since spread extensively in Honduras and Nicaragua. Reddish brown in colour, their features are mongoloid.

CARICATURE. The representation of persons or things by exaggerating characteristic features in such a way as to provoke ridicule or contempt. The word first came into use in England in its Italian form *caricatura* (from It. *caricare*, to exaggerate) c. 1680.

C. was not unknown to the Greeks and Romans. Grotesque drawings have been discovered in Pompeii and Herculaneum, and Pliny refers to a grotesque portrait of the poet Hipponax. Humorous drawings were executed by the Carracci and their followers (the Italian 'eclectic' school of the 16th cent.). Pictorial satire was common in England during the Civil War, but true C. begins with Hogarth: later exponents incl. Gillray, Rowlandson, Cruikshank, John and Richard Doyle, Leech, du Maurier, Tenniel, John May, Beerbohm, David Low, 'Vicky', 'Giles', Cummings, and Osbert Lancaster in England, and Jules Feiffer, Herb Block, Bill Mauldin and Saul Steinberg in the U.S.A. See illus. p. 213.

Charles Philippon (1800–62) founded in Paris in 1830 *La Caricature*, probably the 1st periodical to specialize in C.: notable later was *Punch* 1841.

CARINATAE. One of the two divisions into which the living members of the class Aves (Birds, q.v.) are divided. It includes all those which have a keel (Lat. *carina*) on the breastbone. These are the vast majority of the class, comprising all flying birds and the penguins.

CARINTHIA. An Alpine prov. of Austria, bordering on Italy and Yugoslavia in the S. Klagenfurt is the capital. Area 3,681 sq. m.; pop. (1961) 493,972.

CARISBROOKE. Village in the Isle of Wight, 1 m. S.W. of Newport, of which it is now a part. Its chief feature is the ruins of the castle in which Charles I was imprisoned (1647–8).

CARLILE (karlil'). Richard (1790–1843). British Radical. His publication of the works of Paine (q.v.) and similar writers earned him successive prison sentences totalling more than 9 years, but though his

THOMAS CARLYLE. By Sir J. E. Millais. Photo: N.P.G.

stock was repeatedly seized he continued to publish, and issued his periodical *The Republican* from Dorchester gaol. He rendered great service to the cause of the freedom of the Press.

CARLILE, Wilson. See CHURCH ARMY.

CARLISLE (karlil'). City (co. bor.) and county town of Cumberland, England, on the Eden, 8 m. S. of the Scottish border. It is an important railway centre; textiles, engineering, and biscuit making are the chief industries. The outstanding buildings are the

cathedral and the castle, both dating from Norman times, but subsequently much added to. The bishopric dates from 1133. Pop. (1961) 71,112.

CARLISTS. Supporters of the Spanish pretender, Don Maria Isidro Carlos de Bourbon (1788–1855), who claimed the throne on the death of his brother Ferdinand VII in 1833, in opposition to his niece Maria Isabella who had been proclaimed queen. There ensued fighting between the Royalists, representing the more liberal elements, and the Carlists, particularly in the Basque provinces, and the revolt was not suppressed until 1839. Under successive descendants of Don Carlos the Cs. have continued to this day.

CARLOS I (1863–1908). King of Portugal, of the Braganza-Coburg line, from 1889 until he was assassinated in Lisbon with his elder son Luis. He was succeeded by his younger son Manoel.

CARLOS, Don (1545–68). Spanish prince. Son of Philip II, he was recognized as heir to the thrones of Castile and Aragon, but became a lunatic and had to be placed under restraint following a plot to assassinate his father. His story was made the subject of plays by Schiller, Alfieri, Otway, and others.

CARLOS, Don Juan (1939–). Heir to the pretender to the Spanish throne. In 1962 he m. Princess Sophia, eldest dau. of King Paul of the Hellenes. It is thought that he, rather than his father, Prince Juan, will eventually succeed to the throne, which Franco has said he will restore. See table under BOURBON.

CARLOW. Co. of Rep. of Ireland, in the prov. of Leinster. In the S. there is a long range of heights, rising to 2,610 ft. in Mt. Leinster, but the rest of the co. is a low-lying and undulating plain. The soil, watered by the Barrow and the Slaney, is fertile and dairy farming is important. The co. town is also C. Area 346 sq. m.; pop. (1966) 33,539.

CARLSBAD. German name of KARLOVY VARY.

CARLYLE, Thomas (1795–1881). Scottish author. B. at Ecclefechan in Dumfriesshire, he accepted a mathematical mastership at Annan in 1814, studying meanwhile for the Presbyterian ministry. In 1816 he transferred to Kirkcaldy where he met Edward Irving, and in 1818 to Edinburgh where, having given up thought of the Church, he combined study of the law with miscellaneous literary work. In 1821 he passed through the spiritual crisis described in *Sartor Resartus*, and after a period as a tutor secured the publication in London of his life of Schiller (1825), and a translation of Goethe's *Wilhelm Meister* (1824). He had first met Jane Baillie Welsh (1801–66) in 1821, and after their marriage in 1826 they moved to her farm at isolated Craigenputtock, where *Sartor Resartus* (1836) was written. In 1834 they moved to Cheyne Row, Chelsea, and in 1837 he established his reputation with the *French Revolution*, still unrivalled in vividness of narration. Of the series of lectures he

CARISBROOKE. Much of the castle has been restored, but the apartments where Charles I was imprisoned 1647–8 are still a ruin. Above can be seen the window, still largely in its original state, from which he made his second attempt at escape.

Photo: Central Office of Information.

being cut, and only some 20 per cent are suitable as gems. There are 4 chief varieties: well-crystallized transparent stones, colourless or only slightly tinted, valued as gems; *bort*, poorly crystallized or inferior Ds.; *balas*, an industrial variety, extremely hard and tough; and *carbonado*, or industrial D., also called black D. or carbon, which is opaque, black or grey, and very tough. See CARAT.

Ds. were known before 3000 B.C.; and until their discovery in Brazil in 1725 India was the principal source of supply. Today sources incl. S. Africa (1867), the Congo, Portuguese W. Africa, Tanganyika, Ghana, Brazil and Yakutia on the Siberian plateau (1954). They may be found as alluvial Ds., on or close to the earth's surface in river beds or dried water-courses, or on the sea bottom (off W. Africa); or else in 'pipes' composed of blue ground or kimberlite, where the original matrix has penetrated the earth's crust. In the latter case the blue ground is extracted, then washed until completely disintegrated, and the residue made to flow over vibrating, sloping tables where a layer of petroleum grease arrests the Ds. This involves wastage and x-ray sorting is being developed. Natural Ds. may be exhausted by 2000 unless new deposits are found: See GEM.

Famous rough Ds. incl. the Cullinan (3,025½ carats, S. Africa 1905); Excelsior (995.2 carats, S. Africa 1893) and President Vargas (726.6 carats, Brazil 1938). Ds. are cut by the use of D. dust. The 2 most frequent forms of cutting gem Ds. were the 'brilliant' (for thicker stones) and the 'rose' for shallower ones, but in 1961 Arpad Nagy, a Hungarian merchant, evolved the 1st new method for 500 years, the 'princess'. To give full refraction of light the back of the D. is cut into angled and spaced grooves, and surface area becomes the criterion of value. See CULLINAN.

DĪ'Ā'NA. Roman goddess identified with the Gk. Artemis. The dau. of Jove and twin-sister of Apollo, she was the goddess of hunting and of the moon.

DIARBEKIR. Town of Asiatic Turkey, cap. of D. il, on the Tigris. It exports copper, wool, mohair, etc. Pop. (1965) 102,600.

DIARRHOEA (dī-arē'-a). Excessive action of the bowels so that the motions are fluid or semi-fluid. It is usually due to irritation by a poisonous substance taken with the food or generated by microbes in the food itself (food poisoning), or by a disease organism, as in dysentery or cholera.

DIARY (dī'-ari). A daily record of personal events. The earliest D. extant in English is that of Edward VI, but full development of the form came in the 17th cent. with Pepys, Evelyn, and George Fox. The following cent. provides Swift's *Journal to Stella*, Boswell's *Journal of a Tour to the Hebrides* and the Ds. of John Wesley, Fanny Burney, and the country parson James Woodforde. Very detailed diaries were often kept in the 19th and early 20th cents., e.g. those of C. Greville, T. Creevey, Queen Victoria, Gladstone, Francis Kilvert, W. N. P. Barbellion, K. Mansfield, Sir Harold Nicolson, and Lady Cynthia Asquith. Foreign diarists include Emerson, Saint-Simon, Jules and Edmond Goncourt, Henri Amiel, Marie Bashkirtseff, Gide, etc. A more modern development of the D. is the fictitious form, e.g. George and Weedon Grossmith's *D. of a Nobody*, E. M. Delafeld's *Ds. of a Provincial Lady*, and A. Loos's *Gentlemen Prefer Blondes*.

DĪ'ATHERMY. The generation of heat in body tissues by the passage of high-frequency electric currents through the body between two electrodes placed on the body. In diathermic surgery one electrode is very much reduced for cutting purposes and the other correspondingly enlarged and placed at a distance on the body. The high-frequency current produces at the tip of the cutting electrode sufficient heat to cut tissues, or to coagulate and kill tissue cells, with less bleeding than in normal surgical methods.

DĪ'ATOMS. Class of microscopic algae, found in

all parts of the world. They consist of single cells, known as *frustules*; the cell-wall is made up of 2 similar valves, which are usually impregnated with silica, and which fit together like the lid and body of a pill-box. Diatomaceous earths (diatomite) are made up of the valves of fossil Ds., and are used in the manufacture of dynamite and in the rubber and plastic industries.

DIAZ (dē'ahs), Bartolomeu (fl. 1481–1500). Portuguese explorer. He extended Port. explorations down the W. coast of Africa, discovered the Cape of Good Hope (1488) and a route round the S. extremity of Africa. He served under Vasco da Gama in 1497, and d. during an expedition led by Cabral, off the Cape of Good Hope.

DIAZ (dē'ahth), José de la Cruz Porfirio (1830–1915). Mexican President 1877–80 and 1884–1911. He gave Mexico its longest period of stable govt. but was at length driven from power and fled to Europe.

DIAZ DE LA PEÑA (dē'ahth de lah pān'yah), Narcisse Virgile (1807–76). French landscape and genre painter. B. at Bordeaux of Spanish parentage, he excelled as a colourist.

DIBDIN, Charles (1745–1814). British song-writer. B. at Southampton, his first operetta was produced at Covent Garden in 1762. He was later connected with Drury Lane and other theatres, and wrote the words and music of about 1,400 songs, including 'Bells of Aberdovey' and 'Tom Bowling'.

DIBELIUS (dēbeh'lē-oos), Martin (1883–1947). German Protestant theologian, who initiated the form criticism of the N.T. and wrote *From Tradition to Gospel*, *Gospel Criticism and Christology*, etc.

DICEY (dī'si), Albert Venn (1835–1922). British jurist, prof. of law at Oxford 1882–1909. His works incl. *Introduction to the Study of the Law of the Constitution* (1885).

DICK, Sir William Reid (1879–1961). British sculptor. B. in Glasgow, he became the most prominent representative of the classical school, was elected R.A. in 1928, and was pres. of the Royal Soc. of British Sculptors 1933–8. His dignified but rather colourless works incl. the George V memorial, Westminster; the Kitchener Memorial Chapel, St. Paul's; the Roosevelt statue, Grosvenor Square, and 'Godiva' at Coventry.

DICKENS, Charles (1812–70). British novelist. B. on 7 Feb. 1812, in Portsea, the son of a clerk, he received little systematic education, although a short period spent working in a blacking factory in S. London, while his father was imprisoned for debt in the Marshalsea during 1824, was followed by 3 years in a private school. In 1827 he became a lawyer's clerk, and then after 4 years as a reporter in Doctors' Commons, became parliamentary reporter for the *Morning Chronicle*, to which he contributed the *Sketches by Boz*. In 1836 he m. Katherine Hogarth, three

paddle-like in adaptation to a marine habitat, is composed of modified descendants of the terrestrial Arctoid Fissipedia. They fall into 2 main groups. The first contains the Otariidae or sea-lions, and the Odobaenidae or walruses. The 2nd group is composed of the family Phocidae or true seals.

The geographical distribution of the C. is world-wide but for Australia and New Zealand, and our domestic pets include two typical representatives in the dog and the cat.

CARNOT (kahrnō'), Lazare (1753-1823). French general. He joined the army as an engineer, and at the Revolution earned the title of 'Organizer of victory', since he not only reformed French fighting methods, but also introduced efficient systems of supplying munitions, clothing, and especially food, to the troops. After the coup d'état of 1797 he went abroad, but returned in 1799 and was made War Minister 1800-1. In 1814 as gov. of Antwerp he put up a brilliantly successful defence. Minister of the Interior during the Hundred Days, he was proscribed at the Restoration and retired to Magdeburg, where he d. His great work on fortification (*De la défense des places fortes*, 1810) became a military textbook.

C.'s elder son, Nicolas Leonard Sadi C. (1796-1832), was the founder of thermodynamics. See C. CYCLE.

CARNOT, Marie Françoise Sadi (1837-94). French President. Grandson of Lazare Carnot, he entered the government service, was returned to the Assembly for Côte d'Or in 1871, and in 1887 was elected President. He successfully countered the Boulangist movement, and in 1892 the scandals arising out of French financial activities in Panama. He was assassinated by an Italian anarchist at Lyons.

CARNOT CYCLE. For a reversible heat engine a C.C. consists of the following changes, in the order stated, in the physical condition of a gas: (1) isothermal expansion (i.e. without change of temperature), (2) adiabatic expansion (i.e. without change of heat content), (3) isothermal compression and (4) adiabatic compression. The principles derived from a study of this cycle are important in the fundamentals of heat and thermodynamics. The absolute scale of temperature is based on this cycle.

CAROB TREE. Small tree of the Mediterranean region (*Ceratonia siliqua*), often called locust tree. The 8-in. pods are used as animal fodder and have been suggested as the 'husks' of the Prodigal Son and the 'locusts' eaten by John the Baptist in the wilderness.

CAROL I (1839-1914). King of Rumania. A prince of the house of Hohenzollern-Sigmaringen, he was invited to become Prince of Rumania, then under Turkish suzerainty, in 1866. In 1877, in alliance with Russia, he declared war on Turkey, and the treaty of Berlin recognized Rumanian independence; in 1881 C. was crowned king.

CAROL II (1893-1953). King of Rumania. Son of King Ferdinand, he m. Princess Helen of Greece, who bore him a son, Michael. In 1925 he renounced the succession, and settled in Paris with his mistress, Mme. Lupescu. Michael succeeded to the throne in 1927, but in 1930 C. returned to Rumania and was proclaimed king. In 1938 he introduced a new constitution under which he became practically absolute. He was forced to abdicate by the pro-German Iron Guard in Sept. 1940, and withdrew to Mexico with Mme. Lupescu, whom he m. in 1947.

CAROL. Originally a song associated with a round dance, the term came later to be applied to popular songs (as distinct from hymns) associated with the great annual festivals, such as May Day, the New Year, Easter, and Christmas.

Christmas Cs. were popular as early as the 15th cent. The custom of singing Cs. from house to house, collecting gifts, was associated with 'wassailing'. Many of the best-known Cs., such as 'God rest you

merry' and 'Noel', date back at least as far as the 16th cent. Others, such as 'Good King Wenceslas', have modern words but an ancient tune, and yet others are completely modern.

CAROLINA. See NORTH C. and SOUTH C.

CAROLINE OF ANSPACH (1683-1737). Queen of George II of Great Britain. The dau. of the Margrave of Brandenburg-Anspach, she m. George, Electoral Prince of Hanover, in 1705, and followed him to England in 1714 when his father became king as George I. As Princess of Wales she held a separate court at Leicester House and was the patron of many of the leading writers and politicians.

CAROLINE OF BRUNSWICK (1768-1821). Queen of George IV of Great Britain. Second dau. of Charles William, duke of Brunswick, and Augusta, sister of George III, she m. her first cousin the Prince of Wales in 1795, but following the birth of the Princess Charlotte a separation was arranged. When her husband ascended the throne in 1820 she was offered an annuity of £50,000 provided she agreed to renounce the title of queen and to continue to live abroad. She returned forthwith to London, where she assumed royal state. In July 1820 the Government brought in a bill to dissolve the royal marriage, but Lord Brougham's splendid defence led to the bill's abandonment. On July 19, 1821, she was prevented by royal order from entering Westminster Abbey for the coronation. She d. on Aug. 7, and her funeral was the occasion of popular riots.

CAROLINES. Scattered archipelago in Micronesia, Pacific Ocean, consisting of more than 500 coral islets, with a total area of 463 sq. m. The chief islands are Ponape, Kusa, and Truk in the eastern group and Yap and Palau in the western. They are well watered and productive. German from 1899, occupied by Japan 1914, and mandated by the League of Nations to that country in 1919, they were fortified, contrary to the terms of the mandate. Under Allied air attack in the S.W.W., they were not conquered. In 1947 they became part of the U.S. Trust Terr. of the Pacific Is. (q.v.). Pop. (1967) 61,500.

CAROLINGIANS. Frankish dynasty descending from Pepin the Short (d. 768) and named after his son Charles the Great (Charlemagne). The last of the Cs. was Louis V who reigned in France 966-87, and was followed by Hugh Capet.

CAROLSSA, Hans (1878-1956). German poet and novelist. B. at Bad Tölz in Bavaria, he became a physician like his father. His poetry, collected in 1938, and his novels *Eine Kindheit* (1922: *A Childhood*), *Der Arzt Gion* (1931: *Doctor Gion*) and *Rumanisches Tagebuch* (1924: *Rumanian Diary*) are stages in an autobiographical confession.

CARP. A genus of freshwater fishes (*Cyprinus*) of the family Cyprinidae. *C. carpio*, the common species, found in most parts of Europe and Asia, has large scales, a long dorsal fin, and 4 barbels on its mouth. It prefers still waters, and is much esteemed as a food.

COMMON CARP

CARPACCIO (kahrpah'chō), Vittorio (c. 1465-1522). Venetian painter. His principal works were painted between 1490 and 1519, and are in Venice.

CARPATHIANS. A mountain chain of Central Europe, forming a great semicircle from the Bohemian massif, girdling the Hungarian Plain, to Orsova (90 m. E. of Belgrade) on the Danube. The total length is about 900 m.

CARPENTARIA. A great, shallow gulf opening out of the Arafura Sea on the N. of Australia, was discovered by Tasman in 1606 and named in 1623 in honour of Pieter Carpentier, Governor-General of

Pnom-Penh is the cap.; other towns are Battambang, Kompong Chhnang, and Kompong-Cham. Sihanoukville, on the Gulf of Thailand, is a modern deepwater port.

The Cambodians are fundamentally an Indonesian people, but there has been much infiltration from India. The most ancient monuments date from the 7th cent. A.D., when the Khmers, the ancestors of the present Cambodians, had built up a remarkable civilization. After the 12th cent. the Khmer realm began to fade, and the history of C. has since been one long story of decay. The king of C., formerly a vassal of Siam, in 1863 accepted the protection of France, which lasted until the Japanese overran the country in 1941 during the S.W.W. Negotiations after the war between France and Cambodia led to the recognition of C. as completely independent in 1953. Prince Norodom Sihanouk (1922– : elected king 1941) then abdicated to become P.M. as leader of the Popular Socialist Community. In 1960 he was created Head of State, without becoming king, his mother assuming symbolic ceremonial functions. The people are Buddhists of the Hinayana confession. Area 70,000 sq. m.; pop. (1966) 6,260,000.

CAMBORNE. Market town in Cornwall, 10 m. W.S.W. of Truro. Tin is mined, and there is a noted mining school. With Redruth (q.v.) it forms a U.D., pop. (1961) 36,090.

CAMBRAI (conbrā'). French town in Nord dept., 37 m. S. by E. of Lille, on the Escaut (Scheldt). It is a centre for the manufacture of muslin, lace, and other delicate textiles (cambric is named after the town). Pop. (1962) 35,373.

During the F.W.W. C. was severely damaged while in German hands. It gives its name to 2 battles: (1) Nov.-Dec. 1917, when the 3rd Army under Byng

CAMBODIA. Side by side, the grace of a big ship and the beauty of 'The Floating Royal House', an effect typical of the country where land and water are almost interchangeable.

nearly succeeded in recapturing C. in an engagement in which large numbers of tanks were used for the first time; (2) 26 Aug.-5 Oct. 1918, when C. was captured during the final British offensive.

CAMBRIDGE, Adolphus Frederick, 1st duke of (1774–1850). 7th son of George III, viceroy of Hanover 1816–37. His son George, 2nd duke of C. (1819–1904), as C.-in-C. of the British army 1856–95, was opposed to Cardwell's reforms; and his dau., Princess Mary, who m. the duke of Teck, was the mother of Queen Mary, consort of George V.

CAMBRIDGE. English city (bor.), co. town of Cambridgeshire on the Cam, 56 m. N.N.E. of London. The site was occupied as early as 100 B.C. and a Roman settlement grew up on a slight rise in the low-lying plain, commanding a ford over the river. There are many fine buildings, most of them connected with the univ.; the small Saxon church of St. Peter, and the round church of the Holy Sepulchre—the oldest of the 4 round churches in England; the Fitzwilliam museum, the Guildhall, the Leys and

CAMBRIDGE UNIVERSITY. The Backs and King's College. Photo: British Travel and Holidays Association.

Perse schools, the Dunn Nutritional laboratory, the Folk museum, and the Arts theatre. It is a market town for local agriculture. Scientific instruments and machine tools are made, also jam, fertilizers and paper. Pop. (1961) 95,358.

CAMBRIDGE. City of Mass., U.S.A., facing Boston on the Charles r. It is a cultural centre, and sprang up round Harvard College (later univ.); there are many other educational institutions. Printing and publishing are industries. Pop. (1960) 107,716.

CAMBRIDGESHIRE and Isle of Ely. Low-lying fen co. of E. England. The only important hills are the Gog Magog, S.E. of Cambridge. The chief rivers are the Ouse and Nene. C. is one of the principal grain-producing districts and also produces fruit and dairy foods; sheep are reared. There is little manufacturing. The co. town is Cambridge; other towns incl. Wisbech, March, Soham, and the cathedral city of Ely. Area 831 sq. m.; pop. (1967) 296,930. See ELY, ISLE OF.

CAMBRIDGE UNIVERSITY. One of the oldest of European univs., founded probably in the 12th cent., though the earliest of the existing colls. was not founded until c. 1280–4: see Table, in which the women's colls. are marked by an asterisk. The Chancellor is the titular, and the Vice-Chancellor the active, head. The Regent House is the legislative and executive body, with the Senate as the court of appeal. Each coll. has its own corporation, and is largely independent. The head of each coll. (in the case of men's colls. usually called the master), assisted by a council of fellows, manages the college's affairs. There are c. 9,000 men and 1,000 women students in residence.

For a reversible heat engine a C.C. consists of the following changes, in the order stated, in the physical condition of a gas: (1) isothermal expansion (i.e. without change of temperature), (2) adiabatic expansion (i.e. without change of heat content), (3) isothermal compression and (4) adiabatic compression. The principles derived from a study of this cycle are important in the fundamentals of heat and thermodynamics. The absolute scale of temperature is based on this cycle.

CAROB TREE. Small tree of the Mediterranean region (*Ceratonia siliqua*), often called locust tree. The 8-in. pods are used as animal fodder and have been suggested as the 'husks' of the Prodigal Son and the 'locusts' eaten by John the Baptist in the wilderness.

CAROL I (1839-1914). King of Rumania. A prince of the house of Hohenzollern-Sigmaringen, he was invited to become Prince of Rumania, then under Turkish suzerainty, in 1866. In 1877, in alliance with Russia, he declared war on Turkey, and the treaty of Berlin recognized Rumanian independence; in 1881 C. was crowned king.

CAROL II (1893-1953). King of Rumania. Son of King Ferdinand, he m. Princess Helen of Greece, who bore him a son, Michael. In 1925 he renounced the succession, and settled in Paris with his mistress, Mme. Lupescu. Michael succeeded to the throne in 1927, but in 1930 C. returned to Rumania and was proclaimed king. In 1938 he introduced a new constitution under which he became practically absolute. He was forced to abdicate by the pro-German Iron Guard in Sept. 1940, and withdrew to Mexico with Mme. Lupescu, whom he m. in 1947.

CAROL. Originally a song associated with a round dance, the term came later to be applied to popular songs (as distinct from hymns) associated with the great annual festivals, such as May Day, the New Year, Easter, and Christmas.

Christmas Cs. were popular as early as the 15th cent. The custom of singing Cs. from house to house, collecting gifts, was associated with 'wassailing'. Many of the best-known Cs., such as 'God rest you

merry' and 'Noel', date back at least as far as the 16th cent. Others, such as 'Good King Wenceslas', have modern words but an ancient tune, and yet others are completely modern.

CAROLINA. See NORTH C. and SOUTH C.
CAROLINE OF ANSPACH (1683-1737). Queen of George II of Great Britain. The dau. of the Margrave of Brandenburg-Anspach, she m. George, Electoral Prince of Hanover, in 1705, and followed him to England in 1714 when his father became king as George I. As Princess of Wales she held a separate court at Leicester House and was the patron of many of the leading writers and politicians.

CAROLINE OF BRUNSWICK (1768-1821). Queen of George IV of Great Britain. Second dau. of Charles William, duke of Brunswick, and Augusta, sister of George III, she m. her first cousin the Prince of Wales in 1795, but following the birth of the Princess Charlotte a separation was arranged. When her husband ascended the throne in 1820 she was offered an annuity of £50,000 provided she agreed to renounce the title of queen and to continue to live abroad. She returned forthwith to London, where she assumed royal state. In July 1820 the Government brought in a bill to dissolve the royal marriage, but Lord Brougham's splendid defence led to the bill's abandonment. On July 19, 1821, she was prevented by royal order from entering Westminster Abbey for the coronation. She d. on Aug. 7, and her funeral was the occasion of popular riots.

CAROLINES. Scattered archipelago in Micronesia, Pacific Ocean, consisting of more than 500 coral islets, with a total area of 463 sq. m. The chief islands are Ponape, Kusai, and Truk in the eastern group and Yap and Palau in the western. They are well watered and productive. German from 1899, occupied by Japan 1914, and mandated by the League of Nations to that country in 1919, they were fortified, contrary to the terms of the mandate. Under Allied air attack in the S.W.W., they were not conquered. In 1947 they became part of the U.S. Trust Terr. of the Pacific Is. (q.v.). Pop. (1967) 61,500.

CAROLINGIANS. Frankish dynasty descending from Pepin the Short (d. 768) and named after his son Charles the Great (Charlemagne). The last of the Cs. was Louis V who reigned in France 966-87, and was followed by Hugh Capet.

CAROSSA, Hans (1878-1956). German poet and novelist. B. at Bad Tölz in Bavaria, he became a physician like his father. His poetry, collected in 1938, and his novels *Eine Kindheit* (1922: *A Childhood*), *Der Arzt Gion* (1931: *Doctor Gion*) and *Rumanisches Tagebuch* (1924: *Rumanian Diary*) are stages in an autobiographical confession.

CARP. A genus of freshwater fishes (*Cyprinus*) of the family Cyprinidae. *C. carpio*, the common species, found in most parts of Europe and Asia, has large scales, a long dorsal fin, and 4 barbels on its mouth. It prefers still waters, and is much esteemed as a food.

CARPACCIO (kahrpah'chō), Vittorino (c. 1465-1522). Venetian painter. His principal works were painted between 1490 and 1519, and are in Venice.

CARPATHIANS. A mountain chain of Central Europe, forming a great semicircle from the Bohemian massif, girdling the Hungarian Plain, to Orsova (90 m. E. of Belgrade) on the Danube. The total length is about 900 m.

CARPENTARIA. A great, shallow gulf opening out of the Arafura Sea on the N. of Australia, was discovered by Tasman in 1606 and named in 1623 in honour of Pieter Carpentier, Governor-General of

COMMON CARP

Roman times, it became virtually derelict later owing to over-grazing, lack of water, and the arrival in the area of the malaria-carrying *Anopheles* mosquito. Extensive reclamation and drainage in the 19th and 20th cents. restored it to usefulness.

CAMPANA, Dino (1885–1932). Italian expressionist poet, whose life of world-wide wandering – its spirit expressed in *Canti Orfici* (1914) – ended in an asylum. He was 'discovered' only after the S.W.W.

CAMPANELLA, Tommaso (1568–1639). Italian philosopher. B. in Calabria, he became a Dominican in 1582 but developed heterodox views, and in 1598 was imprisoned on a charge of plotting to free Naples from Spanish rule. During his 28 years' imprisonment he wrote sonnets and philosophical works. After his release he went to Rome, and then to Paris, where he d. In philosophy he leaned towards neo-Platonism. His *Civitas Solis* is a description of an ideal state.

CAMPANIA. A prov. of ancient Italy, also a considerably more extensive region of modern Italy, embracing the provinces of Naples, Benevento, Caserta, Salerno, and Avellino. C. is extremely fertile, and is noted for its climate and scenery. The chief centre is Naples. Area 5,250 sq. m.; pop. (1961) 4,756,094.

CAMPANILE (kahmpahnē'le). Bell-tower erected near, or attached to, churches or town halls in Italy. The leaning tower of Pisa is a famous example; another is the great C. of Florence, 275 ft. high.

CAMPANULA'CEAE (Lat. *campanula*, 'a little bell'). Family of flowering plants, mainly found in the temperate regions of the N. hemisphere, e.g. the British harebell (*Campanula rotundifolia*), the garden Canterbury bell (*C. medium*) and the tall bellflower of the N. American woodland (*C. americana*).

CAMPBELL (kam'bel), Alexander (1788–1866). American religious leader. B. in Ireland, he emigrated to U.S.A. in 1809 and there founded with his father the Disciples of Christ (Campbellites): membership c. 2,000,000. He advocated what he believed was primitive Christianity and expounded his views in more than 60 vols. and innumerable sermons.

CAMPBELL, Sir Colin. See CLYDE, COLIN CAMPBELL, 1ST BARON.

CAMPBELL, Donald Malcolm (1921–66). British car and speedboat enthusiast. His father, Sir Malcolm C. (1885–1949) broke the world's land speed record in 1935 with his *Bluebird* at 301.1 m.p.h. and estab. a world water speed record in 1939 at 141.74 m.p.h. in a boat of the same name. Donald C. was invalided out of the R.A.F. in the S.W.W. and took up his

father's interests: in 1964 he set up the world water speed record of 276.3 m.p.h. on Lake Dumbleyung, Australia, with the turbo-jet hydroplane *Bluebird*. He was killed in an attempt to raise this record on Coniston Water, England.

The Proteus engine of his car *Bluebird* weighed 1½ tons, was 8 ft. long and 39 in. in diameter, and produced 4,250 h.p. Driving all four wheels, it was placed in the centre of the car, immediately behind the driver, who could accelerate in 24 sec. from a standing start to 365 m.p.h. over a distance of 1½ m. It burned a distillate diesel fuel similar to paraffin, c. 1½ m. per gallon. He achieved the land speed record of 403.1 m.p.h. at Lake Eyre salt flats, Australia, 17 July, 1964. See *illus.* The car was accidentally wrecked in 1966.

CAMPBELL, Gordon (1886–1953). British vice-admiral. As commander of Q ships (warships masquerading as unarmed merchantmen, so luring German submarines to the surface) he destroyed numerous U-boats in the F.W.W. and won the V.C. He wrote *My Mystery Ships* (1928).

CAMPBELL, Mrs. Patrick (1865–1940). British actress, née Beatrice Stella Tanner. B. in London, she was selected by Pinero to play Paula in *The Second Mrs. Tanqueray* (1893); her other roles incl. Rosalind and Eliza Doolittle in *Pygmalion*, specially written for her by Shaw, with whom she conducted an amusing correspondence.

CAMPBELL, Roy (1901–57). S. African poet. B. at Durban, he became a professional joustier and bull-fighter in Spain and Provence. He fought for Franco in the Spanish Civil War, and was with the Commonwealth forces in the S.W.W. He estab. his poetic reputation with the individualistic *The Flaming Terrapin* (1924): later vols. were the Byronic literary satire *The Georgiad* and the lyric *Talking Bronco*. He also pub. autobiographical books and translations from Baudelaire, St. John of the Cross, and Lorca.

CAMPBELL, Thomas (1777–1844). Scottish poet. Following the successful publication of his *Pleasures of Hope* in 1799, he travelled on the Continent, and there wrote some of his best poems, including 'Hohenlinden' and 'Ye Mariners of England'. In 1803 he settled (govt. pension from 1805) in London.

CAMPBELL-BANNERMAN, Sir Henry (1836–1908). British Liberal statesman, b. at Glasgow. He was Liberal M.P. for Stirling from 1868, Chief Sec. for Ireland in 1884–5, War Min. in 1886 and again in 1892–5, and leader of the Liberals in the House of Commons from 1899. In 1905 he became P.M., and led the Liberals to an overwhelming electoral victory in 1906. His period of office was marked by the grant of self-govt. to the S. African colonies, the Trades Disputes Act 1906, and the opening of the conflict between Commons and Lords that led to the Parliament Act of 1911. He resigned in 1908 and d. shortly afterwards.

CAMPBELTOWN. Scottish royal burgh, airport, and seaport on the E. coast of Argyllshire; it has a good harbour, distilleries, and fisheries. Pop. (1961) 6,525.

CAMPECHE (kahmpā'chā). Mexican port on the Gulf of C., capital of C. state, in the Yucatan peninsula. Seat of a univ., it was founded in 1540. Pop. (1960) 43,087.

CAMPENDONK, Heinrich (1889–). German painter. His work shows a close sympathy with the peasant life of Bavaria.

CAMPERDOWN. Dutch village in N. Holland prov., 8 m. N.W. of Alkmaar, off which on 11 Oct. 1797 the Dutch were defeated by a British fleet under Duncan.

CAMPHOR (kam'for). Volatile, aromatic ketone substance (C₁₅H₁₀O) obtained from the C. tree (*Cinnamomum camphora*), a member of the Lauraceae, native to S. China, Formosa, and Japan. The C. is distilled from chips of the wood of the root, trunk,

DONALD CAMPBELL. The engine of *Bluebird*: 1, Double bifurcated exhaust pipe; 2, Turbine casing; 3, Air intake; 4, Combustion chambers (8); 5, Igniter plug (2); 6, Blow-off valves; 7, Exhaust pipe thermocouple; 8, Oil drain pipe; 9, Fuel drain pipe; 10, Water spray ring; 11, Output shaft; 12, Mounting points (3). Courtesy of Bristol Siddley Engines Ltd.

important catalysts are those which increase the speed, i.e. *positive catalysts*, but in some reactions materials which slow down a reaction, i.e. *negative catalysts*, are important.

CATAMARAN. Type of raft used in S. America and the E. and W. Indies, commonly consisting of a large centre log with 2 smaller ones lashed above it, the crew and cargo being carried between them. Double-hulled yachts designed on the same principle are the fastest craft in sailing and reach over 20 knots in the annual *Internat. C. Trophy* race (estab. 1961) at *Thorpe Bay, Essex*.

CATANIA (kahtah'nē-ah). Italian city, chief town of C. province in Sicily. It has Roman remains, including a great amphitheatre. The cathedral is part-Norman. It exports locally produced sulphur, asphalt, and fruits. Pop. (1961) 361,466.

CATARACT. Opacity of the lens of the eye. It sometimes occurs in children (lamellar C.), although the commonest form is senile C., occurring chiefly in persons over 50. Fluid accumulates between the fibres of the lens and gives place to deposits of albumen; these coalesce into rounded bodies; the lens fibres themselves break down, and areas of the lens become filled with opaque products of degeneration. The condition nearly always affects both eyes, but usually one more than the other. In most cases the treatment is to extract the lens. After the lens is removed the patient can see but cannot alter his focus, so he needs separate reading and distance glasses.

CATARRH. Discharge of fluid from mucous membrane; generally, an excessive secretion of mucous fluid, sometimes mixed with pus, from the nose (rhinitis).

CATCHMENT AREA. Area from which water is collected by a river valley.

CATECHISM. Instruction, usually in religion, by question and answer. Socrates used this method in his dialogues. A form of C. was used for the catechumens in the early Christian Church. Little books of C. became numerous at the Reformation. Luther pub. simple Cs. for children and unlearned people, and a larger C. for the use of teachers. The most popular R.C. catechism was that of Peter Canisius (1555); that with the widest circulation now is the 'Explanatory C. of Christian Doctrine'. Among the best-known Protestant Cs. are Calvin's Geneva C. (1537); that composed by Cranmer and Ridley with additions by Overall (1549-1661), incorporated in the Book of Common Prayer; the Presbyterian C. (1647-8); and the Evangelical Free Church C. (1898).

CATECHU (kat'eshoo, -choo). An extract of the leaves and shoots of *Uncaria gambier*, an East Indian acacia. It is rich in tannic acid, which is released slowly, a property which makes it a useful intestinal astringent in diarrhoea.

CATERPILLARS. The larvae of butterflies and moths. They are wormlike in form, and the body consists of 13 segments besides the head. The abdominal segments bear a varying number of pro-legs as well as the 6 true legs on the thoracic segments. The head has strong biting mandibles, silk glands and a spinneret. In many species the body is hairy, and the skin is often provided with scent and other glands. Many Cs. resemble the plant on which they

feed, dry twigs, or rolled leaves. Others are brightly coloured and rely for their protection on their irritant hairs, disagreeable smell, or on their power to eject a corrosive fluid. Others again take up a peculiar 'terrifying attitude' when attacked.

Cs. emerge from the eggs which have been laid by the female insect on the food plant, and feed greedily, increasing greatly in size and casting their skins several times, until the pupal stage is reached.

CATFISH. Members of the order of Ostariophysi of the bony fishes; so-called because of the long feelers or barbels about the mouth, which give the effect of a cat's whiskers. The group includes several families of which most are wholly freshwater fishes.

In Britain the name C. is commonly given to the wolf-fish (*Anarrhichas lupus*), a sea-fish belonging to the blennies, and having nothing to do with the true C.

CATHARS or **Cathari** (medieval Lat., 'the pure'). A sect in medieval Europe usually numbered among the Christian heretics. They started about the 10th cent. in the Balkans where they were called Bogomils, spread to the southern countries of W. Europe where they were often identified with the Albigenses, and by the middle of the 14th cent. had been destroyed or driven underground by the Inquisition. It seems that they believed that this world is under the domination of Satan, and men and women are the terrestrial embodiment of spirits who were inspired by him to revolt and were driven out of heaven. At death the soul will become again imprisoned in flesh, whether of man or beast, unless it has been united in this life with Christ. If a man has become one of the C., death brings release, the Beatific Vision, and immortality in Christ's presence. Baptism with the spirit—the *consolamentum*—was the central rite, which was held to remedy the disaster of the Fall. The spirit received was the Paraclete, the Comforter, and it was imparted by imposition of hands. Those who received it were included among the Perfect, the ordained priesthood, were implicitly obeyed in everything, and lived lives of the strictest self-denial and chastity. The Believers or *Credentes* could approach God only through the Perfect.

CATHEDRAL (Gk. *kathedra*, a seat or throne). Church containing the throne of a bishop or archbishop, which is usually situated on the S. side of the choir. There are Cs. in most of the important cities of Britain, and formerly they were distinguished as monastic and secular Cs., the clergy of the latter not being members of a regular monastic order. The term 'minster' applied to such Cs. as Lincoln and York does not imply that they were at one time monastic churches, but it originated in the name given to the bishop and C. clergy who were often referred to as a *monasterium*. After the dissolution of the monasteries by Henry VIII, most of the monastic churches were re-founded and are called Cs. of the New Foundation. Cathedrals of sees founded since 1836 incl. St. Albans, Southwark, Truro, Birmingham, and Liverpool. Among the most famous American cathedrals are: St. Patrick's and St. John the Divine, both in N.Y., and the Episcopal Cathedral of St. Peter and St. Paul, Washington, D.C. A cathedral is governed by a dean and chapter. See **COVENTRY**.

CATHER (kath'-). Willa Sibert (1876-1947). American novelist. Her books deal generally with

CATAMARAN. Japan's Sea Palace carries 300 passengers on Seto inland sea.

Courtesy of Japanese Embassy

CANADA. Specially prepared picnic and camping sites welcome tourists to Quebec province, such as this on Lac du Milieu in Chibougamau Reserve some 300 miles south-east of James Bay. *Courtesy of Province of Quebec Film Bureau.*

While climatic conditions are very varied owing to C.'s vast area, the continental type predominates, and only the coastline of British Columbia enjoys a marine climate such as that of Britain and N.W. Europe. Over most of the central portion the ground is continuously snow-covered from the middle of November until late in March.

History. The first permanent settlements were established by Samuel de Champlain, a French explorer, in what are now Nova Scotia and Quebec province, on the sites of Quebec City and Montreal early in the 17th cent. From the outset the French colonies on the seaboard and along the St. Lawrence were bitter rivals of the English colonies to the S. The French régime was doomed to yield ultimately to the growing strength of the New England colonists and the sea-and-land power of Britain. In 1758 Wolfe captured Louisbourg, the French stronghold, and a year later the citadel of Quebec. By the Peace of Paris (1763) C. was ceded to Britain. During and immediately after the War of American Independence (1775-83) large numbers of loyalists fled from the Union northward into what is now New Brunswick and Ontario, and, under the name of United Empire Loyalists, played an important part in the creation of these new provinces. In 1791 Canada was divided into (French-speaking) Lower Canada and (English-speaking) Upper Canada. The population was swelled by waves of migration from Great Britain and U.S.A., and by the time of Confederation (1867) there were a million people in Lower Canada and 1½ million in Upper Canada.

Meantime an effort to establish an agricultural colony on the Red River had been made by Lord Selkirk, 1811-12. Winnipeg was founded on the site of a fur-trading post, and a colony was estab. In 1866 two colonies on the Pacific side were united to form British Columbia.

Confederation of Upper and Lower Canada (now Ontario and Quebec), Nova Scotia, and New Brunswick was accomplished by the British North America Act, which came into force on 1 July 1867. Manitoba was created in 1870, and British Columbia joined the union in 1871. The Canadian Pacific Railway was completed in 1885. Prince Edward Island came into federation in 1873. The new provs. of Saskatchewan and Alberta were formed out of the N.W. Territory in 1905. A change of economic factors for the better about 1895 made it possible to throw open the vast region of fertile soil on the prairies for settlement; and the discovery of gold and other metals, the exploitation of forests for lumber and paper, the development of fisheries and tourist attractions, and heavy invest-

ment of capital from other countries in industrial plants, gradually transformed C. from a simple extractive economy to one of the important manufacturing and trading nations of the world. Quebec became strongly separatist in the 1960s, resenting English-speaking 'dominance' in Canada, and France fostered a closer association with Quebec in all fields.

People. The predominant racial stocks of C. are British (at the 1961 census, 7,996,669) and French (5,540,346). Nearly all French-speaking Canadians, who numbered 5,540,346 in 1961, are descendants of the few boatloads of emigrants from Normandy and other provinces of N.W. France who were settled in New France and Acadia by the French government in the 17th and 18th cents. The British stock is partly descended from the United Empire Loyalists who moved N. into C. from the U.S.A. during and after the War of American Independence, but in the main is the result of direct immigration. The 'Open Door' policy which began in the 1890s enriched the Canadian racial mosaic with a wide variety of European stocks.

The Eskimos and Indians, aborigines of C., numbered 11,835 and 208,286 respectively in 1961.

There is no established or State Church.

Government. The Canadian constitution is partly written, partly unwritten. The British North America Act of 1867, and subsequent amendments, define and divide the fields of jurisdiction as between the central government and the 10 provinces. A Federal-Provincial Constitutional Conference (1968) agreed on establishing machinery competent to review the entire constitution, incl. 7 committees to study: language rights; a charter of human rights; federal-provincial powers; institutions such as the Senate and Supreme Court; regional and economic disparities; procedure for constitutional amendments; and federal-provincial relations.

The Federal Parliament at Ottawa consists of Queen, Senate, and House of Commons. Queen Elizabeth II of the U.K. is also Queen of Canada; she is represented in C. by her personal viceroy, the Governor-General, who acts as Chief of State in C. There is a Prime Minister of the Canadian Dominion, and there are Premiers in each prov. govt.

The Senate consists of 102 members nominated for life, the House of Commons of 264 members elected by universal suffrage for 5 years (unless previously dissolved). Broadly speaking, the Parliament possesses authority over all the large general matters of government.

Under the Canadian honours system (created 1967) no title is conferred, but recipients place the appropriate letters after their name: C.C. (Companion of the Order of C.), C.M. (Medal of Courage), S.M. (Medal of Service).

Provincial Governments. The Queen is represented in each prov. by a Lieutenant-Governor, appointed by the Gov.-Gen. in Council. The provincial govt. consists of the Lieutenant-Governor, the Executive Council and a Legislative Assembly (Quebec has, in addition, a Legislative Council). The provs. enjoy sovereign authority in all local matters.

Public education comes under the jurisdiction of the provincial govts. and there are 46 universities. In Quebec there are 2 distinct systems of education - Roman Catholic and Protestant.

Economic. Though during the S.W.W. employment in manufacturing for the first time exceeded that in agriculture, farming, including stock-raising and horticulture, continues to be of great importance. The chief cereal regions lie in the prairie provinces. Livestock are raised extensively. Milk production is the 3rd most valuable agricultural activity. Nova Scotia, Ontario, and British Columbia contain the chief fruit-growing areas. Alberta is the leading

CATHODE RAY TUBE. A special form of vacuum tube in which a beam of electrons is produced and focused on to a fluorescent screen. It is an essential component of television receivers and of oscilloscopes, instruments widely used in electronics for studying waveforms.

CATHOLIC CHURCH (Gk. *katholikos*, universal). Term applied to the whole body of the Christian Church (e.g. in the Apostles' Creed). By those Christians who accept the supremacy of the Pope, it is applied exclusively to themselves. Members of other churches, however, add the qualifying term Roman when speaking of them. See ROMAN-CATHOLICISM; OLD CATHOLICS.

CATHOLIC EMANCIPATION. Name given to a series of acts passed in Britain between 1780 and 1829 to relieve Catholics from the civil and legal restrictions accumulated from the time of Henry VIII.

CATILINE (kat'ilin). (Lucius Sergius Catilina) (c. 108-62 B.C.). Roman politician. An unscrupulous adventurer, of an impoverished patrician family, he followed a double failure to be elected to the consulship in 64/63 with a plot to seize control of the state. In 4 celebrated orations Cicero (q.v.) laid bare the conspiracy: several of C.'s followers were executed and C. d. in battle at the head of his revolutionary troops.

CATLIN, George (1796-1872). American authority on American Indian life. B. in Pennsylvania, he lived among the tribes 1832-40 and his paintings of them are in the U.S. National Museum, Washington.

CATLIN, George Edward Gordon (1896-). British political scientist. He was prof. of politics at Cornell 1924-35 and Bronman prof of political science at McGill univ. 1956-60: he is a strong advocate of Anglo-American co-operation and European unity. In 1925 he m. Vera Brittain (q.v.).

CATO, Marcus Porcius (234-149 B.C.). Roman statesman. The son of a farmer, he served in the war against Hannibal, became consul in 195 B.C. and imposed a Roman peace upon the tribes of Spain. Appointed censor in 184 he used his powers to exclude from the senate all those members who fell short of the ancient Roman standards of dignity and moral uprightness. He was a keen farmer, and his treatise on agriculture is the earliest surviving work in Latin prose. Deeply impressed by the commercial prosperity of Carthage, which he visited in 157, he ended every speech in the senate by declaiming that 'Carthage must be destroyed'.

CATO STREET CONSPIRACY. An unsuccessful plot to murder Castlereagh and his ministers while they were dining with Lord Harrowby on 20 Feb. 1820, to capture the Bank and Mansion House, and to set London on fire, after which it was planned to set up a provisional govt. The conspirators were betrayed, and the 5 leaders were hanged and others sentenced to life transportation. The plot was hatched in Cato St., Edgware Rd., London. See THISTLEWOOD.

CATROUX (kahtrōō), Georges (1879-). French general. After service in the F.W.W., he held commands in the colonies, and in 1940 joined De Gaulle, becoming his representative in the Near East. He was Gov.-Gen. of Algeria 1943-4, and was a member of the High Military Tribunal after the abortive military coup of 1962 in Algeria.

CATS (kahts), Jakob (1577-1660). Dutch poet. He became grand pensionary of Holland in 1636, and keeper of the great seal in 1648. In 1651 he retired to Zorgh-vliet, his home near The Hague, but was sent as ambassador to England in 1657. 'Father Cats' ranks in Holland foremost among the poets of the so-called Golden Age of literature.

CATS' CRADLES. Game played by one or more persons with a piece of looped string: world-wide in distribution it has magic connotations in some parts of the world, or may illustrate folktales events.

CATSKILLS. American mountain range, mainly in the state of New York; the highest point is Slide Mt. (4,204 ft.).

CATTARO. Italian form of KOTOR.

CATTERICK. Village and military camp in N. Riding of Yorks, on the Swale, 4½ m. from Richmond.

CATTLE. A group of large-sized ruminant Artiodactyla, including the buffaloes, bison, yak, gaur, gayal, and banteng, and the various familiar domesticated breeds. There are 2 main types of domesticated cattle, the European breeds and the zebu or sacred humped cattle of India, which are useful in the tropics for their ability to withstand the heat and diseases to which European breeds succumb. There is also in northern India a domesticated breed called the gayal descended from a wild species termed the gaur or tsain. A smaller related species, the banteng, has been domesticated in Java. The European breeds (*Bos taurus*) are descended from the extinct aurochs (*Bos primigenius*), which, although larger, resembled

CATTLE. Chillingham wild bull (left), and Indian humped bull. the White Park Cattle formerly greatly prized in Britain, at Chillingham, Chartley, and elsewhere.

CATULLUS, Gaius Valerius (c. 84-54 B.C.). Roman lyric poet. B. at Verona, he moved in the best literary and political society of Rome and wrote lyrics describing his unhappy love affair with Clodia, wife of the consul Metellus. He journeyed to Asia Minor on the staff of the Roman governor Memmius, and near Troy visited the tomb of his brother for whom he wrote an epitaph full of sincere feeling. His longer poems include two wedding-songs. Many of his happiest poems are short verses to his friends.

CAUCASUS (kaw'-). Series of mountain ranges which traverse the area between the Black Sea and the Caspian Sea, in U.S.S.R. From its westerly extremity, S. of the estuary of the Kuban, it runs S.E. for 750 m., approaching the Caspian shore near the peninsula of Apsheron. The maximum width of the Great C. is about 140 m. The highest peaks include Elbruz (18,467 ft.), Jaikyl, Shkara, and several others, all higher than Mt. Blanc.

J. F. Blumenbach c. 1800 derived the white race of mankind from this area, hence the use of the word *Caucasian* to denote European types.

CAUCUS (kaw'-). Term originally used in Boston, U.S.A., in the 18th cent. for a meeting of the leaders of a political club or party designed to make arrangements for elections, etc. In England, it was first applied to the organization introduced by Joseph Chamberlain in 1878. Nowadays it means the powerful directive nucleus of a political party.

CAULAINCOURT (kohlañkōor'), Armand Augustin Louis, marquis de (1772-1827). French general and statesman. He was an aide-de-camp to Napoleon, accompanied him on the Russian campaign, and conducted his diplomatic negotiations during the concluding years of the Empire.

CAULIFLOWER. Variety of cabbage (*Brassica oleracea*), distinguished by its large flattened head of fleshy, aborted flowers, and by being less hardy than is the broccoli. It is said to have been introduced into England from Cyprus in the 16th cent.

CAVAFY, Constantinos (1863-1933). Greek poet.

McCrae (1872–1918). In the 'thirties poetry flourished in the work of E. J. Pratt (1883–) and the Montreal Group among whom were A. M. Klein, Frank Scott, A. J. M. Smith, P. K. Page and Patrick Anderson. Later prominent poets included Dorothy Livesay, Anne Marriott, Douglas LePan, Earle Birney (1904–), Roy Daniels, L. A. Mackay, and Jay MacPherson.

FRENCH. F.-X. Garneau's *Histoire du Canada* (1845–8) inspired a school of patriotic verse led by Octave Crémazie (1827–79) and continued by Louis Fréchette (1838–1908). A new movement began after 1900 with such poets as André Lozeau (1878–1924), Paul Morin, Robert Choquette (1862–1941), Alain Grandbois, St. Denys Garneau, Éloi de Grandmont, and Pierre Trottier. Fiction reached a high point with Louis Hémon (1830–1914) whose *Maria Chapdelaine* inspired many genre works. Outstanding later novelists are Germaine Guèvremont, Gabrielle Roy, 'Ringuet' (Philippe Panneton, 1895–), Robert Elie, Roger Lemelin, and Yves Thériault.

CANADIAN PACIFIC. Railway co. whose main line runs from Montreal to Vancouver, B.C.; other lines connect Montreal with St. John, N.B., and with most important towns in Canada and a number in north U.S.A. Miles operated in 1950 totalled 17,095 in C. and 4,762 in U.S.A. The plan to bridge C. by railway was brought into effect chiefly thanks to Donald A. Smith (later Lord Strathcona) and George Stephen (Lord Mount Stephen). The main line was completed in 1885; the first through train ran in 1886. The co. also owns hotels, ocean liners, and airways.

CANAL. A man-made waterway constructed for drainage, irrigation, or navigation.

Irrigation Canals carry water for irrigation from rivers, reservoirs, or wells, and are carefully designed to maintain an even flow of water over the whole length. These channels are found in all continents, but chiefly in tropical and sub-tropical lands where rainfall is scarce or non-existent. Irrigation canals fed from the Nile have maintained life in Egypt since the earliest times; the division of the waters of the Upper Indus and its tributaries for the extensive system of irrigation canals in W. Pakistan and Punjab, India, was for more than 10 years a major cause of dispute between India and Pakistan, settled at last by a treaty in 1960; the flourishing agriculture of the Murray basin, Victoria, Australia, and of the Great Valley of California, U.S.A., are examples of 19th and 20th cent. irrigation canal development.

Navigation Canals. The most remarkable ancient C. used for transport was the Grand Canal (q.v.) of China, of 850 m. total navigable length, and even today there is more traffic on the Cs. of China than on those in any other country.

Navigation Cs. must be at one level between locks. The channel of the C. has a flat bottom and sides which slope outwards from the bottom. The breadth of the bottom usually is at least twice the greatest breadth of any boat using the C.; the depth of water in feet at least 1½ times the draught of the vessel; the area of the waterway 6 times the greatest midship section of the vessel in the C.

Most C. barges are motor-driven, though the horse is still sometimes used for haulage on the smaller Cs. Tugs can be used only where there are no locks, or locks big enough to accommodate them. Electric traction, using rails on the tow path, has been used.

The first British C. (1761–76) was the Manchester-Worsley C. constructed by order of the 3rd duke of Bridgewater to carry coal from his collieries to Manchester. The engineer, Brindley, overcame great difficulties in the route. The major part of the 2,400 m. system now in use in Britain was nationalized in 1948. The largest C. is the Caledonian C., 61 m. long and remarkable for its locks.

Ship Canals are constructed to allow ocean-going

PRINCIPAL SHIP CANALS

Canal	Opened, year	Length, miles
North Sea (Netherlands) ...	1876	18
Corinth (Greece) ...	1893	4
Don-Volga (Lenin) (U.S.S.R.) ...	1952	63
Elbe and Trave (Germany) ...	1900	42
Göta (Sweden) ...	1832	240
Kiel (Germany) ...	1895	61
Manchester (England) ...	1894	35½
Panama (Central America) ...	1914	50½
Princess Juliana (Netherlands) ...	1935	20
St. Lawrence Seaway (Canada) ...	1959	180
Saulte Ste. Marie (U.S.A.) ...	1855	1½
Saulte Ste. Marie (Canada) ...	1895	1
Suez (Egypt) ...	1869	103
Welland (Canada) ...	1929	25

ships either to reach inland centres (e.g. the Manchester Ship C.) or to reduce the distance by sea between 2 points by cutting across an isthmus (e.g. the Suez C.).

Belgium, France, Germany, and other countries in Europe have spent large sums of money on Cs. and ports. The Baltic Ship C. (1887–95) connects the Baltic with the N. Sea. The North Sea Ship C. unites the IJsselmeer with the N. Sea. The Russians have an extensive system of Cs. in Europe and Asia.

The St. Lawrence Seaway, started in 1954 and opened in 1959, extends from Montreal to Lake Ontario, 180 m.; with the deepening of the Welland C. and some of the river channels, it provides a waterway making it possible for ocean-going vessels to travel during the ice-free months between the Atlantic and Duluth, Minnesota, U.S.A., at the western end of Lake Superior, a distance of 2,342 m.

The N. Crimean C. (first section completed 1963) will link the Dnieper with the Black Sea and the Sea of Azov, and will be navigable for c. 125 m. of its 220 m. length.

CANALETTO, Antonio (1697–1768). Venetian painter. He painted many scenes of Venice, his works being remarkable for their handling of perspective and control of colour. He visited England in 1746 and 1753.

CANARIES. Group of volcanic islands belonging to Spain, 60 m. off the N.W. coast of Africa. There are 7 large and 6 small (uninhabited) islands, forming 2 provinces: Santa Cruz de Tenerife (Tenerife, Palma, Gomera, and Hierro), and Las Palmas (Gran Canaria, Lanzarote, Fuerteventura, and the uninhabited islets). Santa Cruz de Tenerife (1,238 sq. m.) has an est. pop. (1960) of 490,655, Las Palmas (1,569 sq. m.)

CANALETTO. Sharp and clear, with their meticulous detail and bright colour, the pictures of Canaletto bring 18th century Venice to life. This is 'A Fête on the Grand Canal'. Reproduced by permission of the Trustees of the Wallace Collection.

concerned with catching and exporting turtles. Georgetown, the cap., is on Grand Cayman. Formerly a dependency of Jamaica, they were given their own administrative and legislative bodies by an act of the Imperial Parliament of 1958. Total area, 100 sq. m.; pop. (1960) 8,803.

CEBU (seboo'). Oldest city, founded 1565 as San Miguel, of the republic of the Philippines, on the island of C. (area 1,703 sq. m.), of which it is the chief port. Pop. (1960) 251,146.

CECIL (si'sil), Lord David (1902-). British critic. The younger son of the 4th marquess of Salisbury, he became Goldsmiths' prof. of English literature at Oxford in 1948. His books incl. *The Stricken Deer* (1929), dealing with Cowper, as well as studies of Jane Austen, Scott, and Hardy; and the subtly-penetrating *The Young Melbourne* (1939), with its sequel *Lord M.* (1954).

CECIL, Robert, 1st earl of Salisbury (?1563-1612). Son of Lord Burghley by his 2nd wife, he succeeded him as Sec. of State to Elizabeth, and was afterwards the chief minister of James I, who made him earl of Salisbury in 1605.

CECILIA (sesil'ia). Christian saint, martyred in Rome, in the 2nd or 3rd cent. Her later association with music may derive from the story that she sang hymns while undergoing torture.

CECIL OF CHELWOOD, Edgar Algernon Robert Cecil, 1st visct. (1864-1958). British statesman. Third son of the 3rd marquess of Salisbury, he was a Cons. M.P. 1906, sat as an Independent 1911-23, and was then created a visct. In the F.W.W. he was Min. of Blockade 1916-18, and in 1919 played a large part in drafting the Covenant of the League of Nations: he was awarded a Nobel peace prize in 1937.

CEDAR (sē'der). Genus of coniferous trees (*Cedrus*).

CEDAR. To the right, the leaves and cone.

The best-known is the C. of Lebanon (*C. libani*), which grows to a great height and age in the mountains of Syria and Asia Minor. Of the famous forests on Mt. Lebanon itself, only a few groups of trees remain. Together with the Himalayan C. (*C. deodara*) and the Algerian or Mt. Atlas order (*C. atlantica*), it has been introduced into England.

CELANDINE (sel'andin). Name given to 2 plants 'belonging to different families, and resembling each other only in their bright yellow flowers. The greater C. (*Chelidonium majus*) belongs to the Papaveraceae, and is common in English hedgerows. The lesser C. (*Ranunculus ficaria*) is a member of the buttercup family, and is a familiar wayside and meadow plant.

CELEBES (selē'biz). Island of the Rep. of Indonesia, one of the Sunda group. It is mountainous and forested, but there are fertile valleys in which tropical produce grows abundantly. The majority of the people are Malaysians of different tribes, among whom the Bugis and Macassars are Moslem, the Minahassa Christian. The semi-civilized Alfuoros remain in the wilder districts. Area 49,390 sq. m., with dependent islands 73,000 sq. m.; pop. (1961) 7,000,000.

CELERY (sel'eri). Genus of plants (*Apium*) of the family Umbelliferae. The common species (*A.*

graveolens) grows in ditches, salt-marshes, etc., and is coarse and acrid. In cultivation the acrid qualities are removed by blanching.

CELINE (sehlen'), Louis Ferdinand. Pseudonym of Louis Destouches (1897-1961). French novelist. B. in Paris, he studied medicine, and displays in his books a misanthropy contrasting sharply with his

CELLS. 1, Cone (above) and rod cells of retina; 2, Human spermatozoon cell; 3, Nerve cells; 4, Typical plant cells from a moss leaf; 5, Goblet cells of a frog; 6, Red cells from human blood; 7, Liver cells.

self-sacrificing career as a physician, notably *Voyage au bout de la nuit* (1932: *Journey to the End of Night*); *Mea Culpa* (1937) shows his disillusion with Soviet plans for human betterment.

CELL. A minute portion of living matter; the simplest living organism; the unit of physical life. Bacteria, amoebae, and certain other micro-organisms consist of single cells. Plants and animals are composed entirely of cells of various kinds. The body of a mammal (including that of the human species) originates from an organism consisting of a single cell—an ovum or egg-cell generated by the female and fertilized by fusion with a spermatozoon or seed-cell generated by the male. The fertilized ovum (embryo) is a microscopic body chiefly consisting of protoplasm, or clear jelly, the simplest form of living substance. The protoplasmic part of the cell is called the cytoplasm. It is enclosed in a membranous wall and contains a small spherical body called a nucleus—an essential part of most cells, without which they cannot reproduce. The only cells of the body which have no nucleus are the red blood cells. The nucleus of the embryo contains a denser spot called the nucleolus, but many other kinds of cells do not.

The composition of the protoplasm varies, but its breakdown products when the cell dies are mostly proteins. It contains also carbohydrates, fats, and the lipoids lecithin and cholesterol, besides inorganic salts such as the phosphates and chlorides of potash, soda, and lime. The cell wall in most animal cells is not a definite membrane, but the shape of the cell is maintained by surface tension or chemical action.

Cells reproduce by division, a complicated process which starts in the nucleus. The function of the cell is to convert energy from one form into another, e.g. food and oxygen into chemical energy.

Sexual reproduction is performed by the union of two special kinds of cells. When the human ovum is fertilized by fusion with a spermatozoon, the new cell contains the chromosomes from both—48. The sex of the new individual is determined by the distribution of the special sex chromosomes. The ordinary cells of the female body have two X chromosomes; the cells of the male body have an X and a Y chromosome—two different types. The mature ovum contains one X chromosome and the mature spermatozoon contains either an X or a Y chromosome. If on fertilization two X chromosomes meet, the result is a female; if an X and a Y meet, the result is a male. All men thus inherit from their fathers one Y chromosome which gives their male characteristics: some (perhaps 1 in 300) inherit 2, which give

CANNING. The side seam of the can is soldered over a solder roll and one end is seamed on in a double seaming machine. The double seam combines with the sealing compound on the rim to give a completely hermetic seal, but the cans are additionally tested under air pressure, as seen here, and faulty cans are automatically rejected.

Courtesy of the Metal Box Company Limited.

several appointments. As For. Sec. 1807–10 C. was largely responsible for the seizure of the Danish fleet and British intervention in the Spanish peninsula, but his disapproval of the Walcheren expedition involved him in a duel with Castlereagh and led to his resignation. Except for the presidency of the Board of Control (1816–20) he held no further office until 1822, when on Castlereagh's death he again became For. Sec. He opposed the interventionist policy of the 'Holy Alliance' in Spain, and supported the national movements in Greece and the S. American republics. He succeeded Lord Liverpool as P.M. in 1827, and on the refusal of Wellington, Peel, and other Tories to serve under him formed a coalition with the Whigs. He d. in office a few months later.

His son Charles John, earl C. (1812–62), sat in the Lords from 1837 as visct. C. As Gov.-Gen. of India from 1856, he suppressed the Indian Mutiny with an unvindictive firmness which earned him the nickname 'Clemency C.' and became 1st Viceroy of India in 1858, receiving an earldom the next year.

CANNING. The art of preserving foods in hermetically sealed containers by the application of heat. In 1809 the Frenchman Nicolas Appert succeeded in preserving food in glass containers, and in 1810 the Englishman Peter Durand patented tin cans. In 1819 the 1st American C. factory was started in Boston by Underwood, an Englishman. The American Civil War stimulated the development of C. and there was phenomenal expansion following the introduction of scientific methods c. 1925.

Sterilization is achieved by heat, right up to the final sealing, but the very large radioactive sources becoming available from nuclear power stations open up the possibility of sterilization by blasts of electrons or gamma rays.

CANNING TOWN. Industrial area in the East End of London, England, part of the Greater London bor. of Newham, which rapidly developed during the latter half of the 19th cent. Here are chemical, iron, cable, etc., works and famous docks, viz. Victoria and the Royal Albert.

CANNOCK. Market town (U.D.) of Staffs, England, 8 m. N.W. of Walsall, on C. Chase, an

area of heath and woodland, and at one time a royal preserve, now a rich coalfield. Pop. (1961) 42,182.

CANO (kah'nō), Juan Sebastian del (d. 1526). Spanish voyager, for whom it is claimed that he was the first circumnavigator. He sailed with Magellan in 1519, and after the latter's death in the Philippines, brought the *Victoria* safe home to Spain.

CANOE (kanōō'). Lightweight boat of shallow draught, pointed at both ends and easily propelled by paddles or sails. Construction varies from the hollowed tree-trunk of African tribes to the framework covered with bark or skin used by the American Indians. Modern Cs. are often of lightweight wood construction, but various synthetic materials are increasingly used. Canoeing became a sport in the 19th cent. and the Royal C. Club in Britain was founded 1866.

CANON. In the Catholic Church, a clergyman holding a prebend in a cathedral or collegiate church. He lived within its precinct, and his life was ordered by ecclesiastical rules or canons. About the 11th cent. a distinction was drawn between *regular* or Augustinian canons who observed the rule, and *secular* canons who lived in the world, and were in effect the administrative officers of a cathedral, but in holy orders. Following the Reformation, all Cs. in England became secular Cs.; and the Cs., headed by the dean, are the resident ecclesiastical dignitaries attached to a cathedral and constitute the chapter.

CANON (of scripture). The collection or list of books of the Bible (q.v.) that are accepted by the Christian Church as divinely inspired and authoritative, i.e. the Old and New Testaments. The canon of the O.T. was drawn up at the assembly of Rabbis held at Jamnia in Palestine between A.D. 90 and 100; certain excluded books were included in the Apocrypha. The earliest list of N.T. books is known as the Muratorian Canon (c. A.D. 160–70). Athanasius promulgated c. 365 a list which corresponds with that in our Bibles.

CANONICAL HOURS. In the R.C. Church the daily set periods for the performance of devotion; matins and lauds, prime, terce (9 a.m.), sext (noon), nones (3 p.m.), evensong or vespers, and compline. In England C.Hs. are also those in which a marriage may legally be performed in a parish church, without a special licence (8 a.m.–6 p.m.).

CANONIZATION. Procedure in the Roman Catholic Church whereby one (or more) of her members is formally admitted into the Calendar of Saints. It begins with a long process of investigation, seldom completed in under 50 years after the death of the person canonized. The cause is first examined in the country of the deceased under the direction of a diocesan bishop. Then it is brought before the Congregation of Rites, over which a Cardinal presides, at Rome, and the proofs of heroic virtue put forward by the Postulators are examined together with the objections raised by the *Promotor Fidei* (popularly, 'devil's advocate'). When the preliminary investigations at Rome are terminated and the 'Apostolic Process' has been formally commenced, the candidate is entitled to be called Venerable, but the stage of BEATIFICATION, which carries with it permission for local veneration, is not reached until the Pope has ratified the verdict of the Congregation concerning the possession of heroic virtues and the reality of miracles. For full C. 2 further miracles wrought through the intercession of the Blessed (as the candidate is now styled) since beatification are required. The ceremony of C. takes place in the Vatican Basilica. The formalities followed in the examination of a martyr's cause are shorter in the final stages.

CANON LAW. The body of rules and regulations whereby the government of the Christian Church is carried on by ecclesiastics. Its origin is sought in the

CENSOR. The psychic function by which, according to Freud and his followers, impulses arising in the sub-conscious mind are prevented from reaching consciousness if they are for some reason unacceptable, e.g. if they conflict with a moral sentiment, or would cause painful emotion. The rejection of psychic contents on these grounds is repression. See also **PSYCHOLOGY (psychoanalysis)**.

CENSORSHIP. Supervision by some person or persons in authority of printed matter and other forms of publication with a view to suppressing anything considered immoral, subversive of the govt., or liable to undermine faith. The R.C. Church exercises a strict censorship, accepted by the faithful in every country, over all reading matter. In England, under the Tudors and Stuarts, the Crown claimed a monopoly of printing presses, and publication could be carried out only under licence until licensing was abolished in 1695. During both world wars, British defence regulations made it an offence to publish anything likely to be useful to the enemy, and censors were appointed to whom newspaper editors and others could submit material before publication, and much advantage was taken of their services; but such submission was not made compulsory. Laws relating to obscenity, libel, and defamation act in some respects as a censorship; they differ from one country to another, and much that would not be published in the U.K. because it would be libellous there can appear with impunity in e.g. the U.S.A. or France.

The C. of plays in the U.K. by the Lord Chamberlain (under the Theatres Act 1843) ended in 1968.

There is no official C. of films in either the U.K. or the U.S.A., but in both countries films are submitted before public presentation to bodies set up by the film industry: the British Board of Film Censors in the U.K., and a body popularly called the Hays Office (after its first president, 1922-45, Will H. Hays) in the U.S.A.

CENSUS. An official enumeration of the inhabitants of a country or state, together with certain other information regarding the age, sex, occupation, etc., of each individual. In most modern states a C. is taken at regular intervals, usually of 5 or 10 years. The first C. of England and Scotland was held in 1801, and since then the C. has been taken every 10 years except in 1941.

CENTAURS (sen'tawrz). In Greek legend, a race of creatures half-man and half-horse. They dwelt in the plains of Thessaly, and (apart from Chiron, the adviser of Hercules) they were noted for their lawless and turbulent character. The earliest representations of Cs. (c. 1800-1000 B.C.) were excavated near Fama-gusta in 1962, and are two-headed.

CENTAURY (sen'tawri). A plant (*Erythraea centaurium*) of the gentian family, Gentianaceae. It has numerous small red or pink funnel-shaped flowers, and is common in Britain in dry situations.

CENTIGRADE. The temperature scale in which one degree is taken as 1/100th part of the interval between two fixed points, melting ice (0°C), and steam over boiling water at standard atmospheric pressure (100°C). In 1948 the 9th General Conference on Weights and Measures decided that the term C. should be replaced by Celsius, the name of the Swede who invented the scale in 1742. The scale remains un-

changed and one degree has the same magnitude as one degree of the Kelvin scale, which is based on the thermo-dynamic properties of an ideal gas and is independent of the physical properties of any medium. A temperature expressed on the Kelvin scale is numerically greater by 273.15 deg. than the same temperature on the Celsius scale.

CENTIPEDES (sen'tipēdz). Name of a class of animals (*Chilopoda*) of the phylum Arthropoda, having a distinct head and a single pair of antennae. They are distinguished from insects by their bodies being composed of numerous segments, all of similar form and bearing appendages, and from millipedes (*Diplopoda*) by the fact that there is only one pair of

limbs to each segment. They are mostly nocturnal in their habits, predatory, and carnivorous, feeding on insects and worms, and are equipped with strong

jaws provided with poison fangs. The bite of some of the larger species, found in warmer parts of the world, is painful and may be dangerous. Some of the tropical species, such as *Scolopendra gigas*, attain to as much as a foot in length. Several species are British, *Lithobius forficatus* being most common.

CENTRAL AFRICA. Union of. The Central African Rep., Chad, and Congo (Kinshasa) signed a protocol for the creation of a Union of C.A. in 1968: possible future members being Congo (Brazzaville), Rwanda and Burundi. It planned a common market and mutual assistance against aggression. H.Q. Bangui.

CENTRAL AFRICAN REPUBLIC. Name taken on achieving independence in 1960 by the former French territory of Ubangi-Shari. Its chief product is cotton. Area c. 240,000 sq. m.; pop. (1968) 2,000,000. The cap. is Bangui, pop. 238,000. C.A.R. is in the French Community and the Equatorial Union.

CENTRAL AMERICA. A geographical division comprising that portion of the American continent which connects Mexico with the Isthmus of Panamá. In itself it is also an isthmus, traversed by mountains that form part of the cordillera. It comprises British Honduras, the 5 republics of Guatemala, Honduras, Salvador, Nicaragua, and Costa Rica, and the republic of Panamá, although this was never politically associated with the rest—before becoming an independent state in 1903 it was part of Colombia—which were included in the days of Spanish rule in the captain-generalcy of Guatemala.

CENTRAL CRIMINAL COURT. Court (usually known as the Old Bailey) which sits to try all treasons, felonies, and misdemeanours committed in the City of London, and the Greater London area. The C.C.C. was established in 1834, and is in effect London's Assize Court.

CENTRAL PROVINCES AND BERAR. See MADHYA PRADESH.

CENTRAL TREATY ORGANISATION. See BAGHDAD.

CENTRIFUGE (se'ntrifūj). Apparatus for rotating containers at high speeds. One use is for separating

CENTAUR. A two-headed centaur from Enkomi-Alasia. Courtesy of Prof. C. Schoeffler.

COUNTRIES OF CENTRAL AMERICA

	Area in sq.m.	Population (in 1,000s)	Capital
British Honduras	8,867	114 Belize	
Costa Rica	19,960	1,490 San Jose	
El Salvador	8,260	3,036 San Salvador	
Guatemala	42,042	4,575 Guatemala	
Honduras	43,227	2,362 Tegucigalpa	
Nicaragua	57,143	1,700 Managua	
Panamá	28,576	1,328 Panamá	
Canal Zone	648	49 Balboa Heights	
	208,453	14,654	

C. lies on both banks of a wide delta, the main section on the N. bank with industrial suburbs to the N., S., and S.W.; cotton, silk, and jute textiles, cement, paper, matches, lacquer work, and ivory engravings are among its products. C. is linked by railway with Hankow (completed 1936) and Peking, and has an airport; it is the focal point of river trade in the area. There are public parks, a leper hospital, a mint, pagodas, temples, and two universities. Pop. (1965) 3,000,000.

CANTON. Mfg. town of Ohio, U.S.A., in a rich mining and agricultural district. Pop. (1960) 113,631.

CANTON. In France, a subdivision of the arrondissement; in Switzerland, a C. is one of the 22 states forming the Confederation.

CANTON and ENDERBURY. Two atolls in the Phoenix group which forms part of the British colony of the Gilbert and Ellice Islands in the Pacific. In 1938 the U.S.A. claimed sovereignty over C. and E., and it was agreed that they should rank as a condominium for 50 years from 1939. C. airport is less used since the introduction of long-range jets.

CANUTE (c. 995–1035). King of England, Denmark, and Norway. Son of Sweyn, king of Denmark, he was baptized c. 1000, accompanied his father in his invasion of England in 1013, and on the latter's death in 1014 was hailed as king by the army. In 1016 he defeated Edmund Ironside at Assandun in Essex, and then ruled Mercia and Northumbria until on Edmund's death he succeeded to the whole kingdom, and proved himself a just and wise ruler. He invaded Scotland c. 1027, and forced King Malcolm to pay homage. In 1018 he succeeded his brother Harold as king of Denmark, and he conquered Norway in 1028. His empire fell to pieces, however, at his death. He was buried at Winchester.

CANYNGES, William (c. 1399–1474). English merchant. B. at Bristol, of which city he was 5 times mayor and twice the M.P. He was the greatest overseas merchant of his day, and rebuilt at his own expense St. Mary Redcliffe.

CA'NYON. Anglicized spelling of Span. *cañón*, a deep narrow hollow running through the mountains. There are many Cs. in the western States of the U.S.A. and in Mexico, e.g. the Grand C. of the Colorado, the C. in Yellowstone National Park, and the Black C. in Colorado.

CAPACITANCE, ELECTRICAL. The ratio of the electric charge on a body to the resultant change of potential. A capacitor (q.v.) has a C. of one farad when a charge of one coulomb changes its potential by one volt. The farad is an impractically large unit and capacitors normally used in electronic circuits are of the order of millionths of a farad (microfarads) or less.

CAPACITOR. Device for storing electric charge, consisting of conducting plates separated by layers of insulating material (dielectric). They may be flat or rolled up. Multiple air dielectric Cs. are commonly used as adjustable Cs. for tuning radio circuits. (Cs. were formerly called condensers.)

CAPE BRETON. Island forming part of the Canadian province of Nova Scotia, separated from the mainland by the narrow Gut of Canso, and bisected by a waterway. In the N. the surface is rugged, rising to 1,800 ft. at North Cape. The much indented coast has many fine harbours. The climate is mild, and very moist. Mineral wealth is considerable; timber is produced; the cod fisheries are highly important; agriculture is the basic industry. The chief towns are Sydney, Dominion, Inverness, Port Hood, and Glace Bay. The people are mainly of Scottish Highland descent. Some speak Gaelic.

The first English colony was estab. in 1629, but was driven out by the French. In 1763 C.B. was ceded to Britain; it was attached to Nova Scotia. Area 3,970 sq. m.; pop. (1961) 131,507.

CAPE COAST. Port of Ghana, West Africa, about 80 m. W. of Accra, superseded since 1962 by Tema. The town is built on a natural breakwater, adjoining which is the castle, 1st estab. by the Portuguese in the 16th cent. Pop. (1960) 41,143.

CAPE COLOURED. Descendants of mixed unions between Europeans and African peoples, living mainly in Cape Province, Rep. of S. Africa; in (1966) c. 1,800,000.

CAPEK (chah'pek), Karel Matěj (1890–1938). Czech playwright. His great successes were *R.U.R.* (Rossum's Universal Robots) in 1921, in which the mechanical creations of the scientists develop souls and rebel against their masters, and, more bitterly satirical, *The Insect Play* also 1921 (written with his brother Joseph C., 1887–1945) prophetic of totalitarianism. He also wrote novels and an excellent biography of Masaryk.

CAPE OF GOOD HOPE. South African headland forming a peninsula between Table Bay and False Bay, Cape Town. Discovered by Bartholomew Diaz in 1488, it was named Cape of Storms, but afterwards given its present name by King John II of Portugal.

CAPE OF GOOD HOPE (Kaaoland). A province – the parent state – of the Union of S. Africa, in the extreme S. of the African continent, named after the famous promontory. The Dutch occupied the Cape in 1650, and in 1652 laid out Capetown. The territory, first taken by the British in 1795 after the French Revolutionary armies had occupied the Netherlands, was sold to Britain for £6,000,000 in 1814. The Orange r. was proclaimed the N. boundary in 1825. Griqualand W. (1880) and the S. part of Bechuanaland (1895) were later incorporated; and Walvis Bay, although administered with S.W. Africa, is legally an integral part of Cape Province.

Physically the Cape consists of (a) a high plateau, the veld country, hilly and dotted with isolated kopjes, whose southern limit is the great escarpment which more or less parallels the coast and is called the Drakensberg, Stormberg, etc.; and (b) the area between the escarpment and the sea, comprising the Great Karoo, the S.E. region about Graaff Reinet, and the Coast Belt.

Rainfall is the dominating climatic factor; only the S.W. corner about Capetown has a copious and reliable (winter) rainfall, and here conditions favour the production of fruit and vegetables; the grapes are made into popular wines. The Karoo lends itself to extensive farming, in spite of droughts, since the scrub is nutritious animal food and the soil is fertile. The S.E. is an area of mixed farming, cattle and maize being the chief products. Kimberley, in Griqualand W., is the centre of great diamond workings; copper, asbestos, and manganese are also important.

The Cape was given self-government in 1872; it joined the Union in 1910. The chief towns are along the coast. Capetown, the cap., is also the legislative cap. of the Union of South Africa; Port Elizabeth and East London rank next in size. Other towns are Kimberley, the diamond metropolis; and the university towns of Grahamstown and Stellenbosch. Area 278,465 sq. m.; pop. (1960) 5,308,839 (977,377 white).

CAPER. A shrub (*Capparis spinosa*) of the family Capparidaceae, native to the Mediterranean region. Its buds and unripe fruit are preserved in vinegar and used as a condiment, known as capers.

CAPERCAILLIE (kaperkäl'zi, -käl'yi). Game bird (*Tetrao urogallus*), the largest member of the grouse family (Tetraonidae). The cock is as large as a hen-turkey, with dark iron-grey, brown and black plumage, glossed with green on the breast.

CAPET (kahpā'), Hugh (c. 938–96). King of France. He succeeded his father, Hugh the Great, as duke of France in 956, claimed the throne in

by his subjects. In 1879 he defeated the British at Isandhlwana, but was defeated himself at Ulundi.

CETINJE (tseten'yeh). Town of Montenegro, Yugoslavia, 12 m. E.S.E. of Kotor. Founded in 1484 by Ivan the Black, it was cap. of Montenegro until 1918. It has a palace built by Nicholas, the last king of Montenegro. Pop. (1953) 16,333.

CETTE. See **SÈRE**.

CEUTA (sū'ta). Spanish seaport and military base in Morocco, captured in 1580. It is 17 m. S. of Gibraltar and overlooks the Mediterranean approaches to the Straits of Gibraltar. Pop. (1960) 73,182.

CEVENNES (sehven'). Collective name given to a series of mountain ranges on the S., S.E., and E. borders of the Central Plateau of France.

CEYLON (sēlon'). Large island off the S.E. tip of India, formerly a British colony but created into a Dominion in 1948. In the 6th cent. B.C. the Sinhalese — an Aryan people from the N. of India — invaded and conquered it and today form 70% of the pop. (mainly Buddhist). Later migrations and invasions from India brought the Tamils, now just over 20% of the pop. (mainly Hindu). Only a handful of Veddas, the original inhabitants, survive in the jungle.

In a few hours the traveller can exchange the damp heat of Colombo (cap. and chief port) and the emerald paddy (rice) fields and rubber plantations of the low country for the cooler air of Kandy, the hill capital, set among wooded hills by a lake. From Kandy southwards the tea country opens out, with its hillside covered with tea bushes. The hill station of Nuwara Eliya in the S.E. lies at over 6,000 ft. Mt. Pedrotallagalla (8,294 ft.) is the highest point in C.

The northern province of C., stronghold of the Tamils and Hinduism, is dry, sandy, and flat, and intensively cultivated. The tropical jungle in the S.E., and in the N. Central and Eastern provinces, contains the timber for which C. is famous — ebony, satinwood, rosewood, etc. These jungles are the home of big game. In the jungle country lie the ruins of the cities of Anuradhapura and Polonnaruwa.

The cultivation of rice and coconuts is the hereditary occupation of the villagers. British planters introduced coffee in the early 19th cent., but in 1870 a blight destroyed the entire crop. Cinchona was next introduced, followed by tea and rubber. In 1876, 70,000 seeds of *Hevea brasiliensis* were taken from the Amazon basin to Kew Gardens in England; 2,000 developed into plants which in 1877 were sent to C.: from that 2,000 sprang the trees of all the rubber plantations in C., the Dutch East Indies (Indonesia), and Malaya. The coconut industry has also greatly

CEYLON. Many of the people of Ceylon are Sinhalese, descended from colonists who left northern India to settle in the island in the 6th century B.C. Such wayside scenes are less frequent as mechanization proceeds. Courtesy, Tea Bureau.

expanded. Minor products are graphite, cocoa, cinnamon, and precious stones. Pearl fishing is carried on in the Gulf of Manaar. C. is famous for its gold, silver, brass, ivory, and tortoise-shell work, basket and mat weaving. Modern industries incl. vehicle assembly and textiles, and tourism is developing.

History. The Sinhalese dynasty lasted 307 B.C.—A.D. 1815. The Portuguese in the 16th cent. were the first European invaders, but were ousted by the Dutch, who flourished until 1795 when, after the French Revolutionary armies occupied the Netherlands, C. was taken by the British. From 1815 C. was a crown colony with increasing powers of self-government until, under an act of the Imperial Parliament of 1947, C. became a dominion in 1948. In 1960 C. announced its intention of becoming a republic within the British Commonwealth; but internal disturbances in Tamil-speaking areas, following the decision in Nov. 1960 to replace English by Sinhalese as the official language of C., prevented the immediate realization of this intention. Area 25,332 sq. m.; pop. (1966) 11,504,100.

CÉZANNE. Self-portrait in the Tate Gallery.

CÉZANNE (sehzhahn'), Paul (1839–1906). French landscape, still-life, and portrait painter, the leader of the Post-Impressionist School. He was b. at Aix-en-Provence, where he studied and was on friendly terms with Émile Zola. In Paris he met Pissarro and other Impressionist painters, with whom at first he was in sympathy; but later he broke away from them and developed a style of painting which showed up their weaknesses. His aim was to give a sense of solidity which Impressionist paintings failed to give. His

work has great influence on modern art.

c.g.s. **SYSTEM.** System based on the centimetre, gram and second as fundamental units of length, mass and time.

CHABLIS (shahblē'). Town in Yonne dept., France; the centre for the production of a white Burgundy wine of the same name. Pop. (1962) 1,687.

CHABRIER (shahbre-eh'), Emmanuel (1841–94). French composer. Abandoning a post in the Ministry of the Interior to devote himself to music, he made his name with *España* (1883), an orchestral rhapsody, and the light opera *Le Roi malgré lui* (1887: 'King Against his Will'). He influenced French composers of the post-1918 era.

CHACMA. See **BABOON**.

CHACO (chah'koh). Prov. of Argentina, until 1951 a territory, part of Gran Chaco, a great zone, for the most part level, stretching into Paraguay and Bolivia. The prov., which includes many lakes and swamps, is partly unexplored. Much of it is forested, producing timber and quebracho; the chief crop is cotton. The cap. is Resistencia, in the S.E. Area 38,470 sq. m.; pop. (1965) 602,000.

The N. of Gran Chaco was the scene of the Bolivia-Paraguay war (over boundaries) of 1932–5, settled by arbitration in 1938.

CHAD (chahd), Republic of. Independent country of Africa, in the French Community, formerly a territory of France. It takes its name from Lake C. Much of it is desert, but in the Shari basin in the S. cotton and ground-nuts are grown; stock-rearing is important. Fort Lamy is the capital. Area 495,000 sq. m.; pop. (1965) 3,400,000.

LAKE CHAD, on the N.E. boundary of Nigeria, was

TRUMAN CAPOTE

Photo: J. R. Roustan.

trs. to Yugoslavia in 1947.

CAPOTE (kapō'tē), Truman (1924–). American novelist. B. in New Orleans, he uses a Southern setting in *The Grass Harp* (1951), etc., and set a trend in 'non-fiction' novels with *In Cold Blood* (1966), reconstructing a Kansas killing.

CAPP, Al. Pseudonym of the American cartoonist Alfred Caplin (1909–). B. in New Haven, Connecticut, he started his *Li'l Abner* strip in 1934 and the characters of the hill-billy community of Dog-

patch, Kentucky, have passed into U.S. folklore.

CAPPADOCIA (kapadō'shia). In ancient geography, a mountainous district in the E. of Asia Minor bounded on the S. by the Taurus mts. and on the E. by the Euphrates.

CAPRA (kah'prah), Frank (1897–). American film director. Sicilian-born, but living in the U.S. from the age of 6, he won Oscars for such films as *Mr. Deeds Goes to Town* (1936) and *You Can't Take It With You* (1938), with sentimental, idealistic heroes.

CAPRI (kah'prē). Italian island at the S. entrance of the Bay of Naples, 20 m. S. of Naples. It has two towns, Capri and Anacapri, and is famous for its flowers, beautiful scenery, and ideal climate. Area 4 sq. m.; pop. about 8,000.

CAPRIVI (kahprē've), Georg Leo, Count von (1831–99). German Imperial Chancellor 1890–4.

CAPSICUM. Genus of plants of the nightshade family (Solanaceae), native of S. America. The fruit is exceedingly pungent, and is a source of cayenne pepper or red-pepper.

CAPSULE, SPACE. Vehicle launched by a rocket into space. It may be manned, in which case it contains all the instruments and accessories necessary for survival during launching, flight, re-entry into the atmosphere and recovery, or other projected programme.

CAPUA (kah'poo-ah). Italian town in Caserta province on the Volturno, in a fertile plain 27 m. N. of Naples. There was heavy fighting here in 1943 during the S.W.W., and the Romanesque cathedral was almost destroyed. Pop. (1960) 17,600.

CAPUCHIN. A South American monkey (*Cebus*). Sometimes called the Sapajou. Some species have

CAPUCHIN MONKEY.

(The weeper capuchin.)

hairy 'cowls' on the forehead, thus giving rise to the popular name from a fancied resemblance to C. monks. They have prehensile tails used for climbing, and go about in troops, feeding on insects and fruit. The White-throated C. (*C. capucinus*) is a typical species; its head and body are about 18 in. long. The body is black with a white throat and cheeks.

CAPUCHINS. Order of friars in the R.C. church, instituted about 1520 by Fr. Matteo di Bassi, an

Italian monk who wished to return to the literal observance of the rule of St. Francis. The brown habit with the pointed hood (Fr. *capuche*) which he adopted gave his followers the name. It was recognized by the Holy See in 1619, and has been remark-

able for its missionary activity. Despite stress on poverty and austerity, the order has attracted many members of the nobility. See FRANCISCANS.

CAPYBARA (*Hydrochaerus capybara*). The largest of the rodents and the only representative of the family Hydrochoeridae. It has scanty, coarse yellowish hair, and is about 4 ft. long with a large head and a very short tail, and may reach a weight of 100 lb. An expert swimmer, it herds in the forests of South America.

CARACAL (*Lynx caracal*). A species of wild cat, akin to the lynx. It lives in bush or desert country in Africa, Arabia, and India, where it was formerly tamed for the purpose of catching game. It is over 3 ft. long, has tufted blackish ears, and short fur, fawn above, and white with spots below.

CARACALLA, Marcus Aurelius Antoninus (A.D. 186–217). Roman emperor. He succeeded his father Septimius Severus in 211, ruled with great cruelty and ruinous extravagance, and was assassinated.

CARACAS (karah'kas). Chief city and cap. of Venezuela, on the Andean slopes, 11 m. by road S. of its port La Guaira on the Caribbean coast. It has many fine buildings. Founded 1560–67, it has several times suffered severely from earthquakes. Simon Bolivar was b. here. It makes cement, textiles, paper, tobacco, etc., and has an international airport. Pop. (1964) 1,000,000, metropolitan area 1,485,000.

CARAVAGGIO. Almost violent in its bold light and shadow and the dramatically posed figures, 'The Supper at Emmaus' is typical of the artist's powerful gifts.

Courtesy of the National Gallery.

CARA'TACUS (d. c. A.D. 54). British chieftain, who resisted the Romans, A.D. 43–51, at the head of the tribes of S.E. Britain, but was defeated on the southern borders of Wales, and shown in Claudius's triumphal procession; in admiration for his courage Claudius released him, and he d. at Rome.

CARADON of St. Cleer, Hugh Foot, baron (1907–). British Labour politician, son of Isaac Foot (q.v.). As gov. of Cyprus 1957–60, he guided independence negotiations, was British representative on U.N. Trusteeship Council 1961–2 and in 1964 became Min. of State for Foreign Affairs and permanent British rep. at U.N., and was created a life peer.

CARAT. Unit of purity in gold. The carat implies a twenty-fourth part, and chemically pure gold is 24-carat. Jewellery is often composed of 22-carat or 18-carat gold, i.e. a mixture of 22 or 18 parts gold and 2 or 6 parts alloy. The metric C. of 0.200 grams is the unit of weight for diamonds and other precious stones.

CARAVAGGIO (kahrahvahd'jo), Michelangelo Merisi da (c. 1569–1609). Italian artist. B. at Caravaggio, near Milan, he developed a precocious talent and rapidly estab. a reputation for controversial and realism. His life was equally adventurous—he killed

NEVILLE CHAMBERLAIN. On his return from Germany in 1938, he waved aloft the Munich agreement which was to bring 'Peace With Honour'. *Fox Photo, London.*

the Church of Scotland in 1843, C. withdrew from the church along with a large body of other divines, and became principal of the Free Church college.

CHÂLONS-SUR-MARNE (shalon'-sür-mahn'). Cap. of the dept. of Marne, France, about 90 m. E. of Paris, on the r. Marne. The seat of a bishopric, it has a fine 13th cent. cathedral. Pop. (1962) 45,348.

CHALON-SUR-SAÔNE (-sohn'). French town in the dept. Saône-et-Loire, on the Saône, about 80 m. N. of Lyons. It is an important manufacturing town and railway centre. Pop. (1962) 45,993.

CHAMBERLAIN, (Arthur) Neville (1869-1940). British Conservative statesman, younger son of Joseph C. and half-brother of Joseph Austen C. B. in Birmingham, of which he was Lord Mayor in 1915, he became Min. of Health in 1923, doing excellent work in slum clearance. After a brief space as Chancellor of the Exchequer he was Minister of Health again 1924-9. In 1931 he was Chancellor of the Exchequer in the National Govt., and in 1937 succeeded Baldwin as P.M. In an endeavour to close the old Anglo-Irish feud he agreed to the return to Eire of the ports occupied by the navy, and he made similarly friendly advances towards the dictators, Mussolini in particular. When in 1938 he went to Munich and negotiated with Hitler the settlement of the Czechoslovak question, he was ecstatically received on his return. Soon, however, he agreed that he had been tricked, and when Britain declared war on Sept. 3, 1939, he summoned the people to fight the 'evil things' that Hitlerism stood for. On May 10, 1940, he resigned, and became Lord President of the Council (1940-41) but d. on Nov. 9, 1940.

CHAMBERLAIN, Houston Stewart (1855-1927). One of the 'intellectuals' of Nazism. The son of an English rear-admiral, he lived in Germany and became a naturalized German citizen in 1916. His chief work, *Die Grundlagen des 19. Jahrhunderts* ('Foundations of the 19th Century'), was pub. in 1899. He m. Wagner's daughter Eva, as his 2nd wife, in 1908.

CHAMBERLAIN, Joseph (1836-1914). British statesman. B. in London, he entered in 1854 the screw-manufacturing business of his cousin Joseph Nettlefold at Birmingham. By 1874 he had made a sufficient fortune to devote himself entirely to politics; he early adopted radical views, and took an active part in local affairs. Thrice mayor of Birmingham, he carried through many schemes of municipal development. In 1876 he was elected M.P. for Birmingham as John Bright's colleague, and joined the republican group led by Sir Charles Dilke, the extreme left wing of the

Liberal Party. In 1880 he entered Gladstone's Cabinet as Pres. of the Board of Trade. The climax of his radical period was reached with the Unauthorized Programme of 1885, advocating free education, small holdings, graduated taxation, etc. In the next year he broke with Gladstone over Home Rule for Ireland, resigned from the Cabinet, and led the revolt of the Liberal-Unionists. In 1895 C. became Colonial Secretary in Salisbury's Cons. gov., and as such was responsible for relations with the Boer republics up to the outbreak of war in 1899. In 1903 he advanced proposals for Imperial Preference or 'Tariff Reform' as a general policy of imperial consolidation, and left the Cabinet in order to leave himself free to propagate his ideas. In 1906 a stroke was followed by the paralysis which kept him out of public life for his remaining years.

C. was one of the most colourful figures of British politics, and his monocle and orchid made him a favourite subject for political cartoonists.

CHAMBERLAIN, Sir (Joseph) Austen (1863-1937). British Conservative statesman. Elder son of Joseph C. he was elected in 1892 as a Liberal-Unionist M.P., and after holding several minor posts was Chancellor of the Exchequer 1903-6. During the F.W.W. he was Sec. of State for India 1915-17 and member of the War Cabinet 1918. He was Chancellor of the Exchequer 1919-21 and Lord Privy Seal 1921-2, but, as in 1911 (on Balfour's resignation), failed to secure the leadership of the party in 1922, as many Conservatives resented his share in the Irish settlement. He was For. Sec. in the Baldwin government 1924-9, and negotiated and signed the Locarno Treaty and the Kellogg Pact. After the formation of the Nat. Govt. in 1931 he was First Lord of the Admiralty for a few months.

CHAMBERLAIN, Owen (1920-). American physicist. At 22 he was working on the Manhattan Project, subsequently studied under Fermi (q.v.) and in 1958 became prof. at the Univ. of California. In 1959 he was awarded a Nobel prize with Emilio Segre for their work confirming the existence of the anti-proton.

CHAMBERLAIN, Lord. An administrative office in the royal household, responsible for engaging the staff, etc., and for appointing the tradesmen. New plays were submitted to the L.C.'s examiner for a licence before public performance until censorship ended 1968. The office is temporary, and its appointment is in the hands of the Government.

CHAMBERLAIN, Lord Great. The only Officer of State whose position survives from Norman times. His principal duties are to arrange Westminster Hall and the Houses of Parliament at the opening of the Houses by the monarch and to attend the sovereign at the coronation. He is also responsible for the ceremony at the creation of peers and bishops.

CHAMBER MUSIC. That class of music which is suitable for performance in a chamber, as opposed to that intended for the concert hall. As now used the term is applied to music written for a small combination of instruments, played with one instrument to a part. Many such combinations are possible, but of these the string quartet is the most important. A string quartet of G. Allegri (1582-1652) is believed to be the first example of its kind, while among English composers who wrote 'fantasy trios', or 'fancies', were Byrd and Orlando Gibbons. In the 17th and early 18th cents. C.M. generally had the harpsichord as a basis. The C.M. sonata with a figured bass accompaniment was established by the great Italian school of violinists - Vivaldi, Corelli, etc. From the 18th cent. onwards a new type of C.M. was first experimentally worked out by Haydn. In his string quartets each part plays, as it were, on equal terms, the keyboard instrument, as a basis, being eliminated. Haydn also developed the classical sonata form. His

village of Karkamis; nearby on the Syrian side of the frontier is Jerablus.

CARCO (kahrkōh'), Francis. Pseudonym of French novelist François Carcopino-Tusoli (1886–1958). B. in New Caledonia, he excelled in depicting the seamy side of the Latin Quarter of Paris—*Rien qu'une femme* (1923) and *L'Homme de Minuit* (1938).

CARDAMINE. Genus of plants of the family Cruciferae. The best-known British species is the lady's smock or cuckoo flower.

CARDAN, Girolamo (1501–76). Italian physician, mathematician, philosopher, and astrologer. B. at Pavia, he became professor of medicine there in 1543, and wrote 2 important works on physics and natural science—*De subtilitate rerum* (1551) and *De varietate rerum* (1557).

CARDENAS, Lazaro (1895–). Mexican general and statesman. In early life a civil servant, he took part in the revolutionary campaigns 1915–29 that followed the fall of President Diaz, was President of the republic 1934–40, and introduced many Socialist measures. He was Min. of National Defence 1943–5.

CARDIFF. Capital of Wales and county town of Glamorganshire, on the Taff, with docks on the Bristol Channel. It is essentially a modern city, its importance dating from the opening of the docks in 1839. It also has an airport.

C.'s development was greatly helped by the 2nd marquess of Bute (1793–1848) and his trustees who extended the docks. The prosperity of this, one of the largest industrial and commercial centres of the British Isles, was built up on its coal export trade which in 1839 amounted to 165,880 tons, in 1913 to 10½ million tons. This trade began to decline in the 1920s and virtually ceased during the S.W.W., facing Cardiff's people with a serious struggle. Iron and steel exports continued to be extensive, and C.'s import trade grew, chief imports being timber, grain and flour, meat, tobacco. Industries include ship repairing, flour-milling, engineering, and the manufacture of paper, iron and steel goods, and enamel ware.

C. dates from Roman times, the later town being built round the Norman castle: this, the residence of earls and marquesses of Bute from the 18th cent., was given to the city in 1947 by the 5th marquess. In Cathays Park is a group of public buildings including the law courts and city hall, the Welsh national museum, registry of the university of Wales, Glamorgan county hall, Cardiff technical college and the university college of S. Wales, offices of the Welsh board of health, the Welsh national war memorial, and the Temple of Peace and Health. St. John's Church has a perpendicular tower. C. is the seat of an R.C. archbishopric. Llandaff, on the right bank of the Taff, seat of a bishopric from the 6th cent., was included in C. in 1922; its cathedral, virtually rebuilt in the 19th cent. and badly damaged in a German air raid, 1941, was restored 1948–57. It has a giant figure of 'Christ in Majesty' by Epstein. See illus. p. 396.

Constituted a county borough in 1888, made a city with a lord mayor by royal charter in 1905, C. was named capital of Wales in 1955. Area 28 sq. m.; pop. (1961) 256,270.

CARDIGAN. Cap. of Cardigan co., S. Wales, 3 m. from the mouth of the Teifi. The port is now little used. The Teifi has salmon fisheries. Pop. (1961) 3,780.

CARDIGANSHIRE. Welsh county, facing Cardigan Bay. It is mainly mountainous, rising to Plynlimon (2,468 ft.) in the N.E., and is drained by the Rheidol, Ystwyth, Teifi, and Towy. The industries include salmon and longshore fishing, sheep rearing, woollens, and some agriculture. The co. has some fine scenery. Cardigan is the co. town; other towns are Lampeter and Aberystwyth. Area 692 sq. m.; pop (1961) 53,564.

CARDINAL. In the R.C. church, the highest dignitary next to the Pope. Originally a C. was any

priest in charge of a major parish; but in 1567 the term was confined to the members of the Sacred College, and in 1586 their number was limited to 70 by Sixtus V, increased to over 100 under John XXIII and Paul VI. The Cs. assist the Pope in liturgical matters and in the temporal business of the Church, give their advice in all matters of doctrine, canonizations, and convocation of councils, and are responsible for electing the Pope from amongst their number. They are nominated and elected by the Pope and must come to Rome for the ceremony within a year, to receive the red hat which is the badge of office.

CARDUCCI (kahrdooch'ē), Giosuè (1835–1907). Italian poet. B. in Tuscany, he was appointed in 1860 professor of Italian literature at Bologna, and won a distinguished place by his lecturing and critical work, and also as a poet. His *Inno a Satana* (Hymn to Satan, 1865) was full of revolutionary feeling, and was followed by several other vols. of verse, in which his nationalist sympathies are apparent. He was awarded the Nobel prize for literature in 1906.

CARDUS, Sir Neville (1889–). British writer on music and cricket. B. in Manchester, he was a cricket professional at Shrewsbury school 1912–16, and was on the *Guardian* staff 1917–39 and from 1951. His books incl. an autobiography and a study of his friend of Sir Thomas Beecham (1961). Knighted 1967.

CARDWELL, Edward, visct. (1813–86). British Liberal statesman. He entered Parliament as a Peelite in 1842, and 1868–74 was Sec. for War under Gladstone, when he carried out many reforms, including the abolition of the purchase of military commissions and promotions.

CAREW (kār'i), Thomas (1595?–1638?). English poet. B. in Kent, he was in 1628 a gentleman of the privy chamber to Charles I, and was the most brilliant lyricist as well as the most deliberate and finished craftsman of the school of 'Cavalier Poets'.

CAREY, Henry (c. 1690–1743). British poet and musician, remembered for the song 'Sally in Our Alley'. 'God Save the King' (both words and music) has also been attributed to him.

CARICATURE. George IV—'A Voluptuary under the Horrors of Digestion' by James Gillray. Photo: Radio Times Hulton Picture Library.

1947. Planned by Le Corbusier, in the foothills of the Himalayas 20 m. N. of Ambala, C. is the joint cap. of Haryana and Punjab, and Punjab Univ. (1947) serves both states. The city, with a 10-mile surrounding area, has also been a union terr. of India since 1966. Pop. (1967) 89,000.

CHANDLER, Raymond (1888–1959). American thriller writer. B. in Chicago, he shared with Hammett (q.v.) the invention of tough crime writing and of the 'private eye' hero, such as his own Philip Marlowe. His books incl. *The Big Sleep* (1939), *Farewell, My Lovely* (1940) and *The Lady in the Lake* (1943).

CHANDOS (shan'dos), Oliver Lyttelton, 1st visct. C. (1893–). British Cons. politician. Entering Parliament in 1940, he was Min. of Production 1942–5, and as Sec. of State for the Colonies 1951–4 coped with Mau Mau in Kenya and Communist terrorism in Malaya.

CHANDRAGUPTA MAURYA (called Sandrocottus by the Greeks). Ruled in N. India c. 321–c. 296 B.C. as king of Magadha.

CHANEY, James Eugene (1885–). American soldier. He commanded the U.S. Army Forces in Britain in 1941, and in 1945 was commanding general of the army forces which occupied Iwo Jima.

CHANGCHOW. Chinese city in Fukien, 30 m. W. of Amoy, which has supplanted it as the commercial centre of the area; it produces satin, sugar, etc.; pop. (est.) 65,000. Another C. is in Kiangsu, 70 m. E.S.E. of Nanking, and on the Grand Canal; pop. (est.) 130,000.

CHANGCHUN. Chinese industrial city, in Kirin prov. A railway junction and the centre of an agricultural district, it makes machinery, motor vehicles, etc. As Hsingking (new capital) it was capital of Manchukuo 1932–45. Pop. (1965) 1,800,000.

CHANGSHUA (chahngshah). River port, on the Siangkiang, cap. of Hunan prov., China. It trades in rice, tea, timber, and non-ferrous metals; works antimony, lead, and silver; and makes porcelain and embroideries. Pop. (1957) 703,000.

CHANNEL ISLANDS. Group of islands lying in the English Channel, off the N.W. coast of France. Since the Norman conquest they have been a possession of the English Crown. They lie 50–100 m. S. of England and 10–30 m. N.W. of France. The largest is. are Jersey, Guernsey, Alderney, Sark, and Herm; there are besides a number of smaller islets and many rocks, the total area of the group being about 75 sq. m.

French is the official language, though English is more widely used. English currency is used, in addition to local coinage. The is. have their own laws.

CHANNEL ISLANDS. An ancient cider press at Model Farm, St. Lawrence, on Jersey.
Photo: British Travel and Holidays Association.

Unless specially signified, the C.I. are not bound by Acts of Parliament. They are in the diocese of Winchester. They are the only part of the dukedom of Normandy still held by Britain. During the S.W.W. the Germans occupied the is. from June 30, 1940, until May 9, 1945. Pop. (1961) 110,503.

CHANNEL SWIMMING. The first to swim the English Channel was Capt. Webb on Aug. 25, 1875; he swam from Dover to Calais in 21 hr. 45 min. The fastest crossing (France to England) was by Yorkshireman Barry Watson, 1964, in 9 hr. 35 min. The first man to swim the channel in both directions was E. H. Temme, in 1927 and 1934, and the first to do so 'non-stop' was Argentinian Antonio Abertondo 1961.

CHANNEL TUNNEL. Proposed land link between England and France under the English Channel, first suggested by a Frenchman named Mathieu to Napoleon I in 1802. Another Frenchman, Thomé de Gamond (1807–75), put the idea to Napoleon III in 1856. Isambard Brunel and other British engineers became interested, and a convention between the 2 countries was signed in 1875. Excavations were begun in 1882 near Dover and near Calais, but were abandoned a year later after a select committee of the House of Commons rejected the proposal on grounds of military hazard. In 1964 the British and French govts. decided on the construction of a rail T. to be completed by the early 1970s.

CHANNING, William Ellery (1780–1842). American Unitarian divine, a minister at Boston and a prominent advocate of the abolition of slavery.

CHANT. Word used in common speech to denote any vocal melody or song, especially of a slow and solemn character; but applied specifically to a type of melody used in the services of the Christian Church, which is specially adapted for singing the psalms, canticles and other non-metrical portions of the liturgy. The Ambrosian and Gregorian Cs. are forms of plainsong melody.

CHANTILLY (shoñtēyē). Town in Oise dept., France, 24 m. N.N.E. of Paris. Its racecourse is the centre of French horse-racing. Pop. (1962) 8,324.

CHANTREY, Sir Francis Legatt (1781–1841). British sculptor. Son of a carpenter, he was apprenticed to a Sheffield carver and gilder, but went to London in 1802 to study at the R.A. He made a reputation for his busts and statues of Wellington, Wordsworth, Scott (q.v.) and others, but is most celebrated for his child studies, notably the 'Sleeping Children' (1817) in Lichfield cathedral. The C. Bequest provides for the income from his private fortune to be used by the R.A. for the purchase of works of art for the benefit of the nation: these are housed in the Tate Gallery.

CHANUTE (shahnūt), Octave (1832–1910). French aviation pioneer. B. in Paris, he went to America and became the chief engineer of the Erie Railroad in 1872. He built several gliders in 1896, and had a marked success with a biplane, in which he completed over 700 glides.

CHAPEL ROYAL. The original C.R. of the English court, existing at least from 1135, was not a building but the royal retinue of priests, singers and musicians. In the 15th and 17th cents. the choirboys contributed to the development of the drama by their presentation of interludes. The C.R. have incl. 7 the name attaches to the royal household at Buckingham Palace, Hampton Court, Sandringham, Windsor Castle and the Tower of London (St. Peter ad Vincula).

CHAPLIN, Charles (1889–). British film actor-producer. B. in London, he 1st appeared on stage at 5, but made his world-wide reputation as the down-trodden trampish little character with smudge moustache, bowler hat and cane in silent films, e.g. *The Gold Rush* (1925), *The Circus* (1928), *City Lights*

gave (1837–40), the most successful were those *On Heroes, Hero-Worship, and the Heroic in History* (1841). At this period he also wrote *Chartism* (1839), attacking the doctrine of *laissez-faire*; *Past and Present* (1843), a comparison of labour in the 13th and the 19th cents.; and *Latter-Day Pamphlets* (1850), a criticism of popular government. The notable *Letters and Speeches of Cromwell* (1845) was followed by the miniature life of his friend *John Sterling* (1851). C. then began his monumental *History of Frederick the Great* (1858–65), and in the year of its completion was elected rector of Edinburgh university. After the death of his wife in 1866 he devoted most of his time to editing her letters and preparing the *Reminiscences*. The publication of these (in 1883 and 1881 respectively), and of the biography by Froude, caused a public outcry because of the rather unfavourable light thrown on C.'s character.

CARMAN, William Bliss (1861–1929). Canadian lyric poet. B. in New Brunswick, he became a journalist. His first vol. of verse, *Low Tide on Grand Pré*, attracted considerable attention in 1893. It was followed by *Songs from Vagabondia* (1894), *Ballads of Lost Haven* (1897), and many more.

CARMA'RTHEN. Co. town (bor.) of Carmarthenshire, S. Wales, on the Towy, 8 m. from its mouth. It is a small port and a railway junction; parts of a Norman castle are incorporated in the co. gaol here. C. makes ropes and woollens. Pop. (1961) 13,249.

CARMARTHENSHIRE. County of S. Wales, bordering on the Bristol Channel; it is the largest co. in the principality. The N. and E. are hilly and wooded, with fertile valleys. Arable and pastoral farming are carried on. In the S.E. the Loughor valley has valuable anthracite seams, and Llanelly and Ammanford are engaged in coal- and iron-mining, tin-plate and other works. The Towy, Teifi, and Taf are the chief rivers. The co. town is Carmarthen; other towns are Kidwelly, Llandovery, Cwmamman. Area 919 sq. m.; pop (1961) 167,736.

CARMELITES or *White Friars*. Religious order of mendicants in the R.C. church. Traditionally they originated in the days of Elijah, who is supposed to have lived on Mt. Carmel in Palestine. Historically the first congregation was founded on Carmel by Berthold, a crusader from Calabria, about 1155. According to the rule which the patriarch of Jerusalem drew up for them about 1210, they lived as hermits in separate huts. About 1240 the Saracen conquests compelled them to move from Palestine, and they took root in the west, particularly in France and England, where the order became cenobitical and mendicant. There were many reform movements in the order's history, of which the most important was that initiated by St. Theresa. In 1562 she founded in Avila a convent where the rule was stricter than that hitherto observed, and with the co-operation of St. John of the Cross and others she established priories and further nunneries, whose members were called the Discalced or bare-footed Cs., to distinguish them from the senior branch of the Calced Cs. The Cs. have devoted themselves largely to missionary work and mystical theology. Their habit consists of a brown tunic with a white overmantle.

CARMONA, Antonio Oscar de Fragoso (1869–1951). Portuguese general and statesman. In 1926 he became P.M. and virtual dictator, and from 1928 he was Pres. of the Portuguese republic, being re-elected in 1935, 1942, and 1949.

CARNAC (kahrnakh'). Village in the dept. of Morbihan, France, 17 m. S.E. of Lorient. In the neighbourhood there is a fine collection of megalithic remains of the period 2000–1500 B.C., incl. various types of tomb and a series of stone alignments. In the largest of the 3 latter (Menec) well over 1,000 stones (2 to 13 ft. high) are arranged in 11 rows with a circle at the W. end. They were obviously used

for processions, possibly linked with rituals for the dead. Pop. (1962) 3,641.

CAR'NAP, Rudolf (1891–). American philosopher, the world's foremost exponent of logical empiricism. B. at Wuppertal, Germany, he was a member of the Vienna Circle who adopted Mach (q.v.) as their guide, and in 1935 went to the U.S., where he was prof. of philosophy at the Univ. of California 1954–62. His books incl. *The Logical Syntax of Language* (1934), and *Meaning and Necessity* (1956).

CARNARVON, CARNARVONSHIRE. See CAERNARVON, CAERNARVONSHIRE.

CARNATION. Name given to the numerous double-flowered cultivated varieties of the clove-pink (*Dianthus caryophyllus*). They are divided into flake, bizarre, and picotees, according as the petals exhibit one or more colours on their white ground, or have it dispersed in strips, or as a border to the petals.

CARNÉ (kahrneh'), Marcel (1909–). French film director. A master of subtle depths of characterisation, his films incl. *Quai des brumes* (1938), *Le Jour se lève*, and *Les Enfants du Paradis* (1944).

CARNEGIE (kahrneg'i), Andrew (1835–1919). Scottish-American millionaire. B. at Dunfermline, he was taken by his parents to U.S.A. in 1848, and at 14 became a telegraph boy in Pittsburg. Subsequently he became a railway employee, rose to be superintendent, and by the introduction of sleeping-cars and successful investments in oil, laid the foundations of a fortune. Next he concerned himself with the development of the Pittsburg iron and steel industries, and built up a vast 'empire' which he disposed of to the U.S. Steel Trust in 1901. From that time he lived at Skibo castle in Sutherland, and devoted his wealth to philanthropic purposes, notably the provision and equipment of libraries, the endowment of universities, the Carnegie Hero Fund, etc. On his death the C. Trusts continued his benevolent activities. *Carnegie Hall* in New York, opened 1891 as The Music Hall, was renamed in 1898 in recognition of his large contribution to its construction.

CARNEGIE, Dale (1888–1955). American author and teacher. B. in Missouri, he planned a teaching career, but tried journalism and the stage before becoming Y.M.C.A. instructor on public speaking. An instant success, he achieved world fame with *How to Win Friends and Influence People* (1938).

CARNIOLA. A former crownland and duchy of Austria, most of which was included in Slovenia, part of the kingdom of the Serbs, Croats, and Slovenes (later Yugoslavia) in 1919. The westerly districts of Idrija and Postojna, then allocated to Italy, were transferred to Yugoslavia in 1947.

CARNI'VORA. An order of the mammalia, whose members are flesh eaters—though they are not the only animals which eat flesh and some of them are omnivorous or largely herbivorous. They are classified by variations in the skull and skeleton, the teeth, and various external features. There are 2 sub-orders, the Pinnipedia and the Fissipedia.

The *Fissipedia*, which are terrestrial, semi-arboreal, or amphibious, are sub-divided into 2 tribes, the Arctoidea and the Aeluroidea. The Arctoidea include the families of Ursidae or bears; the Canidae or dogs, wolves and foxes; the Procyonidae containing such dissimilar mammals as the racoon, coatimundi, kinkajou, and cacomistle; the Mustelidae including the otters, skunks and badgers, weasels and polecats; the Ailuropodidae containing the giant panda; the Ailuridae (common panda). The Aeluroidea incl. the Felidae or cats; the Hyenidae comprising the hyenas and aard-wolf; the Herpestidae containing the mongooses and suricates, the Cryptoproctidae containing only the fossa; the Viverridae containing the civets, genets, lingsangs, palm civets, binturong.

The 2nd sub-order, the *Pinnipedia*, with the limbs

were dissolved, and that of 1628 refused supplies until C. had accepted the Petition of Right. In 1629 it attacked C.'s illegal taxation and support of the Arminians in the Church, whereupon he dissolved parliament and imprisoned its leaders.

For 11 years he ruled without a parliament, raising money, by expedients which alienated the entire nation, while the Star Chamber suppressed opposition by persecuting the Puritans. When C. attempted in 1637 to force a prayer book on the English model on Presbyterian Scotland he found himself confronted with a nation in arms. The Short Parliament, which met in April 1640, refused to grant money until grievances were redressed, and was speedily dissolved. The Scots then advanced into England, and forced their own terms on C. The Long Parliament met on Nov. 3, 1640, and declared extra-parliamentary taxation illegal, abolished the Star Chamber and other prerogative courts, and voted parliament could not be dissolved without its own consent. Laud and other ministers were imprisoned, and Strafford condemned to death. After the failure of his attempt to arrest the parliamentary leaders on Jan. 4, 1642, C. withdrew from London, and on Aug. 22 declared war on parliament by raising his standard at Nottingham. His defeat at Naseby in June 1645 ended all hopes of victory; in May 1646 he surrendered at Newark to the Scots, who in Jan. 1647 handed him over to parliament. In June the army seized him, and carried him off to Hampton Court. While the army leaders strove to find a settlement, C. secretly intrigued for a Scottish invasion. In Nov. he escaped to Carisbrooke; a Scottish invasion followed in 1648, and was shattered by Cromwell at Preston. In Jan. 1649 the House of Commons set up a high court of justice, which tried C. and condemned him to death. He was beheaded on Jan. 30 before the Banqueting Hall in Whitehall, and was buried in St. George's Chapel, Windsor.

CHARLES II (1630-85), King of Great Britain and Ireland from 1660. B. at St. James's Palace, the son of Charles I, he lived with his father at Oxford 1642-5, and after the victory of the parliament withdrew to the Continent. Accepting the Covenanters' offer to make him king, he landed in Scotland in 1650, and was crowned at Scone on Jan. 1, 1651. An attempt to invade England was ended on Sept. 3 by Cromwell's victory at Worcester. C. escaped, and after many adventures reached the Continent. For 9 years he wandered through France, Germany, Flanders, Spain, and Holland until the opening of negotiations by Monk in 1660 offered new hope. In April C. issued the Declaration of Breda, promising a general amnesty and freedom of conscience. Parliament accepted the Declaration; C. was proclaimed king on May 8, landed at Dover on the 26th, and entered London 3 days later.

Politically he had 3 aims: 'not to go on his travels again'; to make himself absolute; and to secure toleration, and if possible supremacy, for Catholicism. He hovered in religion between Catholicism and scepticism, but for his subjects he favoured the former as most consistent with absolute monarchy. For the present he entrusted the government to Clarendon, who arranged his marriage in 1662 with Catherine of Braganza, but his tutelage soon became irksome.

The disasters of the Dutch War furnished an excuse in 1667 for banishing him, and he was replaced by

CHARLES II. Artist unknown. Photo: N.P.G.

the Cabal—Clifford and Arlington, both secret Catholics, and Buckingham, Ashley and Lauderdale, who had links with the Dissenters. In 1670 C. signed the Secret Treaty of Dover, the full details of which were known only to Clifford and Arlington, whereby he promised Louis XIV he would declare himself a Catholic, re-establish Catholicism in England, and support Louis's projected war against the Dutch; in return Louis was to finance C. and in the event of resistance to supply him with troops. War with Holland followed in 1672, and at the same time C. issued the Declaration of Indulgence, suspending all penal laws against Catholics and Dissenters. Parliament forced C. in 1673 to withdraw the Indulgence and accept a Test Act excluding all Catholics from office, and in 1674 to end the war with Holland. This broke up the Cabal, while Ashley (Lord Shaftesbury), who had learned the truth about the treaty, assumed the leadership of the opposition. Danby, the new chief minister, built up a Court Party in the Commons by wholesale bribery, while subsidies from Louis relieved C. from dependence on parliament. In 1678 Oates's announcement of a 'Popish Plot' released a wholesale panic, which Shaftesbury exploited to introduce his Exclusion Bill, excluding James, Duke of York, from the succession as a Papist; instead he hoped to substitute C.'s illegitimate son Monmouth. C. played for time, counting on a Royalist reaction and offering compromises which the opposition rejected. In 1681 his last parliament was summoned at Oxford; the Whigs attended armed, but when Shaftesbury rejected a last compromise, C. dissolved parliament and the Whigs fled in terror.

Henceforward C. ruled without a parliament. For money he relied on subsidies from Louis. When the Whigs plotted a revolt their leaders were executed, while Shaftesbury and Monmouth fled to Holland. Before C. d. in 1685 he had achieved his ambition to free himself from parliamentary control.

CHARLES (1948-), Prince of the United Kingdom, heir apparent to the British throne, and Prince of Wales. B. at Buckingham Palace on Nov. 14, 1948, he is the first-born child of Queen Elizabeth II and the Duke of Edinburgh. He entered Cheam School, Berks, in 1954, and followed in the footsteps of his father. In 1958 he was created Prince of Wales (holder of the title), and studied at Trinity Coll., Cambridge, from 1967, with a period at Univ. Coll. Aberystwyth 1969.

CHARLES. Name of 7 rulers of the Holy Roman Empire. **CHARLES I** was Charlemagne (q.v.). **CHARLES II, THE BALD (823-77)**, the younger son of Louis I, the Pious, warred against his eldest brother the Emperor Lothair I, until the treaty of Verdun (843) assigned to C. the W. Frankish Kingdom, i.e. modern France and the Spanish March. He was crowned emperor at Rome in 875. **CHARLES III, THE FAT (832-88)**, the youngest son of Louis the German, became king of the W. Franks in 885, thus uniting for the last time the whole of Charlemagne's empire. He was deposed in 887. **CHARLES IV (1316-78)**, son of John of Luxemburg, king of Bohemia, was elected king of Germany in 1346, and in 1347 obtained power over all Germany. He founded the first German university, at Prague, in 1348. **CHARLES V (1500-58)**; see below. **CHARLES VI (1685-1740)**, the 2nd son of the emperor Leopold I, was put forward as the Austrian claimant to the Spanish dominions (see SPANISH SUCCESSION). In 1711 he abandoned Spain on becoming Holy Roman Emperor, and returned to Germany. **CHARLES VII (1697-1745)** was elector of Bavaria when Charles VI died, and contested the claim of the latter's dau., Maria Theresa, to the imperial crown. In 1742 he himself was crowned emperor.

CHARLES V (1500-58), Holy Roman Emperor. B. at Ghent, the son of Philip, son of the emperor

CARPET. The finest carpets in the world are the Persian, hand-tufted in the traditional manner (left). The closest machine-made type is the Axminster, seen (right) being manufactured on a wide gripper loom, which is also made of tufts inserted in the fabric, though these are bound down and not knotted.

Courtesy of the Wilton Royal Carpet Factory.

the Dutch East Indies. There is an Anglican bishop of C. with his seat on Thursday Is., Queensland.

CARPENTIER (kahrpañtyā'), Georges (1894-). French boxer. He worked in a coal mine as a boy, won the French boxing championship in every weight and division, knocked out Joe Beckett in 1919, held the world's light heavyweight championship 1920-2, and in 1921 was beaten by Jack Dempsey in New York.

CARPET. Thick textile fabric, generally made of wool, used for covering floors, stairs, etc. The earliest known Cs. are those excavated at Passyrych in S.E. Siberia by Rudenko and date from c. 500 B.C., but it was not until the later Middle Ages that Cs. reached Western Europe from Turkey, Cardinal Wolsey being an eager buyer. Persian Cs., which reached a still unrivalled peak of artistry in the 15th and 16th cents., were rare in Britain until the mid-19th cent., reaching America a little later. The subsequent demand led to a revival of organized C-making in Persia. Other countries with a long tradition of fine carpets are India, Pakistan, and China. Europe copied oriental technique, but developed western designs: France produced beautiful work at the Savonnerie and Beauvais establishments under Louis XIV and XV, and Exeter, Axminster, London and Wilton became famous British centres in the 18th cent., though Kidderminster is the biggest centre

today. The 1st C. factory in the U.S.A. was estab. at Philadelphia, still a large producing centre, in 1791.

The 3 main types of machine-made Cs. today are the 'Wilton', remarkable for its fine, close texture and lending itself to design effects; the 'Axminster' which economizes in material, each tuft being on the surface with none hidden in the fabric as with 'Wilton'; and the 'tufted' Cs. The last-named are a post-war development, making wide use of the new synthetic fibres: the pile threads are looped through a hessian backing to which they are then anchored by a layer of rubber compound in the form of latex. Tufted Cs., originally inferior in quality and design now rival the traditionally woven Cs., and the latter have adopted the foam rubber and other backings first developed to give resilience, etc. to tufted types.

Cs. and rugs have also often been made in the home as a pastime, cross and tent stitch on canvas being widely used in the 18th and 19th cents.: famous among modern Cs. of this type were those produced by Queen Mary, consort of George V.

CARPET-BAGGER. Name given in U.S. history to the disreputable politicians and office seekers from the North who swarmed into the Southern States following the Civil War of 1861-5 and in co-operation with the local white riffraff (the 'scallawags'), and the Negroes, established governments which were a by-word for oppression and corruption. They were so called because they were supposed to own no property but what they carried in their carpet-bags.

CARPINI (kahrpē'nē), Johannes de Plano (c. 1182-1252). Franciscan friar and traveller. In 1245 Pope Innocent IV placed him in charge of a fact-finding mission to Mongolia, from which he returned in 1247. His history of the Mongols is a valuable piece of practical research.

CARRACCI (kahrah'chē). Three Italian painters who founded the eclectic school of painting, i.e. those who studied the works of the great masters and chose what they considered to be the chief merits of each and combined those in their own works. Lodovico C. (1555-1619), who lived at Bologna, was the initiator of the school. His nephews, Agostino C. (1557-1602) and Annibale C. (1560-1609), helped him in his work. The school is particularly well represented in Bologna.

CARRA'NZA, Venustiano (1859-1920). Mexican statesman. In 1917 he was elected President and during the F.W.W. kept his country neutral. He was killed in a revolution.

CARRARA (kahrah'rah). Italian town in the Apennines, 37 m. N.N.W. of Leghorn, with quarries of the finest white marble in the world. These were

CARPATHIANS. The highest group of the central Carpathians, the Tatra Mountains, lie partly on Czechoslovakia's northern frontier and partly in Poland. Štrbské Pleso Lake, 4,000 ft. above sea-level, is a popular Czech holiday resort.

Courtesy of the Czechoslovak Travel Bureau.

CHARLESTON, S. CAROLINA. The neighbourhood is famed for its flowers, which are a tourist attraction. In spring the Magnolia Gardens have a splendid display of azaleas, magnolias and camellias.

Courtesy of the Magnolia Gardens, S. Carolina.

Britain, during the Seven Years War and the War of American Independence. At home C. carried out a programme of reforms and expelled the Jesuits. **CHARLES IV** (1748–1819) succeeded his father, C. III, in 1788, but left the government wholly in the hands of his wife and her lover Godoy. In 1808 C. abdicated in favour of his son Ferdinand. He became a pensioner of Napoleon, and d. at Rome.

CHARLES ALBERT (1798–1849). King of Sardinia. He showed Liberal sympathies in early life, and after his accession in 1831 introduced certain reforms. On the outbreak of the 1848 revolution he granted a constitution and declared war on Austria. His troops were defeated at Custoza and Novara, and in 1849 he abdicated in favour of his son Victor Emmanuel and retired to a monastery, where he died.

CHARLES AUGUSTUS (1757–1828). Grand Duke of Saxe-Weimar. He succeeded his father in infancy, fought against the French in 1792–4 and 1806, and is remembered as the patron and friend of Goethe.

CHARLES EDWARD STUART (1720–88), 'The Young Pretender'. He was b. at Rome, the son of James, the Old Pretender, and grandson of James II, and created Prince of Wales at birth. In July 1745 he sailed for Scotland, and landed in Inverness-shire with 7 companions. On Aug. 19 he raised his father's standard, and within a week had rallied an army of 2,000 Highlanders. He entered Edinburgh almost without resistance, won an easy victory over General Cope at Prestonpans, invaded England, and by Dec. 4 had reached Derby, where his officers insisted on a retreat. The army returned to Scotland, and won a victory at Falkirk, but was forced to retire to the Highlands before Cumberland's advance. On April 16 at Culloden C.E.'s army was completely routed by Cumberland, and he himself fled. For five months he wandered through the Highlands with a price of £30,000 on his head before escaping to France. He visited England secretly in 1750, and may have made other visits. In later life he degenerated into a friendless drunkard.

CHARLES MARTELL ('the Hammer') (c. 688–741). Frankish ruler. An illegitimate son of Pepin of Heristal, he ruled the E. of the Frankish kingdom from 717 as mayor of the palace, and the whole kingdom from 731. His victory near Poitiers in 732 ended the Arab invasions of France.

CHARLES THE BOLD (1433–77). Duke of Burgundy. Son of Philip the Good, he inherited Burgundy and the Low Countries from him in 1465 and it was his ambition to create a kingdom stretching from the mouth of the Rhine to the mouth of the Rhône. He formed the League of the Public Weal against Louis

XI of France, invaded France in 1471, and laid the country waste as far as Rouen. His ambitions now united against him the Emperor, Lorraine, and the Swiss; he captured Nancy, but was defeated at Granson, and again at Morat (1476). Nancy was lost and while attempting to recapture it he was killed in battle. After his death his possessions in the Netherlands passed, by the marriage of his dau. Mary to Maximilian, to the Habsburgs.

CHARLES'S LAW. This law stated by Jacques Charles (1746–1823), French physicist, in 1787 and independently by Gay-Lussac in 1802 states that the volume of a given mass of gas at constant pressure increases by $1/273$ of its volume at 0°C . for each degree Celsius rise of temperature, i.e. the coefficient of expansion of all gases is the same. The law is only approximately true and the coefficient of expansion is generally taken as 0.003663 per deg. C.

CHARLESTON. Main port and city of S. Carolina, U.S.A., dating from 1680. It has a fine sheltered harbour. In the vicinity are many historic houses and fine gardens. Pop. (1960) 65,925.

CHARLESTON. Chief city of W. Virginia, U.S.A., on the Kanawha. It is the centre of a district producing coal and natural gas. Pop. (1960) 85,796.

CHARLOCK or Wild Mustard. A plant (*Sinapis arvensis*) of the family Cruciferae. It is a common annual weed in Britain, reaching a height of 2 ft., and with yellow flowers.

CHARLOT (shahrloh'), André (1882–1956). Producer of plays and films. B. in Paris, he produced several witty revues in London and became a naturalized British subject in 1922. He went to America in 1937 and appeared in films.

CHARLOTTE (1896–). Grand Duchess of Luxembourg. Dau. of the Grand Duke William, she succeeded to the throne in 1919 on the abdication of her sister Marie Adélaïde and m. Prince Felix of Bourbon-Parma. In 1961 she delegated her authority to her eldest son hereditary Grand Duke Prince Jean (1921–), abdicating in his favour 1964.

CHARLOTTE AUGUSTA, Princess (1796–1817). Only child of George IV and Caroline of Brunswick, and heir to the throne. She m. in 1816 Prince Leopold of Saxe-Coburg, but d. in childbirth 18 months later.

CHARLOTTE SOPHIA (1744–1818). Queen consort. The dau. of the duke of Mecklenburg-Strelitz, she m. George III in 1761, and bore him 9 sons and 6 daughters.

CHARON (kā'ron). In Greek legend the ferryman of the souls of the dead over the river Styx.

CHARPENTIER (shahrpoñtyeh'), Gustave (1860–1956). French composer. His great success was *Louise* (1900), an opera dealing realistically with Parisian working-class life, to which he added a disappointing sequel *Julien* in 1913. In 1902 he founded an institution to give working-class girls free musical training.

CHARRON (shahrroh'), Pierre (1541–1603). French philosopher. He was a lawyer before he entered the Church. His first book, *Les trois Vérités* (1594), was a defence of belief in God, Christianity and Roman Catholicism. Yet in his *De la Sagesse* (1601) C. revealed himself as an advanced sceptic.

CHARTERIS, Leslie (1907–). Anglo-American novelist. B. at Singapore, the son of a surgeon, he had a varied career in many exotic occupations which were

LESLIE CHARTERIS. On his right wrist the author wears a bracelet with the debonair, haloed pin-man familiar to readers all over the world as the emblem of the 'Saint'

CARPET. The finest carpets in the world are the Persian, hand-tufted in the traditional manner (left). The closest machine-made type is the Axminster, seen (right) being manufactured on a wide gripper loom, which is also made of tufts inserted in the fabric, though these are bound down and not knotted.
Courtesy of the Wilton Royal Carpet Factory.

the Dutch East Indies. There is an Anglican bishop of C. with his seat on Thursday Is., Queensland.

CARPENTIER (kahrpāntyā'), Georges (1894–). French boxer. He worked in a coal mine as a boy, won the French boxing championship in every weight and division, knocked out Joe Beckett in 1919, held the world's light heavyweight championship 1920–2, and in 1921 was beaten by Jack Dempsey in New York.

CARPET. Thick textile fabric, generally made of wool, used for covering floors, stairs, etc. The earliest known Cs. are those excavated at Passyppych in S.E. Siberia by Rudenko and date from c. 500 B.C., but it was not until the later Middle Ages that Cs. reached Western Europe from Turkey, Cardinal Wolsey being an eager buyer. Persian Cs., which reached a still unrivalled peak of artistry in the 15th and 16th cents., were rare in Britain until the mid-19th cent., reaching America a little later. The subsequent demand led to a revival of organized C.-making in Persia. Other countries with a long tradition of fine carpets are India, Pakistan, and China. Europe copied oriental technique, but developed western designs: France produced beautiful work at the Savonnerie and Beauvais establishments under Louis XIV and XV, and Exeter, Axminster, London and Wilton became famous British centres in the 18th cent., though Kidderminster is the biggest centre

today. The 1st C. factory in the U.S.A. was estab. at Philadelphia, still a large producing centre, in 1791.

The 3 main types of machine-made Cs. today are the 'Wilton', remarkable for its fine, close texture and lending itself to design effects; the 'Axminster' which economizes in material, each tuft being on the surface with none hidden in the fabric as with 'Wilton'; and the 'tufted' Cs. The last-named are a post-war development, making wide use of the new synthetic fibres: the pile threads are looped through a hessian backing to which they are then anchored by a layer of rubber compound in the form of latex. Tufted Cs., originally inferior in quality and design now rival the traditionally woven Cs., and the latter have adopted the foam rubber and other backings first developed to give resilience, etc. to tufted types.

Cs. and rugs have also often been made in the home as a pastime, cross and tent stitch on canvas being widely used in the 18th and 19th cents.: famous among modern Cs. of this type were those produced by Queen Mary, consort of George V.

CARPET-BAGGER. Name given in U.S. history to the disreputable politicians and office seekers from the North who swarmed into the Southern States following the Civil War of 1861–5 and in co-operation with the local white riffraff (the 'scallawags'), and the Negroes, established governments which were a by-word for oppression and corruption. They were so called because they were supposed to own no property but what they carried in their carpet-bags.

CARPINI (kahrpē'nē), Johannes de Plano (c. 1182–1252). Franciscan friar and traveller. In 1245 Pope Innocent IV placed him in charge of a fact-finding mission to Mongolia, from which he returned in 1247. His history of the Mongols is a valuable piece of practical research.

CARRACCI (kahrah'chē). Three Italian painters who founded the eclectic school of painting, i.e. those who studied the works of the great masters and chose what they considered to be the chief merits of each and combined those in their own works. Lodovico C. (1555–1619), who lived at Bologna, was the initiator of the school. His nephews, Agostino C. (1557–1602) and Annibale C. (1560–1609), helped him in his work. The school is particularly well represented in Bologna.

CARRA'NZA, Venustiano (1859–1920). Mexican statesman. In 1917 he was elected President and during the F.W.W. kept his country neutral. He was killed in a revolution.

CARRARA (kahrah'rah). Italian town in the Apennines, 37 m. N.N.W. of Leghorn, with quarries of the finest white marble in the world. These were

CARPATHIANS. The highest group of the central Carpathians, the Tatra Mountains, lie partly on Czechoslovakia's northern frontier and partly in Poland. Štrbské Pleso Lake, 4,000 ft. above sea-level, is a popular Czech holiday resort.
Courtesy of the Czechoslovak Travel Bureau.

last speech in the Lords, opposing the withdrawal of British troops from America, he collapsed (7 April 1778), and on 11 May he d. at Hayes. He was buried in Westminster Abbey.

CHATHAM. English seaport (bor.) and naval base on N. coast of Kent, on the Medway, adjacent to Rochester on the W. and Gillingham on the E. From 1958 C. naval base was reorganized as a sub-command under C-in-C., Portsmouth. The Royal Dockyard (1588), employing 10,000 men, was converted to deal with the modern complex ships of the R.N., and H.M.S. *Pembroke* replaced the R.N. Barracks as accommodation for men from ships in refit. Pop. (1961) 48,989.

CHATTERJI (chat'ejē), Bankim Chandra (1838-94). Indian novelist. B. in Bengal, where he estab. his reputation with his first book *Durges-Nandini* (1864), he became a favourite of the nationalists: *Ananda Math* (1882) contains the Indian national song 'Bande-Mataram'.

CHATTERTON, Thomas (1752-70). British poet. B. in Bristol, he became familiar with ancient documents he found in the church of St. Mary Redcliffe, and composed poems which he claimed as the work of Thomas Rowley, an imaginary monk of the 15th cent. Encouraged by his success in imposing on his Bristol acquaintance, he sent specimens to Horace Walpole, but was refused assistance when Walpole was advised by friends that these were forgeries. He then began contributing to periodicals in the style of Junius, and in 1770 went to London. Failing in success, he poisoned himself with arsenic. Although his modern productions show versatility and facility, his pseudo-medieval pieces are the proof of his genius, and greatly influenced the Romantic poets.

CHAUCER (chaw'ser), Geoffrey (c. 1340-1400). English poet. B. in London, he became a page in the household of Lionel, Duke of Clarence, by 1357, and in 1359 was taken prisoner in the French wars, although ransomed by Edward III in 1360. He m. Philippa Roet, whose sister later became the wife of John of Gaunt, and through her gained the patronage of the latter. C. held various court and official appointments, notably that of controller of customs in the port of London (1374), and was employed on missions abroad. In this way he visited Italy (1372-3), where he may have met Boccaccio and Petrarch, France and Flanders (1377), and Italy again in 1378.

His early work is dominated by French influence, either in translation, as in his version of the *Romaunt of the Rose*, or in form, as with *The Boke of the Duchesse* (c. 1369). With his absorption of Italian influence came maturity, and such works as *Troilus and Criseyde* (adapted from Boccaccio), *The House of Fame*, *The Legend of Good Women*, and the *Knight's Tale* (also from Boccaccio). The last was to be merged in the great work

THOMAS CHATTERTON. The poet's uncle was sexton at the church of St. Mary Redcliffe, Bristol (above), and old documents from the muniment room inspired his boyish imagination to the invention of Thomas Rowley, the beginning of a career of forgery.

GEOFFREY CHAUCER

After T. Oocleve.

Photo: N.P.G.

Chauvin, one of Napoleon I's veterans, and his fanatical admirer.

CHAVAN, Yeshwantrao Balwantrao (1914-). Indian statesman. A Mahratta from Satara, he was Chief Min. for Bombay 1956-60 and Maharashtra 1960-2; then in the Indian govt. Defence Min. 1962-6 and Min. of Home Affairs from 1966. Noted for his racial humanity, he is one of the most prominent of the new men emerging in the post-independence period.

CHÁVEZ (chah'väs), Carlos (1899-). Mexican composer. A student of the piano and of the complex rhythms of his country's folk music, he held his 1st public concert of his own work in Mexico City in 1921. He was founder-conductor of the Mexican Symphony Orchestra 1929-48, and founded the National Symphony Orchestra. His works incl. a number of ballets, 7 symphonies, and concertos for both violin and piano.

CHAYEFSKY, Sidney (1923-). American playwright known as Paddy C. B. in the Bronx, he estab. his reputation with the television plays *Marty* and *Bachelor Party*, both successfully filmed (1955 and 1957 respectively). His characters have an inarticulate pathos and frustration well adapted to 'Method' acting, and are placed in a detailed urban setting.

CHEAPSIDE. A street running from St. Paul's Cathedral to Poultry, in the City of London, England. It was the scene of the 13th cent. 'Cheap', a permanent fair and general market.

CHECK. See **CHEQUE.**

CHEDDAR. Village of Somerset, famous for its gorge, caves, and fine cheeses. In 1962 excavation revealed the site of a Saxon palace.

CHEESE. A compact, concentrated food made usually from whole cows' milk, but also from the milk of goats, ewes, mares, buffaloes, reindeer, etc., and consisting of preserved milk solids. Its popularity is due to its palatability and its satisfactory nutritional quality; cheese such as Cheddar or Cheshire consists of approximately one-third protein, one-third fat, and one-third moisture. Furthermore, the highly nutritious non-bulky solid - 1 gallon of milk makes approximately 1 lb. of cheese - is easy to handle.

There are over 500 varieties of cheese, of which the greater number used to be made only in the districts after which they are named. The varieties are divided into 3 main groups: (1) hard pressed, e.g. Cheddar, Cheshire, Cantal, Parmesan, Gruyère, the most

of C.'s final period, the *Canterbury Tales*, which was designed c. 1387, and envisaged a company of pilgrims beguiling their journey by telling stories. The descriptive prologue is a masterpiece of metre and characterization. He also wrote a prose translation of Boethius, and a treatise on the astrolabe for his small son. He is buried in Poets' Corner, Westminster Abbey.

CHAUVINISM (shōv' —). A warlike fervour of patriotism: from Nicholas

CATHERINE THE GREAT

immigrant life of the Midwest - *O Pioneers* (1913) and *Lucy Gayheart* (1935) - which she knew as a child in Nebraska, but *Sapphira and the Slave Girl* (1940) is set in her native Virginia.

CATHERINE I (1683-1727). Empress of Russia. A Lithuanian peasant girl, Martha Skavronsky m. a Swedish dragoon and eventually became the mistress of Peter the Great. In 1703 she was rechristened as Katarina Alexeievna, and in 1711 the emperor divorced his wife and m. C. She accompanied him in his campaigns, and showed tact and shrewdness. In 1724 she was proclaimed empress, and after Peter's death in 1725 she ruled capably with the help of her ministers. She allied Russia with Austria and Spain in an anti-English bloc.

CATHERINE II, the Great (1729-96). Empress of Russia. Daughter of the prince of Anhalt-Zerbst, she married in 1745 the Russian grand duke Peter, who was an unbalanced weakling, and 6 months after his becoming Tsar in 1762 he was put out of the way. Henceforth C. ruled alone and proved capable and energetic. During her reign Russia extended her boundaries to include territory from Turkey (1774) and Sweden (1790), and profited by the Partitions of Poland.

C.'s private life was notorious throughout Europe, but she did not permit her amours to influence her policy. She admired and aided the Encyclopaedists, and corresponded with Voltaire and D'Alembert.

CATHERINE DE' MEDICI (de meh'deché) (1519-89). French queen, wife of Henry II and mother of Francis II, Charles IX, and Henry III. She was a daughter of Lorenzo de' Medici, and m. Henry in 1533. During the reigns of her sons she exercised a powerful political influence. At first she schemed with the Huguenots, but later bitterly opposed them, and the massacre of St. Bartholomew (1572) was largely her work. She was a patron of the arts.

CATHERINE OF ARAGON (1485-1536). First queen of Henry VIII of England. Daughter of Ferdinand and Isabella of Spain, she was betrothed at the age of 2 to Prince Arthur of England and m. him in 1501. He d. in 1502, and C. was then betrothed to his brother Henry, aged 11. When Henry became king in 1509, the marriage took place. C. bore 6 children, but only her daughter Mary lived. Henry desired a male heir, and in 1526 began to seek an annulment of his marriage on the grounds that the union with his brother's widow was invalid in spite of papal dispensation. When the Pope demanded that the case should be referred to him, Henry m. Anne Boleyn and afterwards received the desired decree of nullity from Archbishop Cranmer (1533). The Reformation in England followed. C. went into retirement, and was kept virtually a prisoner until her death.

CATHERINE OF BRAGANZA (1638-1705). Queen of Charles II of England. The daughter of John IV of Portugal, she m. Charles in 1662. Bombay and Tangier formed part of her dowry. Charles was occupied with his mistresses, and she lived in retirement. She had no children, but Charles opposed Shaftesbury's design for a divorce. Her liberty to practise her religion as a Catholic was resented. In 1692 she returned to Lisbon.

CATHERINE OF GENOA (1447-1510). Catholic saint. B. at Genoa of a noble family, she was m. at 16 and in later life devoted herself to the care of the sick, practised an inner life of deep meditation, and left two mystical treatises and a dialogue between the soul and the body. She was canonized in 1737.

CATHERINE OF SIENA (1347-80). Catholic saint and mystic, b. at Siena in Italy. She practised severe mortifications while still a child, and at the age of 16 became a Dominican tertiary. She attempted

to reconcile the Florentines with the Pope, and persuaded Gregory XI to return to Rome from Avignon in 1376. In 1375 she is said to have received on her body the stigmata, the impression of Christ's wounds. Her *Dialogue* is a remarkable mystical work. She was canonized in 1461.

CATHERINE OF VALOIS (1401-37). Queen of Henry V of England. The 3rd daughter of Charles VI of France, she was m. to Henry in 1420, and bore a son, Henry VI. Henry d. in 1422, and about 1425 she secretly m. Owen Tudor, by whom she had a son, Edmund, who became the father of Henry VII.

CATHODE. The electrode at which positive current leaves a device. It is the negatively charged electrode of an electrolytic cell, the electrode from which the primary stream of electrons is emitted in a vacuum tube, and the positive terminal of a battery.

CATHODE RAYS. Streams of negatively charged particles (electrons) emitted from the cathode of a discharge tube when sufficiently evacuated.

* = gas; ** = liquid; the remainder are solids. Atomic weights are for elements as found in nature, and those in parentheses in the table are for the most stable isotope of the more recently discovered man-made elements which are represented only by unstable isotopes. They are International atomic weights 1959 based on oxygen 16.000. See also Transuranium Elements.

(H₂SO₄) is converted into sodium bisulphate (NaHSO₄) and hydrogen chloride (HCl).

Elements are divided into two classes: metals, having lustre, and being conductors of heat and electricity, and non-metals, which usually lack these properties. The Periodic System developed by Newlands (1863) and established by Mendeleev in 1869, classified elements according to their atomic weights, i.e. the least weight of the element present in a molecular weight of any of its compounds. Those elements which resemble each other in general properties were found to bear a relation to one another by weight, and these were placed in groups or families. Certain anomalies in this system were removed by classifying the elements according to their atomic number. The latter is the equivalent of the charge on the nucleus of the atom.

Organic Chemistry is that branch of C. which deals with carbon compounds. *Inorganic C.* deals with the description, properties, reactions, and preparation of the elements and their compounds, with the exception of carbon compounds. *Physical C.* treats of the particular changes which materials may undergo in special circumstances. Physical changes are changes of state only, the properties of the material remaining unaltered. This branch studies in particular the movement of molecules, and the effects of temperature and pressure, especially with regard to gases and liquids. See ORGANIC CHEMISTRY, INORGANIC CHEMISTRY, etc.

CHEMNITZ. Another name for KARL-MARX-STADT.

CHEMULPO. Chinese name for INCHON.

CHENGCHOW. Chinese town, made cap. of Honan prov. in 1954. It lies 40 m. W. of Kaifeng, the old cap., and is a railway junction and market town; it makes cotton textiles. Pop. (est.) 500,000.

CHENGHSIEN. Older name for CHENGCHOW.

CHENGTEH (chung'te). Chinese city, about 110 m. N.E. of Peking, formerly cap. of Jehol prov. (abolished 1955). Here the Manchu rulers of China had their summer residence. Pop. (est.) 60,000.

CHENG TU (chungtōō). Walled city of China, cap. of Szechwan prov., seat of Szechwan univ. and a busy industrial centre with silk and other textile factories, engineering works, and railway workshops. Pop. (1957 est.) 1,107,000.

CHENIER (shchneyeh'), André de (1762-94). French poet, b. at Constantinople, son of a French father and a Greek mother. He began to write poetry in imitation of classical models, visited Italy and London, and in 1790 associated himself in Paris with the Feuillant Club, a group of constitutional royalists, and pub. political poems and prose. In 1793 he went into hiding, but continued to write, among other poems, his *Ode à Charlotte Corday*, and his *Ode à Versailles*. Finally he was arrested, and, on 25 July 1794, guillotined. While in prison he wrote some of his most famous poems, including the *Jeune Captive* and the political *Jambes*.

CHENNAULT (shen'awl), Claire Lee (1890-1958). American airman. B. in Texas, he became aviation adviser to Chiang Kai-shek in 1937. In 1941 he founded the American Volunteer Group ('Flying Tigers') of airmen attached to the Chinese army fighting the Japanese, and was commander of the

An Alexandrian, he throws a startlingly up-to-date light on the Greek past, recreating the classical period with zest. In 1923 E. M. Forster translated *Pharos and Pharillon*.

CAVALIER. A term originally applied to horsemen of gentle birth, but referring in particular to the supporters of Charles I in the Civil War. Suckling, Lovelace, etc. are known as 'C. poets'.

CAVALLI (kahvahl'le), Francesco (1620-76). Italian composer, organist at St. Mark's, Venice; 27 of his operas survive. C. was the first to make opera a popular entertainment.

CAVAN. Inland co. in that part of the prov. of Ulster that is included in Rep. of Ireland. The r. Erne divides it into a narrow peninsula, some 20 m. long, between Leitrim and Fermanagh—low-lying country for the most part—and an eastern section of wild and bare hill country. The soil is generally poor, and the climate moist and cold. Agriculture is the chief industry. The chief towns are Cavan, the capital, pop. c. 3,000. Kilmore, seat of R.C. and Protestant bishoprics, Virginia, etc. Area 730 sq. m.; pop. (1966) 54,022.

CAVE. A hollow in the earth's crust produced by the action of underground water or by waves on a sea coast. Cs. of the former type commonly occur in limestone, but not in chalk country where the rocks are soluble in water. A *pot-hole* is a vertical hole in rock caused by water descending a crack. C. fauna often show loss of pigmentation or sight, and under isolation specialized species may develop. See **SPELEOLOGY**.

Some of the most famous Cs. are the Mammoth C. in Kentucky, 4 m. in length and 125 ft. high; the Caverns of Adelsberg (Postumia) near Trieste which extend for many miles; Carlsbad C., the largest in America; the Cheddar Cs., Somerset; Fingal's C., Staffa, Scotland, famous for its range of basalt columns; and Peak Cavern, Derbyshire.

CAVE, Edward (1691-1754). British printer, founder under the pseudonym 'Sylvanus Urban' of *The Gentleman's Magazine* (1731-1914), the 1st periodical to be called a 'magazine'. Johnson was an influential contributor 1738-44.

CAVELL (kavl), Edith Louisa (1865-1915). British nurse. Dau. of a Norfolk clergyman, she was appointed matron at the new nurses' training institute in Brussels in 1907. In the F.W.W. this became a Red Cross hospital for both sides, and she with Philippe Baucoq helped English and French soldiers to escape to the Dutch frontier. On 5 Aug. 1915 she was arrested; and after a court martial she and Baucoq were condemned to death. She d. with heroic calmness. Since 1919 her body has rested beside Norwich Cathedral, and there is a statue of her in St. Martin's Place, London.

CAVENDISH. Pen-name of Henry Jones (1831-99). British authority on whist.

CAVENDISH, Lord Frederick Charles (1836-82). Second son of the 7th duke of Devonshire, he was appointed in 1882 chief secretary to the Lord-Lieutenant of Ireland, and on the evening of his arrival in Dublin was murdered in Phoenix Park with Burke, the Under-Secretary, by members of the society of 'Irish Invincibles'.

CAVENDISH, Henry (1731-1810). British physicist. A grandson of the 2nd duke of Devonshire, he devoted his life to scientific pursuits, living in rigorous seclusion at Clapham Common. He discovered the composition of nitric acid and the composition of water. The C. experiment was a device of his to discover the density of the earth.

CAVENDISH, Thomas (c. 1555-92). English navigator; commander of the 3rd circumnavigation of the world. He sailed in July 1586, touched Brazil, followed down the coast to Patagonia, passed through the Straits of Magellan, and sailed back via the

Philippines, Cape of Good Hope, and St. Helena, reaching Plymouth after 2 years and 50 days.

CAVE TEMPLES. Examples of rock architecture, of which the finest are found in western India and the Deccan. See **AJANTA** and **ELLORA**.

CAVIARE (kav'eahr'). Russian delicacy, obtained from the roe of the sturgeon. It is prepared by beating and straining the ovaries until the eggs are free from fats, etc., and then adding salt.

CAVITE (kahvé'teh). Town and port of the Philippine Republic, cap. of C. prov., Luzon, 8 m. S. of Manila. It was in Japanese hands Dec. 1941 to Feb. 1945 during the S.W.W. After the Philippines attained independence in 1946, the U.S.A. retained a military base here. Pop. (est.) 40,000.

CAVOUR (kahvoor'), Camillo Benso, count (1810-61). Italian statesman. B. at Turin, he served in the army in early life, and entered politics in 1847 as editor of *Il Risorgimento*. From 1848 he sat in the Piedmontese parliament, and held cabinet posts 1850-2. Becoming Prime Minister in 1852, he sought to secure French and British sympathy for the cause of Italian unity by sending Piedmontese troops to fight in the Crimean War. In 1858 he met Napoleon III secretly at Plombières, and planned with him the war of 1859 against Austria, which resulted in the union of Lombardy with Piedmont. The central Italian states also joined the kingdom of Italy, although Savoy and Nice had to be ceded to France as the price of acquiescence. With C.'s approval Garibaldi overthrew the Neapolitan monarchy, but to prevent him from marching on Rome C. occupied part of the Papal States, which with Naples and Sicily were annexed to Italy.

CÁ'VY (family Caviidae). Various kinds of short-tailed S. American rodents, of which the tame guinea pig (q.v.) is the most familiar example.

CAWNPORE. Another form of KANPUR.

CAXTON, William (c. 1422-91). First English printer. B. in Kent, he was apprenticed to a London mercer (1438), and set up his own business in Bruges 1441-70. In 1471 he went to Cologne, where he learned the art of printing, and then set up his own press in Bruges in partnership with Colard Mansion. The first book from his press, and the first book printed in English, was C.'s own version of a French romance, *Recuyell of the Histories of Troye* (1474). Returning to England in 1476 C. estab. himself in Westminster, where he produced the first book printed in England, *Dictes and Sayenges of the Philosophers* (1477). Altogether he printed about 100 books, including editions of Chaucer, Gower and Lydgate, and translated many texts from the French or the Lat., in addition to revising others, e.g. Malory's *Morte d'Arthur*.

CAYENNE (kāyen'). Cap., chief port, and international airport of French Guiana, on C. island at the mouth of the r. C. Founded 1634 and destroyed by Indians, it dates actually from 1664; it was used as a penal settlement from 1854 to 1946. Pop. (1961) 18,635.

CAYENNE PEPPER, also known as chilly, Guinea pepper, or Spanish pepper. A condiment derived from the dried fruits of *Capsicum*, a genus of plants of the family Solanaceae. It is wholly distinct in its origin from true pepper. The capsicum is a herb or shrub, and bears pod-like fruits with a leathery envelope.

CAYLEY, Arthur (1821-95). British mathematician. Sadlerian prof. at Cambridge from 1863, he was the greatest pure mathematician of the cent. His books incl. *Elliptic Functions* (1876).

CAYLEY, Sir George (1773-1857). British pioneer in aeronautics. In 1804 he made the 1st model glider and his scientific writings were in advance of his age.

CAYMANS (kāmahnz'). Three low-lying islands in the W. Indies, 180 m. W.N.W. of Jamaica, discovered by Columbus in 1503. The inhabitants are chiefly

CHESHIRE. Little Moreton Hall at Congleton, here seen from the south-east, is one of the finest examples of black and white timbering in England, and in its present form dates from the late sixteenth century. *Courtesy of the National Trust.*

coast on the Irish Sea. Most of it is a plain with fertile soil. The chief rivers are the Mersey, Dee, and Weaver. The inland waterways are important.

Textiles are made at Stockport, Stalybridge, Dukinfield, Hyde, Macclesfield, and Congleton. There are large tanneries at Birkenhead and Nantwich; shipbuilding yards about Birkenhead, which is an important port; locomotive works at Crewe. Soap, margarine, etc., are made in the Port Sunlight area. Coal is mined in E. Cheshire, and brine pumped up from a wide district near the Weaver is turned into salt, alkali, etc., at Northwich, Nantwich, and Winsford. Chief towns: Chester (co. town), Birkenhead, Stockport, Wallasey, Crewe, Hyde, Macclesfield. Area 1,015 sq. m.; pop. (1967) 1,486,470.

CHESIL BANK. A shingle bank extending c. 11 m. along the coast of Dorset, England, from Abbotsbury to the 'Isle' of Portland, breached by storms in 1954.

CHESS. A game of great antiquity, played by 2 players on a board of 64 squares alternating black and white. Each player has 16 pieces, the one side white and other red or black. These pieces are placed as shown in the accompanying diagram; and (reading from the white square on the player's right) they are: king's rook (or castle), king's knight, king's bishop, king, queen, queen's bishop, queen's knight, queen's rook. In front of these is a line of pawns. The object of the game is to force the king of the opposite side into such a situation that he can neither move nor remain without the danger of being taken by some other piece - this is called being in check. If the king cannot be removed out of check, the game is lost. Each of the pieces can move only in a particular way.

C. is a game that is capable of being recorded; the method usually used is by naming and numbering the squares. Strategy varies from the flexibly defensive, prevalent in the 1930s and again in the 1960s, to the strongly attacking style of the immediate post-S.W.W. period. The 1st international tournament was held in London in 1851.

CHESTER. English city and seaport (co. bor.), also co. town of Cheshire, situated on the Dee, 16 m. S. of Liverpool. Its name derives from the Roman *Castra Devana*, the 'camp on the Dee', and there are many Roman and later remains. The city walls are intact - a unique feature in England. The cathedral dates from the 11th cent. but was restored in 1876. The church of St. John the Baptist is one of the finest examples of early Norman architecture. The famous 'Rows' are covered arcades dating from the Middle Ages. From 1070 to the reign of Henry III, C. was the seat of a county palatine. In 1506 it was constituted a co. of itself, and in 1541 was erected into a bishopric by Henry VIII, who founded the King's School. The

town hall dates from 1869. Although the silting up of the Dee destroyed C.'s importance as a port, navigation has been greatly improved by dredging. Pop. (1961) 59,283.

CHESTERFIELD, Philip Dormer Stanhope, 4th earl of (1694-1773). English statesman and man of letters. B. in London, he sat in parliament from 1715, and in 1726 succeeded his father as 4th earl. As an opponent of Walpole, he was Lord-Lieutenant of Ireland in 1745 and a Sec. of State in 1746. He moved in the literary circle of Swift, Pope, and Bolingbroke, and is remembered chiefly for his *Letters to his Son* (1774) - his natural son, Philip Stanhope (1732-68).

CHESTERFIELD. Market town (bor.) of Derbyshire, England, 25 m. N. of Derby, on the Rother, a coal-mining and industrial centre. All Saints' church is renowned for its crooked spire. Pop. (1961) 67,833.

CHESTER-LE-STREET. Town in Durham, England, 6 m. N. of Durham on the Great North Road and in an important coal-mining area. Pop. (1961) 18,948.

CHESTERTON, Gilbert Keith (1874-1936). British author. B. in London, he studied art but quickly turned to journalism. His sympathies at this time were with the Socialist attempts to remedy the evils of capitalism, but he later found his own solution in Distributism. In poetry his best work is in satire, in the humorous *Wine, Water, and Song* (1915), and in *The Ballad of the White Horse* (1911). Among his best-known serious prose works are his studies of Browning (1903) and Dickens (1906); and the collections of essays *Twelve Types* (1902), *Heretics* (1905), and *A Short History of England* (1917). The most famous of his novels are the series dealing with the adventures of the naïve priest-detective, who first appeared in *The Innocence of Father Brown* (1911); but others incl. *The Napoleon of Notting Hill* (1904), *The Man who was Thursday* (1908), *The Flying Inn* (1914), and *The Man who knew too Much* (1922). In 1922 C. entered the R.C. Church, and in 1936 his autobiography appeared.

His brother Cecil Edward C. (1879-1918) fearlessly denounced corruption in professional politics. The latter's wife Ada Elizabeth C. (d. 1962) pub. *In Darkest London* (1926), the result of an investigation of down-and-out life which led to her foundation of the 'Cecil' houses for homeless women, and *The Chestertons* (1941).

CHESTNUT (ches'nut). Genus of trees (*Castanea*)

belonging to the same family as the oak and beech (Fagaceae). The Spanish or Sweet C., *C. sativa*, produces a fruit that is a common article of diet in Europe and U.S.A., and its timber is also valuable. The Horse chestnut or *Aesculus hippocastanum* is quite distinct, belonging to a different family, Sapindaceae or Hippocastanaceae. Other Cs. are the American C., which is *C. dentata*; the Japanese C., *C. crenata*; and the Chinese C., *C. mollissima*.

CHETWODE (chet'wood), Philip Walhouse, 1st baron (1869-1950). British soldier. Under Allenby he had an important part in the capture of Jerusalem, Damascus and Aleppo in the F.W.W., and was C-in-C. India 1930-5. Promoted field-marshal in 1933, he was awarded the O.M. in 1936, and was created a baron in 1945.

CHEVALIER (shevahlyeh'), Albert (1861-1923). British music-hall artist. A Londoner, he performed from the age of 8, and was celebrated for coster songs, such as 'Knocked 'em in the Old Kent Road' and 'My Old Dutch', and sketches.

CHESS. The position of the pieces at the opening of play.

added height, greater emotional instability, inability to bear frustration, and great aggressiveness. These men are often criminally violent, and possession of the Y-factor, immediately detectable under the microscope, has (as in France and Australia 1968) been successfully pleaded in mitigation in murder cases.

Ionization arising from gamma or X-radiation can damage Cs., and in the case of reproduction Cs. this may lead to disruption of the chromosomes and potential degradation of the offspring.

CELL (Electric). An apparatus in which chemical energy is converted into electrical energy; the popular name is 'battery', but this should be reserved for a collection of cells in one unit. E. Cs. can be divided into: (a) *primary*, which produce electric energy by chemical action and require replenishing after this action is complete; and (b) *secondary*, or accumulators, which are so constituted that the action is reversible, and the original condition can be restored by an electric current. The first battery was made by Volta in 1800. Types of primary cells are the Daniell, Lalande, Leclanché, etc., and the so-called dry cells; secondary cells include Planté, Faure, Edison, etc. Newer types incl. the Mallory (mercury depolarizer), which has a very stable discharge curve and can be made in very small units, e.g. for hearing-aids, and the Venner accumulator, which can be made substantially solid for some purposes.

CELLINI (chellē'nē), Benvenuto (1500–71). Italian artist, sculptor, and silversmith; also famous for his autobiography. B. in Florence, he was apprenticed to a goldsmith, and in 1519 went to Rome. C. claims to have killed the Constable de Bourbon during the siege of 1527. Later C. worked for the papal mint, and once was imprisoned on a charge of having embezzled pontifical jewels. In 1546 he began the bronze group of 'Perseus holding the head of Medusa', completed in 1554. He worked for a time in France at the court of Francis I, and finally settled in Florence in 1545, where he d.

CELLULOID (sel'uloid). Transparent or translucent highly inflammable plastic material, now largely replaced by the non-inflammable cellulose acetate. C., chemically, is cellulose nitrate, and is formed by the action of nitric acid on cellulose in the presence of sulphuric acid mixed with camphor.

CELLULOSE. Complex carbohydrate material widely distributed in the plant kingdom, where it is the principal structural material. In various states of combination it is familiar as different kinds of wood; a purer form is cotton, and also paper and linen. It is present in nearly all plants, where it forms the harder parts, the cell walls, the fibres, etc.

CELSIUS. See CENTIGRADE.

CELTIC (keltik). A group of languages of the Indo-European family. They fall into two well-marked groups: the Goidelic consisting of the Gaelic language, under its 3 forms of Irish, Scottish, and Manx Gaelic, each with several sub-dialects; and the Brythonic, which includes Welsh, Cornish (extinct since c. 1800), Breton, and Gallic or Gaulish, the language of Gaul before the introduction of Latin, which seems to have died out in c. A.D. 600. The C. languages had formerly a much wider extension, as is seen by place-names in all parts of the British Isles, France, the N. of the Spanish peninsula, Switzerland, S. Germany, and N. Italy. Native C. speakers grow fewer, but measures to arrest a final decline were undertaken in the mid-20th cent.

CELTIC ART. A style of art which originated in c. 500 n.c., probably on the Rhine, and spread westwards to Gaul and the British Isles, and southwards to Italy and Asia Minor until it was superseded by Roman influence (2nd–1st cent. n.c.). It is known conventionally as La Tène art, from a Swiss site where the best examples of the style were found. The chief characteristics are: linear designs—developing at a

CELTIC ART. A silver cauldron of the 1st century B.C. found at Gundestrup in north Jutland. At the rim it is 27 inches in diameter, and is richly ornamented.

National Museum, Copenhagen.

later state into intricate patterns—and the use of enamel and coral in the decoration of bronze objects.

A Late Celtic period existed only in the British Isles; it corresponds to a period of varying length according to regions in the Christian era, and is characterized by a rich decorative art, especially by enamelled horse-trappings and engraved mirrors.

CELTIC LITERATURE. The literature of the Celtic peoples is dealt with under the headings BRETON; CORNISH; IRISH; MANX; SCOTTISH GAELIC; WELSH.

CELTS (keltz). The name given, under various forms, by Greek and Roman writers to a people whose first-known territory was an area in the basin of the upper Danube and S. Germany. Here they were pioneers of the working of iron, and in the last 6 cents. b.c. elaborated the La Tène culture. They overran France, Spain, Portugal, N. Italy, sacked Rome in 390 b.c., the British Isles, and Greece. They appear never to have had a united empire, and their conquests were made by emigrant bands which effected permanent settlements in the lands named, as well as in the part of Asia Minor later known as Galatia from their name. The name C. was given by classical authors to a fair, tall people of N. Europe; and it was only gradually that they learned to distinguish the Cs. from the German tribes.

CEMENT (sement'). A bonding agent used to unite particles in one mass or to cause one surface to adhere to another. The term is applied to a variety of materials such as fluxes and pastes, and also bituminous products obtained from tar. In general, however, the name is more applicable to Portland C., a powder obtained from burning together a mixture of lime or chalk, and clay, which is the universal medium for building in brick or stone or for the production of concrete. In 1824 Joseph Aspdin, a Yorkshire bricklayer, discovered and patented the first Portland C., so named because of its resemblance in colour, in the hardened state, to the famous Portland stone. Today Portland C. is manufactured in huge quantities throughout the world. Chief centre of manufacture in the U.K. is the Thames valley.

CENOTAPH (sen'otaf; Gk. 'empty tomb'). Sepulchral monument to commemorate a person or persons whose remains are not actually buried at the site. The C. in Whitehall, London, for those who d. in both world wars, was designed by Sir Edwin Lutyens.

CENSOR (sen'-). High official at ancient Rome. Every 5 years 2 censors were elected to hold office for 18 months; besides completing a registration (*census*) of the citizen body, they revised the list of senators.

CHICLE (chik'l). Juice from the sapodilla tree of Central America. It is obtained by tapping, usually once in 5 years. Shortly after exposure, the juice hardens into gum. C. is the basis of chewing gum.

CHICORY. Plant (*Cichorium intybus*) belonging to the Compositae. It grows wild in Britain, mainly on chalky soils, and has large, usually blue, flowers. Its long tap-root is dried and roasted, to be mixed with coffee.

CHIFF-CHAFF. A bird (*Phylloscopus rufus*) of the warbler family (Sylviidae). It is olive-brown above and yellowish-white below, and is a summer migrant in England, being the first to arrive, about the middle of March.

CHIFLEY, Joseph Benedict (1885–1951). Australian Labour statesman. B. at Bathurst, N.S.W., of Irish descent, the son of a blacksmith, he became an engine-driver and was active with the Engine-Drivers' Union. Entering the Australian parliament in 1928, he was Min. of Defence in 1931–2, Treasurer in 1941–9, and Min. of Post-War Reconstruction in 1942–5. On the death of Curtin in 1945 he succeeded him as P.M. until Dec. 1949.

CHIHLI. Name of Hopen prov., China, under Manchuria; it means direct rule.

CHIHUAHUA (chēwah'wah). Mexican city, cap. of C. state, about 800 m. N.W. of Mexico City. It was founded 1707 and is the centre of a mining district. Pop. (1967) 221,500.

CHIHUAHUA. Breed of dog and one of the few varieties indigenous to the U.S.A., said also to be the smallest existing dog. Smooth and short-coated, prick-eared, skull large in comparison to body, in colour varied, it may weigh as little as 2 lb.

CHILBLAIN. A painful inflammation of the skin of the feet or hands, due to damp cold. The parts turn red, swell, itch violently, and are very tender. In a bad case the skin cracks, blisters, or ulcerates, or may even become gangrenous.

CHILD BIRTH. The expulsion of a child from its mother's body; labour. Normally a child grows within the womb (uterus) for 40 weeks from the date of conception; but birth may take place at any earlier time, and may be delayed by several weeks after the normal term. A child born before the end of the 7th month rarely survives. The birth of a dead child is called a stillbirth. Normal labour is spontaneous childbirth without assistance or complications.

CHILDE (child), V. Gordon (1892–1957). Australian archaeologist, director of the London Institute of Archaeology 1946–57. He discovered the prehistoric village of Skara Brae in the Orkneys, and in 1939 pub. *The Dawn of European Civilisation*.

CHILDERS (chil'derz), Robert Erskine (1870–1922). Irish Sinn Féin politician and writer. Before turning to Irish politics, he was a clerk in the House of Commons in London and author of the 'German spy' novel, *The Riddle of the Sands* (1903). In 1921 he was elected to the Irish parliament as a supporter of De Valera, and as a Republican took up arms against the Irish Free State in 1922. Shortly afterwards he was captured, court-martialled, and shot.

CHILE. S. American republic occupying the W. or Pacific slope of the Andes, S. of Peru. It is about 2,500 m. long, with an average width of 100 m. The country may be divided into 3 main areas: the chain of the Andes in the E., which extends through most of the length of C.; the central valley or tableland, and the coastal chain of mountains. The climate varies a great deal in different parts; the N. receives no rain and is desert, the S. is cold, wet, and heavily forested; the centre has a Mediterranean climate, and is the heart of C. This central area, which includes the largest cities – Santiago (the cap.), Valparaíso, and Concepción – is covered by farms and vineyards.

The principal rivers flow from E. to W.; they are short and of little importance for transport. The

CHILE. Lake Pehoe and the Paine mountains in the extreme south of Chile. Behind the Horns of the Paine, in the distance, are the famous Towers of Paine swept by 100-m.-an-hour winds; the central tower (8,760 ft.) was unclimbed until conquered by a British party in 1963.

Courtesy of Anglo-Chilean Society.

lakes are chiefly in the S. The chief ports from N. to S. are Arica, Iquique, Antofagasta, Coquimbo, Valparaíso, Talcahuano (port of Concepción), Puerto Montt, and Punta Arenas. There are 25 provs.

C. is the principal mining country in S. America. Sodium nitrate is found in Tarapacá and the Atacama desert; and in this region about 70 per cent of the world's iodine (an element which exists in nitrate deposits) is produced. Copper is mined in the mountainous region in the N. and is exported from Antofagasta and Tocopilla. Iron, coal, and many other minerals are worked.

The first European to see what is now Chile was Magellan who discovered and sailed through Magellan Strait in 1520. A Spanish expedition under Pedro de Valdivia founded Santiago in 1541. In 1810 there was a rising against Spain and a rep. was proclaimed; Spanish rule ended in 1818. The discovery of nitrates and guano in the borderlands to the N. led to disputes from 1866 onwards with Bolivia and Peru over frontiers which in 1879 came to war, ended in 1883 by a treaty under which C. gained Tacna (returned to Peru in 1929) and Arica provs. from Peru, Antofagasta prov. from Bolivia.

Govt. is by a president elected every 6 years by direct popular vote, and a national congress with senate and chamber of deputies, half the former and all the latter being re-elected every 4 years. The national language is Spanish; education is free and compulsory from 7–15. There are 8 univs., the oldest founded 1842. Area 286,400 sq. m.; pop. (1960) 7,339,546.

CHILLINGWORTH, William (1602–44). C. of E. divine, author of *The Religion of Protestants a Safe Way to Salvation* (1637).

CHILLON (shē-yōn'). A fortress on an island rock at the E. end of Lake Geneva, Switzerland, made famous by a poem of Byron. It dates from the 8th cent.

CHILOPODA (kilo'poda). An important subdivision of the Arthropoda (q.v.) comprising the centipedes (q.v.).

CHILTERN HUNDREDS. The stewardship of the C.H. is a nominal office which may be accepted by a M.P. who wishes to resign his seat. Another is the stewardship of Northstead in Yorks.

CHILTERNs. Range of chalk hills extending for some 45 m. in a curve from a point N. of Reading to the Suffolk border. The highest point is Haddington Hill near Wendover (857 ft.).

CHIMAERA (ki-mē'rah). Genus of fishes, typical

CERN. The 28 GeV proton synchrotron, forming part of the CERN laboratories at Meyrin, is the largest particle accelerator in Europe and is one of the two biggest in the world.

Courtesy of CERN.

substances of different densities. These substances (solid particles, colloids, liquids, gases or mixtures of these) are placed in the containers and the rotation sets up centrifugal forces in the whirling substances acting radially outwards, causing them to separate according to their densities. A common example is the separation of the lighter cream from the heavier milk in this way. The ultracentrifuge is a very high-speed C. and is used in colloid- and bio-chemistry. Large Cs. are used for physiological research, e.g. in astronaut training: testing bodily response to many times the normal acceleration due to gravity (g).

CEPHALONIA (sefalō'nia). Largest of the Ionian islands, off the W. coast of Greece. Area 260 sq. m.; pop. (1961) 46,302. Was devastated by an earthquake in 1953 which destroyed Argostolion, the cap., and Lixouri, and killed many of the inhabitants.

CEPHALOPODA (sef-; Gk. 'head-footed'). Class of animals of the phylum Mollusca, including the octopus, cuttle-fish, squid, nautilus, etc. They are characterized by the inclusion of the mouth and head in the foot—hence the name—are exclusively marine, and have a very wide range.

CEPHALOSPORIN (sef'alo-). Antibiotic, also known as ceporin, extracted from cephalosporium mould. It was developed at Oxford by E. P. Abraham (q.v.) and others: Dorothy Hodgkin (q.v.) was associated in the early stages. C. is capable of destroying penicillin-resistant bacteria.

CERAMICS (seram'iks). In the widest sense any non-metallic mineral used in articles created from a powder and sintered at high temperatures. C. are divided into heavy clay products (bricks, roof tiles, drainpipes, sanitary ware), refractories or high-temperature materials (linings for furnaces used in steel-making, fuel elements in nuclear reactors), and pottery, which uses china clay, ball clay, china stone and flint. Pottery (q.v.) ranges from the opaque and porous earthenware well adapted to colour, through translucent white bone china (5% calcined bone) to finest porcelain (q.v.).

CERBERUS. In classical mythology, the many-headed watchdog at the gates of the underworld.

CEREALS (se'rē-als). Grain-bearing plants cultivated for food. The term relates primarily to barley and wheat, but may also be said to cover oats, maize, rye, millet, and rice. Cs. have been of the utmost importance in the history of human society, and different grain-bearing plants are characteristic of different civilizations in various parts of the world. See BREEDING.

CERES (sērēz). In Roman mythology, the goddess of agriculture, identified with the Greek Demeter.

CERIUM (sēr'-). The principal chemical element of the groups known as the rare earth metals, symbol Ce, at. wt. 140.13, at. no. 58. In the form of its oxide, C. helps to provide luminosity in gas mantles, and one of the most common uses of C. is as an alloy for 'flints' for cigarette lighters. Radioactive Ce-140 (half-life 9 months) is a fission product from nuclear power stations and may find a use in giant sources of limited life.

CERN (originally *Conseil Européen pour la Recherche Nucléaire*, but subsequently renamed *Organisation Européenne pour la R.N.*, although still familiarly known as CERN). A European organization which came into being in 1954 as a co-operative enterprise among European govts. and is at present supported by contributions from 13 European member countries, to promote fundamental research in nuclear physics, and to provide the necessary high-energy machines too costly for an individual member country to support. The laboratories are situated at Meyrin near Geneva and the equipment includes a 600 million electronvolt synchro-cyclotron and a 28 thousand million electronvolt proton synchrotron, and large liquid bubble chambers, some of which have been specially brought to Geneva from other parts of Europe to use the beams from the high-energy machines.

CERNAUTI. Rumanian form of CHERNOVTSY.

CERVANTES (servan'tēz; Span. thervahn'thes), Miguel de Cervantes Saavedra (1547–1616). Spanish novelist, playwright, and poet. B. at Alcalá de Henares, he entered the army in Italy and in 1571 was wounded in the battle of Lepanto. In 1575, while on his way back to Spain, he was captured by Barbary pirates and was taken to Algiers, where he became a slave until ransomed in 1580. Returning to Spain he began to support himself by writing. He wrote several plays, and in 1585 his pastoral romance *Galatea* was printed. In 1587 he was employed at Seville in provisioning the Armada. He was more than once imprisoned for failures to make good deficiencies in the accounts of moneys he had received as a collector of taxes. He now sank once more into poverty, and little is known of the course of his life till *Don Quixote*, which had previously circulated in manuscript, appeared in 1605 and immediately achieved a great success. Within a few years it had been translated into English and French. In 1613 appeared his *Novelas Exemplares*, a collection of short tales; and in 1614 a burlesque poem, *Viage del Parnaso*, and a spurious 2nd part of *Don Quixote* which prompted C. to bring out his own authentic 2nd part, considered to be superior to the first in construction and in characterization. His last work was *Persiles y Sigismunda*.

CESKE BUDEJOVICE. Town of Czechoslovakia, cap. of South Bohemian region. Dating from the 13th cent., it is a railway junction with some industry. Pop. (1967) 72,000.

CESTODA. Class of worms of the phylum Platyhelminthes. They include all those commonly called tape-worms (q.v.).

CETACEA (sitā'sha). A highly specialized order of purely aquatic fish-like mammals, including whales, dolphins, and porpoises. Fossil forms indicate their descent from an extinct group of the carnivora known as the creodonts. They can be readily distinguished from fish by their tail-fins, termed the 'flukes', being horizontal, not vertical. They are grouped in two sub-orders, the *Mystacoceti* or whalebone whales, including the narwhal and also the Greenland whale and the *Odontoceti* or toothed whales, including porpoises, dolphins, narwhal, etc. See WHALES.

CETEWAYO (setiwah'yō) (d. 1884). Ruler of Zululand, S. Africa, 1873–83, when he was expelled

by a national people's congress elected under Communist guidance from all over the country. Besides the people's congress, elected for 4 years and in theory the highest authority in the state, there is a state council and standing committees of the congress. The head of state is a chairman elected by the congress, but the Communist party wields the real power.

History. Chinese civilization is the oldest in existence. The social system which endured until this cent. was stabilized fully 3,500 years ago. The so-called Sage Kings (2800–2205 B.C.) were all associated with civilizing developments – agriculture, medicine, river conservancy, etc. There followed the Hsia dynasty (2205–1557 B.C.) of which little is known. Then came the Shang dynasty, whose artistic genius is illustrated in the still existing bronze vases; it was replaced about 1050 by the Chou dynasty, followed in 221 B.C. by the shortest and most remarkable of the dynasties, the Ch'in, comprising the reign of Shih Hwang Ti, who curbed the feudal nobility and introduced a widespread system of orderly government; he also built the Great Wall to keep out the northern barbarians. The next dynasty was the Han (206 B.C.–A.D. 220) under which the keeping of historical records was systematized and the idea of the unity of China was so firmly implanted that, though that unity has often been broken, it always re-asserted itself. After a period of division between N. and S. came the T'angs (618–906), the most brilliant centuries in China's history. After another period of disruption the Sung ruled (960–1279) in an age of culture and refinement. The Mongols reigned from 1279–1368, when they were expelled by the 1st of the Mings (1368–1644); during their rule, in the 16th cent., Europeans began to arrive in China.

The last of the dynasties was the Manchu (1644–1912) which gave several great rulers to C., up to the empress dowager Tz'e Hsi who d. in 1908. Three years later revolution broke out, and in 1912 the infant emperor (see PU YI, HENRY) was deposed. The principal maker of the revolution was Sun Yat-sen, who became President of the Republic. He d. in 1925, and for years afterwards C. was distracted by civil war conducted by rival war lords. Then the country was divided between the nationalist Kuomintang under Chiang Kai-shek and the Communists, who received Russian support. In 1931 the Japanese began their penetration of Manchuria, and in 1937 the so-called 'China Incident' outside Peking marked the beginning of open war which continued until 1945 when C., as one of the Allied Powers, received the surrender of the Japanese. The Civil War was then resumed, and in 1949, following their elimination of Nationalist resistance on the mainland, the Communists inaugurated the People's Republic of China. The Nationalists retired to Formosa (q.v.).

Dissension developed in the Communist Party from 1957 when Mao Tse-tung (q.v.) attempted to achieve 'pure' Communist aims at home and abroad. He failed and moderate policies prevailed 1959–62 when Liu Shao Chi replaced him as chairman of the rep., but he struggled to regain power and launched 1964 the Great Proletarian Cultural Revolution, adopted as Party policy 1966 and put into force by the youthful Red Guards and adult Revolutionary Rebels. Widespread disturbances ensued 1967–8 and industry was disrupted. Relations with Britain and Russia de-

teriorated sharply. Western influence in C. began with the arrival of the Portuguese at Canton in 1517. Spanish, Dutch, French, British, and Americans followed; and during the 19th cent. it seemed likely that C. would be partitioned amongst the Powers. Trade was conducted through Treaty Ports which were in the ownership or control of one or other of the Great Powers, and the Chinese customs were managed by British officials. The last Chinese effort under the Empire to throw off western influences was the Boxer rising of 1900, repressed by European troops. The Treaty Ports were abolished by new agreements made 1943–7.

By autumn 1968 external relations were still strained and internally there had been bloodshed between rival Red Guard and other groups, as well as between them and opponents of the Cultural Revolution. Calls for discipline were made and educational institutions, closed or in disorder from 1966, were being reorganised. Leadership seemed in the hands of Mao, Chou En-lai (qq.v.) and Marshal Lin Biao.

Area and Population. The Chinese vary widely from province to province. The main barrier between the Chinese and other nations is the extreme difficulty of the language. Apart from Islam, which prevails in the remote N.W., 3 philosophical systems, Taoism, Confucianism, and Buddhism, flourished in pre-Communist China; a Chinese could profess all at once.

Area 3,745,000 sq. m.; pop. (1966) 773,119,728.

CHINA CLAY. See KAOLIN.

CHINAWARE. See POTTERY.

CHINCHILLA (family, Chinchillidae). Name given to several species of South American rodents allied to porcupines. They have long hind legs, longish ears, and a bushy tail; vary in size from a large squirrel to a small rabbit, are very active, and live in groups in burrows and rock crevices in the Andes of Bolivia and Chile. The Common C. (*Chinchilla lanigera*) is famous for its beautiful, soft, silvery-grey fur.

CHINDITS. Name given to troops of the 3rd Indian Division (Long Range Penetration Group) under the command of Brigadier Wingate (q.v.) in the S.W.W. The name was derived from Chintay, the mythical animal – half lion, half eagle – at the entrance of Burmese pagodas to scare evil spirits.

CHINESE ARCHITECTURE. Since early times Chinese buildings have been constructed chiefly of timber, and consequently they do not usually last long. There are few buildings which date back earlier than the Ming dynasty (1368–1644), but there are records, such as the Ying Tsao Fa Shih (Method of Architecture), pub. in A.D. 1103, which describe and illustrate early Chinese buildings. These records reveal that C.A. has remained very much the same in style throughout the ages. Chinese buildings usually face S., a convention which can be traced back to the 'Hall of Brightness', a famous building of the Chou dynasty (c. 1050–221 B.C.). One of the most characteristic features of C.A. is the curved roof, believed to have been imported with Buddhism from India.

The Chinese are also famous for their walls. The Great Wall of China was built, c. 228–210 B.C., by the Emperor Ch'in Shih Hwang Ti along the northern frontier as a defence against the hostile nomadic tribes of the north. The fine city wall of Peiping dates back to the Ming dynasty, as also do some of the buildings in or near Peiping, notably the Altar of Heaven, the ancestral temple of the Ming tombs, and the Five Pagoda Temple. The pagoda with its tiled roofs one above the other is typically Chinese.

CHINESE ART. During China's Stone Age painted pottery and jade objects were made, but there was not a Chinese culture until the acquisition of bronze. During the Shang period, which lasted till c. 1050 B.C., beautiful bronze vessels were produced, and motifs, such as the dragon, the elephant, and the ogre's mask, were already in use. Under the Chou dynasty

CHINESE ART. White horse, unglazed earthenware, T'ang dynasty.

discovered in 1823; it varies in extent between rainy and dry seasons from 20,000 sq. m. to 7,000 sq. m.

CHADWICK, Sir Edwin (1800–90). British social and sanitary reformer. B. near Manchester, he became for a time a literary employee of Jeremy Bentham. In 1833 he was a member of, and from 1834 secretary of, the royal commission on poor law. His constant differences with his superiors were partly responsible for the break-up of the commission in 1846. C. also interested himself in drainage, water-supply, and sanitary problems, and was a commissioner to the Board of Health 1848–54.

CHADWICK, Sir James (1891–). British physicist. He studied at Cambridge under Rutherford, and in 1932 discovered the particle in an atomic nucleus which became known as the neutron, because it has no electric charge. In 1935 he was awarded a Nobel prize, and in 1940 was one of the British scientists reporting on the atom bomb. He was Lyon Jones prof. of physics at Liverpool 1935–48, and Master of Gonville and Caius Coll., Cambridge, 1948–59.

CHAETOGNATHA (kētōg'natha) or Arrow-worms. Class of invertebrate animals of peculiar structure and uncertain position, consisting of *Sagitta* and 7 other genera, comprising 38 species. They usually measure from $\frac{1}{4}$ to $1\frac{1}{4}$ in. in length, occur in vast numbers on the surface of the sea, and form an important item in the food of fishes.

CHAETOPODA (kētop'oda). Division of annelid worms, distinguished from the Hirudinea by the presence of locomotive organs, in the form of paired bristles, borne on most of the numerous rings or segments into which the body is divided. They include two principal classes. The Polychaeta have many bristles, and include the marine bristle worms. The Oligochaeta, which have fewer bristles, include the earthworms and some freshwater species.

CHAFER. Name given to several beetles of the section Lamellicornia, e.g. the cockchafer (*Melolontha vulgaris*); the summer C. (*Rhizotrogus solstitialis*), another common British species; and the rose C. (*Cetonia aurata*).

CHAFFINCH. A bird (*Fringilla coelebs*), well known as resident in Britain and Europe generally. The male is olive-brown above, with a bright chestnut breast, a bluish-grey cap, and two white bands on the upper part of the wing; the female is duller. The length is about 6 in. The C. is a good songster.

CHAGALL (shag'al), Marc (1889–). Russian artist. B. at Vitebsk, of Jewish parentage, he became a pupil of Bakst and from 1910 to 1914 studied in Paris. In 1922 he returned to France where he has since lived. A precursor of Surrealism, he breaks through the bounds of natural law to a dream world of floating animals and figures, and strange colours and juxtapositions of objects. He has also produced illustrated books—the Bible and La Fontaine's *Fables*.

CHAHAR. Former prov. of China, divided in 1947 between Inner Mongolia, Shansi, and Hopci.

CHAILLU (shahyū'), Paul Belloni du (1835–1903). American (French-born) traveller. B. in France, in 1855 he began a 4 years' journey of exploration in W. Africa. His *Explorations and Adventures in Equatorial Africa* (1861) relates amongst other things his discovery of the gorilla in Gabun.

CHAIN. Instrument of measurement used in land surveying, and hence a unit of land measurement. *Gunter's C.* is 66 ft. long and divided into 100 links. The *Engineer's C.* or *Ramsden C.* is 100 ft. long and divided into 100 links. In both cases the links are normally of steel wire. The former came to be adopted as the unit of land measurement; a C. is 22 yd., and 10 sq. C. make an acre (4,840 sq. yd.).

CHAIN, Ernst Boris (1906–). British scientist. B. in Berlin, son of a chemist and industrialist, he was driven to Britain by Nazi racial discrimination and

CHALK. Hill figures, formed by removing turf to show the underlying chalk, are a feature of English landscape. The White Horse on Bratton Hill near Westbury in Wiltshire is said to commemorate the victory of Alfred the Great over the Danes at Ethandun in 878. Photo: Aerofilms Ltd.

worked under F. Gowland Hopkins (q.v.) at Cambridge 1933–5. With Florey (q.v.) he initiated the work on penicillin which led to the discovery of its curative properties, and in 1945 shared the Nobel prize for physiology and medicine with Fleming and Florey. In 1961 he became prof. of biochemistry at Imperial College, London.

CHAITANYA (chitan'ya) (1486–c.1534). Indian mystic and philosopher, founder of a sect of Vaishnavas (devotees of Vishnu), numerous in Bengal. He was an eminent Sanskrit scholar, and advocated a religion of *bhakti* (personal devotion to the Deity), regardless of caste distinction.

CHAKA (chah'kah) (c. 1783–1828). Zulu chief who in the early years of the 19th cent. built up by conquest a powerful Zulu realm from the border of Cape Colony to the Zambesi. He was murdered.

CHALDAEA. See BABYLONIA.

CHALIAPIN (chahlē-ah'pēn), Fyodor Ivanovich (1873–1938). Russian singer. B. at Kazan of peasant parentage, he became a world-famous bass singer, and made his London début in 1913. His greatest role was that of Boris Godunov in Mussorgsky's opera. C. left Russia after the rise of the Soviet régime, and d. in Paris.

CHA'LICE (chal'is). Cup used in celebrating the Eucharist, sometimes of wood or pewter, but often of precious metal.

CHALK. A soft, fine-grained whitish rock composed of carbonate of lime, CaCO₃, formerly thought to derive from the remains of microscopic animal organisms or Foraminifera (foraminiferal ooze theory). In 1953, however, it was seen under the electron microscope to be composed chiefly of coccoliths, unicellular lime-secreting algae, and hence to be primarily a vegetable deposit. C. was laid down in the later Cretaceous period and covers a wide area in Europe. In England it stretches in a belt from Wilts continuously across Bucks and Cambs to Lincs and Yorks, and also forms the N. and S. Downs and the cliffs of S.E. England. C. is extensively quarried for use in cement, lime, mortar, etc.

CHALMERS (chah'merz), James (1841–1901). Scottish missionary-martyr. In 1866 the London Missionary Society sent him to the island of Rarotonga in the S. Pacific, and after 10 years there he was appointed to New Guinea. He was killed by cannibals on the is. of Goaribari.

CHALMERS, Thomas (1780–1847). Scottish divine. As minister of Tron Church, Glasgow, from 1815, he became noted for his eloquence and for schemes of social reform. In 1823 he became professor of moral philosophy at St. Andrews, and in 1828 of theology at Edinburgh. At the 'Disruption' of

off the coast of Turkey. Cap. Chios, pop. (1961) 24,361. Area 321 sq. m.; pop. (1961) 62,090.

CHIPMUNK (*Tamias*). A kind of ground-squirrel found in N. America and E. Asia. Of small size and ornamented with white stripes, they are sometimes called striped gophers, and are distinguished from ordinary squirrels by having cheek-pouches. They inhabit woods, living in burrows or hollow logs. See illus p. 251.

CHIPPENDALE, Thomas (c. 1718–79). English cabinet-maker. The son of a joiner of Otley, Yorks, he went to London at the age of 20, and from 1753 had his workshop in St. Martin's Lane. His book *The Gentleman and Cabinet Maker's Director* (1754) was a landmark in furniture design, and illustrates his favourite styles – Louis XV, Chinese and Gothic. He worked mainly in dark mahogany.

THOMAS CHIPPENDALE. Mahogany bookcase in the Gothic style c. 1755. Courtesy of the Lady Lever Collection.

CHIPPENHAM (chip'nam). English market town (bor.) on the Avon in Wilts, 11 m. N.E. of Bath. Once a chief centre of the woollen trade, it produces condensed milk, bacon, etc., and has some light industry. Pop. (1961) 17 525.

CHIRGWIN, George H. (1854–1922). Music-hall artist; one of the most popular of all coon singers, and known as the 'White-Eyed Kafir' from his trick of leaving one eye unblacked.

CHIRICO (ké'rēkō), Giorgio de (1888–). Italian artist. B. in Greece, of Italian parents, he was associated with the Dadaists and Surrealists, rearranging ordinary objects in unusual patterns. In more recent years he has revolted against 'modernism', producing a number of works in the style of Raphael. There are numerous striking self-portraits.

CHIRON (kī'ron). In Greek mythology, the wise centaur, son of Cronos and a sea nymph, and tutor of Jason, Achilles, and other heroes.

CHIROPODIST (kī'rop'ōdist). One who is professionally concerned with the care and treatment of the hands and feet. The Society of Chiropodists functions in Britain under the Council for Professions Supplementary to Medicine. The first centre to provide treatment for the more common disorders of the foot was the Pedic Clinic in Bloomsbury, estab. in 1913 by E. G. V. Runting, which later became the London Foot Hospital.

CHIROPTERA (kī'rop'terā). An order of mammals comprising the bats (q.v.), which are readily distinguished by the conversion of the fore-limbs into wings for the purpose of flight.

CHISINAU. Rumanian form of KISHINEV.

CHISLEHURST (chiz'lherst). District of the London bor. of Bromley. Camden Place (built by William Camden, q.v.) was the home of Napoleon III 1871–3. A nearby series of chambered caves, of unknown origin, were used as air-raid shelters in the S.W.W. and are open to the public.

CHISWICK (chiz'ik). An ancient English town, on the Thames, part of the Greater London borough of Hounslow from 1965. Hogarth, Barbara Palmer, duchess of Cleveland, and Whistler are buried at C., and it has other interesting associations.

CHITA. Russian town in eastern Siberia, cap. of C. region on the C. river. It is on the Trans-Siberian railway, and has engineering works, coal mines, etc. Pop. (1967) 201,000.

CHITAL (*Axis axis*), also known as the Axis or Spotted Deer. A medium-sized species of the deer

family (Cervidae) inhabiting the jungles of India and Ceylon; it has white spots and resembles somewhat the fallow deer.

CHITRAL (chitrah'l). Former Indian princely state, merged in W. Pakistan in 1956. Area 5,700 sq. m.; pop. (1951) 105,724.

CHITTAGO'NG. Town and port in E. Pakistan, the chief town of C. district. In 1967 Pakistan's first steel mill, together with her first power station fired by natural gas, were opened here. Pop. (1961) 364,205.

CHIVALRY (shiv'alri). Originally the knightly class of the feudal Middle Ages; subsequently the word came to mean the code of gallantry and honour that the knights were supposed to observe. The Court of C. endured from Edward III's reign to 1737.

CHIVE. A plant (*Allium schoenoprasum*) that sometimes grows wild in Britain, and is cultivated as a vegetable.

CHKALOV (chkah'lof). Name 1938–57 of ORENBURG.

CHLADNI (khlahd'nē), Ernst Florens Friedrich (1756–1827). German physicist, a pioneer in the field of acoustics.

CHLORAL (klor-) (CCl₃-CHO) or Trichloroacetaldehyde. An oily colourless liquid with a characteristic pungent smell. It is very soluble in water, and its compound chloral hydrate is a powerful hypnotic.

CHLORATES. In chemistry, the salts of chloric acid, the common ones being those of sodium, potassium, and barium.

CHLORELLA (klore'la). A single-celled, freshwater green alga, 3–10 microns in diam., obtaining its growth energy from light. C. is capable of increasing its weight four-fold in a 12 hr. period, and, already an essential tool for the study of photosynthesis in the laboratory, it may prove even more valuable as a staple foodstuff, particularly for space travellers. Although unpalatable, its nutritive content is high, consisting of 50% protein, 20% fat, 20% carbohydrate and 10% phosphate, calcium and other inorganic substances.

CHLORIDES (klor'idz). Salts of hydrochloric acid commonly formed by its action on various metals or by the direct combination of metal and chlorine.

CHLORINE (klor'en). A chemical element, a greenish-yellow gas with an irritating, suffocating smell. Symbol Cl; atomic weight, 35.457; atomic number 17. It rapidly attacks the membranes of the nose, throat, and lungs, producing bronchitis or pneumonia, and during the F.W.W. it was used as a weapon. It is never found uncombined in nature, but is widely distributed in combination with the alkali metals. Common or rock salt is sodium chloride. C. was discovered in 1774 by Scheele, but Sir H. Davy in 1810 first proved it to be an element. C. is an important bleaching agent and is used universally as a germicide for drinking water. It is also an oxidizing agent and finds many applications in organic chemistry.

CHLOROFORM. Trichloromethane, CHCl₃, with 1 or 2 per cent of alcohol to prevent it from decomposing on exposure to light. It is a clear, colourless liquid with a characteristic pungent, sweet, rather sickly smell and taste. It had been known to chemists long before David Wadlie, chemist to the Apothecaries' Company of Liverpool, suggested to Professor James Young Simpson of Edinburgh in 1847 that it might be used as a general anaesthetic.

CHLOROMYCETIN (klō'rōmīsetin). Antibiotic which attacks viruses as well as bacteria, used in treatment of scrub-typhus, typhus and psittacosis.

CHLOROPHYLL (klō'rofil). The green colouring matter found in plants, being formed in the parts exposed to light. By its means, plants absorb and decompose carbon dioxide in order to produce oxygen and to form new organic substances.

CHOCOLATE. See COCOA.

quartets influenced those of Mozart, who in turn influenced his master. The last quartets of Beethoven are the personal expression of his own individuality and show many striking departures from the original classical framework. In the 19th cent. C.M. found its way into the concert hall, and this effected a certain coarsening of the texture, and a quasi-orchestral quality, even in the work of Brahms. The early 20th cent. French school of Impressionists, represented by Debussy and Ravel, instituted changes in the classical framework, and during the period which followed various theories such as atonality, polytonality, etc., have found expression in C.M.

Modern composers of C.M. incl. Berg, Webern, Hindemith, Stravinsky, Prokofiev, Shostakovich, Kodály, Bartók, Ireland, Bliss, Tippett, Rubbra, Copland and Roy Harris.

CHAMBERS, Sir Edmund (1866–1954). British scholar, specializing in *The Elizabethan Stage* (1923); he also pub. studies of Coleridge and Arnold.

CHAMBERS, George (1803–40). British marine painter. B. at Whitby, Yorks, the son of a seaman, he excelled in battle scenes, e.g. 'The Bombardment of Algiers in 1816', Greenwich Hospital.

CHAMBERS, Sir (Stanley) Paul (1904–). British economist. Sec. and Commissioner of the Board of Inland Revenue 1942–7, he devised P.A.Y.E. (q.v.), and 1960–8 was chairman of Imperial Chemical Industries.

CHAMBERS, Sir William (1726–96). British architect. Sailing as supercargo to China at 16, he made drawings of Chinese subjects and his design for the Kew Gardens pagoda shows this influence, which he helped to popularize. His greatest work is Somerset House, London.

CHAMBERY (shoñbärē). Old capital of Savoy, now cap. of Savoie dept., France. The seat of an archbishopric, it is a railway junction and airport, with a number of industries; also a holiday and health resort. Pop. (1962) 47,447.

CHAMELEON (kamē'leōn). A family of lizards (*Chamaeleontidae*) of peculiar structure and remarkable for their faculty of colour-changing. The headquarters of the family is in Africa, but some species are found outside the limits of that region, including the common C. (*Chamaeleon chamaeleon*) of the Mediterranean countries, and there are also Indian representatives. The tail is long and highly prehensile, assisting the animal when climbing. The tongue is very long, protrusible, and covered with a viscid secretion; it can be shot out with great rapidity to a length of 7 or 8 in. and by means of it the C. captures insects. Cs. are entirely arboreal in their habits, and move very slowly. Their changes of colour are caused by changes in the intensity of light, of temperature, and of emotion, which affect the action of two layers of pigment-containing cells which lie underneath the skin.

CHAMINADE (shahmēnahd'), Cécile Louise Stéphanie (1857–1944). French composer. B. in Paris, she attracted the notice of Bizet, and made her appearance as a pianist when she was 18. Her best-known compositions are songs and piano pieces.

CHAMOIS (sham'wah) (*Rupicapra tragus*). A species of the so-called goat-antelopes, distinguished by vertical horns about 7 in. long and hooked backwards at the tip. It is brown, stands about 2½ ft. high, and inhabits the mountain ranges of S. Europe and Asia Minor. Its skin furnishes chamois leather.

CHAMONIX (shahmōhnē). Holiday resort at the foot of Mt. Blanc, in the French Alps. Pop. (1962) 7,966.

CHAMOIS

CHAMPAGNE (sham-pān'). Ancient province of France; parts of 10 depts. fall within the area, of which the chief are Ardennes, Marne (all), Haute-Marne, and Aube. The cap. was Troyes; Reims and Châlons are other important towns. C. consists of plains to the E. of the Paris basin, and is famous for its vineyards.

CHAMPAGNE. French wine, produced from specially fine grapes and blended wines, the former grown in a strictly defined area of the Marne region about Reims and Épernay in Cham-

pagne. Unlike other wines, fermentation takes place after the bottle has been sealed, this accounting for the effervescence.

CHAMPAIGNE, Philippe de (1602–74). French painter. Of Flemish origin, he settled in Paris at 19, and is famed for portraits, e.g. Richelieu. *See* p. 449.

CHAMPLAIN (shoñplān'), Samuel de (1567–1635). French pioneer in Canada, soldier, and explorer. He served in the army of Henry IV and with an expedition to the W. Indies, and in 1603 began his exploration of Canada. In a 3rd expedition in 1608 he founded and named Quebec, and in 1612 was appointed Lieut.-Governor of French Canada.

CHAMPOLLION (shoñpolyōn'), Jean François, le Jeune (1790–1832). French Egyptologist, who in 1822 found the key to the decipherment of the Egyptian hieroglyphics on the Rosetta Stone (now in the British Museum).

CHANCELLOR, Lord High. A high state official who originally acted as royal secretary and keeper of the great seal. Until the 14th cent., the C. was always an ecclesiastic, who also acted as royal chaplain. Under Edward III the C. became head of a permanent court to consider petitions to the king, the Court of Chancery. Today he is a member of the cabinet, and goes out of office with it. In his legal capacity he may preside over the Court of Appeal, and appoints the judges and justices of the peace; he also acts as Speaker of the House of Lords. In order of precedence he comes after the Archbp. of Canterbury.

CHANCELLOR OF THE DUCHY OF LANCASTER. An honorary post held by a cabinet minister who has other non-departmental responsibilities. The C. was originally the king's representative controlling his lands and courts within the duchy.

CHANCELLOR OF THE EXCHEQUER. The cabinet minister responsible for the national economy. The office was originally established under Henry III, the C.'s task being that of keeper of the exchequer seal. Since the 19th cent. it has been a cabinet post, regarded as ranking next to that of Prime Minister.

CHANCERY. The court which, until the fusion of the courts in 1875 into the High Court of Justice and the Court of Appeal, administered the rules of equity as distinct from the rules of common law. It dealt with such matters as the administration of the estates of deceased persons, the execution of trusts, foreclosure of mortgages, partnerships, and the estates of infants. By the Judicature Act of 1873 it was established as a division.

CHANDERNAGORE. Indian city, 22 m. N. of Calcutta, in the state of W. Bengal. Formerly a French settlement it was ceded to India by treaty in 1952. Pop. (1961) 67,105.

CHANDIGARH. City of the Rep. of India, inaugurated 1953 to replace Lahore (cap. of British Punjab), which went to Pakistan under partition in

his second son, George, became king of Greece. In 1864 he lost Schleswig-Holstein following a war with Austria and Prussia.

CHRISTIAN X (1870-1947) succeeded his father Frederick VIII as king of Denmark and Iceland in 1912. He m. Alexandrine, Duchess of Mecklenburg-Schwerin; and because of his democratic ways was highly popular. During the S.W.W. he was a semi-prisoner of the Germans in Copenhagen.

CHRISTIAN ACTION. Undenominational, non-party organization in Britain, founded in 1946 by Lewis J. Collins (q.v.), which aims at translating Christian teaching into action in local, national and international affairs. It opposes racial discrimination, aids refugees, relieves want and works for peace.

CHRISTIANIA. See OSLO.

CHRISTIANITY. One of the great world religions; regarded as having been founded by Jesus of Nazareth in the first third of the first Christian century. Like Buddhism and Islam it is a universal religion, claiming to be the true religion which ought to be believed by all men. It has, therefore, always been a missionary religion, and its expansion from its place of origin in Palestine is still in progress. Beginning as a religion of the Near East, it has become the religion of the West, and its central seat has been Europe. In fact C. has been the principal factor in Western culture. The last century has seen the greatest expansion of the Christian Church since its foundation.

C. includes a vast number of sects which represent different versions of the faith. The 3 main sections are: the Roman Catholic Church; the Eastern Orthodox Church; and the Evangelical communions which have since the Reformation repudiated the authority of the Pope. The schism between Eastern and Western churches was finally effected in 1054. The Reformation in the 16th cent. gave rise to 2 large groups of reformed churches - those which followed Luther and those which regarded Calvin as their teacher. The Protestant movement has since given birth to a very large number of smaller sects. Today there is a strong movement towards reunion, e.g. the presence of members of other churches as observers at the Vatican Council of 1962, and the reunion of the Anglican and Methodist churches discussed in 1963. The World Council of Churches (provisionally estab. 1938 and permanently 1948) has its H.Q. at Geneva, and incl. representatives of the Anglican, Eastern Orthodox, Protestant, and Old Catholic churches.

C. is grounded on the Bible, the N.T. in particular; in addition most Christians profess belief in the statements of the 3 creeds - the Apostles', the Nicene, and the Athanasian. Belief in God the Father, Who is all-good, all-wise and all-powerful, is the fundamental concept, combined with the doctrine of the Trinity, i.e. of the union of the three Persons of the Father, Son, and Holy Ghost in one Godhead. Only the comparatively few Unitarians reject the dogma of the divinity of Christ. Most Christians profess belief in the Incarnation and the Resurrection of Christ, although there are many Modernists of whom this can hardly be said. The universal belief of Christians is that Christ is the Redeemer, but there is no universal agreement as to the nature of the Atonement. Belief in a historical Fall in the Garden of Eden has declined since the propagation of the theory of Evolution in the last century.

Some churches are much more exclusive than others, and there is much dispute as to the number and meaning of the sacraments, but the Bible is accepted by all Christians as being, in some sense at least, authoritative and inspired. There are about 700 million Christians, of whom nearly half are returned as Roman Catholics. Rather more than 200 million are Protestants, and the rest are Eastern Orthodox, Copts, etc.

CHRISTIAN SCIENCE. The religion, or interpretation of the Christian religion, discovered and founded by Mary Baker Eddy (q.v.). It is regarded by Christian Scientists themselves as the restatement of primitive Christianity with its full gospel of salvation from all evil, including sickness and disease as well as sin. Christian Scientists believe that since God is good and is Spirit, matter and evil are not truly real; and the application of this belief constitutes C.S. practice. According to its adherents, C.S. healing is brought about by the operation of Truth in human conscience and not by mental suggestion, psycho-therapy, etc. In those who are properly attuned to the Divine Spirit there can be no place for evil, sin, and disease.

There is no ordained priesthood, but there are public practitioners of C.S. healing who are officially authorized and listed by the Church of Christ, Scientist, that was estab. by Mrs. Eddy in 1879. The Mother Church - the First Church of Christ, Scientist - is situated in Boston, Mass., U.S.A., and it has branches in most parts of the world. The textbook of C.S. is Mrs. Eddy's *Science and Health with Key to the Scriptures*, first pub. in 1875. Among the Christian Science publications is the *C.S. Monitor*, an international daily newspaper.

CHRISTIANS OF ST. THOMAS. Sect of Indian Christians on the Malabar coast; named after the apostle who is supposed to have carried his mission to India, although they were estab. in the 5th cent. by Nestorians from Persia. They now form part of the Syrian Church with their own patriarch.

CHRISTIE, Agatha (1891-). British novelist, née Miller. B. at Torquay, she was later to use a

Photo: Angus McBean.

Devon setting in a number of books. Skilfully constructed and with strong characterization, her mystery novels began with *The Mysterious Affair at Styles* (1920), introducing Hercule Poirot, the Belgian detective. Outstanding among later books is *The Murder of Roger Ackroyd* (1926), much discussed because the narrator is the murderer, a device considered by purists to be illegitimate. Films have been made from her novels, and she has

written a number of very successful plays, e.g. *The Mousetrap*. Her 2nd husband is the archaeologist, Sir Max Mallowan, whom she has accompanied on a number of Middle East 'digs'.

CHRISTIE, John (1882-1962). British patron of music. In 1934 he founded the Glyndebourne Festival, held in an opera house in the grounds of his country mansion, and in 1954 Glyndebourne Arts Trust Ltd. (a charitable trust) was estab. to continue his work.

CHRISTIE'S. Popular name for the firm of Christie, Manson, and Woods, Ltd., the principal art dealers in London. It was estab. by James Christie in 1766.

CHRISTINA (kris'tēna) (1626-89). Queen of Sweden. She succeeded her father Gustavus Adolphus in 1632, and until she was 18 the country was ruled by the great chancellor Oxenstierna. In 1644 she assumed the royal power, and proved in many ways a wise and enlightened ruler. But she was extravagant and capricious, and refused to marry and thus secure the succession, as her ministers repeatedly advised her to do. At length she nominated her cousin Charles Gustavus as her successor, and then embarked upon a career of dissipation. In 1654 she abdicated and removed to Innsbruck, where she was received into the R.C. Church, and then maintained a court in Rome. Twice she returned to Sweden with a view to

CHARLES CHAPLIN. Wearing the costume familiar to millions, Chaplin in a bewildered moment in *Modern Times*. The wait round the corner is his third wife, Paulette Goddard. Courtesy of the British Film Institute.

(1931) and *Modern Times* (1938), showing man's predicament in a machine age. In *The Great Dictator* (1940), guying Hitler, he spoke for the first time and in *Monsieur Verdoux* (1947) again abandoned his traditional costume. He has been 4 times married, his 3rd wife being Paulette Goddard and his 4th Oona, dau. of Eugene O'Neill (q.v.). In 1919 he was one of the founders of United Artists Corporation.

CHAPMAN, George (1559–1634). English poet, who was associated in London with Marlowe, and collaborated with Ben Jonson, but is best known for his fiery translation of Homer 1598–1624, which inspired Keats.

CHAR. Genus of fishes (*Salvelinus*) of the salmon and trout family (Salmonidae). *S. alpinus*, the typical species, is a marine form, but it enters rivers; and isolated colonies, each a distinct species or sub-species, have been formed in many European lakes. About 15 such have been distinguished in the British Isles.

CHARADRIIFORMES (karad'ri-fof'méz). Order of birds, including the plover family (Charadriidae) and their allies the snipe and sandpipers.

CHARCOT (shahrkoh'), Jean-Martin (1825–93). French neurologist. B. at Paris, he was prof. of pathological anatomy in the Univ. of Paris from 1860. He estab. the neurological clinic at the Salpêtrière, distinguished himself by his researches on the diseases of the nervous system, and initiated the scientific study of hypnotism.

CHARDIN (shahrđin'), Jean Baptiste Siméon (1699–1779). French artist. B. in Paris, of a poor family, he is chiefly celebrated for his interiors and still-lives of kitchen subjects – fruit and pots and pans.

CHARDONNE (shahrđon'), Jacques. Pseudonym of Jacques Boutelleau (1884–), French novelist, noted for his penetrating studies of married life, e.g. *Les Destinées sentimentales* (1934–5).

CHARENTE (shahrđon'). French river, rising in Haute-Vienne dept. and flowing past Angoulême and Cognac into the Bay of Biscay below Rochefort. Its wide estuary is much silted up. Length c. 225 m. It gives its name to two depts., Charente and Charente-Maritime (formerly Charente-Inférieure).

CHARENTE-INFÉRIEURE. Former name of Charente-Maritime, a dept. of FRANCE.

CHARING CROSS. District within the city of Westminster, London, lying around Charing Cross (main line) railway station. Its name is derived from one of the stone crosses built by Edward I at the resting-places of the coffin of his queen, Eleanor. The present cross is modern.

CHARLEMAGNE (char'lemün), or Charles the

Great (742–814). King of the Franks and Roman emperor. The son of Pepin the Short, mayor of the palace in Merovingian Neustria, he was crowned by the Pope in 754 along with his father and his younger brother Carloman. When Pepin d. in 768, C. inherited the N. part of the Frankish kingdom, and when Carloman d. in 771, C. also took possession of his countries. In 770 he m. the dau. of the king of the Lombards, whom a year later he divorced.

He was engaged in his first Saxon campaign when the Pope's call for help against the Lombards reached him; he crossed the Alps, captured Pavia, and took the title of king of the Lombards. The pacification and Christianizing of the warlike pagan tribes of Saxons occupied the greater part of C.'s reign. The Westphalian leader Widukind did not submit until 785, when he received baptism. From 792 N. Saxony was subdued, and in 804 the country was finally pacified. In 777 the emir of Saragossa asked for C.'s help against the emir of Cordova. C. crossed the Pyrenees in 778, and reached the Ebro, but had to turn back from Saragossa. The rearguard action of Roncesvalles in which Roland, warden of the Breton March, and other Frankish nobles were ambushed and killed by Basque hordes, became immortal in the *Chanson de Roland*. In 801 the district between the Pyrenees and the Llobregat was organized as the Spanish March. The independent duchy of Bavaria was incorporated in the kingdom in 788, while the Avars, Turko-Finnish nomads inhabiting Hungary, were subdued in 791–6 and accepted Christianity. The supremacy of the Frankish king in the western world found outward expression in the bestowal of the imperial title: in Rome, during Mass on Christmas Day 800, pope Leo III crowned C. emperor.

C.'s activities were not confined to warfare. Jury-courts were introduced, the laws of the Franks revised, other tribal laws written down. A new coinage was introduced, weights and measures were reformed, and communications were improved. C. also took a lively interest in theology, organized the Church in his dominions, and furthered missionary enterprises and monastic reform. The 'Carolingian Renaissance' of learning began when he persuaded the Northumbrian Alcuin to enter his service in 781. C. gathered a kind of academy around him. He also collected the old heroic lays, began a German grammar, and promoted religious instruction in the vernacular. He died on Jan. 28, 814, at Aachen, where he was buried. Soon a cycle of heroic legends and romances developed round him, and these live on in epics of Ariosto, Boiardo, and Tasso.

CHARLEMAGNE PRIZE. Estab. by a no. of leading citizens in Aachen in 1949, it is awarded annually for services to European understanding and co-operation: winners incl. Churchill, Adenauer, Hallstein, Monnet, Schuman, Spaak and Heath.

CHARLEROI (shahr'lrwah'). Belgian industrial and coal-mining town on the Sambre in Hainault prov. Pop. (1966) 24,895.

CHARLES I (1600–49). King of Great Britain and Ireland from 1625. B. at Dunfermline, the son of James VI of Scotland, he became heir to the throne on the death of his brother Henry in 1612. He went to Madrid in 1623 to urge his suit to the Infanta of Spain, but without success. In 1625 he became king, and m. Henrietta Maria, dau. of Henry IV of France. Friction with parliament began at once. The parliaments of 1625 and 1626

which owe much to the English nursery rhymes and nonsense verse he admires.

CHUNGKING. City of W. China, in Szechwan prov. A former treaty port, opened to foreign trade in 1891, it stands at the confluence of the Yangtze-Kiang and the Kia-ling. For more than 4,000 years it has been an important commercial and route centre in one of the most remote and economically backward regions of China, and it remains a focal point of road, river and railway transport. Its manufactures incl. textiles, matches, iron and steel goods, chemicals; it exports tung oil, hog bristles, hides, etc., and is the seat of a univ. When both Peking and Nanking were in Japanese hands, it was cap. of China 1938-46; large sections of the town were destroyed by Japanese bombing, and more than 1,000 were killed in a fire in 1949. It was called Pehsien until 1936. Pop. (1960 est.) 2,165,000.

CHURCH, Richard (1893-). British man-of-letters. B. in London, and ed. at Dulwich Hamlet school, he entered the Civil Service at 16, retiring in 1933. Until then his chief published work had been as a subtly sensitive poet (*Collected Poems*, 1948) but in 1937 his novel *The Porch* was acclaimed. Among later works are 2 vols. of autobiography *Over the Bridge* (1955) and *The Golden Sovereign* (1957). He is also a noted essayist and literary critic.

CHURCH ARMY. Religious organization within the Church of England founded in 1882 by Wilson Carlile (1847-1942), a business man converted after the failure of his textile-firm, who took orders in 1880. Originally intended for evangelical and social work in the Westminster slums, it developed along Salvation Army lines, and has done much work among ex-prisoners and for the soldiers of both world wars.

CHURCH ASSEMBLY (or National Assembly). A body established by parliament in 1919, consisting of a House of bishops, a House of clergy, and a House of laity, which has power to frame legislation concerning the C. of E. Any measures it approves may become law when approved by both Houses of Parliament and given the Royal Assent.

RICHARD CHURCH

CHURCH COMMISSIONERS. See ANGLICAN COMMUNION.

CHURCH CONGRESS. Annual meeting, first held at Cambridge, in 1861, consisting of laymen and clergy of the C. of E. for the discussion of problems affecting the Church. It has no legislative authority.

CHURCH HISTORY. The Christian C. is traditionally said to have originated on the first Whitsun Day, but was only finally separated from the parent Jewish C. by the declaration of SS. Barnabas and Paul that the distinctive rites of Judaism were not necessary for entry into the Christian C.

For the 1st 2 cents. the C. was not much more than a spasmodically persecuted minority, but in the 3rd cent. more determined efforts to extirpate it were made under Severus, Decius, and Diocletian. Toleration was obtained by the victory of Constantine at Milvian Bridge (312), and Christianity became the estab. religion of the Roman Empire. Security and increasing wealth brought some deterioration, and the outbreak of heresies such as Montanism and Gnosticism, to which the C. opposed a developed creed, a canon of estab. scriptures, and her threefold ministry with its succession from the Apostles. Questions of discipline also threatened disruption within the C.; and to settle these Constantine called the Council of Arles (314), which was followed by the Councils of Nicaea (325), Constantinople (381), Ephesus (431), and Chalcedon (451). A settled doctrine of Christian belief evolved, but failed to prevent the schism of the churches of the East.

During the Dark Ages the Church, esp. as represented by the Celtic and Benedictine monks, preserved the best features of the Graeco-Roman civilization and taught the northern barbarians, e.g. SS. Columba and Augustine in England. The C. fostered agriculture and education, and assisted the growth of the feudal system of which it formed the apex, as recognized by Charlemagne (800) in seeking coronation by the Pope.

The Middle Ages, despite an underlying unity symbolized by the theology of St. Thomas Aquinas, saw much controversy between secular and spiritual jurisdiction, e.g. Emperor Henry IV and Pope Gregory VII, Henry II of England and Becket. Moreover, increasing worldliness (against which the foundation of the Dominicans and Franciscans was a protest) and other ecclesiastical abuses, led to dissatisfaction in the 14th cent. and the appearance of the reformers Wycliffe and Huss.

In N. Europe the Renaissance brought a re-examination of Christian truth by More, Colet, and Erasmus; and with the advent of Luther, Calvin, and Zwingli came the Reformation, an attempt to return to primitive Christianity. In England Henry VIII and Elizabeth found a middle way between Romanism and Puritanism in the C. of England. During the 18th cent. Christianity was brought to the test of reason; the Scriptures were then examined on the same basis as secular literature, and the shock to orthodox belief was confirmed by the evolutionary theories of the 19th cent.

Meanwhile in England the Church of England suffered the loss of large numbers of Nonconformists, who estab. the denominations known today as the Free churches. In the 18th cent. arose the Methodist movement, and in the 19th cent. the Oxford movement led by Newman, Keble and Pusey, which eventually developed into present-day Anglo-Catholicism. Of the Presbyterian churches founded in the Reformation period the most important is the Church of Scotland. See CHRISTIANITY.

CHURCHILL, Charles (1731-64). British satiric poet. Once a clergyman in the C. of E., he wrote coarse and highly personal satires dealing to a large extent with political issues.

CHURCHILL, Lord Randolph Henry Spencer

Maximilian, and Joanna of Castile, he was brought up in the Netherlands, which he inherited on his father's death (1506). In 1516 he inherited the possessions of his maternal grandfather Ferdinand V, consisting of Spain, Naples, Sicily, Sardinia, and the Spanish dominions in N. Africa and America. When Maximilian d. in 1519, C. came into possession of all the Habsburg dominions, and was elected emperor.

The rivalry of Francis I of France, originating in disputes over possessions in Burgundy and Italy, led to 4 wars, the outstanding events of which were the French king's defeat and capture in the battle of Pavia (1525), and the sacking of Rome—the Pope having become an ally of Francis—by Charles's troops in 1527. The series was concluded in 1544 by the treaty of Cr py-en-Valois in which C. renounced his claims on the duchy of Burgundy, but maintained his other Burgundian possessions and Milan. Francis never ceased to scheme against the emperor, and even allied himself with the Turks, who besieged Vienna in 1529 and again in 1532.

Meanwhile the religious movement started by Luther in 1517 was dividing the empire into two camps, and all Charles's efforts to reach a settlement, culminating in the diet of Augsburg in 1530, were unsuccessful. The Turkish threat obliged C. to conclude a truce with the Lutherans (1532), and not before the French wars had come to an end was he able to crush the Protestant League of Schmalkalden (1546-7). The Protestants then allied themselves with Henry II of France, and allowed him to take Metz, Toul, and Verdun. After years of struggle, the Protestants under Maurice of Saxony forced Charles by the treaty of Passau in 1552 to yield most of the Protestant demands. Disappointed and worn out, C. at last abdicated in favour of his son, Philip II, in the Netherlands (1555) and in Spain (1556), resigned the imperial crown into the hands of his brother Ferdinand, and passed the remainder of his days in the monastery of Yuste in Spain.

CHARLES (Karl) (1887-1922). Emperor of Austria and king of Hungary, the last of the Habsburg emperors. He succeeded his great-uncle, Francis Joseph, in 1916, at the height of the F.W.W., and in 1919 was forced to withdraw to Switzerland, although he refused to abdicate. In 1921 he attempted unsuccessfully to regain the crown of Hungary; and was deported to Madeira, where he d. He m. the Princess Zita of Bourbon-Parma, and their son, the Archduke Otto, maintains the Habsburg claims.

CHARLES. Name of 10 kings of France. Charles I was Charlemagne (q.v.) and for Charles II the Bald, see CHARLES, rulers of the Holy Roman Empire.

CHARLES III, THE SIMPLE (879-929), the son of Louis the Stammerer, was crowned at Reims in 893. In 911 he ceded what later became the duchy of Normandy to the Norman chief Rollo. **CHARLES IV, THE FAIR (1294-1328),** the last of the direct Capetian line, succeeded Philip V in 1322. **CHARLES V, THE WISE (1337-80),** acted as regent during the captivity of his father John II in England (1356-60), and became king in 1364. He renewed the war with England in 1369, and by 1380 had reconquered nearly all France. **CHARLES VI (1368-1422)** succeeded his father Charles V in 1380, but until 1388 France was governed by his uncles. In 1392 he went mad; his uncles regained power, and civil war broke out between the dukes of Orleans and Burgundy. Henry V of England invaded France in 1415, conquered Normandy, and in 1420 forced C. to sign the treaty of Troyes, which recognized Henry as his successor. Charles VII (1403-61), the son of Charles VI, was excluded from the succession by the treaty of Troyes, but on his father's death he was recognized as king by the S. of France. C. remained inactive until 1429 when Joan of Arc raised the siege of Orleans and had him crowned at Reims. C. organ-

ized France's first standing army, and by 1453 had expelled the English from all France except Calais. Charles VIII (1470-98) succeeded his father, Louis XI, in 1483. In 1494 he claimed the Neapolitan crown, invaded Italy, and entered Naples in 1495. Milan, Venice, Spain and the Emperor then formed a coalition against him; C. defeated the allies at Fornovo, but Naples was lost. He d. while preparing a 2nd expedition. Charles IX (1550-74), 2nd son of Henry II and Catherine de' Medici, succeeded his brother Francis II in 1560, but remained entirely under his mother's influence for 10 years, during which France was torn by religious wars. In 1570 he fell under the influence of the Huguenot leader Coligny, whereupon Catherine in alarm persuaded him to consent to the massacre of St. Bartholomew which led to a new religious war.

Charles X (1757-1836), grandson of Louis XV, and brother of Louis XVI and Louis XVIII, was known before his accession as Count of Artois. At the beginning of the Revolution he fled to England, where he remained until the fall of Napoleon. When he came to the throne in 1824 he attempted to undo the work of the Revolution. In 1830 there was a revolt, and C. again fled to England. He d. at Gorizia.

CHARLES. Name of 15 kings of Sweden. The first 6 were merely local chieftains. **CHARLES VII** reigned 1161-7. **CHARLES VIII,** elected king in 1448, was twice expelled by the Danes and twice restored before his death in 1470. **CHARLES IX (1550-1611)** was elected regent for his nephew Sigismund, king of Sweden and Poland, in 1595, and king in 1600. This involved him in war with Poland and Denmark. **CHARLES X (1622-60)** succeeded his cousin Christina in 1654. He waged war with Poland and Denmark, and in 1657 invaded Denmark from the S., leading his army over the frozen sea. **CHARLES XI (1655-97),** who succeeded in 1660, showed himself a remarkable general, and drastically reformed the administration. **CHARLES XIII (1748-1818),** who was elected king in 1809, became the 1st king of Sweden and Norway in 1814. **CHARLES XV (1826-72)** reigned over Sweden and Norway from 1859. For Charles XII and XIV see below.

CHARLES XII (1682-1718). King of Sweden. He succeeded his father Charles XI in 1697 and from 1700 was involved continuously in war with Denmark, Poland, and Russia. He won a brilliant succession of victories, until in 1709 while invading Russia he was defeated at Poltava, and forced to take refuge in Turkey until 1714. He was killed in 1718 while besieging Frederiksten.

CHARLES XIV (1763-1844). King of Sweden and Norway, originally Jean Baptiste Jules Bernadotte. B. at Pau, he entered the French army, won rapid promotion during the Revolutionary War, and was created a marshal of France by Napoleon. In 1810 he was elected crown prince of Sweden, under the name of Charles John. He brought Sweden into the alliance against Napoleon in 1813, as a reward for which Sweden received Norway. He succeeded to the throne in 1818, proved a capable ruler, and was the founder of the present dynasty.

CHARLES or Carlos. Name of 4 kings of Spain. **CHARLES I** was Charles V, Holy Roman Emperor (q.v.). **CHARLES II (1661-1700)** was the last of the Spanish Habsburg kings, 2nd son of Philip IV. He was an invalid and almost an imbecile from birth. On his deathbed he made a will leaving his dominions to Philip of Anjou, grandson of Louis XIV, which led to the War of the Spanish Succession. **CHARLES III (1716-88),** the son of Philip V, became duke of Parma in 1732, and in 1734 conquered Naples and Sicily. On the death in 1759 of his half-brother Ferdinand VI he became king of Spain, handing over Naples and Sicily to his son Ferdinand. During his reign Spain was twice involved in war with

in 1954 vice-chairman of the Central People's Govt. Council and in 1959 (re-elected 1965) chairman of the Standing Committee of the People's Congress. In the Cultural Revolution he was denounced 1967.

CHUVASH (choovash'). An Autonomous Soviet Socialist Republic of the R.S.F.S.R. It lies W. of the Volga, some 350 m. E. of Moscow. The cap. is Cheboksary, the largest town Alaty. Lumbering and grain-growing are important and there are phosphate and limestone deposits, and electrical and engineering industries. Area 7,100 sq. m.; pop. (1967) 1,192,000.

CIANO (chēah'noh), Galeazzo (1903-44). Italian Fascist politician. B. at Leghorn, the son of an industrialist, he entered the diplomatic service, and in 1930 m. Mussolini's dau. Edda. In 1936 he became Foreign Min., organized Italian intervention in Spain and the invasion of Albania, estab. the Rome-Berlin Axis in 1939, advocated the 'stab in the back' against France in 1940, and the invasion of Greece. But the war began to go badly, and in 1943 C. was removed from his post and given the office of ambassador to the Vatican. He voted against Mussolini at the meeting of the Fascist Grand Council on 25 July at which the Duce was overthrown, and went into hiding. Arrested by Fascists, he was tried for treason at Verona, found guilty, and shot. His diaries were pub. in Eng. in 1947.

CIBBER (sib'er), Colley (1671-1757). British actor and dramatist. B. in London, he joined Betterton's company in Drury Lane in 1690 and 3 years later produced his 1st play, *Love's Last Shift*. This was followed by *She Would and She Would Not*, *The Careless Husband* and *The Non-juror* (1717). His Whig sentiments secured him the post of Poet Laureate in 1730.

CICADA (sikā'da). A family of insects (Cicadidae) of the sub-order Homoptera of the order Hemiptera, nearly allied to the frog-hoppers. The adult insects live on trees, whose juices they suck, and are remarkable for the chirping noise made by the males.

CICERO (sis-), Marcus Tullius (106-43 B.C.). Roman orator, writer, and statesman. B. at Arpinum, he became an advocate in Rome, spent 3 years in Greece studying oratory, and after Sulla's death distinguished himself in Rome on the side of the popular party. In 63 B.C. he was appointed consul; later in the year he saved the Republic when it was threatened by Catiline's conspiracy. When the 1st Triumvirate of Caesar, Crassus, and Pompey was formed in 59, C. was exiled, and devoted himself to literature. On the outbreak of the Civil War in 49 he followed Pompey to Greece, but in 48 returned to Italy where he was well treated by Caesar. After the latter's assassination in 44 B.C. he took the lead in the Senate in an attempt to restore the republican form of govt., and in 14 great speeches he supported Octavian (the future Augustus) and denounced Mark Antony. These speeches are known as the Philippics after the denunciations of King Philip of Macedon by Demosthenes in the 4th cent. B.C. In the autumn of 43, however, Antony and Octavian came to terms and C. was killed while trying to escape to the East.

As a statesman, C. attempted unsuccessfully to carry out a moderate policy. His influence on the future of literature was immense. His speeches were soon recorded as models of Latin prose, and his philosophical essays are full of common sense and practical sympathies. His letters are of interest.

CID (Span., thēdh), Rodrigo Diaz de Bivar (c. 1040-99). Spanish national hero, was b. in Castile of a noble family, fought against the king at Navarre, and won his nickname *el Campeador* (the Champion) by killing the Navarrese champion in single combat. Eventually he became a soldier of fortune, and d. while defending Valencia against the Moors. 'The Cid' (the Lord) was a name given to him by the Moors, and he soon became a hero of romance.

CIDER (sider). A fermented drink made from the juice of the apple. As a beverage it has been known for more than 2,000 years, and for many centuries it has been a popular drink in France and England, which are now its main centres of production. The French output is by far the greater, Normandy and Brittany being chiefly concerned. In a good year c. 30 million gallons are produced in Britain. The West of England from Hereford to Devon has long been famous for its C. Most of the apple crop is sold to factories estab. in the region and also in Kent and Norfolk. In the U.S.A. the term usually refers to unfermented apple juice.

CIGAR (sigahr). Originally a sheath of palm leaves filled with tobacco, smoked by the Indians of Central and N. America. The modern C. is a compact roll of tobacco leaves. C-smoking was introduced into Spain soon after the discovery of America, and then spread all over Europe. The 1st C. factory was opened in Hamburg in 1788, and about that time the taste for C-smoking became well marked in England. The 1st Cs. were made by hand - as still are the more expensive Cs., incl. most of those made in Cuba - but in U.S.A. from about the 1850s various machine methods were employed. From about 1890 C-smoking was gradually supplanted in popularity in England by cigarette-smoking. The 'little cigar' has been in some demand of recent years.

CIGARETTE. Literally, a little cigar. The 1st Cs. were the *papelitos* smoked in S. America about 1750. The habit spread to Spain, and then throughout the world, and is today the most general form of tobacco-smoking, the vast majority of Cs. being machine-made. In some countries, through the tax on tobacco, smokers contribute a large part of the national revenue, e.g. U.K. c. £885,000,000 and U.S. c. \$2,000,000,000. The diagnosis that C-smoking is a factor in the increase of lung cancer has led to much experimental work on methods for filtering potentially harmful substances.

CIGARETTE CARDS. Cards incl. in packets of cigarettes, and bearing printed views, drawings, portraits, etc. They are believed to have originated in the U.S.A. in the 1870s.

CILÈA (chēlā'ah), Francesco (1866-1950). Italian composer. B. in Calabria, he was prof. at the Reale Istituto Musicale, Florence, 1896-1904. His great successes were the operas *L'Arlesiana* (1897) after Daudet and *Adriana Lecouvreur* (1902) after Scribe.

CIMABUE (chēmāhboō'eh), Giovanni (1240-c. 1302). Italian painter; the master of Giotto, and styled the 'father of Italian painting'. Among the best-known works attributed to him are 'Madonna and Child' in the Uffizi, Florence, and other paintings of the same subject in the Louvre, Paris, and the National Gallery, London. C. was one of the 1st artists to paint from a living model.

CIMAROSA (chēmāhroh'zah), Domenico (1749-1801). Italian composer of operas extremely popular in their day, of which the best is *Il Matrimonio Segreto* (1792: The Secret Marriage).

CINCHONA (sīnkō'na). Genus of shrubs and trees belonging to the family Rubiaceae and growing wild in the Amazonian forests. From the bark of some species is produced quinine (q.v.), and C. culture has been introduced into India, Ceylon, the Philippines, and the E. Indies, with marked success.

CINCINNATI (sīnsīnā'ti). American city in Ohio

CHARTRES. A symphony of soaring columns, Chartres cathedral is sometimes considered the most beautiful in all France.

Photo: Mansell Collection.

to give authentic background to his some 40 novels of Simon Templar, the 'Saint' – gentleman-adventurer on the wrong side of the law – which have been translated into 16 languages and adapted for films, radio and television. These began with *The Saint Meets the Tiger* (1928). In 1946 he became a U.S. citizen.

CHARTIER (shahrtyeh'), Alain (c. 1392–c. 1430). French poet, b. at Bayeux. He was the author of *La Belle Dame sans Merci*, and many other works. In 1422 he wrote his *Quadrilogue invectif*, a conversation between France and the three estates (nobility, Church, and people), in which the ills of the time are trenchantly expounded.

CHARTISM. Radical British democratic movement, mainly of the working classes, which flourished c. 1838–50. It derived its name from the 'People's Charter', a programme comprising 6 points: universal manhood suffrage, equal electoral districts, vote by ballot, annual parliaments, abolition of the property qualification for M.P.s., and payment of M.P.s.

CHARTRES (shahrtr). Cap. of the dept. of Eure-et-Loir, N.W. France, 55 m. S.W. of Paris, on the Eure. Its cathedral of Notre Dame, completed about 1240, is a masterpiece of Gothic architecture. Pop. (1962) 33,992.

CHARTREUSE (shahrtröz'), La Grande. The original home of the Carthusian order of R.C. monks, estab. by St. Bruno c. 1084, in a remote valley some 14 m. N.N.E. of Grenoble (in modern dept. of Isère), France. The present buildings date from the 17th cent. The monks were expelled at the Revolution, returned 1816, were again expelled 1903, but, returning in 1940 as refugees from Italy, were allowed to remain. Since 1607 the monks have distilled a famous liqueur, here and at another house at Tarragona, Spain.

CHARYBDIS (karib'dis). In Greek mythology a whirlpool on one side of the narrow straits of Messina, Sicily, opposite the monster Scylla. Homer tells how the ship of Odysseus contrived to pass unscathed between Scylla and Charybdis.

CHASE. James Hadley. Pen-name of René Raymond (1906–), who served in the R.A.F. during the S.W.W., and wrote *No Orchids for Miss Blandish* (1939), and other 'tough' novels with a great vogue.

CHASE, Stuart (1888–) American social scientist. From Harvard he entered his father's accounting firm, but made his name with *The Tragedy of Waste* (1925), a study of man in the machine age; *The Tyranny of Words* (1938) and *The Power of Words* (1954).

CHASING. Indentation of a design on metal by small chisels and hammers. This method of decoration was familiar in ancient Egypt, Assyria and Greece.

CHA'SUBLE. The outer garment worn by the priest in the celebration of the Mass. The colour of the C. depends on the feast which is being celebrated.

CHÂTEAU (shah'toh). Term originally applied to a French medieval castle, but now used to describe a country seat or important residence in France. The C. was first used as a domestic building in the late 15th cent.; by the reign of Louis XIII (1610–43) fortifications such as moats, keeps, etc., were no longer used for defensive purposes, but merely as decorative features.

CHATEAUBRIAND (shahtöbrë-on'), François René, vicomte de (1768–1848). French author. He visited America in 1791, and returning to France, was exiled by the Revolution (1794–9). In exile he wrote *Atala* and the autobiographical *René*, which formed part of *Le Génie du Christianisme* (1802). He assisted the accession of Louis XVIII, under whom he held diplomatic appointments, and in 1849–50 his *Mémoires d'Outre Tombe* appeared. C. was an important precursor of Romanticism.

CHATEAUROUX (shahtohrōō'). Cap. of Indre dept., France, on the r. Indre. Dating from the 14th cent., it makes army cloth and has a national tobacco factory. Pop. (1962) 46,772.

CHÂTEAU-THIERRY (shahtoh'tyärre'). Town on the Marne, Aisne dept., France, the scene during the F.W.W. of a U.S. victory in 1918. Pop. (1962) 10,619.

CHATHAM, William Pitt, 1st earl of (1708–78). British statesman and orator. The grandson of Thomas Pitt, governor of Madras, he entered parliament in 1735 as M.P. for the family pocket borough of Old Sarum, and joined the 'patriots' in opposition to Walpole. After Walpole's fall in 1742 he attacked the policy of his successor, Carteret, during the War of the Austrian Succession, but in 1746 he was given a place in Pelham's Cabinet as Paymaster of the Forces; he refused to use this post, as was customary, to enrich himself, and contented himself with his legal salary. In 1755 he was dismissed from office for attacking the P.M., Newcastle, but the disastrous beginning of the Seven Years War led to a popular demand for his recall. He formed a govt. in 1756, but in 1757 was forced to form a coalition with Newcastle. His strategy and his choice of military and naval commanders were justified by brilliant success, culminating in the 'year of victories', 1759. By military and financial help to Frederick the Great he kept the French occupied in Europe, while Britain won the command of the sea and expelled the French from Canada and India, while at home he appealed to the patriotism of parliament and the nation by his eloquence and by such measures as the revival of the militia. In 1761 he was forced by George III to resign. He attacked the Peace of Paris in 1763, maintaining that Britain's gains were not proportionate to her efforts, and in 1766 formed an all-party government and accepted the title of earl of Chatham. Ill-health, however, kept him out of public life for 2 years, during which the govt. came more and more under the king's control, and in 1768 he resigned. During his last years he championed civil liberties, parliamentary reform and the rights of the American colonies against the king, although he rejected any suggestion of recognizing American independence. While making his

CITRUS. Picking the ripened crop in an ortanique orchard. A cross between an orange and a tangerine, the ortanique is produced only in Jamaica. *Courtesy of Alcan Jamaica Ltd.*

CITRIC ACID. An organic acid widely distributed in the plant kingdom, especially in citrus fruits. It is a white crystalline powder with an acid taste. At one time it was prepared from concentrated lemon juice, but now the main source is the fermentation of sugar with certain moulds. It is widely used in effervescent saline drinks, calico-printing, etc. Its chemical formula is $C_6H_8O_7$.

CITRUS. Genus of trees and shrubs, belonging to the family Rutaceae, and found in the warmer parts of the world, particularly Asia. They are evergreen and aromatic, and several species (orange, lemon, lime, citron, grapefruit, etc.) are cultivated for fruit.

CITY. Generally speaking, a large and important town. In the ancient world Cs. were states in themselves. In the early Middle Ages, Cs. were usually those towns which were episcopal sees, and to this day the English cathedral towns are called Cs. In present-day Britain the term is chiefly of historical and ceremonial importance. The official style of city has been conferred by royal authority on certain towns, e.g. Birmingham in 1889, Cambridge, 1951, which were not the seat of a bishop.

CITY, The. See LONDON.

CITY TEMPLE. Congregational church in London, sometimes called the 'cathedral of Nonconformity'. Founded in the City in 1640, it was transferred in 1874 to a new building at Holborn Viaduct. Destroyed in an air raid in 1941, it was rebuilt 1958.

CIUDAD BOLIVAR (thē-oodadh' bohlē'vahr). City of Venezuela on the Orinoco, c. 250 m. from its mouth, and linked with Soledad across the river by the Angostura bridge (1967) – first to span the Orinoco. Gold is mined in the vicinity. Pop. (1964) 87,928.

CIUDAD REAL (reh-ahl'). City of central Spain, capital of C.R. prov., 107 m. S. of Madrid. Its chief feature is its huge Gothic cathedral. Pop. (1960) 37,081.

CIUDAD TRUJILLO. Trujillo City: name 1936–61 of Santo Domingo (q.v.).

CIVET (siv'et) or Civet Cat (*Viverra*). Mammals of the family Viverridae, related to the cats (*Felidae*), but distinguished principally by their longer head and jaws, numerous dog-like teeth, and by having a perfume gland in the inguinal region. There are many different kinds inhabiting tropical Asia and Africa. A few species are of commercial value on account of their perfume.

CIVIL AVIATION. Passenger and freight service organization, and aircraft development.

The International C.A. Organization (1947) has its

H.Q. in Montreal, and is a U.N. agency. In the U.K. there are about 150 airports, those for London (Heathrow, Gatwick and a third to be designated) and Prestwick being managed by the British Airports Authority (1965), and 2 state airlines – British European Airways and British Overseas Airways – besides a number of independent companies.

Close co-operation is maintained with authorities in other countries, incl. the Federal Aviation Agency, which is responsible for development of aircraft, air navigation, traffic control and communications in the U.S.A.: the Civil Aeronautics Board is the American authority prescribing safety regulations and investigating accidents. There are no state airlines in the U.S.A., although many of the private airlines are large. The world's largest airline is the gov.-owned Aeroflot (U.S.S.R.).

INDIAN CIVET

With increasing traffic, control of air space is a major problem, and in 1963 Eurocontrol was established by Belgium, Britain, France, W. Germany, Luxembourg, and the Netherlands to supervise both military and civil movement in the air space over member countries. There is also a tendency to co-ordinate services and pool service and other facilities between national airlines, e.g. the estab. of Air Union by France (Air France), W. Germany (Lufthansa), Italy (Alitalia) and Belgium (Sabena) in 1963.

CIVIL DEFENCE. Organization of the civil population to mitigate the effects of enemy attack. In Britain the Min. of Home Security was constituted 1939 to direct Air Raid Precautions in the S.W.W., the country being divided into 12 regions, each under a commissioner to act on behalf of the central gov. in the event of cut communications. Associated with the 'air-raid wardens' were ambulance and rescue parties, gas officers, breakdown gangs, etc., and a Nat. Fire Service, based on existing local services, and c. 5,000,000 citizens were enrolled as firewatchers and firefighters. The C.D. services (the name being changed from A.R.P. in 1942) were stood down 1945, and the renewed requirement from 1949 that they be maintained by local authorities ceased in 1968 when the C.D. Corps and Auxiliary Fire Service were disbanded.

In the U.S.A. the Office of Civil Defense (1961) of the Dept. of Defense has a Staff College and 3 warning centres. Public shelter from fall-out is available for 160,000,000 and special attention is given to incorporating shelter in all new constructions.

CIVIL DISOBEDIENCE. Movement in India led by Gandhi (q.v.) and aimed at peaceful withdrawal of Brit. power.

CIVIL AVIATION. The complex of runways at London Airport, typical of the modern international airport.

Photo: Aeroflms Ltd.

important group, economically and nutritionally; (2) semi-hard, e.g. Stilton, Gorgonzola, Wensleydale, Roquefort, Pont l'Évêque, Gouda; (3) soft, e.g. Cambridge, York, Camembert, Coulommier, Brie.

CHEETAH (chē'tah). Member of the cat family (Felidae), also known as the hunting-leopard (*Cynaelurus jubatus*), used for cents. in India and Persia for hunting game because of its phenomenal speed and comparative tractability. Standing about 1½ feet high, it is yellowish with black spots, and differs from other cats in having claws which are only partially retractile.

It is found in open country in Africa and S.W. Asia, and S. Rhodesia has a specially handsome variety, the king C.

CHEFOO (chēfōo'). Ice-free port in Shantung prov., China, noted for the export of wild silk. It was formerly a treaty port. A railway linking it with Tsingtao was completed in 1955. Pop. (1957) 227,000.

CHEKA (chā'kah). Secret police operating in the Soviet Union 1918–23. The name is formed from the initials *che* and *ka* of the two Russian words meaning 'extraordinary commission', formed for 'the repression of counter-revolutionary activities and of speculation', and extended to cover such matters as espionage and smuggling. In 1923 the C. was replaced by the Ogpu and ultimately by the M.V.D. (q.v.).

CHEKHOV (chekhof'), Anton Pavlovich (1860–1904). Russian writer. B. at Taganrog, he qualified as a doctor in 1884, but devoted himself to writing short stories rather than medical practice. A collection *Particoloured Stories* (1886) consolidated his reputation, and gave him leisure to develop his style: *My Life* (1895), *The Lady with the Dog* (1898) and *In the Ravine* (1900). His 1st play *Ivanov* (1887) was a failure, as was *The Seagull* (1896) until revived by Stanislavsky in 1898 at the Moscow Arts Theatre, for which C. went to write *Uncle Vanya* (1899), *The Three Sisters* (1901) and *The Cherry Orchard* (1904). Not influential in Russian literature, he has been widely recognized abroad, espec. in Britain, where there is a tendency to over-selennify. He relies on the creation of atmosphere and delineation of internal development, rather than external action.

CHEKIANG (chekyang'). The smallest, but densely populated, prov. of China, covering an area of 37,700 sq. m.; in 1957 it had a population of c. 25,280,000. The cap. is Hangchow. Among its products are rice, silk, cotton, jade, tea, fruits, lumber, and fish; also some coal and salt.

CHELMSFORD. County town (bor.) of Essex, England, 30 m. N.E. of London. It is a market town of some importance, and manufactures radio parts, electrical apparatus, ball bearings, agricultural implements, etc. The name derives from the ford on the Chelmer. Pop. (1961) 49,810.

CHELONIA (kilō'nia). Order of reptiles, including the tortoises and turtles, and distinguished, among other characteristics, by having their body protected by a bony carapace or shell, into which the head and limbs can be withdrawn.

CHELSEA. Formerly a met. bor., it was merged in 1965 in the new Royal Bor. of Kensington and C. (q.v.). The district of C. is immediately N. of the Thames, where it is crossed by the Albert and C. bridges. The Royal Hospital was founded by Charles II 1682 for old and disabled soldiers. 'Chelsea Pensioners'; the Physic Garden for botanical research was estab. in the 17th cent.; and the home of Thomas Carlyle in Cheyne Row is maintained by the Nat. Trust.

CHELTENHAM. English town on the Chelt, in Glos, at the foot of the Cotswolds. It is a spa and

summer resort, and has many educational establishments, incl. C. Ladies' College, opened in 1854, and C. College, a public school for boys, founded in 1841. A Festival of Literature (estab. 1949) is held annually. Pop. (1961) 71,968.

CHELYABINSK. Industrial town of the R.S.F.S.R., cap. of C. region. It lies E. of the Ural Mountains, c. 150 m. S.S.E. of Sverdlovsk. It has ferrous and non-ferrous industries and engineering works, and makes chemicals, motor vehicles, and aircraft. Pop. (1967) 820,000.

C. region, area 33,900 sq. m., is an important iron-producing area, with manganese, chrome, nickel, limestone, and other mineral deposits also. An area devoted mainly to heavy industry, it includes Magnitogorsk. There is some agriculture in the E. Pop. (est.) 2,500,000.

CHEMISTRY. The science concerned with the composition of matter, and of the changes which take place in it under varying conditions.

The ancient civilizations were familiar with certain chemical processes, e.g. extracting metals from their ores, and making alloys. The alchemists were concerned with endeavouring to turn base metals into gold, and modern chemistry may be said to have evolved from alchemy towards the end of the 17th cent. Robert Boyle (1627–91) defined elements as the simplest substances into which matter could be resolved. The alchemical doctrine of the four elements (earth, air, fire, and water) gradually lost its hold, and the theory that all combustible bodies contained a substance called phlogiston was discredited by the experimental work of Black (1728–99), Lavoisier (1743–94), and Priestley (1733–1804), the last-mentioned discovering the presence of oxygen in the air. Cavendish (1731–1810) discovered the composition of water, and Dalton (1766–1844) put forward the atomic theory, which ascribed a precise relative weight to the 'simple atom' characteristic of each element. Much research then took place leading to the development in modern times of biochemistry, chemotherapy, plastics, etc.

All matter can exist in three states: gas, liquid or solid. It is composed of minute particles termed *molecules* which are constantly moving, and may be further divided into *atoms* (q.v.). Molecules which contain atoms of one kind only are known as *elements*, while those which contain atoms of different kinds are called *compounds*. The separation of compounds into simpler substances is analysis, and the building up of compounds from their components is synthesis. When substances are brought together without changing their molecular structure they are said to be *mixtures*. Chemical compounds are produced by a chemical action which alters the arrangement of the atoms in the molecule. Heat, light, vibration, catalyst, radiation or pressure, as well as moisture (for ionization), may be necessary to produce a chemical change.

To facilitate the expression of chemical composition, symbols are used to denote the elements. The symbol is usually the first letter or letters of the English or Latinized name of the element, e.g. C, Carbon; Ca, Calcium; Fe, Iron (Ferrum). These symbols represent one atom of the element; molecules containing more than one atom are denoted by a subscript figure, e.g. Water, H₂O. In some substances a group of atoms acts as a single atom, and these are enclosed in brackets in the symbol, e.g. (NH₄)₂SO₄, ammonium sulphate. The symbolical representation of a molecule is known as a formula. A figure placed before a formula represents the number of molecules of one substance present in another, e.g. 2 H₂O, two molecules of water. Chemical reactions are expressed by means of equations, viz. NaCl + H₂SO₄ = NaHSO₄ + HCl. This equation states the fact that sodium chloride (NaCl) on being treated with sulphuric acid

cent. between the king and his Royalist supporters on the one hand, and the Parliamentarians (also called Roundheads) on the other. It falls into two parts. The first C.W. began on 22 Aug. 1642, when Charles I raised his standard at Nottingham, and was ended on 5 May 1646, when he surrendered to the Scottish army. The most important battles were Edgehill (23 Oct. 1642) which was indecisive, Marston Moor (2 July 1644) and Naseby (14 June 1645) both of which were great Parliamentary victories won largely by Cromwell. The second C.W. was the Royalist and Presbyterian rising of March to Aug. 1648, which was soon crushed by Cromwell and his New Model Army.

Extensions of the C.W. were Cromwell's invasion of Ireland, 1649–50, and the campaign in which he defeated the Royalists under Prince Charles (Charles II) at Dunbar, 1650, and Worcester, 1651.

CIVITAVECCHIA (ché'vêtah-vek'kê-ah). Ancient port on the W. coast of Italy about 40 m. N.W. of Rome, the seat of a bishopric. Pop. (1960) 38,500.

CIZEK (tsizek), Franz (1865–1947). Czech educationist who revolutionized art training in children's schools. He opened the first juvenile art class in 1893, and encouraged children to draw what pleased them most. After the F.W.W. his pupils' work was exhibited in Britain and America.

CLACKMANNANSHIRE. Smallest of the Scottish counties, 54½ sq. m. in area, bordering on the Firth of Forth. In the Ochil hills sheep are pastured, and coal is mined in the Devon valley. The county town is Alloa. Pop. (1961) 41,391.

CLACTON-ON-SEA. Popular English seaside resort (U.D.) on the Essex coast, 12 m. S.E. of Colchester. Nearby is St. Osyth's priory (16th cent.). Pop. (1961) 27,543.

CLAIR (klâr), René. Pseudonym of the French film producer René-Lucien Chomette (1898–). Originally a poet, novelist, and journalist, he produced the 1st sound film of artistic value *Sous les Toits de Paris* (1930); later were *The Ghost goes West* (1935) for Hollywood, and *Tout l'Or du Monde* (1963).

CLAIRVAUX (klâr'voh). Prison in Aube dept., France, 2 m. N. of Ville-sous-la-Ferté. It was formerly a Cistercian abbey, founded in 1115 by St. Bernard of Clairvaux, suppressed at the Revolution.

CLAM. Various bivalve molluscs. In England the name is usually given to the gaper (*Mya truncata*) and to other species of *Mya* and *Macra*; in Scotland to the scallops (*Pecten*). They are used for bait and for human food.

CLAN. A patriarchal division of human society usually restricted to the clans of Scotland and Ireland, but similar institutions exist among many other peoples. In theory, all members of the C. are in common origin, tracing their descent from one ancestor from whom in general the name is derived, e.g. the clan MacGregor (son of Gregor) believed themselves to be descendants of Griogar, a son of King Alpin of Scotland, and the Irish O'Donnells were the grandsons of Donnell, i.e. Donald.

In Scottish history the Cs. played a prominent part until after the Jacobite rebellion of 1745, when their distinctive dress was prohibited and a determined attempt was made to break the allegiance of the clansmen to their chiefs. In modern times the chieftainship of some Cs. is still maintained as a title.

CLAPHAM. District of S.W. London, England, part of the Greater London bor. of Wandsworth. It incl. C. Common. C. JUNCTION has been called the busiest station in the world, since more than 2,500 trains pass through it in a day.

CLARE (c. 1194–1253). Christian saint. B. at Assisi, she became at 18 a follower of St. Francis, who founded for her the convent of San Damiano. Here were gathered the first members of the Order of Poor Clares. Canonized in 1253, she was in 1958 proclaimed by Pius XII the patron saint of television,

since in 1252 she saw from her convent sickbed the services celebrating Christmas in the Basilica of St. Francis at Assisi.

CLARE, John (1793–1864). Poet. B. near Peterborough, the son of a farm labourer, he passed most of his days in poverty. His *Poems of Rural Life* (1820), and *The Village Minstrel* (1821) were followed in 1827 by *The Shepherd's Calendar*. He was given an annuity from the duke of Exeter and other patrons, but had to turn to work on the land and spent his last years in Northampton asylum. His early life is described in his autobiography (1st pub. 1931).

CLARE. Co. in Rep. of Ireland, in the prov. of Munster, bounded on the W. by the Atlantic, with a wild and dangerous coastline. Inland C. is an undulating plain, with fringing mountains on the E., W., and N.W., the chief range being the Slieve Bernagh mts. in the S.E., rising to over 1,700 ft. The principal rivers are the Shannon and its tributary, the Fergus. There are more than 100 lakes in the co., Lough Derg is on its eastern border. The co. town is Ennis. At Ardnacrusha, 3 m. N. of Limerick, is the chief power station of the Shannon hydro-electric installations. The co. is said to be named after Thomas de Clare, an Anglo-Norman settler to whom this area was granted in 1276. Area 1,231 sq. m.; pop. (1966) 73,579.

CLARENCE. English ducal title, which has been conferred on a number of princes. The last was Albert Victor (q.v.), eldest son of Edward VII.

CLARENDON, Edward Hyde, 1st earl of (1609–74). Statesman and historian. He sat in the Short Parliament of 1640 and in the Long Parliament, where he attacked Charles I's unconstitutional actions, and supported the impeachment of Strafford. In 1641, however, he broke with the revolutionary party, and became one of the royal advisers. When war began he followed Charles to Oxford, and was knighted and made Chancellor of the Exchequer. On the king's defeat in 1646 he withdrew to Jersey, but in 1651 became chief adviser to the exiled Charles II. At the Restoration he was created earl of C., while his influence was further increased by the marriage of his daughter Anne to James, duke of York. The 'Clarendon Code' was designed to secure the supremacy of the C. of E., but his moderation earned the hatred of the extremists, and finally he lost the support of Charles by his openly expressed disapproval of his private life. The disasters of 1667, when the Dutch sailed up the Medway, brought about his downfall. His last years were passed in exile in France. He d. at Rouen, and was buried in Westminster Abbey. C.'s claim to literary fame rests on his *History of the Rebellion* (1702–4).

CLARENDON, George William Frederick Villiers, 4th earl of (1800–70). British Liberal diplomat. He was Lord Lieutenant of Ireland 1847–52, and in 1853 became For. Sec. His diplomatic skill was shown at the Congress of Paris, 1855. He was again For. Sec. in 1865–6 and 1868–70, and an outstanding achievement was the settlement of the Alabama dispute with the U.S.A.

CLARENDON, Constitutions of. A code of laws accepted by the royal council at C., near Salisbury, in 1164, and intended to regulate the relations between Church and State. Becket refused to accept the Constitutions, and his ensuing quarrel with Henry II led to his murder.

CLARET. Since the 17th cent. the English term for the light red wines of Bordeaux.

CLARINET. A single-reed woodwind instrument, invented in its present form by Joseph Christian Denner (1655–1707). It has a mouthpiece containing the reed, a cylindrical tube, and a bell-mouthpiece. The tube is pierced by 18 holes, of which 9 are closed by the fingers and 9 by keys. Its tone is full, mellow, and sweet.

CLARK, Sir Kenneth (1903–). British art expert.

14th U.S. Air Force in China 1943–5. *Way of a Fighter* (1949) is an autobiography.

CHENOPODIUM (keno-). Genus of plants, known as goose-foot. All-good, or Good King Harry (*C. bonus-Henricus*) is the most familiar species, a common wayside weed in Britain which was formerly cultivated, being used as a substitute for spinach.

CHEN YI (1905–). Chinese soldier/statesman. The son of a magistrate, he was awarded a scholarship for study in France. Returning to China, he became a member of the Communist Party in 1923 and then in 1927 of the political branch of the Chinese army. In the S.W.W. he was prominent in the campaigns against Japan, and in 1949 took Nanking and Shanghai from the Nationalists. In 1958 Chou En-Lai made him his own successor as For. Min., and he was thought a likely eventual successor to him as Premier, but in the Cultural Revolution he was under attack.

CHEPSTOW. Market town (U.D.) of Monmouthshire, England, 15 m. N.E. of Newport, on the Wye. The high tides (sometimes 50 ft. above low level) are the highest in Britain. C. has ruins of a castle, and those of Tintern Abbey are 4 m. N. of C. Pop. (1961) 6,041.

CHEQUE (chek'). A form of bill of exchange, drawn on a bank by a depositor. It need not be on a special form, though this is usual. The essentials of a C. are that it should bear the date on which it is payable, name in words and figures a definite sum of money to be paid, to a named person or body or to bearer, to be signed by the drawer, and in the U.K. (but not in the U.S.A.) bear a 2d. revenue stamp. It is then payable on presentation at the bank on which it is drawn. If the C. is 'crossed', it is not negotiable and can be paid only through a bank; in the U.S.A. a C. (spelled check) cannot be made non-negotiable.

An Act of 1957 made endorsement of a C. paid into the payee's account unnecessary in the U.K.

CHEQUERS. Country seat of the Prime Minister for the time being of the U.K. It is an Elizabethan mansion in the Chiltern hills near Princes Risborough, Bucks, and was given to the nation by Lord Lee of Farnham under the Chequers Estate Act, 1917, which came into effect in Jan. 1921.

CHER (shâr). French r. which rises in Creuse dept. and flows into the Loire below Tours. Length 220 m. It gives its name to a dept.

CHERBOURG (shârboôr). French port and naval station at the N. end of the Cotentin peninsula, in the dept. of Manche. It is one of the chief ports of call in France, particularly for liners making the Atlantic crossing, and has large shipbuilding yards.

During the S.W.W., C. was captured in June 1944 by the Allies who thus gained their 1st large port of entry into France. C. was severely damaged; restoration of the harbour was completed in 1952. Pop. (1962) 40,018.

CHERENKOV, Pavel (1904–). Russian physicist. I. d. at Voronezh univ., he discovered in 1934 the *C Effect*, important in atomic physics: when charged atomic particles pass through water or other media at a speed in excess of that of light itself, a bluish light is emitted. In 1958 C. and his colleagues Ilya Frank and Igor Tamm were awarded a Nobel prize. The *C Effect* has also been claimed as the discovery of Fr. scientist Lucien Mallet.

CHERKASOV, Nikolai Konstantinovich (1903–66). Russian actor. Trained at the Leningrad Institute of Stage Art, he became in 1933 a member of the Leningrad State Pushkin Theatre of Drama. His roles incl. Peter I in Tolstoy's play and Krogstadt in Ibsen's *A Doll's House*, and he appeared in the title roles of the films *Alexander Nevsky* (1938) and *Ivan the Terrible* (1945). He pub. interesting reminiscences *From an Actor's Notebook* (1951).

CHERKA'SSKY, Shura (1911–). Russian pianist.

Ed. at the Curtis Institute of Music, Philadelphia, he was a pupil of Hofmann, and has a remarkable technique.

CHERKA'SSY. Town on the Dnieper in the Ukrainian S.S.R., cap. of C. region; it has distilleries, flour mills, tanneries, and clothing factories. Pop. (est.) 52,000.

CHERNIAKO'VSKY, Ivan Danilovich (1908–45). Russian general. B. in the Ukraine, the son of a Jewish railwayman, he had a distinguished military career, and was promoted to major-general in 1942. He liberated Minsk, Vitebsk, and Vilna from the Germans, and led the invasion of East Prussia. He d. of wounds received in action.

CHERNIGOV (chernëgof'). Town on the Desna in the N. of the Ukrainian S.S.R., cap. of C. region. It has an 11th cent. cathedral. Lumbering, distilling, and food-canning are among its industries. Pop. (1967) 132,000.

CHERNOVTSY. City of the Ukrainian S.S.R., on the Prut r., cap. of C. region. It has a univ. founded 1875. It was in Rumania 1918–40. Pop. (1967) 175,000.

CHERRY. Sub-genus of trees (*Cerasus*) of the genus *Prunus* distinguished from the plums and apricots by their fruit, a drupe, being spherical and smooth, and not covered with a bloom. They are probably derived from the 2 species, the wild or dwarf C. (*Prunus cerasus*), and the gean (*P. avium*), which grow wild in Britain. The former is the ancestor of the 'sour Cs.' – morello, duke, and Kentish C., and the latter of the 'sweet Cs.' – hearts, mazzards, and bigarreus. Besides those varieties which are grown for their fruit, others are well-known ornamental trees.

CHERUBINI (keroobë'në), Maria Luigi Carlo Zenobio Salvatore (1760–1842). Italian composer. B. at Florence, his first opera *Quinto Fabio* was produced at Alessandria in 1780. In 1784 he went to London and became composer to the king, but from 1788 Paris became his permanent home. There he produced a number of dramatic works, e.g. *Médée* (1797), the ballet *Anacréon* (1803), and *Les deux Journées*. In 1809 with a Mass in F he began his career as a great church composer. In 1822 he became director of the Conservatoire at Paris; in 1835 appeared his treatise *Counterpoint and Fugue*; and in 1836 his Requiem in D minor was written.

CHERVIL. Genus of umbelliferous plants (*Chaerophyllum*). The garden C. (*C. cerefolium*) has leaves with a sweetish odour, somewhat resembling parsley. It is used as a garnish, and as a pot-herb.

CHERWELL (char'-), Frederick Alexander Lindemann, viscount C. (1886–1957). British physicist. Director of the Physical Laboratory of the R.A.F. at Farnborough in the F.W.W., he was personal adviser to Churchill on scientific and statistical matters during the S.W.W. He was prof. of experimental philosophy at Oxford 1953–6.

CHESHIRE, Geoffrey Leonard (1917–). British airman. Commissioned with the R.A.F. on the outbreak of the S.W.W., he won the V.C., D.S.O. (with 2 bars) and D.F.C., and in 1945 was an official observer at the dropping of the atom bomb on Nagasaki; he retired in 1946. A devout Roman Catholic, he founded in 1948 the first C. Foundation Home for the Incurably Sick, an example followed in Britain, Europe and the Far East.

CHUSHIRE. County in N.W. England, with a

CLAY, Lucius DuBignon (1897–). American general. B. in Georgia, he was *Director of Material*, in control of armaments, 1942–4; deputy military gov. of Germany 1945–7 under Eisenhower, and was then C.-in-C. of the U.S. occupation forces in Germany until retirement in 1949. He broke the Berlin blockade with the 'airlift', a term he brought into general use.

CLAY. A mud which has undergone a greater or lesser degree of consolidation. It may be white, grey, red, yellow, bluish, or black, and consists essentially of hydrated silicate of alumina, together with sand, lime, iron, oxides, magnesium, potassium, soda and organic substances. When mixed with water it is rendered plastic. The more important clays are adobe, alluvial, building, brick, cement, china, ferruginous, fusible, refractory, vitrifiable, fireclays, etc. Clays have an immense variety of uses, some of which, e.g. pottery and bricks, date back to prehistoric times. According to international classification, in mechanical analysis of soil C. has a grain size less than 0.002 mm.

CLAYTON, Philip Thomas Byard (1885–). C. of E. clergyman, founder-padre of Toc H. (q.v.). B. in Queensland, he became a curate at Portsea in 1910 and during the F.W.W. was an army chaplain in France and Flanders. He opened Talbot House in Poperinghe in Dec. 1915, and after the war refounded it in London as Toc H. He was vicar (1922–63) of All Hallows, Barking-by-the-Tower, London (bombed 1940 but restored 1965), which he made the Guild Church of Toc H. He was made a C.H. in 1933.

CLEANTHES (klē-an'thēz) (c. 300–220 B.C.). Greek Stoic philosopher. B. in the Troad, Asia Minor, he attended the lectures of Zeno for nearly 20 years, and on his master's death took his place as the recognized head of the Stoic school.

CLEETHORPES. English seaside resort (bor.) on the Humber estuary, 3 m. S.E. of Grimsby, Lincolnshire. Pop. (1961) 32,705.

CLELAND, John (1709–89). British author. Consul at Smyrna and one-time employee of the E. India Co. at Bombay, he wrote *Fanny Hill – Memoirs of a Woman of Pleasure* (1749–9) to extract himself from the grip of his London creditors. Called before the Privy Council, he escaped with a pension to prevent his falling into more mischief. The publishers of a reprint were in 1963 prosecuted in the U.S. (unsuccessfully) and in the U.K.

CLEMATIS. Genus of plants of the family Ranunculaceae. They are mostly climbing plants, and have a wide distribution. *C. vitalba* (traveller's joy or old man's beard) is the only British species. Many beautiful species are also grown in gardens, e.g. *C. flammula* (sweet virgin's bower), with small, white, very fragrant flowers, and *C. viticella*, whose bell-like, purple or pink, flowers hang downwards.

CLEMENCEAU (klemon'soh'), Georges (1841–1929). French statesman. B. in La Vendée, he was mayor of Montmartre, Paris, in the war of 1870, and in 1871 was elected a member of the National Assembly at Bordeaux. He was elected a deputy in 1876, and soon earned the nickname of 'The Tiger' on account of his ferocious attacks on politicians whom he disliked. At this time he was an extreme radical. In 1893 he lost his seat and spent the next 10 years in journalism. He was prominent in defence of Dreyfus. In 1902 he was elected senator for the Var, and henceforth was one of the most powerful politicians. He was P.M. 1906–9; and in 1917, in the darkest hour of the F.W.W., he was again called to the premiership. His appointment of Foch as generalissimo was a stroke of the 1st importance. Victory won, he presided over the Peace Conference in Paris, but failed to secure for France the Rhine as a frontier. In 1920 he resigned, and withdrew his candidature for the presidency of the Rep. for lack of support. C. founded and edited a succession of political papers, wrote novels and works of philosophy. *The Grandeur and Misery of*

Victory (1930) was his final testament. In 1922 he toured U.S.A., pleading unavailingly for American co-operation in the new European order.

CLEMENS, Samuel Langhorne. See TWAIN, MARK.

CLEMENTI (klehmen'tē), Muzio (1752–1832). Italian pianist and composer. He conducted the Italian opera in London in 1777, and settled there in 1782 as a teacher and then as proprietor of a successful pianoforte and music business. He was the founder of the new technique of piano-playing, and his *Gradus ad Parnassum* (1817) is still in use.

CLEMENT OF ROME (fl. c. A.D. 96). Saint and Father of the Church. According to tradition he was the 3rd or 4th bp. of Rome, and a disciple of St. Peter. He wrote a letter addressed to the church at Corinth (First Epistle of Clement), and many other writings have been attributed to him.

CLEMENTS, Sir John (1910–). Brit. actor-producer. He founded the Intimate Theatre (1935) at Palmers Green, and excels in Shaw and Restoration Comedy. He m. in 1946 the actress, Kay Hammond.

CLEON (klē'on) (d. 422 B.C.). An Athenian demagogue and military leader in the Peloponnesian War. After the death of Pericles, to whom he was opposed, he won power as representative of the commercial classes and leader of the party advocating a vigorous war policy. He was killed fighting the Spartans at Amphipolis.

CLEOPATRA (c. 68–30 B.C.). Queen of Egypt, famous for her beauty. Upon the death of her father in 51 B.C. she ascended the throne in Alexandria together with her younger brother Ptolemy XII, whom she was expected to marry according to the tradition of the Pharaohs. In 49 B.C. Julius Caesar arrived in Egypt and she became his mistress, bore him a son, Caesarion, and returned with him to Rome. After Caesar's murder she returned to Alexandria and resumed her position as queen of Egypt. In 41 B.C. she met Mark Antony in Cilicia, who, after having m. Octavia, sister of Octavian, in 40, returned to the E. to live in sumptuous magnificence with C., who bore him 3 sons. In 32 B.C. open war broke out between Antony and Octavian (the future Augustus). In the crucial battle of Actium (31 B.C.), fought at sea off the W. coast of Greece, C. took to flight with her 60 Egyptian ships, whereupon Antony abandoned the struggle and followed her to Egypt. Next year they were besieged in Alexandria. Antony committed suicide, and C. killed herself by applying an asp to her bosom.

CLEOPATRA'S NEEDLE. Name given to each of two ancient Egyptian granite obelisks that originally stood at Heliopolis, but were re-erected by Ramesses II at Alexandria. They are thus much older than the reign of Cleopatra. One of the pair was taken to London in 1878 and erected on the Victoria Embankment; it weighs 186 tons and is 68½ ft. high. The other was given by the Khedive to U.S.A., and erected in Central Park, New York, in 1881.

CLERKENWELL. English parish, a watch-making centre, immediately N. of the City of London, in the bor. of Islington, Greater London. The gatehouse is all that remains of the 12th cent. priory of St. John of Jerusalem; in 1887 it became H.Q. of the St. John Ambulance Association.

CLERK MAXWELL (klark-), James (1831–79). British physicist. B. in Edinburgh, he was prof. of natural philosophy at Aberdeen 1856–60, and then of physics and astronomy at London. In 1871 he became prof. of experimental physics at Cambridge. C.M.'s short life was rich in contributions of the 1st order to every branch of physical science, particularly on gases, optics and colour sensation, electricity and magnetism. His theoretical work in the last sphere prepared the way for wireless telegraphy and telephony. His principal works incl. *Perception of Colour*, *Colour Blindness* (1860), *Theory of Heat* (1871),

CHEVALIER, Maurice (1888–). French actor. B. in Paris, he became famous as dancing partner to Mistinguett at the Folies Bergère, and has made numerous films incl. *The Innocents of Paris*, which revived his song 'Louise', and *Gigi* (1958).

CHEVIOTS. Range of hills 35 m. long, forming for some 30 m. the border between England and Scotland. The highest point is the Cheviot (2,676 ft.). For centuries the area was a battleground of English and Scots.

CHEWING GUM. A confectionery mainly composed of chicle (q.v.), sweetened with various flavours. The first patent was taken out in the U.S.A. in 1871.

CHEYNEY, Peter. Pseudonym of British crime-novelist, Reginald Evelyn Peter Southhouse-Cheyney (1896–1951). B. in London, where he was ed. at the univ., he became an actor, then a journalist. *This Man is Dangerous* (1936) was his first success.

CHIANG KAI-SHEK (chyang ki-shek) (1887–). Chinese generalissimo and statesman. B. at Ningpo, he entered the Chinese military academy and in 1907 joined the revolutionary party of Sun Yat-sen. He took part in the Revolution of 1911, and served on Sun Yat-sen's staff at Canton, 1917–20. In 1925 he was made C.-in-C. of the Kuomintang armies in S. China and established a national government at Nanking, of which in 1928 he became President and Generalissimo. From 1931 he was continuously engaged in striving to unite the Chinese against the Japanese menace. In 1936 he was kidnapped by Chang Hsüeh-liang, the 'Young Marshal', but was released after 13 days. Following the 'incident' near Peking on 7 July 1937, C. conducted the war against the Japanese invaders and in the early years suffered many reverses. In 1937 he had to move the cap. to Chungking, and in the next year he resigned the presidency in order to devote himself entirely to military leadership. In 1943, however, he was re-appointed President of the Republic and of the Executive Yüan or cabinet, while retaining his post as Generalissimo. During the S.W.W. he met Roosevelt and Churchill in 1943, and in 1945 received the surrender of the Japanese in China. But almost at once the former struggle between the Kuomintang and the Chinese Communists was renewed. He temporarily resigned the presidency 1949–50, and the Communist victory limited his rule to Formosa.

Madame Chiang Kai-Shek (Soong Mayling, 1898–) was the 3rd dau. of Charles Soong, a Chinese merchant, was ed. in U.S.A., and is a distinguished

CHICAGO (shikah'gō). Second city in pop., third in area, of the U.S.A., in Illinois, on the S. shore of Lake Michigan. It covers just over 211 sq. m., and has a lake frontage of c. 25 m. The Chicago river cuts the city into three 'sides', joined by bridges and tunnels. The original lay-out of C. was rectangular, but many outer boulevards have been constructed on less rigid lines. As late as 1831 C. was still an insignificant village, but by 1871, when it suffered a disastrous fire, it was a city of more than 300,000 inhabitants. Rapid development began in the 1920s, and C. has become a series of towns rather than a centralized city. The old business and amusement centre was in the Loop; the newer business district lies to the north of it. C. was the original home of the skyscraper: the first was built here 1887–8, and during the years since many others have been erected, notably the Chicago Temple, the Tribune tower, the Wrigley building, the Civic Opera, and the Board of Trade offices. There are many fine parks, playgrounds and bathing beaches; cultural institutions incl. the Univ. of C., an art institute, a school of music, and a symphony orchestra.

C. is the greatest railway centre in the U.S.A.; the opening of the St. Lawrence Seaway in 1959 brought Atlantic shipping to its docks; it has two major airports and a number of smaller ones. It is the chief market in the U.S.A. for grain and livestock, and the biggest meat-packing centre. Its manufactures are on a colossal scale, steel (production capacity, more than 29,000,000 tons annually) being of outstanding importance. Government is by mayor and common council; the various social and racial groups in the city play an important part in local politics. Pop. (1960) 3,550,404.

The site of C. was visited by Jesuit missionaries in 1673, and Fort Dearborn, then a frontier fort, was built here in 1803. The World's Columbian Exhibition, commemorating the 400th anniversary of the discovery of America, was held in C. in 1893, and another great fair was held in 1933 and 1934. During the years of prohibition, 1919–33, the city became notorious for the activities of its gangsters.

CHICHEN ITZA (chechān' etsa'). Maya city, Yucatan, Mexico, which flourished 11–13th cents. A.D. Excavated by Sylvanus Griswold Morley 1924–40, the remains incl. temples with magnificent sculptures and colour reliefs, an observatory, and a sacred well into which sacrifices, incl. human beings, were cast.

CHICHESTER, Sir Francis (1901–). British yachtsman. B. in Devon, he became famous as a flier (1931 first E.-to-W. crossing of Tasman Sea in *Gipsy Moth*), and was knighted (K.B.E.) for his circumnavigation of the world in *Gipsy Moth IV* 1966–7.

CHICHESTER. English city and market town (bor.), cap. of W. Sussex, 69 m. S.W. of London nr. C. Harbour. It was an ancient Roman township and has a fine cathedral consecrated in 1108, later much rebuilt and restored; its spire is 277 ft. high. Other buildings are the guildhall, Vicars' Close, occupied by a theological college and the *Chichester Festival Theatre* (1962). Unique outside Italy are the remains (opened to the public 1968) of the Roman palace, built c. A.D. 80, at nearby Fishbourne. Pop. (1961) 20,118.

CHICKEN. See POULTRY.

CHICKEN POX. Varicella, an acute fever characterized by crops of small blisters and a rash. It is caused by an unknown virus, probably identical with that which causes shingles. One attack protects for life, probably against shingles as well. It chiefly attacks children under 10. The virus is probably air-borne, in the spray of coughing or speaking, but may also be transmitted on objects such as clothing or toys. The incubation period is 2–3 weeks.

CHICKWEED. A plant (*Stellaria media*) belonging to the pink family Caryophyllaceae. In Britain it is a common garden weed.

HORSE CHESTNUT, with foliage, flower and fruit.

sociologist. She assisted her husband in the foundation of the New Life Movement in 1934, designed to combat the opium habit and to encourage physical fitness, thrift, and public welfare, and accompanied her husband in most of his military and political journeys throughout China. During the S.W.W. she visited America and was prominent in the conferences at Delhi in 1942 and Cairo in 1943.

simulating natural conditions. The Geodesic dome, lined by a layer of Plexiglass suspended from the aluminium framework, is 70 ft. high and 175 ft. in diameter, and covers approx. $\frac{1}{2}$ of an acre. Two individual air-conditioning systems allow full variable climate control; tropical lowland jungle in the S.E.; oceanic (cool days, warm nights) in the S.W.; dry tropical (warm days, cool nights) in the N.E.; and tropical mountain forest in the N.W. Every 5 min. controlled lighting effects a transition through dawn, midday, afternoon, and moonlight. The C. was planned by Frits W. Went, Director of the Garden.

CLINOMETER. A hand surveying instrument for measuring angles of slope.

CLIVE, Robert, baron (1725–74). Soldier and statesman, founder of the British Empire in India. B. at Market Drayton, in 1743 he became a writer in the East India Company's service in Madras and was given an ensign's commission. In 1751, during a dispute over the succession to the Carnatic in which the French took the side of one claimant and the British of the other, C. marched from Madras with 500 men, seized Arcot, the cap. of the Carnatic, defended it for 7 weeks against 10,000 French and Indian troops, and then sallied out and relieved the British besieged in Trichinopoly. In 1753 C. returned to England a national hero.

In 1755 he went back to India as a lieutenant-colonel and governor of Fort St. David. In the next yr. the Nawab of Bengal, Suraj-ud-Dowlah, seized Calcutta, and shut up 146 British prisoners in the 'black hole' where all but 23 perished (20 June 1756). In Feb. 1757 C., with 1,900 men, defeated the Nawab's army of 34,000 men outside Calcutta, and forced him to make peace. In Europe the Seven Years War had begun; and C., discovering that Suraj-ud-Dowlah intended to assist the French, set out from Chander-nagore with 3,200 men, and on 23 June completely defeated the Nawab's army at Plassey. By this victory Bengal practically fell to the East India Company.

In 1760 ill-health forced C. to return to England. In 1762 he was created Baron C. of Plassey. He returned to India in 1765 as Governor of Bengal and C.-in-C., and executed many great and necessary reforms. But he made many enemies, and on his return to England for the last time, in 1766, he was fiercely attacked and threatened with impeachment. In 1772–3 a parliamentary enquiry was held and he was virtually acquitted, but the charges preyed on his mind. In a fit of depression he committed suicide.

CLIVEDEN (cleev'den). National Trust estate in Bucks, England, on the Thames, 3 m. N.W. of Maidenhead. Bought in 1893 from the 1st duke of Westminster by the 1st viscount Astor, it was presented by the 2nd viscount to the National Trust in 1942. In the grounds is a hospital built by the Canadian govt. during the S.W.W. at a cost of £5,000,000 which was handed to the National Trust in 1946 as the Canadian War Memorial in Britain.

CLOCKS. Any device that can be used for measuring the passage of time, though by customary usage the word normally indicates that class of timepiece which consists of a train of wheels driven by a spring or weight. The purpose of a C. is to perform the subdivision of the day into smaller time intervals. In ancient Egypt the time during the day was measured by a shadow-clock, a primitive form of sundial, and at night the water-clock was used. Up to the late 16th cent. the only C. available for use at sea was the sand-clock, of which the most familiar form is the hour-glass. The Royal Navy kept time by half-hour sand-glasses until 1839. During the Middle Ages various types of sundials were widely used, and portable sundials were in use from the 16th to the 18th cent. Watches were invented in the 16th cent. – but the 1st were made in Nuremberg shortly after 1500 – but it was not until the 19th cent. that they became cheap

enough to be available to the ordinary man or woman.

The 1st known public C. was set up at Milan in 1353; the 1st in England was the Salisbury cathedral C. of 1386. The time-keeping of both Cs. and watches was revolutionized in the 17th cent. by the application of pendulums to Cs. and of balance-springs to watches.

The marine chronometer is a precision timepiece of special design and of the finest workmanship, used at sea for giving Greenwich mean time. Electric timepieces were made possible by the discovery early in the last century of the magnetic effects of electric currents. One of the earliest and most satisfactory methods of electrical control of a C. was invented by Matthaeus Hipp in 1842. In the modern mains electric C., the place of the pendulum or spring-controlled balance-wheel is taken by a small multipolar synchronous motor which counts up the alternations of the mains electric supply, and then by a suitable train of wheels records the time by means of hands on a dial.

The quartz crystal C. (made possible by the piezo-electric property of certain crystals) has even greater precision, with a short-term accuracy of about one-thousandth of a second per day. More recently still it has been shown that resonances in some molecules, e.g. ammonia or caesium, come within the range of established radar techniques, and through positive rays and cavity resonance a link can be maintained with the molecular resonance and the frequency of an electric current. In this way time division accurate to one part in 10^4 can be maintained for reference purposes.

CLOETE (klōēt), Stuart (1897–). S. African writer. B. in Paris, he served with the Coldstream Guards in the F.W.W., retiring in 1925 to farm for 10 years. His novels incl. *Turning Wheels* (1937), *The Mask* (1958), and *The Abductors* (1966).

CLOISTERS, The. Branch of the Metropolitan Museum of Art in Fort Tryon Park, upper Manhattan. Lovingly reassembled are parts of a number of medieval buildings transported to America from Europe, and priceless medieval tapestries, pictures, books, etc. are among the exhibits.

CLOSED SHOP. Name given to a company or firm, public corporation or other body which requires its employees to be members of the appropriate trade union. In the U.K., some organizations recognize only one union as a negotiating body for their employees, e.g. the London Transport Executive so recognizes the Transport and General Workers' Union. Trade unionism is strong enough in many factories (of e.g. the motor industry) for employees to insist that only trade union members shall be employed; but membership is not restricted to one union: such restriction results in what is properly a 'union' rather than a 'closed' shop. The C.S. was made illegal in the U.S.A. by the Taft-Hartley Act, 1947, passed by Congress over President Truman's veto.

CLOTH. See TEXTILES.

CLOTHES MOTHS. Moths of the family Tineidae. The larvae feed on clothes, upholstery, etc., and often do considerable damage. The lesser C.M. (*Tinea pellionella*) has yellow larvae.

CLOUDS. Water vapour condensed into minute water particles which float in masses in the atmosphere. Like fogs or mists, from which they are distinguished by the height at which they occur above the ground, they are formed by the cooling of air charged with water vapour which condenses generally on tiny dust particles.

Clouds are usually classified according to the height at which they occur. *Cirrus* and *cirro-stratus* clouds are met with at an average height of 30,000 ft. The former, sometimes called *mare's-tails*, consist of minute specks of ice and appear as feathery white wisps, while *cirro-stratus* clouds stretch across the sky as a thin white sheet. Three types of cloud are found at heights of 10,000–24,000 ft.: *cirro-cumulus*, *alto-cumulus*, and

CHINA. A trio of lumbermen pause for a moment in their work, and provide an interesting study in facial expression.
Photo: Camera Press.

of the order Holocephali of the class Selachia. They resemble the sharks and rays in having a cartilaginous skeleton, and in laying large, single eggs, enclosed in a horny case. The Arctic C. or rabbit fish (*C. monstrosa*) is sometimes taken in British waters.

CHIMPANZEE (*Anthropopithecus troglodytes*). An anthropoid ape, which, apart from the gorilla, is the most man-like in structure. Like the gorilla it lives in the forests of West and Central Africa, but it is easily distinguished by its smaller size, larger ears, and unswollen nostrils. Its arms are somewhat shorter, reaching to the knees in the erect posture, and the hands and feet are narrower. An adult male is about 4½ ft. in the upright position and the female is some 6 in. shorter. Cs. feed mainly on fruit.

CHINA. Country of E. Asia, one of the largest in the world, and the most populous. The territory of the Chinese Rep. embraces the Chinese provs. (incl. former Manchuria) and bordering autonomous regions. Following the Communist conquest of the country in 1949, the provs. were several times re-organized.

Physical. China proper consists of 3 great river systems – the Hwang-Ho, or Yellow river, in the N.; the Yangtze-Kiang in central China; and the Si-Kiang in the S. Their basins are separated by mountain ranges. In the far N., beyond the Hwang-Ho, is the Mongolian plateau, merging into the loess-covered plateau of N.W. China. The S. part of the country is occupied by a rugged plateau, much dissected. In the W. is the Szechwan or Red basin, surrounded by mountains, except for the gorge where the Yangtze breaks through to the plain of central China. Beyond Szechwan, to the W., rises the lofty plateau of Tibet. Covering such a huge area, and with such varying surface conditions, C. has a very diverse climate, with Jan. temperatures below 0° F. in the N.E. and as high as 65° F. in Hainan. Rainfall is much heavier in the S. (85 in. at Pakhoi in Kwangtung, 14 in. at Tai-yuan in Shansi).

Originally much of C. was forested, but the Chinese have cut down the trees over large areas, and the torrential rains cause great erosion of the land, washing away crops and soil. Agriculture remains the main occupation of the people who farm the land

CHIMPANZEE

DIVISIONS OF CHINA

Provinces	Area in sq. m.	Population est. 1957 (in 1,000s)	Capital

Seat of Nationalist Government:

Formosa ... 13,890 12,993 Taipei

*Special municipalities, pop. 1965.

by hand, fertilizing it with human and animal manure, irrigating it with flood waters which deposit silt on the land, and conserving its productivity by careful rotation of crops. In the S. rice is the main crop and staple food material; to the N. this gives way to wheat, and N. again to millet. The soya bean is particularly important in the N., cotton in the Yangtze basin, tea in the centre and S., and groundnuts, maize, etc., in other parts. Silkworms are reared in the central parts. The chief animal is the pig, which provides valuable by-products such as bristles. Oxen and buffaloes are the draught animals in the S., and mules and horses in the N., but animal transport is nowhere as important as human labour. Sheep are kept in the N. and N.W., and chickens everywhere. Cattle are less important. Under the Communist régime irrigation and more intensive cultivation are being extended in the N.E. and N.W., and in the S. existing intensive cultivation is being increasingly aided by the use of farm machinery. Industrialization, stimulated in particular in Manchuria by the Japanese during their ascendancy in eastern China, was intensified by the Communists who from 1952 drew up five-year plans of industrial development affecting the areas N. of the Yangtze where C.'s most accessible raw materials – coal, iron, cotton, wool, petroleum – are concentrated. Most important of the coal deposits are those in Shansi and Szechwan; iron occurs in the N.E.; and tin, copper and other minerals are also found. The chief ports of C. are Shanghai, Canton, Tientsin, Foochow, and Amoy; inland centres incl. Peking, the capital, Nanking, Hankow, and Chungking. Fushun is a great oil-producing centre and Anshan produces iron and steel.

Government. After the Chinese Communists drove the remnant of the Nationalist Chinese forces from the mainland in 1949, they immediately introduced a Communist republican form of govt., ratified in 1954

this form of *C.* was well estab. all over the country when the Federation of Women's Clubs was formed in 1889.

CLUB MOSS. A class of flowerless plants (*Lycopodiales*) belonging to the *Pteridophyta* and allied to the ferns and horsetails. They have a wide distribution, but were far more numerous in Palaeozoic times, the *Lepidodendroids* of the coal measures being large trees. The living species are all of small size. The common C.M. or stag's horn moss (*Lycopodium clavatum*) is found on upland heaths.

CLUB-ROOT. Disease affecting cabbages, turnips, and allied plants. It is caused by one of the organisms known as *Mycetozoa* or slime-moulds—*Plasmodiophora brassicae*; this attacks the root of the plant, which sends out knotty outgrowths, and the whole plant decays.

CLUJ (klōōzh). City in Transylvania, Rumania, cap. of *C.* region, on the *Somes*, a communications centre for Rumania and the Hungarian plain. It is the seat of a bishopric, and of a univ. (1919) and polytechnic. Varied industry incl. machine tools, furniture, and knitwear. Pop. (1966) 222,652.

CLUNY (klünē'). Town in Saône-et-Loire dept., France, on the *Grosne r.* Here from 910 to 1790 was a celebrated abbey, foundation house of the *Cluniac* order, originally a reformed branch of the *Benedictines*; some remains of the abbey exist. *C.*, once famous for lace, has an important cattle market. Pop. (1962) 4,412.

CLYDE, Colin Campbell, 1st baron *C.* (1792–1863). British soldier. B. at Glasgow, he entered the army in 1808, and served in the Peninsular War, in China 1842–6, the Sikh War of 1848–9, and during the Crimean War commanded the Highland Brigade at Balaclava. During the Indian Mutiny he was *C.-in-C.*, raised the siege of Lucknow, and captured Cawnpore. He was created Baron *C.* in 1858 and promoted to field marshal in 1862.

CLYDE. Scottish river, one of the chief commercial waterways of the world. It rises in Lanarkshire in the Lowther hills, runs through Clydesdale, and after a course of 106 m. enters the Firth of Clyde, a broad tidal inlet nearly 40 m. wide at its southern end. Between Glasgow and Greenock some of the world's greatest shipbuilding firms are established. Among the chief towns on the *C.* are Lanark, Hamilton, Bothwell, Glasgow, Port Glasgow, and Greenock. Ayr is on the Firth in which are the islands of Bute and Arran and a number of smaller islands. The *C.* is connected to the Firth of Forth by the Forth and Clyde canal, 35 m., from Bowling to Grangemouth.

CLYDEBANK. Scottish burgh on the Clyde, Dunbartonshire. 6 m. W.N.W. of Glasgow. Shipbuilding

COACHING. Utility is forgotten in the fairy-tale splendour of the state coach of the Austrian emperors now preserved in the palace of Schönbrunn, Vienna.

Courtesy of Austrian State Tourist Department.

is the primary industry; at *C.* is the famous firm of John Brown & Co. Pop. (1961) 49,654.

CLYNES, John Robert (1869–1949). Pioneer of the British Labour movement. B. at Oldham, he began work as a piecer in a cotton mill, but entered Parliament in 1906, and was Home Sec. 1929–31. He was opposed to 'direct action' and to the extremism of the general strike of 1926.

CLYTEMNESTRA (klitemnest'ra). In Greek legend, daughter of Tyndareus and Leda, and wife of Agamemnon. Their children were Orestes, Electra, and Iphigenia. During her husband's absence at the Trojan war, *C.* was seduced by Aegisthus, and on his return murdered him with the connivance of her lover. *C.* and Aegisthus were eventually slain by Orestes.

CNOSSUS. Alternative form of *KNOSSUS*.

COACHING. Conveyance by a coach – a horse-drawn passenger carriage on 4 wheels, sprung and roofed in. Famous coaches still in use are those of the Lord Mayor of London (1757) and the state coach built in 1761 for George III. Stage coaches made their appearance in the middle of the 17th cent.; the first mail coach ran in 1784. Between about that time and 1840, when railways became the vogue, was the golden age of *C.* The main roads were kept in good repair by turnpike trusts, and large numbers of inns – many of which still exist – arose to cater for man and beast. The influence of coach design may be seen in the normal railway carriage.

COAL. Mineral substance of fossil origin, the result of the transformation of organic matter: the main types are *anthracite* (bright and with more than 90 per cent carbon), *bituminous C.* (bright and dull patches) and *lignite* (woody, grading into peat) and brown *C.* (no woody structure but only 70 per cent carbon). Fields are widely distributed in the temperate N. hemisphere, the greatest reserves being in Europe, W. Siberia and U.S.A.: the York, Derby and Notts. is Britain's chief reserve.

C. has probably been worked in England since Roman times and in the 2nd half of the 18th cent. became the basis of Britain's rise to industrial power. Since 1950 the use of natural gas as fuel and of oil for generating electricity, manufacturing gas, etc., has led to a steep decline in world demand for *C.* except in the less developed countries. World consumption is c. 2,000 million metric tons (Soviet Union and Communist Europe c. 850 million; W. Europe, incl. the U.K., c. 550 million; and N. America c. 350 million). Under the *C.* Industry Nationalization Act (1946) Britain's mines are admin. by the National *C.* Board.

Extraction may be by the single 'longwall' operation popular in the U.K. in which a section of the coal seam is opened out to form a straight face or wall, perhaps 100 yd. long, and is then steadily cut away day by day; by the 2-operation 'bord and pillar'

CLYDE. Celebrated for her busy shipbuilding yards, the Clyde still has scenery of lonely grandeur along her banks. In the foreground are the modern Lithgow yards at Port Glasgow, but beyond are the quiet hills. Courtesy of Lithgows Ltd.

a feudal system emerged, together with important developments in the field of art. Buildings were often decorated with mural paintings, and this art is said to have won the praise of Confucius. The brush had been used for painting on pottery, and lacquer workers used brushes as early as 2 or 3 cents. B.C. The use of finer brushes resulted in the invention by Mêng T'ien of the writing brush, c. 200 B.C., and the development of calligraphy, which the Chinese have long regarded as the greatest of the fine arts.

The Han period (206 B.C.–A.D. 220) was very important in art. Silk weavings appeared, glaze was used to brighten pottery, great architectural schemes were carried out, relief sculpture, portrait and other painting developed.

The first of the great painters whose name we know – Ku K'ai Chih – worked c. A.D. 350–400 in S. China. Some of his illustrations on the inscribed scroll entitled *The Admonitions of the Instructress to the Court Ladies* are in the British Museum.

During the T'ang period (618–906) the art of painting reached its zenith, and porcelain was perfected. This was a period of great expansion, and China began to take an interest in her neighbours, both oriental and occidental. The shapes of vessels show the influence of Persian designs. The Sung period (960–1279) is famous for its many beautiful landscape paintings, and its many animal, flower, and bird paintings which were executed with great delicacy and charm. An Imperial Academy of Painting was founded by the emperor Hui Tsung, who was himself a talented painter of birds. Then with the Mings (1368–1644) there was an outburst of patriotism which was reflected by artists and craftsmen in bold masses, free flowing line, and brilliant colour. Chinese architecture, pottery, and painting of the period display all these qualities. There was a flourishing trade in porcelain, and typical of the time are the large wine jars of sturdy design, tall and imposing vases with heavily outlined floral designs. Enamelling on metal was perfected.

The Ming dynasty was overthrown by invaders from Manchuria who proved to be excellent rulers. The Manchus fostered the arts and encouraged learning. Closer contact was made with western civilization. The two great liberal rulers of the period were K'ang Hsi, whose reign began in 1662, and Ch'ien Lung, who reigned from 1736 till almost the end of the 18th cent. Under K'ang Hsi porcelain became the most typical medium of expression. K'ang Hsi wares were chiefly the blue and white (called 'Nanking' in England), and the enamelled porcelains. During the 18th cent. there was a growing fad for intricacy of design. Although some fine pieces were produced during the reign of Ch'ien Lung, C.A. began to deteriorate, and it has never since recovered.

CHINESE LANGUAGE. Chinese is generally believed to belong to the Sinitic or Indo-Chinese family related to Tibetan, Burmese, Siamese, etc. Its chief characteristics are the possession of significant tones whereby the pitch or inflection of the voice entirely alters the meaning of a syllable, and monosyllabism. In course of time the spoken language has been affected by many innovations, but syllables which have become identical to the ear have remained distinguished to the eye. Thus the spoken language is distinguished from the written, and it was not until our own day that the spoken language has been given written form. The dialects of Chinese are many, and are so profoundly different as to constitute almost separate languages.

The classical written language has remained the same since about the 10th cent. A.D., while the spoken language moved further and further towards its modern form. Thus a good written style can be attained only after many years of study. After the establishment of the Republic, this was recognized

as a hindrance to democratic development and Common Speech (Putonghua), based on the Peking dialect (Mandarin), was cultivated as a nat. spoken and written language. To speed reading and writing the characters, formerly vertical and read right to left, were from 1956 placed horizontally and read left to right, and c. 1,000 simplified characters were gradually introduced. A 25-letter Roman alphabet (excl. 'v'), introduced in primary schools 1957, is eventually to replace the old characters.

CHINESE LITERATURE. POETRY. Written in the ancient literary language understood throughout China, C. poems, often only 4 lines long, consist of rhymed lines of a fixed number of syllables, ornamented by parallel phrasing and tonal pattern. The oldest poems are contained in the *Book of Songs* (800–600 B.C.). Among the most famous C. poets are the nature poet T'ao Ch'ien (A.D. 372–427), the master of technique Li Po (701–62), the autobiographical Po Chü-i (772–846), and the wide-ranging Su Tung-p'o (1036–1101); and among the moderns using the colloquial language under European influence and experimenting in free verse are Hsu Chih-mo (1895–1931), and Pien Chih-lin (1910–).

PROSE. Typical C. history is less literary than an editing of assembled documents with moral comment, but the essay has long been cultivated under strict rules of form and style. Among the most famous essays is that of Han Yü (A.D. 768–824) *Upon the Original Way*, recalling the nation to Confucianism. Until the 16th cent. the short story was confined to the anecdote, startling by its strangeness, related in the literary language, e.g. those of the poetic Tuan Ch'eng-shih (d. A.D. 863), but after that time the more novelistic type in the colloquial tongue developed by its side. The C. novel has evolved entirely from the street storyteller's art, and has consequently always existed in the vulgar tongue. The early romances *Three Kingdoms*, *All Men are Brothers*, and *Golden Lotus* are anonymous, the earliest known author being Wu Ch'eng-en (c. 1505–80); the most realistic of the great novelists is Ts'ao Chan (d. 1763).

20th cent. C. novels have largely adopted European form, and have been particularly influenced by Russia, as have the realistic stories of Lu Hsün (q.v.). In typical C. drama, the stage presentation far surpasses the text in importance (the dialogue was not even preserved in early plays), but the present cent. has seen experiments in the European manner.

CHINGHAI. Prov. of China, bordering Tibet; its chief products are grains and oil seeds. The cap. is Sining. Area 278,400 sq. m.; pop. (1957 est.) 2,050,000.

CHINKIANG. Chinese city on the Yangtze-Kiang 40 m. N.E. of Nanking, at the point where the Grand Canal crosses the river. Once a British concession, it was opened to foreign trade in 1861, returned to China in 1927. Wheat, soya beans, rice are the principal items in its trade. Pop. (est.) 201,000.

CHINNERY, E. W. Pearson (1887–). Australian anthropologist. Official Adviser in Native Matters to the Commonwealth of Australia 1938–47, he was prominent in the discovery and pacification of cannibal and head-hunting tribes in the interior of New Guinea.

CHIOGGIA (kēoh'jah). City and port in N.E. Italy, 15 m. S. of Venice, built on C. island at the S. end of the Venice lagoon and connected by bridge with the mainland. Pop. (1960) 49,750.

CHIOS (kē'os). Greek island in the Aegean Sea,

CHIPMUNK

Palmerston offered him a seat in the Cabinet, which he refused. C. was largely responsible for the commercial treaty with France in 1860.

COBDEN-SANDERSON, Thomas James (1840–1922). British bookbinder and painter. Influenced by William Morris and Burne-Jones, he opened his own workshop in Maiden Lane, Strand, in 1884, and soon established a reputation as a bookbinder with faultless technique and admirable taste. Later he founded the Doves Press (1900–16).

COBH (côve). Irish seaport and market town on Great Island, in the estuary of the Lee, co. Cork, Rep. of Ireland. Pop. (1961) 5,266.

COBHAM, Sir Alan John (1894–). Pioneer of long-distance aviation. During the F.W.W. he served in the R.F.C., and then turned to civil aviation. By his tours with an aerial 'circus' he did much to make Britain air-minded. In 1926 he was made K.B.E.

COBLENZ. See **KOBLENZ**.

COBRA. Venomous snakes of the genera *Naja* and *Sepeodon*, characterized by the fact that their necks are dilatable into a broad hood. They have cylindrical bodies with long tails and smooth scales. The Indian C., or Cobra da Capello (*Naja naja tripudians*), attains

7 ft., and is black to pale brown, with generally a spectacle-shaped marking on the upper surface of the neck. Its bite is deadly. The king C. or hamadryad (*N. hannah bungarus*) may be 14 ft. long, and is one of the fiercest and most aggressive of snakes. It is yellowish brown or olive, with black cross-bands, and feeds on other snakes. African Cs. include the Egyptian asp or hooded C. (*N. haje*) and the black-necked C. (*N. nigricollis*).

INDIAN COBRA

COBURG (koh'boorg). German town in Bavaria, on the Itz, 50 m. S.E. of Gotha. Formerly the capital of the duchy of C., it was part of Saxe-Coburg-Gotha 1826–1918, and a residence of its dukes. Pop. (1960) 44,000.

COBURN, Charles. Pseudonym of British music-hall artist Colin Whitton McCallum (1852–1945). Reared in the East End of London, he took his name from Coburn Rd., Bow. His favourite songs were 'Two lovely black eyes' (1886), written by himself, and 'The Man who broke the Bank at Monte Carlo'.

COCA. A S. American shrub (*Erythroxylon coca*) belonging to the Erythroxylaceae, whose dried leaves are the source of cocaine. It is cultivated in Bolivia.

COCAINE. The chief alkaloid found in the leaves of the coca tree. It is used in medicine to produce local anaesthesia, etc.

COCHABAMBA. City in Bolivia, cap. of C. dept. At a height of 8,370 ft., it has a refinery linked by pipeline with the Camiri oilfields. Pop. (1965) 115,989.

COCHIN. Indian town and seaport, also fishing port and naval training base, in Kerala state, on the Malabar coast. It exports coir, copra, tea, spices; makes ropes, clothing, etc.; and has an airport and railway terminus. Vasco da Gama established a Portuguese factory at C. in 1502, and in 1530 St. Francis Xavier made it a missionary centre. The Dutch held C. 1663–1795 when it was taken by the English. Pop. (1961) 35,061; with the adjoining town of Mattancheri, 118,954.

COCHIN. Formerly princely state lying W. of the Anamalai hills in S. India; capital Ernakulam; area 1,480 sq. m. It was part of Travancore-Cochin from 1949 until merged in Kerala in 1956.

COCHIN-CHINA. Former French colony in Indo-

COCKATOO

China, from 1949 part of Vietnam (q.v.).
COCHINEAL (coch' inél). Red dye obtained from the bodies of *Dactylopius coccus*, one of the scale-insects (Coccidae) belonging to the sub-order Homoptera of the order Hemiptera. It is a native of S. America, and feeds on various species of cactus.

COCHRAN, Sir Charles Blake ('C.B.') (1872–1951). British impresario, who promoted everything from wrestling and roller-skating to the introduction to London of the Diaghilev Ballet. C.'s 'young ladies' incl. many musical comedy stars of later years. He was knighted in 1948.

COCKATOO. A group of birds, forming the family (Cacatuidae) of the parrots (Psittaciformes), confined to Australia, New Guinea, and the Malay Archipelago, and chiefly distinguished by the long crests of erectile feathers. The sulphur-crested C. (*Cacatua galerita*) is white, with a yellow crest. A native of Australia, it is a familiar cage-bird. The black C. (*Calyptorhynchus funereus*) is also Australian, and the great palm C. (*Microglossus aterrimus*) is the largest member of the group.

COCKCHAFER. Species of beetle (*Melolontha vulgaris*) belonging to the Lamellicorn series of the order Coleoptera. It is about an inch long, and of a reddish-brown colour, with the breast covered with fine, greyish hairs. Cs. emerge in large numbers in May, hence the name May-bugs.

COCKCROFT, Sir John Douglas (1897–67). British physicist. B. at Todmorden, Yorks., he held an engineering appointment with Metropolitan-Vickers, and took up research work under Rutherford at the Cavendish Laboratory, Cambridge. He succeeded (with E. T. S. Walton) in splitting the nucleus of the atom for the first time in 1932, and in 1951 they were jointly awarded a Nobel prize. Succeeding Appleton as Jacksonian prof. of natural philosophy, Cambridge (1939–46), he was engaged in the S.W.W. on scientific work for the govt., latterly in connection with the atom bomb. He was director at Harwell 1946–58, and in 1960 became 1st Master of Churchill Coll., Cambridge. Knighted in 1948, he was awarded the O.M. in 1957.

COCKERELL, Sir Christopher (1910–). British engineer, inventor of the hovercraft (q.v.). From a first interest in radio, he switched to electronics, working with the Marconi Co. 1935–50. In 1953 he began work on the hovercraft, carrying out his early experiments on Oulton Broad, Norfolk, and 1958–66 was director of Hovercraft Ltd. Knighted 1969.

COCK-FIGHTING. The pitting of game-cocks against one another to make sport for onlookers and gamblers – a diversion now, in most countries, illegal because of its cruelty. It was extremely popular in feudal England. A royal cockpit was built in Whitehall by Henry VIII, and royal patronage continued in the next century. During the Cromwellian period it was banned, but at the Restoration it received a new lease of life until it was banned in 1849. The cockpits were stages of about 20 ft. in diameter. Fighting cocks were from one to two years of age when matched, and wore steel spurs, 1–2½ in. long, on their legs.

COCKLE. Genus of bivalve molluscs (*Cardium*) belonging to the Lamelibranchia and recognized by

CHODOWIECKI (kohdohvyets'kê), Daniel Nicolas (1726–1801). German painter and engraver. B. at Danzig of Polish descent, he is particularly famous for his engravings of scenes from the Seven Years War and the life of Christ, and for a picture of 'Jean Calas and his family'.

CHOIR (pron. and formerly spelt 'quire'). A trained body of singers, esp. as taking part in religious services, either leading the congregation or singing alone. The use of a C. in worship was taken over by the Christian Church from the Jews. In the Anglican Church, the C. consists, as a rule, of boys and men only, singing in 4 parts.

CHOISEUL (shwahzhôl'), Étienne François, duke of (1719–85). French statesman. Originally a protégé of Mme de Pompadour, he became Minister for Foreign Affairs in 1758 and held this and other offices until 1770. He banished the Jesuits, and was a supporter of the *Philosophes*.

CHOLERA. Asiatic cholera, an acute epidemic disease, most common in India, due to a specific micro-organism (vibrio, spirillum) and characterized by violent diarrhoea, cramps, and a high death rate; this, however, has been reduced to about 20 per cent by Leonard Roger's treatment with copious injections of saline fluid.

CHOLESTEROL (koles'terol). Fatty alcohol occurring in bile and nervous tissue, and forming gall stones and causing arterio-sclerosis. Konrad Bloch (Harvard) and Feodor Lynen (Munich) received a Nobel prize 1964 for their research on C.

CHOPIN (shopañ'), Frédéric François (1810–49). Polish composer. B. near Warsaw, the son of a French father and a Polish mother, he made his first public appearance as a pianist at the age of 9, and from 1831 made his home in Paris. Here he became well known in the fashionable salons, though he rarely performed in public. In 1836 Liszt introduced him to Mme Dudevant (George Sand, q.v.), with whom he had a liaison from 1839 which lasted for 7 years. At Majorca, George Sand nursed him – he was consumptive – and for a time he regained his health. He d. on 17 Oct. 1849 and was interred in Père Lachaise cemetery in Paris.

As a performer C. revolutionized the technique of pianoforte-playing. He excelled in the performance of his own works, and was at his best in the intimate atmosphere of a salon. As a composer, he made little attempt to handle the larger forms, but in his pieces for piano solo he is without a rival. These stand alone for their lyrical and poetic quality; in them Slavonic passion and melancholy are combined with French grace and refinement. Besides sonatas, his works incl. collections of waltzes, preludes, études, nocturnes, ballades, impromptus, fantasias, polonaises, and mazurkas.

CHORDATA (kordā'ta). The highest phylum of the animal kingdom, consisting of the Vertebrata, together with certain primitive forms lacking a true backbone, but agreeing in other characters, e.g. the sea squirts, lancelet, and Balanoglossus.

CHORLEY (chor'li). English town (bor.) in Lancs, 20 m. N.W. of Manchester. Cotton, chemicals, brassware, etc., are made. Pop. (1961) 31,262.

CHOSEN. Japanese name for KOREA.

CHOU EN-LAI (chō-enlī) (1898–). Chinese statesman. B. in S. China, he was ed. at Nankai High School, and in Japan. After studying Communist organization in Europe, he became head of the political dept. of Whampoa Military Academy. Purged by Chiang Kai-shek in 1927 he went 'underground', and then during 1937–46 was Communist representative to the National Govt. at Nanking and Chungking. In 1949–58 he was Premier and For. Min. of the newly estab. People's Republic, becoming Premier of the State Council in 1958. He was a moderating influence in the Cultural Revolution 1966–8.

CHOUGH (chuf). Genus of birds (*Pyrrhocorax*) belonging to the crow family (Corvidae). The red-legged or Cornish C. (*P. graculus*) is now only rare and local in Britain. Its plumage is black, and the eggs are white, spotted with brown.

CHOW CHOW. Chinese breed of dog, popular in Britain as a pet. Its name is pidgin-English for 'food', and in China the C. is killed for human consumption. Its coat should be of one colour, and its chief peculiarity is its black tongue.

CHRÉTIEN DE TROYES (krehtë-an' de trwah). Medieval French poet, b. in Champagne, about the middle of the 12th cent. His epics include *Le Chevalier de la Charrette*; *Perceval*, written for Philip, count of Flanders; *Erec*; *Yvain*, and other Arthurian romances.

CHRIST. See JESUS CHRIST.

CHRISTADELPHIANS (kristadel'fianz). A Christian religious denomination founded in Brooklyn, U.S.A., in 1848 by John Thomas (1805–71), an English medical student. They have no ministers of elders, hold to a strict literal interpretation of the Bible, and are millenarians. They are represented in Britain, the U.S.A., and other parts of the world.

CHRISTCHURCH (krist'-). English town (bor.) in Hants, adjoining Bournemouth at the junction of the Stour and the Avon, with a fine Norman and Early English priory church. Pop. (1961) 26,498.

CHRISTCHURCH. City of South Island, New Zealand, on the Avon, 7 m. from its mouth. Principal city of the Canterbury plains, it has an Anglican cathedral, designed by Sir Gilbert Scott, and an R.C. cathedral; and is the seat of the Univ. of Canterbury. Pop. (1967) 163,800.

CHRISTENING (kris'ning). The Christian ceremony of baptism of infants, including giving a name.

CHRISTIAN. A professor of the religion founded by Jesus Christ. In Acts xi, 26, it is stated that the first to be called Christians were the disciples in Antioch.

CHRISTIAN. Name of 8 kings of Denmark and Norway. **CHRISTIAN I** (1426–81) was the first of the dynasty; in 1450 he established the union of Denmark and Norway which lasted until 1814. Under **CHRISTIAN III**, who reigned 1535–59, the Reformation was introduced. **CHRISTIAN IV** reigned 1588–1648, sided with the Protestants in the Thirty Years War, and founded Christiania (now Oslo, capital of Norway).

CHRISTIAN VIII was king of Denmark 1839–48. **CHRISTIAN IX** (1818–1906) was king of Denmark from 1863. His daughter Alexandra m. Edward VII of the U.K. and another m. Tsar Alexander III;

CHRISTCHURCH. A pleasant scene beside the Avon which could almost be in England in the spring.

Memorial Assoc.

1912 won a prize for the best British aeroplane. But whilst flying this machine he was killed.

CODY, William Frederick (1846–1917). American scout and showman known as Buffalo Bill from a contract he made with the Kansas Pacific Railway to supply buffalo meat to its labourers in 1867: he killed 4,280 buffalo in 18 months. He saw service against the Red Indians and from 1883 organized a 'Wild West' show with which he toured U.S.A. and Europe.

CO-EDUCATION. The teaching of boys and girls together, on equal terms and in the same classes.

With the rise of modern national systems, economy dictated the adoption of C., as in 17th cent. Scotland and after the Education Act of 1870 in England. Yet it has never been universally approved, either in England or on the Continent, and segregation is still the general rule, particularly at the adolescent stage, and in the old-established schools. In 1954 the U.S.S.R. returned to her earlier co-educational system, partly abolished in 1944. In the U.S. 90 per cent of schools and colleges are co-educational, and an overwhelming majority of teachers are women.

COELACANTH (sē'lakanth). Archaic fish, formerly believed extinct. In 1938 a skin, in 1952 a complete fish, and subsequently other specimens, were obtained near Madagascar. It is directly related to the ancestors from whom human beings descend.

COELENTERATA (sēlenterā'ta). One of the phyla or primary divisions of the animal kingdom, distinguished from all the higher animals, or Coelomata, by having a single body cavity, which has only one opening, the mouth, through which food is taken into the body, and the waste products subsequently rejected. They thus correspond to the gastrula stage of the developing embryo of higher animals, and rank next in order above the Protozoa and sponges.

With one or two exceptions the C. are a marine group, and exhibit two main forms of organization: the free-swimming Medusa or jelly-fish form, and the fixed polyp. A special feature is the possession of special stinging cells, or nematocysts, by means of which they are able to paralyse their prey. Many C., e.g. the corals, build up skeletons for themselves from carbonate of lime.

The C. are divided into the 3 great classes of Hydrozoa, Scyphozoa, and Anthozoa (qq.v.). Sometimes a 4th class is added, the Ctenophora.

COFFEE. The seeds or berries of cultivated forms of *Coffea arabica*, *C. liberica* and allied species – natives of Africa and probably Arabia. Naturally growing 15–20 ft., the shrub is pruned to 6–10 ft. in cultivation, is in full bearing in 5–6 years and lasts for 30 years. C. is a tropical crop and does best on frost-free hillsides with moderate rainfall. The largest producer is Brazil; others are Colombia,

COFFEE. Plant, with
berries.

Ivory Coast, Portuguese territories, Uganda, Mexico, El Salvador, Guatemala and Indonesia. Chicory (q.v.) is often mixed with C. to give it a distinctive bitter flavour and rich colour.

In Arabia C. drinking dates from about the 14th cent., but did not become common in Europe until 300 years later. In the 17th cent. C. houses were opened in London, but C. was largely superseded by tea until it began regaining ground in the 20th: in U.S.A. and on the Continent C. has always been more popular.

COGHILL, Nevill (1899–). British scholar, Merton prof. of English Literature 1957–66 and author of a modern English version of *The Canterbury Tales* (1951).

COGNAC (koñyahk'). Town in Charente dept., France, 25 m. W. of Angoulême. Situated in a vine-growing district, C. has given its name to a world-famous brandy. Pop. (1962) 21,081.

COHEN, Morris R. (1880–1947). American philosopher. B. in Russia, he emigrated to the U.S. as a boy and taught at the Coll. of the City of N.Y. 1912–38. A keen critic of anti-rational tendencies, he pub. in 1931 *Reason and Nature*.

COFFEE. The higher the altitude, within the limits of cultivability, the milder the coffee. This plantation is about 5 miles from Nairobi, and the Napier grass in the foreground is used for mulching. Courtesy of the Coffee Publicity Association Ltd.

COIMBATORE (kō-imbator'). Indian city in Madras State on the Noyel r. It is a popular hill station and industrial centre. Pop. (1961) 285,263.

COIMBRA (koh-ēm'brah). Portuguese city on the Mondego r., 20 m. from the sea, cap. of C. district. It is an episcopal see, with 2 cathedrals; the university, founded at Lisbon 1290, was transferred to C. in 1537. C. was cap. of Portugal 1139–1385. Pop. (1960) 42,640.

COINS. See NUMISMATICS.

COKE, Edward (1552–1634). Lord Chief Justice of England. B. in Norfolk, he was called to the Bar in 1578, and in 1592 became Speaker of the House of Commons and Solicitor-Gen. In 1594 he was appointed Attorney-Gen., and as such conducted the prosecution at the trials of Essex, Raleigh, and the Gunpowder Plot conspirators. In 1606 he became Chief Justice of the Common Pleas, and began his struggle, as champion of the common law, against James I's attempts to exalt the royal prerogative. An attempt to silence him by promoting him to the dignity of Lord Chief Justice proved unsuccessful, and from 1620 he was a leader of the parliamentary opposition. Under Charles I he drew up the Petition of Right, and led the attack on Buckingham. His *Institutes* are a legal classic, and he ranks as the supreme common lawyer.

COKE, Thomas William, earl of Leicester of Holkham (1752–1842). British agriculturist, known as C. of Norfolk. He succeeded to his estates at Holkham

recovering the throne, but d. in Rome as a pensioner of the Pope.

CHRISTMAS. The mass of Christ; the day on which the birth of Christ is commemorated, constituting a feast of the Christian Church. The actual day of the Nativity has never been decided, and as late as the 5th cent. A.D. the feast was variously held on 25 Dec., 6 Jan., and 25 March; 25 Dec. the winter solstice was a highly significant date in pagan mythology – the Mithraists, for instance, kept it as the birthday of the 'Unconquered Sun' – and its increasing acceptance in the Western Church from the 4th cent. onwards owed much to the desire to facilitate the conversion of the pagans to Christianity. In Britain, 25 Dec. has been kept as a festival since long before the introduction of Christianity.

In the R.C. Church, the Church of England, and most of the Protestant denominations, Christmas Day is celebrated with religious services; and in most Christian countries it is kept as a public holiday. Many of the popular usages have a heathen origin. The yule log was taken from the pagan Norse festival. The holly, ivy, and mistletoe used to decorate churches and homes are symbols of fertility with their winter berries. Fir trees used to adorn the Roman Saturnalia, but the spread of their use as Christmas trees is said to date from their introduction to England from Germany by Prince Albert. Christmas puddings and cakes date from the Middle Ages. Carols were originally secular songs, until the Franciscans succeeded in giving them a religious application. Santa Claus is a corruption of St. Nicolaus, patron saint of children, whose feast is properly 6 Dec. The first Christmas card was designed in 1843, by J. C. Horsley, R.A.; the custom of sending them was estab. by 1870 in England, and spread to the U.S.A. a few years later.

CHRISTMAS. (i) Island in the Indian Ocean, c. 250 m. S. of Java. Uninhabited when discovered on Christmas Day 1643 by Capt. Wm. Mynors, it was annexed by Britain in 1888; Chinese labourers were brought in in 1897 to work the phosphate deposits. Japan occupied C. island 1942–5; it was transferred to Australia 1958. Area 64 sq. m.; pop. (1966) 3,381. (ii) One of the Line Islands, lying about 2° N., 157° W., area 220 sq. m.; pop. (1966) 356. Discovered on Christmas Eve 1777, by Capt. Cook, and annexed by Britain in 1888, it is the largest coral atoll in the Pacific. Copra is exported. Hydrogen bomb experiments were carried out here in 1957.

CHRISTOFF, Boris (1919–). Bulgarian bass singer. B. nr. Sofia, he gained a scholarship to study singing in Rome, and in 1946 made his début in opera. His roles incl. Boris Godunov, Ivan the Terrible and Mephistopheles.

CHRISTOPHE (krēstōf'), **Henri** (1767–1820). Negro slave in the West Indies who was one of the leaders of the revolt against the French in 1790, and in 1812 was crowned king of Haiti. In spite of his capable rule he alienated support by his cruelty; when he was deserted by his troops he shot himself.

CHRISTOPHER. Patron saint of ferrymen and travellers. Traditionally he was a Christian martyr in Syria in the 3rd cent., and the best-known legend concerning him describes his carrying the Christ child over the stream; despite his great strength he found the burden increasingly heavy, whereupon he was told that this was no wonder as Christ was bearing the sins of all the world.

CHRIST'S HOSPITAL. English public school for boys, generally known as the Blue Coat school from the blue gown which forms part of the boys' dress. Founded in 1552, it was removed from Newgate Street, London, to Horsham, Sussex, in 1902. At Hertford there is a girls' school on the same foundation. Coleridge and Lamb (qq.v.) were C.H. boys.

CHROMATOGRAPHY. A method of analysing substances by spatial separation. It may be carried

out either: (1) by passing solutions of different substances up a column of an absorbent when they will be separated according to their affinity for the absorbent; or (2) by putting drops of a mixture of components in solution on filter paper when the different components will be separated by differential diffusion through the paper (paper C.); or (3) by evaporating the liquid to be analysed into an inert gas which is allowed to flow into a partition column containing a substance, such as a high-boiling-point liquid, in which the materials of the sample have different partition coefficients, and are separated because they travel at different speeds (gas C.). These methods are extremely sensitive and enable very small quantities of substances to be detected and analysed.

CHROMIUM. Chemical element, symbol Cr, at. wt. 52.01, at. no. 24. A bluish-white metal capable of taking a high polish, and with a high melting-point, it is much used decoratively and (alloyed with nickel) for electrical heating wires. Resistant to abrasion and corrosion, it is used to harden steel, and is a constituent of stainless steel and many useful alloys. It is used extensively in C. plating and as a catalyst. Its most important compounds are sodium and potassium chromates and dichromates (for tanning leather) and potassium and ammonium chrome alums. It occurs chiefly as chrome iron ore: U.S.A., Rhodesia and India are the chief sources.

CHROMOSOMES. See GENETICS.

CHROMOSPHERE (krō'mosfēr). The upper portion of the sun's atmosphere, consisting mainly of hydrogen and ionized calcium. It may be observed through the spectroscope and visually when the sun is totally eclipsed.

CHRONOMETER. An instrument for measuring equal intervals of time with the greatest accuracy. Although its necessity is largely removed in these days of wireless telegraphy, ships at sea are still required by law to carry Cs. for navigation.

CHRYSANthemum (krisan'thēmum). Genus of plants of the family Compositae, containing nearly 300 species, most of which have been developed by cultivation. The Chinese and Japanese varieties are derived by hybridization from *C. indicum* and *C. morifolium*. In the Far East the common C. has been cultivated for more than 2,000 years, and it is the national emblem of Japan. The first C. was introduced into England in 1789, but *C. leucanthemum* and *C. segetum*, the ox-eye daisy and the corn marigold respectively, are common weeds in Britain. Cs. may be grown from seed, but are more usually reproduced by cuttings or division.

CHRYSLER (krī's'ler), **Walter** (1875–1940). American industrialist, who produced the first C. car in 1924, and in 1925 founded the C. Corporation, which manufactures motor-cars, marine and industrial engines, etc.

CHRYSLITE. See OLIVINE.

CHUANG CHOU, called Chuang Tzu ('philosopher Chuang') (c. 330–c. 275 B.C.). Chinese philosopher and essayist, he was a contemporary of Mencius, and the leading thinker of the Taoist school.

CHUB. A freshwater fish (*Leuciscus cephalus*) belonging to the carp family (Cyprinidae). It has a plump, thick body and heavy head, and is dark bluish or greenish on the back, with silvery sides.

CHUBB CRATER. Crater discovered in 1950 by a prospector, F. W. Chubb, in northern Quebec, c. 60 m. from Hudson Strait, Canada. Made by a meteor, in prehistoric times, it is 1,350 ft. deep with a rim 550 ft. above the local land level. In the centre is a lake 800 ft. deep.

CHUKOVSKY, Kornei Ivanovich (1882–). Russian critic and poet. The leading authority on Nekrasov, he is also an expert on the Russian language, e.g. *Zhivoi kak zhizn* (1963: *Alive as Life*), and is beloved as 'Grandpa' K.C. for his nonsense poems

COLET, John (1467?–1519). English humanist. B. in London, he set out on a tour of the Continent in 1493 and in Italy fell under the influence of Savonarola. On his return in 1496 he was ordained, and began lecturing at Oxford on the Pauline epistles. His interpretation represented a reaction against the scholastic tradition, and Erasmus was strongly influenced by him. In 1505 C. became dean of St. Paul's and about 1508 refounded St. Paul's school. C. is the founder of modern biblical exegesis.

COLETTE (kolet'), Sidonie-Gabrielle (1873–1954). French writer. She was b. in the Burgundian countryside, whence she derived a great love of animals and natural scenery. At twenty she m. her 'Svengali', Henry Gauthier-Villars, a journalist known as 'Willy', who signed with his own name her 4 'Claudine' novels loosely based on her early life, which took Paris by storm. A period in music-hall as strip-tease artist and mime followed their divorce, but she continued to write, her later books incl. *Chéri* (1920) and *Le Fin de Chéri* (1926), dealing with a love affair between a young man and an older woman, and *Gigi* (1944). Her 2nd husband was the journalist Henri de Jouvenal (m. diss. 1925) and her 3rd Maurice Goudekot.

COLIGNY (kolényé'), Gaspard de (1519–72). French admiral and soldier, and prominent Huguenot. About 1557 he joined the Protestant party, and in 1569 achieved an advantageous peace. He became a favourite of the young king Charles IX, but on the eve of the massacre of St. Bartholomew's Day was killed by a servant of the duc de Guise.

COLITIS. Inflammation of the walls of the colon. Sulphonamides are among the drugs used in its treatment.

COLLAGE (kolahzh). Dada technique originated by Max Ernst, and named from the French for 'gluing' or 'pasting'. Disparate items such as fragments of newsprint or photographs are stuck alongside one another, and linked by brush or pencil to create a new artistic whole.

COLLECTIVE FARMS. System of farming developed in the Soviet Union. A C.F. is formed by a group of peasant farmers, who pool their land, horses, and agricultural implements, each household retaining as private property a plot of land and domestic animals for its own requirements. The profits of the farm are divided among its members in proportion to work done. This system has developed gradually since 1917, and became general after 1930. State farms also exist which are owned and run by the State, and employ their workers for wages. The State

COLLECTIVE FARM. In the Soviet Union it is planned that the economic prosperity engendered by such well-run collective farms as this should create conditions which will bring closer public ownership, with the eventual prospect of fusion into a single communist ownership.

supplies the C.F.s with stock and equipment, and loans agricultural machinery as required. The system obtains in other Communist countries, and was adopted (1953) as an objective in China, but by 1954 had been considerably modified in Yugoslavia, Israel also has a large number of C.F.s.

COLLECTIVE SECURITY. The principle laid down in the covenant of the League of Nations, that all nations collectively should guarantee the security of each individual nation. When put to the test in Manchuria in 1931, in Abyssinia in 1935, in Spain in 1936, and in China in 1937, the principle was not enforced.

COLLEGE OF ARMS. See **HERALDS' COLLEGE**.

COLLIE. British sheepdog. There are 3 main varieties, rough, smooth, and bearded; and two lesser, the Welsh and Border Cs. Commonly known as the 'Scotch C.' the rough has been bred for centuries in the Highlands for herding. Of medium size, its long, narrow head and muzzle, and its strikingly handsome coat and colouring, are its chief features. The smooth variety differs in coat and colour. But the bearded C. resembles the Old English sheepdog.

COLLIER, Jeremy (1650–1726). Anglican divine. On the Revolution of 1688 he was one of the Non-jurors, refusing the oath of allegiance to William III, and was several times imprisoned. In 1696 he was outlawed for having granted absolution on the scaffold to 2 men who had tried to assassinate William. In 1698 appeared his *Short View of the Immorality and Profaneness of the English Stage*, aimed at Congreve and Vanbrugh, and temporarily effective. In 1713 he was consecrated a bishop of the Non-jurors.

COLLIMATOR. An optical device for producing parallel light. A small point source or an illuminated slit is placed at the focus of a convex lens, from which the rays emerge parallel.

COLLINGWOOD, Cuthbert Collingwood, baron (1750–1810). British admiral. Entering the navy at the age of 11, he formed a close friendship with Nelson while serving in the W. Indies. He distinguished himself on the 'glorious 1st of June' and at St. Vincent, was promoted to Rear-Admiral in 1799, and was with the Channel fleet blockading Brest 1803–5, until Villeneuve's return from the W. Indies, when he blockaded him in Cadiz. Here he was joined by Nelson as his commander-in-chief, and after Nelson's death he took command at Trafalgar. He was buried beside Nelson in St. Paul's.

COLLINGWOOD, Robin George (1889–1943). British archaeologist and philosopher. Ed. at Oxford, where he was Waynflete prof. of metaphysical philosophy 1935–41, he was also an authority on Roman Britain. His works incl. *An Essay on Metaphysics* (1940) and an illuminating *Autobiography* (1939).

COLLINS, Lewis John (1905–). British churchman. While dean of Oriel Coll., Oxford (1938–48), he founded Christian Action (q.v.), and became in 1948 canon of St. Paul's. His support for the Aldermaston marches and other demonstrations has made him a controversial figure.

COLLINS, Michael (1890–1922). Irish Sinn Féin leader. B. in Co. Cork, he became an active member of the Irish Republican Brotherhood, and in 1916 fought in the Easter Rebellion. In 1918 he was elected a Sinn Féin member to the Dáil, and became a minister in the Republican Provisional Govt., and in 1921 he and Arthur Griffith were mainly responsible for the treaty which established the Irish Free State. In spite of the opposition of De Valera and the Republicans, he persuaded the Dáil to accept the treaty, and in 1922 became Min. for Finance in the Prov. Govt. During the ensuing civil war C. took command of the Free State forces, and crushed the opposition in Dublin and the large towns within a few weeks. When Griffith d. on 12 Aug., C. became head of the State and the army, but he was ambushed near Cork by fellow Irishmen 10 days later and killed.

(1849–95). British Cons. statesman. B. at Blenheim, son of the 7th duke of Marlborough, he entered parliament in 1874 as a Cons. M.P. After 1880 he formed the '4th party' with Drummond Wolff, Gorst, and Arthur Balfour, and in 1885 his policy of Tory democracy was widely accepted by the party. In 1886 he became Chancellor of the Exchequer, but resigned within 6 months because he did not agree with the demands made on the Treasury by the War Office and the Admiralty. He was a founder and the first member of the Primrose League, and was prominent on the Turf. He m. in 1874 Jenny Jerome, dau. of a wealthy New Yorker, and had 2 sons, the elder of whom was Winston C.

CHURCHILL, Winston (1871–1947). American novelist. B. at St. Louis, he wrote successful novels incl. *Richard Carvel* (1899), *Coniston* (1906), and *The Unchartered Way* (1941).

CHURCHILL, Sir Winston Leonard Spencer (1874–1965). British statesman. A descendant of the great duke of Marlborough, he was b. at Blenheim Palace on 30 Nov. 1874, being the elder son of Lord Randolph C. (q.v.) and his wife, Jenny Jerome. Ed. at Harrow, he was commissioned in the 4th Hussars in 1895 and saw active service in a series of minor campaigns. During the Boer War he was the *Morning Post's* war correspondent and made a dramatic escape from imprisonment in Pretoria. In 1900 he was elected Cons. M.P. for Oldham, but he disagreed with Chamberlain's tariff reform policy, and joined the Liberals. In 1908 Asquith made him Pres. of the Board of Trade, in which capacity he introduced legislation for the establishment of Labour Exchanges. In 1910 he became Home Sec. and was present at the notorious incident in the East End of London known as the siege of Sydney Street, when he authorized the use of troops against some armed gangsters. Then in 1911 Asquith appointed him First Lord of the Admiralty with the instruction to put the fleet into a state of instant readiness for war. C. ordered naval mobilization on the eve of war without waiting for Cabinet authority, and early in the war sent the Naval Brigade to Antwerp. He was then involved in acute controversy over the Dardanelles operation which he sponsored, and when the first Coalition govt. was formed in 1915 he was excluded. Until the autumn of 1916 he served in the trenches in France as lieut.-col. of the 6th Royal Scots Fusiliers, but then resumed his parliamentary duties and was Min. of Munitions under Lloyd George in 1917, when he had much to do with the development of the tank. After the Armistice he was Sec. for War, 1918–21, and then as Colonial Sec. played a leading part in the establishment of the Irish Free State. During these post-war years he was active in support of the anti-Bolshevik (white) generals in Russia.

From 1922–4 C. was out of parliament, left the Liberals in 1923, and in 1924 was returned for Epping as a Constitutionalist. Baldwin made him Chancellor of the Exchequer, and he brought about Britain's return to the Gold Standard and was prominent in the defeat of the General Strike of 1926. In 1929–39 he was out of office as he disagreed with the Conservatives on India, re-armament, and Chamberlain's policy of appeasement.

On the 1st day of the S.W.W. C. went back to his old post at the Admiralty, and there he remained until 10 May 1940, when he was called to the Premiership as head of an all-party admin. On 13 May he presented himself to the House of Commons with the historic 'blood and tears, toil and sweat' speech. One of the decisive decisions of the war was his broadcast announcement on the evening of 22 June 1941, that Britain allied herself with the Soviet Union. He effected the closest personal contact with President Roosevelt, and in Aug. 1941 concluded with him the Atlantic Charter. On 20 Dec. 1941 he addressed a joint

SIR WINSTON CHURCHILL. Leader of Britain in her 'finest hour', he became in 1963 the first foreign national to receive honorary American citizenship by Congressional action. Photo: Topix.

session of the American Congress. He travelled to Washington, Casablanca, Cairo, Moscow, and Teheran, meeting the other great leaders of the Allied war effort; and at Christmas 1944 he made a dramatic flight to Athens to avert civil war in Greece. In Feb. 1945 he met Stalin and Roosevelt in the Crimea, and agreed on the final plans for victory. On 8 May he announced the unconditional surrender of Germany.

Then on 23 May the Coalition was dissolved, and C. formed a 'caretaker' govt. drawn mainly from the Cons. Defeated in the gen. election in July, he resigned office to become Leader of the Opposition until the gen. election of Oct. 1951 brought his return to power as P.M. He received the O.M. in 1946, and was created K.G. in 1953. On 5 April 1955 he resigned.

Also a great writer, C. won the Nobel prize for literature in 1953. His 1st books were accounts of the campaigns in which he had participated. His life of his father was pub. in 1906, and his *World Crisis*, (4 vols., 1923–9) is a history of the F.W.W. In 1933–8 appeared his life of the Great Duke of Marlborough later followed by vols. of speeches, and *Memoirs of the S.W.W.* He was also a capable artist. He was buried at Bladon, nr. Blenheim Palace, and his home from 1922, Chartwell in Kent, was opened as a museum.

C. m. in 1908 Clementine Hozier (1885–), created G.B.E. in 1946 and in 1965 a life peeress as Lady Spencer-Churchill. Their children are: Diana (1909–63), who m. Duncan Sandys (q.v.) in 1935 (m. diss. 1960); Randolph (1911–68), Cons. M.P. 1940–5, well known as a journalist and author of studies of Eden (1959) and Derby (1960); Sarah (1914–), an actress, who m. Vic Oliver the musician and comedian in 1936 (m. diss. 1945), then Anthony Beauchamp, photographer, in 1949 (d. 1957) and in 1962 Lord Audley (d. 1963); and Mary (1922–) who m. in 1947 Christopher Soames (q.v.).

CHU TEH (1886–). Chinese soldier-statesman. In 1922 he joined the Chinese Communists in Germany, was expelled from the country in 1925, and on his return to China was one of the organizers of the Nanchang Communist rising and formed the Chinese Red Army. C.-in-C. of the army from 1930, he became

COLOMBO. The House of Representatives.

Courtesy of the Ceylon Government.

the Panama Canal. Founded in 1850, and named Aspinwall in 1852, it was renamed C. in 1890 in honour of Columbus (Span. Colon). Once notorious for yellow fever, it has been transformed into a healthy and prosperous town. Adjoining is Cristobal, under U.S. control in the Canal Zone. Pop. (1968) 67,700.

COLONIAL OFFICE. The govt. dept. dealing with the colonial possessions of the Crown, originating in a committee of the Privy Council set up at the Restoration to deal with matters relating to the 'plantations'. In 1854 the Colonies became the entire charge of a principal Sec. of State. In the 20th cent. the growth of self-govt. led to diminishing responsibilities for the C.O., and in 1966 it was merged with the Commonwealth Office (q.v.), becoming the Dependent Territories Division.

COLONNE (kolon'), Judas (1838–1910). French violinist and conductor, known as Édouard C. He founded in 1873 the Concerts C., which he conducted till his death, and was an ardent advocate of Berlioz.

COLOPHON (kol'ofon). Originally an inscription on the last page of a book giving the writer or printer's name, place and year of publication, etc. In modern

COLORADO. The Dinosaur National Monument comprises almost 200,000 acres of country on the Green and Yampa rivers, with ancient river beds, and sandstone cliffs. Skeletons of prehistoric animals can be seen in situ, and the illustration shows the fossilized bones of a dinosaur being brought out in relief on the quarry face by skilled use of a hammer and chisel.

Courtesy of the U.S. National Park Service.

practice it is a decorative device on the title page or spine of a book, the 'trade-mark' of the individual publisher.

COLORADO (kolorah'dō). One of the mountain states of the U.S.A., west of the Mississippi basin in the Rocky Mountains. The eastern half is mainly rolling plains, but the west is mountainous with numerous peaks of more than 14,000 ft. The largest river is the Colorado, and this and other rivers travel in deep, narrow canyons. The state contains some of the finest mountain scenery in the world. A number of national parks have been set apart on the mountain slopes.

C. has great mining and smelting industries, coal, gold, silver, copper, uranium, etc., being produced. The world's largest molybdenum mine is at Climax. Agriculture is important. The cap. is Denver; other towns are Pueblo, Colorado Springs, Greeley, Trinidad, Boulder, and Fort Collins.

First settled by the Spanish, C. later attracted fur-traders. In 1858 gold was discovered and Denver was founded in the resulting gold rush. Later the immigrants turned to the mining of coal, silver, and lead, and to agriculture. C. became a state in 1876. Area 104,247 sq. m.; pop. (1960) 1,753,947.

COLORADO BEETLE. A beetle (*Leptinotarsa decemlineata*) of the family Chrysomelidae. A native of the U.S.A., it first appeared in England in 1933, and was at once dealt with as a menace to agriculture. It is a small, oval beetle, dark in colour with longitudinal yellowish stripes, and club-shaped antennae. The six-legged grub is orange-yellow. Both larvae and

with grub.

perfect insects feed on the leaves of the potato, etc., and the damage done extends to the tubers.

COLORADO SPRINGS. Health resort in Colorado, U.S.A., 75 m. S.S.E. of Denver. At an alt. of nearly 6,000 ft., and surrounded by magnificent scenery, it is also a local trade centre.

Pop. (1960) 70,194.

COLOSSEUM (kolosē'um). The largest amphitheatre in ancient Rome. Begun by the emperor Vespasian to replace the amphitheatre destroyed by fire in the reign of Nero, and completed by Titus in A.D. 80, it was 615 ft. long and 160 ft. high, and seated c. 50,000 people. Its ruins are amongst the most notable antiquities of Rome.

COLOSSUS OF RHODES. Bronze statue of Apollo erected at the entrance to the harbour at Rhodes 292–280 B.C. Said to have been about 100 ft. high, it was counted as one of the seven Wonders of the World, but in 224 B.C. fell as a result of an earthquake.

COLOUR. A quality of the visual sensation. It is not known what is going on in the mind of an observer when he sees a colour, but it is possible to analyse the quality of the light coming from a coloured object. Light consists of electro-magnetic radiations of various wavelengths or frequencies of vibration, and if a beam of light is refracted through a prism it can be spread out into a spectrum, each part of the spectrum corresponding to a particular wavelength. At the long-wave end of the spectrum there are the red radiations; at the short-wave end the violet colours; and in between are the orange, yellow, yellow-green, green, blue-green, and blue hues. Purples are a mixture of radiations from the two ends of the spectrum. When the surface of an object is illuminated by white light, some parts of the spectrum are absorbed, depending on the molecular structure of the material of the surface and of the dyes or pigments which may have been applied to it. Thus a red surface will absorb the light from the blue end of the spectrum, but have a high

on the Ohio. Founded in 1788, it became a city in 1819, and during the middle years of the 19th cent. grew rapidly as it attracted large numbers of European immigrants, particularly Germans. It has one of the finest railway stations in the U.S.A. and is well served by air. The symphony orchestra of the municipal univ. (oldest mun. univ. in the U.S.A.) is famous; there is also a R.C. univ. Among the chief industries are machine-tool, clothing, and furniture making, and meat-packing. Pop. (1960) 502,550.

CINCINNATUS, Lucius Quinctius. Early Roman general, famous for his frugal simplicity. Appointed dictator in 458 B.C. he defeated the Aequi in a brief campaign, then resumed life as a yeoman farmer.

CINEMATOGRAPHY. The technique of making and showing motion pictures. Images recorded on a continuous strip of film on a cellulose acetate (non-inflammable) base (instead of the highly inflammable celluloid base used in early days) are projected on to a screen sufficiently fast to give the impression of continuous motion owing to the facility of retention of normal vision. The standard speed is 90 ft. per minute. Film is usually handled in lengths from 400 to 2,000 ft. Sound, as a rule recorded separately on $\frac{1}{4}$ in. magnetic tape, but carried for reproduction on a narrow track alongside the picture film, is delivered from loudspeakers placed behind the screen and sometimes also about the auditorium.

CINEMATOGGRAPHY. Circlorama - the completely circular cinema - as developed in Russia by E. Goldovsky. Courtesy of Circlorama Theatre, London.

As a medium of popular entertainment, the cinema is a creation of the 20th cent., but the basis of virtually all cinematographic technique was contained in a patent filed in 1889 by William Friese-Greene of Bristol, England. By about 1926 film technique had been perfected as a vehicle for artistic experiment, and films of high quality were being made in France, Italy, Sweden, Germany, and elsewhere. Hollywood, Calif., U.S.A., once the undisputed film metropolis on account of its light and climate, has come to occupy a less commanding position with improvements in cameras and film sensitivity which have made it possible to take satisfactory pictures in any light and any location. Sound films were 1st publicly presented in 1928. Colour, 1st used before the F.W.W., was not fully developed until the 1930s. Much experiment has been carried out with a view to obtaining a stereoscopic effect; and wider screens, up to a series encircling the cinema, have been introduced in the effort to produce greater actuality. The standard cine-film is 35 mm. wide, but 70 mm. has been used, and 'sub-standard' film in 16 mm., 9.5 mm., and 8 mm. widths is manufactured for amateurs and for special, e.g. educational, films.

For film production, see **FILM**.

CINNABAR (sin'abar). Mercuric sulphide, HgS, the only important ore of mercury. The chief deposits are at Almaden in Spain. The mineral itself is used as a pigment, commonly known as vermillion.

CINNAMON (si'namon). Bark of a tree (*Cinnamomum zeylanicum*) which is a member of the family Lauraceae and is grown in Ceylon, Java, Brazil, W. Indies, etc. Oil of C. is obtained from the inner bark, and is used as a flavouring and in medicine.

CINQUEFOIL (singk'foil). Genus of plants (*Potentilla*) belonging to the rose family (Rosaceae). The typical species (*P. reptans*) seen on this page, is a creeping perennial, widely distributed throughout the British Isles, growing in pastures and meadows and on banks.

CINQUE (sink) **PORTS** (Fr. *cing*, five). An association of ports in S. England, originally Sandwich, Dover, Hythe, Romney, and Hastings, to which were added later Rye and Winchelsea, and a number of other places. Founded probably in Roman times, they rose to importance after the Norman conquest, and until the end of the 15th cent. were bound to supply the ships and men necessary against invasion. The office of Lord Warden survives as an honorary distinction (Churchill 1941-65, Menzies from 1965); his official residence is Walmer Castle. The C.P. court has continued to deal with salvage cases.

CIRCUITS. Periodical travels by the judges of the Queen's Bench Division of the High Court through England and Wales to try civil and criminal cases at the assize towns. There are at present 7 Cs.: S.-Eastern, Western, Wales and Chester, Northern, N.-Eastern, Midland, and Oxford, each with its own set of barristers attached to it. There are 3 Cs., winter, summer and autumn, at each place.

CIRCUMCISION. Surgical operation, practised from early times and usually accompanied by ritual, consisting of the removal of a small part of the foreskin. Performed for sanitary reasons in infancy, it is sometimes necessitated on medical grounds. All Jewish and Mohammedan boys must be circumcised as a religious rite, and the custom prevails among Arabs, Australian aboriginals, Kaffirs, and Papuans.

CIRCUMCISION, Feast of. Anglican and R.C. religious festival, celebrated annually on 1 Jan. in commemoration of Christ's circumcision.

CIRCUMFERENCE. In geometry, the curved line that encloses a plane figure, e.g. a circle, an ellipse. Its length varies according to the nature of the curve, and may be ascertained by the appropriate formula. Thus the C. of a circle is $2\pi r$, where r is the radius and $\pi = 3.1415927 \dots$ or roughly $\frac{22}{7}$.

CIRCUMNAVIGATION. The 1st ship to sail round the world was the *Victoria*, one of the Spanish squadron of 5 vessels that sailed from Seville in Aug. 1519 under F. de Magellan (q.v.). Four vessels

CINQUEFOIL

were lost on the way, but the *Victoria* arrived back in Spain in Sept. 1522. Magellan himself did not complete the voyage, as he d. in the Philippines in 1521. The 1st English circumnavigator was Drake in 1577-80.

CIRENCESTER (sis'iter). English market town (U.D.) in Gloucestershire on the Churn, 12 m. S.E. of Gloucester. It has Roman remains and was once a centre of the wool trade. The Royal Agricultural College nearby was incorporated in 1845. Pop. (1961) 11,836.

CIRL (serl) **BUNTING**. A bird (*Emberiza cirlos*), nearly allied to the yellowhammer, from which it is distinguished by the olive crown and black bib in the male. In Britain it is a local resident, found chiefly in Wales and the S.W.

CISTERCIANS (sister'sh-). A monastic order of the R.C. Church, estab. at Cîteaux in 1098 by Robert de Champagne, abbot of Molesme. Its purpose was to restore in its full rigour the rule of St. Benedict, and the Cs., living mainly by agricultural labour, were responsible for much of the advance in farming methods in the Middle Ages.

CITHARA (sith'ara). Cithern, or Cittern. Ancient musical instrument, resembling a lute but with a flat back. It was strung with wire and plucked with a plectrum or (after the 16th cent.) with the fingers. It is now obsolete, but the bandurria and laud, still popular in Spain, are instruments of the same type.

friendly societies or went underground, until the acts were repealed in 1824, largely due to Francis Place.

COMBINED OPERATIONS. During the S.W.W. (1939–45), name given to the Command formed in Britain to plan and carry out raids on the enemy coasts, and to co-ordinate the activities of the land, sea and air forces engaged in these operations. The special troops trained to raid the enemy coast were known as Commandos (q.v.). Famous operations included the raid on Bruneval, St. Nazaire, and Dieppe. After the war a new School of C.O. was estab. at Fremington.

COMÉDIE FRANÇAISE (komēhdē' frōnsāz'). The French national theatre in Paris, formally estab. in 1680. Rules laid down by Napoleon in 1812 are still in force. It receives a govt. subsidy, and from Molière's time has been associated with the leading French dramatists and players.

COMENIUS (komē'nūs), Johann Amos (1592–1670). Latinized name of the Czech educationist Komenský. B. in Moravia, he became the last bishop of the Moravian Brethren at Lissa in 1648. He revolutionized the teaching of languages, and his *Orbis sensualium pictus* was the first picture-book for children.

COMINES (komēn'), Philippe de (c. 1445–1509). French statesman and historian. He was a minister of Charles the Bold, duke of Burgundy, but from 1472 was in the service of Louis XI of France. In 1489–91 he wrote his *Mémoires* (pub. 1524), one of the most valuable historical documents of the age.

COMINTERN. Abbreviation of Communist International. See INTERNATIONAL.

COMMAGER, Henry Steele (1902–). American historian. Born at Pittsburg, he became prof. of history at N.Y. univ. (1929–38) and at Columbia (1938–56). He estab. his reputation with *Growth of the American Republic* (1930–9, 2 vols.); later studies incl. *The American Mind* (1950).

COMMANDOS. British troops of Combined Operations Command who raided enemy-occupied territory in the S.W.W. The name was suggested by Lt.-Col. D. W. Clarke who, after Dunkirk, prepared a scheme for 'amphibious guerrilla warfare'. Among the most important C. raids were those on the Lofoten Islands (3–4 Mar. 1941), Vaagsø, Norway (27 Dec. 1941), St. Nazaire (28 Mar. 1942), and Dieppe (19 Aug. 1942). In 1940 Cs. were sent to the Middle East. One of their most daring exploits was the raid in Nov. 1941 on Rommel's H.Q. in the desert. Cs. were later active in other theatres of war, e.g. in French North Africa, Sicily, and Italy, and went into action on D-Day, taking part in some of the hardest fighting in Normandy. In Nov. 1944 Cs. took part in the capture of the island of Walcheren at the mouth of the Scheldt, and later distinguished themselves in the crossing of the Rhine. Cs. also fought in Burma. At the end of the war the army Cs. were disbanded, but the organization was carried on by the Royal Marines. The term C. originated in S. Africa, where it was used for Boer military reprisal raids against African tribesmen, and later, in the S. African War, against the British.

COMMISSIONERS FOR OATHS. In England persons appointed by the Lord Chancellor with power to administer the oath or take an affidavit. They are usually practising solicitors.

COMMÓDUS, Lucius Aelius Aurelius A.D. 161–92). Roman emperor from 180. Son of Marcus Aurelius, he proved an ignoble tyrant and was strangled by members of his household.

COMMON LAW. That part of the English law not embodied in legislation. In contrast with legislation, C.L. consists of rules of law embodied in judicial decisions. It is also described as 'unwritten law' as opposed to the 'written law' of legislation. English C.L. became the basis of law in the U.S.A.

With the growth of law reports grew the doctrine of 'judicial precedent', i.e., that, in deciding cases, the courts must have regard to the principles of law laid down in earlier reported decisions which relate to the same point, or to a similar point, in the particular case before them. This rule does not prevent the courts from making reasonable extensions of such principles to suit variant facts, or from laying down a new principle if the case before them is unconnected with any existing principle. Hence, the C.L. (sometimes also called 'case law' or 'judge-made law') is an important agency in keeping the law in harmony with the needs of the community, where no legislation is applicable, or where, if there is, its exact meaning has to be interpreted by the courts.

A narrower meaning of C.L. is that it comprises the law embodied in decisions of the C.L. Courts, as opposed to that contained in 'Equity', i.e. the decisions of the Court of Chancery.

COMMON MARKET. Another name for European Economic Community. See under EUROPE, Unification of.

COMMON PRAYER. Book of. The service book of the C. of E., based very largely on the Roman Breviary. The first Book of Common Prayer in English was that known as the First Prayer Book of Edward VI, pub.

COMET. Mrkos' comet was one of the two naked-eye comets of 1957, and was quite conspicuous for a few days. Like all comets, it moves round the sun, but has a period of thousands of years, so that it will not re-appear in the foreseeable future. Courtesy of Lick Observatory, Univ. of California.

COMET (Gk. *kome*, hair). A member of the Solar System, composed of relatively small particles surrounded by an envelope of tenuous gas. Some Cs. move round the sun in short periods, but the only periodical C. visible to the naked eye is Halley's, which has a period of 76 years and is due to return in the year 1986. Strictly speaking, all Cs. are periodical, but the 'great Cs.' have periods amounting to thousands or even millions of years, so that they cannot be predicted. Large Cs. have long tails, but the small, short-period Cs. are often tail-less. The last really brilliant C. appeared as long ago as 1910, but during recent years there have been several naked-eye Cs. used to be regarded with superstitious dread, but it is now known that they are completely harmless. Though they may be extremely large, they are of negligible mass.

COMFORT, Alexander (1920–). British poet and author. He qualified as a doctor at the London Hospital, where he lectured 1948–51, and was ranked among the 'new Romantic' poets during the S.W.W. He pub. *The Biology of Senescence* in 1956 and in 1966 became Director, Medical Research Council Group on Ageing, Univ. Coll., London.

CIVIL AVIATION. The Anglo-French Mach 2.2 supersonic airliner Concorde (left) leaves the main aircraft assembly hall at B.A.C. Filton Works, Bristol, in 1968. A cruising speed of 1,450 m.p.h. will cut transatlantic flying time from 7 to 3 hours. Built of aluminium alloy with titanium or stainless steel used in areas subject to high thermal stress, Concorde has an overall length of 170 ft. and a wingspan of 77 ft., and accommodation for c. 140 passengers. Powered by turbojets, its engines are mounted in pairs below the wings and a retractable visor, raised in supersonic cruise to reduce aerodynamic drag, can be lowered in subsonic flight to provide normal vision for the crew. The instrumentation and flight control lay-out (right) is incredibly complex.

Courtesy of British Aircraft Corporation

CIVIL ENGINEERING. That department of engineering that is concerned with such works as construction of roads, bridges, aqueducts, water-works, tunnels, canals, irrigation works, harbours, etc. The professional organization in Britain is the Institution of Civil Engineers, which was founded in 1818 and is the oldest engineering institution in the world.

CIVIL LIST. The annual sum settled by Act of Parliament on the British sovereign at the beginning of each reign. It is charged on the consolidated fund and takes the place of certain hereditary revenues 1st surrendered by William IV to Parliament. At the accession of Queen Elizabeth II in 1952, the C.L. was fixed at £475,000; in addition the Duke of Edinburgh was granted £40,000 a year for life; younger sons of the Queen were to receive £10,000 at 21, increased to £25,000 on marriage; daughters £6,000 at 21, increased to £15,000 on marriage. The Prince of Wales (who is also Duke of Cornwall) is provided for by the revenue of the Duchy of Cornwall, est. at £270,000, of which he will have full control on coming of age in 1969. Under earlier acts, Queen Elizabeth the Queen Mother receives £70,000; Princess Margaret, £15,000; the Duke of Gloucester, £35,000.

There is no equivalent of the C.L. in the U.S.A. A President receives, by Act of Congress, a salary of \$200,000 a year taxable plus \$50,000 (also taxable) for defraying expenses connected with his official duties, and may spend up to \$40,000 (not taxable) a year on travel and official entertaining expenses; ex-presidents receive a life pension of \$25,000, their widows a life pension of \$10,000 a year. The Vice-Pres. has a salary of \$43,000 and \$10,000 expenses, all taxable. Although the presidential salary was raised 1969 from \$100,000 to \$200,000, the other payments listed remained the same.

CIVIL LIST PENSIONS. Pensions originally paid out of the sovereign's Civil List, but granted separately since the accession of Queen Victoria. They are paid to persons in need, who have just claims on the royal beneficence, who have rendered personal service to the Crown, or who have rendered service to the public by their discoveries in science and attainments in literature and art, etc. The sums paid amount to about £24,000 per annum. The recipients are nominated by the Prime Minister, and the List is approved

by Parliament.

CIVIL SERVICE. The body of civilian staffs working in the different departments of state of a country. In England, civil servants were originally in the personal service of the sovereign. They were recruited by patronage, and many of them did little except nominal duties. The great increase in public expenditure during the Napoleonic Wars led to a move in Parliament for reform of the C.S., but it was not until 1854 that two civil servants, Charles Trevelyan and Stafford Northcote, issued a report as a result of which recruitment by competitive examination, carried out under the C.S. Commission (1855), came into force. Some appointments still went by patronage, but by c. 1900 competitive entry was the rule, even those recruited from time to time (e.g. during the world wars) on a temporary basis having to pass some form of examination.

The 2 main divisions of the British C.S. are the Home and Diplomatic services, the latter created 1965 by amalgamation of the Foreign, Commonwealth and Trade Commission Services. All are paid out of funds voted annually for the purpose by Parliament.

In 1968, following the recommendations of the Fulton Committee, responsibility for the C.S. was transferred to a new C.S. Dept. under the control of the P.M., which was to absorb both the C.S. Commission and the Treasury's responsibility for central management, its Permanent Secretary being designated Head of the Home C.S. The 1400 classes of civil servant were replaced by a unified grading structure, emphasis being placed on the professional rather than the 'all-rounder', and a C.S. College was estab. to develop training. Freer movement between jobs in the C.S. and in industry was to be maintained, and the long-standing devotion to secrecy and anonymity broken down.

Members of the British C.S. may not take an active part in politics.

In the U.S.A., until 1883 all C.S. posts were given as rewards for political services, and changed hands with a change of the party in power; the Pendleton Act 1883, estab. competitive examinations and permanency for certain posts, and that system has been steadily extended. The govt. agency concerned is the C.S. Commission.

CIVIL WAR. In English history, the name usually applied to the struggle in the middle years of the 17th

and members might not hold a U.S. passport. However, in 1964 the Supreme Court reversed the conviction of the Communist Party for failure to register in 1962, and ruled the passport provision unconstitutional.

China has the largest Communist Party in the world (c. 17,000,000), next is the Soviet Union (c. 9,000,000); and outside the Communist world it is strongest in Indonesia (c. 2,000,000), Italy (c. 1,700,000), and France (c. 450,000).

COMMUTATOR. A device in an electric motor or generator whereby electric contact is made to the armature or rotor. It usually consists of a cylindrical insulator mounted on the armature shaft with metal contacts mounted on the insulator and connected to the armature coils through carbon or metal brushes. In a d.c. motor or generator the brushes and contacts are so arranged that the armature current is reversed at the appropriate time.

COMO (koh'moh). Italian city and episcopal see in Lombardy, cap. of C. prov., on Lake C. at the foot of the Alps. The r. Adda flows through the lake from N. to S., and the shores are famous for their beauty. C. has a marble cathedral (1396-1732), and is a tourist resort. Pop. (1961) 82,070.

CO'MORIN. The cape that is the most southerly point of India, in Madras state. Here meet the Indian Ocean, Bay of Bengal and Arabian Sea.

COMPANIES. Cs. may be either public (to which the general public is invited to subscribe) or private (the great majority), at least 7 members being required for the former and 2 for the latter. In the majority of Cs. in Britain the liability of the members is limited liability to the amount of their subscription, under the Limited Liability Act of 1855 (see BRAMWELL), by which British law came into line with Continental practice, which had already been largely adopted in the U.S. This limitation of liability is essential to commercial expansion when large capital sums must be raised by the contributions of many individuals. The affairs of Cs. are managed by directors, a public company having at least 2, and their accounts must be audited. See AUDITOR. The American equivalent of the company is the 'corporation', which has developed along similar lines although its activities are complicated on occasion by state law, i.e. a corporation of one state may not be allowed to operate in another.

In forming a company a Memorandum of Association is registered with the Registrar of Cs. which sets out its name and object, the country in which the registered office is situated, the share capital, and whether the liability of members is limited by shares, or guarantee, or is unlimited. Essential for private Cs. is the filing of Articles of Association containing the regulations governing their internal affairs. Every notice or advertisement offering shares or debentures for purchase or subscription is a 'prospectus' and must contain certain detailed information as provided in the C. Act, 1948, which also gives rulings for the annual presentation of balance sheets, etc.

COMPANIONS OF HONOUR. British Order of Chivalry, founded by George V in 1917. It is of one class only, and carries no title, but Companions append C.H. to their names. The number is limited to 65 and the award is made to both men and women.

COMPASS. An instrument for finding direction.

The most commonly used is a magnetic C. consisting of a thin piece of magnetic material with the north-seeking pole indicated, free to rotate on a pivot perpendicular to its length and mounted on a C. card on which the points of the C. are marked. When the C. is properly adjusted and used the north-seeking pole will point to the magnetic N. from which true N. can be found from tables of magnetic corrections.

Cs. not dependent on the magnet are gyrocompasses, dependent on the gyroscope and radiocompasses, dependent on the use of radio.

COMPIEGNE (kōpē-ān'). Town with an airport in Oise dept., France, on the Oise near its confluence with the Aisne. It has an enormous château, built by Louis XV. Nearby is the forest of C. in a clearing of which the armistices of 1918 and 1940 were signed. Pop. (1962) 28,000.

COMPLEX. In psychology, a group of ideas and feelings which have become repressed because they are distasteful to the person in whose mind they arose; but which are still active in the depths of the person's unconscious mind, and which continue to affect his life and actions, even though he is no longer fully aware of their existence. Typical examples of a C. are the Oedipus C. and the Inferiority C.

COMPOSITAE. Family of Dicotyledonous flowering plants, characterized by having the flowers crowded into composite heads. It is the largest family of flowering plants, and the most highly advanced.

COMPTON, Fay (1894-). British actress, sister of Sir Compton Mackenzie (q.v.), and dau. of the celebrated actor Edward C. Equally at home in Shakespeare and modern roles, she has a fine voice.

COMPTON-BURNETT, Dame Ivy (1892-). English novelist. She relies on dialogue to show reactions of small groups of characters dominated by the tyranny of family relationships. Set at the turn of the century, they incl. *Pastors and Masters* (1925), *More Women than Men* (1933), *Mother and Son* (1955) and *The Mighty and Their Fall* (1961). D.B.E. 1967.

COMPUTER. Device for performing numerical calculations. There are 2 main types. In an *analog* C. numbers are represented by continuously variable physical quantities such as lengths, rotation of shafts or voltages. A common analog C. is the slide-rule, but modern ones are electronic. They contain various sub-units which perform the individual mathematical operations such as addition, multiplication and integration, and the machine is controlled, or programmed, by connecting together the appropriate wires on an external plugboard. The output is usually a curve tracer. They are not as accurate as digital Cs. but for some problems they are faster and are mainly used for solving differential equations, and simulating physical processes, so enabling models to be studied.

In a *digital* C. numbers are represented by discrete stable states, either mechanical or electrical, such as bead positions on a wire, toothed wheels, or, electronically, where devices can be in either the conducting or the non-conducting state. Examples are the abacus and conventional calculating machines. Charles Babbage, c. 1835, was the first to conceive the idea of building a large machine of this type to execute variable and extended sequences of operations; this machine used toothed wheels, but modern ones are electronic and can perform long and complicated sequences of numerical calculations on stored information under the guidance of a programme, or list of instructions to the computer, which is usually also stored internally. The first electronic machine was the Electronic Numerical Integrator and Calculator (ENIAC) built at the University of Pennsylvania in 1946. Normally, Cs. work on the binary number system, and the essential parts are an arithmetic unit, a calculating unit and a store. Data is fed in by means of punched paper, punched cards or magnetic tape, and the output can be similar, or by electrical type-

LAKE COMO, ringed by granite mountains 2,000-9,000 ft. high. Courtesy of the Italian Cultural Institute.

CLAUDE LORRAIN. 'A Seaport' shows the artist's inimitable handling of light and colour equally with the more familiar landscapes. *Courtesy of National Gallery.*

As director of the National Gallery (1934–45) he did much to humanize relations with the public and was Slade prof. of fine art at Oxford 1946–50 and 1961–2. Through television he has stimulated lay interest in art, and his books incl. *Leonardo da Vinci* (1939), *Landscape into Art* (1949), *The Nude* (1955) and *Looking* (1960).

CLARK, Mark Wayne (1896–). American soldier. B. in New York, he fought in France in the F.W.W. and between the wars held various military appointments in U.S.A. In 1942, during the S.W.W., he became Chief of Staff for ground forces, led a successful secret mission by submarine to get information in N. Africa preparatory to the Allied invasion, and commanded the 5th Army in the invasion of Italy and the capture of Rome. He commanded the U.S. forces in Austria 1945–7, and succeeded Ridgway as C-in-C. of the U.N. armies in Korea 1952–3. Among his many decorations is an honorary K.B.E. awarded in 1944.

CLARKE, Charles Cowden (1787–1877). Shakespearean scholar. Keats was a pupil at his father's school at Enfield, and C. encouraged his early love of letters and of poetry. C. m. in 1828 Mary Victoria Novello (1809–98), who produced in 1845 a *Concordance to Shakespeare's Plays*. Some of C's. lectures on Shakespeare and Molière were pub. and the Clarkes worked together on an annotated edition of Shakespeare, and in 1878 pub. *Recollections of Writers*. From 1861 they lived at Genoa.

CLARKE, Marcus Andrew Hislop (1846–81). Australian writer. B. in London, he went to Australia when he was 18, and worked as a journalist in Victoria. He wrote *For the Term of his Natural Life* (1874), a powerful novel dealing with life in the early Australian prison settlements.

CLARKSON, Thomas (1760–1846). British philanthropist. From 1785 he devoted himself to a campaign against African slavery. He was one of the founders of the Anti-Slavery Society in 1823 and was largely responsible for the abolition of slavery in the British colonies in 1833.

CLASSICISM. In literature, music, and art, the opposite to Romanticism (q.v.). It may be said to denote that style which emphasizes the qualities considered as characteristic of Greek and Roman art, i.e. reason, objectivity, restraint, definiteness, strictness and simplicity of form – as opposed to those Romantic qualities supposed to be derived from Gothic art and literature.

CLAUDEL (klohdel'), Paul (1868–1955). French author. Entering the diplomatic service in 1892, he was ambassador to Tokyo, Washington and Brussels.

A fervent Catholic, he was influenced by the Symbolists and achieved an effect of mystic allegory in such plays as *L'Annonce faite à Marie* (1912) and *Le Soulier de satin* (1929), set in 16th cent. Spain. His verse incl. *Cinq Grandes Odes* (1910).

CLAUDE LORRAIN (kloh'd lorān') (1600–82). Properly Claude Gellée, a landscape painter of the French school, b. in Lorraine. In 1627 he estab. himself in Rome, where he executed several pictures for pope Urban VIII. He was the 1st great artist to devote himself entirely to landscapes, of which he painted about 400, and had an unequalled ability to render light and the atmosphere of a place at a particular time of day. His *Liber Veritatis* contains some 200 drawings after his finished works, useful for dating.

CLAUDIAN (klaw'di'an), or **CLAUDIUS CLAUDIANUS** (d. 408?). Last of the great Latin poets. He was b. probably in Alexandria, and fl. at the end of the 4th cent. A.D. He wrote official panegyrics, and may have been a Christian.

CLAUDIUS (klaw'di-us) (10 B.C.–A.D. 54). Roman emperor. A nephew of Tiberius, he was made emperor by the soldiers in A.D. 41, though he was much more inclined to scholarly pursuits. For many years he was under the thumb of his 3rd wife Messalina, notorious for her debaucheries and intrigues, whom ultimately he had executed. He d. of poison. During his reign the Empire was considerably extended.

CLAUSEWITZ (klow'sewitz), Karl von (1780–1831). Prussian soldier and writer on war, b. near Magdeburg. Outstanding among his writings is *Vom Kriege* (Eng. ed. 'On War', 1873) which gave a new philosophical foundation to the science of war, and put forward a conception of strategy which was dominant at least to the time of the F.W.W.

CLAUSIUS (klow'zē-oos), Rudolf Julius Emanuel (1822–88). German physicist, one of the founders of the science of thermodynamics. In 1850 he enunciated its 2nd law: Heat cannot of itself pass from a colder to a hotter body.

CLAVERHOUSE (klā'vēr-), John Graham of, visct. Dundee (c. 1649–89). Scottish soldier. Employed in the suppression of the Covenanters, he was routed at Drumclog in 1679, but 3 weeks later won the battle of Bothwell Bridge, in which the rebellion was crushed. Until 1688 he was engaged in the work of persecution, and as 'Bloody Clavers' he became an almost diabolical figure among the peasantry. In 1688 he took up arms in support of James II and defeated Mackay in the pass of Killiecrankie, but was mortally wounded.

CLAVICHORD. Stringed keyboard instrument, popular in the Middle Ages and in 18th cent. Germany. Notes are sounded by a metal ball striking the string. It was a forerunner of the pianoforte.

CLAY, Cassius. See ALI, MUHAMMAD.

CLAY, Frederic (1838–89). British composer. B. in Paris, he wrote light operas and the cantata *Lalla Rookh* (1877), after Moore, which incl. 'I'll Sing Thee Songs of Araby'.

CLAUDIUS

CLAY, Henry (1777–1852). American statesman and orator. B. in Virginia, he was one of the founders of the Republican Party and thrice stood unsuccessfully for the presidency. He was chiefly responsible for the Missouri compromise of 1821 and for the compromise of 1850 that endeavoured to reconcile the interests of the slavery and anti-slavery parties in the U.S.A.

CONCORD. Preserved at Antiquarian House is a reproduction of Emerson's study. A typical New England room of the period, it contains his books just as he left them.

Courtesy of Concord Antiquarian Society.

as head of the R.C. Church and the temporal ruler of a state, concerning matters which are of mutual concern, e.g. the appointment of the clergy, education, taxation, etc. The C. effected between Napoleon and Pius VII in 1801 lasted in France until 1905. Mussolini concluded a C. with the Holy See in 1929.

CONCRETE. A building material composed of cement, sand, and crushed stone or gravel, mixed in varying proportions so that when dry there results a solid stone-like substance of very great durability.

C. was used by the Romans before 500 B.C., and many examples of Roman work nearly 2,000 years old still exist. In medieval times it was used for the foundations, etc., of Westminster Abbey, Salisbury and York Cathedrals, etc. C. of the type known today was not used until the middle of the last century, following the discovery of Portland cement by Aspdin in 1824.

The life of C. is almost unlimited, and it is not affected by extremes of weather conditions. Additional strength is imparted by the use of steel reinforcement in the form of rods from $\frac{1}{8}$ in. to 2 in. in diameter. Owing to its fireproofing qualities C. is frequently used as a coating for steel structural bars.

Pre-cast C. units such as paving slabs, lamp posts, drainpipes, walling blocks, etc., are now common, but the more recent development of larger units not only speeds the construction time of tunnels, blocks of flats and offices, etc., but minimizes interruptions due to bad weather. C. can be applied to other substances by means of a cement coating, and coloured C. is decoratively effective.

CONDÉ (kondēh'). A noble French family, related to the house of Bourbon, The founder of the family, Louis de Bourbon (1530-69), was an uncle of Henry IV of France, and was prominent as a Huguenot leader in the Wars of Religion. Louis II, called the Great C. (1621-86), won brilliant victories during the Thirty Years War at Rocroi (1643) and Lens (1648), rebelled in 1651 and entered the Spanish service, was pardoned in 1660, and commanded Louis XIV's armies against the Spaniards and the Dutch.

CONDER, Charles (1868-1909). English artist who painted in water-colour and oil, and executed a number of lithographs including the 'Balzac' (1899) and the 'Carnival' sets (1905).

CONDILLAC (kondē-yahk'), Étienne Bonnot de (1715-80). French philosopher, B. at Grenoble, of noble parentage, he entered the Church and was appointed tutor to Louis XV's grandson, the duke of Parma. As a philosopher he mainly followed Locke, but his *Traité de sensations* (1754) claims that all mental

activity stems from the transformation of sensations. He was a collaborator in the *Encyclopédie*.

CONDITIONED REFLEX. A response to an associated stimulus, e.g. a dog secretes saliva not only at the sight of food but in answer to a bell rung at mealtimes. It is considered to occur without conscious learning as a result of nerve processes in the brain. See BEHAVIOURISM and PAVLOV. Contrasted with the C.R. is a *simple or unconditioned reflex* - an action occurring automatically or intensively in immediate response to a stimulus, without involving the higher brain centres.

CONDOMINIUM. The joint rule of a territory by two or more states. Examples include the Anglo-Egyptian Sudan until 1953, the New Hebrides (administered by Britain and France), and Canton and Enderbury Islands, in the Phoenix Group (under the joint control of Britain and the U.S.A. for 50 years from 1939).

CONDOR. Largest of all flying birds (*Sarcophaghamphus gryphus*), one of the American vultures (*Cathartidae*), 4 ft. long and with a 9-10 ft. wing span. The plumage is black, except for a white frill at the base of the neck which (like the head) is bare and bright red. Ranging from Ecuador to Patagonia, the C. hunts by sight and is carnivorous. Another species (*Gymnogyps californianus*) frequents the mountains of Lower California to Arizona.

CONDORCET (kondorsä'), Marie Jean Antoine Nicolas Caritat, marquis de (1743-94). French philosopher and statesman. His essay on the theory of probabilities (1785), contributed to the *Encyclopédie*, won him a high reputation as a mathematician. He welcomed the Revolution in 1789, was elected to the Legislative Assembly of 1791-2, and his plan for state education (1792) formed the basis of the scheme adopted. One of the Girondins, he opposed the execution of Louis XVI, and was outlawed. Whilst in hiding, he wrote *Esquisse d'un tableau historique des progrès de l'esprit humain*. Arrested at length, he was found dead in his cell, probably having taken poison.

CONEY (kōn'i) ISLAND. Pleasure resort on a peninsula in the S.W. of Long Island, New York City, U.S.A., part of Brooklyn. It has a famous boardwalk 2 m. long.

CONFECTIONERY. A term of wide application covering food preparations having sugar as the

CONCRETE. The construction of flats from pre-cast concrete units halves the time needed for erection and cuts costs. Under the Bison wall-frame system - the first all-British method - each flat comprises 21 units, and the first blocks were erected in Kidderminster and Rugby in 1963. Courtesy of Concrete Ltd.

Electricity and Magnetism (1873), *Matter and Motion* (1876).

CLERMONT-FERRAND (klermon'-feron'). French industrial city, capital of Puy-de-Dôme dept. Its rubber industry is the largest in France; motor-car tyres are manufactured. Other products incl. chemicals, preserves, foodstuffs, and clothing, and C.-F. is an important agricultural market. The Gothic cathedral is 13th cent. At a council at C. Urban II ordered the First Crusade in 1095. Pop. (1962) 134,263.

CLERMONT-GANNEAU (-gahnō'), Charles-Simon (1846–1923). French Orientalist. In 1868 he discovered the Moabite stone, then the oldest existing inscription in the Semitic language (9th cent. B.C.).

CLEVELAND, Stephen Grover (1837–1908). President of the U.S.A.; notable as the 1st Democratic pres. elected after the Civil War, and as the only pres. to hold office for 2 terms (1885–9 and 1893–7) which were not consecutive. He attempted to check corruption in public life, and in 1895 settled the Venezuela dispute with Britain.

CLEVELAND. District in the N. Riding of Yorkshire, England, incl. the C. hills, which contains one of the largest deposits of iron ore in the British Isles.

CLEVELAND. Largest city of Ohio, U.S.A., standing on Lake Erie at the mouth of the r. Cuyahoga, where the iron ore from the Lake Superior region is brought to meet the coal from the mines in Ohio and Pennsylvania. Its chief industries centre round the many great iron and steel works; petroleum refining is also important. C. is a railway centre and has an airport. Pop. (1960) 876,050.

CLÈVES. French form of KLEVE.

CLIBURN, Van. Pseudonym of the American pianist Harvey Lavan C. (1934–). B. at Shreveport, Louisiana, he was trained at the Juilliard School of Music, New York, and in 1958 won the international Tchaikovsky piano competition in Moscow. He is a skilled interpreter of Rachmaninoff and Prokofiev.

CLICK-BEETLE or **SKIP-JACK**. Name given to the members of the family Elateridae of beetles (Coleoptera), which can be recognized by their long, narrow, rather flattened bodies, short legs, and the lengthening of the hinder end of the thorax backwards into 2 sharp spines. They can get on to their feet again from lying on their backs, by jumping into the air and turning over, making loud clicks in the process. The larvae are known as wireworms.

CLIFDEN. Irish market town and port, in Galway, 43 m. N.W. of Galway town. The British airmen Alcock and Brown landed here on 15 June 1919, at the end of the 1st non-stop flight of the Atlantic.

CLIFFORD, William Kingdon (1845–79). British mathematician. B. at Exeter, in 1871 he became prof. of mathematics at Univ. Coll., London. As a mathematician he was considered to be in the front rank, and in philosophy his sceptical, even atheistic, *Essays and Lectures* (1879) had a wide sale and influence. Mrs. W. K. Clifford (d. 1929) was a well-known novelist and dramatist.

CLIMATE. The primary factors which determine the variations of C. over the surface of the earth are (a) the effect of latitude and the tilt of the earth's axis to the plane of the orbit about the sun ($66\frac{1}{2}^\circ$); (b) the difference between land and sea; and (c) contours of the ground.

The amount of heat received from the sun varies in different latitudes and at different times of the

year. In the equatorial region the mean daily temperature of the air near the ground has no large seasonal variation. In the polar regions the temperature in the long winter, when there is no incoming solar radiation, falls far below the summer value.

The temperature of the sea, and of the air above it, varies very little in the course of day or night, while the surface of the land is rapidly heated by sunshine and at night is rapidly cooled by radiation to a clear sky. In the same way, the annual change of temperature is relatively small over the sea, and great over the land. Thus the land is colder than the sea in winter, and warmer than the sea in summer. The winds which blow from the sea are warm in winter and cool in summer, while winds from the central parts of continents are hot in summer, and cold in winter.

On an average, air temperature falls off with height at a rate of approximately 1° F. per 300 ft. Thus places situated at an elevation above mean sea-level will usually have lower temperatures than places at a lower level. Even in equatorial regions, high mountains are snow-covered during the whole year. Rainfall is produced by the ascent of air. When an air current blows against a range of mountains, so that it is forced to ascend over the high ground, it gives rainfall, of amount depending on the height of the ground and the dampness of air.

The complexity of the distribution of land and sea, and the consequent complexity of the general circulation of the atmosphere, makes the distribution of the climate extremely complicated. Centred on the equator is a belt of tropical rain-forest which may be either constantly wet or monsoonal, i.e. seasonal with wet and dry seasons in each year. Bordering each side of this belt is a belt of savannah, with lighter rainfall, and less dense vegetation. After this usually comes a transition through steppe (semi-arid) to desert (arid), with a further transition through steppe to Mediterranean climate with dry summer, followed by the moist temperate climate of middle latitudes. Next comes a zone of cold climate with moist winter, but where the desert extends into middle latitudes the zones of Mediterranean and moist temperate climates are missing, and the transition is from desert to a cold climate with moist winter. In the extreme E. of Asia a cold climate with dry winters extends from about 70° N. to 35° N. The polar caps have tundra and ice-cap climates, with little or no precipitation.

CLIMATRON. The world's 1st completely air-conditioned and moisture-controlled display greenhouse, in the Missouri Botanical Garden, St. Louis, U.S.A., which shows tropical and semi-tropical vegetation of various kinds in environments exactly

CLICK BEETLE, with grub (wireworm) and pupa.

Cão in 1482; but not until the explorations of Livingstone and Stanley in the 19th cent. did the vast extent of the C. system become known.

CONGO, Republic of. Name taken by two African countries on achieving independence in 1960. (i) The Republic of C., cap. Brazzaville (formerly French Middle Congo), lies N. and W. of the C. river. It is in the French Community and the Equatorial Union. There is unrest and relations with France are poor. Its chief products are coffee and cotton. A railway, 320 m. long, connects Brazzaville with Pointe-Noire on the Atlantic. Area c. 138,000 sq. m.: pop. (1966) 870,000. (ii) The Republic of C., cap. Kinshasa (formerly Belgian Congo), occupies a large part of the C. basin. Its central area is a vast flat plain covered by dense forests and jungle swamps; but in the S. plateau country rises to 500–1,000 ft. In the extreme E. and S. the land rises to over 16,000 ft. in the Ruwenzori Mts., among which lies a chain of lakes including Albert, Edward, and Tanganyika. Climate on the plain is hot with heavy rainfall; on the plateau it is milder.

The people are for the most part Bantu of various tribes; numerous dialects are spoken, the chief being Kiswahili or Kingwana in the E., Tshiluba or Kiluba in the S., Lingala and Kikongo along the C. river. The republic is rich in vegetable and mineral resources; rubber, cotton, coffee, and oil palms are cultivated, and the timber of the forests is exploited. Minerals include copper, diamonds (chiefly of industrial quality), cobalt, uranium, radium, germanium. Katanga in the S. has the principal mineral wealth, espec. copper.

The chief port, Matadi, and the second, Boma, lie on the Congo estuary. The C. river and its tributaries remain important means of transport; but there are 3,200 m. of railways; 21,000 m. of good roads; five international airports and some 150 lesser ones. Area c. 900,000 sq. m.: pop. (1965) 15,627,000.

History. The C. basin was unknown territory until the explorations during the 1870s of Livingstone and Stanley (qq.v.). Leopold II, king of the Belgians, financed Stanley's journeys, and established personal rule over the so-called C. Free State, which was internationally recognized in 1885. Local wars occurred and were suppressed, and there was a good deal of oppressive exploitation of the inhabitants under Leopold's rule. In 1908 the Belgian government annexed the territory as a colony, and it was generally believed that from that time the Belgian C. was one of the best-administered colonies in Africa; but though peace was maintained, and the territory's resources were developed, the granting of complete independence to the colony in 1960 revealed that its people had been given no preparation for self-govt. Old tribal antagonisms revived, Belgian settlers were driven out, and rich Katanga sought to break away from the rep. A small U.N. force remained in C. till 1964, but civil unrest continued, and in 1965 Gen. Joseph-Désiré Mobutu (1930–) assumed the presidency by a coup. In 1966 he reduced the no. of provs. from 21 to 12—the cap. remaining an independent admin. unit—and renamed various towns Kinshasa (Léopoldville), Lubumbashi (Elizabethville), Kisangani (Stanleyville). A new constitution instituting a unitary state under a pres., with a unicameral legislature, and political parties limited to 2, was proclaimed after a referendum 1967. By 1968 order was largely restored, and power had been increasingly centralised by Mobutu.

CONGREGATIONALISM. The form of church govt. adopted by those Protestant Christians known as Congregationalists, in which each congregation manages its own affairs. The first Congregationalists were the Brownists, named after Robert Browne, who in 1580 defined the congregational principle. In the next cent. they were known as Independents, e.g. Cromwell and many of his Ironsides, and in 1662 hundreds of their ministers were driven from their

churches and estab. separate congregations. In Britain there are c. 3,000 Congregational churches, with many more in the Commonwealth. The Congregational Union of England and Wales (1832), like the Congregational Union of Scotland (1812; united 1896 with the Evangelical Union), has no control over individual churches but is simply consultative. In Canada the Congregationalists joined with the Methodists and Presbyterians in 1925 to form the United Church of Canada, and in the U.S. in 1957 they joined with the Evangelical and Reformed Church to form the United Church of Christ.

CONGRESS. National legislature of U.S.A., consisting of a House of Representatives (438 members, apportioned to the States of the Union on the basis of population, and elected for 2-year terms) and the Senate (100 senators, 2 for each State, elected for 6 years, one third elected every 2 years). Both representatives and senators are elected by direct popular vote. C. meets at Washington in the Capitol. Members of both houses receive a salary of \$42,500, plus allowances.

CONGRESS OF INDUSTRIAL ORGANIZATIONS. See AMERICAN FEDERATION OF LABOR AND CONGRESS OF INDUSTRIAL ORGANIZATIONS.

CONGRESS PARTY. The Indian National Congress, founded by the Englishman A. O. Hume in 1885, was a moderate body until the F.W.W. when, under Gandhi's leadership, it began a campaign of non-violent non-co-operation. Declared illegal 1932–4, it polled 70 per cent of the votes at the 1937 elections and formed ministries in 9 out of 11 provs., and by 1939 had 6 million membership. Under Nehru's guidance it adopted a radical programme of agrarian reform, and at the beginning of the S.W.W. withdrew from participation with the British. It was recognized as the paramount power in India at the granting of independence in 1947, and was returned to power at the elections of 1952, 1957, 1962, 1967.

CONGREVE (kon'grēv), William (1670–1729). English dramatist and poet. B. nr. Leeds, he was a friend of Swift at Trinity Coll., Dublin, and in 1691 began studying law in London. He won immediate success with his first comedy *The Old Bachelor* (1693), which was followed by *The Double Dealer* (1694), *Love for Love* (1695) and the tragedy *The Mourning Bride* (1697). In 1698 he pub. a reply to Jeremy Collier's (q.v.) attack on the contemporary stage, and 2 years later his masterpiece, *The Way of the World*, appeared, but was at the time a failure.

Among the friends of his later years were the actress Mrs. Bracegirdle, and Henrietta, duchess of Marlborough, to whom he left his fortune. C. is the most brilliant of the Restoration comic dramatists, and achieves perfection of construction and style.

CONIC SECTIONS. The curves obtained when a cone is intersected by a plane; they were first discovered by the ancient Greeks and have been of great importance in mathematics. If the intersecting plane cuts both extensions of the cone it yields a hyperbola, if it is parallel to the side of the C. it produces a parabola; other intersecting planes produce circles and ellipses.

CONIFERAE (kōnif'ērē) or **CONIFERALES.** Division of plants, forming the largest and most important order of the Gymnosperms, and contained in about 46 genera, and about 500 species. They are trees and shrubs, often of a characteristic pyramidal form, and the leaves are linear 'needles', or small and scale-like, usually evergreen. The reproductive elements are borne in male and female cones, and the pollen is distributed by the wind. They usually grow in forests, and are specially characteristic of the colder and temperate parts of the world, particularly the N. hemisphere.

The C. are divided into 5 families: the Araucariaceae, including the monkey-puzzle tree and the kauri pine; Podocarpaceae, including half-a-dozen genera of

alto-stratus. *Cirro-cumulus* Cs. occur in small or large rounded tufts, sometimes arranged in the familiar pattern called 'mackerel sky'. *Alto-cumulus* clouds are similar but larger white clouds, also arranged in lines. *Alto-stratus* clouds are like heavy cirro-stratus clouds and may stretch across the sky as a grey sheet.

The lower clouds, occurring at heights of up to 7,000 ft., may be of 2 types, the strato-cumulus or the nimbus. The *strato-cumulus* Cs. are the dull grey clouds which give rise to a so-called 'lead' sky which, however, may not yield rain. *Nimbus* Cs. are dark grey, usually shapeless, rain-clouds.

Two types of C., the *cumulus* and *cumulo-nimbus*, are placed in a special category because they are produced by diurnal ascending currents which take moisture into the cooler regions of the atmosphere. *Cumulus* Cs. have a flat base generally at a height of about 4,500 ft. where condensation begins, while the upper part is dome-shaped and extends to about 6,000 ft. *Cumulo-nimbus* Cs. have their base at much the same level, but extend much higher, often up to over 20,000 ft. Short heavy showers and sometimes thunder may accompany them. *Stratus* clouds, met with below 3,500 ft., have the appearance of sheets parallel to the horizon. They are, practically speaking, high fogs.

CLOUD CHAMBER. Apparatus devised by C.T.R. Wilson of Cambridge for tracking ionized particles. It consists of a vessel filled with air or gas, saturated with water vapour. When suddenly expanded this cools and a cloud of tiny droplets forms on the nuclei, dust or ions present. If single fast-moving ionizing particles are allowed to traverse a dust-free chamber just before expansion a trail of droplets will appear where the ionizing particles collide with the air or gas molecules, showing as visible tracks. Much information about interactions between particles and radiations has been obtained from photographs of these tracks. This system has been developed in recent years by the use of liquid hydrogen or helium instead of air or gas. See BUBBLE CHAMBER.

CLOUD CHAMBER. Following its sudden cooling, these tiny condensation trails were formed in the wake of a neutral hyperon particle.

Courtesy of Imperial College of Science and Technology.

CLOUET (klōō-eh'), Jean (c. 1486–1541). French artist, court painter to Francis I, known as Janet. He portrayed Francis and the members of his court with great skill. His son François (b. before 1522, d. 1572), also known as Janet, succeeded his father as court painter to Francis, holding the same office under Henry II and Charles IX. Both produced oils, chalk drawings and miniatures of exquisite life.

CLOUGH (kluf'), Arthur Hugh (1819–61). British

poet. B. at Liverpool, the son of a rich cotton merchant, he was at Rugby under Dr. Arnold, and at Oxford came under the influence of Newman. Eventually he became an unbeliever in religion, and many of his lyrics are marked by a melancholy scepticism. One of his best-known poems is the pastoral 'Tober-na-Vuolich'. (1848). *Amours de Voyage* (1849) is a novel in verse. His lyric 'Say not the struggle nought availeth' was made famous in the S.W.W. through a Churchillian quotation. He d. at Florence. His sister Anne Jemima C. (1820–92) was the first principal of Newnham Coll., Cambridge.

CLOVELLY. Village of N. Devon, England, famous for its steep cobbled main street which descends 400 ft. down the side of a beautifully wooded cliff. Pop. c. 550.

CLOVER. A genus of leguminous plants (*Trifolium*), of which there are a great number of species, found mostly in the temperate regions; 20 are British. Herbaceous plants, they have trifoliate leaves and roundish heads or a spike of small flowers. Many are cultivated as fodder plants. The most important is the Red C. (*T. pratense*). White or Dutch C. (*T. repens*) is common in pastures.

WHITE CLOVER

CLOVES. The unopened flower-buds of the clove tree *Eugenia aromatica*, a member of the order Myrtaceae. Their aromatic quality is shared to a large degree by the leaves, bark and fruit of the tree, which is a native of the Moluccas. Cs. are used for flavouring in cookery and confectionery. Oil of Cs., which has tonic and carminative qualities, is employed in medicine.

CLOVIS (465–511). King of the Franks. One of the Merovingians, he succeeded his father Childeric in 481 as king of the Salian Franks, defeated the Gallo-Romans near Soissons, and also the Alemanni near Cologne in 496, embraced Christianity and subsequently proved a powerful defender of orthodoxy against the Arian Visigoths, whom he defeated at Poitiers (507). He made Paris his capital.

CLUB. An association of persons for social intercourse, indulgence in sport or hobbies, discussion of matters of common interest, etc. There were Cs. of a sort in the ancient world, but the London Cs. of today developed from the taverns and coffee-houses of the 17th and 18th cents. The oldest is White's, evolved from a chocolate-house of the same name in 1693. Other famous London clubs incl. Boodles, 1762; Brooks's, 1764; the Portland (cards), 1816; the Athenaeum, 1824; the Garrick (dramatic and literary), 1831; the Carlton (Conservative), 1832; the Reform (Liberal), 1836; the Savage (literary and art), 1857; the Press Club, 1882; the Royal Automobile, 1897. Among women's clubs are the Forum (1919) and University Women's (1887).

The clubland of London is in the St. James and Pall Mall area, but there are clubs in all British cities and many towns. The Working Men's Club and Institute Union (1862) comprises more than 3,000 Cs. with approx. 2 million members.

Club life in the U.S.A. is common in pursuit of a particular interest, notably sports and country Cs., and such bodies as the Antique Automobile Club of America (1935). The Yale Club of New York and the Harvard Club of New York, drawing membership in the main from the universities from which they take their names, are more like a London C. than many so-called Cs. in America. The most prominent type of C. in the U.S.A., however, is the women's club, with regular lunches followed by lectures and debates;

Agent (1907), and *Chance* (1914), his first popular success.

CONS, Emma (1838–1912). British philanthropist. B. in London, she devoted herself to social work, and in 1880 bought the Royal Victoria Hall and made it the home of Shakespeare and opera. See **OLD VIC**.

CONSANGUINITY. Relationship by blood, whether lineal, i.e. by direct descent, or collateral, i.e. by virtue of a common ancestor. The degree of C. is of importance in laws relating to the inheritance of property and also in relation to marriage, which is forbidden between parties closely related by blood.

CONSCIENCE (kon'syons'), Hendrik (1812–83). Flemish novelist. B. at Antwerp, he served in the Belgian army, and, fired by the desire to write in Flemish, he pub. in 1837 *In't Wonderjaar 1566*, a series of sketches of the War of Dutch Independence, and *Phantazy*. These were followed by many other works, notably *The Lion of Flanders* (1838) and *The Conscript* (1850). Long before his death C. was recognized as the creator of a national literature in a hitherto despised tongue.

CONSCIENTIOUS OBJECTORS. A term originally denoting parents who objected to compulsory vaccination, later applied to persons refusing compulsory service, usually in the army, on moral, religious or political grounds. When conscription was introduced in Britain in 1916, there were about 22,000 C.O.s. Nearly 7,000 were arrested and many were repeatedly sentenced by court-martial. When conscription was re-introduced in May 1939, tribunals were set up to decide the claims of C.O.s. In the S.W.W. about 3,500 C.O.s were sent to prison.

CONSCRIPTION. The system under which all able-bodied male citizens are legally liable to serve with the armed forces. It originated in France in 1792, during the Revolutionary War, and in the 19th cent. it became the established practice in almost all European states. C. was unknown in Britain before the F.W.W., although a campaign in its favour was carried on by Lord Roberts for some years. During F.W.W. it was introduced for single men between 18 and 41 in March 1916 and for married men 2 months later, but was abolished after the war. It was introduced for the first time in peace in April 1939, when all men aged 20 became liable to 6 months' military training. The National Service Act, passed in Sept. 1939, made all men between 18 and 41 liable to military service, and in 1941 women also became liable to be called up for the women's services as an alternative to industrial service. Men reaching the age of 18 continued to be called up until 1960.

In the U.S.A. C. was introduced during the Civil War. During the F.W.W. men of 18–45 were conscripted. Peacetime C. – the 'draft' – was first introduced in 1940, and since 1948 the balance of the armed forces has been maintained by the Selective Service System.

CONSERVATIVE PARTY. One of the 2 historic British parties, the name replacing 'Tory' in general use from 1830 onwards. Traditionally the party of landed interests, opposed to the *laissez-faire* of the Liberal manufacturers, it supported, to some extent, the struggle of the working-class against the harshness of conditions arising from the Industrial Revolution. The split of 1846 over Peel's corn-law policy led to 20 years out of office, or in office without power, until Disraeli 'educated' his party into accepting parliamentary and social change, extended the franchise to the artisan (winning considerable working-class support), launched imperial expansion, and estab. an alliance with industry and finance. The Home Rule issue of 1886 drove Radical Imperialists and old-fashioned Whigs into alliance with the Conservatives, so that the party had nearly 20 years of office, but Joseph Chamberlain's proposals for Imperial Preference and the general fear that Protection meant

higher prices led to a Liberal landslide in 1906. The C.P. fought a rearguard action against the sweeping reforms which followed and only the outbreak of the F.W.W. averted a major crisis.

During 1915–45, except briefly in 1924 and 1929–31, the Conservatives were continually in office, whether alone or as part of a coalition, the main factor in maintaining this ascendancy being the break-up of the traditional 2-party system by the rise of Labour. At the elections following the end of the S.W.W. Labour swept to power, but the C.P. formulated a new policy in their Industrial Charter of 1947, visualizing an economic and social system in which employers and employed, private enterprise and the State, work to mutual advantage. Antagonism to further nationalization 1st reduced the Labour majority in the 1950 election, and in 1951 returned the Conservatives to power with a small majority. This was slightly increased in the general elections of 1955 and 1959 – despite such setbacks as Suez – because of maintained prosperity. Narrowly defeated in 1964 under Home (q.v.), the C.P. chose in 1965 its first elected leader, Edward Heath (q.v.) and was again defeated 1966. By 1968 a right

wing had developed with dissident views on defence, immigration, taxation, etc. See **POWELL, ENOCH**.

CONSTABLE, John (1776–1837). English landscape painter. B. at E. Bergholt, Suffolk, the son of a miller, he first worked in his father's mills, but in 1795 was sent to study art in London, where he copied Reynolds, painted religious pictures and studied Ruysdael. In 1799 he entered the R.A. schools and from 1802 exhibited every year in the R.A. His marriage to Mary Bicknell in 1816 followed a long period

JOHN CONSTABLE.
Self-portrait in pencil and water colour.
Photo: N.P.G.

of waiting, due to her relatives' stubborn opposition. He was elected A.R.A. in 1819, and his picture 'The Haywain' created a sensation when exhibited in the Paris Salon in 1821. From 1830 to 1833 he was mainly occupied with the famous series of mezzotints engraved by David Lucas. His pictures are remarkable for the way in which they evoke a sense of warmth or coolness, according to the kind of weather he is depicting. Among the most famous are 'Flatford Mill' (1825), 'Stratford Mill' (1820), 'The Leaping Horse' (1825), 'The Cornfield' (1826), 'Dedham Vale', and 'Salisbury Cathedral' (1831).

CONSTANCE. Town in Baden-Württemberg, Germany, on the section of the Rhine joining Lake C. and the Untersee. Suburbs stretch across the frontier into Switzerland. C. has clothing, machinery, and chemical factories and printing works. The Council of C. 1414–17, ended the Great Schism, 1378–1417, with rival popes at Rome and Avignon. Pop. (1960) 52,000.

CONSTANCE, Lake (Ger. Bodensee). Lake lying between Germany, Austria, and Switzerland. It is 45 m. by 8 m., and the Rhine flows through it.

CONSTANTA. Chief seaport of Rumania on the Black Sea, cap. of C. region. The exporting centre for the Rumanian oilfields, to which it is connected by pipeline, it has refineries, shipbuilding yards, and food factories. Pop. (1966) 150,436.

CONSTANTAN. A high-resistance alloy of approximately 40 per cent Ni and 60 per cent Cu with a very low temperature coefficient. It is used as a resistance wire in items of physical apparatus.

CONSTANT DE REBECQUE, Henri Benjamin (1767–1830). French writer and politician. B. at Lausanne, he travelled widely, began a liaison with

COAL. The Collins Miner, invented in 1955 by H. E. Collins, is specially designed for the economic extraction of coal from thin seams, along which the miner would once have had to crawl on his stomach. A remote-controlled cutting and loading machine, it extracts a stall (a long narrow excavation in the solid coal), and is here seen in trial operation above ground.
Courtesy of National Coal Board.

method almost universal in the U.S.A., by which the coal seam is divided into blocks by narrow roads driven at right angles to each other; or by 'opencast' stripping of the top soil over near-surface deposits, with the soil being replaced after mechanical removal of the coal layer.

COAL TAR. The black oily material resulting from the destructive distillation of coal in the gas-works. After distillation a number of fractions are obtained, viz. light oil, middle oil, heavy oil, and anthracene oil; the residue is called pitch. On further fractionation a large number of substances – some 200 have been isolated – used as dyes, in medicines, etc., are obtained.

COASTAL COMMAND. Combined British naval and R.A.F. system of defence organized during the S.W.W. (1939–45). It was divided into groups which worked in close co-operation with Naval Command, both services being directed from an Area Combined Headquarters. In addition to the groups which operated in England, N. Ireland, Scotland, and Wales, there was a separate group in Iceland and a station at Gibraltar.

COASTGUARD. Organization to prevent smuggling, assist distressed vessels, etc. In Britain the C. was originally formed to prevent smuggling after the Napoleonic Wars, but passed from the control of the Customs in 1856 to the Admiralty (to the Board of Trade 1923 – when it was re-organized as primarily a life-saving service – and in 1946 to the Min. of Transport). The U.S. Coast Guard (1915) has wider duties incl. enforcement of law and order on the high seas and navigable waters; prevention of smuggling; maintenance of lighthouses, buoys and bells; carrying out of an ice patrol for ships crossing the N. Atlantic, etc. It had its beginnings in the revenue cutter service estab. by Washington in 1790.

COATBRIDGE. Scottish royal burgh in Lanarkshire, 8 m. E. of Glasgow, on the Lanarkshire coal-field, with a large iron and steel industry. Pop. (1961) 53,946.

COATES, Eric (1886–1957). British composer. B. in Notts, he was viola player, but from 1918 devoted

himself to composing, e.g. *The London Suite*, which incl. the 'Knightsbridge March'; 'The Teddy Bears' Picnic'; 'The Dam Busters March' and songs such as 'Sleepy Lagoon' and 'Souvenir'.

COATES, Joseph Gordon (1878–1943). New Zealand statesman. The son of a farmer, he was elected to parliament in 1911 as a member of the Reform Party. After serving in the F.W.W. he entered the Cabinet in 1919, and on W. F. Massey's death in 1925 succeeded him as P.M., holding office until 1928. In the coalition govt. of 1931 he was Min. of Public Works and was Min. of Finance and Transport 1933–5. In the War Cabinet formed in 1940 he was Min. for the Armed Forces, and d. while in office.

COATI (ko-ah'ti) (*Nasua*). A mammal of the order Carnivora, family Procyonidae, related to the racoon. It has a long tail and a long, flexible, pig-like snout, and its paws are furnished with long claws for climbing and digging. It is found in the forests of S. and Central America.

COBALT. Metallic element, closely resembling nickel in appearance, symbol Co, at. wt. 58.94, at. no. 27. It occurs in a number of ores, though not in great quantities, and is used as a pigment and in alloys: because it maintains its hardness at great heat, it is used to cement carbides in tools in the high-speed machining of metals. The chief sources of supply are the Rep. of the Congo and N. Rhodesia. Radioactive cobalt-60 (half-life 5.3 years) is produced by neutron radiation in heavy-water reactors, and is used in large sources for gamma-rays in cancer therapy, substituting for the much more costly radium. The C. 'bomb' contains C.-60 and is used in routine radiotherapy in hospitals.

COBB, John Rhodes (1899–1952). British racing motorist, who estab. the world record of 394.2 m.p.h. at Bonneville Salt Flats, Utah, U.S.A., on 16 Sept. 1947, broken by Campbell (q.v.) in 1964.

COBBETT, William (1763–1835). English politician and journalist. B. at Farnham in Surrey, the son of a farmer, he enlisted in the army in 1784 and saw service in Canada. Having obtained his discharge, he lived in U.S.A. as a teacher of English, and became known as a vigorous pamphleteer, at this time on the Tory side. In 1800 he returned to England, and in 1802 launched his *Political Register*, a weekly journal. Gradually C.'s views changed to out-and-out Radicalism, largely because of his increasing knowledge of the sufferings of the farm labourers whose champion he constituted himself. In 1809 he was imprisoned for having criticized the flogging of English troops by German mercenaries, and in the post-war years he became the protagonist of the working-class movement. From 1817 to 1819 he was in America, and on his return wrote the *Rural Rides* for his newspaper, which were collected in book form in 1830. Other notable books of his were an English grammar, a *History of the Protestant Reformation in England* (in which he attacked the Protestant version) and *Advice to Young Men*. He was a strong advocate of parliamentary reform, and sat in the Reformed parliament from 1832.

COBDEN, Richard (1804–65). British Liberal statesman. B. in Sussex, the son of a farmer, he became a calico manufacturer at Manchester. With other business men he founded in 1838 the Anti-Corn Law League and began his lifelong association with John Bright. In 1841 he was elected Liberal M.P. for Stockport, and until 1845 devoted himself to the repeal of the Corn Laws. A typical early Victorian radical, he believed in the abolition of class and religious privileges, a minimum of govt. interference, and the securing of international peace by disarmament and arbitration. He opposed trade unionism and most of the factory legislation of his time, because he regarded them as opposed to liberty of contract. His opposition to the Crimean War made him unpopular, but in 1859

Photos: L. Sharpes, F.A.D.O.

following the expulsion of the last king in 510 B.C. The Cs. were two annually elected magistrates, both of equal power; they jointly held full civil power at Rome, and the chief military command in the field. After the establishment of the Roman Empire the office became purely honorary. See FOREIGN OFFICE.

CONTACT LENSES. Lenses placed under the eyelids in contact with the eye, separated in most cases only by a film of tears. They may be used as a substitute for spectacles in the correction of refractive defects or, in special circumstances, as protective shells, or to correct cosmetic defects, or refractive errors which cannot be coped with by the normal spectacle lens. The earliest use of C.L. in the late 19th cent. was protective, or in the correction of corneal malformation, for it was not until the 1930s that simplification of fitting technique by taking eye impressions made their general use possible. Until the advent of the corneal lens after the S.W.W. the only lens used was the Haptic lens covering the whole eye. Since 1955 the modern micro-corneal lens has been developed, which is very much smaller than the cornea (average size 9.5 mm.).

CONTINENT. A major division of the land surface of the earth. There are 6 major Cs.: Europe, Africa, Australia, Asia, N. America and S. America. Antarctica and Greenland are referred to as Cs. on occasion. Each C. is continued under the sea in a *continental shelf*, which varies in width according to the nature of the coastline. The shelf reaches an approximate depth of 100 fathoms, then drops more sharply, by the *continental slope*, to the ocean depths. That part of the earth's surface above sea-level is called the *continental area* and covers roughly five-sixteenths of the earth's surface. In 1915 Alfred Wegener (q.v.) put forward the hypothesis suggested by the way in which, for example, the shores of Europe/Africa and N./S. America fit together, that the continents had reached their present position by *continental drift*, following the split-up of 2 super-continent Laurasia in the N. and Gondwanaland in the S. Later research confirmed that Cs. 'float' on the rocks of the mantle of the Earth, proof of their movement coming from study of the magnetism of ancient rocks, etc., by Blackett, Runcorn and others. It is thought, for example, that the folding of the Himalayas was the result of the comparatively recent drifting together of India and Asia.

CONTRACEPTION. See FAMILY PLANNING.

CONTRACT. An agreement between two or more parties which will be enforced by law. Every agreement is not a C., which always consists of an offer and an acceptance of that offer. In English law a C. must either be made under seal (i.e. in a deed) or there must be consideration to support it, i.e. there must be some benefit to one party to the C. or some detriment to the other.

A C., even though it is made in the proper form and the parties to it have the necessary capacity, may be unenforceable because it is made under a mistake, misrepresentation, duress, or undue influence.

Cs. which are illegal are void. Among illegal Cs. are those to commit a crime or civil wrong, to trade with the enemy, immoral Cs., and Cs. in restraint of trade, i.e. Cs. by which a servant binds himself not

Courtesy of the Photographic Dept., Westminster Medical School.

CONTACT LENSES. Far left a Haptic lens and to the right a much-enlarged micro-corneal lens: the child illustrated is suffering from microphthalmos (the right eye is the size of a pea) combined with a squint, but in the lower picture has been fitted with a Haptic cosmetic contact lens giving full movement and the effect of correcting (by obscuring) the squint.

to compete with his master after his service is over. Cs. by way of gaming and wagering are void.

CONTRACT BRIDGE. Probably the most popular card game, played all over the world since 1930. It originated in 1925 in a bridge game on a steamer *en route* from Los Angeles to Havannah, and was introduced to New York clubs by H. S. Vanderbilt, one of the players. Subsequently the most famous expert was Ely Culbertson (q.v.).

C.B. is a development of Auction B. and like it is based on whist. It is played by 2 pairs of players as partners, and its distinctive feature is that trumps are settled by a preliminary process of bidding. The partner of the caller is 'dummy', and his hand is laid face upwards on the table. Scoring is above the line for honours and below the line for tricks; only the tricks actually contracted for and won count towards the game. Each trick over six contracted for and won counts 30 if spades or hearts, and 20 if diamonds or clubs, are trumps; in no trumps, 40 is counted for the first trick and 30 thereafter. A game is won when a pair scores 100 points below the line, and the pair which first wins 2 games wins the rubber (500 points if 3 games have been played, 700 if only 2). Extra points are awarded for over tricks, small slam, grand slam, etc., and penalties are imposed for under tricks. Once the bidding has been completed, play is very much as in 'auction' or whist, although in the various highly complicated systems there are numerous 'conventions'.

CONVOCATION. In the Church of England, the synods of the clergy of the provinces of Canterbury and York. It is convened by the archbishops at the same time as Parliament begins a new session, and consists in each province of an Upper and Lower House, the one comprising the archbishop and bishops of the province, and the other the representatives of the lower clergy. From 1717 until 1852 it was indefinitely prorogued. In 1919 the National Church Assembly was constituted, the first two houses of which consist of the members of the Convocations of Canterbury and York.

CONVOLVULUS, or Bindweed. Genus of plants,

their prominently ribbed, heart-shaped shell. The common *C. (C. edule)* is found in large numbers on the British coasts, and is gathered for food (after boiling to destroy typhoid bacilli).

COCKNEY. A native of the city of London. According to tradition he must be born within sound of Bow bells (q.v.) in Cheapside. The term *C.* is also applied to the racy dialect of the Londoner, of which a striking feature is the *C.* rhyming slang.

COCKROACH. A sub-order of insects (Blattaria), commonly but wrongly called 'black beetles'; they belong to the order Dictyoptera and have nothing to do with the true beetles. In Britain only 2 small species, of the genus *Ectobia*, which do not enter human habitations, are truly native, but several species have been introduced with imported food, etc., and are great pests, e.g. common *C. (Blatta orientalis)* which is common in old houses, and nocturnal and omnivorous in its habits. It leaves a disgusting smell, caused by its saliva, on whatever it touches.

The so-called German *C. (Blattella germanica)* and the American *C. (Periplaneta americana)* are found in bakeries, warehouses, etc.

COCOA and CHOCOLATE. Food products both made from the cacao (or cocoa) bean, fruit of a tropical tree (*Theobroma cacao*) growing chiefly in W. Africa (Ghana, Nigeria), parts of S. America, the West Indies, Java, and Ceylon. Cacao is believed to be indigenous to the forests of the Amazon and Orinoco, and the use of the beans was introduced into Europe following the conquest of Mexico by Cortez in the 16th cent. A 'cocoa-house' was opened in London in 1657; others followed and became centres for the fashionable and the wits. In Mexico *chocolatl* (its native name) was mixed with hot spices, whisked to

a froth and drunk cold. Cocoa powder was a later discovery.

The cacao tree when fully grown is some 20 ft. high. It begins bearing fruit about the 5th year; this matures rapidly and takes the form of a pod, 5-9 in. long, containing 20 to 40 seeds (beans), embedded in juicy white pulp. The trees bear all the year round, and there are 2, sometimes 3, harvests. Preparation consists chiefly in roasting, winnowing, and grinding the nib (the edible portion of the bean). If drinking cocoa is required, a proportion of the cocoa butter is removed by hydraulic pressure and the cocoa which remains is reduced by further grinding and sieving to a fine powder. Chocolate, on the other hand, contains all the original butter.

COCONUT. Fruit of the palm (*Cocos nucifera*), native to India and S.E. Asia. The trees grow 60-80 ft., mature in 5-7 years, and bear up to 100 nuts a year until they are 70-80 years old. The kernel of the mature nut contains 70 per cent of oil and when dried this 'copra' is sold for use in making margarine and nut butter. The sap of the tree is fermented to produce a potent spirit, 'arrack', or may be boiled down to yield sugar, as in India. The leaves are woven into mats, baskets and sails, and the fibrous husk of the nut is used for mats, cordage and ropes. Indonesia,

COCKROACH. Male (1), and female (2).

COD The only freshwater member of the family, the burbot (*Lota lota*).

the Philippines, Malaysia, and Ceylon are among the chief exporters.

COCOS. Group of 27 small coral islands in the Indian Ocean lying some 1,720 m. N.N.W. of Perth, Australia. Discovered 1609, they had no inhabitants until 1826. Britain annexed them in 1857, and in 1955 transferred them to Australia. West Island is an important refuelling point for aircraft. Area 5 sq. m.; pop. (1966) 684 (210 Europeans).

COCTEAU (koktoh'), Jean (1891-1963). French writer of multifarious talents. Young in an era which worshipped youth, he produced Dadaist verse, a miscellany-novel *Le Potomak* (1919), ballets such as *Le Beuf sur le toit*, or *The Nothing doing Bar* (1920), plays, e.g. *Orphée* (1926), and a mature novel of bourgeois French life, *Les Enfants terribles* (1929), which he made into a fine film in 1950. *Portraits-Souvenir 1900-1914* (1935) is autobiographical.

COD. The typical fish of the family Gadidae. The common species (*Gadus morrhua*) is found in the Atlantic and Baltic, and when freshly taken is brown to grey along the sides, with the belly shining white. The most important cod-fisheries are on the Newfoundland banks, Iceland, and the North Sea. The majority of the catch is salted and dried.

CODEX. An ancient book, with pages stitched together and bound, somewhat after the modern fashion; during the 2nd cent. A.D. codices began to replace the earlier rolls.

COD LIVER OIL. Oil obtained by subjecting fresh cod livers to pressure at a temperature of about 85°C. When prepared by modern methods, it is nearly tasteless and odourless and is highly nutritious. It is also a valuable source of the vitamins A and D.

CODY, Samuel Franklin (1862-1913). American aviation pioneer. B. in Texas, U.S.A., he spent his early days with a cowboy stage and circus act, and experimented with kites. At Farnborough, England, he helped design and build the *Nulli Secundus*, the 1st British dirigible. In 1908 he built an aeroplane, and in

COCOA. A Ghanaian farmer at work in a cocoa plantation. Some 20 ft. high when fully grown, the trees come into bearing about the 5th year. The 5-9 in. long pods contain 20-40 seeds, or beans, and there may be 2 or 3 harvests a year.

Courtesy of Cadbury Bros

CO-OPERATIVE WHOLESALE SOCIETY. The C.W.S., which had its origins mainly in the N. of England, still has its headquarters in Manchester, and seen here is the new 14-storey office block, which also serves the C.I.S., and the New Century Hall (on the left), opened in 1963, which adjoin the old C.W.S. building. C.W.S. Ltd. (Manchester).

stories of settlers and Redskins in the middle 18th century.

COOPER, Samuel (1609-72). English artist. He was probably b. in London, and his works – the finest of all miniatures – incl. portraits of Milton, Cromwell, and members of Charles II's court. Pepys commissioned him to paint his wife.

CO-OPERATION. The banding together of bodies of persons for mutual assistance in trade, manufacture, the supply of credit, or other services. In Britain the predominant type of C. is the Consumers' Co-operative Society, a retail trading concern whose shops sell at current market prices, but return the bulk of their profits (less any sums placed to reserve) to their members as 'dividends' on the sums spent there. Control is in the hands of a management committee elected by the members. Societies of this type in Britain have nearly 13,000,000 members, and in Scandinavia the rate is also high – in Denmark they cover approx. 45 per cent of the population. Usually the local societies are federated nationally in co-operative wholesale societies, which carry on wholesale trade and factory production. The original principles of consumers' C. were laid down in 1844 by the Rochdale Pioneers, under the influence of Robert Owen (q.v.). Producers' Co-operative Societies, formed on a basis of co-partnership among the employees, exist on a large scale in France, Italy, and the Soviet Union, but are of little importance in Britain. Agricultural Co-operative Societies have been formed in Britain for the collective purchase of seeds, fertilizers, etc., while societies for co-operative marketing of agricultural produce are prominent in the U.S., Ireland, Denmark, the British Commonwealth, and many other countries. Often both functions are discharged by a single society. Agricultural Credit Societies are strong in the peasant countries of Europe and Asia, including parts of India. The U.S. also has a Co-operative Farm Credit System.

CO-OPERATIVE COMMONWEALTH FEDERATION (C.C.F.). Canadian political party, in some measure the counterpart of the British Labour Party. It was formed after the depression of 1930, and was for a time a federation of Labour, Socialist, and Farmer parties. Its programme includes strict control or nationalization of monopolies, nationalization of the banking credit system, and the establishment of a system of social security with greatly improved social

services. In 1944 C.C.F. secured a majority in Saskatchewan, and formed its first cabinet: still in power 1963.

CO-OPERATIVE PARTY. Founded by the C. movement in 1918 to maintain its interests and principles in Parliament and local governing bodies. Although it has rejected affiliation to the Labour Party, local branches are eligible for affiliation to local Labour parties, and seats in Parliament are contested by agreement with the Labour Party.

CO-OPERATIVE WHOLESALE SOCIETY (C.W.S.). The largest co-operative organization in the world, this British concern is owned and controlled by 850 co-operative retail societies, who are also its customers. Founded in 1863, it acts as wholesaler, manufacturer, banker, etc., and has a share capital of over £31 million. It owns some 200 factories, farms and estates, in addition to offices and warehouses etc., and has more than 54,000 employees.

COORG (koorg). Dist. of Mysore, India, formerly a princely state, merged in Mysore in 1956. It is agricultural; Mercara is the cap. Area 1,586 sq. m.; pop. (1961) 321,516.

COOT. Genus of birds (*Fulica*), belonging to the rail family (Rallidae) and closely resembling the moorhens in habits and appearance. The European species (*F. atra*) is common in Britain. Its plumage is sooty black, and there is a large, bare white patch on the forehead (hence 'bald as a coot').

COOTE, Sir Eyre (1726-83). Irish soldier. B. near Limerick, he took part in Clive's occupation of Calcutta and the battle of Plassey. In 1759 he was transferred to the Carnatic, where his victory in 1760 at Wandiwash, followed by the capture of Pondicherry, ended French hopes of supremacy. He returned to India as C.-in-C. in 1779, and several times defeated Hyder Ali, sultan of Mysore.

COPE. Ecclesiastical vestment. It is a semi-circular cape, without sleeves, worn by priests of the Western Church in processions and on certain other formal occasions, but not when officiating at Mass.

COPENHAGEN. Capital of Denmark, on the islands of Zealand and Amager. The harbour occupies the channel between the two islands and forms the headquarters of most of the Danish shipping lines.

COPENHAGEN. Seen across the Raadhuspladsen (Town Hall Square) is the Renaissance-style Raadhus (1901) with its easterly tower. At an annual gathering round the column surmounted by two Vikings with lurs, on the left; such long bronze trumpets, relics of prehistory, are still played. To the right of the Raadhus is Hans Christian Andersen's Boulevard and the Tivoli pleasure garden, with its open-air theatre, funfair, restaurants, ballrooms and concert hall.

COLCHESTER. A medieval corner of the town—the Old Siege House. Photo: British Travel and Holidays Association.

in 1776, and devoted himself to agricultural improvements, and especially to improving the breed of sheep. He was M.P. for Norfolk for most of his life as a Whig, and was raised to the peerage in 1837.

COKE. A clean, light fuel produced by the carbonization of certain types or blends of coal. When this coal is strongly heated in airtight ovens, in order to release all volatile constituents, the brittle, silver-grey C. is left. It comprises 90 per cent carbon together with very small quantities of water, hydrogen, oxygen, etc., and makes a most useful industrial and domestic fuel. An inferior grade of C. is produced as a by-product in the manufacture of coal-gas.

COLBERT (kolbär'), Jean-Baptiste (1619–83). French statesman. B. at Reims, he entered the service of Mazarin, and after his death became Chief Minister to Louis XIV. In 1661 he set to work to reform the Treasury, and in 1665 was appointed Controller-General. The national debt was largely repaid, and the system of tax collection was drastically reformed. Industry was brought under state control, and a high standard of workmanship was insisted on. Shipbuilding was encouraged by bounties, companies were established to trade with India and America, and colonies were founded in Louisiana, Guiana, and Madagascar. Above all, C. tried to make France a naval power equal to England or Holland. He favoured a peaceful foreign policy, but in his later years was supplanted in Louis's favour by Louvois, who supported a policy of conquests.

COLCHESTER (köl'chester). English town and river port (bor.) on the Colne, Essex, 50 m. E.N.E. of London. In an agricultural area, it is a market centre making clothing and with engineering and printing works. The Univ. of Essex (1962) is at Wivenhoe Park, 3 m. S.E. of Colchester.

C. goes back to the time of Cymbeline (c. A.D. 10–43). Made a colony of Roman ex-soldiers in A.D. 50, it became one of the most prosperous towns in Roman Britain despite its burning by Boudicca (Boadicea) in 61. Most of the Roman walls remain as well as ruins of the Norman castle, St. Botolph's priory, etc. Pop. (1961) 65,072.

COLD. Common. A minor disease caused by a variety of viruses, and which is a major cause of industrial absenteeism. Symptoms: headache, chill, nasal discharge, sore throat and occasionally cough. In 1962 the British C.C. Research Unit at Harvard Hospital, Salisbury, tested their 1st experimental vaccine against one virus strain.

COLE, George Douglas Howard (1889–1959). British economist. Active in the Guild Socialist movement, he was Chichele prof. of social and political theory at Oxford 1944–57, and pres. of the Fabian Soc. from 1952. His books incl. *The World of Labour* (1913), *The Simple Case for Socialism* (1935) and *Socialist Thought* (1953–8), 4 vols. He m. in 1918

Margaret (1893–), dau. of R. W. Postgate (q.v.) with whom he had collaborated in several books, and wrote with her detective stories and political works.

COLENSO, John William (1814–83). Anglican cleric. Bishop of Natal from 1853, he incurred furious attack from traditionalists by his *Pentateuch and Book of Joshua critically examined* (1862). Deposed in 1863 by the bishop of Capetown, he was reinstated on appeal to the Privy Council. He was later under attack for championing the Zulus against the white settlers.

COLEOPTERA. See **BEE**.

COLERAINE, Lord. See **LAW, R. K.**

COLERAINE (köl'rän'). Port (bor.) on the r. Bann, 4 m. from the sea, in co. Londonderry, N. Ireland. Steamers run to Glasgow and Liverpool; there is a linen industry and the New Univ. of Ulster (1968). Pop. (1961) 12,051.

COLERIDGE, John Duke Coleridge, 1st baron (1820–94). British judge. An eloquent pleader, he played a prominent part in the Tichborne case while at the Bar, and in 1880 became Lord Chief Justice. He was the great-nephew of the poet S.T.C.

COLERIDGE, Samuel Taylor (1772–1834). British poet, critic, and philosopher. B. 21 Oct. 1772 in Ottery St. Mary, Devon, he was a contemporary of Charles Lamb at Christ's Hospital, and while at Cambridge was driven by debt to enlist for a time in the Dragoons. In 1795, as part of a plan to found a communist colony in America with Robert Southey and others, he m. Sarah Fricker, from whom he afterwards separated. On the failure of this project, he turned to lecturing, and in 1796 pub. both the unsuccessful periodical *The Watchman* and his first vol. of *Poems*. In 1795 he had met Wordsworth, and now collaborated with him in the *Lyrical Ballads* (1798), in which the 'Ancient Mariner' appeared. 'Kubla Khan' and 'Christabel' were also written at this time. In 1798 he also visited Germany, becoming interested in German literature and philosophy, and 1800–4 he settled at Keswick, near Wordsworth, with whom he later quarrelled, and finally became enslaved by opium. He lectured in London during the next dozen years, and pub. another unsuccessful periodical, *The Friend*, in 1809. From 1816 he resided largely in the care of the physician James Gillman at Highgate, where his remarkable conversational powers attracted many young disciples.

His poetry is largely fragmentary, but unequalled in magic and music; and in criticism, the best of which is found in the *Biographia Literaria* (1817), lectures on Shakespeare, and *Table Talk*, he was the first to bring philosophical and psychological methods into the consideration of poetry. As a philosopher, he is less important as a creative thinker than as introducing idealistic German philosophy to England.

His eldest son, Hartley C. (1796–1849), was a poet of considerable power, especially in the sonnet, but ruined his life by intemperance; and his dau., Sarah C.

(1802–52), besides editing her father's works, was the author of the fairy-tale *Phantasmion* (1837).

COLERIDGE-TAYLOR, Samuel (1875–1912). Brit. composer. B. in London, he was the son of a West African Negro doctor and an English mother. While still a student at the Royal College of Music he had a symphony performed at St. James's Hall in 1896. His choral work *Hiawatha* (1898–1900), a setting in 3 parts of Longfellow's poem, won immediate popularity. Hewas a student and champion of trad. Negro music.

Christian Egyptians had adopted Monophysite views, and when this doctrine was condemned by the Council of Chalcedon in 451 they became schismatic and were persecuted by the orthodox party, to which they were opposed on nationalistic as well as religious grounds. They therefore readily accepted Arab rule, but were later subjected to persecution by their new masters. They now form a small minority (c.1,300,000) of the population, mainly town-dwellers, and are distinguishable in dress and customs, but hardly in physical features, from their Mohammedan fellow-countrymen. They rarely marry outside their own sect. The head of the Coptic Church is the Patriarch of Alexandria.

COPYRIGHT. Generally speaking, the law of C. applies to literary, musical or artistic works, including plays, recordings, films, and radio and television broadcasts. It prevents the reproduction of the work, either whole or in part, without the consent of the author, but is essentially a safeguard, not for the basic idea or theme, but for the individual interpretation by the author, composer, or artist through which it takes on concrete form. For example, the basic plots of 2 novels might be identical without infringing the law of C., but should details in the descriptions and development of characters make it clear that one author had copied from the other, then C. would be infringed. *Translations of literary works* are also protected.

In 1952 agreement was reached by many nations to adopt the Universal C. Convention, its basic principle being that each contracting country should afford the authors of the other signatories the same protection that it gave its own. It came into force in the U.S.A. 1955, U.K. 1957: though not a signatory the U.S.S.R. made concessions. Revision of the Convention of Berne (1886, mainly European) at Stockholm 1967 introduced a controversial protocol allowing countries regarded by the U.N. as 'developing' to modify C. conditions extensively: Britain did not sign the protocol. Under English law, C. subsists for 50 years from end of year of author's death, or from date of publication, where posthumous. Duration of C. in the U.S.A. is for 28 years from date of publication, with a right to renewal for another 28, but the law is in process of being revised.

COQUELIN (koka'la'), Benoît Constant (1841-1909). French actor. B. at Boulogne, the son of a baker, he went on the stage in 1860 and for many years was associated with the Comédie Française, creating leading comic parts. In 1892 he formed his own company, and in 1897 created his greatest role, that of the hero in Rostand's *Cyrano de Bergerac*. His brother, ALEXANDRE C. (1848-1909), was also a versatile actor and a writer on stage subjects.

COQUES (kok), Gonzales (1614-84). Flemish artist. B. at Antwerp, he painted portraits and groups in the style of Van Dyck, whom he admired, and became known as the Little Van Dyck.

CORAL. Name given to the hard skeletons of various marine organisms, belonging to the phylum Coelenterata. Most of them are members of the class Anthozoa, but a few are placed in the Hydrozoa. The skeleton is composed of carbonate of lime extracted from the surrounding waters. In the simplest solitary Cs., such as the Devonshire cup coral (*Caryophyllia smithii*), the skeleton takes the form of a cup, into which the polyp can contract itself. The majority of Cs., however, form large colonies, and it is from the accumulated skeletons of these polyps that C.-reefs are built up. The red C. of the Mediterranean (*Corallium rubrum*) has been valued from very ancient times as an ornament.

CORALLI, Jean (1779-1854). French dancer and choreographer. B. in Paris of Italian descent, he made his début as a dancer in Paris in 1802. He composed *Giselle* (1841) and *La Péri* (1843), both for

Grisi; *Le Diable Boiteux* for Fanny Elssler, and many other famous ballets.

CORAL REEFS are built up from the accumulated skeletons of marine organisms, including certain algae as well as Cs. These flourish in the warmer seas and at moderate depths. C. reefs take the 3 distinct forms of fringing reefs, barrier reefs, and atolls. *Fringing reefs* are so called because they are built up on the shores of continents or islands; the living Cs. mainly occupy the outer edges of the reef. *Barrier reefs* are separated from the shore by a salt-water lagoon, which may be as much as 20 or more miles wide; there are usually navigable passes through the barrier into the lagoon. The Great Barrier Reef, to the N.E. of Australia, is more than 1,000 miles long. *Atolls* resemble a ring surrounding a lagoon, and do not enclose an island; their origin is undecided.

CORAL SEA. Part of the Pacific Ocean lying between N.E. Australia, New Guinea, the Solomon Islands, New Hebrides, and New Caledonia. It contains numerous coral islands and reefs. The BATTLE

CORAL. Among the many types of coral found in the Great Barrier Reef are the more than seven beautiful varieties seen here. Some are capable of stinging and it is not uncommon to find a fish which has been stung to death.

Courtesy of the Agent-General for Queensland.

OF THE C.S. was fought 4-8 May 1942 and ended with the victory of American naval and air forces over a Japanese fleet. The first Allied success in the Pacific, it saved Australia from invasion.

CORAM, Thomas (1668-1751). British philanthropist. B. in Lyme Regis, he became a farmer and shipwright in Massachusetts, returned to England in 1703 and founded the Foundling Hospital in London in 1741. He nearly became bankrupt through his many philanthropic schemes and also promoted the settlement of Georgia and Nova Scotia.

COR ANGLAIS (kōr-ang'lā') or English Horn. Musical instrument; it is not a horn, but a member of the oboe family, and its English origin is doubtful. A metal tube, bent backwards to the mouth of the player, contains the reed. The C.A. was introduced into the Orchestra in the time of Wagner, has an expressive tone, and is used in slow melodic passages.

CORBETT, Harvey Wiley (1873-1954). American architect. B. in San Francisco, he set a pattern in design by his economical exploitation of space for large structures, e.g. Bush House in London and his contribution to the Rockefeller Centre, N.Y.

CORBIERE (kōrbē-är'), Tristan (1845-75). French poet. The merits of his *Les Amours jaunes* (1873) went unrecognized until Verlaine called attention to it in 1884. Many of his poems, such as *La Rhapsodie Foraine*, deal with life in his native Brittany.

CORBY. English industrial and iron-mining town

COLLINS, William (1721–59). British poet. B. at Chichester, he was ed. at Winchester and Magdalen Coll., Oxford. His *Persian Eclogues* (1742) were followed in 1746 by the great series of endlessly imitated 'Odes', the best-known being 'To Evening'. After 1750 he became insane.

COLLINS, William Wilkie (1824–89). British novelist. Although called to the Bar, he turned instead to literature, and in 1860 contributed *The Woman in White* (a crime novel remarkable for its fat villain, Count Fosco) to Dickens' periodical *Household Words*. Best-known of his later books was *The Moonstone* (1868), with Sergeant Cuff, one of the first detectives in English literature. Still highly dramatic, his stories suffer for modern readers from repetition and very involved narrative technique.

COLODI (kolō'di), Carlo. Pseudonym of Italian writer Carlo Lorenzini (1826–90), adopted from the birthplace of his mother. B. himself at Firenze, he was a journalist, and in 1881–3 wrote *The Adventure of Pinocchio* the children's story of a wooden puppet who became a human boy.

CO'LOIDS. Non-crystalline substances of high molecular weight such as glue, egg-white, soaps, and starch which exhibit special properties in solution. A colloidal solution that retains the liquid form is known as a *sol*, but many Cs. can retain the colloidal state when in liquid form as a *jelly* or *gel*. The study of Cs. has thrown much light on the study of vital processes and has proved valuable in such industries as rubber and artificial silk.

COLMAN, George (1732–94). British dramatist, known as C. the Elder. His *The Jealous Wife* (1761) was based on *Tom Jones*, and he collaborated with Garrick in *The Clandestine Marriage* (1766). He managed Covent Garden Theatre 1767–74 and the Haymarket 1777–89. His son, **George C. the Younger** (1762–1836), took over the Haymarket from him and wrote the comedy *The Heir at Law* (1808).

COLMAN, Ronald (1891–1958). British actor. B. at Richmond, Surrey, he went to the U.S. in 1920 where his charm, good looks and speaking voice soon brought success in romantic Hollywood roles – *Beau Geste*, *The Prisoner of Zenda*, *Lost Horizon*, and *A Double Life* (1948), for which he received an Oscar.

COLMAR. French town, cap. of Haut-Rhin dept., between the Rhine and the Vosges mts. It is an industrial centre with an airport, and has a 13th–14th cent. minster. Pop. (1962) 54,264.

COLNE (kōn). English market town (bor.) in Lancs, 27 m. N. of Manchester. It is an important textile (cotton and artificial fibres) town. Pop. (1961) 19,410.

✓ **COLOGNE (kolōn')**. German port, city, and archiepiscopal see in N. Rhine-Westphalia Land, on the left bank of the Rhine, 22 m. S. from Düsseldorf. It can be reached by ocean-going vessels and has developed into a great trans-shipment centre. It is the H.Q. of (W.) German civil aviation. Some 30 m. to the N. lies the Ruhr coalfield and C. has many industries based on Ruhr coal.

Founded by the Romans c. 38 B.C. and made a colony in A.D. 50 under the name Colonia Claudia Arae Agrippinensis (hence the name Cologne), it became an important Frankish city and during the Middle Ages was ruled by its archbishops. It was a free

COLOGNE. Beyond the express train, the spires of the cathedral.
Courtesy of the German Tourist Information Bureau.

imperial city from 1288 until the Napoleonic age. In 1815 it passed to Prussia. The great Gothic cathedral was begun in the 13th cent. but its towers were not built until the 19th cent. (completed 1880). C. univ. (1388–1797) was refounded 1919. C. suffered severely from aerial bombardment during the S.W.W.; some 85 per cent of the city was wrecked and its three Rhine bridges were destroyed. Pop. (1966) 859,830.

COLOMBES (kolōnb'). Town in Seine dept., France, 5 m. N.W. of Paris; bicycles, chemicals, hosiery, perfumery, etc., are made. Pop. (1962) 77,090.

COLOMBIA. S. American republic, in the N.W. corner of the continent, with coasts on the Pacific Ocean and Caribbean Sea. It is traversed by the Andes from N. to S. In the E. there are vast llanos and forested plains watered by tributaries of the Amazon and Orinoco. The Magdalena is an entirely Colombian river nearly 1,000 m. in length. Though C. is a tropical country its climate and temperature vary greatly according to the altitude.

The largest town is Bogotá, the capital; other important centres are Medellín, Barranquilla, the Caribbean port, and Cali. Some 60 per cent of the pop. are country-dwellers; and most of the people live at 4,000 to 9,000 ft. alt. Except for a few small isolated tribes, the indigenous peoples have been absorbed into the general population.

C. is the most important emerald-producing country in the world, and also ranks high as a producer of platinum; gold, silver, uranium are worked, and C. has many other minerals, including coal and iron. Petroleum is an important export, and some 25% is refined in C., chiefly at Barrancabermeja. Coffee and bananas are the chief crops grown for export: cotton, rice, tobacco, sugar are other important crops. Air transport has greatly simplified communications. An interoceanic seaway linking the Caribbean and Pacific via the Choco Valley, and formed by damming the Atrato and San Juan rivers, has been projected.

Primary education is free but not compulsory, and about 40% of the pop. are illiterate. The predominant religion is R.C., the language Spanish. There is a President and Congress composed of House of Representatives and Senate, all directly elected for 4 years. Women received the vote in 1954.

The land that is now C. was conquered by the Spaniards in the 16th cent. and from 1740 was the separate viceroyalty of New Granada. Simon Bolivar formed Greater C. in 1819, but after his death large parts split off. After several further changes of name, New Granada became in 1886 the republic of C.

Area 439,714 sq. m.; pop. (1967) 19,300,000.

COLOMBO. Capital and principal seaport of Ceylon, standing on the W. coast near the mouth of the Kelani. It is a port of call for liners on the Australian and Far East routes, and is one of the most important ports of the British Commonwealth. The harbour, started in 1875, was completed in 1912. The business quarter of the city contains the official residence of the governor, the chief government offices, etc. At C. also were Ceylon Univ. Coll. (1921) and Ceylon Medical Coll. (1870), united in 1942 to form the Univ. of Ceylon which was gradually moved to new buildings at Peradeniya near Kandy.

C. was mentioned as Kalambu in c. 1340, but the Portuguese renamed it in honour of Columbus. The Dutch seized it in 1656 and it was surrendered to Britain in 1796. Pop. (1963) 510,947.

COLOMBO PLAN. British Commonwealth plan for co-operative economic development in S. and S.E. Asia which came into operation in 1951. The plan covers large-scale irrigation and hydro-electric schemes, technical training, an Asian nuclear centre at Manila, etc., and is not limited to Commonwealth members.

COLON. City of Panama at the northern end of

and has a greenish gloss on its plumage. Cs. feed on fish, and are proverbially voracious.

CORNCRAKE. See RAIL.

CORNEILLE (kornäy), Pierre (1606–84). French dramatist. B. at Rouen, he had his first play *Mélite* performed in 1629. It was followed by others of skilful construction, which were approved by Richelieu, and gained him an appointment as one of the 5 poets engaged to mould the cardinal's ideas for the stage (1634). But C. proved intractable and was soon dismissed.

His first important play, the tragedy *Médée* (1635), was followed in 1636 by *Le Cid*, which achieved sensational success with the public, although it was fiercely attacked by Academicians under the influence of Richelieu. After 3 years' retirement, C. returned to the cardinal's favour and a pension with *Horace* (1639), which like all his later plays was based on Aristotle's unities. Continuing his success with *Cinna* (1640), *Polyeucte*, the comedy *Le Menteur*, and *Rodogune*, he was elected to the Academy in 1647. He then encountered a run of failures, and retiring from the stage in 1652 devoted himself to translation and criticism, notably his *Discours du poème dramatique*. He returned with *Oedipe* (1659), approved by Louis XIV, and *La Toison d'or* (1661). His last great play was *Sertorius* (1662), although he continued to write until 1674. His tragedies glorify the strength of will governed by reason, and although unequal in style and construction, established the French classical drama of the next two centuries.

His younger brother Thomas Corneille (1625–1709), wrote some 40 plays, of which the most famous are *Ariane* (1672), and *Comte d'Essex* (1678).

CORNELIUS (korneh'tē-oos), Peter von (1783–1867). German painter. B. at Düsseldorf, he went to Rome in 1811, and became one of the group of German painters who founded a new school of German art, being chiefly responsible for a revival of mural painting. Later he worked in Düsseldorf, Munich, and Berlin.

CORNELIUS NEPOS (1st cent. B.C.). Roman scholar, antiquarian, and biographer. He was a friend of Cicero; of his writings only 25 biographies have survived, and these have been much altered.

CORNELL, Katharine (1898–). American actress-manager. Of great dignity, she estab. her dual reputation with her production of *The Barretts of Wimpole Street* (1931); others incl. *Romeo and Juliet* and *Candida*.

CORNET. Musical instrument. Originally the name of a family of woodwind instruments; it now refers to the *Cornet à Pistons*, which is without fixed notes, notes of different pitch being obtained by overblowing and by means of 3 pistons. It is often used as a substitute for the trumpet in brass bands.

CORNFLOUR. The purified starch content of maize (Indian corn) used in milk puddings, etc.

CORNFLOWER. A plant (*Centaurea cyanus*) belonging to the Compositae. It is distinguished from the knapweeds by its deep azure blue flowers, and is a fairly common weed in cornfields in Britain.

CORNISH. An extinct branch of the Brythonic group of the Celtic languages, spoken in Cornwall from the beginning of the 19th cent. Written C. first appears in 10th cent. glosses and similar documents. C. verse is first represented by a (dramatic?) fragment of the 14th cent. and a slightly later poem on the Passion of Our Lord. There are a number of religious plays of the 15th and 16th cents. which draw on Lat. and Eng. sources. Later C. literature is scanty, and consists of an occasional folk-tale or poem and other scraps of verse and prose.

CORN LAWS. Laws to regulate the export or import of cereals, in order to maintain an adequate supply for the consumers and a fair price for the producers. For centuries they formed an integral part

of the Mercantile System in England, and it was not until after the Napoleonic wars that they aroused any strong opposition. They were modified in 1828, again in 1842, and practically repealed by Peel in 1846, as being an unwarranted tax on food.

CORNWALL. County occupying the extreme S.W. of England and including the Scilly Is. It is surrounded by the Atlantic Ocean and the English Channel, except in the E. where it adjoins Devon. C. is renowned for its fine coastal scenery culminating in Land's End, and for its moorland stretches. Bodmin Moor rises to 1,375 ft. in Brown Willy; everywhere the co. is rugged and hilly. The main rivers are the Tamar, Fowey, Fal, and Camel. Creeks along the coast have given shelter to fishing fleets for centuries. The climate is mild and sunny, particularly in the south round Falmouth and Penzance (Cornish Riviera). Agriculture is general, and there are specialized 'pockets' for early vegetables. The Scilly Is. are famous for spring flowers. Among the rocks of C. there is considerable mineral wealth, the best-known deposits being those of tin. Exploited from the Bronze Age, they were for many years superseded by Malayan discoveries until renewed workings in the 1960s. Tungsten, lead, zinc, and silver are also mined. Kaolin occurs near St. Austell. The Cornish have been fishermen for many centuries. Tourism is important.

The co. town is Bodmin, though the administrative centre is Truro, which is also an episcopal see. Penzance and Falmouth are the principal ports; Bude, Padstow, Newquay, St. Ives, and Looe are fishing towns and holiday resorts. Launceston is a market town. Area 1,375 sq. m.; pop. (1967) 356,200.

CORNWALLIS, Charles, 1st marquess (1738–1805). British soldier, eldest son of the 1st earl C., he had a distinguished career in the army until 1781, when he and the force under his command were forced to surrender at Yorktown, thus virtually ending the War of American Independence. Subsequently he was twice Governor-General of India, and Viceroy of Ireland, and was made a marquess in 1793.

CORNWELL, John Travers (1900–16). British naval hero. Joining the Navy in 1915, he was rated as a 'boy' and won the V.C. for his gallant conduct on the *Chester* at the battle of Jutland. He was mortally wounded in the action.

COROMANDEL. The east coast of Madras, India.

CORONATION. The ceremony of investing a king with the emblems of royalty, as a symbol of his inauguration in office. The British C. ceremony combines the Hebrew rite of anointing, with customs of Germanic origin, e.g. the actual crowning and the presentation of the king to his subjects to receive homage. Its main features are the presentation to the people; the administration of the oath; the presentation

Coronation chair and 'stone of destiny' in Westminster Abbey.

tion of the Bible; the anointing of the sovereign with holy oil on hands, breast, and head; the presentation of the spurs and the sword of state, the emblems of knighthood; the presentation of the armills, robe royal, the orb, the ring, the sceptre with the cross, and the rod with the dove; the coronation with St. Edward's Crown; the benediction; the enthroning; and the homage of the princes of the blood and the peerage. A queen consort is anointed on the head, presented with a ring, crowned, and finally presented with the sceptre and the ivory rod. Since the

reflection for light at the long-wave end. Colours vary in brightness or luminosity, in hue, and in saturation – i.e. in the extent to which they are admixed with white.

COLOUR BLINDNESS. An incurable defect of vision which reduces the ability to discriminate one colour from another. In the most common types confusion among the red-yellow-green range of colours is very prevalent – e.g. many colour-blind observers are unable to distinguish red from yellow or yellow from green. The cause of congenital C.B. is not known, although it probably arises from some defect in the retinal receptors. Toxic conditions caused by excessive smoking, lead poisoning, etc., can lead to C.B. Statistics show that from 2 to 6 per cent of males suffer from the defect, but among women the number of cases is under 1 per cent.

COLOURS, Military. Flags or standards carried by regiments, so called because of the various combinations of colours employed to distinguish one regiment from another. Each battalion carries the Sovereign's colour – i.e. a Union Jack on a blue ground – and the regimental colour which bears the title, crest, and motto of the regiment with the names of battle honours. Rifle regiments do not carry colours.

COLT, Samuel (1814–62). American inventor of the revolver named after him (1835). At Hartford, Conn., his birthplace, he built up an immense arms-manufacturing business.

COLT'S FOOT. A plant (*Tussilago farfara*) of the family Compositae, common in Britain and growing on damp, heavy clay soils. Its bright yellow flowers somewhat resemble a dandelion.

COLUGO (*Galeopithecus*), sometimes called the flying lemur. An animal forming a special order of mammals, the Dermoptera; they are not related to the true lemurs. Cs. are about the size of a small cat, are chiefly vegetarian in diet, live in trees, and are active at night, sleeping during the day. They cling to the underside of branches with their sharp claws and cannot actually fly, but use an extensive flying-membrane to glide from branch to branch. The typical species is the flying lemur (*Galeopithecus volans*) from the forests of the Philippines.

COLUM, Padraic (1881–). Irish writer. He was associated with the foundation of the Abbey Theatre, Dublin, where his best-known plays *Land* (1905), *Fiddler's House*, and *Thomas Muskerry*, were performed. His *Collected Poems* (1932) show a homely lyric gift.

COLUMBA (521–97). Latin form of Colum or Colum-cille ('C. of the cell'). Irish saint and apostle of Scotland. B. in co. Donegal of royal descent, he founded monasteries and churches in Ireland. In 563 he sailed with 12 companions to Iona, and built there the monastery famous in the history of the conversion of Britain. He crowned king Aidan. In 1958 his cell, with the broad slab of rock on which he slept, was discovered.

COLUMBAN (543–615). Irish saint. B. in Leinster, he studied at Bangor, and c. 585 went to the Vosges with 12 other monks and founded the monastery of Luxeuil. Later he preached to the barbarians in Switzerland, then went to Italy, where he built the abbey of Bobbio in the Apennines.

COLUMBIA. River in western N. America, famous for salmon. It rises in B.C., Canada, and flows through Washington state, U.S.A., to the Pacific below Astoria. It is harnessed for irrigation and power by the Grand Coulee and other great dams.

COLUMBIA. U.S. city, cap. of S. Carolina, on the Congaree river. A distributing centre and seat of S. Carolina university, it makes textiles, fertilizers, hosiery, etc. Pop. (1960) 97,433.

COLUMBIA, District of. Seat of the federal govt. of the U.S.A. It is coterminous with the capital, Washington (q.v.).

COLUMBIFORMES. Order of birds including the various forms known as pigeons and doves (family Columbidae) together with the extinct dodo and solitaire (family Raphidae). The sand-grouse (Pteroclididae) are often added as a 3rd family.

COLUMBINE (kol'umbin). A plant (*Aquilegia vulgaris*) belonging to the Ranunculaceae. It is a perennial herb, with deeply divided leaves, and purple flowers with spurred petals. It grows wild in woods and is a familiar garden plant.

COLUMBIUM. See Niobium.

COLUMBUS, Christopher (1451–1506). Discoverer of America. B. at Genoa, he went to sea at an early age, and in 1478 settled in Portugal. Having come to the conclusion that Asia could be reached by sailing westward, he sought for many years for a patron to finance such a voyage. After many delays he won the support of the king of Spain, and on 3 Aug. 1492 sailed from Palos with 3 small ships. On 12 Oct. land was sighted (probably Watling Island), and within a few weeks Cuba and Haiti were also discovered. On his return to Spain in March 1493, C. was loaded with honours. During his 2nd voyage (1493–6) he discovered Guadalupe, Montserrat, Antigua, Porto Rico and Jamaica. In 1498 he discovered Trinidad, and sighted the mainland of S. America for the first time. He now became involved in quarrels among the colonists sent to Haiti, and in 1500 the governor sent him back to Spain in chains. Released and compensated by the king, he made his last voyage in 1502–4, during which he explored the coast of Honduras and Nicaragua in the hope of finding a strait leading to India. He d. in poverty in Valladolid, and lies buried in Seville cathedral. In many states of the U.S.A. *Columbus Day* (12 October) is a public holiday. In 1968 the site of the wreck of his flagship, *Santa Maria*, sunk off Hispaniola 25 Dec. 1492, was thought to have been located.

COLUMBUS. Capital city of Ohio, U.S.A., on the rivers Scioto and Olentangy. It is the seat of the state univ., is near a coalfield and natural gas sources, and has diverse manufactures. Pop. (1960) 471,316.

COLUMN. In architecture, a structure, round or polygonal in plan, erected vertically as a support for some part of a building. Cretan paintings reveal the existence of wooden Cs. in Aegean architecture, about 1500 B.C. The Hittites, Assyrians, and Egyptians also used wooden Cs., and in modern times they are a great feature in the monumental architecture of China and Japan. In classic architecture there are 3 principal types of Cs., viz. *Doric* which is a tapering shaft with a simple capital consisting of an echinus and abacus, and no base; the *Ionic* which is more slender than the Doric, its most distinctive feature being the capital which has 2 large volutes in the front and 2 at the back; and the *Corinthian* which is similar to the Ionic, but has a capital ornamented with conventional acanthus leaves. See ORDER.

COLWYN BAY. Seaside holiday resort (bor.) in Denbighshire, N. Wales. Pop. (1961) 23,090.

COMA (kō'ma). In medicine, a state of complete unconsciousness from which the subject cannot be roused even by powerful stimuli; and in optics one of the geometrical aberrations of a lens, whereby skew rays from a point object make a comet-shaped spot on the image plane instead of meeting at a point, hence the name.

COMBE (koom), William (1741–1823). Author of the *Tour of Dr. Syntax in Search of the Picturesque*, 1809–11. Written in doggerel verse, it owed its success largely to Rowlandson's illustrations.

COMBINATION ACTS. Laws passed in Britain in 1799 and 1800 making trade unionism illegal. Their introduction was the result of the anti Jacobin panic following the French Revolution, and the fear that the unions would become centres of political agitation. The unions continued to exist, but claimed to be

forests and pine woods. Sheep are kept on the highland pastures, while on the coastlands wheat, vines, tobacco, olives, and fruits are grown. Fishing is important, marble is quarried; there is little industry.

The Corsican is renowned for his pride and dignity, his hospitality towards visitors, and formerly was famed for the relentless nature of the vendetta, or blood feud. The chief town and port is Ajaccio; other towns are Bastia, Bonifacio, Calvi, and Corte.

The first civilized inhabitants of C. were the Phocaean of Ionia, who founded Alalia about 560 B.C. They were succeeded in turn by the Etruscans, the Carthaginians, the Romans, the Vandals, and the Arabs. In the 14th cent. C. fell to the Genoese, and in the second half of the 18th cent. Paoli led an independence movement. Genoa sold her rights to France in 1768 and French rule was eventually established. In the S.W.W. C. was occupied by the Italians 1942-3. Area 3,367 sq. m.; pop. (1962) 275,465.

CORT, Henry (1740-1800). British ironmaster. He invented the puddling process and developed the rolling mill in the manufacture of wrought iron, which were of vast importance early in the Industrial Revolution.

CORTES (kortehts'), Hernando (1485-1547). Spanish soldier. He went to the W. Indies as a young man, and in 1518 was given command of an expedition to Mexico. Landing with only 600 men, he was at first received as a god by the emperor, but was finally expelled from Mexico City by a revolt. With the aid of native allies he recaptured the city in 1521, and conquered the whole country. After ruling as governor for some years he returned to Spain, where he d., neglected by the court.

CORTISONE (Compound E). Substance discovered by T. Reichstein of Basle, Switzerland, and put to practical clinical use for rheumatoid arthritis by P. S. Hench and E. C. Kendall in the U.S.A. (all 3 shared a Nobel prize in 1950). A product of the adrenal gland, it was first synthesized from a constituent of ox-bile, and is now produced commercially from a Mexican yam and from a by-product of the sisal plant.

CORTONA. Town in Arezzo prov., Italy, one of Europe's oldest cities. It is encircled by walls built by the Etruscans and has a medieval castle, and an 11th cent. cathedral. Pop. c. 5,000.

CORTOT (kortoh'), Alfred (1877-1962). French pianist and conductor. B. in Switzerland, he trained at the Paris Conservatoire, and became an unrivalled interpreter of Chopin, whose works he edited, and Schumann.

CORUMBÁ (koroombah'). Brazilian port on the Paraguay river, long disputed between Paraguay and Brazil, the commercial centre of Mato Grosso state. Pop. (1960) 20,000.

CORUNDUM. Native aluminium oxide (Al_2O_3), occurring in cleavable masses or in pyramidal crystals. It includes the ruby and sapphire, and is next on the scale of hardness to diamond. It occurs as crystals distributed through granites, cyanites, and schists in many parts of the world.

CORUNNA (kohroon'yah). Town, cap. of C. prov., in the extreme N.W. of Spain. Its activities are for the most part based on the fisheries, but it has tobacco and match factories, sugar refineries, linen and cotton mills, etc. Nearby in 1809 was fought the battle in which Sir John Moore was killed. Pop. (1965) 185,142.

CORVETTE (korvet). Term, now obsolete, for a class of vessels in the Royal Navy, which guarded convoys, etc., during the S.W.W. The term was a revival from the days of sail.

CORVIDAE. Family of birds including the crow, magpie, chough, and jay (qq.v.).

CORVO, Baron. See **ROLFE, F. R.**

CORYPHAENA (korefē'na). Genus of ocean fishes of the mackerel family, known to sailors as dorados

or 'dolphins'. *C. hippurus*, the best-known species, is brilliant blue with golden reflections and deep blue spots. They grow to 6 ft.

COS. Fertile Greek island, one of the Dodecanese, in the Aegean Sea. It gives its name to the Cos lettuce. Area 111 sq. m.; pop. (1961) 20,000.

COSENZA. Italian town of Calabria at the junction of the Crati and the Busento. cap. of C. prov., an archiepiscopal see, and the burial place of Alaric. Pop. (1961) 77,590.

COSGRAVE, William Thomas (1880-1965). Irish statesman. B. in Dublin, he took part in the Easter Rebellion of 1916, and sat in the Sinn Féin cabinet of 1919-21. Head of the Free State govt. from 1922 until his defeat by De Valera in 1932, he led the Fine Gael opposition 1933-44, as did his son Liam C. (1920-) from 1965.

COSMETICS. See **BEAUTY CULTURE.**

COSMIC RADIATION. The so-called cosmic rays are not true rays, but high-speed particles (atomic nuclei) moving at tremendous velocities. The cosmic-ray primaries are relatively heavy, since the nuclei appear to have atomic weights as high as that of tin, and may well be dangerous to living matter; fortunately, the earth's atmosphere provides an effective screen, and the primaries are broken up, so that only their fragments reach the ground. The origin of C.R. is still rather uncertain. The sun is one source, but most of the cosmic rays come from beyond the Solar System. They were first studied by Millikan (qq.v.) in 1925. Their energy far exceeds that of particles from a laboratory accelerator, and they present a marginal hazard to manned space flights.

COSMONAUT (kos'monawt) Russian term for man making flights into space. See **SPACE RESEARCH.**

COSSACKS. A section of the Russian population, of mixed descent, which originally held land in return for military service. Before 1917 C. households had a larger allotment of land than that of the ordinary peasant, and in return all the men were bound to serve in the army for 20 years. Their chief pursuits are agriculture and the breeding of sheep and cattle. Their fine horsemanship is proverbial.

COSTA, Lorenzo (1460-1535). Italian painter. A member of the Bolognese school, though b. in Ferrara, he painted notable frescoes at the Bentivoglio chapel in San Giacomo Maggiore.

COST ACCOUNTANCY. A specialized branch of accountancy concerned with ascertaining the cost of production of goods or services rendered at any and every stage of their production. Its aim is the securing of the maximum productive efficiency of the undertakings. The professional bodies in the U.K. are the Institute of Cost and Works Accountants (1919) and the Cost Accountants' Association (1937) and in the U.S. the National Association of Cost Accountants.

COSSACKS. Once a name to be feared, it now suggests to audiences throughout the world the thrill of watching their fiery dances. Here a star of the Ukrainian State Cossack Company demonstrates for his delighted fellow-troopers his skill in the gopak. Photo: Novosti Press Agency, Moscow.

in 1549. The Second Prayer Book of Edward VI appeared in 1552, but was withdrawn in 1553 on Mary's accession. In 1559 the Revised Prayer Book was issued, closely resembling that of 1549. This was suppressed by parliament in 1645, but its use was restored in 1660 and a number of revisions were made. This is the Book of Common Prayer still officially authorized, but a Revised Book was approved by the Church Assembly in 1927. This was twice rejected by the House of Commons, but in 1968 the Prayer Book (Alternative and other Services) Measure received the royal assent and opened the way for certain alternative services to be used.

COMMONS. Unenclosed wastes and pastures used in common by the inhabitants of a parish or district or the community at large. It is a popular misconception that a C. belongs to 'the public' and that therefore anyone may use it as he pleases. Cs. originated in the manorial system. In every manor there was a large area of unenclosed and uncultivated land over which the freeholders and copyholders had the right to take or use what the soil naturally produced.

COMMONS, House of. See PARLIAMENT.

COMMONWEALTH CONFERENCE. Popular name for a meeting between the Prime Ministers (or Defence, Finance, Foreign or other Mins.) of the sovereign independent members of the Commonwealth. Colonial Cs. had been instituted in 1887, also meeting in 1894, 1897 and 1902. The 1907 Conference resolved that Imperial Cs. be held every 4 years, and these met regularly till 1937 (the most notable being in 1926 which defined the relationship of the self-governing members of the Commonwealth). From 1937 the tendency was towards the present more informal discussions now known as C.Cs., but although these are purely consultative, the implementation of policies being decided by individual govts., results may be far-reaching. The condemnation of S. Africa's racial policy at the 1961 C. P.M.s C. led to her withdrawal from the Commonwealth.

COMMONWEALTH DAY. Celebrated on the official birthday of Elizabeth II, it was called Empire Day till 1958 and celebrated on 24 May (Qu. Victoria's birthday) till 1966. Its commemoration was advocated by Lord Meath to promote citizenship and knowledge of the Empire in schools, and the day was officially recognized by Canada in 1901, Australia and India in 1905, New Zealand in 1910 and the U.K. in 1916.

COMMONWEALTH DEVELOPMENT CORPORATION. An organization founded as the Colonial D.C. in 1948 to aid the development of dependent Commonwealth territories; the change of name and extension of its activities to include those now independent were announced in 1962. It works in close co-operation with the govts. concerned.

COMMONWEALTH INSTITUTE. The major centre in the U.K. for information about the Commonwealth and its dependent territories, founded in 1887. It operates under the Min. of Education and Science, but is in effect independent and non-political, all the C. govts. contributing to its finances. The permanent galleries are in Kensington High St., see illus. p. 171.

COMMONWEALTH (RELATIONS) OFFICE. Govt. dept. formed in 1947 in succession to the Dominions Office to maintain relations between H.M. govt. in the U.K. and the govts. of the independent members of the Commonwealth. In 1966 the Colonial Office (q.v.) was merged with it, the word 'Relations' being dropped, and amalgamation with the Foreign Office as the Foreign and Commonwealth Office followed in 1968.

COMMUNE OF PARIS. The revolutionary govts. set up in Paris in 1789-94 and 1871. The former, a purely municipal govt. set up after the storming of the Bastille, played a prominent part in the French Revolution until the fall of Robespierre. The latter, a pro-

visional govt. of Socialist and left-wing Republicans, was elected in March 1871 after an attempt by the right-wing National Assembly at Versailles to disarm the Paris National Guard, and held power until May, when the Versailles troops captured Paris and massacred at least 20,000 people. It is famous as the 1st socialist govt. in history.

COMMUNICATIONS SATELLITE CORPORATION. Estab. by Pres. Kennedy in 1963 to provide satellites and ground facilities for international transmission of telephone, telegraph, television and other communications: 1st pres. Joseph V. Charyk.

COMMUNISM. The revolutionary socialist movement basing its theory and practice on the teachings of Marx (q.v.). The first organization of those sharing this outlook was the Communist League, for which Marx and Engels wrote the *Communist Manifesto* (1848), setting out the general theory of C. According to this, human society has passed through successive stages - primitive society, slavery, feudalism and capitalism; that each phase was at first progressive, but later became a drag upon human progress and had to be superseded by a higher phase, through the taking of power by a new class which represented the new social system. Capitalism, progressive in its early stages, appears as a barrier to progress in its monopoly stage, so that in order for mankind to advance the working class must take power, end the capitalist system of production for private profit, and build a socialist society based on common ownership of the means of production and a planned economy.

The Social Democratic parties formed in Europe in the 2nd half of last century professed to be Marxist, but their outlook gradually became 'reformist' - aiming at reforms of capitalist society rather than at the radical social change envisaged by Marx. The Russian Social Democratic Labour Party, however, led by Lenin, remained Marxist, and led the Russian workers in the November 1917 revolution, and in the subsequent building up in the Soviet Union of a socialist society on Marxist principles. It changed its name to 'Communist Party' to emphasize its difference from Social Democratic parties elsewhere. Revolutionary socialist parties and groups united to form Communist Parties in other countries (in Britain in 1920), and China, at first under Russian tutelage, swiftly emerged after the S.W.W. as a rival to the Soviet Union in world leadership. Both took strong measures to maintain or establish their own types of 'orthodox' C. in countries on their borders (U.S.S.R. in Hungary and Czechoslovakia, qq.v.) and China in Korea and Vietnam (qq.v.), and in more remote areas (U.S.S.R. in the Arab world and Cuba, and China in Albania); and both of them in the newly-emergent African countries.

By the late 1960s two issues were dominant. *Firstly*, whether the state requires to be maintained as 'the dictatorship of the proletariat' once revolution on the economic front has been achieved (so that classes may also be abolished beyond revival on the political, ideological, cultural and traditional fronts), or whether it may then become the state of the entire people: Engels, Lenin, Khrushchev, and Liu Shao-chi held the latter view, and Stalin and Mao Tse-tung the former. *See CHINA, History.* *Secondly*, the thesis maintained by Brezhnev in a Warsaw speech of 1968, that the Soviet Union was entitled to intervene militarily (as in Czechoslovakia) in any socialist country in which there was a threat of the restoration of capitalism: he was supported by Bulgaria, E. Germany, Hungary and Poland, condemned by Albania, China, West Germany, Rumania, Yugoslavia, and the British, French and Italian Communist Parties.

In the U.S.A. under the Internal Security Act of 1950 (known as the MacCarran Act: see MACCARRAN, PATRICK) all Communist organisations were required to register with the Attorney General

COTTON. Each shrub produces some 20 flowers (left). The petals fall after only 3 days, leaving small green pods with 30–40 seeds in each, and every seed has soft downy hairs like those of dandelion clocks. After 2 months the swollen pods open (right), revealing the cotton. Courtesy of The Cotton Board, Manchester.

with regard to quantity, though not necessarily quality, are the U.S.S.R., China, India and Pakistan, Egypt and the Sudan, Brazil, Mexico, Peru, Tanganyika, Uganda and Kenya. See illus. under ALABAMA.

The staple length of *C.* varies quite considerably, ranging from short staple *C.* (about 1½ in.) to long staple (up to 2½ in.). Classification is by growth (country of origin), grade, and staple and 'character'. The grade depends on the colour, the amount of trash and foreign impurities present, and the quality of the ginning (the first process *C.* goes through to remove seeds, etc.). Character is judged by fibre strength, fibre fineness, the degree of uniformity in diameter and twist, and the ability of the fibres to hold or cling together.

C. may be classified in the country of origin and in the country of importation, and a certain amount is done in Liverpool. The *C.* industry in Britain grew up in Lancashire and remains there. Its varied products range from apparel fabrics and household and surgical textiles to industrial fabrics and Service equipment. In recent years increasing competition, both from cheap imports produced by the developing countries and from man-made fibres, has stimulated new developments in machinery, and in new processes and finishes, as well as combination of *C.* with synthetics. The Shirley Institute has a world-wide reputation for fundamental and applied research in *C.*, silk, and man-made fibres.

COTTON SEED. A by-product of *C.* cultivation from which can be extracted a reddish oil containing glycerides of palmitic, oleic, stearic and linolic acids. Refined, it turns yellow and is used in the manufacture of edible products such as cooking fats, margarine and salad oils. Other derivatives are soaps, tars, paints, chemicals, etc. The *C.* cake is used as cattle food and as a fertilizer, since it contains nitrogen, phosphates and potash. Cotton seed flour blended with wheat flour is used by bakers and confectioners and the hard covering of the kernel is used for making insulating materials and fertilizers.

COTY (koh'ti), René (1882–1962). French statesman. Of Norman stock, he studied law, entered Parliament in 1923 and in 1948 was elected to the Senate. He was last President of the 4th Republic (1953–9), being elected on the 13th ballot (the longest election in the history of the rep.), and was succeeded by de Gaulle.

COUCH GRASS. A plant (*Agropyron repens*), one of the commonest of the grasses (Gramineae). It is closely allied to wheat, but is generally regarded as an undesirable weed.

COUDENHOVE-KALERGI, Richard Nicolaus, count (1894–). Austrian writer. Founder-president in 1923 of the Pan-European Union, he has pub. many books advocating a federal Europe.

COUË (koo-eh'), Emile (1857–1926). French psychological healer, famous for his slogan, 'Every day, and in every way, I am becoming better and better'. 'Couëism' reached the height of its popularity in the 1920s.

COULOMB (koolon'), Charles Auguste de (1736–1806). French scientist, inventor of the torsion balance for measuring the force of electric and magnetic attraction. The name *coulomb* was given to the practical unit of quantity of electricity – the quantity conveyed by a current of one ampère in a second.

COUNCIL. In English local government, a popularly elected local assembly charged with the good government of the area within its boundaries, e.g. county C., city C., borough C., urban district C., rural district C., parish C. All members of the district and parish Cs. are styled councillors, but counties, cities, and boroughs have aldermen in addition. Councillors are directly elected, and sit usually for 3 years: aldermen are elected by the councillors from among their number. See COUNTY COUNCIL, etc.

COUNCIL FOR MUTUAL ECONOMIC ASSISTANCE (COMECON). Organization established in 1948 as the East European equivalent of the Marshall Plan. Members are Bulgaria, Czechoslovakia, German Democratic Republic, Hungary, Mongolia, Poland, Rumania, Soviet Union. In addition to fostering trade and industrial growth among themselves, they aim at expanding trade with 'capitalist' countries.

COUNCIL OF EUROPE. Body constituted in 1949 to secure 'a greater measure of unity between the European countries'. The first session of the Consultative Assembly opened at Strasbourg in August 1949, the members then being Great Britain, France, Italy, Belgium, the Netherlands, Sweden, Denmark, Norway, the Repub. of Ireland, Luxemburg, Greece, and Turkey; Iceland, W. Germany, Austria, Cyprus, Switzerland, and Malta joined subsequently. The Assembly operates through 12 general committees; a standing committee preserves its existence between sessions. Its seat is Strasbourg, France, where a chamber was constructed for it and opened in 1950.

COUNTER-ESPIONAGE. See SECRET SERVICE.

COUNTERFEITING. The production of fraudulent imitations, particularly of money. The problem is increased today by the rapidity with which large sums, produced by modern printing and photographic techniques, can be distributed over great distances. In the U.S.A. the Secret Service seizes some 510,000,000 of counterfeit notes annually.

COUNTERPOINT. In music, the combination of melodies to form an artistic and satisfying musical texture. Derived from the Lat. *punctus contra punctum*, 'note against note', it originated in Plainsong where 2 vocal lines, independent but sung simultaneously, produced a certain texture. The greatest period for *C.* was the 16th century.

COUNTLESS OF HUNTINGDON'S CONNEXION. A Nonconformist denomination in England, founded by Selina, countess of Huntingdon, in the middle of the 18th cent. Calvinistic Methodist in theology, most of its 37 chapels are affiliated with the Congregational Union.

COUNTRY DANCING. See FOLK DANCING.

COUNTY. In Britain, an administrative unit, nowadays synonymous with 'shire', although historically the two had different origins. Many of the English cos. can be traced back to Saxon times, but a number have proved either too large or too small for modern administrative purposes, and others have cut across the lines of new development. Consequently there have been numerous modifications in recent years, by subdivision, amalgamation, and adjustment of boundaries, and by 1969 there were 46 administrative counties. Wales has 13, which it has been proposed to reduce by amalgamation to five. Scotland has 33

COMPUTER. A bronze computer (left), the earliest known, made c. 30 B.C. and recovered from the wreck of an ancient Greek ship off the Mediterranean island of Antikythera in 1953; and (right) girl operators of the giant Ferranti Atlas computer at Manchester University, of which only a fraction can be seen. Courtesy of Derek Price and Maurice Broomfield.

writer or line printer. Digital Cs. are in very wide use for scientific and business purposes, and modern machines can perform up to 1,000,000 operations per second.

COMSTOCK, Anthony (1844–1915). American agitator. B. in Conn., he served in the Civil War, founded in 1873 the New York Society for the Suppression of Vice, and crusaded against what he regarded as improper literature and indecent pictures.

COMTE (kōnt), **Auguste** (1798–1857). French philosopher, founder of Positivism or the Religion of Humanity. B. at Montpellier, he studied at the Paris École Polytechnique, being expelled for leading a student revolt in 1816, and began teaching mathematics in Paris. In 1818 he became secretary to Saint-Simon and was much influenced by him. He began lecturing on the 'Positive Philosophy' in 1826, but was almost immediately attacked by a nervous disorder and once tried to commit suicide in the Seine. On his recovery he resumed his lectures and mathematical teaching. His first great work, the *Cours de Philosophie Positive*, was pub. in 6 vols., 1830–42. In 1848 he founded the Positivist Society, out of which grew the Positivist Church, which secured members not only in France but in Brazil and England. His 2nd work of importance was the *Système de Politique Positive* (4 vols., 1851–4). For many years C. was in correspondence with J. S. Mill, who was the means of securing financial assistance from English sympathizers to enable him to carry on his work. C. d. of cancer and was buried in Père La Chaise cemetery in Paris. See **POSITIVISM**.

CONAKRY (kō'nakri). Cap. and chief port of Rep. of Guinea, linked by rail with Kankan. Bauxite and iron ore are mined nearby. Pop. (1964) 120,000.

CO'NANT, James Bryant (1893–). American educationist. Pres. of Harvard univ. 1933–53, he is celebrated for his studies of the American educational system.

CONCENTRATION CAMPS. Prison camps used by the Nazis for the detention, and later for the mass extermination, of the Jews and political opponents. In 1939 some 40,000 Germans were est. to be in C.Cs. and over 200,000 had previously passed through them. During the S.W.W. the numbers of inmates were swollen by many millions of Jews and political suspects from occupied Europe, and when Germany was overrun the Allies found 80,000 prisoners at Buchenwald, 30,000 at Belsen, 32,000 at Dachau, 16,000 at Mauthausen and 16,000 at Ebensee – all near to starvation and many diseased. At the Polish camps conditions were even worse: at Oswiecim the total number sent

to the gas-chambers exceeded 4 million and medical experiments were carried out on living persons, and at Maidanek c. 1½ million people were exterminated, cremated, and their ashes used as fertilizers. Many camp officials and others responsible were executed by the Allies as war criminals. See **EICHMANN**.

CONCEPCIÓN (kontheptē-on'). City of Chile, capital of the province of C., near the mouth of the Bió-Biío in a rich agricultural district. Nearby are a coalfield and a large steel plant. Pop. (1966) 158,941.

CONCERTINA (konsertē'na). A wind musical instrument with free reeds consisting of 2 keyboards connected by expansible and folding bellows. It is played by compressing and expanding the bellows while at the same time pressing the knobs on the keyboard. By these means air is admitted to the reeds, which are set in vibration. The English C., or melodion, was invented by Wheatstone (q.v.) in 1829.

CONCERTO (konchār'tō). Composition, usually in 3 movements, for solo instrument or instruments and orchestra. Corelli and Torelli were early composers in the form, and Mozart wrote some 50 Cs. for various instruments. Modern C. composers incl. Schoenberg, Berg and Bartók, who have developed it along new lines.

CONCLAVE. Literally, a room locked with a key. Usually the word refers to the papal C. which is held in Rome immediately following the funeral of a pope. Wooden cells are erected inside the Vatican Palace near the Sistine Chapel, one for each cardinal, who is accompanied by his secretary and a servant, and all are sworn to secrecy on the deliberations. This section of the palace is then locked and no communication with the outside world is allowed until a new pope is elected, the result of each ballot being announced by a smoke signal – black for an undecisive vote and white when the choice is made.

CONCORD. Town in Mass., U.S.A., on the C. river, 20 m. N.W. of Boston. Site of the first battle of the War of American Independence, 19 April 1775, it also has associations with Emerson, Thoreau, Hawthorne, Louisa Alcott and her father. Pop. (1960) 12,517.

CONCORDANCE. Book containing an alphabetical list of the words in some important work with reference to the places in which they occur. The first C. was one prepared to the Vulgate by a Dominican in the 13th cent. The first to the English N.T. was pub. in 1535, and to the whole Bible in 1550. The most famous C. is A. Cruden's (1737), of which many editions have appeared. There are also C.s to Shakespeare, Milton, etc.

CONCORDAT. An agreement between the Pope

COVENTRY The new cathedral, consecrated in 1962, replaced the 14th cent. building destroyed in the air raids of 1940-1. Behind the High Altar is the world's largest tapestry, 'Christ in Majesty', designed by Graham Sutherland; measuring 75 ft. by 40 ft. it weighs nearly a ton and was woven at Felletin, in France. To the right and left may be seen some of the 8 stone mural panels, by Ralph Beyer.

Photo: P. W. & L. Thompson, Coventry.

Maurice (1907-). French diplomat. Holding a post in the Finance Ministry in 1940, he escaped in 1942 to the Free French in N. Africa, and was ambassador to the U.S. 1955-6, and W. Germany 1956-8. Always in close harmony with de Gaulle, he was appointed For. Min. on the latter's return to office in 1958 and became P.M. in 1968.

COVENANTERS. The Presbyterian adherents of the National Covenant in 17th cent. Scotland. The National Covenant was occasioned by Charles I's attempt in 1637 to introduce a liturgy on the English model into Scotland. The Presbyterians revived the covenant drawn up by John Craig in 1581, swearing to uphold Presbyterianism, and added an appendix condemning recent innovations. This document was signed at Greyfriars' church, Edinburgh, on 28 Feb. 1638 and a general assembly abolished episcopacy. In 1643 the Cs. signed with the English parliament the *Solemn League and Covenant*, whereby they promised military aid in return for the establishment of Presbyterianism in England, and a Scottish army entered England and fought at Marston Moor.

At the Restoration Charles II revived episcopacy in Scotland, and ministers who resisted the change were evicted. Conventicles began to be held, and those who attended them were savagely persecuted. Rebellions followed in 1666, 1679, and 1685, and led to the intensification of persecution, but Presbyterianism was restored as the national religion of Scotland after the revolution of 1688.

COVENTRY (kuv'entri). City (co. bor.) in Warwickshire, England, on the r. Sherbourne, 18 m. E.S.E. of Birmingham. A priory was founded in 1043 by Leofric, earl of Mercia, whose wife was Lady Godiva (q.v.). C. was a centre of woollen and cloth manufacture to c. 1700; ribbons, silks, and cottons are still made. C.'s great engineering industry began with the manufacture of bicycles in 1870; it produces motor-cars, aeroplanes, bicycles, radio and electrical equipment, etc.

C., sometimes called the 'City of Three Steeples', was one of the most heavily bombed British cities in the S.W.W. The cathedral, built 1373-95 on the site of an earlier building, was destroyed in the air raid of 14 Nov. 1940, but its 303-ft.-high steeple survived and was incorporated in the plan of the new cathedral, prepared by (Sir) Basil Spence; permission to rebuild was given in 1952, and Elizabeth II laid the foundation stone in 1956. During the war, Christ Church also was demolished, though the 14th cent. spire remains.

Trinity Church (17th cent.), with the 3rd of the spires, was only slightly damaged. St. Mary's hall was built in 1394-1414 as a guild centre; of the old walls (1356) 2 gates remain. The Belgrade Theatre, a civic project, dates from 1958. Pop. (1961) 305,060.

COVERDALE, Miles (1488-1569). Translator of the Bible into English. B. in Yorks, he became a Catholic priest, but turned to Protestantism and in 1528 went abroad to avoid persecution. His translation of the Bible appeared in 1535 and was dedicated to Henry VIII - the first complete translation of the Bible to be printed in English. His translation of the psalms is that retained in the Book of Common Prayer. In 1539 he ed. the Great Bible which was ordered to be placed in churches. After some years in Germany, he returned to England in 1548, and in 1551 was made bishop of Exeter. Under Mary he again left the country, but in the early part of Elizabeth's reign he held the living of St. Magnus near London Bridge.

COWARD, Noël (1899-). British man-of-the-theatre. He first appeared on the stage in 1910, and estab. himself as a dramatist with *The Young Idea* (1921), going on to consolidate his reputation in the '20s and '30s with the sharp sophistication of *The Vortex* (1924); the brilliant comedy *Hay Fever* (1925); the revue *This Year of Grace* (1928); the operetta *Bitter Sweet* (1929); *Private Lives* (1930), which gave a great role to Gertrude Lawrence; and the sentimental *Cavalcade* (1931). Besides stage appearances in his own plays, etc., he acted in the film *In Which We Serve* (1942), which he also scripted, and wrote scripts for films of his later plays, *Blithe Spirit* (1941), a venture in spiritualism, and *This Happy Breed* (1942); and for the subtle *Brief Encounter* (1945).

COWES (kowz). Seaport and resort (U.D.) on the N. coast of the Isle of Wight, on the Medina estuary, opposite Southampton Water. It is the H.Q. of the Royal Yacht Squadron which holds the annual Cowes Regatta, and has maritime industries. In East C. is Osborne House (q.v.), used as a museum. Pop. (1961) 16,974.

COWLEY, Abraham (1618-67). British poet. Joining King Charles at Oxford in 1644, he fled to France after Marston Moor, and was employed in Royalist intrigues. He returned to England in 1655, and although arrested was released on bail, and in 1656 pub. his collected works, including the epic *Davidis*, 'The Mistress', 'Pindaric Odes', and 'Miscellanies'. Highly valued in his own day, his fondness for 'conceits' now makes him unreadable except in his lighter pieces and unstudied essays.

COWLEY FATHERS. Name given to senior members of the Society of St. John the Evangelist, a monastic order within the C. of E. founded by Richard Meux Benson (1824-1915); junior members are referred to as C. Brothers. Members take the vows of poverty, chastity, and obedience, and engage in evangelical and religious social work. The headquarters are at Cowley St. John, near Oxford.

WILLIAM COWPER

By George Romney.

COWPER (koo'per), William (1731-1800). British poet. B. in Herts, he was called to the Bar in 1754, but suffered from intense melancholic depression, which in 1763 was aggravated to madness. While in a St. Albans asylum he underwent a great religious experience, and on his recovery in 1765 settled in Huntingdon with Mr. and Mrs. Unwin. On the death of the former, C. and Mrs. Unwin removed to Olney,

principal ingredient and comprising 2 main classes, (a) sweetmeats and (b) cakes and pastries.

Prior to the 19th cent., sweet manufacture was carried out by apothecaries, who produced sweetmeats to mask the taste of their drugs, and by the chefs attached to the courts of kings and nobles. The manufacture of sugar-coated nuts, etc., known as *dragées*, is said to have been introduced by a Roman, Julius Dragatus, about 177 b.c. Bon-bons were first made in France in the 13th cent., pastilles in the 15th, and fondants in the 17th cent. The great present-day volume of manufacture is due to the introduction of automatic and semi-automatic machines about the middle of the 19th cent.

CONFEDERATION OF BRITISH INDUSTRY. Organization estab. in 1965, combining the former Federation of British Industries (founded 1916), British Employers' Confederation, and National Association of British Manufacturers. The unified body voices general policy on economic, fiscal, commercial, labour, social and technical questions, and increased efficiency.

CONFESSION. The C. of sins originated with the Jews, and both John the Baptist's converts and the early Church practised public C. The Lateran Council of 1215 made auricular confession (the accusation by the penitent of himself of his sins to a priest who in Catholic doctrine is divinely invested with authority to give him absolution) obligatory once a year. Auricular C. is practised in Roman Catholic, Orthodox and most Oriental Churches and since the early 19th cent. has been revived in Anglican and Lutheran Churches.

CONFIRMATION. Rite by which a previously baptized person is admitted to full membership of the Christian Church. It consists in the laying on of hands by a bishop, in order that the confirmed person may receive the gift of the Holy Spirit. Among Anglicans, the rite is deferred until the child is able to learn a catechism containing the fundamentals of Christian doctrine, and an unconfirmed person is not usually allowed to receive Holy Communion.

CONFUCIANISM. The body of beliefs and practices that are based on the Chinese classics and are supported by the authority of Confucius, although he himself maintained that he was a transmitter rather than a creator. For some 2,500 years C. has been the religion of the great masses of Chinese.

The scriptures of C. are the 5 Chinese classics or canonical books, viz. the *Shu King*, or book of historical documents; the *Shih King*, or ancient poems; the *Li Ki*, or book of rites and ancient ceremonies and institutions; the *Yi King*, or book of changes; and the *Annals of Lu*, otherwise known as *Spring and Autumn*. Only the last may be attributed with any confidence to Confucius's authorship, but the material in the other books may owe something to his editing.

From these scriptures the Chinese in countless generations have derived their ideas of cosmology, political government, social organization, and individual conduct. The origin of things is seen in the union of Yin and Yang, the negative and positive principles. Human relationships follow the patriarchal pattern; until 1912 the emperor was regarded as the father of his people, appointed by heaven to rule. The Superior Man was the ideal human, filial piety was the virtue of virtues, and in general human relationships were to be regulated by the Golden Rule.

CONDOR

Accompanying this lofty morality is a kind of ancestor worship. Under the emperor, sacrifices were offered to heaven and earth, the heavenly bodies, the imperial ancestors, various nature gods, and Confucius himself. These were abolished at the Revolution in 1912, but ancestor worship (better expressed as reverence and remembrance) remained a regular practice in the home. Even under the modern régime C. has shown itself capable of continuing and even expanding in a nominally democratic world.

CONFUCIUS (c. 550–478 b.c.). Latinized form of K'ung Fu-tzu (K'ung the master), the Chinese sage whose name is given to Confucianism (q.v.). He was b. in Lu, a small state in what is now the province of Shantung, and his early years were spent in poverty. At 15 his mind was 'set on learning'. At 19 he m., and about this time he was a minor official. Very early he began his career as a teacher, and gradually attracted a number of disciples on whose voluntary contributions he made a meagre living. In 517 there was an uprising in Lu, and C. spent the next year or two in the adjoining state of Ch'i, where the ruler treated him with marked respect. On his return he held aloof from public life until he was nearly 50, when he accepted the governorship of a small town and distinguished himself in the suppression of crime and in the promotion of morality. Then for 14 years he wandered from state to state accompanied by a handful of disciples. At last he returned to Lu and devoted himself to the revision of the ancient Chinese scriptures, some parts of which have been attributed, though on slight evidence, to his pen. At his death he was buried with great pomp, and his grave outside Kufow has remained ever since a centre of devout pilgrimage.

CONGER. See EELS.

CONGO. Second-longest river in Africa, and one of the longest in the world. It is more than 3,000 m. in length, draining an area of 1,425,000 sq. m.; at its mouth it is 7 m. wide. Its remotest headstream is the Chambezi, which rises between lakes Nyasa and Tanganyika. The Upper C. sweeps over the Stanley Falls, a few miles N. of the equator. Below the cataracts the Middle C. is navigable for 1,000 m. to Stanley Pool. This section forms a great arch towards the N., the main tributaries being the Lomami, Aruwimi, Chuapa, Ubangi, and Kasai. Below the Ubangi cliffs reduce the C. from 8 to 1 m. wide, and navigation is interrupted by a series of cataracts S. of Stanley Pool. Below the rapids, at Matadi, begins the 95 m.-long estuary which is navigable for ocean-going ships. The mouth of the river is continued 100 m. out to sea in a deep canyon on the continental shelf. Léopoldville and Brazzaville stand on the C. near Stanley Pool; Boma is a large port on the estuary.

The mouth of the C. was discovered by Diogo

CONGO. Close collaboration between a doctor of the Swiss Red Cross and a Congolese auxiliary at Léopoldville. Courtesy of WHO.

and was assisted by Burke in furthering his literary career. In 1781 he took orders and pub. his first poem *The Library*, which was followed by *The Village* (1783), *The Parish Register* (1807), *The Borough* (1810), *Tales* (1812), and *Tales of the Hall* (1819). In 1782 C. became chaplain to the duke of Rutland, and in 1814 settled as vicar of Trowbridge. Reacting against the romantic idealized conception of country life, he dealt realistically with the agricultural poor.

CRACOW. Alternative form of **KRAKOW**.

CRAIG, Edward Gordon (1872–1966). British theatrical producer, actor, dramatist and writer. The son of Ellen Terry, he went on the stage at 6, and joined Irving's company in 1889. His first stage production, Purcell's *Dido and Aeneas* (1900), introduced new effects in staging and lighting. His sister, Edith C. (1869–1947), was also a stage designer and producer, and his son, Edward Anthony C. (1905–), working under the name Edward Carrick, is an artist and film and theatre designer.

CRAIGAVON (krāgav'on), James Craig, 1st visct. C. (1871–1940). Irish Unionist statesman. B. in Co. Down, he was elected a Unionist M.P. in 1906, and when in 1914 Carson organized the Ulster Volunteers to resist by force the granting of Home Rule to Ireland, C. acted as his lieutenant. During the F.W.W. he raised the 36th (Ulster) Division. In 1921 he became the 1st Prime Minister of N. Ireland, and in 1927 was created visct.

CRAIK, Dinah Maria (1826–87). British novelist. B. at Stoke-on-Trent, the dau. of Thomas Mulock, an eccentric Irishman, she pub. *John Halifax, Gentleman* in 1857, still an English classic. In 1864 she m. G. L. Craik, partner in Macmillan's, the publishers.

CRAIOVA (krah-yoh'-vah). Rumanian town near the r. Jiu, cap. of C. region. It is an important commercial and manufacturing centre. Pop. (1966) 148,821.

CRAKE. See **RAIL**.

CRAMER (krah'mer), Johann Baptist (1771–1858). German musician. Brought to England as an infant, he founded the publishing firm of C. in 1824, and was a celebrated pianist and teacher.

CRANACH (krah'nakh), Lucas (1472–1553). German artist. B. at Kronach in Bavaria, he settled at Wittenberg in 1504 to work for the elector of Saxony. He was a close friend of Luther, whose portrait he painted several times, and his work is highly finished and gaily inventive in the use of classical themes. He produced numerous woodcuts and copperplates. His 2nd son Lucas C. the Younger (1516–86) had a similar style, and succeeded his father as director of the C. workshop.

CRANBERRY. A plant (*Vaccinium oxycoccus*) allied to the bilberry, and belonging to the heaths (Ericaceae). It is a small evergreen, growing in marshy places, and bearing small, acid, edible crimson berries.

CRANE, Hart (1899–1932). American poet. B. in Ohio, he had little education and at 15 was working in his father's sweet factory. His long heroic poem *The Bridge* (1930) lives only in parts. He drowned after jumping overboard from the steamer bringing him back to the U.S.A. after a visit to Mexico.

CRANE, Stephen (1871–1900). American writer. B. in N.J., he became a journalist, and won fame in 1895 with *Red Badge of Courage*, dealing vividly with the American Civil War.

CROWNED CRANE

and are usually migratory. They are found in all parts of the world except S. America. The common C. (*Megalornis grus*) is an occasional visitor to Britain, and is still common in many parts of Europe, and winters in Africa and India. It stands about 4 ft. high and the plumage of the adult bird is grey, varied with black and white, and a red patch of bare skin on the head and neck.

CRANE. Machine for raising, lowering, or placing in position, heavy bodies. The jib C. revolves, and an arm which juts from the base carries the load. The overhead travelling C., which is chiefly used in workshops, is mounted on rails laid on girders.

CRANE-FLY or **Daddy-Long-Legs.** Family of insects (Tipulidae), belonging to the Diptera. They have long, slender, and very fragile legs. The larvae of the typical genus (*Tipula*) are known as 'leather-jackets' and live underground, doing damage to the roots of plants, esp. grasses.

CRANE'S BILL. Plants of the genus *Geranium*, which contains about 300 species and is typical of the family Geraniaceae. They are so called because of the long, beak-like process which is attached to the seed-vessels. When ripe, this splits into spiral, coiling processes which jerk the seeds out, thus assisting in their distribution. The genus incl. 14 British species, including herb-robert (*G. robertianum*) and bloody C. (*G. sanguineum*).

CRANKO, John (1927–). British choreographer. Ed. in Capetown, where he worked with the univ. ballet, he joined Sadler's Wells in 1946 and was resident choreographer 1951–7. His authorship and production of the revue *Cranko* (1952) showed the

CRANE. Top left an overhead travelling model used in the factory to speed mass production; top right a portal crane for unloading cargo; bottom left cantilever crane essential for the new tall buildings of the modern city and bottom right the mobile crane indispensable on any building site.

CONNEMARA. Chequered by low drystone walls, sometimes enclosing no more than a few square yards of land, the countryside at Rossaveal—dotted with limewashed cottages—is a harmony of white and silver-grey.

Courtesy of the Irish Tourist Board.

trees, shrubs, or small undershrubs; the Pinaceae, including the spruce, pine, fir, larch, and cedar; the Cupressaceae, including the juniper, cypress, arbor vitae, umbrella-pine, and the gigantic *Sequoia*; and the Taxaceae, which includes the yew.

CONJUNCTIVITIS. Inflammation of the conjunctiva or membrane which covers the front of the eye.

CONKLIN, Edwin Grant (1863–1952). American biologist. B. and ed. in the state of Ohio, he was prof. of biology at Princeton (1908–33), and became known for his discoveries in embryology and in the mechanism of evolution and heredity.

CONNACHT. Province of Rep. of Ireland, consisting of the cos. of Mayo, Galway, Roscommon, Sligo, and Leitrim: area 6,611 sq. m., pop. (1966) 401,950. Mainly lowland, it is agricultural and stock-raising country with very poor land in the W. The chief rivers are the Shannon, Moy, and Suck, and there are a number of lakes. The chief towns are Galway, Roscommon, Castlebar, Sligo, and Carrick-on-Shannon. The Gaelic language has maintained itself better in C. than in the other provinces, and the C. dialect has been adopted as the standard of the national language.

CONNAUGHT AND STRATHEARN (kon'awt, strathern'), Arthur William Patrick Albert, duke of (1850–1942). 7th child and 3rd son of Queen Victoria, he was Gov.-Gen. of Canada 1911–16. He m. in 1879 Princess Louise of Prussia, and their only son, Prince Arthur of C. (1883–1938) was Gov.-Gen. of S. Africa 1920–3. The latter's wife, Alexandra (1891–1959), whom he m. in 1913, was a grand-dau. of Edward VII and Duchess of Fife in her own right.

CONNECTICUT (konet'ikut). One of the New England States of the U.S.A., bounded by the States of New York, Massachusetts, and Rhode Is., and Long Is. Sound. Most of it is plain, but there are highlands in the N.W. The chief rivers are the Connecticut, the Thames, the Naugatuck, and the Housatonic. The chief towns are Hartford (the cap.), New Haven, Bridgeport, Waterbury, and New Britain. C. is primarily an industrial state, and noted for its armament factories. Tobacco growing and dairying are important. Yale univ. at New Haven is world-famous.

Settled in 1635 by Puritan colonists from Massachusetts, C. in 1639 adopted the famous Fundamental Orders, foreshadowing in many respects the United States constitution. It was one of the original 13 states of the American union.

Area 5,009 sq. m.; pop. (1960) 2,535,234.

CONNELL, James (d. 1929). Irish socialist writer, remembered as the author of *The Red Flag*.

CO'NNELLY, Marc (1890–). American dramatist. B. in Penn., he became a reporter in Pittsburgh, and in 1930 won a Pulitzer Prize with *Green Pastures*—

banned in England because God was represented (as a venerable Negro), but a film version was shown.

CONNEMARA (konemah'rah). The western division of co. Galway, Rep. of Ireland, much visited by tourists for its wild scenery.

CONNOLLY, Cyril (1903–). English writer. As founder-editor of the literary magazine *Horizon* (1939–50), he exercised considerable critical influence. His books incl. *The Rock Pool* (1935), a novel of artists on the Riviera; *The Unquiet Grave* (1945), a vol. of essays under the pseudonym 'Palinurus'; *The Condemned Playground* (1946), parodies and satires; and *Ideas and Places* (1954), more essays.

CONNOLLY, James (1870–1916). Irish socialist and nationalist. B. in Ulster, he led, with James Larkin, the Dublin transport workers' strike of 1913, and helped to lead the Easter Rebellion of 1916, in which he was severely wounded. He was captured, court-martialled, and shot at Kilmainham gaol.

CONNOR, Ralph. Pseudonym of the Canadian writer, the Rev. Charles W. Gordon (1860–1937). A missionary to the miners and lumbermen of the Rockies (1890–3), and minister of a Presbyterian church in Winnipeg from 1894, he wrote novels drawing on this background, e.g. *The Sky Pilot* (1899).

CONQUISTADOR (konkistador'). Spanish word for 'conqueror', applied to such explorers and adventurers in the Americas as Cortes and Pizarro.

CONRAD. Name of several kings of the Germans. Conrad I (d. 918) succeeded Louis the Child, the last of the Ger. Carolingians, in 911, and during his reign the realm was harassed by Magyar invaders. Conrad II (d. 1039) reigned from 1024 and ceded the march Sleswick to Canute. Conrad III (1093–1152), the 1st king of the Hohenstaufen dynasty, was crowned at Aachen in 1138, and throughout his reign a fierce struggle between his followers, the Ghibellines, and the Guelphs, the followers of Henry the Proud, duke of Saxony and Bavaria, and his son Henry the Lion, continued. C. took part in the 2nd crusade. Conrad IV (1228–54), son of the emperor Frederick II, was elected king in 1237, and had to defend his right of succession against Henry Raspe of Thuringia and William of Holland. His son Conradin (1252–68), the last of the Hohenstaufen, was defeated and captured by Charles of Anjou at Tagliacozzo in 1268, and beheaded in Naples.

CONRAD, Joseph (1857–1924). British novelist. Of Polish parentage, he was b. Teodor Jozef Konrad Korzeniowski in the Ukraine, and was taken to Warsaw in 1861 by his father. He joined the French merchant marine in 1874, and transferred to the British service in 1878, when he first landed at Lowestoft with no knowledge of English. In 1886 he gained his master mariner's certificate and became a naturalized British subject, but retired from the sea in 1894 to write. His first novel, *Almayer's Folly*, appeared in 1895 and was followed by — among others — *An Outcast of the Islands* (1896), *The Nigger of the 'Narcissus'* (1897), *Lord Jim* (1900) and *Nostramo* (1904). Showing increasing power and mastery of technique, he not only brought home to English readers the mysteries of sea life and exotic foreign settings, but plumbed the psychological isolation of the 'outsider'. C.'s earlier period closes with the autobiographical *Mirror of the Sea* (1906). Among later books were *Under Western Eyes* (1911), with a Tsarist Russian background, *The Secret*

JOSEPH CONRAD

account of the belief in the bodily resurrection of the dead. It is practised among primitive peoples of Asia and America.

C. was revived in Italy about 1870, and shortly afterwards introduced into England. The C. Society was formed in 1874, but it was not until 1885 that C. was legalized and the first crematorium in England was opened at Woking. In 1902 an Act of Parliament was passed, amended in 1952, to regularize C., and to permit burial authorities to establish crematoria, of which there are now 175 in Great Britain.

In the U.K. an application for C. must be accompanied by 2 medical certificates. C. is usually carried out by means of gas-fired furnaces, taking about 1½ hours to complete. Cremated ashes are scattered in Gardens of Remembrance or deposited in urns at the crematorium or in private graves.

The U.K. has the highest C. rate in the world (38.7 per cent.), followed by Australia, N.Z., and Scandinavia. C. is also practised in most other European countries, the U.S.A., Rhodesia, South Africa, and Canada.

CRÉMAZIE (krehmahzē), Octave (1827–79). French-Canadian poet. B. at Quebec, in 1862 he emigrated to France, where he d. in poverty. He wrote the patriotic *Chant du vieux soldat canadien* and *Promenade des trois morts*.

CREMONA. Italian city, capital of C. prov. in Lombardy, on the Po, 45 m. S.E. of Milan. It has a 12th cent. cathedral, and was a famous violin-making centre. Pop. (1961) 74,242.

CREOLE (krē'ol). Word used in the W. Indies and in various parts of Spanish America, etc., for natives with European ancestors. The common application only to persons of 'colour' is erroneous. In the W. Indies all persons descended from European stock are Cs., and in Mexico persons of pure Spanish blood are also given the name.

CREOSOTE (krē'-osōt). A constituent of coal-tar and wood-tar used as a preservative and disinfectant.

CRESCENT. Term applied to the curved shape of the moon during its first quarter when its points or horns are seen at the left (in the N. hemisphere). Also applied to any object, symbol, etc., resembling the C. moon. Often associated with Islam, it was first used by the Turks on their standards after the capture of Constantinople in 1453, and appears on the flags of Pakistan and the United Arab Republic.

CRESS. Name given to several plants, mostly belonging to the Cruciferae, and characterized by a pungent taste, but especially to the common garden C. (*Leptidium sativum*). This is cultivated in Europe, N. Africa, and parts of Asia, the young plants being grown along with white mustard to be eaten while in the seed-leaf stage as 'mustard and cress'.

CRETE (krēt). Large island in the Mediterranean belonging to Greece, lying S.E. of the Greek mainland. Its backbone is a limestone ridge, rising into 4 main mountain groups; snow covers the highest peaks for most of the year. The valleys and lower slopes are very fertile, and produce the usual Mediterranean fruits, etc.

The chief towns are Canea, the capital, on the northern coast; Candia, seat of the archbishopric of C. and formerly the capital; Rethymon; and Hierapetra. Most of the people belong to the Eastern Orthodox Church.

Archaeologists have unearthed many traces of early civilization in C. beginning somewhere about 3000 B.C., before which time there are traces of a Neolithic population. Between about 1900 and 1400 B.C. was the flowering time of the Minoan culture, named after the legendary king Minos of Knossos (q.v.). About 1000 B.C. it was overthrown by Dorian invaders from Greece. Subsequent changes in ownership have been many. From 1669 to 1898 C. was under Turkish rule, and in 1913 it was allowed to join Greece.

During the S.W.W. an Allied force of Greek, British, and N.Z. troops under General Freyberg (q.v.) made a desperate stand against German airborne troops, 19 May–1 June 1941. The survivors withdrew to Egypt. Area 3,235 sq. m.; pop. (1961) 482,021.

CREUSE (kröz). River in central France flowing 140 m. generally N. from the Plateau des Millevaches to the Vienne r. It traverses Creuse dept., to which it gives its name. There is a hydro-electric station at Eguzon in Indre dept.

CREUSOT (krözō), Le. Industrial and coal-mining centre in Saône-et-Loire dept., France. It has foundries, locomotive shops, armaments factories, etc. Pop. (1962) 33,779.

CREWE. English industrial town (bor.) in Cheshire, which owes its growth to its position as a railway junction. At C. are the chief construction workshops of British Rlys. Pop. (1961) 53,394.

CRICHTON (krit'on), James (c. 1560–82). Scottish scholar. Commonly called 'the Admirable C.' because of his extraordinary gifts as a poet, scholar, and linguist, he was also an athlete and swordsman. According to one account he was killed at Mantua in a street brawl.

The killer is said to have been C.'s pupil, Vincenzo di Gonzaga, son of the Duke of Mantua, whose enmity had been aroused by his master's popularity.

CRICK, Francis (1916–). British molecular biologist. During the S.W.W. he worked on the development of radar, but from 1949 did research into DNA (deoxyribo-nucleic acid) at the Cavendish Laboratory, Cambridge. For his discoveries as to its molecular structure (the means whereby characteristics are transmitted from one generation to another), he was awarded a Nobel prize (with Maurice Wilkins of Harvard and John D. Watson of London) in 1962. He pub. *Of Molecules and Men* (1966).

CRICKET. Name applied to insects of the family Gryllidae, which are allied to the grasshoppers and like them belong to the order Orthoptera or Saltatoria. They have long, slender antennae, and the males make a chirping note by rubbing together their wing-cases, which are provided with special stridulating organs, the purpose being to attract the females. The latter have a long ovipositor, and the males, also, are provided with special organs for transferring the sperm to the female. They are typically subterranean insects, but the most familiar species, the house C. (*Gryllus domesticus*), about ½ in. long, is common in old houses and bakehouses in the Old and New Worlds. The field C. (*G. campestris*) is larger and darker, and lives in burrows in the ground;

CRICKET. Sir Donald Bradman (left) and W. G. Grace, two of the greatest batsmen of all time.

Mme de Staël in 1796, and in 1803 went into exile because of his liberal views. Returning to Paris on the fall of Napoleon in 1814, he advocated a constitutional monarchy, and after Waterloo he withdrew to London, where he pub. the autobiographical novel *Adolphe*. He went back to Paris in 1816, and for the rest of his life defended constitutional liberalism. His most ambitious work is *De la Religion* (1825–31).

CONSTANTINE XIII (1940–). King of the Hellenes. In 1964 he succeeded his father Paul I (q.v.) and later that year m. Princess Anne-Marie of Denmark: his heir is Crown Prince Paul (1967–). In 1967 he went into voluntary exile.

CONSTANTINE, Sir Learie Nicholas (1902–). West Indian Test cricketer and barrister. One of the game's finest bowlers, he captained a Dominions team against England in 1945 and played as a professional in the Lancs League. He was Trinidad's 1st Commissioner in the U.K. (1962–4), and was created Life Peer 1969.

CONSTANTINE THE GREAT (c. A.D. 274–337). First Christian emperor of Rome, and founder of Constantinople. B. at Naissus (Nish, Yugoslavia), he was the son of Constantius. He was already well known as a soldier when his father d. at York in 306 and he was acclaimed by the troops there as joint-emperor in his father's place. His authority over Britain and Gaul was at first recognized by the other emperors, but a few years later Maxentius, the joint-emperor at Rome (whose sister C. had married), mobilized his armies to invade Gaul. C. won a crushing victory outside Rome at the Milvian Bridge (312). It was during this campaign that he was said to have seen a vision of the cross of Christ superimposed upon the sun, accompanied by the words, 'In this sign conquer'. By the Edict of Milan (313) he formally recognized Christianity as one of the religions legally permitted within the Roman Empire, and in 314 summoned the bishops of the western world to the Council of Arles. Since 312 C. had been sole emperor of the West, and by defeating Licinius, the emperor in the East, C. became sole ruler of the Roman world (324).

He now set to work to consolidate and reorganize his empire. He increased the autocratic power of the emperor, issued legislation which tied the farmers and workpeople to their crafts in a sort of caste system, and enlisted the support of the Christian Church. He summoned, and presided over, the first general council of the Church at Nicaea (q.v.) in 325.

C. moved his capital to Byzantium on the Bosphorus in 330 and renamed it Constantinople. In 337 he set out to defend the Euphrates frontier against the Persians, but d. at Nicomedia in Asia Minor.

CONSTANTINE. City of Algeria, cap. of C. dept. 200 m. E. of Algiers. An ancient town, it was captured by the French in 1837. Carpets and leather goods are made. Pop. (1967) 255,000.

CONSTANTINO-PLE. The former capital of the Eastern Roman and Turkish Empires, now generally called by its Turkish name, Istanbul (q.v.). It was founded by Constantine the Great by the enlargement of the Greek city of Byzantium in 328, and became the seat of the imperial government in 330. Its elaborate fortifications enabled it to resist a succession of sieges, but it was captured by crusaders in 1204, and was the seat of a Latin kingdom until in 1261 the Greeks recaptured it. An attack by the Turks in 1422 proved unsuccessful, but after a gallant defence lasting nearly a year another Turkish army took the city by storm on 29 May 1453.

CONSTELLATION. A group of stars. Many received their names in antiquity from some mythological figure with which they were associated. See **ZODIAC**. In 1930 the International Astronomical Union standardized the boundaries of 88 Cs., the chief being: NORTHERN: Andromeda, Aquila, Auriga,

Boötes, Cassiopeia, Cepheus, Corona Borealis, Cygnus, Draco, Hercules, Lyra, Ophiuchus, Pegasus, Perseus, Sagitta, Ursa Major, Ursa Minor. **ZODIACAL**: Aquarius, Aries, Cancer, Capricornus, Gemini, Leo, Libra, Pisces, Sagittarius, Scorpius, Taurus, Virgo. **SOUTHERN**: Canis Major, Centaurus, Cetus, Corona Austrina, Corvus, Crater, Crux Australis, Eridanus, Hydra, Lepus, Lupus, Orion.

CONSTITUTION. The fundamental laws of a state, laying down the system of government, and defining the relations of the legislative, executive and judiciary to each other and to the citizens. The British C. is unique, in that it does not exist in the form of a single document; it consists rather of an accumulation of customs and precedents, which have arisen in the course of national development, together with a number of laws defining certain of its aspects. Among the most important of the latter are Magna Carta (1215), the Petition of Right (1628), and the Habeas Corpus Act (1679), limiting the royal powers of taxation and of imprisonment; the Bill of Rights (1689) and the Act of Settlement (1701), establishing parliamentary supremacy and the independence of the judiciary; and the Parliament Act (1911), limiting the powers of the House of Lords. The Triennial Act (1694), the Septennial Act (1716), and the Parliament Act (1911) limited the duration of parliament, while the Reform Acts of 1832, 1867, 1884, 1918, and 1928 extended the electorate. Relations between states of the Commonwealth are regulated by the Statute of Westminster (1931). By the Republic of Ireland Act (1948), S. Ireland ceased to be a member of the Commonwealth, but neither the Irish Rep. nor the U.K. regards the other as a foreign state. The adoption of Republican status by India (1950) and others does not affect their membership and they accept the Queen as Head of the Commonwealth.

The British C. is that of a parliamentary monarchy, sovereignty being vested in the Queen, Lords, and Commons. The legislature consists of the House of Lords and the elected House of Commons. The hereditary basis of the former has been modified by the creation of Life Peers and in 1968 measures were under consideration which would both further reduce its existing powers (amendment of bills and delay for one year) and reduce voting Peers. See **PARLIAMENT**. All legislation requires the royal assent (q.v.). The Queen, as the head of the executive, appoints her ministers, but since the revolution of 1688 it has become customary for her to choose them from the party commanding a majority in the Commons, on the advice of the leader of the party. The judges are appointed by the Crown for life, and can be removed only on a petition from both Houses.

The C. of the U.S.A., adopted in 1787, is the oldest written C. in existence. Subsequent modifications incl. the Bill of Rights, 1791 – this contained 12 amendments of which 10 were adopted, among them the '5th amendment' including the provision none should be compelled 'to be a witness against himself' which has frequently been quoted by those accused as Communists – the abolition of slavery 1865, equal rights for white and coloured 1870, and limitation of presidential terms to two, which came into effect in 1951 and was inspired by F. D. Roosevelt's unique achievement in being elected for a 4th term. See **UNITED STATES**.

Since the French Revolution almost all states have adopted written Cs. The present C. of the Soviet Union was adopted in 1936; it, too, is written.

CONSTRUCTIVISM. Art movement which arose in the 1930s out of cubism (q.v.), having as its aim the creation of works – sculpture, painting, etc. – which exist in their own right and are unrelated to natural forms. Among the chief exponents of the movement are N. Gabo, B. Nicholson, B. Hepworth, and Mondrian (qq.v.).

CONSUL. The chief magistrate of ancient Rome

After the Conquest the Saxon conception of the king's peace, at first limited to the vicinity of the king's person, was extended to include the whole kingdom, and offences against this, together with the crimes that were *botless*, form the basis of modern C.L. Under Henry II more modern procedure was introduced into C.L. by the institution of a formal 'presentation' of persons suspected of felonies, i.e. homicide, treason, arson, before a grand jury, and their ultimate trial before one of the king's justices. Lesser offences or misdemeanours were for a time dealt with by the county courts, and later by the Justices of the Peace. The distinction between felonies and misdemeanours was afterwards lost, when, owing to the extreme penalties inflicted for the former, new crimes created by statute were commonly placed in the latter class.

Early law does not differentiate sharply between offences which are committed intentionally and those which cannot be attributed in law to the doer, but today the first test of criminal liability is guilty intention. This may be affected by the accused being an infant, e.g. it is presumed that no child under 14 may have guilty intention; by insanity; irresistible impulse (admitted as a defence in some states of America, although not in England); drunkenness (generally no excuse to a criminal charge, and sometimes an aggravation); necessity (apparently no defence in English C.L.); duress, i.e. coercion, or the threat of it.

During the last cent., however, a great many minor offences have been created by legislation which may be crimes of absolute liability, i.e. offences committed independent of any question of intention, e.g. selling adulterated food; or impose vicarious liability on certain persons, e.g. a publican is liable if his servant permits any unlawful game on licensed premises.

In the U.S.A. each of the States has its own individual body of C.L., but these have a common origin in English practice.

CRIMINOLOGY. The study of crime in its various forms; of its causation and prevention; of the types of individuals who commit crimes; and of the methods used in studying these problems. C. as an independent branch of scientific study dates from the first half of the 19th cent, but criminologic research remained a comparatively little-developed field in Britain until the continued increase of crime in the years following the S.W.W. prompted the endowment of an Institute of C. at Cambridge Univ. in 1959 by the Isaac Wolfson Foundation.

CRINOIDEA. Class of Echinoderms mainly known as feather-stars and sea-lilies. They are distinguished from the other living members of the phylum by being fixed by a stalk for at least part of their existence. The majority are known only as fossils.

CRIPPEY, Henry Hawley (1861-1910). British murderer. He killed his wife, variety artist Belle Elmore, and tried to burn the remains, but finally buried them in the cellar of his house in Hilldrop Crescent, Islington, London. Trying to escape to the U.S.A., with his mistress Ethel le Neve (dressed as a boy), he was arrested on board ship following a radio message to the captain. He was the first criminal captured 'by radio', and was executed at Pentonville.

CRIPPS, Sir (Richard) Stafford (1889-1952). British Labour statesman. The youngest son of the 1st baron Parmoor and Theresa Potter, sister of Beatrice Webb, he was called to the Bar in 1913, and during the F.W.W. served with the Red Cross in France, and later ran an explosives factory. Knighted in 1930, he was Solicitor-General in the MacDonald govt. and was elected a Labour M.P. in 1931. During the 1930s he became, as leader of the Socialist League, which he helped to found, an outstanding figure in the left wing of the Labour Party but was expelled from the latter in 1939 for supporting the proposal for a 'Popular Front' of all opposed to the Chamberlain

appeasement policy, and was not re-admitted until 1945. In 1940 he was appointed British ambassador to Moscow and did much to improve Anglo-Soviet relations during a difficult period. On his return in 1942 he became Lord Privy Seal and Leader of the House of Commons, and shortly afterwards went to India to put forward proposals for a solution of the constitutional deadlock, but without success. From 1942 to 1945 he was Min. of Aircraft Production, and in the Attlee govt. made great efforts to curb inflation while Chancellor of the Exchequer from 1947 until his resignation for health reasons in 1950.

CRISPI, Francesco (1819-1901). Italian statesman. He took part in the Sicilian revolution of 1848 and in Mazzinian conspiracies, and organized Garibaldi's Sicilian expedition of 1860. In later life he abandoned his republican views, and as Prime Minister 1887-91 and 1893-6 relied on the right-wing parties for support.

CRITCHLEY, Alfred Cecil (1890-1963) Canadian soldier. B. in Calgary, and ed. in England, he served with the 1st Canadian Division and the R.F.C. in the F.W.W., and in 1939 became Air Commodore R.A.F.V.R., organizing the initial training of R.A.F. aircrews until 1943. He also opened Britain's 1st greyhound track at Manchester in 1926.

CRIVELLI, Carlo (c. 1430-c. 1493). Italian artist. B. in Venice, probably the son of a painter, he fled from his native city after a sentence for rape. His numerous paintings of sacred subjects are sharply defined and often incl. swags of realistic fruit.

CROATIA (krō-ā'shia). Federal republic of Yugoslavia. It has a long coastline on the Adriatic with the r. Drava forming its eastern boundary. Although the majority of the pop. is engaged in agriculture, coal, iron, and other minerals are mined, and there are various industries. The people are mainly Serbs and Croats (nearly 90 per cent), and about 75 per cent are R.C., most of the remainder being Greek Orthodox. Zagreb is the cap., other towns are Rijeka, Split, Dubrovnik, Zadar.

CRIVELLI. Detail, head of the Virgin, from the Demidoff altarpiece. Courtesy of the National Gallery.

C. was in Roman times part of Pannonia, but in the 7th cent. was settled by Carpathian Croats. From 1102 it was for 800 years an autonomous kingdom under the Hungarian Crown. An Austrian crownland 1849, a Hungarian crownland 1868, it was included in the kingdom of the Serbs, Croats, and Slovenes (called Yugoslavia from 1931) in 1918. Area 21,720 sq. m. Pop. (1961) 4,148,122.

CROCE (krō'cheh), Benedetto (1866-1952). Italian philosopher. B. in the Abruzzi, he studied at Rome Univ. and continued as a private scholar in Naples. He was Min. of Public Instruction 1920-1, but the gradual hardening of his opposition to Fascism prevented his holding further office until he was briefly Min. without portfolio in Badoglio's cabinet in 1944. He was, however, allowed to pub. his journal *La Critica*, which he founded in 1903, and continued from 1945 as *Quaderni della Critica*.

C. like Hegel held that ideas do not represent reality but are reality; but unlike his master he rejected every kind of transcendence. For C. immediate experience generates whatever is, and ultimate reality is the active, changing, self-creative spirit. The bulk of his work consists of a detailed application of his theory of art as the expression of the creative mind. Nothing exists but present Mind, which is the product of the past and is greatly modified by its understanding of the

typical of the family *Convolvulaceae*. They are characterized by their twining stems, and by having their petals united into a tube. The common bindweed (*C. arvensis*), a trailing plant with handsome white or pink-and-white-streaked flowers, is a frequent weed in Britain.

CONVOY SYSTEM. The grouping of ships to sail together under naval escort in wartime. In the F.W.W. Royal Navy escort vessels were at first used only to accompany troopships, but the C.S. was adopted for merchant shipping when the unrestricted German submarine campaign opened in 1917. In the S.W.W. it was widely used by the Allies, and was generally successful, although there were heavy losses.

CONWAY. Welsh port (bor.) on the river C., in Caernarvonshire. The town is still surrounded by walls, and has ruins of a castle, rebuilt by Edward I in 1284. Pop. (1961) 11,392.

COOCH BEHAR. Town of W. Bengal, India, on the Torsa r., 88 m. S.E. of Darjeeling. A trade centre, it also makes leather goods. Pop. (1961) 41,922. It is the cap of C.B. dist., a former princely state merged in W. Bengal in 1950.

COOK, James (1728–79). British explorer. B. at Marton, Yorks., he joined the R.N. in 1755, and in 1768 was given command of an expedition to the S. Pacific to witness the transit of Venus. He sailed in the *Endeavour* with Joseph Banks and other scientists, reaching Tahiti in April 1769. The transit was observed in June, after which C. sailed round New Zealand and charted the coasts. He then went on to make a detailed survey of the E. coast of Australia, naming New South Wales, Botany Bay, etc., and arriving back in England on 12 June 1771.

Portrait by J. Webber.
Photo: N.P.G.

Now a commander, C. set out in 1772 with the *Resolution* and *Adventure* to search for the southern continent. The location of Easter Island was determined, and the Marquesas and Tonga Islands plotted. Among other discoveries were New Caledonia and Norfolk Island, and New Zealand was revisited. C. returned on 25 July 1775, having sailed 60,000 m. in 3 years.

The object of his 3rd and last voyage with the *Resolution* and *Discovery*, on which he set out 25 June 1776, was the discovery of the N.W. Passage from the Pacific end. On the way to New Zealand, he discovered several of the Cook or Hervey Islands and rediscovered the Hawaiian or Sandwich Islands. The ships sighted the American coast in lat. 45° N., and sailed N., making a continuous survey as far as the Bering Strait, when the way was blocked by ice. C. then surveyed the opposite coast of the strait (Siberia), and returned to Hawaii early in 1779. In Kealakekua Bay, one of the *Discovery's* boats was stolen by the islanders, and C. was clubbed from behind on 14 Feb. in a scuffle on the beach when trying to recover it, and was buried at sea.

C. made enormous additions to geographical knowledge, was responsible for Britain's acquisition of the Australasian territories, and his accounts of his discoveries are classics.

COOK, Sir Joseph (1860–1947). Australian politician. B. in Staffs, he started work in a coal-mine at the age of 9, emigrated to Australia in 1885, and in 1891 was elected to N.S.W. legislative assembly. In 1901 he was elected to the first Commonwealth Parliament as a Liberal free trader, and 1913–14 was

Prime Minister. In 1917 C. joined Hughes's coalition government, and was High Commissioner in London 1921–7.

COOK, Thomas (1808–92). Pioneer British travel agent, founder of Thos. C. & Son. B. in Derbyshire of poor parents, he started work at 10, and at 20 became a Baptist travelling missionary and temperance worker. He organized his 1st excursion in 1841 for a temperance meeting at Loughborough, and his 1st tour to Switzerland in 1863. Tours to America (1866), the Middle East (1868), and round the world (1872) followed. In 1884 C. was given charge of transport of Gordon's Sudan expedition.

His son, John Mason, and grandsons expanded the business. A Banking and Exchange Department was set up in 1879, and earlier C. had transported cattle to the Vienna Exhibition for Queen Victoria, thus laying the foundation for the Shipping and Freight Department. Travellers' cheques, known as 'circular notes', were introduced in the early 1870s.

COOKE, Alistair (1908–). American journalist. B. in England, he was ed. at Cambridge, Yale and Harvard, and estab. a reputation for humorously penetrating interpretation of American affairs for British readers and radio listeners. In 1948 he became chief U.S. correspondent of *The Guardian*.

COOKHAM-ON-THAMES. Village in Berkshire, England. The artist Stanley Spencer (q.v.) lived here for many years and a memorial gallery of his work was opened in 1962.

COOK ISLANDS. A group of 6 large and a number of small islands 1,638 m. N.E. of Auckland, N.Z.; total area c. 89 sq. m. Rarotonga is the chief, area 26 sq. m.; on it is Avarua, seat of govt. An air service is maintained between N.Z. and Aitutaki, another of the islands. The group was discovered by Capt. Cook in 1773, annexed to Britain in 1888, transferred to N.Z. in 1901, and given internal self-govt. in 1965. Pop. (1966) 19,251.

COOLIDGE, John Calvin (1872–1933). 30th President of the U.S.A. B. in Vermont, the son of a farmer and storekeeper, he became a lawyer and was Governor of Massachusetts in 1919, when he won fame by the vigour with which he crushed the Boston police strike. A Republican, he became Vice-President in 1921 and President, on the death of Harding, in 1923. He was re-elected in 1924, and his period of office was marked by great economic prosperity.

COOPER, Alfred Duff. See NORWICH, LORD.

COOPER, Gary (1901–62). American actor. B. in Montana, he epitomized the lean, true-hearted Yankee, slow of speech but capable of besting the 'badmen' in *A Bengal Lancer*, *Mr. Deeds Goes to Town*, *Sergeant York* (Academy award 1941), and *For Whom the Bell Tolls*.

COOPER, Dame Gladys (1889–). British actress. B. at Lewisham, she is a polished stylist, and her parts range from Paula in *The Second Mrs. Tanqueray* (1922) to Mrs. St. Maugham in *The Chalk Garden* (1955). Created D.B.E. 1967. See MORLEY, ROBERT.

COOPER, Henry (1934–). Brit. heavyweight boxer. Noted for his left—Henry's hammer—he won the British and Empire titles in 1959, and the European 1964 and from 1968. In 1967 he became the first to win 3 Londale belts outright.

COOPER, James Fenimore (1789–1851). American writer. B. in New Jersey of Quaker stock, he sailed before the mast to Europe and in 1808 became a midshipman. In 1811 he made a happy marriage, and spent most of the rest of his life on the family estate of Cooperstown. He wrote some 30 novels, 1st becoming popular with *The Spy* (1821). Most notable were the volumes of *Leather Stocking* stories (so called because they were linked by the figure of Hawk-eye or Leather Stocking) comprising *The Pioneers* (1823), *The Last of the Mohicans* (1826), *The Prairie* (1827), *The Pathfinder* and *The Deerslayer* (1841), all exciting

pictures incl. 'Mousehold Heath' (National Gallery), 'The Poringland Oak', and 'Carrow Abbey'.

CROMER, Evelyn Baring, 1st earl of (1841–1917). British statesman. A member of the banking family of Baring, he was appointed British commissioner of the Egyptian public debt office in 1877, and then financial member of the Viceroy of India's council in 1880. He returned to Egypt in 1883 as British agent and consul-general, and until his resignation in 1907 remained the real ruler of the country.

CROMER. Seaside resort (U.D.) and fishing port on the cliffs of Norfolk, 24 m. N. of Norwich. Pop. (1961) 4,895.

CROMLECH (krom'lek). A prehistoric burial-chamber, consisting of 2 or more upright stone slabs, on top of which a flat stone is placed as a roof. A well-known example is Kit's Coty House, near Aylesford, Kent.

CROMPTON, Richmal. Pseudonym of the British author R. C. Lamburn (1890–1969). B. in Lancs, and formerly a teacher, she is best known for her scapegrace schoolboy creation 'William'.

CROMPTON, Rookes Evelyn (1845–1940). British electrical engineer, founder of R. E. Crompton & Co., now Crompton Parkinson Ltd. He estab. the International Electrotechnical Commission (1906) to resolve problems of standardization, and was a pioneer in electric lighting and in public electricity supply.

CROMPTON, Samuel (1753–1827). British inventor. B. in Lancs, he invented in 1779 the 'spinning mule', an improved version of Hargreaves' spinning-jenny. His contribution to the supremacy of British manufactures was inadequately rewarded, and he d. in comparative poverty.

CROMWELL, Oliver (1599–1658). English soldier and statesman. B. at Huntingdon, the son of a small landowner, he was ed. at the local grammar school and at Cambridge. He represented Huntingdon in the parliament of 1628–9, and Cambridge in the Short Parliament of 1640, and the Long Parliament. Active in the events leading to the Civil War, he raised a troop of horse with which he did good work at Edgehill. After this experience he worked with the Eastern Association, raising more cavalry forces. These were chiefly responsible for the victory at Marston Moor in 1644, being called 'Ironsides' by Prince Rupert. By 1645, C. was the only member of either House allowed to retain his commission. The New Model Army was now raised, and under Fairfax and C. inflicted a decisive defeat on the royalists at Naseby.

Throughout 1646–8 C. worked to secure a constitutional settlement with the king acceptable to all parties. The 2nd Civil War of 1648, during which C. defeated a Scottish invasion at Preston, ended all hopes of a compromise; the army purged parliament of its Presbyterian right wing, a special commission, of which C. was a member, tried the king and condemned him to death, the monarchy and House of Lords were abolished, and a republic was set up. The democratic party or Levellers wished to go further, but in 1649 C. suppressed them and executed their leaders. During 1649–50 he crushed the resistance of the Irish clans and their royalist allies by terrorist methods. He then turned on the Scots, who had acknowledged Charles II, defeated them at Dunbar on 3 Sept. 1650, and a year later ended their attempt to invade England at Worcester.

In 1653 C. forcibly expelled the 'Rump' parliament,

whose corruption was discrediting the republic, and summoned a convention known as 'Barebone's Parliament', which was soon dissolved as too radical. Under a constitution drawn up by the army leaders, the Instrument of Government, C. assumed the title of Protector, with almost royal powers. A parliament which met in 1654–5 proved refractory; it was dissolved, and a period of military dictatorship followed. C.'s last parliament, that of 1657–8, offered him the crown, which only fear of the army's republicanism restrained him from accepting. His greatest achievement as a ruler was the broad, though not complete, system of religious toleration he established. His foreign policy restored English prestige, but its whole basis, of an alliance with France against Spain, was anachronistic. He d. at Whitehall on 3 Sept. 1658; his body was buried in Westminster Abbey, whence it was removed in 1661.

His eldest surviving son Richard Cromwell (1626–1712) succeeded him as Protector, but resigned in May 1659. After the Restoration he lived in exile until 1680, and subsequently in retirement in England. C.'s 4th son Henry Cromwell (1628–74) served in the Irish campaign and ruled Ireland 1655–9 with considerable success.

CROMWELL, Thomas, earl of Essex (c. 1485–1540). English statesman. B. at Putney, he entered Wolsey's service in 1514, and after his fall transferred to that of Henry VIII. He soon won his new master's favour, and from 1534 acted as royal secretary and the real director of government policy. Aiming at the establishment of an absolute monarchy unchecked by Church or parliament, he had Henry proclaimed head of the Church, suppressed the monasteries, ruthlessly crushed all opposition, and favoured Protestantism, which upheld the divine right of kings against the divine right of the Pope. The failure of Henry's marriage to Anne of Cleves, which C. arranged in 1539 to cement an alliance with the German Protestant princes against France and the Empire, brought about his downfall. In 1540, shortly after being created earl of Essex, he was accused of treason, attainted, and beheaded.

CRO'NIN, Archibald Joseph (1896–). British novelist. B. in Scotland, he practised as a doctor, and then in 1930 settled to creative writing. *Hatter's Castle* (1931), the story of a tradesman's lust for power, was immediately successful; later books incl. *The Citadel* (1937), exposing the methods of certain 'society doctors'. He is also the creator of 'Dr Finlay's Case-book', celebrated television series.

CRONJE (krōn'ye), Piet Arnoldus (c. 1840–1911). Boer general in the South African War of 1899–1902. In 1899 he besieged Mafeking and defeated Gatacre at Magersfontein, but early in 1900 he was surrounded by Kitchener's force near Paardeberg, and forced to surrender with 4,000 men.

CROOKES, Sir William (1832–1919). British scientist. B. in London, he was from 1856 engaged on scientific research. Among his many chemical and physical discoveries were the metal thallium (1861), the radiometer (1875), and C.'s high vacuum tube used in X-ray techniques. He was an authority on town sewage disposal, and interested in other problems, including dyeing and printing, artificial manures, and spiritualism (q.v.). Elected F.R.S. in 1863, he was awarded the O.M. in 1910.

CROQUET (krō'ke). Open-air game played with mallets and balls on a level grass lawn not less than 30 yd. long by 20 yd. wide. Two or more players try to drive the balls through a series of hoops set to a pattern on the ground, leading to the winning peg. During the game a player may have his ball advanced by his partner or retarded by his opponent. These conflicts are the chief interest of the game. C. was played in France (16th–17th cent.), and was popular in England during the 1850s, before being superseded

OLIVER CROMWELL
After Samuel Cooper.
Photo: N.P.G.

The centre of the city is the Kongens Nytorv, an irregular open space adjacent to the harbour, on which focus the main thoroughfares of the city. To the N.E. are the citadel and the royal palace at Amalienborg. Buildings round the square include the Charlottenburg palace (1672–83), occupied 1754 by the Academy of Arts, the Kunststudstillng (1883), Thotts Palais (c. 1685), the Royal Theatre, Foreign Office, etc. The cathedral church was rebuilt early in the 19th cent. The new town hall dates from 1901. The Christiansborg, in the Slotsholm, an island formed by an arm of the harbour, is used for meetings of parliament. The univ. was founded in 1479.

C. was a fishing village until 1167, when a castle was built on the site of the present Christiansborg palace by the bishop of Roskilde. A settlement grew up, and it became the Danish cap. in 1443. On 9 April 1940 C. was occupied by the Germans, remaining in their hands until 5 May 1945. Pop. (1965) 1,377,605.

COPENHAGEN, Battle of. Naval victory won on 2 April 1801 by a British fleet under Sir Hyde Parker and Nelson over the Danish fleet. Here it was that Nelson put his telescope to his blind eye and refused to see Parker's signal for withdrawal.

COPE'ODA. Sub-class of Crustacea, incl. a great variety of forms, nearly all microscopic, abundant in the sea and fresh water.

COPERNICUS, Nicolaus (1473–1543). Polish astronomer. B. at Thorn on the Vistula, then under the Polish king, he studied at Cracow and in Italy, and lectured on astronomy at Rome. On his return to Pomerania in 1505 he became physician to his uncle, the bishop of Ermland, and was made canon at Frauenburg, although he did not take holy orders. Living there until his death, he interspersed astronomical work with the duties of various civil offices. For 30 years he worked on the hypothesis that the motion of the earth was responsible for the apparent movements of the heavenly bodies, but his great work *De revolutionibus orbium coelestium* was not pub. until the year of his death. In this work he proved that the sun is the centre of our system, and he thus became a prime founder of modern astronomy.

COPLAND, Aaron (1900–). American composer. B. in N.Y., he studied in France with Nadia Boulanger, and in 1940 became instructor in composition at the Berkshire Music Center – from 1945 assistant director. C.'s early works, such as the piano concerto of 1926, were in the jazz idiom then popular in America, but he gradually developed a gentler style with a regional flavour drawn from American folk music. Later works incl. the ballets *Billy the Kid* (1939) – which contains a variant of the cowboy song 'Bury Me Not on the Lone Prairie' – *Rodeo* (1942) and *Appalachian Spring* (1944), based on a poem by Hart Crane; and *Piano Fantasy* (1957).

COPLEY, John Singleton (1737–1815). American artist. B. at Boston, Mass., of Anglo-Irish parents, he became the leading portraitist of the colonial period. From 1774 he lived mainly in England, where he also painted historical scenes incl. 'The Death of Chatham', which gained him his R.A.

COPPARD, Alfred Edgar (1878–1951). British writer. B. in Folkestone, he pub. his 1st collection of stories *Adam and Eve and Pinch Me* in 1921, and subsequently regularly pub. vols. of short stories, incl.

AARON COPLAND

Photo: Godfrey MacDonnic.

The Black Dog, which show a skilful unity of fantasy and realism. C. also wrote verse.

COPPÉE (kopeh'), François (1842–1908). French poet. He was a clerk in the War Office before his poems *Le Reliquaire* (1866) and *Les Intimités* (1867) established his reputation as one of the principal Parnassiens. He then maintained a steady output of moving verse, including *Olivier*, a long narrative poem; *Contes en vers*; *Le Passant*, his first dramatic poem; *L'Abandonnée*, *Les Jacobites*, etc.

COPPER. A chemical element, one of the earliest metals used by man. Chemical symbol Cu; at. no. 29; at. wt. 63.54. It is salmon pink, very malleable and ductile, and used principally on account of its toughness, softness, and pliability, high thermal and electrical conductivity, and resistance to corrosion. When alloyed with tin it forms bronze, a relatively hard metal, the discovery of which opened a new age in human pre-history.

Until about a century ago, Spain and Cornwall were the chief producers, but these are now of minor importance compared with the U.S.A. (which produces about a quarter of the world's output), Chile, Canada, Zambia, and the Katanga area of the Congo. C. is usually commercially extracted from C. pyrites. Large deposits containing C. sulphide occur in the Lake Superior district in N. America, and in Spain. Other ores from which C. is extracted include malachite, chrysocolla, and atacamite.

COPPER HEAD. N. American snake (*Trigonocephalus contortrix*) belonging to the viperine section of the Ophidia, allied to the rattlesnake. It is about a yard long, and in colour coppery-brown, banded with reddish brown.

COPRA. Dried kernel of the coconut (q.v.).

COPTIC. The latest phase of the old Egyptian language, and still the ritual language of the Coptic Church. It is written in the Greek alphabet with the addition of 8 characters derived from the demotic. Of the several dialects, that of Upper Egypt, known as Sahidic, became the literary medium. The literature is wholly religious.

COPTS. The descendants of the ancient Egyptians who had accepted Christianity in the 1st cent. and refused to adopt Mohammedanism after the Arab conquest. Prior to the Arab conquest a majority of

COPPER. Part of the surface installations at Mufullira copper mine on the Copperbelt of Zambia. In the right foreground is a corner of the concentrator, where the ore-bearing rock from underground is crushed and ground, and the mineral fraction removed by a flotation process in which the mineral attaches itself to a froth which is dried and then sent to the smelter. Behind the concentrator is the power plant, now on emergency stand-by duties only, as the Copperbelt's main supplies come from the Kariba hydro-electric scheme on the Zambezi river. The smelter can be seen behind the power station. In the left foreground and middle distance are engineering workshops, and in the background the refinery, where anodes from the smelter are used to electro-plate pure copper cathodes. The pure cathodes are then melted and cast into suitable shapes for fabricators, the most common being the wirebar. Courtesy of Rhodesian Selection Trust.

was the author of *The Complete Concordance of the Holy Scriptures*, first pub. in 1737. For much of his life he was mentally unbalanced.

CRUFT, Charles (1852-1938). British dog expert. He organized his first dog show in 1886, and henceforward annual shows were held in Islington - Cruft's being the premier event of the dog year in Britain.

CRUIKSHANK (krook'-), George (1792-1878). British caricaturist, painter and illustrator. B. in London, he illustrated children's books when still a youth, and at 19 began to contribute satirical drawings to periodicals. He owed much to Gillray for his mastery of technique, but his cartoons were not so coarse as those of his contemporary. His best-known illustrations include those for Dickens's *Oliver Twist*, and *Sketches by Boz*; *The Ingoldsby Legends*; Ainsworth's *Tower of London*, and works by Fielding, Smollett, and Sterne. He was an ardent teetotaller, and his oil-painting, 'The Worship of Bacchus', now in the National Gallery, illustrates the evils of drink.

CRUISER. See WARSHIP.

CRUSADES. The wars undertaken 1096-1291 to recover the Holy Land from the Moslems. The term was also applied to wars undertaken, with the blessing of the Church, against the Spanish Moors, the Baltic pagans, heretics, and excommunicated princes. The motives combining to produce them included religious zeal, the territorial ambitions of feudal princes, and the desire of the Italian cities to secure trading bases. The 1st CRUSADE 1095-9 was occasioned by the conquest of Asia Minor and the capture of Jerusalem by the Seljuk Turks; it resulted in the recovery of Jerusalem and the establishment of a chain of Latin kingdoms along the Syrian coast. The 2nd CRUSADE 1147-9, led by Louis VII of France and the Emperor Conrad III, was a complete failure. The 3rd CRUSADE 1189-92, led by Philip Augustus of France and Richard I of England, failed to recapture Jerusalem, which had fallen to Saladin in 1187. The 4th CRUSADE 1202-4, originally intended for Egypt, was diverted against Constantinople by the intrigues of Venice; the city was sacked, and its empire divided among the crusaders. The 5th CRUSADE 1218-21, again directed towards Egypt, captured Damietta only to lose it again. The 6th CRUSADE 1228-9 was led by the Emperor Frederick II, himself under excommunication at the time, who recovered Jerusalem from the Sultan of Egypt by negotiation. The city was finally lost in 1244. The 7th CRUSADE 1249-54 and the 8th CRUSADE 1270-2 were both led by Louis IX of France, with whom in the latter was associated Edward I of England. Acre, the last Christian fortress in Syria, was lost in 1291.

CRUSTACEA (krustá'shia). Class of animals in the phylum Arthropoda, comprising the crabs, lobsters, crayfish, prawns, and shrimps, besides a very large number of less familiar forms. The name is derived from the Lat., *crusta*, a shell or crust, as the stiff outer skin of chitin is further strengthened by lime salts, and forms a covering of shelly plates. C. are mostly aquatic and often develop by metamorphosis. The class is divided into 5 sub-classes: Branchiopoda, including certain shrimps and waterfleas; Ostracoda, minute forms with the body completely enclosed in a bivalved shell; Copepoda, minute forms with a simple unpaired eye and paddle-like two-branched feet; Cirripedia, the barnacles and acorn shells; and Malacostraca, comprising all the larger and better-known examples of the class, with the body divided into two regions, and the appendages sharply distinguished. Each of these sub-classes is further sub-divided into orders.

In point of size the C. have, probably, a greater range than any other of the major divisions of the animal kingdom, varying from less than one hundredth of an inch to as much as 11 ft.

Most of the C. live in sea water and are found all

CRYSTAL. It may have taken 150 years to rub down with sand this 'skull of doom', reputed to be 3,600 years old. According to Maya legend, when a wise man grew too old he and an intelligent youth were laid together on the altar before the skull, and the High Priest performed a ceremony willing the elder man to die, his knowledge passing to the younger.
Courtesy of Miss A. Mitchell-Hedges.

over the world. There are a few terrestrial species, but most of these breed in water. The most familiar of the terrestrial C. are the woodlice, whose whole life is spent on the land.

Some varieties such as crabs, lobsters, etc., serve as human food, but the importance of the Cs. lies in the part they play in the 'food-chains' in the sea.

CRYOGENICS (kri-ójen'iks). The science of very low temperatures (approaching the absolute zero) and its applications. C. includes the production of these low temperatures, the liquefaction of gases such as nitrogen, helium, hydrogen, etc. Most substances have peculiar properties at these low temperatures which in recent years have been exploited. These include the disappearance of electrical resistance (superconductivity) and the application of this phenomenon to the production of very intense magnetic fields, masers such as that used in connection with Telstar, and high-speed switching devices for computers.

CRYSTAL. Nearly all known substances, organic and inorganic, natural or artificial are crystalline; that is, they possess directional properties and their ultimate structure is a highly symmetrical arrangement of electrically-bonded atoms or molecules. A crystalline substance often grows with the characteristic shape of a geometrical solid called a crystal, which is bounded by plane surfaces termed 'faces'. Each geometrical figure or form, many of which may be combined in one crystal, consists of 2 or more faces, e.g., dome, prism, pyramid, etc. A mineral can often be identified by the shape of its crystals and the system of crystallization determined. A single crystal can vary in size from a sub-microscopic particle to a huge mass some hundred feet in length.

CRYSTALLOGRAPHY. The scientific study of crystals, a type of solid body which shows a pattern of atoms extended in all directions. Scientific interest in crystals has greatly increased in recent years owing to the discovery of yet more remarkable properties possessed by them. Thus in 1912 it was found that the shape and size of the unit cell of a crystal can be discovered by X-rays and also the exact nature of the cell contents, thus opening up an entirely new way of 'seeing' atoms and how they cling together to form crystalline solids. This means of determining the atomic patterns in a crystal is known as X-ray diffraction. By this method it has been found that many substances have unit cells or boxes which are exact cubes, e.g. ordinary table salt (sodium chloride).

(U.D.) in N. Northants. The first blast furnace was built in what was then a village in 1910; from c. 1931 it began to grow, and with its development after the S.W.W. as a 'new town' its pop. rose from 16,743 in 1951 to 46,580 in 1967.

CORDAY (kordā'), Charlotte (1768-93). French-woman who assassinated Marat. She belonged to the Girondist party and went to Paris in 1793 resolved to rid the country of one or other of the Jacobin leaders, Robespierre or Marat. Having secured admission to the latter's apartment, she stabbed him to the heart with a bread-knife as he was sitting in his bath. She was guillotined 4 days later.

CÓRDOBA. City of Argentina, cap. of C. prov., on the Rio Primero, here harnessed for power. Founded in 1573, it has a univ. founded 1613, a military aviation college, an observatory, and a cathedral. Pop. (1960) 589,000.

CÓRDOBA. Spanish city, cap. of C. prov., on the Guadalquivir. It has many Moorish remains. Its glory is the mosque, now a cathedral, founded by Abder-Rahman I in 785; it is 590 by 425 ft. and except for St. Peter's, Rome, is the largest Christian church in the world. C. was founded probably by the Carthaginians, and from 711 until 1236 was held by the Moors. Pop. (1965) 214,562.

CORELLI, Arcangelo (1653-1713). Italian composer and violinist. B. in Milan, he studied in Bologna and in c. 1685 settled in Rome, under the patronage of Cardinal Pietro Ottoboni, where he pub. his 1st violin sonatas. He was one of the first great violinists and his music, marked by graceful melody, incl. a set of concert grossi and 5 sets of chamber sonatas.

CORELLI, Marie. Pseudonym of the British novelist Mary Mackay (1855-1924). Trained for a musical career, she turned instead to writing and from the appearance of *The Romance of Two Worlds* (1886) was highly popular, though literary critics were far from kind. Later books incl. *Barabbas* (1893), *The Sorrows of Satan* (1895), and *Temporal Power* (1902). After the F.W.W. her popularity declined, since her luscious style and undisguised moralizing did not suit the new age.

CORFE (korf) **CASTLE**. English village in the Isle of Purbeck, Dorset, built round the ruins of a Norman castle destroyed in the Civil War in 1646.

CORFU (korfōō'). Most northerly, second largest of the Ionian islands, also a nome of Greece, off the coast of Epirus in the Ionian Sea. The chief town, also C. (pop. 1961, 27,431), is a port and seat of an R.C. archbishopric. C. was colonized by Corinthians c. 700 B.C. Venice held it 1386-1797, Britain from 1815-64. Area 414 sq. m.; pop. (1961) 101,555.

CORINIUM. Roman name of CIRENCESTER.

CORINTH (kor'int), Lovis (1858-1925). German artist, a leader of German Impressionism. He painted fine portraits and religious pictures, e.g. 'Ecce Homo' (Basle Museum).

CORINTH. Ancient city of Greece, on the isthmus connecting the Peloponnesus with the mainland. The isthmus is rocky, and is now cut by the 4 m.-long C. canal, opened in 1893. C. was already a place of some importance in the 9th cent. B.C. At the end of the 6th cent. B.C. it joined the Peloponnesian League, and it took a prominent part in the Persian and the Peloponnesian wars. In 146 B.C. it was conquered by the Romans. St. Paul visited it, and addressed two epistles to the churches there. After many changes of ownership it became part of independent Greece in 1822. The most outstanding of C.'s ancient monuments is the ruined temple of Apollo (6th cent. B.C.). The city is cap. of the modern nome of C. Pop. (1961) 17,728.

CORK. The light cellular outer layers of the bark of the stems and roots of almost all trees and shrubs, which is impermeable by water. In particular, the word is used for the corky outer layers of the bark of

CORK. Overlooking the River Lee, on the site of the cathedral founded by St. Finbarr in the 7th century, the modern Protestant cathedral - rebuilt in the early French style in the 19th century - is still dedicated to the saint.

Courtesy of the Irish Tourist Board.

the cork-oak (*Quercus suber*), a native of S. Europe and N. Africa, which is cultivated in Spain and Portugal and provides the cork of commerce. Manufactured C. is C. ground up and then formed into sheets with a binder: it is much used for engine gaskets and isolation of vibration, as well as for heat insulation.

CORK. Co. of Rep. of Ireland, in Munster prov., with a coastline on the Atlantic Ocean. The co. is occupied by a series of ridges and vales, running from N.E. to S.W. Across its centre run the Nagles and Boggeragh mts., which separate the two main drainage systems, the Blackwater and the Lee. There are many smaller rivers, such as the Bandon, Ilan, etc. C. is an agricultural co., but there is some mining of copper, manganese, etc., marble-quarrying, and river and sea fishing. The co. town is Cork. Other towns are Cobh, Bantry, Youghal, Fermoy, and Mallow. Area 2,880 sq. m.; pop. (1966) 339,703.

CORK. City (co. bor.), episcopal see, and seaport of co. Cork, at the head of the long inlet of Cork harbour, on the Lee. It is the 2nd port of the Rep. of Ireland. The lower section of the harbour can berth liners, and the town has distilleries, shipyards, iron-foundries, etc. There is a Protestant cathedral dedicated to St. Finbarr, an R.C. cathedral of St. Mary and St. Finbarr. University College (1845) became in 1968 the University of Cork. The city hall was opened in 1937.

St. Finbarr's 7th cent. monastery was the original foundation of C. It was eventually settled by Danes, who were dispossessed by the English in 1172. Pop. (1966) 122,146.

CORMORANT. Genus of birds (*Phalacrocorax*) included with the gannets in the Pelicaniformes. They are divers, with long necks and strong, solid beaks. Of the 30 species, 2 are British. The common C., *P. carbo*, is a familiar sea-bird, and is black glossed with bronze. The shag or green C. (*P. graculus*) is rather smaller

CORMORANT

above and barred beneath, and has a long rounded tail. The eggs are laid singly, at intervals of about 48 hours, and placed in the nests of small insectivorous birds. As soon as the young C. is hatched, it ejects all other young birds or eggs from the nest. It is useful to farmers, as it feeds entirely on insects, particularly hairy caterpillars.

The C. has played a great part in European folklore and literature, and has often been introduced into music and song.

CUCKOO FLOWER or **Lady's Smock**. A perennial plant (*Cardamine pratensis*) belonging to the Cruciferae, and in Britain common in moist meadows and marshy woods; it bears pale lilac flowers, which later turn white, from April to June.

CUCKOO-PINT, **Wake-robin** or **Lords-and-ladies**. A plant (*Arum maculatum*), belonging to the arum family, Araceae, of which it is the only British representative. The large arrow-shaped leaves appear in early spring, and the inflorescence is provided with a purplish appendix above and is enveloped by a leafy spathe. This latter forms a chamber which contains the flowers, protected by a ring of downward-pointing hairs. By means of these small insects are trapped, and effect the plant's fertilization. In autumn the bright red, berry-like fruit, which is poisonous, makes its appearance.

CUCUMBER. Name of a plant (*Cucumis sativus*) belonging to the same genus as the melon, in the gourd family (Cucurbitaceae). It is an annual climbing and trailing plant, with rough or bristly stem and five- or three-lobed leaves. The flowers are bell-shaped and borne on short stalks and are succeeded by the oblong fruit, which varies from 4 in. to 2 ft. in length.

CUDWORTH, **Ralph** (1617-88). English philosopher. B. in Somerset, he became master of Clare Hall and Regius professor of Hebrew at Cambridge in 1645. He was a leading Cambridge Platonist, and in 1654 became Master of Christ's. His most important work, *The True Intellectual System of the Universe*, a critique of atheism, appeared in 1678.

CUENCA (kwān'kah). City of Ecuador, cap. of Azuay prov. It was founded by the Spanish in 1557. Pop. (1966) 71,484.

CUENCA. Spanish city, cap. of C. prov., at the confluence of the Júcar and Huécar, 84 m. S.E. of Madrid. It has a 13th-cent. cathedral. The British captured it in 1706. Pop. (1960) 25,000.

CUI (kü-ē'), **Cesar Antonovich** (1835-1918). Russian composer. B. at Vilna, he became a military engineer. He wrote operas and orchestral suites, but is chiefly remembered for his piano pieces and songs.

CUIABA (kwē-yahbah'). Brazilian town, on the C. river, cap. of Mato Grosso state. Gold and diamonds are worked nearby. Pop. (1960) 62,726.

CULBERTSON, **Ely** (1891-1955). American contract bridge expert. In 1930 he became famous as the author of the C. approach-forcing system, and was largely responsible for the world-wide popularity of the game.

CULDEES (kul'dēz). Name given to an ancient order of Christian monks which existed in Ireland and Scotland from before the 9th cent. to about the 12th cent. A.D., when the Celtic Church, to which they belonged, was forced to conform to Roman usages. Some survived till the 14th cent., while at Armagh in N. Ireland they endured until the dissolution of the monasteries in 1541.

CUCKOO. Young bird being fed by the much smaller reed-warbler.

CULICIDAE (kūlis'idē). Family of insects of the order Diptera, incl. the various gnats, mosquitoes, and midges.

CULLINAN, **Sir Thomas** (1862-1936). S. African diamond miner. He discovered the Premier Diamond Mine, Pretoria, and the world's largest diamond was named after him. (See **DIAMOND**.) Uncut the C. Diamond measured $4\frac{1}{2}$ by $2\frac{1}{2}$ by 2 in. and was presented by the Transvaal govt. to Edward VII: one of the 2 main portions is in the Sovereign's sceptre and the other in the crown.

CULLODEN. Stretch of moorland in Inverness-shire, where the Young Pretender, Charles Stuart, was defeated in 1746 by the Duke of Cumberland.

CULLUM, **Ridgwell** (1867-1943). British novelist. B. in London, he travelled in various parts of the world, was a cattle-rancher in Montana, and played a part in risings of the Indians. From 1904 he lived in England, and devoted himself to writing, chiefly 'Western' adventure stories.

CULPEPER, **Nicholas** (1616-54). English medical writer and astrologer. B. in London, he set up there as a physician and astrologer in 1640, and in 1649 pub. a translation of the Pharmacopoeia of the College of Physicians.

CUMAE (kū'mē). Ancient city in Italy, on the coast 14 m. W. of Naples. A Greek colony founded c. 740 a.c., it was famous in the ancient world as the seat of the oracle of the Cumaean Sibyl.

CUMANS (kū'manz). A powerful Turki federation of the Middle Ages, which dominated the steppes in the 11th and 12th cents. and built an empire reaching from the Volga to the Danube. For a generation they held up the Mongol advance on the Volga, but in 1238 a Cuman and Russian army was crushingly defeated near Astrakhan, and 200,000 Cs. took refuge in Hungary, where they settled and where their language died out only about 1775. The Mameluke dynasty of Egypt was founded by Cuman ex-slaves. Most of the so-called Tartars of S. Russia were of Cuman stock.

CUMBERLAND, **Ernest Augustus**, duke of; king of Hanover (1771-1851). The 5th son of George III, he served in the Hanoverian army against the French 1793-5. In 1799 he was created duke of C. He was intensely unpopular, being a high Tory and an opponent of all reforms. On the death of William IV in 1837 he became king of Hanover, Victoria being excluded by the Salic Law, and had a stormy reign.

CUMBERLAND, **Richard** (1732-1811). British dramatist, author of some 50 sentimental plays, novels, and interesting memoirs.

CUMBERLAND, **William Augustus**, duke of (1721-65). British general. 3rd son of George II, he was created duke of C. in 1726. He fought at Dettingen in 1743, was defeated by Marshal Soaxe at Fontenoy in 1745, and in 1746 ended the Jacobite rising in Scotland by his victory at Culloden. His brutal repression of the Highlands earned him the nickname of 'Butcher'. In the Seven Years' War he surrendered with his army at Kloster-Zeven (1757).

CUMBERLAND. County of N.W. England, adjacent to the Scottish border on the N., and in the S. including part of the Lake District. In the E. the land rises to the Pennines, and in the N.E. are the Cheviot hills. In the N.W. is the fertile low-lying Solway plain, drained by the Eden and Liddel. The

CULLINAN DIAMOND
Found in 1905

C. of Harold in 1066 English sovereigns have been crowned in Westminster Abbey.

CORONEL. Port of Chile, off which on 1 Nov. 1914 a German squadron under Admiral von Spee defeated a technically inferior British squadron under Rear-Ad. Cradock, who went down with his ship.

CORONER. In England an officer appointed by a county council to inquire into the deaths of persons who have died suddenly by acts of violence, under suspicious circumstances, or in prison at the hands of the hangman. They may also inquire into instances of treasure trove. The office may date back to the days of King Alfred.

A C. is appointed for life, and must be a barrister, solicitor, or medical practitioner with at least 5 years' professional service. Some county councils insist on the double medical and legal qualification.

At an inquest, a C. is assisted by a jury of not less than 7 or more than 11 persons. Evidence is on oath, and medical and other witnesses may be summoned. If the jury return a verdict of murder or manslaughter, the C. can commit the accused for trial.

In Scotland similar duties are performed by the procurator-fiscal. In the U.S.A. coroners are usually elected by the qualified voters of the co.

CORONET. A small crown worn by a peer at the Coronation and the state opening of parliament. A duke's C. consists of a golden circlet, above which are 8 strawberry leaves; a marquess's has 4 strawberry leaves with 4 points surmounted by pearls between them, an earl's 8 strawberry leaves with 8 tall points surmounted by pearls between them, a viscount's 16 small pearls, and a baron's 6 large pearls.

COROT (koroh'), Jean Baptiste Camille (1796–1875). French landscape painter. B. in Paris, he was at first employed in a linen-draper business there, but from the age of 26 devoted himself to painting, and became famous as one of the painters of the 'Barbizon school'. Though he exhibited regularly at the Paris Salon from 1827, his pictures did not begin to attract attention until he was about 60. He was one of the most poetical of landscape painters; much of his best work was executed in the early hours of the morning or at twilight.

CORPORATIVE STATE. A state in which the members are organized and represented not on a local basis as citizens, but as producers working in a particular trade, industry, or profession. The conception first appeared in modern politics in the theories of the Syndicalist movement of the early 20th cent., which proposed that all industries should be taken over and run by the trade unions, a federation of whom should replace the state. Similar views were put forward in Britain by the Guild Socialists. Certain features of Syndicalist theory were adopted and given a right-wing tendency by the Fascist régime in Italy, under which employers' and workers' organizations were represented in the National Council of Corporations, but this was completely dominated by the Fascist Party and had no real powers. Catholic social theory, as expounded in recent papal encyclicals, also favours the C.S. as a means of eliminating class conflict. Corporative institutions have been set up by the Franco and Salazar régimes in Spain and Portugal, under the influence of Fascist and Catholic theories. In Spain representatives of the national syndicates are included in the *Cortes*, and in Portugal a Corporative Chamber exists alongside the National Assembly.

CORPUS CHRISTI (Lat., Body of Christ). A feast celebrated in the R.C. and Greek churches, and to some extent in the Anglican Church, on the Thursday after Trinity Sunday. It was instituted in the 13th cent. through the devotion of St. Juliana, prioress of Mount Cornillon, near Liège, in honour of the Real Presence of Christ in the Eucharist.

CORREGGIO (kohr-rej'oh), Antonio Allegri da (c. 1494–1534). Italian painter, named after his birthplace near Modena. The son of a prosperous merchant, he came under the influence of Mantegna, Leonardo da Vinci, and Raphael, but developed a style of his own which is remarkable for its finesse of colouring and its treatment of light and shade. His best-known works incl. 'Adoration of the Shepherds' or 'Night' in the Dresden Gallery, 'The Marriage of St. Catherine' in the Louvre, and 'Mercury instructing Cupid before Venus' and 'Ecce Homo' in the National Gallery, London.

CORREGGIO. 'Mercury instructing Cupid before Venus'.
Courtesy of the National Gallery.

CORREGIDO R. Fortified island at the mouth of Manila Bay, Luzon, Philippine Rep. It became famous for its heroic defence in the S.W.W. by survivors of the Bataan campaign under Gen. Wainwright from 9 April until resistance ceased on 6 May 1942. U.S. parachute troops recaptured it 15 Feb. 1945.

CORRÈZE (korràz'). River of central France flowing 55 m. from the Plateau des Millevaches, past Tulle, cap. of C. dept. (to which it gives its name), to join the Vézère. It is harnessed for power at Bar, 6 m. N.W. of Tulle.

CORRIENTES (korre-en'tes). City of Argentina, cap. of C. prov., on the Paraná; an important river port in a stock-raising district. Pop. (1960) 57,000.

CORROBOREE. Dance of the Australian aborigines. Some Cs. record events in history; others have a religious significance, connected with fertility and rejuvenation, or are just theatrical entertainment.

CORSAIRS (kor'sarz). Moorish pirates who from the 16th cent. onward plundered shipping in the Mediterranean and Atlantic. Although many punitive expeditions were sent against them, they were not suppressed until France occupied Algiers in 1830. Some Englishmen of good birth joined the Barbary pirates or C., e.g. the half-brother of Sir Edmund Verney (q.v.), Sir Francis Verney.

CORSE. French name of CORSICA.

CORSICA. Island in the Mediterranean off the W. coast of Italy, and immediately N. of Sardinia. It forms a dept. of France, and is composed of a granitic plateau. The only part with a coastal plain is in the E. C. has a very favourable climate. Much of the land is covered by the characteristic maquis vegetation, herbs, evergreens, and bushes, but parts have fine chestnut

CORSAIR. Sir F. Verney.

Paris in 1891, where she m. the scientist Pierre Curie (1859–1906), in 1895. Impressed by the publication of Becquerel's experiments, Marie decided to investigate the nature of uranium rays; and in 1898 she reported the possible existence of some new powerful radioactive element in pitchblende ores. Her husband abandoned his own researches to assist her, and in the same year the existence of polonium and radium was announced, the pure elements being isolated in 1902. Both scientists refused to take out a patent on their discovery, and were jointly awarded the Davy Medal (1903) and the Nobel Prize for physics (1903; with Becquerel). In 1904 Pierre was appointed to a chair in physics at Sorbonne, and on his death in a street accident was succeeded by his wife. She wrote a *Treatise on Radioactivity* in 1910, and was awarded the Nobel Prize for chemistry in 1911. She d. a victim to the radiations among which she had worked in her laboratory, as seen below.

Her elder dau., Irène C. (1896–1956), m. in 1926 the physicist Frédéric Joliot (1900–59), who added the surname C. to his own. Together they made the discovery of the possibility of artificial radioactivity, i.e. that non-radioactive substances could be induced

to acquire the properties of radium after being submitted to bombardment by its rays. For this they received the Nobel chemistry award in 1935. Irène C. d. from leukaemia, caused by her work on radiation. Joliot-C. was prof. of physics at the Collège de France from 1937, but incurred official disapproval for his Communist sympathies from 1950.

Marie C.'s younger dau. Eve-Denise (1904–), pub. a biography of her mother in 1937, was a war correspondent in the S.W.W. and pub. *Journey Among Warriors* (1943).

CURIE. Unit of radioactivity equal to that emitted by one gramme of radium, named after Marie C.

CURITIBA (kōōrē'tē'ba). Brazilian city, cap. of Paraná state on the C. river. It has a univ. (1912) and makes paper, furniture, textiles, chemicals, etc. It dates from 1654. Maté is its chief export. Pop. (1960) 361,309.

CURIUM. Element at no. 96, at wt. 247, radioactive transuranic metal produced from americium and named after the Curies.

CURLEW (ker'lū). Genus of wading birds (*Neminius*) of the snipe family Charadriidae, distinguished by their long curved bills. The typical European C. or whaup (*N. arquata*) breeds on upland moors, and is about 2 ft. long with brownish, mottled plumage. A more northern species is the smaller whimbrel (*N. phaeopus*), which also has a shorter bill. Closely allied is the American whimbrel (*N. hudsonicus*). The stone-C. or thick-knee (*Oedienemus crepitans*) belongs to the Oedienemidae, a family intermediate between plovers and bustards.

CURLING. Game played on ice with stones; sometimes described as 'bowls on ice'. One of the most distinctive national games of Scotland, where it probably originated, it has spread to many countries. It can also be played on artificial (cement or tarmacadam) ponds. Two tees are erected 38 yd. apart. There are 2 teams of 4 players. The object of the game is to deliver the stones near the tee, those nearest scoring. Each player has 2 stones, of equal size, fitted with a handle. The usual weight of the stone, which is shaped like a small flat cheese, is 36 to 42 lb. In Canada the weight is greater (about 60 lb.) and iron replaces stone. The stone is slid on one of its flat surfaces and it may be curled in one direction or another according to the twist given it as it leaves the hand. The match is played for an agreed number of heads or shots, or by time.

CURRAN, Charles (1921–). Brit. administrator. Director of External Broadcasting 1967, he became Director-General BBC in 1968.

CURRAN, John Philpot (1750–1817). Irish politician and lawyer. In 1783 he entered the Irish parliament, where he championed Catholic emancipation, although himself a Protestant, and parliamentary reform. Between 1794 and 1803 he delivered speeches in defence of the leaders of the United Irishmen.

CURRENT. Variety of grape first cultivated near Corinth (hence the name), with a small round seedless berry. Dried, these are used extensively in cakes and are grown on a large scale in Greece and California. Because of the similarity of the fruit, the same name is given to several species of shrubs in the genus *Ribes* (family Grossulariaceae). The red C. (*Ribes rubrum*) is a native of S. Europe, Asia and N. America, occasionally growing wild in Britain. The white C. is a cultivated, less acid variety, but the black C. (*R. nigrum*) is the most favoured for cooking. The flowering C. (*R. sanguineum*) is a native of N. America.

CURRENCY. See MONEY.

CURRENT. A body of water flowing in a particular direction. Oceanic Cs. are of two kinds, viz. drifts which are broad and move slowly, and streams which are narrow and move swiftly. Of stream currents the best-known is the Gulf Stream (q.v.).

CURTIN, John (1885–1945). Australian Labour statesman. B. in Victoria, he rose to prominence as a trade-union leader and journalist, entered the House of Representatives in 1928, and was elected leader of the Labour Party in 1935. Becoming Prime Minister in 1941, he organized the mobilization of Australia's resources to meet the danger of Japanese invasion, and was confirmed in office in 1943.

CURTIS, Lionel (1872–1955). British advocate of imperial federation and a world state. One of Milner's 'young men' in S. Africa after the Boer War, he pub. in 1916 *The Commonwealth of Nations* – the 1st time this term was used – arguing the federalist case.

CURTISS, Glenn Hammond (1878–1930). American aircraft-designer. B. in New York, he designed some of the earliest successful types of aeroplane, was the first man to pilot a seaplane with success (1911), and was concerned with the early development of flying boats; his N.C.4 model was the first plane of any kind to be flown across the Atlantic.

CURVE. In geometry, the locus of a point moving according to specified conditions. The best-known of all Cs. is the circle, which is the locus of all points equidistant from a given point (the centre). Other common geometrical Cs. are the ellipse, parabola, and hyperbola; these curves are produced when a cone is cut by a plane at different angles. Many Cs. have been invented for the solution of special problems in geometry and mechanics, e.g. the cissoid and the cycloid.

CURWEN (ker'wen), John (1816–80). British musician. A Nonconformist minister, he retired in 1864 to propagate the tonic sol-fa system of music

COTMAN. Water colour 'Greta Bridge', in the British Museum, which dates from c. 1806 and is powerfully effective in the simplicity of its design.

COSTA RICA (rē'kah). A Central American rep. lying between the Caribbean Sea and the Pacific. It was discovered by Columbus, and from 1563 until 1821 was under Spanish rule. Since then it has been independent. Its chief troubles have been boundary disputes with its neighbours.

Most of C.R. is an elevated tableland, and there are a number of high volcanic mountains. The chief river is the San Juan. The country is divided into 7 provs. The capital is San José, pop. (1967) 185,640; other towns are Cartago, Heredia, Alajuela, Liberia, Limón, and Puntarenas.

Agriculture is the principal industry, but much of the country remains to be cleared. The principal product is coffee, followed by bananas and cacao. There is gold, silver, etc., and mineral surveys are in progress: timber is produced.

C.R. is governed by a president and a single chamber, the Legislative Assembly, both elected for 4 years. Roman Catholicism is the state religion. The language is Spanish. There is a national system of education, and English is taught in all secondary schools. Area 19,690 sq. m.; pop. (1966) 1,490,000.

CO'STELLO, John Aloysius (1891–). Irish statesman, leader of the Fine Gael party. B. in Dublin, he was Attorney-General under Cosgrave 1926–32, and P.M. of the Rep. 1948–51 and 1954–7, and led the Opposition 1951–4 and 1957–9.

COSTER, Charles de (1827–79). Belgian writer. B. at Munich, he was one of a group of young writers who set out to produce a distinctively Flemish literature instead of using French. In *La Légende de Thyl Uylenspiegel* (1867) he achieved a true masterpiece.

COSTER, Laurens Janszoon (1370–1440). Dutch printer, b. at Haarlem. According to some authorities, he invented movable type, but after his death an apprentice ran off to Mainz with the blocks and, taking Gutenberg into his confidence, began a printing business with him.

COST OF LIVING. This phrase came into common use during the F.W.W., when it was desired to measure the rise in prices of goods in general consumption, partly as a guide to necessary increases in wages. In Britain the first C.O.L. index was introduced in 1914 and based on the expenditure of a working-class family of man, wife and 3 children; the standard is 100. This, officially known from 1947 as the *Index of Retail Prices*, has been revised from time to time, as a result of inflation and a general rise in prices. Supplementary to it in reaching estimates of C. of L. is the *Consumer Price Index*, calculated from 1938 on the expenditure of all consumers.

In the U.S. a Consumer Price Index, based on the expenditure of families in the iron, steel and related

industries, was introduced in 1890. The modern index is based on the expenditure of the urban wage-earner and clerical-worker families in 46 large, medium and small cities, the standard being 100.

COSTUME. See DRESS.

COSWAY, Richard (1742–1821). British artist. Elected R.A. in 1771, he was the most accomplished of the 18th cent. miniaturists and painted the chief members of the Prince Regent's court.

COTMAN, John Sell (1782–1842). British landscape painter. B. at Norwich, he went to London to study c. 1798, returning to Norwich in 1807 as a drawing master. In 1834 Turner helped him to an appointment at King's Coll., London. He achieved a balanced harmony of forms in subdued tones, and was fond of depicting ships and bridges. His sons, Miles Edmund (1810–58) and Joseph John (1814–78) were also landscape painters.

COTONEASTER (kōtōnē-as'ter). Genus of trees and shrubs belonging to the Rosaceae and closely allied to the hawthorn and medlar. Its leaves are simple and entire, and woolly beneath, and the conspicuous but small and unpalatable fruits persist through the winter.

COTONOU (kot'onoo). Chief port of Dahomey, on the Gulf of Benin. It is a road and rail centre, and has an airport. Palm products and timber are exported. Pop. (1965) 85,000.

COTOPA'XI. Highest active volcano in the world, situated to the S. of Quito in Ecuador. It is 19,500 ft. high, and was first climbed in 1872. Its name is Quichua and means shining peak.

COTSWOLDS (kots'wöldz). Range of hills in Gloucestershire, England, some 50 m. long, between Bristol and Chipping Camden. They rise to 1,070 ft. in Cleeve Cloud, near Cheltenham, but average 500–600 ft.

COTTA. German publishing house established at Tübingen in 1659. JOHANN FRIEDRICH C. (1764–1832) pub. the works of Schiller, Goethe, Jean Paul, etc., and founded the *Allgemeine Zeitung* (1798).

COTTBUS. See KOTTBUS.

COTTET (kotēh'), Charles (1863–1925). French painter, best known for his paintings of life in the coastal region of Brittany.

COTTON, Sir Robert Bruce (1571–1631). English antiquary. At his home in Westminster he built up a fine collection of MSS. and coins, many of which had come from the despoiled monasteries. His son, Sir Thomas C., added to the library, and in 1700 it was bestowed on the nation by Sir John Cotton. Its contents are in the British Museum.

COTTON, Thomas Henry (1907–). British golfer. B. in Cheshire, he won the British Open Championship in 1934, 1937 and 1948.

COTTON. Commercial cotton mainly processed by industry consists of the fibres surrounding the seeds in the ripened fruit or boll. Most frequently cultivated is *Gossypium herbaceum*, believed to be of eastern origin, but introduced to America in the 18th cent. However, the longest fibres come from Sea Island Cotton (*Gossypium barbadense*), considered to be a native of the New World and now grown in the West Indies, which is so named from its early cultivation on the islands that fringe Georgia and South Carolina. Many cultivated cottons are hybrids.

The C. shrub grows 4–5 ft. and requires 200 days free from frost coupled with moderate rainfall or irrigation. Bright sunshine and rich soil are important for the ripening of the bolls. In the U.S.A. the seed is sown in March or April and the C. is picked in late summer or autumn. The principal C. lands of the world are in the sub-tropical regions. In the U.S.A. the principal States are in the South from the Carolinas and Georgia to Texas, Arizona and California, excluding the swampy Gulf Coast and Florida. The other main C.-growing areas in order of importance

CYCLADES. One of the lesser Cyclades, Mykonos is famed for its tiny and varied Byzantine churches—about 365—and its windmills, such as the one from beneath whose sails this photograph was taken.

Courtesy of National Tourist Organization of Greece.

CYCLADES (sik'lādēz). Group of about 200 Greek islands in the Aegean Sea, lying between Greece and Turkey. They include Andros, Melos, Paros, Naxos and Siros on which is the cap. Hermoupolis. Area 923 sq. m.; pop. (1961) 99,931.

CYCLAMATES (sik'lāmāts). Derivatives of cyclohexylsulphamic acid used as cheap artificial sweeteners, because 30 times as sweet as sugar, without after-taste, and free of calories. In excess of 3 grams a day C. may be harmful, especially in the case of heart, circulatory or liver complaints. In the U.S.A., where they were discovered 1937, their use is strictly controlled.

CYCLAMEN (sik'lāmen). Genus of perennial plants of the Primulaceae, with heart-shaped leaves and the lobes of the corolla twisted and bent back. The flowers are usually white or pink, and several species are cultivated.

CYCLING. Riding a bicycle for sport, pleasure or transport. The bicycle derived from the hobby-horse which consisted of 2 wheels connected by a wooden beam carrying a saddle. The rider propelled himself by thrusting his feet against the ground. By the 1860s it had assumed a practical form; being driven from the front wheel by pedals and cranks. Structural improvements, including wire wheels, metal frames, and solid rubber tyres followed in the 1870s and 1880s, and an increase in the diameter of the front wheel to gain extra speed, gave rise to the graceful 'penny-farthing'. Further developments led to the chain drive 'safety' bicycle, equipped with pneumatic tyres (J. B. Dunlop, 1888), which exists virtually unchanged to the present day. C. is now very popular for touring and racing both on road and track. A famous international race is the 'Tour de France' in 21 stages covering 2,500 m.

CYCLONE. See ANTICYCLONE.

CYCLOPES (sik'lōpēz). In Gk. mythology, a race of one-eyed giants, inhabiting Sicily. As described by Homer, they were savages, subsisting on their flocks of sheep and goats, but of cannibalistic propensities.

The name C. was also given to a legendary race of builders, supposed to have come from Thrace or Lycia, and to be responsible for the so-called Cyclopean walls, a feature of the prehistoric architecture of Mycenae and other places in Greece and Italy.

CYMBAL (sim'bel). Musical instrument of percussion, consisting of a pair of round metal plates, fastened to the hand with a leather strap, and struck together to produce a loud clashing sound.

CYNEWULF (kin'ewoolf) (fl. 750). Anglo-Saxon poet. He is thought to have been a Northumbrian monk, and is the undoubted author of 'Juliana' and part of the 'Christ' in the Exeter Book, and of the 'Fates of the Apostles' and 'Elene' in the Vercelli Book, in all of which he inserted his name in form of runic acrostics.

CYNIC (sin'ik). Originally the name of a school of ancient Greek philosophy, founded at Athens c. 400 B.C. by Antisthenes, a disciple of Socrates. He advocated a stern and simple morality, and a complete disregard of pleasure and comfort. His followers led by Diogenes (fl. 340 B.C.) not only showed a contemptuous disregard for pleasure, but despised all human affection as a source of weakness. Their 'snarling contempt' for ordinary men earned them the name of C., which in Gk. means 'dog-like'.

CYPRESS (si'pres). Genus of coniferous trees (*Cupressus*) of the family Cupressaceae. There are 12 species, which are evergreen trees and shrubs, found mainly in the warm temperate regions of the N. hemisphere. They have minute scale-like leaves and small globular cones, made up of peltate woody scales, and exude an aromatic resin.

CYPRIAN (si'pri'an) (c. 210-258). Christian saint and martyr, one of the earliest Christian writers and bishop of Carthage about 249. His most famous work is a treatise on the unity of the Church.

CYPRUS (si'prus). Large island in the E. Mediterranean, some 40 m. S. of Turkey in Asia, 60 m. W. of Syria.

Much of the island is covered by 2 mountain ranges, between which lies the broad and fertile plain of Messaoria. Streams are small, and even the largest, the Pedias, may be dried up in summer. In ancient times C. was famed for its copper, and in modern times cuprous pyrites is the most important mineral worked. Other minerals are iron pyrites, asbestos chrome ore, and gypsum. The lack of water is being remedied by extensive irrigation works; afforestation is carried on.

The cap. is Nicosia; other towns are Limassol, Larnaca, Famagusta, and Kyrenia. Area 3,572 sq. m.; pop. (1967) 614,000, of whom c. 112,000 were Moslems, and all but a few of the remainder members of the Eastern Orthodox Church. Greek is the language of the mass of the people, Turkish that of the Turkish minority (c. 17½ per cent); English is spoken by the educated.

From the 15th cent. B.C. C. was colonized by a succession of peoples from the mainland. In the 8th cent. it was within the Assyrian empire, then the Babylonian, Egyptian, and Persian. As part of Ptolemaic Egypt, it was seized by Rome in 58 B.C. The Lusignan family ruled it from 1191 until Venice captured it in 1489, and from 1571 it belonged to the Turks until in 1878 they surrendered its administration to Britain which annexed it in 1914, made it a colony in 1925. In 1954 Gk. Cypriots erupted into violence, demanding *enosis* (pron. en'osis, union with Greece, a movement which first developed c. 1930), the Turks

CYCLING. The Moulton bicycle is a revolutionary design from first principles. With its small wheels and F-shaped frame, it has independent suspension to iron out road bumps. It is shown in racing form during a record breaking run from Cardiff to London in 1962.

civil counties, and N. Ireland 6, admin. and geographical Cs. The Irish Republic has 26 geographical and 27 admin. Cs.

COUNTY BOROUGHS. See **BOROUGH**.

COUNTY COUNCIL. The largest of British local govt. units. C.Cs. were established in 1888, and exist in every administrative county. See **COUNTY**.

The C.C. consists of a chairman, aldermen, and councillors. The chairman is elected annually by the whole council and may be paid. The aldermen are usually one-third the number of the councillors and hold office for 6 years, one-half retiring every 3 years, and are elected by the councillors from their own number, or from persons qualified to be elected councillors. Councillors are elected every 3 years by the local-government electors, who are now the same as parliamentary electors.

C.Cs. have very varied and extensive powers, incl. public education in all forms, the county constabulary, public health administration, town-and-country planning, county roads, bridges, registration and local taxation licences, etc. They derive their revenue chiefly from the county rate obtained by precept from the county districts (borough, urban, and rural district councils).

COUNTY COURT. An English court of law created by the County Courts Act, 1846. It exists to try civil cases, and actions on contract and most actions on tort may be brought before it if the claim does not exceed £400. C.Cs. are presided over by a paid judge sitting alone. An appeal on a point of law lies to the Court of Appeal.

COUPERIN (kooprah'), François (1668–1733). French composer, called *le Grand*, as being the most famous of a distinguished musical family. B. in Paris, he held various court appointments and wrote exquisite pieces for the harpsichord.

COUPERUS (koo'-), Louis (1863–1923). Dutch poet and novelist. B. at The Hague, the setting of his 4-vol. *Books of the Small Souls* (1901–3), he also wrote historical novels of Heliogabalus, Xerxes, and Alexander.

COURBET (koorbeh'), Gustave (1819–77). French landscape and genre painter. From 1841 he was associated with the Barbizon school, and his paintings created a sensation at the Salon of 1850, because of their Impressionistic technique. Manet was influenced by him. In 1871 C. became a member of the Paris Commune and was sentenced to 6 months' imprisonment and a fine. His last years were spent at Vevey in Switzerland.

COURSING. The chasing of hares by greyhounds, not by scent but by sight, as a sport, and as a test of the greyhound's speed, etc. It is one of the most ancient of field sports. Since the 1880s it has been practised on enclosed or park courses. The governing body in Great Britain is the National Coursing Club, formed in 1858.

The C. season lasts September–March: the Altcar or Waterloo meeting, which decides the championship, is held in Feb. The Waterloo Cup race is known as the Courser's Derby.

COURTAULD, Samuel (1793–1881). British industrialist. He founded the firm of Courtaulds in 1816 at Bocking, Essex, which at first specialized in silk and crape manufacture, but from 1904 developed the production of viscose rayon. His great nephew, Samuel C. (1876–1947), was chairman of the firm from 1921, and in 1931 transferred his house and art collection to the Univ. of London as the C. Institute. The firm has more recently developed other man-made fibres.

COURT-MARTIAL. A court convened for the trial of persons subject to service discipline. British Cs.-M. are governed by the code of the service concerned – Naval Discipline, Army, or Air Force Acts – and in 1951 an appeal court was estab. for all 3 services by

the Cs.-M. (Appeals) Act. The procedure prescribed for the U.S. services is similar, being originally based on British practice.

COURTNEIDGE (kawrt'nēj), Cicely (1893–). British actress. B. in Sydney, she estab. herself on stage and screen as a comedienne with a gift for rousingly tuneful songs. She is the wife of Jack Hulbert.

COURT OF SESSION. The supreme Civil Court in Scotland, estab. 1532. Cases come in the first place before one of the 8 Lords Ordinary, and from their decisions an appeal lies to the Inner House which sits in 2 divisions called the First and Second Division. From the decisions of the Inner House an appeal lies to the House of Lords.

COURT OF THE LORD LYON. Scottish heraldic body composed of 1 King of Arms, 3 Heralds, and 3 Pursuivants. It embodies the High Seanachie of Scotland's Celtic kings.

COURTOIS (koortwah'), Jacques (1621–76). French painter, known as Bourguignon or Il Borgognone, chiefly famous for his battle and siege scenes.

COURTRAI. Belgian industrial town on the Lys, in W. Flanders. It is connected by canal to the coast, and by river and canal to Antwerp and Brussels. It has a large textile industry, esp. damask, linens, and lace. Here in 1302 was fought a battle in which the Flemings of Ghent and Bruges defeated an army of French knights. Pop. (1966) 43,310.

COURTS, Law. See **LAW COURTS**.

COUSIN (koozah'), Jean (1501–89). French painter, engraver, and sculptor. He was a Paris goldsmith, and his stained-glass windows in the Sainte Chapelle at Vincennes are considered among the finest examples in France.

COUSIN (koozah'), Victor (1792–1867). French philosopher. B. at Paris, he became a lecturer at the Sorbonne when 23, and did much to introduce German philosophical ideas into France. In 1840 he was Minister of Public Instruction and reorganized the system of elementary education.

COUSINS, Frank (1904–). British trade union leader. B. in Notts., from the age of 14 he worked in the mines for 6 years. Moving into transport, he became organizer for the Road Transport Section of the Transport and General Workers' Union in 1938. Min. of Technology 1964–6, he resigned in protest over the 'prices and incomes' policy, and was Gen. Sec. of the T.G.W.U. 1956–64 and 1966–9. He became chairman Community Relations Commission 1968.

COUSTEAU (koostoh'), Jacques-Yves (1910–). French naval officer. Celebrated for his oceanographic researches in command of the *Calypso* from 1951, he shared in the invention of the Aqualung and was the first to use television under water. *The Silent World* (1953) and other books recount his adventures, and he pioneered in underwater archaeology.

COUTTS, Frederick (1899–). British Salvation Army officer. B. at Kirkcaldy, Scotland, he was principal of the Army's Training Coll. 1953–7, and then Territorial Commander of E. Australia from 1957 until his election as General of the Army in 1963.

COUTTS (koots), Thomas (1735–1822). British banker. He estab. with his brother the firm of Coutts & Co. (one of London's oldest banking houses, first originating in 1692 in the Strand, which it has never left), becoming sole head on the latter's death in 1778. Since the reign of George III an account has been maintained there by every succeeding sovereign and other customers incl. Chatham, William Pitt, Fox, Wellington, Reynolds and Boswell. In 1920 the bank was affiliated to the National Provincial Bank Ltd., but retains a separate identity. One of his daus. m. Sir Francis Burdett (q.v.).

COUVE DE MURVILLE (koov de mŭrvēl'),

half chosen by each of the Czech and Slovak Nat. Councils), with safeguards to prevent domination by either nationality.

History. C. came into existence as an independent republic in 1918, after the break-up of the Austro-Hungarian empire at the end of the F.W.W. It consisted originally of the Bohemian crownlands (Bohemia, Moravia, and part of Silesia) and Slovakia, the area of Hungary inhabited by Slavonic peoples; to which was added as a trust part of Ruthenia when the Allies and Associated Powers recognized the new republic under the treaty of St. Germain-en-Laye. (For the earlier history of the regions concerned, see those headings.) Besides the related Czech and Slovak peoples, the country included substantial minorities of German origin long settled in the N., of Hungarian (or Magyar) origin in the S. But despite the problems of welding into a nation such a mixed group of peoples, until the troubled 1930s C., under the presidency of Thomas Masaryk (q.v.), made considerable political and economic progress.

The rise of Hitler to power in Germany produced a revival of opposition among the German-speaking part of the pop., and irredentism revived among the Magyar-speakers; in addition, the Slovakian clerical party demanded autonomy for Slovakia. These difficulties led on to crisis in 1938 and the Munich agreement (q.v.) between Britain, France, Germany, and Italy, made without consultation with or the consent of C., which detached from C. the Sudetenland and gave it to Germany. Six months later Hitler occupied all C. A government-in-exile under Beneš was estab. in London until the liberation in 1945 by Russian and U.S. troops. The same year saw some 2,000,000 Sudeten Germans expelled and Czech Ruthenia transferred to Ukraine S.S.R. Elections in 1946 gave the Left a slight majority and by 1948 the Communists were in full control (see MASARYK, JAN). The historic provs. were subsequently abolished, the country being divided into 10 regions plus Prague, and the 1960 constitution estab. a socialist rep., a unitary state of Czechs and Slovaks with equal rights, with a unicameral Nat. Assembly. A slight liberalization of the economy initiated 1965 became in 1968, under the leadership of Alexander Dubček (1921–) the First Sec. of the Communist Party, a 'Socialist Democratic Revolution'. Its programme, incl. restoration of freedom of assembly, speech and movement, and restric-

tion of the secret police, was regarded with suspicion by the U.S.S.R., and in Aug. 1968 Soviet, Bulgarian, E. German, Hungarian and Polish troops invaded C. to restore the orthodox line. Nevertheless, C. went ahead with the adoption of a federal structure with equal status for Czechs and Slovaks, and attempted to retain some shadow of freedom of action.

Literature. Although Czech has the oldest of the Slavonic literatures, little remains before the 14th cent. when there was a rapid development of vernacular writing in prose and verse. But interest was soon absorbed in religious controversy, and after 1621 the native literature was suppressed by the Jesuits; Comenius (1592–1670), greatest of the early writers, was driven into exile. In the 18th cent. the national language was suppressed by the Austrian govt.; but in the early 19th cent. came a revival led by the scholar J. Dobrovský (1753–1829). Among the new writers were the poets Jan Kollár (1793–1852) and Karel H. Mácha (1810–36); the historian F. Palacký (1798–1876), and the novelist B. Němcová (1820–62). The leading figure of the mid-19th cent. was the critic and journalist Jan Neruda (1834–91). Towards the end of the 19th cent. Czech literature split into 2 groups. One, under the leadership of the poet and translator J. Vrchlický (1853–1912), turned westward; the other, represented by the poet S. Čech (1846–1908) and the patriotic historical novelist A. Jirásek (1851–1930), preferred to maintain the Slav tradition and looked rather to Russia. A more realistic approach was induced by T. Masaryk (1850–1937), who influenced the poet Jan S. Machar (1864–1942), and novelists such as K. M. Capek-Chod (1860–1927). Later writers included Karel Čapek (1890–1938), whose plays achieved international fame; and the novelists J. Hášek (1883–1923), V. Vančura (1891–1942), and I. Olbracht (1882–1952). Most popular of recent novelists is Ladislav Mňacko (1919–), who fled to Israel with his Jewish wife in 1967 in protest against govt. anti-Israeli policy.

CZERNY (cher'nē), Karl (1791–1857). Austrian composer and teacher of the pianoforte. B. at Vienna, he was a teacher when he was 14. He composed over 900 works, and is best known for his piano studies.

CZESTOCHOWA (chestokhoh'vah). Industrial town in Poland, 120 m. S.W. of Warsaw, making iron goods, chemicals, paper, cement, etc. It has a railway junction and an airport. Pop (1966) 176,000.

D Fourth letter of the alphabet, answering to the Semitic *daleth* and the Greek *delta*.

In the Latin numeral system D stands for 500. In English money d. is the sign for a penny (Lat. *denarius*).

DAB. Species of flatfish (*Limanda limanda*) belonging to the plaice family (Pleuronectidae). Light brown or grey, with dull brown spots, it is commonly about 10 in. long.

DABCHICK or Little Grebe. Freshwater bird (*Podiceps flavirostris*) belonging to the Podicipedidae. See GREBES.

DACCA (dak ah). Capital of E. Pakistan, 150 m. N.E. of Calcutta, on the Burhi Ganga. It makes jute goods, chemicals, muslin, etc. Chittagong and Chalna are its ports. The Univ. was founded in 1921. Pop. (1961) 556,712.

DACE. A freshwater fish (*Leuciscus leuciscus*) of the carp family (Cyprinidae). Common in England, it is silvery, and reaches a length of about 12 in.

DACHAU (dakh'ow). See CONCENTRATION CAMPS.

DACHSHUND (daks') (Ger., badger-dog). Small hound of German origin, intended for use in badger digging, whence its name. Black-and-tan or self-coloured tan, it is long in body and short-legged.

DACOIT. Indian term for an armed robber, member of a gang numbering 5 and over; also used in Burma. Dacoity remained troublesome after India's independence, and a mission of reform by Vinoba Bhave (q.v.) in 1960 conspicuously failed.

D'ACOSTA, Uriel (c. 1590–1647). Jewish rationalist. B. in Oporto, he removed to Amsterdam, where he found himself in opposition to the Jewish authorities. Accused of atheism in a Christian court, he was excommunicated. Eventually he shot himself.

DADAISM. Irrational literary and artistic movement developed between 1915 and 1922, born of reaction and disillusion during the F.W.W. D. appeared almost simultaneously in New York, with Marcel Duchamp's exhibition of 'ready-made' sculptures; and in Zürich, the Rumanian poet Tzara with German writers Ball and Hiltensbeck founded the

where he was subjected to the evangelical influence of the converted slave-trader, the Rev. John Newton, with whom he collaborated in the *Olney Hymns* (1779). In 1773 C. suffered another attack of madness which prevented his marriage with Mrs. Unwin, but on the removal of the influence of Newton in 1779, C. turned to secular poetry, and in 1782 pub. *Table Talk*. This was followed in 1785 by *The Task* and *John Gilpin*, but in 1787 and 1794 he again suffered from insanity. Many of C.'s best minor poems belong to these later years, and in 1794 he received a state pension. The outstanding qualities of his poetry, delicate observation and kindly humour, are also present in his letters.

COWRY. A family of marine gasteropod molluscs (Cypræidae), belonging to the Streptoneura. They are distinguished by the peculiar form of the shell, in which the last wall conceals the others, and the outer lip of the elongated border is bent in towards the inner. Cs. are shallow-water dwellers, and are found in many parts of the world, particularly in the Indian and Pacific Oceans. C. shells are often beautifully coloured and polished. They have been used as ornaments and charms, and were worn by women to produce fertility. They have also been used as money in the S. Seas.

COWSLIP. A plant (*Primula veris*) belonging to the Primulaceae, being placed in the same genus as the primrose. It is common in English meadows, and in some parts the flowers are made into C. wine. The oxlip (*P. elatior*) is closely allied to it.

COX, David (1783–1859). British artist. B. nr. Birmingham, the son of a blacksmith, he studied under John Varley and made a living as a drawing master. His water-colour landscapes have attractive cloud effects, and his renderings of scenes in N. Wales are excellent.

COXCIE (kok'sē), Michael (1499–1592). Flemish painter who came under the influence of Raphael, and was court painter to Philip II of Spain.

COXWELL, Henry Tracey (1819–1900). British balloonist. B. in Kent, he made his first balloon ascent in 1844, and in 1845 pub. and ed. *The Balloon*, the first British journal devoted to aeronautics. In 1852 he became a professional balloonist, and during the Franco-Prussian War he helped to found the first German balloon corps.

COYOTE (*Canis latrans*). Name for several races of small wolf inhabiting N. America from southern Canada to Mexico, and representing the jackals of the New World. They live in burrows, and are a great nuisance to poultry farmers, but their food consists chiefly of hares, mice, and wild birds.

COYPU (koi'poo). S. American water rodent

COYPU. Although harmless in the Argentine, the C. developed in Britain – where it had no enemies to check its numbers – a dangerous liking for root crops and young corn. It also undermines marsh roadways and the banks of waterways. Crown Copyright.

(*Myocaster coypus*) of the porcupine group, often 2 ft. long, excluding its scaly rat-like tail, and weighing more than 20 lb. It has webbed hind feet, a blunt-muzzled head on a short, thick neck, and its strong front teeth are orange-yellow. Most common in the Argentine, it feeds on water plants and lives either on flat nests of dry reeds above water-level or in burrows on river-banks. Introduced into East Anglia in the 1930s for its fur (nutria), the C. escaped, bred, and did such damage to growing crops and waterways that it was officially recognized as a pest in 1960.

COZENS (kuz'enz), Alexander (c. 1717–86). British artist. B. in Russia, he was rumoured to be a natural son of Peter the Great, but was probably the son of Richard C., employed by the Tsar as a shipbuilder. Coming to England in 1742, he taught at Eton and George III's sons were his pupils. He is famous for his water-colour landscapes done in brown, grey or black washes, and sometimes used blots as the inspiration of a study to be finished with brush or pen. His son, John Robert C. (c. 1752–97) was also a water-colourist, influencing Girtin and Turner, but became mentally unstable.

CRAB. Robber crab and the European edible crab.

CRAB. Name given to the crustacea of the sub-order Brachyura, and to many of the Anomura (hermit crabs, etc.) of the order Decapoda. The true Cs. (Brachyura) are characterized by having the abdomen small, and tucked under the cephalothorax, which is covered with a broad carapace. They have 10 legs, of which the first pair are modified as claws, or nippers, and the remaining 4 pairs are used for swimming and walking. They are active, intelligent crustaceans, mainly carnivorous in their diet, and acting as scavengers. Most of them have a characteristic sidelong mode of progression. The young pass through a metamorphosis, the zöa and megalopa stages, before the familiar adult form is reached; and growth, both in these larval free-swimming forms and the adult, is effected by periodic casting of the outer shell.

Cs. vary greatly in habit and type. Common between tide-marks in Britain and Europe is the shore or green C. (*Carcinus maenas*); species of commercial value incl. the British and European edible C. (*Cancer pagurus*) and the blue C. (*Callinectes sapidus*) of the American Atlantic coast; freshwater Cs. incl. the S. European river C. (*Thelphusa fluviatilis*); and the hermit Cs. have a soft, spirally twisted abdomen and rely on the empty shells of gasteropod molluscs such as the whelk and periwinkle to afford them protection. Some tropical hermit Cs. live most of their lives a considerable distance from the sea, and the robber C. (*Birgus latro*) – a member of the family that has developed armour on the upper surface of the abdomen – climbs palm trees for the nuts.

CRAB APPLE. The wild form (*Pyrus malus*) from which the cultivated apple has been derived; it differs chiefly in the smaller size and bitter flavour of the fruit, used in C.A. jelly. The tree is common in woods and hedgerows in Britain S. of Perthshire, and varies from a mere bush to 30 ft. in height.

CRABBE, George (1754–1832). British poet. B. in Suffolk, he was apprenticed to an apothecary and practised medicine until he went to London in 1780

dockyard. With Port Arthur (q.v.) it forms the municipal district of Lita. Pop. (1960) 1,508,000.

DAIRYING. The business of producing and handling milk and milk products. Liquid whole milk is the nearest approach which is known to a perfect food. In England and Wales, over 70 per cent of the milk produced is consumed in its liquid form, consequently D. is dominated by the needs of the home liquid milk market, whereas countries such as New Zealand rely on easily transportable milk products such as butter, cheese, condensed and dried milk. It is now usual for dairy farms to concentrate on the production of milk and for factories to take over the handling, processing, and distribution of milk as well as the manufacture of dairy products. In Britain the Milk Marketing Board (1933), to which all producers must sell their milk, forms a connecting link between farms and factories. Research is carried out at the National Institute for Research in Dairying at Reading, the Hannah Dairy Research Institute in Scotland, etc. See MILK.

DAISY. Genus of plants (*Bellis*) of the family Compositae. The best-known species is the common D. (*B. perennis*), a British wild flower. A single white or pink flower-head rises from a rosette of spoon-shaped leaves. There are many cultivated varieties.

DA'KAR. Chief port and cap. of Senegal, W. Africa, on Cape Verde peninsula. Founded in 1862, it has an artificial harbour, extensive docks, and an airport. It is an industrial centre, and there is a univ. (1957). It was formerly the seat of govt. of French W. Africa. Pop. (1968) 450,000.

COMMON DAISY

DAKOTA. See NORTH DAKOTA; SOUTH DAKOTA.

DALADIER (dahlahdyeh'), Edouard (1884–). French statesman. Originally a teacher, he entered the Chamber as a Radical in 1919, and was P.M. Jan.–Oct. 1933 and Jan.–Feb. 1934. Once more Premier April 1938–March 1940, he was largely responsible both for the Munich Agreement and France's declaration of war on Germany, was arrested on the fall of France, and was a prisoner in Germany 1943–5. He was re-elected to the Chamber 1946–58.

DALAI LAMA (dahli' lah'mah), 14th Incarnation (1935–). Spiritual and temporal head of the Tibetan State until 1959. Enthroned in 1940, he temporarily fled 1950–1 when the Chinese overran Tibet, and in March 1959 made a dramatic escape from Lhasa to India, following a local uprising against Chinese rule. He then settled at Dharmasala, in the Punjab. In 1962 he pub. his autobiography *My Land and People*. See LAMAISM.

DALCROZE (dahlcrozh'), Émile-Jaques. See JACQUES-DALCROZE, ÉMILE.

DALE, Sir Henry Hallett (1875–1968). Brit. scientist. B. in London, he was director of the National Institute for Medical Research 1928–42 and in 1936 shared the Nobel prize for medicine with Otto Loewi of Graz for work on the chemical transmission of nervous effects. In 1942–6 he was prof. of chemistry at the Royal Institution, and was awarded the O.M. 1944.

D'ALEMBERT. See ALEMBERT.

DALGARNO, George (1626–87). Scottish schoolmaster and inventor of the first deaf-and-dumb alphabet (1680).

DALHOUSIE (dalhow'zi), James Andrew Broun Ramsay, 1st marquess and 10th earl of D. (1812–60). British administrator. He worked with Gladstone at the Board of Trade, succeeding him as pres. from

1845 until his appointment as Gov.-Gen. of India in 1847. For his successful handling of the 2nd Sikh War he received a marquessate, annexed the Punjab (1849) and, following the Burmese War, Lower Burma (1853). He also reformed the Army and Civil Service, and furthered social and economic progress before retiring in 1856.

DALI (dah'le), Salvador (1904–). Spanish artist. B. near Barcelona, he came under the influence of the Italian Futurists, but in 1929 joined the Surrealists. A student of Freud, he claimed that his work could be appreciated only by the unconscious, and shocked the public into startled recognition of his gifts. His later work shows a reversion to classicism. He collaborated with L. Bunuel in surrealist films, and has designed ballet costumes and scenery. *Secret Life of S.D.* and *Diary of a Genius* (1966) are autobiographical.

DALIN (dah'lin), Olof von (1708–63). Swedish poet, essayist and dramatist. A civil servant at Stockholm, he became famous for the political satires *Story of the Horse* and *Aprilverk* (1738), and in 1751 was appointed tutor to the Crown Prince. He wrote tragedies and comedies in the French classical style.

DALKEITH (dalketh'). Scottish burgh of Midlothian, 6 m. S.E. of Edinburgh, between the N. and S. Esk. Pop. (1961) 8,864.

DALLAN MAC FORGAILL (6th cent.). Irish poet, contemporary of Columba. His chief interest today is as the author of the *Eulogy of Colum Cille*, one of the earliest works in the Irish language extant.

DALLAS. Industrial city of Texas, U.S.A., an important railway centre with an airport in a large agricultural, mineral and petroleum area. It has a univ., and the annual Texas State Fair. Pop. (1960) 679,684.

DALMATIA (dalmā'shia). Region of Croatia, Yugoslavia, area 4,956 sq. m.; pop. (est.) 800,000. The cap. is Split. It lies along the E. shore of the Adriatic and incl. a number of islands. The interior is mountainous. Important products are wine, olives, and fish. Notable towns in addition to the cap. are Zadar, Sibenik, and Dubrovnik. D. became Austrian in 1815, and by the treaty of Rapallo, 1920, went to the kingdom of the Serbs, Croats, and Slovenes (Yugoslavia from 1931), except for the town of Zadar (Zara), and the island of Lastovo (Lagosta) with neighbouring islets, given to Italy until transferred to Yugoslavia in 1947. D. was made a region of Croatia in 1949.

DALI. A surrealist treatment of a conventional subject, 'The Discovery of America by Christopher Columbus' dated 1959, results in a dreamlike atmosphere. Courtesy of The Huntington Hartford Collection, Gallery of Modern Art.

DALMATIAN. Breed of dog, familiar as the 'spotted' or 'plum pudding' dog. Medium-sized and smooth-coated, white with characteristic liver or black spots, it is classified as a pointer.

DALMATIC. The outer liturgical vestment of the deacon in the R.C. Church; a

same liveliness of invention and in 1961 he became ballet director to the Württemberg State Opera, Stuttgart.

CRANMER, Thomas (1489–1556). English churchman. B. in Notts, he went to Cambridge and was ordained a Catholic priest in 1523. In 1529 he suggested that the question of Henry VIII's marriage to Catherine of Aragon should be referred to the universities of Europe, and Henry received him into his favour. In 1530 and 1531 he was sent on foreign embassies, and in 1532 m. a German Lutheran. In 1533 he was appointed Archbishop of Canterbury, declared the King's marriage to Catherine of Aragon null and void, and crowned Anne Boleyn queen.

Having by now adopted Protestant views, he encouraged the translation of the Bible, ordering a copy to be placed in every church, and issued an English litany, the basis of that now in use. Under Edward VI he was responsible for the issue of the Prayer Books of 1549 and 1552, and took a large part in their compilation. On Edward's death he supported the movement to place Lady Jane Grey on the throne, and in 1553 was condemned to death for treason. Taken to Oxford, he was tried for heresy, found guilty, excommunicated, and degraded. He signed 6 recantations of his heresies, but when Mary refused to spare his life he repudiated them and was burnt at the stake.

CRASHAW, Richard (1613–49). English religious poet of the metaphysical school. B. in London, he pub. a book of Latin sacred epigrams in 1634. Developing Catholic leanings, he fled to France, and in Paris joined the R.C. Church, and his *Steps to the Temple* appeared in 1646. In 1649 he became sub-canon of the Holy House at Loretto, and d. there of fever or possibly of poison.

CRASSUS, Marcus Licinius (c. 108–53 B.C.). Roman general, statesman, and financier. He crushed the rising of gladiators and slaves under Spartacus in 71, and in 70 became consul with Pompey. In 60 he joined with Caesar and Pompey in the first Triumvirate and in 55 obtained a command in the East. Invading Mesopotamia, he was defeated by the Parthians, captured, and put to death.

CRATER LAKE. See CHUBB CRATER.

CRAWFORD, Francis Marion (1854–1909). American novelist. Son of the neo-classical sculptor Thomas C. (1814–57), he aimed solely at entertainment in his many stories which reflect his travels. Many have the background of Italy, where he was born and made his home from 1883, e.g. *A Roman Singer* (1884).

CRAWFORD, Joan (1908–). American actress. B. in Texas, she was originally a dancer, but made her name from 1925 in such strongly dramatic films as *Mildred Pierce* and *Whatever Happened to Baby Jane*.

CRAWFORD, Osbert Guy Stanhope (1886–1957). British archaeologist. He introduced aerial survey as means of finding and interpreting remains, an idea conceived in the F.W.W., and was founder-editor of *Antiquity* from 1927.

CRAWLEY. English town (U.D.) in W. Sussex, 7 m. N.E. of Horsham. A village until chosen in 1946 for development as a new town, it has a 16th cent. inn. Pop. (1961) 53,786.

CRAYFISH. Name given to freshwater crustaceans of the family Astacidae, which closely resemble the lobsters, and like them belong to the division Macrura

of the order Decapoda. *Astacus pallipes* is common in rivers and streams in England and Ireland, living in burrows in the mud, and emerging chiefly at night. It is sometimes eaten in England.

The name C. or CRAWFISH is also given by fishermen to a marine Crustacean, the spiny or rock lobster (*Palinurus vulgaris*), which belongs to quite a different family of the Macrura. It is abundant on the S. and W. coasts of Britain; in France it is much valued for the table, and is known as *langouste*.

CREASY, Sir George (1895–). British admiral. In the S.W.W. he directed anti-submarine warfare 1940–2, and largely planned the naval operations of D-Day. He was C.-in-C. Portsmouth, and Allied C.-in-C. Channel Command under N.A.T.O. 1954–7, and in 1955 was promoted Admiral of the Fleet.

CRÉBILLON (krehb'yon'), Prosper Jolyot de (1674–1762). French tragic dramatist. B. at Dijon, his *Idoménée* was produced in 1705, and *Rhadamiste et Zénobie*, his finest play, in 1711. Powerful friends at court advanced him in opposition to Voltaire, and his *Catalina* (1748) was a great success.

CRÉCY-EN-PONTHIEU (krehse'-on-pontyö'). A village in Somme dept., France, about 11 m. N.N.E. of Abbeville, where in 1346 Philip VI of France was defeated by Edward III. Pop. (1962) 1,419.

CREDITON. English agricultural market town (U.D.) on the Creedy in Devon, traditionally the birthplace of St. Boniface. Pop. (1961) 4,422.

CREED, Frederick George (1871–1957). Canadian inventor. B. in Nova Scotia, he came to Britain in 1897 and perfected the teleprinter, or C. telegraphy system, first used in Fleet Street in 1912 and now used in newspaper offices all over the world.

CREEDS (Lat. *credo*, I believe). Name given to the verbal confessions of faith expressing the accepted doctrines of the Christian Church. The oldest is the APOSTLES' CREED, which, though not the work of the apostles, was probably first formulated in the 2nd cent. The full version of the Apostles' Creed, as now given, first appeared about 750. The use of Cs. as a mode of combating heresy was established by the appearance of the NICENE CREED, introduced by the Council of Nicaea in 325, when the Arian heresy was widespread. The Nicene C., as used today, is substantially the same as the version adopted at the Church Council at Constantinople in 381.

The so-called ATHANASIAN CREED is much later in origin than the time of Athanasius (d. 373) although it represents his views in a detailed exposition of the doctrines of the Trinity and the Incarnation. Some authorities suppose it to have been composed in the 8th or 9th cent. but others place it as early as the 4th or 5th cent. The only Creed recognized by the Eastern Orthodox Church is the Nicene.

CREEPER. A family of birds (Certhiidae) of the order Passeriformes, so named from their habit of creeping up the trunks of trees or other upright surfaces in search of insects which harbour in the crannies. Typical representatives are the tree C. (*Certhia familiaris*) and the wall C. (*Tichodroma muraria*).

CREEVEY, Thomas (1768–1838). British politician and diarist. B. at Liverpool, the son of a slave-trader, he entered parliament as a follower of Fox, m. a rich widow, and in 1830 became Treasurer of the Ordnance. His lively letters and journals give information on early 19th cent. society and politics.

CREIGHTON (kri'ton), Mandell (1843–1901). Anglican bishop and historian. B. at Carlisle, he became bishop of Peterborough and (1897) of London. His books include *The Age of Elizabeth* (1876), *History of the Papacy during the Reformation*, and a life of Wolsey.

CREMATION. The method of disposing of the dead by burning. The custom was universal among Indo-European peoples, e.g. Greeks, Romans, Teutons, etc., but was discontinued among Christians on

THOMAS CRANMER
By Gerlach Flicke
Photo: N.P.G.

was hostile to France. In 1678 he was impeached, and sent to the Tower until 1684. In 1688 he signed the invitation to William of Orange which led to the Revolution, was again chief minister 1690-5, and in 1694 was created duke of Leeds.

DANCE, George (1700-68). British architect. He designed the Mansion House (1739). His son, **GEORGE D.** (1741-1825), succeeded him as architect to the City of London.

DANCE, Sir George (d. 1932). British playwright. B. at Nottingham, he became a successful dramatist and wrote *A Modern Don Quixote*, the first English musical comedy.

DANCING. Rhythmic movement of the body, usually performed in time to music by one, two or more people. Its primary purpose is not for exercise, but may be religious, magical, martial, social or artistic - the last 2 being characteristic of contemporary 'advanced' societies.

Dances have always tended to rise upward through the social scale, i.e. the medieval court dances derived from peasant country dances. One form of dance tends to typify a whole period, e.g. the galliard the 16th cent., the minuet the 18th, the waltz the 19th and the quickstep the 20th. In this cent. new dances have tended to reach Britain from the Americas, the pioneers in popularizing them being Vernon and Irene Castle and the Astaires. The 9 dances of the modern World Championships in ballroom D. are the standard 4 (waltz, foxtrot, tango and quickstep) the Latin-American styles (samba, rumba, cha-cha-cha, and paso doble), and the Viennese waltz: a British development since the '30s, which has spread to some extent abroad, is 'formation' D. in which each team (usually 8 couples) performs a series of ballroom steps in strict co-ordination. Popular dance crazes, also American imports, have been the jitterbug in the '40s, jive in the '50s and the twist in the '60s. There is also today a great interest in Old Time (lancers, polka, two-step) and sequence D. See **BALLET**.

DANCOURT (doñkoor'), **Florent Carton** (1661-1725). French actor and dramatist, author of some 60 farcical comedies, the most notable being *Le Chevalier à la Mode* (1687).

DANDELION (dan'deli-on). Perennial British wild flower (*Taraxacum officinale*) belonging to the Compositae. The stout root-stalk rises from a rosette of leaves, deeply indented like a lion's tooth, hence the name (from Fr. *dent de lion*). The flower-heads are bright yellow. The fruit is surmounted by the hairs of the calyx which constitutes the familiar D. 'puff'. The milky juice of the D. has laxative properties, and the young leaves are sometimes eaten in salads.

DANCING. In Indonesia an honoured guest is still welcomed with the traditional dances. Here, in the Purwodiningratan Pavilion, Djakarta, the Sari Kembar dance is performed. Courtesy of Indonesian Embassy.

DANDIE DINMONT

DANDIE DINMONT. Breed of terrier dog, which originated in the Scottish border country, and was made famous through the character Dandie Dinmont (and his terriers) in Scott's *Guy Rattray*.

DANDOLO. Celebrated Venetian family which produced 4 doges, of whom the most outstanding was

Enrico D. (c. 1120-1205) who became doge in 1193. He greatly increased the dominions of the Venetian republic and accompanied the crusading army which took Constantinople (1203).

DANE, Clemence. Pseudonym of British author Winifred Ashton (1888-1965). Her many works include novels, such as *Regiment of Women* (1917) and *He Brings Great News* (1946), and plays, e.g. *A Bill of Divorcement* (1921), *Wild Decembers* (1932) - on a Brontë theme - and *Call Home the Heart* (1947).

DANIEL, Glyn (1914-). British archaeologist. University lecturer in archaeology at Cambridge from 1948, he has greatly assisted the development of the subject. His books incl. *A Hundred Years of Archaeology* (1950) and *The Idea of Prehistory* (1961).

DANIEL, Samuel (1562-1619). English poet and playwright. B. near Taunton, he was appointed in 1603 Master of Revels and entertained the court with his own masques and plays. The best-known of these is *Hymen's Triumph* (1615). The most popular of his works are his sonnets.

DANILOVA, Alexandra (1906-). Russian dancer. B. in Pskoff, she was with Diaghileff's company 1925-9 and was prima ballerina of the Ballet Russe de Monte Carlo 1938-58.

DANINOS (dahnēnoh'), **Pierre** (1913-). French author. Originally a journalist, he was liaison agent with the British Army at Dunkirk in 1940, and created in *Les Carnets du Major Thompson* (1954) a humorous-type Englishman who caught the French imagination.

DANISH LANGUAGE, LITERATURE, ART. See under **DENMARK**.

D'ANNUNZIO (dahnohn'tsyō), **Gabriele** (1863-1938). Italian writer. His 1st vol. of poetry, *Primo Vere* (1879), was followed by further collections of verse, short stories, novels, and plays, such as *La Gioconda* (1898) for Duse; *Francesca da Rimini* (1902), etc. After serving in the F.W.W., he led an expedition in 1919 to capture Fiume, which he held until 1921. He prepared the way for Fascism by his mystic nationalism, and was created Prince of Montenevoso in 1924.

DANTE ALIGHIERI (ahlēgi-ā'ri) (1265-1321). Italian poet. B. in Florence, he first met Beatrice in 1274 and conceived a love for her which survived her marriage to another and her death in 1290, as he described in *Vita Nuova* (c. 1295). In 1289 D. fought in the battle of Campaldino, won by Florence against Arezzo, and from 1295 took an active part in Florentine politics. In 1300 he was one of the 6 Priors of the Republic, and since he favoured the moderate White Guelphs rather than the Black, was convicted in his absence of misapplication of public moneys in 1302 when the latter became predominant. He spent the remainder of his life in exile, in central and N. Italy. His works include the prose philosophy (*Convivio* (1306-8); *Monarchia* (1310-13), theories; *De vulgari eloquentia* (1304-6), an original Latin work on Italian, its dialects, and kindred languages; *Canzoniere*, containing his scattered lyrics; and the *Divina Commedia* (c. 1300-21) an imaginary journey through Hell, Purgatory, and Paradise, under the guidance of Reason and Faith, represented by Virgil and Beatrice respectively. It is the greatest poem of the Middle Ages.

the American *G. assimilis* closely resembles it.

CRICKET. England's national summer game, played in the open air with bat and ball. Its origin is obscure, but some form of bat and ball game has been played since the 13th cent. In 1711 Kent played All England, and in 1735 a match was played between teams chosen by the Prince of Wales and the Earl of Middlesex. The Hambledon Club at Broad-Halfpenny Down in Hampshire was the first to be formed, in 1750. The Marylebone Cricket Club (M.C.C.) was established in Thomas Lord's ground in Dorset Square in 1787, and in 1814 it moved to St. John's Wood. Since then it has been the controlling authority, and its ground the acknowledged H.Q. of the game.

The rules of the game have been changed from time to time. At first the wicket consisted of only 2 stumps, first without, then with a single bail. The third stump was introduced in the middle of the 18th cent. The first rules of the game were drawn up in 1774. Only underhand bowling was allowed at first, but over-arm bowling was introduced in 1865. The game is played between 2 sides of 11 men each. Wickets are pitched at 22 yards apart. A batsman stands at each wicket and the object of the game is to score more runs than do the opponents. The bowler bowls to the batsman a stipulated number of balls (usually 6), after which another bowler bowls from the other wicket. A run is normally scored by the batsman after striking the ball, exchanging ends with his partner, or by hitting the ball to the boundary line for an automatic 4 runs. A batsman is usually got out by being (1) bowled; (2) caught; (3) run out; (4) stumped; (5) l.b.w. — when the ball hits his leg which is placed before the wicket. Games comprise either one or two innings per team.

Every year series of Test Matches are played among member countries of the Commonwealth, where the game has its greatest popularity: Australia, India, N.Z., Pakistan, U.K., and W. Indies; S. Africa, outside the Commonwealth from 1961, participated till 1968. See *ASHES*. In Britain there is a County Championship Table (1850), and a County Knock-Out Competition for the Gillette Cup. The Eton v Harrow (1805, in which Lord Byron played) and Oxford v Cambridge (1827) matches are social occasions.

Famous grounds, besides Lord's, incl. Kennington Oval, Old Trafford (Manchester), the Melbourne Ground and Sydney Oval (Australia); and the Wanderers' Ground (Johannesburg). Great cricketers have incl. W. G. Grace, Sir Jack Hobbs, W. R. Hammond, and Sir Len Hutton; the Australian Sir Don Bradman; the Indian K. S. Ranjitsinhji; the South African A. D. Nourse; and the West Indians Sir Leary Constantine, Sir Frank Worrell and Gary Sobers.

The game has suffered some diminution of popularity in recent years because of the growth of defensive tactics and the number of drawn games, and there have been moves to amend the rules.

CRIEFF (krēf). Small Scottish burgh and health resort on the r. Earn, Perthshire, with tanneries. Pop. (1961) 5,773.

CRIMEA. Peninsula on the N. shore of the Black Sea, forming a region of Ukraine S.S.R. Most of its surface is steppe, but the Kerch peninsula on the E. is rich in iron ore and petroleum is worked. The southern

coastal strip has a Mediterranean climate and a fertile soil, making it a favourite health resort. The cap. is Simferopol. Sevastopol is a great port and naval base. Smaller places are Yevpatoria, Feodosia, Kerch, and Yalta, scene of an Allied conference in 1945.

At an early period the C. was colonized by the Greeks; overrun later by successive invaders, it was Turkish 1475–1774, then independent until seized by Russia in 1783. It was the republic of Taurida 1917–20, C. A.S.S.R. of the R.S.F.S.R. 1920–44. The Germans occupied it July 1942–May 1944; its Tatar inhabitants were afterwards deported for alleged collaboration (exonerated 1967) and it was reduced to the rank of a region, first of the R.S.F.S.R., from 1954 of Ukraine. Area 23,312 sq. m. Pop. (est.) 2,250,000.

CRIMEAN WAR (1854–6). The war arose nominally from a disagreement over the custody of the Holy Places at Jerusalem, actually from British and French mistrust of Russia's ambitions in the Balkans. Hostilities began in 1853 with a Russian invasion of the Balkans (whence they were compelled to withdraw by Austrian intervention) and the sinking of the Turkish fleet at Sinope. Britain and France declared war on Russia in 1854, and were joined in 1855 by Sardinia. The main military operations were the invasion of the Crimea, the siege of Sevastopol (Sept. 1854–Sept. 1855), and the battles of the Alma, Balaklava, and Inkerman, fought in 1854. The French lost 62,500 men, the British 19,600 – 15,700 of them by disease, a scandalous state of affairs that led to the organization of proper military nursing services by Florence Nightingale (q.v.).

CRIMINAL APPEAL, Court of. In England and Wales a court constituted under the Criminal Appeal Act of 1907 (amended 1908) and consisting of the Lord Chief Justice as president, and all the judges of the Queen's Bench Division. A similar court was estab. for Scotland in 1926.

CRIMINAL INJURIES COMPENSATION BOARD. In Britain the board estab. in 1964 to admin. the govt. scheme for compensation of victims of crimes of violence.

CRIMINAL INVESTIGATION DEPARTMENT (New Scotland Yard). Detective branch of the London Metropolitan Police, estab. in 1878, and comprising a force of 1,600 men, which is recruited entirely from the uniformed police and controlled by an Assistant Commissioner.

Some 600 men are stationed at New Scotland Yard, where are housed: the *Central Office*, which deals with international offences and serious crimes in London and the provinces, and controls the Flying Squad; the *Criminal Intelligence Department*, which studies criminals and their methods; the *Fingerprint Department*, which contains c. 1,750,000 prints of convicted persons; the *Criminal Record Office*, which has information on all known criminals, and pub. the 'Police Gazette' and a pawn list daily; the *Scientific Laboratory*, which also serves police forces in the Home Counties; the *Stolen Car Squad*; and the *Special Branch*, which deals with offences against the State. The remaining 1,000 detectives are stationed locally in the Metropolitan Police District. See *SCOTLAND YARD*.

CRIMINAL LAW. It is distinguished from Civil Law, which redresses the private wrong of the individual, by being the attempt of the State to preserve public order, at first by limitation of private vengeance, and later exclusively by state-inflicted punishment.

Prior to the Norman Conquest, machinery for the enforcement of C.L. was rudimentary, and rested on the organization of the local territorial unit, e.g. the hundred. The principal court was the shire court, at which the freemen of the county were represented, and in which the law was declared from oral tradition. The main tendency of Saxon times was to extend money penalties for all offences, except for those that were *botless*, for example, murder, arson, rape.

author. Dramatic editor of the *Daily Telegraph* from 1925, he wrote the comic fantasy *Alf's Button* (1919), later staged and filmed.

DARLINGTON. English town (co. bor.) in Durham, on the Skerne, near its junction with the Tees. It has coal and ironstone mines, and makes iron and steel goods, woollens, etc. Pop. (1961) 84,162.

DARMESTETER (dahrmestetâr'), Arsène (1846-88). French lexicographer and philologist. Of Jewish origin, he was professor at the Sorbonne, joint author with Hatzfeld of the *Dictionnaire général de la langue française* (1895-1900), and author of works on philological subjects. His brother, JAMES D. (1849-94), orientalist, pub. *Études iraniennes* (1883) and translated and commented on the *Zend Avesta*.

DARMSTADT. Town in the Land of Hessen, Germany, 18 m. S. of Frankfurt-am-Main. It has a ducal palace and a technical university. Its industries include iron founding and the manufacture of chemicals. Pop. (1966) 139,748.

DARNLEY, Henry Stewart or Stuart, lord (1545-67). 2nd husband of Mary, Queen of Scots. He was b. in England the son of the earl of Lennox and Lady Margaret Douglas, through whom he inherited a claim to the English throne. In 1565 he m. Mary, who was his 1st cousin. By the advice of her secretary, David Rizzio, Mary refused D. the crown matrimonial; in revenge D. led a band of nobles who murdered Rizzio in Mary's presence. Within a few days Mary and D. were reconciled, and a son, later James I and VI, was b. in June, but soon D. alienated all parties and a plot was formed against him by Bothwell. While he was lying ill at Kirk o'Field, a lonely house at Edinburgh, it was blown up on 10 Feb. 1567, D.'s body being found strangled in a neighbouring garden. Mary's share in the plot remains a subject of controversy.

DARROW, Clarence Seward (1857-1938). American lawyer. B. in Ohio, he appeared on behalf of labour organizations in many famous cases, notably the trial of Eugene Debs in 1895, and was counsel for the defence in the Loeb and Leopold murder trial of 1924, and the Dayton 'monkey' trial of 1925.

DARTFORD. English market town (bor.) in Kent, 17 m. E.S.E. of London, on the Darent, close to its union with the Thames. Manufactures cement, chemicals, and paper. The D. Tunnel (1963) runs under the Thames to Purfleet, Essex. Pop. (1961) 45,643.

DARTMOOR. Plateau of S.W. Devon, some 400 sq. m. in extent; 200 sq. m. lie 1,000 ft. or more above sea-level. D. is noted for its wild aspect. Rugged

DARTMOUTH. The Pilgrim Fathers set sail in the *Mayflower* and *Speedwell* from Southampton on 5 August 1620, but had to put in at Dartmouth when the *Speedwell* was found to need repair. A second start was made from Monkey Quay, seen here, but bad weather drove them into Plymouth Sound where the *Speedwell* was abandoned. Photo: A. W. Kerr.

blocks of granite, or 'tors', crown its higher points, the highest being Yes Tor (2,029 ft.) and High Will-hays (2,038 ft.). The chief rivers of Devon have their sources on D. There are numerous prehistoric relics. 365 sq. m. of D. is a National Park.

D. Prison, opened in 1809 originally to house prisoners-of-war, is at Princetown in the centre of the moor, 7 m. E. of Tavistock.

DARTMOUTH. English seaport (bor.) at the mouth of the Dart, 27 m. E. of Plymouth, on the Devon coast, a noted centre for yachting, with an excellent harbour. The Britannia Royal Naval Coll. dates from 1905. Pop. (1961) 5,757.

DARU (dahrü'), Pierre Antoine, count (1767-1829). French statesman. B. at Montpellier, he became one of Napoleon's ablest advisers and administrators, and at the Bourbon restoration was made a peer.

DARWEN. English town (bor.) on the D. river, Lancs, 23 m. N.N.W. of Manchester. Cotton and plastics are manufactured, coal mined, and stone quarried. Pop. (1961) 29,452.

DARWIN, Charles Robert (1809-82). British scientist; discoverer of the principle of natural selection. B. at Shrewsbury, the grandson of Erasmus D. (q.v.), he studied medicine at Edinburgh and theology at Cambridge. As naturalist on the surveying voyage in the southern hemisphere of H.M.S. *Beagle* 1831-6, he made the observations leading to his theory of modification of species. Having m. in 1839 his cousin Emma Wedgwood, he settled in Down, Kent, for the rest of his life. By 1844 he had enlarged his notes to a sketch of his conclusions, and in 1858 A. R. Wallace (q.v.) sent a memoir to D. embodying almost the same theory. In 1859 D. pub. *On the Origin of Species by Means of Natural Selection* which placed the whole world of living things in an intelligible pattern, a genealogical tree, but aroused bitter controversy because it did not agree with the literal sense of the Book of Genesis. D. himself played little part in the debates, but his *Descent of Man* (1871) added fuel to the theological

DARTMOOR. One of a number of such broken granite masses, Haytor lies slumbering like a primeval beast. The moor, at once strangely beautiful and sinister, has captured the imagination of innumerable writers and artists. Photo: Roy J. Westlake.

CHARLES DARWIN. By John Collier. Photo: N.P.G.

past. In this sense all reality is history, and all knowledge is historical knowledge.

CROCKETT, Davy (1786–1836). American folk-hero. Tennessee-born, he was a Congressman (Democrat) 1827–31 and 1833–5. A series of books, of which he may have been part-author, made him into a mythical hero of the frontier, but their Whig associations cost him his office. He d. defending the Alamo during the war for Texan independence.

CROCKETT, Samuel Rutherford (1860–1914). Scottish novelist. Son of a Galloway farmer, he took orders in the Free Church, but later devoted himself

to novel writing, gaining success with *The Stickit Minister* (1893).

CROCODILE

to novel writing, gaining success with *The Stickit Minister* (1893).

CROCKFORD, John. Managing clerk to Edward Cox, Sergeant-at-Law, who pub. in Britain in 1858 the 1st edition of *Crockford's Clerical Directory*, and who preferred to use his clerk's name because of his own official position. It has been pub. since 1921 by the Oxford University Press, and the anonymous prefaces have estab. an influential tradition.

CROCKFORD, William (1775–1844). British gambler. Son of a fishmonger, he founded in 1827 C.'s Club in St. James's Street, which became the fashionable place for London society to gamble.

CROCODILE. Name given to reptiles of the order Crocodilia, and esp. to that section which includes the genera *Crocodylus* and *Osteoleaemus*, distinguished from the alligators and caimans by their short, triangular or rounded snout, and a notch in the upper jaw into which the 4th tooth in the lower jaw fits. There are about a dozen known species, found in the tropical regions of Africa, Asia, Australasia, and Central America. The largest is the salt-water or estuarine C. (*Crocodylus porosus*), which ranges from the eastern shores of India, through the Malay Region, to N. and E. Australia, New Guinea, and the Fiji Is. Lengths of 20 ft. or over are not uncommon. The Nile C. (*C. niloticus*) ranges from the Upper Nile to the Cape, incl. Madagascar.

The members of the order Crocodilia are distinguished by their more or less ponderous, lizard-like form, short legs and amphibious habits.

Cs. are generally sluggish when on land, but can move with considerable speed when alarmed. They are largely nocturnal, and wholly carnivorous, and will not hesitate to attack man. All the Crocodilia are oviparous, their eggs are relatively small and are covered with a hard, white shell.

CROCUS. Genus of plants of the family Iridaceae, natives of the N. parts of the Old World, esp. S. Europe and Asia Minor. During the dry season of the year they remain underground in the form of a 'corm', and produce fresh shoots and flowers in spring or autumn. At the end of the season of growth fresh corms are produced. Several species are cultivated as garden plants, the familiar mauve, white and orange forms being varieties of *C. vernus*, *C.*

versicolor, and *C. aureus*. To the same genus belongs the saffron (*C. sativus*). The so-called autumn C. or meadow saffron (*Colchicum*) is not a true C., but belongs to the Liliaceae.

CROESUS (krē'sus) (d. c. 546 B.C.). Last king of Lydia. He secured dominion over the Greek cities of Asia Minor, and welcomed at his court their wise men, among them Solon, the Athenian lawgiver, who warned him that no man could be called happy till his life had ended happily. Later C. was overthrown by Cyrus the Persian and condemned to be burnt to death. When on the pyre, he called three times the name of Solon; and Cyrus, having learnt the reason, was moved to spare his life. See NUMISMATICS.

CROFTS, Freeman Wills (1879–1957). Irish writer. B. in Dublin, he was a railway engineer until 1929, but pub. the first of many detective novels, *The Cask*, in 1919. He was precisely detailed in his settings and his detective, Inspector French, was a member of the British regular force.

CROKER, John Wilson (1780–1857). British Tory politician and writer. B. at Galway, he entered parliament in 1807, and was secretary to the Admiralty 1810–30. He regularly contributed to the *Quarterly Review* for many years; the best-known example of his criticism is his brutal attack on Keats's *Endymion*. He fiercely opposed the Reform Bill, and refused to sit in parliament after it was passed.

CROKER, Richard (1841–1922). American politician, known as 'Boss C.' B. in Co. Cork, he was taken to New York in infancy and there became 'Boss' of Tammany Hall, the notorious political organization of the Democratic Party (1886–1902).

Accused of every crime from corruption to murder, he was only once in prison, and lived from 1900 in retirement in England.

CROMAGNON (kroman'yoñ). Name given to a race of prehistoric man, the first skeletons of whom were found in 1868 in the C. cave near Les Eyzies, in the Dordogne region of France. They are supposed to have been negroid and rather larger in build than modern man, and to have been possessed of considerable artistic gifts.

CROMARTY. See ROSS AND CROMARTY.

CROME, John (1768–1821). British artist, known as Old Crome. B. at Norwich, the son of a journeyman weaver, he was apprenticed to a housepainter. In his spare time he drew from nature, his work showing Dutch influence, and in 1803 founded the Norwich Society. Chiefly using oils, he also produced watercolours and etchings, and is important in the development of English landscape art. His most important

CROME. 'Back of the New Mills, Norwich', which is now in the Castle Museum of the city, probably dates from the period 1806–1814. In his work can be seen the transition from 18th century picturesque to 19th century romantic.

Hebron, took Jerusalem, made it his capital, and housed the Ark there. Absalom, his favourite son, led a rebellion but was defeated and slain. D. sent Uriah to his death in order that he might marry his widow. He probably wrote a few of the psalms, and was celebrated as a secular poet.

DAVID (or Dewi) (fl. 5th–6th cent.). Patron saint of Wales, traditionally the son of a prince of Cardiganshire and uncle of King Arthur. He founded a monastery at Menevia, and presided over a synod at Brefi and condemned the Pelagian heresy. It is said that D. was responsible for the adoption of the leek as the national emblem of Wales.

DAVID I (1084–1153). King of Scotland. The youngest son of Malcolm Ceanmhor and St. Margaret, he was brought up in the English court of Henry I, m. in 1113 Matilda, widow of the earl of Northampton, and in 1124 became king. He invaded England in 1138 in support of Queen Matilda, dau. of Henry I, but was defeated at Northallerton in the 'Battle of the Standard', and again in 1141.

DAVID II (1324–71). King of Scotland. Son of Robert the Bruce, he was m. at the age of 4 to Joanna, dau. of Edward II of England, and in 1329 succeeded to the throne. After the defeat of the Scots by Edward III at Halidon Hill, D. and Joanna were sent to France for safety. They returned in 1341 and in 1346 D. invaded England and was captured at the battle of Neville's Cross and imprisoned for 11 years. On Joanna's death in 1362 D. m. Margaret Logie, but divorced her in 1370.

DAVID (dahvêd'), *Félicien César* (1810–76). French composer. He travelled in Palestine, and became famous with the performance of his symphonic fantasy *Desert* (1844). He was one of the first Western composers to introduce oriental scales and melodies into his music.

DAVID, Gerard (c. 1450–1523). Flemish painter. The last great artist of the Bruges school, he is famous chiefly for his altar-pieces.

DAVID (dahvêd'), Jacques Louis (1748–1825). French painter. He studied under Boucher, won the Prix de Rome in 1774, and during the Revolution he was an ardent supporter of the republicans: he was elected to the Convention and a member of the Committee of Public Safety, and narrowly escaped the guillotine. His most famous paintings are 'The Sabine Women' and 'Mme. Récamier'. He became court painter to Napoleon, but was banished by the Bourbons and settled in Brussels.

DAVIDSON, John (1857–1909). Scottish poet. B. in Renfrewshire, he developed an interest in science as assistant to the public analyst at Greenock, spent some years as a schoolmaster, and in 1889 went to London. At first mildly successful with *Fleet Street Eclogues* (1893) he declined into poverty and drowned himself. The modern, realistic idiom of such a poem as 'Thirty bob a week' influenced Eliot.

DAVIDSON OF LAMBETH, *Randell Thomas*, 1st baron (1848–1930). British churchman. Of Scottish parentage, he was archbishop of Canterbury 1903–28, and took a leading part in the movement to reunite the Christian Churches and the passing of the Church Assembly (Powers) Act of 1919, presiding over the Assembly 1920–8. He was created a baron on his resignation.

DAVID with the head and sword of Goliath. After Domenico Fetti at Hampton Court.

Victoria and Albert Museum.

DAVIES, Clement (1884–1962). British politician. B. in Montgomery, he was called to the Bar in 1909 and in 1929 entered politics as M.P. for his native co. He led the Liberal Party 1945–56, when he was succeeded by Grimond (q.v.).

DAVIES, Sir Henry Walford (1869–1941). English composer. B. in Salop of Welsh parentage, he was knighted in 1922, and was organist at St. George's Chapel, Windsor 1927–32. From 1934 he was Master of the King's Musick, and he was influential in the musical education of Britain through his attractive radio talks. His compositions incl. the cantata *Everyman* (1904), the 'Solemn Melody' for organ and strings, chamber music and part songs.

DAVIES, Joseph Edward (1876–1958). American diplomat. B. in Wisconsin, he was ambassador to the U.S.S.R. 1936–8 and Belgium 1938–9, and special asst. to Sec. of State Hull 1939–41. He was Roosevelt's special envoy to Stalin in 1943 and at the Potsdam Conference he was special adviser to the Pres.

DAVIES, Rhys (1903–). British author. B. in the Rhondda Valley, he wrote short stories and novels, such as *Marianne* (1951) and *Girl Waiting in the Shade* (1960), often in the Welsh dialect.

DAVIES, William Henry (1871–1940). British poet. B. in Mon. he went to America, where he lived the life of a 'hobo', and lost his right foot 'riding the rods'. Returning to England he raised the money to pub. his first vol. of poems, *Soul's Destroyer* (1906), as a wandering pedlar. G. B. Shaw recognized its merit and assured his success. D. pub. further vols. of simple direct verse and the prose *Autobiography of a Super-Tramp* (1908). Our portrait is by Dame Laura Knight.

DA VINCI. See LEONARDO DA VINCI.

DAVIS, Bette (1908–). American actress. B. in Mass., she entered films in 1930, estab. a reputation with *Of Human Bondage* as a forceful dramatic actress. Later films incl. *Dangerous* (1935) and *Jezebel* (1938), both winning her Academy Awards, *Private Lives of Elizabeth and Essex*, and *Whatever happened to Baby Jane* (1963).

DAVIS, Colin (1927–). British conductor. Musical director at Sadler's Wells 1961–5, and chief conductor BBC Symphony Orchestra from 1967, he was appointed in 1968 musical director of the Royal Opera from 1971.

DAVIS, Dwight Filley (1879–1945). American tennis player, donor in 1900 of the *Davis Cup* – more properly, the Dwight Davis International Bowl, competed for annually by the world's amateur lawn-tennis players. He was Gov.-Gen. of the Philippine Islands 1929–32, after being U.S. Sec. for War from 1925.

DAVIS, Elmer (1890–1958). American journalist. B. in Indiana, he was a Rhodes scholar at Oxford, and was associated with the *New York Times* 1914–24. He is remembered for his superb broadcast on Pearl Harbor and his campaign against McCarthy (q.v.).

DAVIS, Jefferson (1808–89). American statesman.

B. in Kentucky, he served in the U.S. army before becoming a cotton planter in Mississippi. He sat in the Senate 1847–51, and was Secretary of War 1853–7. He returned to the Senate in 1857 as a leader of the Southern Democrats, and a defender of slavery; in 1860 he issued a declaration in favour of secession, and early in 1861 he was elected president of the Confederate States. During the Civil War he ably directed the home front, but his strategy was less

W. H. DAVIES

by lawn tennis (c. 1875); but from the 1950s showed signs of revival.

CROSBY, Harry Lillis (1904–). American singer, known as 'Bing' C. B. at Tacoma, Washington, he started singing with dance bands in 1925 and achieved world success with such songs as *Pennies from Heaven*, *Blue Skies*, *White Christmas*, *The Bells of St. Mary's* – which were featured in films with the same titles. He also made a series of 'road' film comedies with Dorothy Lamour and Bob Hope, the last being *Road to Hong Kong*.

CROSS, Henri-Edmond. Pseudonym of the French Neo-Impressionist artist Henri Delacroix (1856–1910). His use of brilliant colour and solid form influenced Matisse and Fauvism (qq.v.).

CROSS (Lat. *crux*). Stake used in ancient times as an instrument of punishment; particularly, the C. on which Christ was crucified. It was commonly used by the Carthaginians, and the Romans employed it as a means of executing malefactors of the lowest class. The simplest form of cross (*crux simplex*) is an upright stake, without the transverse bar, on which criminals were bound or nailed. The form of C. best known in the West is the Latin cross, or *crux immissa*, which has a transverse bar fixed towards the top of the upright stake. The *crux commissa* or C. of St. Anthony has the transverse bar at the top of the stake. St. Andrew's C., or *crux decussata*, is formed of 2 diagonal beams, and the C. of St. George or Greek C. of equal upright and horizontal beams, intersecting at the centre.

The C. is the recognized symbol of the Christian faith, but long before the Christian era it was used as a religious emblem or for ornamental purposes. Traditionally, St. Helena, Constantine's mother, discovered the C. on which Christ was crucified when she made a pilgrimage to Jerusalem in 326.

CROSSBILL. Genus of birds (*Loxia*) of the finch family, distinguished by the crossed tips of the bill. This peculiar formation enables the C. to lever up the scales of pine cones and scoop out the seeds with its tongue. The common C. (*L. curvirostra*) of Europe also breeds in the Scottish Highlands and visits other parts of Britain; the adult male is orange crimson and the female and young are greenish. The smaller-billed *L. c. minor* is an American species, as is the rose-coloured *L. leucoptera*.

CROSSMAN, Richard (1907–). British Labour politician. Fellow and tutor of New Coll., Oxford, 1930–7, he entered Parliament in 1945. A 'Bevanite' (see ANEURIN BEVAN), he consistently opposed the Labour Party's official defence policy, and in 1960 left the shadow cabinet following a disagreement on this with Gaitskell, returning in 1963. He was Min. of Housing and Local Govt. 1964–6, when he became Lord Pres. of the Council and then in 1968 Min. for Health and Social Security.

CROSSWORD. Short for a crossword puzzle, consisting of a diagram divided with squares, some of which are cancelled, but the remainder are numbered and have to be filled in with the letters of words of which numbered clues ('down' and 'across') are given at the side. The modern vogue dates from 1923, when Cs. became very popular in U.S.A. and soon after in Britain.

CROUP. An obsolete name for diphtheria; but spasmodic croup is a distinct disease in which a child suffers frequent attacks of severe breathlessness. Treatment of the attack is by warm and cold bathing, but the cause is probably nervous.

CROW. Bird of the genus *Corvus* which also incl. the raven, rook and jackdaw, in the family Corvidae. The carrion C. (*C. corone*), resident in Britain, is wholly black, without the patch of bare white skin at the base of the bill which marks the rook – it is also less gregarious and more carnivorous. It is highly intelligent and sometimes destructive. The hooded or

grey C. (*C. cornix*) takes its place in Ireland and parts of Scotland. The American C. (*C. brachyrhynchos*) is rather smaller.

CROWFOOT. Name applied to plants of the genus *Ranunculus*. Of this genus, some members are terrestrial, and have yellow flowers, while others are aquatic, and have white flowers, with only a touch of yellow at the base of the petals. In the former are included the buttercup, lesser celandine, and spearwort. The celery leaved C. (*R. sceleratus*) is a large annual, inhabiting ditches and pond-sides, the corn C. (*R. arvensis*) is found in cornfields. The water C. (*R. aquatilis*) has 3-lobed floating leaves with dentate margins, and thread-like submerged leaves.

CROWN. An official head-dress worn by a king or queen. The modern C. originated with the diadem, an embroidered fillet worn by eastern rulers, for which a golden band was later substituted. A laurel C. was granted by the Greeks to a victor in the games, and by the Romans to a triumphant general. Cs. came into use among the Byzantine emperors and the barbarian kings after the fall of the Western Empire. Perhaps the oldest in Europe is the Iron C. of Lombardy, made in 591. The C. of Charlemagne, preserved at Vienna, consists of 8 gold plates.

Before the Conquest kings of England certainly wore Cs., and from the Conquest to the Commonwealth each king had two Cs. The old regalia was broken up under the Commonwealth, and a new set had to be made after the Restoration. See REGALIA.

CROWN AGENTS FOR OVERSEAS GOVERNMENTS AND ADMINISTRATIONS. The officially appointed business and financial agents in the U.K. for many govts. (inside and outside the Commonwealth) and public authorities, incl. the U.N. The office originated in 1833 under the title C.A. for the colonies, and was assimilated to the Civil Service in 1909, though not forming part of it. Self-supporting, its funds are drawn from fees charged to clients.

CROWN COLONIES. British colonies which are under the direct legislative control of the Crown, and do not possess their own systems of fully responsible or representative government. They are administered either by a Crown-appointed governor or by elected or nominated legislative and executive councils with an official majority. Usually the Crown retains rights of veto and of direct legislation by orders in Council.

CROWN COURTS. Courts estab. under the Criminal Justice Administration Act in 1956 in Liverpool and Manchester, and which took over Quarter Sessions and Assize Court work in the area.

CROWN JEWELS. See REGALIA.

CROWN PROCEEDINGS ACT. An Act of Parliament passed in 1947 providing that, as from 1 Jan. 1948, the Crown (i.e. Government departments, etc.) may be sued like a private person.

CROWTHER, Geoffrey, baron (1907–). British economist. Editor of *The Economist* (1938–56), he has pub. *Ways and Means* (1936), *An Outline of Money* (1941), etc., and was created a Life Peer 1968.

CROYDON. Bor. of Greater London from 1965. Lanfranc's palace (11th cent.), residence of the Archbishops of Canterbury until c. 1750, survives in part. The Peggy Ashcroft (q.v.) Theatre was opened 1962. Opened 1920, C. airport was once one of the world's busiest; closed 1959. Office development to relieve congestion in central London has led to rapid growth. Pop. (1967) 328,290.

CRUCIFERAE (kroos'i'ferē). Family of dicotyledonous flowering plants, so called because of the cross-like arrangement of their four petals. They are annuals or biennials, and comprise about 220 genera and 1,000–2,000 species.

CRUCIFIX (kroo's'ifiks). A cross, or a representation of a cross, with the image of Christ on it.

CRUDEN (krōo'd'en), Alexander (1701–70). Scottish scholar who became a bookseller in London, and

D-DAY. 6 June 1944 is one of the great dates of history that will never be forgotten. Between 6.30 and 7.30 a.m., after a tremendous sea and air bombardment, the spearhead of the liberating Allied forces secured a lodgement on the French coast between the Cotentin peninsula and the Seine estuary. Hitler's 'Fortress Europe' was breached, and victory was at last in sight. This painting by Barnett Freedman, now in the Imperial War Museum, shows the main beach-head at Arromanches 20 days later (D.20). The Mulberry harbours are in position and functioning, and the 'build-up' for the great push is in full swing.

which they spread. Unfortunately, there is evidence that these pests develop resistant strains in response.

DEACON. Third and last order of the Christian min. It dates from Apostolic times, and originally the Ds. were entrusted with the care of the material needs of the Christian community. Subsequently it became the preliminary stage to the priesthood, and in the C. of E. a candidate for holy orders is ordained D., proceeding to obtain priest's orders after a year. Ds. receive episcopal ordination and must be at least 23 years of age. In the Presbyterian and Free Churches a D. is a layman chosen to assist the min. In 1964 the Second Vatican Council approved in principle the estab. of a permanent order of Ds., who might incl. married men of mature years.

DEACONESS. In the Christian Church, a woman specially trained and set apart for spiritual work, sick visiting, and charitable and welfare work in general. There were Ds. in the early Church, but as known today they are a modern institution. The order of Ds. was revived in the C. of E. in 1862; they are trained at special colleges and are licensed by the bishop in whose diocese they are chosen to serve. They are not allowed to administer the Sacraments, but may conduct public worship, preach, and hold special services. They achieved legal standing within the law of the Church 1968.

DEAD SEA. Large lake partly in Israel partly in Jordan; it is 46 m. long, about 8 m. wide, and lies 1,292 ft. below sea-level. The chief river entering it is the Jordan; it has no outlet to the sea, and the water is very salt.

DEAD SEA SCROLLS. Collection of ancient scrolls (some intact in their jars) and fragments of scrolls found in 1947 in a cave on the W. side of the Jordan 12 km. south of Jericho and 2 km. from the N. end of the Dead Sea. The jars are considered to date from c. 22 B.C. to A.D. 100. The fragments were painstakingly pieced together and deciphered. Five are in Syrian possession: five (incl. a complete Isaiah) are at the Hebrew Univ. of Jerusalem, which also acquired a 6th, the Temple Scroll, discovered 1967. See QUMRAN.

DEAFNESS. Absence or deficiency of the sense of hearing. It may be inborn and due to abnormality of development, but is usually caused by injury of disease of the inner ear. After the habit of speech has been fully formed, the ability to speak will be retained, and some relief may be given by electrical hearing aids (q.v.), but deafness in young children necessarily implies mutism as well unless special training is given.

DEAKIN, Alfred (1856–1919). Australian statesman. He was Attorney-General in the first Federal Cabinet of 1901, and P.M. 1903–4, 1905–8, and 1909–10. He favoured social reform and preference for Britain.

DEAKIN, Arthur (1890–1955). British trade unionist. Son of a cobbler, he made a name as a masterly negotiator and succeeded Bevin as sec. of the T.G.W.U. 1945–55.

DEAL. English port and resort (bor.) on the E. coast of Kent; one of the Cinque ports. Julius Caesar is said to have landed there in 55 B.C. The castle was built by Henry VIII and houses the town museum. Pop. (1961) 24,791.

DEAN. In the C. of E., the head of the chapter of a cathedral or collegiate church. A rural D. is a clergyman who is invested with jurisdiction or precedence over a division of an archdeaconry. There are also Ds. in the colleges of Oxford and Cambridge, being fellows charged with the maintenance of discipline; and in medical schools, univs., etc.

DEAN, Basil (1888–). British man-of-the-theatre. He made his debut as an actor in 1906, and has since produced many West End successes, often under his own management. During the S.W.W. he was founder and director-general of ENSA, providing entertainment for the forces.

DEAN, Forest of. Wooded area in W. Gloucestershire, England, much of it Crown property. Iron and coal are mined.

DEARBORN. Motor manufacturing city in Michigan, U.S.A., 10 m. W.S.W. of Detroit. Settled in 1795, it was the birthplace and home of Henry Ford (q.v.) who built here the first Ford works. D. also makes aircraft parts, steel, bricks. Pop. (1960) 112,007.

The unit boxes into which a crystal structure can be divided are not always cubic; many have boxes whose edges are all of different lengths and not all at right-angles to one another.

The interest of chemists now lies in a detailed study of the complex groupings which occur in living matter. It has recently been shown that even protein molecules of living matter can form crystals, and such compounds may now be studied by X-ray C. Another field of application of X-ray analysis lies in the study of metals and alloys. C. is also of use to the geologist, since X-ray analysis of crystals can tell how atoms are arranged in the rocks and soils. Many materials now examined by X-ray C. were until recently not even suspected of being crystals.

CRYSTAL PALACE. Building of glass and iron designed by Paxton, originally erected in Hyde Park, London, England, to house the Great Exhibition of 1851, transferred to Sydenham Hill 1854. Saturday concerts of symphonic music were held there 1855–1901, and a triennial Handel Festival took place 1859–1929. During the F.W.W. the C.P. was the depot of the Royal Naval Division, and after the war it housed the Imperial War Museum for a time, but was burnt down in 1936, except for one tower (demolished 1941). Sporting events, such as the Cup Final, had often been held in the grounds, and the site was acquired in 1952 by the London County Council for a National Youth and Sports Centre (opened in 1964 and covering c. 36 acres), a National Exhibition Centre being planned for 1970.

CTESIPHON (tes'ifon). Ruined city of the Sassanians 12 m. S.E. of Baghdad. A palace of the 4th cent. still has its throne-room standing, spanned by a single vault of unreinforced brickwork some 80 ft. across. See illus. under MESOPOTAMIA.

CUBA. Largest of the islands of the West Indies; it lies across the entrance to the Gulf of Mexico; and is an independent republic. C. is long and narrow, and is mountainous at either end. For the rest there are large areas of well-watered, fertile plain, on which tropical agriculture flourishes. The staple products are tobacco and sugar: in 1960 C. was the largest producer of sugar in the world after the U.S.S.R. Tobacco is chiefly grown in the Vuelta-Abajo district in the W. Coffee, cocoa, pineapples, bananas, etc., are also exported. There is much valuable wood in the forests: the cedar is used locally for cigar-boxes. Working of iron, copper, nickel, etc., was developed chiefly by U.S. companies.

CUBA. One of the world's racial melting pots, the island ranges in its population from deepest black to white, with every shade in between. Courtesy of the Cuban Embassy.

C. is divided into 6 provs. The cap. is Havana. Roman Catholicism is the predominant religion and Spanish the official language. Commerce is chiefly with the U.S.A. About two-thirds of the people are descended from Spanish settlers, but there is a large Negro and mulatto pop. and an intermixture of races. A Socialist constitution has been promised at an unspecified date, and the general programme is Marxist-Leninist. There is a president, who appoints the Prime Minister (Castro) and a Cabinet.

C. was discovered by Columbus in 1492 and conquered by the Spanish some 20 years later. The import of African slaves began in 1523. After a long period of corrupt administration and civil war, the Cubans revolted in 1895. The blowing up of the U.S.S. *Maine* in Havana harbour in 1898 led to war, April–Dec., between Spain and the U.S.A. in which Spain was defeated and in the peace treaty acknowledged C.'s independence. A short period of U.S. military rule followed. A Cuban convention adopted a constitution in 1901, and in 1902 the U.S.A. withdrew and the first president was inaugurated. A corrupt regime forcibly established by Maj.-General Fulgencio Batista y Zaldívar in 1952 was forcibly overthrown in 1959 by Fidel Castro (q.v.) who introduced a violently anti-U.S.A. policy. C. is subject to hurricanes, and one in 1963 killed more than a 1,000 people, and destroyed roads and railways as well as 80 per cent of the coffee crop. See also PIGS, BAY OF.

Area 44,200 sq. m. including the Isle of Pines and adjacent islands; pop. (1967) 8,033,000.

CUBISM. Art movement arising out of Post-Impressionism. The term was first used in a derogatory sense by Henri Matisse in 1908 in his criticism of a picture by Georges Braque, who invented the Cubist technique; its chief exponent is Pablo Picasso.

C. is the artistic expression of reality by means of abstract forms. The cubist does not try to reproduce a photographic or impressionistic picture of an object – indeed, many of his pictures do not, at first sight, bear any resemblance to recognizable objects – but merely gives an impression of its solidity and abstract qualities. Thus Picasso cuts up human features into a number of geometrical forms.

Other exponents of C. incl. André Derain, Fernand Leger, Albert Gleizes, and Francis Picabia.

CUCHULAIN (kuhōō'lin). Legendary hero, the chief figure in an important cycle of Irish legends. He is associated with his uncle Conchobar, king of Ulster, and his most famous exploits are described in the epic saga *Cow-reiving of Cuailgne*. He has been called the Irish Achilles.

CUCKOO. Large and important family of birds (Cuculidae), of which the common C. (*Cuculus canorus*) is the type. The latter breeds in Europe and N. Asia, and migrates S. in winter. Its name derives from its characteristic cry. The adult bird somewhat resembles a hawk in appearance, being bluish-grey

CRYSTAL. Using specially designed pressure vessels and control equipment, Standard Telephones and Cables Ltd. has perfected a process which permits the growth in less than a month of large pieces of radio quality quartz suitable for use in the manufacture of frequency control units. Against this the world's deposits of natural quartz crystals took over 3,000,000 years to form. Courtesy of Standard Telephones and Cables Ltd.

professorships at Zürich, Utrecht, Göttingen, Leipzig and Berlin: in 1940 he went to the U.S. where he was prof. of chemistry at Cornell Univ. 1940–52. A pioneer of X-ray powder photography, and famed for his work on polar molecules, dipole moments and molecular structure, he was awarded a Nobel prize in 1936.

DE'CALOGUE. The 10 commandments delivered by Jehovah to Moses, and stated in Ex. xx, 1–17, and Deut. v, 6–21. The D. is recognized as the basis of morality by both Jews and Christians.

DECA'PODA. An important order of crustaceans of the division Malacostraca. The name is derived from the limitation of the feet to 10. They are divided into Natantia (prawns and shrimps) and Reptantia (lobsters, crayfish, hermit-crabs, crabs).

DECATUR (dekā tur), Stephen (1779–1820). American naval hero. Of French ancestry, he was b. in Maryland and greatly distinguished himself in the war with Tripoli (1801–5), when he succeeded in burning the *Philadelphia*, which the enemy had captured. During the war with England he surrendered only after a desperate resistance in 1814, and in 1815 was active against the Algerian pirates. He was killed in a duel. He is famed for his toast which incl. the phrase 'our country, right or wrong'.

DE'CCAN. *Triangular tableland in the peninsula of India, stretching between the Vindhya Hills in the N. and the Western and Eastern Ghats.*

DECIBEL (des'ibel). A logarithmic unit, symbol dB, used to express ratios of power, voltage current or sound intensity. It is expressed as 10 times the logarithm to the base 10 of the power ratio, that is $10 \log_{10} p_1/p_2$ where p_1 and p_2 are the powers being compared. The unit is the tenth of a bel, and 3 dB is equivalent to roughly doubling the power.

Sound intensity which is proportional to the square of the sound pressure is often quoted in Ds. with reference to a standard intensity, which is usually taken to be a pressure of 0.002 dyn/cm². Hence a sound intensity corresponding to this pressure would, by definition, be 0 dB. See NOISE.

DECIMAL FRACTIONS (Lat. *decem*, ten). The system of fractions expressed by the use of the decimal point, which are in fact all those fractions where the denominator is 10, 100, 1,000 or any higher power of 10. Thus 3/10, 51/100, 23/1,000 are D.Fs. and are normally expressed as 0.3, 0.51, 0.023. The regular use of the decimal point appears to have been introduced about 1585, but the occasional use of D.Fs. can be traced as early as the 12th cent.

DECIMAL SYSTEM. A system of weights and measures, or coinage based on one standard unit (e.g. the metre, the dollar), which is divided into or multiplied by multiples of 10. Since the U.S.A. and France set the example in the late 18th cent., many leading countries of the world have adopted the D.S. for their coinage. Apart from Canada the Commonwealth has generally been slow to adopt decimal coinage, but India did so in 1957, Australia 1966, New Zealand (from 1967) and the U.K. announced in 1966 its adoption of the system in Feb. 1971 (£1 retained with 100 units: one new penny = 2.4d.). The D.S. of Weights and Measures, 1st suggested by James Watt, and 1st adopted by France during the Revolution, was being adopted in Britain 1970–5: 90% of the world pop. either use or are committed to the system. In terms of relative efficiency, however, the Duodecimal System (q.v.) is superior.

DECIUS (dē'shius), Gaius Messius Quintus Traianus (A.D. 201–51). Roman emperor. He fought a number of campaigns against the Goths, but was finally beaten and killed by them near Atrium. He ruthlessly persecuted the Christians.

DECLARATION OF INDEPENDENCE. The statement issued by the American Continental Congress on 4 July 1776, renouncing all allegiance to the

British Crown, and ending the political connection with Britain. Following a resolution moved on 7 June, 'that these United Colonies are, and of right ought to be, free and independent States', a committee incl. Jefferson and Franklin was set up to draft a declaration; most of the work was done by Jefferson.

The resolution was adopted by the representatives of 12 colonies, New York abstaining, on 2 July, and the Declaration on 4 July; the latter date has ever since been celebrated as the 'birthday' of the U.S.A. The representatives of New York announced their adhesion on 15 July, and the Declaration was afterwards signed by the members of Congress on 2 August.

DECLARATION OF RIGHTS. The statement issued by the Convention Parliament in Feb. 1689, laying down the conditions on which the crown was to be offered to William and Mary. Its clauses were later incorporated in the Bill of Rights (q.v.).

DECORATED. Name given in architecture to the 2nd period of English Gothic, covering the latter part of the 13th cent. and the 14th cent. Its chief characteristics are highly ornate window tracery, the window itself being divided into several lights by vertical bars called mullions; sharp spires ornamented with crockets and pinnacles; complex church vaulting; and slender arcade piers. Exeter cathedral is a notable example.

DEE, John (1527–1608). English alchemist and mathematician. B. in London, he lived for many years on the Continent, and claimed to have transmuted metals into gold. He long enjoyed the favour of Queen Elizabeth, but d. in poverty.

DEED. A legal document serving to pass an interest in property or to bind a person to perform or abstain from some action. Ds. are of two kinds: indentures and Ds. poll. Indentures are those which bind two parties in mutual obligations; Ds. poll concern one party only, as where a person changes his name.

DEEP FREEZING. Method of extremely rapid cooling of food to c. 300°F below freezing point, the temperature then being kept constant until the food is required. The real nutritive value and flavour of food is contained in the water or 'juice' which forms the greater part of it, and which is released in D.F. Thawing enables it to run away and escape, unless a temporary 'skin' is formed by cooking until the food can be served and eaten. Hence, thawing before cooking results in tasteless food without nourishment, whereas the reverse, allowing all the flavour to be released at once, may give a more palatable meal than with untreated food. First used in the U.S.A. in the 1930s, D.F. is not to be confused with the earlier practice of slowly chilling food to a few degrees below freezing, which is now recognized as harmful.

DEER. Family of ruminant hoofed mammals (Cervidae) akin to antelopes and cattle but distinguished by the presence of antlers in almost all species. In the typical D. the antlers are usually branched and with rough surfaces and are carried only by the male, but they occur in both sexes in the reindeer (*Rangifer tarandus*).

Most species of D. are forest-dwellers, and the family is distributed throughout Europe, Asia, and America; it is absent from Australia, and in Africa occurs only in Morocco, where the Red D. (*Cervus elaphus*) is found. This is the typical wild D. of Europe, including Great Britain.

DEERHOUND. Breed of dog traced as far back as the 14th cent., and formerly used for stag-hunting; similar to the greyhound, but of larger size, being 30 in. and upwards in height with a harsh, wiry coat.

DE FALLA, Manuel. See FALLA, MANUEL DE.

DEFAMATION. See LIBEL, SLANDER.

DEFENCE. Ministry of. British government dept.

mountainous mass is drained by many rivers, e.g. the Derwent, Esk, Eden, and nearly every valley is occupied by a lake, some of the best-known being Derwentwater, Bassenthwaite, Buttermere, Wastwater, etc. C. is rich in minerals; there are extensive coal and iron workings in the W. and S. Carlisle is the county town. After the Roman withdrawal, C. became part of Strathclyde, a British kingdom. In 945 it passed to Scotland, in 1157 to England; until the union of the English and Scottish crowns in 1603 C. was the scene of frequent battles between the two countries. Area 1,521 sq. m.; pop. (1967) 296,050.

CUNEIFORM. The king of Babylon worships at the shrine of the Sun-god (seated right) c. 870 B.C. A cuneiform inscription below records his restoration of the god's temple at Sippar.

CUMBERNAULD. New town of Dunbartonshire, Scotland, 11 m. from Glasgow, and founded 1956 to take the city's overflow. In 1966 it won a prize as the world's best-designed community. Pop. (1968) 25,000; ultimately to be 100,000.

CUMMINGS, Bruce F. See W. N. P. BARBELLION. **CUMMINGS, Edward Estlin** (1894–1962). American artist-poet. B. in Mass. and ed. at Harvard, he wrote much verse, characterized by a peculiar use of punctuation and typographical devices, and the French prison camp novel *The Enormous Room* (1922).

CUNARD (kūnahr'd), Sir Samuel (1787–1865). British shipowner. B. at Halifax, Nova Scotia, he prospered as a merchant and shipowner, went to England in 1838, and in 1839 founded with others the British and N. American Royal Mail Steam Packet Co., which eventually became the C. line.

CUNDALL, Charles (1890–). British artist. B. in Lancs, he studied at the Manchester School of Art and at the Slade School, and has produced landscapes and portraits. 'Bank Holiday' is in the Tate Gallery.

CUNEIFORM (kūnē'iform). An ancient system of writing formed of combinations of wedge-shaped strokes, usually impressed on clay. It was probably invented by the Sumerians, and was in use in Mesopotamia as early as the middle of the 4th millennium B.C. It was adopted and modified by the Assyrians, Babylonians, Elamites, Hittites, Persians, and many other peoples of different races and languages. In the 5th cent. B.C. it fell into disuse, but sporadically reappeared in later cents. B.C. The decipherment of the C. scripts was due to the efforts of G. F. Grotefend (1802) and H. C. Rawlinson (1846).

CUNNINGHAM, Allan (1784–1842). Scottish man of letters. B. in Dumfriesshire, he was apprenticed to a stonemason, and became clerk of works in Chantrey's studio in London. His best-known poem is 'A Wet Sheet and a Flowing Sea'.

CUNNINGHAM, Andrew Browne, 1st visct. C. of Hyndhope (1883–1963). British admiral. From the training ship *Britannia*, he entered the R.N. in 1898, served in the F.W.W. and as C.-in-C. in the Mediterranean 1939–42 maintained British control. He was Naval C.-in-C. of the Expeditionary Force to N. Africa in 1942 and Feb.–Oct. 1943 was C.-in-C. Allied Naval Forces in the Mediterranean and Admiral of the Fleet, receiving in Sept. the surrender of the Italian fleet. He succeeded Dudley-Pound as First Sea Lord and Chief of Naval Staff 1943–6, when he was created a visct. and awarded the O.M. His autobiography *A Sailor's Odyssey* (1951) records his story as the greatest fighting sailor since Nelson.

CUNNINGHAM, Sir John (1885–1962). British admiral. In 1940 he assisted in the evacuation of Norway, taking the Norwegian King to England in his flagship, and as 4th Sea Lord in charge of supplies and transport 1941–3 prepared the way for the N. African invasion in 1942. He was C.-in-C. Mediterranean 1943–6, 1st Sea Lord 1946–8, and became Admiral of the Fleet in 1948.

CUNNINGHAME GRAHAM, Robert Bontine (1852–1936). Scottish writer and politician. Of Scottish and Spanish descent, he travelled widely in C. and S. America, Spain and Morocco. He was a Liberal M.P. 1886–92, became president of the Scottish Labour Party in 1888, and in later life was associated with the Scottish Nationalist movement. His writings deal with Morocco, e.g. *Mogreb-el-Akksa* (1898), or Latin America, e.g. *A Vanished Arcadia* (1901). For using the word 'damn' in the House of Commons he was once suspended.

CUPAR (kōō'pah'r). Scottish royal burgh and co. town of Fifeshire, on the Eden, 30 m. N.E. of Edinburgh. Pop. (1961) 5,495.

CUPID. Roman name for the Greek god Eros (q.v.).

CUPRITE. Red oxide of copper, Cu₂O, occurring crystalline in cubes or octahedra or massive. It resembles haematite in its reddish colour, but is much softer. In Arizona it is an important source of copper.

CUPRO-NICKEL. Copper alloy (75 per cent copper and 25 per cent nickel) substituted in the U.K. in 1946 for the 'silver' (50 per cent silver, 40 per cent copper, 5 per cent nickel and 5 per cent zinc) previously used in currency. The change was prompted by the rising cost of silver, obtained chiefly from the U.S. and paid for in dollars.

CURACAO. Island in the West Indies, one of the Netherlands Antilles (q.v.), to the legislature of which it sends 12 members. It lies in the Caribbean Sea, c. 40 m. N. of Venezuela. Area 210 sq. m. Pop. (1965) 136,289.

Willemstad, the cap., has a fine harbour. There is some agriculture, but the principal industry, dating from 1918, is the refining of petroleum from Venezuela. C., discovered in 1499, colonized by Spain 1527, annexed by the Dutch West India Company 1634, gave its name from 1924 to the group of islands renamed Netherlands Antilles in 1948.

CURACAO. Liqueur, originally the produce of the island of C. in the Netherlands W. Indies, but now made in other countries, notably Latvia. Both dry and sweet C. is produced and marketed, the alcohol content varying between 36 and 40 per cent.

CURARE (kūrah'ri). S. American native poison obtained from the bark of the tree *Strychnos toxifera* by macerating in water: used on arrow tips it paralyzes the victim. An alkaloid derivative, curarine, is used as a muscle relaxant in surgical operations.

CURATE (kū'ret). Literally, a priest who has the cure of souls in a parish, and so used on the Continent. In England, however, it is generally applied to an unbeneficed clergyman who acts as assistant to a parish priest, more exactly an 'assistant C'.

CURÉ D'ARS (kūreh'-dah'r). Name by which the French R.C. saint Jean Baptiste Vianney (1786–1859) is generally known. He was ordained priest in 1815, and in 1817 was appointed to the obscure parish of Ars, in the prov. of Moselle. There he remained for 40 years, and his good life and alleged miracles attracted crowds of pilgrims. He was canonized in 1925.

CURIA ROMANA. The judicial and administrative bodies through which the Pope carries on the government of the R.C. Church. It includes certain tribunals: the chancery which issues papal bulls, and various offices including that of the Cardinal Secretary of State; and the Congregations, or councils of cardinals, each with a particular department of work.

CURIE (kū're), Marie (1867–1934). Polish scientist. B. in Warsaw (née Skłodovska), she went to study in

meridians making an angle of 1° at the centre of the earth. *Temperature* is also measured in Ds. but in this case the D. is divided decimally, not into minutes and seconds.

DE GRUNWALD, Anatole (1910-67). British film producer. Son of the historian Constantin de G., his successes incl. *Quiet Wedding*, *The Winslow Boy*, and *The Way to the Stars*.

DEHAVILLAND, Sir Geoffrey (1882-1965). British aircraft designer. Founder in 1920 of the De H. Aircraft Co., he had already designed planes for the F.W.W. Later were the *Moth*, the *Mosquito* fighter-bomber of the S.W.W., and the post-war *Comet*—the world's first jet-driven air liner. He was knighted in 1944 and received the O.M. in 1962.

DEHMEL, Richard (1863-1920). German poet. B. in Brandenburg. He wrote socialist poems, and was influenced by Nietzsche. He also wrote dramas, and the epic poem *Zwei Menschen* (1903).

DEHRA DUN (deh'rah doon). Town of India in Uttar Pradesh, capital of D.D. district. It has a military academy, a college, and a Sikh temple built in 1699. Pop. (1961) 158,599.

DEHYDRATION. Process whereby food is reduced to powder form by removing its water content. Research, begun in 1937, was carried on at the Cambridge Low Temperature Research Station and elsewhere and was stimulated by the need to save shipping space during the S.W.W. D. was applied to milk, butter, eggs, meat, fish, and vegetables, but there was loss of flavour until the process was perfected in the 1960s. In accelerated freeze drying (A.F.D.) food is quick-frozen to preserve the flavour, before being dehydrated in vacuo.

DEISM (dē'izm). Literally, belief in one Supreme Being; but especially a movement of religious thought in England in the 17th-18th cents., characterized by belief in the 'religion of nature' as opposed to the revealed religion of Christianity. The father of English D. was Lord Herbert of Cherbury (1583-1648), and the chief writers were John Toland (1670-1722), Anthony Collins (1676-1729), Matthew Tindal (1657-1733), Thomas Woolston (1670-1733), Thomas Chubb (1679-1747). Later, D. came to mean a belief in a personal deity who is distinct from the world and not very intimately interested in its concerns. See THEISM.

DEKKER, Edward Douwes (1820-87). Dutch writer, usually known as Multatuli. B. at Amsterdam, he was in the Dutch Civil Service in Java from 1838, and his novel *Max Havelaar* (1860) is an exposure of labour conditions in the Dutch Indies.

DEKKER, Thomas (c. 1572-c. 1632). English dramatist and pamphleteer. B. in London, he wrote realistic plays incl. *The Shoemaker's Holiday* (1600), *Old Fortunatus* (1600); *The Honest Whore* and *Roaring Girl* (both with Middleton); *Sir Thomas Wyatt* (with Webster), *Virgin Martyr* (with Massinger), and *The Witch of Edmonton* (with Ford and Rowley).

DEKOBRA (dekohbrah'), Maurice (1885-). French novelist. B. in Paris, he became highly successful as a writer of cosmopolitan novels, such as *La Madone des Sleepings*, and *Hell is Sold Out*.

DE LA BECHE (de lah bash), Sir Thomas Henry (1796-1855). British geologist. A veteran of the Peninsular War, he produced the first series of geological maps covering England, and estab. in 1835 the Geological Survey on a permanent basis.

DELACROIX (delahkrwah'), Ferdinand Victor Eugène (1798-1863). French artist. Possibly the son of Talleyrand, whom he resembled, he was b. near Paris. Outstanding in his early romantically heroic style is 'Liberty Leading the People' (1831), and a visit to Morocco in 1832 (as a member of a French military mission) and to Spain introduced a colourfully exotic element to his work. He excelled in religious and historical subjects, animal studies, illustrations of

Shakespeare, Dante and Byron, and painted superb portraits of Paganini and Chopin. Leader of the romantic movement, he encountered great opposition to his daring use of colour and freedom of approach. His lithographs and murals are notable. As striking in his personality as in his work he kept a remarkable *Journal*.

DELAFIELD, E. M. Pseudonym of British writer Edmée Elizabeth Monica de la Pasture (1890-1943). Author of a number of psychologically competent novels, she is best remembered for her amusing *Diary of a Provincial Lady* (1931), skilfully exploiting the foibles of middle-class existence.

DE LA MARE, Walter (1873-1956). English poet. Of Huguenot descent, he was born in Kent, and wrote superlative verse for children, such as *Songs of Childhood* (1902), which appeared under the pseudonym Walter Ramal. Later vols. of poetry incl. *The Listeners* (1912) and *Collected Poems* (1942). He was also a gifted anthologist, as in *Come Hither* (1923) and *Behold this Dreamer* (1939), and wrote attractive prose, e.g. *The Memoirs of a Midget* (1921). He received the O.M. in 1953. He had a gift for the weirdly mysterious.

DELANE (delan'), John Thaddeus (1817-79). British journalist. As editor of *The Times* (1841-77), he 1st gave it international standing.

DE LA RAMEE, Louise. See OUIDA.

DELAROCHE (delarosh'), Hippolyte, called Paul (1797-1856). French artist. B. in Paris, he 1st exhibited in the Salon of 1822, and with his friends Géricault and Delacroix was in the forefront of the revolt against the classicism of David and his followers. D.'s historical paintings were very popular.

DE LA ROCHE (-rosh), Mazo (1885-1961). Canadian novelist, author of the 'Whiteoaks' series, a family chronicle of 3 generations on an estate in Ontario, ruled by an autocratic old lady.

DELAUNAY (delōneh'), Robert (1855-1941). French painter. B. in Paris, he made fruitful experiments in the constructive use of colour in non-representational works and in subject pictures of runners, etc. His 'Windows' (1912) is believed to be the 1st Cubist painting in colour.

DE LAURENTIIS, Dino (1919-). Italian film director and producer. His depictions of Italian life *Bitter Rice* (1952) and *La Strada* (1956) have harsh realism, and he made the spectacular *Barabbas* and an attempt to film the scriptures in their entirety.

DE LAVIGNE (delavēn'y), Jean François Casimir (1793-1843). French poet and dramatist. B. at Havre, he wrote *Vêpres siciliennes* (1819) and many other historical dramas.

DELHI. Among the many government buildings is the circular Parliament House at New Delhi, designed by Sir Herbert Baker, and surrounded by a continuous colonnade half a mile long, which was opened at the inauguration of the city as India's capital. Courtesy of Indian Press Information Bureau.

notation which he adapted from that originated by Sarah Ann Glover (1785–1867).

CURZON, Clifford (1907–). British pianist. He studied in Berlin under Schnabel, and under Wanda Landowska and Nadia Boulanger in Paris, and became famous as an interpreter of Schubert and modern British composers.

CURZON LINE. The Polish-Russian frontier proposed by the territorial commission of the Versailles conference in 1919, based on the eastward limit of areas with a predominantly Polish population. It acquired its name after Lord Curzon (q.v.) suggested in 1920 that the Poles, who had invaded Russia, should retire to this line pending a Russo-Polish peace conference. The frontier established in 1945 in general follows the C.L.

CURZON OF KEDLESTON, George Nathaniel Curzon, 1st marquess (1859–1925). British Cons. statesman. Son of a clergyman, he entered Parliament in 1886 and acquired an expert knowledge of Asian affairs by foreign travel 1887–94. Created baron C. in the Irish peerage on his appointment as Viceroy of India in 1899, he was the inaugurator of the North West Frontier prov. and of various reforms, but resigned in 1905 following a controversy with Kitchener. In 1911 he accepted an earldom and in 1921 a marquessate. He was For. Sec. 1919–22 and 1922–4, but on Bonar Law's resignation in 1923 he was bitterly disappointed when passed over for the premiership in favour of Baldwin.

CUSHIONCRAFT. See HOVERCRAFT.

CUSTARD APPLE. Name given to several tropical fruits, produced by trees and shrubs belonging to the genus *Anona*, of the family Anonaceae. *A. reticulata*, the common C.A., or 'bullock's heart', bears a large, dark-brown fruit, containing a sweet reddish-yellow pulp. It is a native of the W. Indies.

CUSTOMS AND EXCISE. C. duties are taxes levied on certain imports, e.g. tobacco, wines and spirits, perfumery and jewellery; E. duties are levied on certain goods produced (e.g. beer) and incl. purchase tax; or on licences to carry on certain trades (sale of wines and spirits, etc.) or other activities (theatrical entertainments, betting, etc.) within a country. In the U.K. both come under the Board of C. and E.; in the U.S.A. E. duties are classed as Internal Revenue and C. are controlled by the C. Bureau.

CUTHBERT (d. 687). Christian saint. He was a shepherd of Northumbria till after a vision he entered the monastery of Melrose, travelled as a missionary far and wide, and because of his miracles was known as the 'wonderworker of Britain'. He became prior of Lindisfarne, but retired in 676 to Farne Island. In 684 he became bishop of Hexham and later of Lindisfarne. His body was removed to Durham in 995.

CUTTACK (kut-tak'). Indian city and minor port in Orissa state, of which it was the cap. until 1950. It is on the Mahanadi river delta. The old fort (Kataka) from which the town takes its name is in ruins. Pop. (1961) 146,590.

CUTTLE-FISH. Name applied to various ten-armed molluscs of the class Cephalopoda, chiefly those belonging to the family Sepiidae, which are distinguished by their internal calcareous shell (cuttle-bone). The common European C.F. (*Sepia officinalis*) reaches a length of 6–10 in., and swims actively by means of the fins into which the sides of its oval, flattened body are expanded, and also jerks itself backwards by emitting a jet of water from its siphon.

It varies from dark brown to grey, and is capable of rapid changes of hue. The large head is provided with conspicuous eyes, and 10 arms provided with suckers. Two of these are very much elongated, and with them the animal seizes its prey. The C.F. is provided with an 'ink-bag', from which a black fluid can be discharged into the water, whereby the animal can cover its retreat when alarmed; from this sepia, the well-known dark-brown pigment, is obtained.

CUVIER (küvyä'), Georges, baron (1769–1832). French comparative anatomist. In 1798 appeared his *Tableau élémentaire de l'histoire naturelle des animaux*, in which his scheme of classification is outlined. He was prof. of natural history in the Collège de France from 1799, and at the Jardin des Plantes from 1802; and at the Restoration in 1815 he was elected Chancellor of the University of Paris. C. was the first to relate the structure of fossil animals to that of their living allies. His great work, *Le Règne animal*, embodies a systematic survey of the animal kingdom.

CUXHAVEN (kooks'hahfen). German seaport on the S. side of the Elbe estuary, at its entrance into the North Sea. It acts as an outpost for Hamburg. Pop. (1960) 50,000.

CUYP (koip), Albert (1620–91). Dutch artist. The son of Jacob Gerritsz C. (1594–1652), a landscape and portrait painter, he himself painted views of rivers remarkable for their purity of colour and simplicity of design, people on horseback, seascapes, etc. His 'Riders with the Boy and Herdsman' is in the National Gallery, and 'Piper with Cows' in the Louvre.

CUZCO (kooz'koh). City of S. Peru, cap. of C. dept., in the Andes, over 11,000 ft. above sea-level, some 350 m. S.E. of Lima. It was the ancient cap. of the Inca empire, and has many Inca remains as well as a fine Renaissance cathedral and other relics of the early Spanish conquerors. Founded in the 11th cent by the first of the Incas, it was captured by Pizarro in 1533. The univ. was founded in 1598. Pop. (1965) 92,600.

CYANIDES (si'anidz). In chemistry, salts of prussic or hydrocyanic acid, produced when this is neutralized by alkalis. The principal are potassium, sodium, calcium, mercuric, gold, and cupric.

CYBELE (sib'ele). In the pantheon of W. Asia, the Great Mother Goddess, whose worship, originally of Phrygian origin, was introduced among the Greeks and Romans. The Greeks identified her with Rhea. The Corybantes celebrated her worship with wild orgiastic dances, and in Rome the Galli, the priests of her cult, castrated themselves in her honour. Attis (q.v.) was beloved by her.

CYBERNETICS (siberne'tiks). Name, derived from the Gk. κυβερνήτης 'steersman', for the science concerned with how systems organize, regulate and reproduce themselves, and also how they evolve and learn. In the laboratory inanimate objects are created that behave like living systems, e.g. Ross Ashby's Homeostat, a behavioural model made up of 4 interacting regulators and an independent switching mechanism which changes the interconnections between these elements until a stable arrangement is reached. Its working is identical with a feature of the workings of a brain which is relevant to the control within a brain. The logical ultimate development of C. is the evolution of adaptive, decision-making machines operating at managerial level, e.g. able to assimilate data on the state of a factory and produce the correct solution to any aspect of inefficient working. Such control mechanisms would open the way to a new industrial revolution.

CYCADS (si'kadz). An order of plants (Cycadales) belonging to the Gymnosperms. Some have a superficial resemblance to palms, others to ferns. There are 9 genera and about 80 species, natives of tropical and sub-tropical countries. The stems of many species yield an edible starchy substance resembling sago.

sugar-cane in the country, and D. sugar is named after it.

DEMETER. Greek goddess of agriculture (equivalent to the Roman Ceres), dau. of Cronus and Rhea. By Zeus she became the mother of Persephone.

DE MILLE (demil'), Cecil B. (Blount) (1881–1959). American film director. B. in Mass., he entered films with Jesse L. Lasky in 1913 (with whom he later estab. Paramount), and was one of the founders of Hollywood's long supremacy. He specialized in biblical-type epics, e.g. *The Sign of the Cross* and *The Ten Commandments*.

DEMOCRACY. As defined by Abraham Lincoln, 'Government of the people, by the people, for the people'. A distinction may be made between direct D., where the whole people meet for the making of laws or the direction of executive officers, and indirect D., where the people entrust such power to elected representatives. The most famous example of direct D. is that of Athens in the 5th cent. B.C. Direct D. today is represented mainly by the use of the referendum, as in Switzerland and certain states of the U.S.A. In the modern world D. has developed from the American and French Revolutions. Representative parliamentary government has existed in England since the 13th cent., but the working classes were excluded almost entirely from the franchise until 1867, and women were admitted and property qualifications abolished only in 1918.

Recent controversy has centred on the 'western' conception of D., as accepted in Britain, France and the U.S.A., and the 'eastern', as in the U.S.S.R. and Communist Asia and E. Europe. The former emphasizes the control of the govt. by the electorate and freedom of speech and the Press. The latter envisages economic control by the govt. for the benefit of the community, both political and economic power resting in the Communist Party under a single-party system.

DEMOCRATIC PARTY. One of the two great parties of the U.S.A. Founded by Jefferson in 1792 to defend the rights of the individual states against the centralizing policy of the Federalists, it tends to be the party of the 'small man', as opposed to the Republicans, the party of 'big business', but the divisions between the two are not clear-cut. Its stronghold is the Southern states, or 'solid south'. The D.P. held power almost continuously 1800–60, and later returned Cleveland, Wilson, F. D. Roosevelt, Truman, Kennedy, and Johnson. In the 20th cent. it has become associated with more liberal policies than the Republican.

DEMOCRITUS (c. 460–361 B.C.). Greek philosopher and speculative scientist. B. in Thrace, he travelled widely in the E. in search of knowledge. His most important contribution to philosophy is the atomic theory of the universe.

DE MORGAN, William (1839–1917). British novelist and artist. Son of Augustus de M. (1806–71), a noted mathematician, he joined the pre-Raphaelite circle and, having rediscovered the secret of the bright blue and green glazes of medieval ceramists, produced tiles and pottery at his own factory. On his retirement in 1905 he attained a 2nd reputation with his novels *Joseph Vance* (1906) and *Alice-for-Short* (1907) – the latter having autobiographical interest.

DELPHINIUM

DEMOSTHENES (c. 384–322 B.C.). Athenian orator and statesman. From 351 B.C. he led the party which advocated resistance to the growing power of Philip of Macedon and in his 'Philippics' incited the Athenians to war. This policy resulted in the defeat of Chaeronea in 338, and the establishment of Macedonian supremacy. After the death of Alexander he organized a revolt, and when it failed took poison to avoid capture by the Macedonians.

DEMOTIC WRITING. A cursive script derived from Egyptian hieratic, itself a cursive form of hieroglyphic. D. documents are known from the 6th cent. B.C. to about A.D. 470. It was written horizontally, from right to left.

DEMPSEY, William Harrison (Jack) (1895–). American boxer. B. in Colorado of Irish-Scottish-American descent, he became world heavyweight champion in 1919, when he knocked out Willard. He defeated all challengers for the title until 1926, when he was beaten on points by Gene Tunney.

DENBIGH (den'bi). County town (bor.) of Denbighshire, Wales, in Clwyd valley. It is an agricultural centre, with a castle built in Edward I's reign. Pop. (1961) 8,044.

DENBIGHSHIRE. Co. of N. Wales, bordering the Irish Sea. The interior is hilly, rising to the Berwyn mts., over 2,000 ft., in the S. The chief rivers are the Clwyd, Conway, and Dee. The Vale of Clwyd is excellent agricultural land. Coal, lead, and limestone are obtained. The co. town is Denbigh; other towns are Wrexham, Ruthin, Llangollen, Abergele, and the coastal holiday resort of Colwyn Bay. Area 669 sq. m.; pop. (1961) 173,843.

DEN HAAG. Dutch form of THE HAGUE.

DENHAM, Sir John (1615–69) British poet. B. in Dublin, he was driven into exile as a Royalist in 1648, and at the Restoration was appointed surveyor-general of works. He achieved fame with *The Sophy*, a tragedy; his best-known poem, 'Cooper's Hill', is a graceful description of the Thames valley.

DENIER. System of measuring fine yarns, both natural and man-made, derived from the old French silk industry. The D. was an old French silver coin; it is the weight in grammes of 9,000 metres of yarn. Thus 9,000 metres of 15 D. nylon, commonly used in nylon stockings, weighs 15 g. and in this case the thickness of thread would be 0.00170 in.

DENIKIN (denē'kin), Anton Ivanovich (1872–1946). Russian general. He distinguished himself in the Russo-Japanese and the F.W.W.s. After the outbreak of the Revolution he organized a volunteer army of 60,000 'Whites', but in 1919 was routed and escaped abroad. He wrote a history of the Revolution and the Civil War.

DENIS (denē'), Maurice (1870–1943). French artist. His definition of a picture being primarily 'a flat surface covered with colours arranged in a certain order' is often quoted, but he lent importance to subject-matter by his later concentration on religious art.

DENIS, St. (Dionysius). 1st bishop of Paris and one of the patron saints of France. He was martyred by the Romans about A.D. 275.

DENMAN, Lady (1884–1954). British social worker. Dau. of 1st visct. Cowdray, she m. in 1903 Lord D., Gov.-Gen. of Australia 1911–14. She helped the spread of Women's Institutes (q.v.) in England and Wales, and was chairman of the Nat. Federation 1917–45. *Denman College*, named after her, provides training for members. She was also the organizer of the Women's Land Army in the S.W.W.

DENMARK. Kingdom of N.W. Europe, occupying the N. two-thirds of the Jutland peninsula and the islands lying between the peninsula and Sweden. It is a low-lying, flat country, the highest point being Møllehoj (561 ft.) in E. Jutland. The W. part is sandy, terminating in a sand-dune coast, behind which lies

CYPRUS. The rough country of the Kyrenia range is ideal terrain for guerrilla warfare, and much Greek, Turkish and British blood has been spilt here.

Photo: Central Office of Information.

demanding partition. Negotiations between the British, Greek and Turkish govts. in 1960 led to the establishment of an independent rep. of C. (admitted to the Brit. Commonwealth 1961) with Archbishop Makarios, leader of the insurgents, as first pres. Britain retained 2 bases on the S. coast at Akrotiri and Dhekelia. From 1964 the U.N. maintained a peace-keeping force and by 1968 tension was less.

CYRANO DE BERGERAC (sērah'noh-de-berzher-ahk'), Savinien (1619–55). French writer. B. in Paris, he joined a corps of guards at 19, and performed heroic feats which made him famous. He wrote a comedy, *Le Pédant joué* (1654), classical tragedies, notably *Mort d'Agrippine* (1654), and scientific romances, *L'Histoire comique des Etats du Soleil* (1662) and *L'Histoire comique des Etats de la Lune* (1656). He is the hero of a well-known play by Rostand (q.v.).

CYRENAICA (sirēnā'ika). Area of E. Libya, N. Africa. The Greeks estab. colonies here in the 7th cent. B.C. which passed under the rule of the Ptolemys in 322 B.C., and in 174 B.C. became a Roman province. It was conquered by the Arabs in the 7th cent., by Turkey in the 16th and by Italy in 1912, when it was developed as a colony which became a prov. of the new kingdom of Libya from 1951 until it was split into a number of smaller divisions under the constitutional reorganization of 1963. Modern cities, rapidly growing following discoveries of oil, incl. Benghazi, Derna and Tobruk, and there are magnificent ruins at Cyrene, Apollonia, etc.

CYRENAICS (sirēnā'iks). A school of ancient Greek philosophy founded c. 400 B.C. by Aristippus of Cyrene. He regarded pleasure as the only absolutely worth-while thing in life, but taught that self-control and intelligence were necessary to choose the best pleasures.

CYRIL (sir'il) **OF ALEXANDRIA** (376–444). Christian prelate and saint. B. at Alexandria he was made archbp. in 412. He persecuted Jews and heathens, and his conjectured part in the death of Hypatia, the girl philosopher, aroused indignation. His violence arose out of hatred of heresy, but he himself was charged with unorthodoxy.

CYRIL and **METHODIUS**. Christian saints, apostles of the Slavs in the 9th cent. They were brothers, b. in Thessalonica, and were sent in 863 as missionaries to Moravia. They translated the scriptures and liturgy into Slavonic, and are said to have invented the Cyrillic alphabet, a variation of the Greek alphabet, with some additional signs, which is still in use among the Serbs, Bulgars, and Russians.

CYRUS (sī'rus) (d. 529 B.C.). The founder of the Persian empire. He became king of the Persians while they were still a small tribe of hardy warriors subordinate to the king of Media. In 550 B.C. he over-

threw his suzerain Astyages of Media, and in 546 captured Croesus, king of Lydia, and became master of the whole of Asia Minor, including the Greek cities on the coast. Finally in 539 he captured Babylon and added Babylonia and Syria to his empire. As part of his policy of toleration he allowed the exiled Jews to return to Jerusalem. He d. fighting in Afghanistan.

CZAR. See **TSAR**.

CZECH (chek). A member of the western branch of the Slavonic languages, spoken in the former provs. of Bohemia and Moravia, and in the Teschen dist., Czechoslovakia. Its closest allies are Polish and Sorb or Wendish. The Slav-speaking people seem to have established themselves in Bohemia in the 5th cent. A.D., displacing or incorporating earlier Celtic or Germanic inhabitants. Spoken by c. 10,000,000, it is closely related to Slovak, spoken by c. 4,000,000; and is the liturgical language of the Slovak Protestants.

CZECHOSLOVAKIA (chekōslōvah'kē-a). Federal republic of central Europe. Area 49,381 sq. m. Pop. (1967) 14,271,547.

C. may be divided into two main areas separated by the valley of the Morava. To the W. lies a densely populated area with good communications; to the E. a district that is sparsely populated and comparatively backward. The continental character of the climate increases towards the E.

Agriculture is highly developed. In the low-lying regions sugar-beet, wheat, maize, and barley are grown, in the higher parts potatoes, oats, and rye. Hops for the production of beer and for export are cultivated. Fruit is grown in many districts, and there are numerous vineyards.

Many of the important industries obtain their raw materials from agricultural products, e.g. the sugar and beer-brewing industries, the numerous factories for the production of preserved fruit, cheese, smoked meat. C. is rich in minerals, there are important coalfields at Most, Chomutoc, Kladno, Ostrava, and elsewhere; iron, silver, copper, lead, uranium, and rock-salt are mined. Parts of C. are among the most densely wooded regions of Europe, and the timber industry is important. Manufactures incl. machine tools, cars, glass, imitation jewellery, toys and woodware.

The capital is Prague; other large towns are Brno, Bratislava, Ostrava, and Plzen.

Government. Under the Federalization Law (1969) there is a pres. and a bicameral federal assembly: directly elected Chamber of the People (2 to 1 Czech majority) and Chamber of Nations (150 deputies:

CZECHOSLOVAKIA. Bohemian glass has been famous since the 14th cent. Today, traditional skills are passed on through special technical training centres, and here a student at the Železný Brod aircraft school puts the finishing touches to her graduation work.

Courtesy of the Czechoslovak Travel Bureau.

of the substance to that of water which is taken to be unity at 4°C. As the D. of water varies with temperature it is more convenient for precision work to deal with Ds. than with specific gravities.

DENT, Edward (1876–1957). British musicologist. Prof. of music at Cambridge 1926–41, he did much to foster opera in Britain, translated a number of librettos and pub. *Opera* (1941). He was founder-pres. of the International Society for Contemporary Music (1923).

DENTISTRY. Section under a cavity of a tooth ($\times 7,500$), showing bacteria in each of the dentinal tubules. These bacteria are surrounded by a 'matrix' they have formed for themselves, and which would, on the surface, be the basis for dental calculus.

Courtesy of Miss K. Little, Nuffield Orthopaedic Centre, Oxford.

DENT, Joseph Malaby (1849–1926). British publisher. He issued the 'Temple' Shakespeare (1893), launched the 'Temple' classics (1896), and with his son Hugh, and Ernest Rhys, planned the 'Everyman Library' of 1,000 classics of world literature.

DENTISTRY. The care and treatment of the teeth and their supporting tissues. The earliest dental school was opened at Baltimore in 1839; in Britain the 2 schools which were to become the modern Univ. College Hospital Dental School and the Royal Dental Hospital and School, both now under the Univ. of London, were estab. in 1859 and 1860 respectively. Since then schools have been opened at most of the univs. There is an International Dental Federation, founded in 1900.

DENVER. City of U.S.A., capital of Colorado on the South Platte river, and a commercial and industrial metropolis of the western U.S.A. It has a univ. Pop. (1960) 493,887.

DE'ODAR. Species of cedar (*Cedrus deodara*), native to the Himalayas, Afghanistan, and N. Baluchistan. It forms forests at high elevations, and is a valuable timber-tree.

DEPILATORY. An instrument or substance used to eradicate growing hair. For ringworm of the scalp in children, X-rays or thallium acetate are generally employed, but the only sure method of removing facial hair for cosmetic reasons is the destruction of each hair root separately with an electrolytic needle or an electrocautery.

DEPTFORD (def'-). Locality in E. London, part of the Greater London bor. of Lewisham, bordering the S. bank of the Thames. Peter the Great worked in the dockyard at D., built 1513, closed 1869. The chief industries are marine engineering, chemicals, railway goods, etc.

DE QUINCEY (de kwin'si), Thomas (1785–1859). British author. B. in Manchester, he ran away from school there to wander and study in Wales. He then went to London where he lived in extreme poverty, but with the constant companionship of the young

orphan Anne, of whom he writes in the *Confessions*. In 1803 he was reconciled to his guardians and was sent to Oxford, entering the Middle Temple in 1808. In 1809 he settled with the Wordsworths and Coleridge in the Lake District, and in 1816 m. Margaret Simpson. His addiction to opium had begun while he was at college, and in 1820 he removed to London where he pub. his *Confessions of an English Opium-eater* in 1821 in the *London Magazine*. He devoted the rest of his life to miscellaneous writing; most notable are his essays. In 1828 he moved to Edinburgh, where he died.

DERAIN (derran'), André (1880–1954). French post-impressionist artist. He originally estab. himself as one of the leaders of the Fauve movement with a number of landscapes and studies of the Paris suburbs in 1905, and went on to produce work of astonishing diversity. His gift for fantasy emerged in his scenery and costumes for Diaghileff's ballet *La Boutique Fantasque*.

DERBY (dar'bi), Edward Geoffrey Smith Stanley, 14th earl of (1799–1869). British statesman. Son of the 13th earl, he entered parliament in 1820 as a Whig. In 1830 he became Sec. for Ireland, and in 1833 Sec. for the Colonies, introducing the bill for the abolition of slavery. He broke with the Whigs in 1834 and joined the Tories, the split in the Tory Party over Peel's free-trade policy giving him the leadership for 20 years, with Disraeli as his lieutenant in the Commons. He succeeded to the earldom in 1851. He was thrice P.M.: in 1852, in 1858–9, and 1866–8.

DERBY, Edward George Villiers Stanley, 17th earl of (1865–1948). British Cons. statesman. He became an M.P. in 1892 and succeeded to the earldom in 1908. In 1915 he was appointed director-general of recruiting, and was responsible for the system known as the Derby Scheme. In the Lloyd George coalition of 1916–18 he was Sec. for War, and held the same post

DERAIN. Painted c. 1904–6 'Barges on the Thames' is a superb early example of the Fauve manner, with its dynamic use of colour.
Photo: Temple Newsam House, Leeds.

in 1922–4. In 1918–20 he was ambassador to France. He was well known on the Turf. He was succeeded by his grandson Edward John Stanley, 18th earl of D. (1918–).

DERBY. Co. town (co. bor.) of Derbyshire, England, on the Derwent, 14 m. W. of Nottingham. It is a great industrial centre, manufacturing locomotives and wagons, Rolls-Royce cars and aero-engines, Crown Derby china, electrical, mining and engineering equipment, chemicals, paper, etc. All

'Cabaret Voltaire' in 1916, where works by Jean Arp, Max Ernst, Klee, Modigliani and Picasso were exhibited. D. was a preparatory phase in the development of Surrealism (q.v.).

DADDY LONG-LEGS. See CRANE FLY.

DAEDALUS (dē'dalus). In Greek mythology, an Athenian craftsman who constructed for King Minos the labyrinth in which the Minotaur was imprisoned, and fled from Crete with his son Icarus by means of wings made from feathers and fastened with wax. See AYRTON, MICHAEL.

DA'FFODIL. Name given to several species of plants of the genus *Narcissus*, distinguished by their bell-shaped corollas. The common D. of N. Europe (*N. pseudo-narcissus*) has large yellow flowers, and grows from a large bulb. There are numerous cultivated forms.

DAGENHAM. Industrial locality on the N. bank of the Thames, divided between the Redbridge and Barking bors. of Greater London. It has a Ford factory and a famous band of girl pipers.

DAGHESTAN (dahgestahn'). An A.S.S.R. of the R.S.F.S.R., at the E. extremity of the Caucasus, bordering the Caspian Sea. It is mountainous, dissected by deep valleys and inhabited by numerous distinct peoples, each with its own language. Makhach-Kala, the cap., is a useful port on the Caspian, with petroleum refineries. D. was annexed from Persia in

DACCA. Opened in 1948, the Government Institute of Arts has been a constituent college of the University of Dacca since 1963, and offers its 200 students courses varying from ceramics to commercial art. In the approachway a scooter 'taxi' waits. Courtesy of the Pakistan High Commission.

1723, made an autonomous republic in 1921. Area 14,700 sq. m.; pop. (1967) 1,361,000.

DAGLISH, Eric Fitch (1892-1966). British artist and author. B. in London, he wrote a number of natural-history books, and illustrated both these and such classics as Izaak Walton, Thoreau, Gilbert White, and W. H. Hudson with exquisite wood engravings.

DAGUERRE (dahgär), Louis Jacques Mandé (1789-1851). French painter and pioneer of photography. He worked from 1829 with J. N. Niepce (d. 1833) who, like himself, had discovered the possibility of using sunlight to obtain permanent pictures. D. perfected the process, which was pub. in 1839 and is known as daguerreotype.

DAHLIA (dā'liā). Genus of plants of the family Compositae, named after Andrew Dahl, a Swedish botanist. There are 10 species of the genus, which is a native of Mexico, but was introduced to England in 1789. There are many cultivated forms.

DAHOMEY (dahō'mi). Republic in West Africa, between Nigeria and Ghana, with a short coast on the Gulf of Guinea. Much of D. is arid, but there are scattered forest areas producing palm kernels and palm oil, the chief export. The climate is tropical.

DAHOMEY On his rounds, one of the many African doctors trained at Dakar Medical School. Courtesy of WHO.

Porto Novo (pop. 65,000) is the cap.; other towns are Cotonu (largest port), Whydah, Abomey. Area 45,000 sq. m.; pop. (1965) 2,370,000.

The French signed a commercial treaty with the well-organized Negro kingdom of D. in 1851, made it a protectorate in 1863, a colony in 1894. On attaining independence in 1960 D. left the French Community. After a period of military rule from 1965, civil govt. was restored 1968, and under a new constitution D. became a one-party state with an executive pres. elected for 5 years.

DÁIL ÉIRANN (doil-är'an). The lower house of the legislature of Eire. It consists of 144 members elected by adult suffrage on a basis of proportional representation.

DAIMLER (dīm'ler), Gottlieb (1834-1900). German motor-car pioneer. B. in Württemberg, he had engineering experience at the Whitworth works, Manchester, before joining in 1872 N. A. Otto of Cologne in the production of new-type gas engines. In 1886 he produced the first 'motor vehicle', and a motor-bicycle. He is usually credited with the original invention of the internal combustion engine, though Benz and others were experimenting simultaneously. His patents, etc., were acquired in 1891 by the D. Co., later a subsidiary of Jaguar, and from 1966 part of British Motor Holding Ltd.

DAIREN (diren'). Chinese port on Liaotung peninsula facing the Yellow Sea, in the prov. of Liaoning. It was leased to Russia in 1898, ceded to Japan in 1905 until in 1945 by a Russo-Chinese treaty it was made a free port, half the port installations being leased to Russia; under a second treaty, 1950, the status of D. was to be reconsidered after Russia and China had made peace with Japan. D. makes machinery, chemicals, textiles, etc., has petroleum refineries, soya-bean processing factories, and a naval

DAHLIA. Left to right: garden cactus, star, old-fashioned double dahlias.

DESIGN CENTRE. In 1959 Prince Philip instituted the Duke of Edinburgh's Prize for Elegant Design, awarded to the most distinguished item included in the Design Index. This spode tableware 'Apollo', designed by Neal French and David White, was an obvious winner.

Courtesy of the C.O.I.D. and W. T. Copeland & Sons Ltd.

Jacotin, he was elected to the National Convention in 1792, and his *Histoire des Brissotins* was largely responsible for the overthrow of the Girondins. But shortly after he went to the guillotine.

DESPIAU (dāpē-oh'), Charles (1874–1946). French sculptor, a pupil of Rodin; his portrait busts are among his finest works.

DESSALINES (desahlēn'), Jean Jacques (1758–1806). Negro emperor of Haiti. B. in Guinea, he was taken to Haiti as a slave, where he led the revolt against the French in 1791, and became emperor in 1804. He proclaimed himself emperor, as Jean-Jacques I, but was killed when trying to suppress a revolt.

DESSAU (des'ow). Town of Halle region, E. Germany, on the Mulde, 70 m. S.W. of Berlin, the former cap. of Anhalt duchy and state. It manufactures chemicals, machinery, chocolate, etc., and was the seat of the great Junkers aeroplane works. Pop. (1966) 94,000.

DESTOUCHES (dātoosh'), Philippe Nicolas. Pseudonym of the French dramatist, P. N. Néricault (1680–1754). B. at Tours, he wrote comedies of character in the manner of Molière, the most famous being *Le Glorieux* (1732).

DESTROYER. See **WARSHIP**.

DETAILLE (detahy'), Jean Baptiste Édouard (1848–1912). French painter who excelled in painting scenes of military life.

DETECTIVE FICTION. Novels of crime, in which a prominent part is played by an amateur or professional sleuth. The 1st great detective of fiction was E. A. Poe's Dupin in *The Murders in the Rue Morgue* (1841). The earliest English example was the Sergeant Cuff of Wilkie Collins (q.v.), but the real vogue of D.F. began with Sherlock Holmes (see Conan Doyle). More recent writers incl. Agatha Christie, Dorothy Sayers, F. W. Crofts, G. K. Chesterton (qq.v.), and Maurice Leblanc, whose Arsène Lupin was both criminal and detective. One striking departure was in books by Dennis Wheatley in which the reader was presented with data and clues to solve the problem himself. Successor to the more formal detective is the 'private eye' and adventurer-investigator of Charteris, Hammett, Chandler and others. See also **SIMENON**.

DETERGENT. In the broadest sense any cleansing agent including soap is a D., but the term is generally limited to a special class of surface-active agents. The common Ds. are made from fats or hydrocarbons and sulphuric acid, and their long-chain molecules have a type of structure similar to that of soap molecules—a salt group at one end attached to a long hydrocarbon 'tail'. The mechanism of removing dirt, which is

generally attached to materials by oil or grease, is that the hydrocarbon 'tails' (soluble in oil or grease) penetrate the oil or grease drops, while the 'heads' (soluble in water but insoluble in grease) remain in the water, and being salts become ionized. Consequently the oil drops become negatively charged and tend to repel one another; thus they remain in suspension and are washed away with the dirt. They have the advantage over soap in that they do not produce scum by forming insoluble salts with the calcium and magnesium ions present in hard water.

Ds. were 1st developed from coal tar in Germany during the F.W.W., and synthetic organic Ds. came into ever-increasing use after the S.W.W. Domestic powder Ds. for use in hot water have alkyl benzene as their main base, but also incl. bleaches and fluorescers for the whiter-than-white look, perborates to free stain-removing oxygen, and phosphates and silicates to soften the water. Liquid Ds., an even more recent large-scale development, are based on ethylene oxide. Special low-temperature powders and liquids have been produced for use on delicate fabrics, washing woollens, etc. Use of Ds. rather than soap has been encouraged by the fact that the raw materials for the latter are actual or potential foodstuffs, but they also have their own special problems e.g. surface-active material escapes the normal processing of sewage and causes troublesome foam in rivers.

DETERMINISM. Psychological theory which maintains that all human actions are completely determined or caused by past conditions. It is the opposite of Free Will, and involves the denial of moral choice and responsibility; the causes which determine men's actions are not limited to their external circumstances, but incl. also their own past mental states and their motives. In antiquity the theory of D. was held by the Stoics. In Christian theology the Calvinist doctrine of Predestination is deterministic. Support for D. has been found in psychoanalysis.

DETROIT. City of Mich., U.S.A., situated on D. river. It was founded in 1701 and is the oldest city of any size W. of the original colonies of the coast. In 1805 it was completely destroyed by fire, but was soon rebuilt and is today a great industrial centre with major factories of Ford, Cadillac, Packard, and other famous cars. Pop. (1960) 1,670,144.

DETSKOE SELO. See **PUSHKIN**.

DETTINGEN. Bavarian village where on 27 June 1743, in the War of the Austrian Succession, an army of British, Hanoverians, and Austrians under George II defeated the French under Noailles. It was the last battle in which a British sovereign took part.

DEUS, João de (1830–96). Portuguese poet, who with *Ramo de flores* (1875)—his greatest work—and *Folhas soltas* (1876) estab. himself as the most distinguished national lyricist of the period.

DEUTERIUM (dūtēr'ium). Heavy isotope of hydrogen, mass number 2, discovered in 1932 by Urey. Combined with oxygen it produces heavy water.

DEUTERON (dū'-). Nucleus of the deuterium atom, or the ion of deuterium. It is of mass 2 and carries a unit positive charge.

DE VALERA (de valā'ra), Éamon (1882–). Irish statesman. B. in New York, the son of a Spanish father and an Ir. mother, he was sent to Ireland as a child, and became a teacher of mathematics. He was sentenced to death for his part in the Easter Rebellion, but the sentence was commuted to penal servitude for life, and in 1917 he was released under an amnesty. In the same year he was elected M.P. for E. Clare, and president of Sinn Féin. In May 1918 he was re-arrested and imprisoned in Lincoln gaol, but in 1919 escaped to the U.S.A. Elected Pres. of the Irish Rep., he returned to Ireland in 1920, and directed the struggle against the British govt. from a hiding-place in Dublin. He authorized the negotiations of 1921, but refused to

mantle worn at Mass and in solemn processions.

DALNY. Russian form of **DAIREN**.

DALOU (dahloo'), Jules (1838–1902). French sculptor. Involved in the Commune rising of 1871 he fled to London, but returned in 1879 and after 20 years' work his 'Triumph of the Republic' was erected in the Place de la Nation.

DALTON, Hugh, baron (1887–1962). British economist. The son of a canon of St. George's, Windsor, he was called to the Bar in 1914, and in 1919 became a lecturer at the London School of Economics. He had been pres. of the University Fabians at Cambridge and in 1924 entered parliament as a Labour M.P., becoming an important figure in the '30s. Chancellor of the Exchequer in 1945, he resigned in 1947 following an indiscreet disclosure to a Lobby correspondent before a Budget speech. His name is associated with the 2½% Irredeemable Treasury Stock known as 'Daltons', introduced in 1946 and bought by many savers, but rapidly depreciating in value. In 1960 he was created a life peer.

DALTON, John (1766–1844). British scientist. B. in Cumberland, he taught at New College, Manchester 1793–9, his 1st important work *Meteorological Observations and Essays* appearing in 1793. He is remembered for his tentative formulation of the atomic theory of chemical composition in 'Absorption of Gases' (1805), with a list of atomic weights, and elaborated in his *New System of Chemical Philosophy* (1808).

DALTON-IN-FURNESS. English town (U.D.) in Lancs, 4 m. N.E. of Barrow-in-Furness. Iron ore is mined. Pop. (1961) 10,317. Romney was b. and buried here.

DALY, Augustin (1838–99). American theatrical manager. Of Irish descent, he was at first a drama critic and playwright, then in 1879 built Daly's theatre in New York and another Daly's in London (1893–1939). His company was a great training ground for the American stage.

DALZIEL (dal'zēl). British family of wood-engravers. George D. (1815–1902), Edward D. (1817–1905), John D. (1822–60), and Thomas Bolton D. (1823–1906), were all sons of Alexander D. of Wooler, Northumberland. George went to London in 1835 and was joined in due course by his brothers. They produced a large number of illustrations for the classics and magazines.

DAMAN. Another form of **DAMAO**.

DAMÃO (dah'mahā). Former Portuguese settlement on the W. coast of India, at the entrance to the Gulf of Cambay, some 100 m. N. of Bombay. Area 149 sq. m.; pop. (1950) 63,521. It was annexed by India in 1961.

DAMA'RALAND. Central region of S.W. Africa, lying about Windhoek. It is inhabited by the Hereros (q.v.).

DAMA'SCUS. City of western Asia, the capital of Syria, said to be the oldest still inhabited city of the world. It stands on the Barada, 57 m. S.E. of Beirut, on the edge of a highly fertile area, and has rail connections with the chief cities of the Levant.

D. was an ancient city even in O.T. times. The Assyrians destroyed it in c. 733 B.C. In 332 B.C. it fell to one of the generals of Alexander the Great; in 63 B.C. it became Roman. In A.D. 635 it was taken by the Arabs, and has since been captured many times, by Egyptians, Mongolians, Turks, etc. During the F.W.W. it was taken by the British, 1918, and in 1920 became cap. of French-mandated Syria.

The 'street which is called straight' is associated with St. Paul who was converted while on the road to D. The most notable of the old buildings is the Great Mosque, completed as a Christian church in the 5th cent. A.D. The fortress dates from 1219. A Syrian univ. was founded in 1924. From ancient times, D. has been a trading centre and was once famous for its swords. Pop. (1965) 599,000.

DAMASK. In textiles: linen, cotton, silk, etc., fabrics that possess a figured pattern. The name derives from the city of Damascus.

DAMASKINOS (damaskē'nos) (1891–1949). Primate of the Greek Orthodox Church from 1938, and Regent of Greece 1945–6, following the withdrawal of the German forces and prior to the return of King George.

DAME. Legal title of the wife (or widow) of a knight or baronet, also of Dames of the Order of the British Empire. See **CUSTOMARY FORMS OF ADDRESS**.

DAMIEN (dahmyān'), Father (1840–89). Belgian missionary; his original name was Joseph de Vaster. He entered the order of the Fathers of the Sacred Heart at Louvain, went to Hawaii, and from 1873 was resident priest in the leper settlement at Molokai; he became himself infected.

DAMIETTA. River-port of the United Arab Republic, in Lower Egypt on the E. branch of the Nile delta, 10 m. from its mouth. Pop. (1967) 97,000.

DAMOCLES (dam'ōklēz) (fl. 4th cent. B.C.). A courtier to the elder Dionysius, ruler of Syracuse. Having extolled the happiness of his sovereign, D. was invited by him to a great feast, and in the midst of his enjoyment beheld above his head a sword suspended by a single hair. He recognized this as a symbol of the insecurity of the great.

DAMODAR. Indian river flowing c. 350 m. from Chota Nagpur plateau in Bihar through Bihar and W. Bengal states to join the Hooghly 25 m. S.W. of Calcutta. Work on the major D. valley project for flood control, irrigation, and production of power began in 1948.

DAMPIER (dam'pēr), William (1652–1715). English explorer. B. in Somerset, he went to sea in 1668, led a life of buccaneering adventure, circumnavigated the globe, and pub. his *New Voyage Round the World* in 1697. In 1699 he was sent by the government on a voyage to Australia and New Guinea, and again circled the world. He accomplished a 3rd circumnavigation 1703–7, and on his final voyage 1708–11 rescued Alexander Selkirk, the original of Robinson Crusoe, from Juan Fernandez.

DAMROSCH (dam'rosh), Leopold (1832–85). German-American composer and conductor. B. at Posen, he held musical appointments at Weimar and Breslau, before emigrating to America in 1871 to become conductor at the Metropolitan Opera House, N.Y. His son **WALTER D.** (1862–1950), succeeded him at the Metropolitan Opera House and also conducted the New York Symphony Society 1885–1926, the N.Y. Oratorio Society, etc.

DAMS. Engineering structures built to hold up water so as to prevent floods, provide water for irrigation and storage, and produce hydro-electric power. The first of the modern scientifically designed Ds. was the Aswan Dam on the Nile, 600 m. above Cairo.

DAMSON. Variety of the plum distinguished by its small, oval fruit, which in colour ranges from yellow, through dark purple or blue to black.

DANA (dā'na), Richard Henry (1815–82). American author. Son of Richard Henry D., poet and essayist, he went to sea and worked his passage round Cape Horn to California and back, publishing in 1840 an account in *Two Years before the Mast*.

DANAE (dan'ā-ē). In Gk. mythology, dau. of Acrisius, king of Argos, who shut her up in a brazen tower because of a prophecy that her son would kill his grandfather. Zeus became enamoured of her and descended in a shower of gold, and by him she became the mother of Perseus.

DANBY, Thomas Osborne, earl of (1631–1712). British Tory statesman. Entering parliament in 1665, he acted 1673–8 as Charles II's chief minister, and in 1674 was created earl of D. He endeavoured to strengthen the Crown, although his foreign policy

many cabinet posts until 1885, when he broke with Gladstone over the Irish Home Rule Bill, and became leader of the Liberal Unionists. He was Lord President of the Council 1895-1903, when, as a free trader, he resigned from Balfour's Cabinet.

VICTOR CHRISTIAN CAVENDISH, 9th duke of D. (1868-1938), was the nephew of the 8th duke. He was Gov. Gen. of Canada 1916-21 and Colonial Sec. 1922-4. His son Edward William Spencer Cavendish, 10th duke of D. (1895-1950), became a Unionist M.P. in 1923, and was Under-Sec. for Dominion Affairs 1936-40, for India 1940-2 and for the Colonies 1943-5; he was succeeded by his son Andrew Cavendish (1920-) as 11th duke.

DEW (dū). Moisture which collects on the ground during clear, calm nights, particularly after a warm day. As temperature falls during the night the air and the water vapour it contains become chilled. Condensation takes place on the cooled surfaces of grass, leaves, etc. When the moisture begins to form, the surrounding air is said to have reached its dew-point. If the temperature falls below freezing point during the night, the dew will freeze, or if the temperature is low, and the dew-point is below freezing point, the water vapour condenses directly into ice; in both cases hoar frost is formed.

DEWAR (dū'ar), Sir James (1842-1923). Scottish chemist and physicist; Fullerton prof. of chemistry at the Royal Institution, London, from 1877. He invented cordite jointly with Abel (q.v.); and while working on the liquefaction of gases and low temperatures evolved the vacuum flask.

DE WET (de vet), Christian (1854-1922). Boer general and politician. B. in the Orange Free State, he served in the Boer Wars of 1880 and 1899; in 1907 became Min. of Agriculture in the Orange River Colony; and when the F.W.W. broke out in 1914 he headed a rising that was soon suppressed by Botha.

DEWEY (dū'i), George (1837-1917). American admiral. B. in Vermont, he was commander of the U.S. squadron which in 1898 during the Spanish-American War destroyed or captured the whole Spanish fleet in the battle of Manila Bay.

DEWEY, John (1859-1952). American philosopher. B. in Vermont, from 1904 he was prof. of philosophy at Columbia Univ. D. early recognized that the exigencies of a modern democratic and industrial society demand new educ. technique. He expounded his ideas in numerous writings, esp. in *School and Society* (1899), and founded a progressive school in Chicago. A pragmatist thinker, influenced by William James, D. maintained that there is only the reality of experience, and made 'inquiry' the essence of logic. D.'s influence on American thought and educ. has been profound. His writings incl. *Experimental Logic* (1916), *Reconstruction in Philosophy* (1920), *Quest for Certainty* (1929), *Problems of Men* (1946), etc.

DEWEY, Thomas Edmund (1902-). American Republican politician. B. in Michigan, he became a noted New York lawyer and was U.S. Attorney 1933-4. In 1935 he was appointed to conduct a special campaign against organized crime in New York, and was Gov. of the state 1942-54. He failed to defeat Roosevelt in the presidential elections of 1944, and Truman in 1948 - the closest contest since 1916.

DE WINT, Peter (1784-1849). English landscape artist. B. in Staffs, of Dutch descent, he was a notable water-colourist.

DHOLE. Wild dog of India, reddish-brown in colour, larger than the jackal, but, like it, hunting in packs.

DIABETES. A disease in which, owing to deficiency of the islets of the pancreas, the body cannot reduce sugars properly. It causes incapacity, weakens resistance to infection, and ends in death in coma unless treated by regulation of diet and regular dosage with

insulin. The correct name is *diabetes mellitus*; *diabetes insipidus* is a distinct condition of unknown cause marked by the passage of abnormally large quantities of clear urine.

DIAGHILEFF (děah'gilef), Sergei Pavlovich (1872-1929). Russian impresario. B. in the prov. of Novgorod, he studied law at St. Petersburg, and in 1908 went to Paris and produced *Boris Godunov* with Chaliapin in the title role. In 1909 he founded the Ballet Russe, with its H.Q. in Monte Carlo, which he was to direct for 20 years. Its artists incl. Pavlova and Nijinsky, and Falla, Ravel and Stravinsky provided scores, so that 1st Paris, and then in 1911 London, were taken by storm.

DIALECTICAL MATERIALISM. The philosophy developed by Marx and Engels. From Hegel they derived the conception that all material and mental phenomena constitute a single system, developing through the tension between opposites, which resolves itself in a transition to a higher form of organization. But reversing Hegel's view, D.M. teaches that matter preceded mind, that in the course of evolution it gave rise to life, and subsequently to mind, and that the mental always remains a function of matter. D.M. assumes that things do not always remain the same, but possess latent potentialities which emerge as conditions change. What things are and how they behave depends on the relationships in which they are found, and only in relation to surrounding phenomena can they be understood. Institutions change their nature as social and political developments transform conditions. As one social order, by developing its internal contradictions, is compelled to change into a higher order, the new society will evoke new qualities in man, and transform law, politics, economics, morals, and art.

DIALYSIS. The separation of colloids and substances in solution by diffusion through a semipermeable membrane. The process is made use of in the artificial kidney machine for dialysing accumulated impurities, normally removed by healthy kidneys, out of the blood.

DIAMOND. A precious gem stone, the hardest natural substance known (10 on Mohs' scale). Composed of carbon, it crystallizes in the cubic system, other common crystals being octahedra and dodecahedra. The high refractive index of 2.42 and the high dispersion or 'fire' accounts for the display of colours seen in cut Ds. Rough Ds. are dull or greasy before

DIAMOND. The blue ground is first crushed and washed until completely disintegrated, and the resultant diamondiferous concentrates are then passed over grease tables, like those seen here in the Premier Mine's recovery plant, Transvaal. The diamonds adhere to the grease and the residue is washed away.

Courtesy of the Anglo-American Corporation of South Africa.

DANTON (dōntōn'), Georges Jacques (1759-94). French revolutionary. B. at Arcis-sur-Aube, he practised law, and during the early years of the Revolution he was one of the most influential men in Paris. He organized the rising of 10 Aug. 1792 which overthrew the monarchy, roused the country to expel the Prussian invaders, and procured the formation in April 1793 of the revolutionary tribunal and the Committee of Public Safety, of which until July he was the real leader. Thereafter he sank into the background. When he attempted to recover power, he was arrested and guillotined.

DA'NUBE. Second longest of European rivers. It rises on the E. slopes of the Black Forest, and flows for 1,750 m. across Europe to enter the Black Sea in Rumania by a swampy delta. The head of river navigation is Ulm, in Baden-Württemberg; Braila, Rumania, is the limit for ocean-going ships. Large towns on the D. include Linz, Vienna, Bratislava, Budapest, Belgrade, Ruse, Braila, and Galati. The D. is connected with the Main by canal, and thus with the Rhine system.

Navigation of the D. delta below Braila was in 1856 placed under an international commission and the Versailles Treaty, 1919, created another to maintain free navigation for all nations from Ulm to Braila; this was abolished by Germany in 1940. After the S.W.W. Russia was in a position to control the D. from Vienna to its mouth, and in 1948 called a conference of Danubian states which excluded non-Danubian countries from the commission and, in practice, from use of the river.

DANZIG. German form of GDANSK.

DA'PHNE. Genus of shrubs, natives of the N. hemisphere of the Old World, and included in the Thymelaeaceae. Best known of the 40 species is the British spurge laurel (*D. laureola*). The leaves are evergreen, the flowers green, and the berries black and poisonous.

D'ARBLAY, Madame. See BURNEY, FANNY.

DARDANELLES. Turkish strait that joins the Sea of Marmara with the Aegean Sea; its shores are formed by the Gallipoli (q.v.) peninsula on the N.W. and the mainland of Turkey-in-Asia on the S.E. It is about 47 m. long and 3-4 m. wide.

DARES SALAAM (dahr-es-salahm') (Arab., 'haven of peace'). Seaport and cap. of Tanganyika (also of Tanzania) on the E. coast of Africa. Univ. Coll. is a constituent coll. of the Univ. of E. Africa (1963) and there is a Technical College. Oil is refined and a pipeline (1968) runs to Ndola in the Zambian copperbelt, to which a road was completed 1966. There is also an airport and a rail link with Lake Tanganyika. Pop. (1967) 372,515.

DARFUR (dar'foor). Prov. in the W. of the Republic of Sudan, a vast rolling plain producing gum arabic; there is also stock raising. The cap. is El Fasher (pop. 30,000). D. was an independent sultanate until conquered by Egypt in 1874. Area 138,150 sq. m. Pop. (1967) 372,515.

DARIEN. Eastern prov. of Panama, cap. La Palma. Pop. (1968) 24,100. It produces timber, rice, and beans, and cattle are reared. The Gulf of D., part of the Caribbean, lies between Panama and Colombia.

The name D. was formerly used for the Panama isthmus, an attempt at colonization of which by Scottish emigrants in 1698-9 failed disastrously owing to Spanish hostility and the unhealthy climate.

DARÍO (dahré-oh'). Rubén. Pseudonym of the Nicaraguan poet, Felix Rubén Sarmiento (1867-1916). After holding various diplomatic appointments, he came to Madrid in 1892. He estab. the Modernist movement by his *Azure* (1888), a collection of prose and verse, and *Profane Prose* (1896). Greatest of the later works is *Sones of Life and Hope* (1905).

DARIUS I, the Great, king of Persia, 512-

DARIUS I
Courtesy of Imperial
Iranian Embassy.

485 B.C. A member of a younger branch of the royal family of the Achaemenidae, he won the throne from the usurper Gaumata, reorganized the govt., and in 512 marched against the Scythians and subjugated Thrace and Macedonia. An expedition in 492 to crush a rebellion in Greece failed, and the army sent into Attica (490 B.C.) was defeated at Marathon. D. had an account of his reign inscribed on the mountain at Behistun, Persia. Our illus. shows a low-relief carving from Persepolis. Then, as now in the East, the parasol was a symbol of royal dignity.

DARJEELING (dahrjé'-ling). Town and hill-station in W. Bengal, India, c. 7,000 ft. above sea-level on the S. slopes of the Himalayas, and connected by rail with Calcutta, 369 m. to the S. It is the centre of a tea-producing district. Pop. (1961) 40,651.

DARLAN (dahrloān'), Jean François (1881-1942). French admiral and politician. He entered the navy in 1899, and in 1939 was appointed admiral and C.-in-C. He commanded the French navy 1939-40, took part in the evacuation of Dunkirk, and entered the Pétain Cabinet as Naval Minister. In 1941 he was appointed Vice-Premier, and became strongly anti-British and pro-German, but in 1942 he was dropped from the Cabinet by Laval. He was recognized as Chief of State by the Americans when they landed in French N. Africa, and was assassinated by a young Frenchman.

DARLEY, George (1795-1846). Irish poet. B. in Dublin, he became a journalist in London in 1822. His chief poem 'Nepenthe' (1839) was left unfinished; he also wrote lyrics and poetic dramas.

DARLING, Grace (1815-42). British heroine. She was the dau. of a lighthouse keeper on the Farne Islands. On 7 Sept. 1838 the *Forfarshire* was wrecked, and at considerable danger Grace and her father rowed to the wreck and 9 lives were saved. She was awarded a medal for her bravery.

DARLING. Australian river, a tributary of the Murray, which it joins at Wentworth; its length is 1,910 m. D. is also the name of a district of New S. Wales, a mountain range in W. Australia, and of Downs in S.E. Queensland. The name comes from Sir Ralph Darling (1775-1858), governor of N.S.W. 1825-31.

DARLINGTON, Cyril Dean (1903-). British geneticist. Director of the John Innes Horticultural Institution 1939-53, he was then appointed Sherardian prof. of botany at Oxford. His books incl. *The Evolution of Genetic Systems* (1939) and *Genus, Plants, and People* (1950). In 1941 he was elected F.R.S.

DARLINGTON, William Aubrey (1890-). British

DARJEELING. 'Darby and Joan'.
Photo: B. Deane

days after the publication of the first number of the *Pickwick Papers*. Originally intended merely as an accompaniment to a series of sporting illustrations, the adventures of Pickwick outgrew their setting and established D.'s position as a writer. He followed up this success with *Oliver Twist* (1838), the first of his 'reforming' novels; *Nicholas Nickleby* (1839); *Barnaby Rudge* (1840), set in the period of the Gordon riots; and *The Old Curiosity Shop* (1841). In 1842 he visited the U.S.A., where his attacks on the pirating of English books by American publishers chilled his welcome; his experiences are reflected in *American Notes and Martin Chuzzlewit* (1843). In 1843 he pub. the first of his Christmas books, *A Christmas Carol*, followed in 1844 by *The Chimes*, written in Genoa during his first long sojourn abroad, and in 1845, by the even more successful *Cricket on the Hearth*. A venture as editor of the Liberal newspaper, *The Daily News*, in 1846 was short-lived, and *Dombey and Son* (1848) was largely written abroad. *David Copperfield*, his most popular novel, appeared in 1849, and contains many autobiographical incidents and characters.

Reverting to journalism, D. inaugurated the weekly magazine *Household Words* in 1850, reorganizing it in 1859 as *All the Year Round*; many of his later stories were pub. serially in these periodicals. His married life had long been unsatisfactory, and in 1856 he agreed with his wife on a separation: his sister-in-law remained with him to care for his children, while D. himself formed an association with the actress Ellen Ternan. In 1858 he began making public readings from his novels, which proved such a success that he was invited to make a 2nd tour of America in 1867. Among his later books are *Bleak House* (1853), which mirrors his legal experience; *Hard Times* (1854); *Little Dorrit* (1857), in which he evoked his memories of the Marshalsea prison; *A Tale of Two Cities* (1859), indebted to Carlyle's *French Revolution*; *Great Expectations* (1861); and *Our Mutual Friend* (1864). He d. at Gadshill, his home near Rochester, on 9 June 1870. *Edwin Drood*, left incomplete, was a mystery story influenced by the style of his friend, Wilkie Collins.

Dickens's life was written by John Forster (1872-4), who also edited his letters. He had 7 sons and 3 daughters. The 6th son was Sir Henry Dickens (1849-1933), an eminent barrister.

DICKENS, Monica Enid (1915-). British novelist. A great-granddaughter of Charles D., she became a hospital nurse and wrote *One Pair of Hands*, *Happy Prisoner*, and *Flowers on the Grass*.

DICKINSON, Emily (1830-86). American poetess. B. in Mass., she had an unhappy love affair while visiting Philadelphia in 1854, and from 1862 lived in complete seclusion at Amherst. There she wrote a large number of short poems of an increasingly mystical character. During her lifetime very few of her poems were pub., but numerous vols. have since appeared, including *Bolts of Melody* (1947). D.'s poetry has been described as among the most remarkable ever written by a woman.

DICKINSON, Goldsworthy Lowes (1862-1932). British scholar. B. in London, he lectured at King's College, Cambridge (1896-1920), on modern political problems, and wrote on history, philosophy, religion, and the causes of war; one of his best-known books is *The Greek View of Life* (1896).

DICK-READ, Grantly (1890-1959). British gynaecologist. In private practice in London 1923-48, he developed the theory of natural childbirth, i.e. that by the elimination of fear and tension childbirth pain could be minimized and anaesthetics rendered unnecessary. He encountered much opposition, but his work was ultimately recognized. His theory is contained in *Natural Childbirth* (1933), *No Time for Fear* (1955), etc.

DICOTYLEDONS (dikotiléd'onz). In botany, class of Angiosperms, containing the great majority of flowering plants. They are characterized by the presence of 2 seed-leaves or cotyledons in the embryo, which is usually surrounded by an endosperm.

DICTATOR. Originally a Roman magistrate invested with extraordinary powers for 6 months in order to cope with a grave emergency, but in modern usage an absolute ruler possessing extra-constitutional powers. A king overriding the constitution and assuming extraordinary powers may constitute himself a D. Although dictatorships were common in Latin America during the 19th cent., the only European example during this period is the rule of Napoleon III. The crises following the F.W.W. produced many dictatorships in Europe; these included the régimes of Atatürk, Mussolini, Hitler, Pilsudski, Primo de Rivera, Franco, and Salazar.

DICTATORSHIP OF THE PROLETARIAT. Marxist term for a revolutionary dictatorship estab. after a socialist revolution, during the period of transition from capitalism to complete communism.

DICTIONARY. Book containing the words of a language, with their meanings—either definitions or equivalents in another language—usually arranged alphabetically. The term is also applied to books containing specialized information on some particular subject and to lexicons of the special terms of some particular art or science.

The earliest Ds. in England were written for the purpose of explaining Latin words in English. Dr. Johnson's D. (1755) was the first standard English D.; it long held foremost place in English lexicography, as did that of Noah Webster (1828), in U.S.A. The Oxford New English Dictionary appeared in 10 vols., 1884-1928, and a revision began in 1958.

DIDEROT (dēderoh'), Denis (1713-84). French man of letters, b. in Langres. His first notable publication, *Les Pensées philosophiques* (1746), was burnt by order of the *parlement*. His *Lettre sur les Aveugles* (1749) was also condemned, and the author was imprisoned for several months. In 1749 he was commissioned to edit a vast Encyclopaedia, and obtained the collaboration of Voltaire, D'Alembert, Rousseau, Montesquieu, etc. They aimed not merely to impart information but to mould opinion, and although the *Encyclopédie* was often in danger of being suppressed, D.'s indomitable spirit had carried it through by 1772. D. also wrote novels, e.g. *Le Neveu de Rameau*; plays, e.g. *Le Fils naturel*; and criticism.

DIDO. Phoenician goddess, legendary founder of Carthage. Virgil makes her fall in love with Aeneas. **DIDOT** (dédō'). Firm of French printers and publishers, founded in 1713 by François D. (1689-1757), and continued by successive generations up to Hyacinthe Firmin D. (1794-1880).

DIEFENBAKER (dēf'enbäker). John George (1895-). Canadian statesman. B. in Ontario, of Dutch-Scottish ancestry and son of a schoolteacher, he was ed. at the Univ. of Saskatchewan and made a brilliant reputation as a defence counsel after being invalided from the army in 1917. Cons. M.P. for Lake Centre 1940-53 and for Prince Albert from 1953, he succeeded George A. Drew as leader of the Progressive Cons. Opposition in 1956, and became P.M. in 1957. Since the govt. had not an absolute majority, D. went to the polls again in 1958, and the result was the

Commissioner for Canada.

DARWIN. Named after Charles Darwin, who visited it in 1836 on his way to New South Wales, the city is the northern gateway to Australia. The way overland from the south was opened by John McDouall Stuart in 1861 and a 1,000-mile road (Stuart Highway) links it with Alice Springs.
Courtesy of Australian News and Information Bureau.

discussion in which T. H. Huxley and Haeckel (qq.v.) took leading parts. D. then devoted himself chiefly to botanical subjects till his death. He was buried in Westminster Abbey.

Of his 5 sons, several were eminent scientists, and his grandson SIR CHARLES D. (1887–1963), a theoretical physicist, was the chief organizer in S.W.W. of British atom-bomb research, and director of the N.P.L. 1938–49. Another grandson, BERNARD D. (1876–1963), was *The Times* golf correspondent 1907–53 and played for England 8 times.

DARWIN, Erasmus (1731–1802). British poet, physician and naturalist. B. in Notts, he practised as a doctor at Nottingham, at Lichfield, and at Derby. His most famous work was *The Loves of the Plants* which attempted to expound the Linnaean or sexual system of classification in verse.

DARWIN. Cap. and port of Northern Territory, Australia, in the N.W. of Arnhem Land, a centre for pearl shell, bêche-de-mer, and fish, founded in 1872 and named after Charles D. The N. terminus of a railway from Birdum, and an air station on the route from India, it was bombed by the Japanese in the S.W.W. Experiments in commercial fruit and vegetable growing are in progress in D. area. Pop. (1966) 20,412.

DASS (dahs), Petter (1647–1708). Norwegian poet of Scottish descent. He became a priest, and pub. *Den norske Dale-Vise* (Norwegian Song of the Valley) in 1696; other books, including his greatest poem, *Nordlands Trompet*, appeared posthumously.

DASYURUS (dasi-ŭ-rus). Genus of marsupial cats. Nocturnal animals found in Australia and New Guinea, they are usually brown, spotted with white, and have a long fairly bushy tail, and feet adapted for climbing and running.

DATE. Genus of palms (*Phoenix*), of which *P. dactylifera*, a native of N. Africa, S.W. Asia, and parts of India, is the most important. It varies in height from 30 to 60 ft. The fruit are produced by the female tree in bunches,

DATE palm and fruit.

weighing 20–5 lb., and numbering 180–200 fruit. Ds. are an important source of food in the Near and Middle East, being exceedingly rich in sugar, and when dried are exported. Their juice is made into a kind of wine.

DAUBIGNY (dohbēnyi'), Charles François (1817–78). French landscape painter. B. in Paris, he was associated with the Barbizon school, and is famed for his river scenes.

DAUDET (dohdēh'), Alphonse (1840–97). French novelist. He became a journalist in Paris. Among his works, which show a Dickensian realism, are the sketches *Lettres de mon moulin* (1866); *Tartarin de Tarascon* (1872) with its 2 sequels; *Fromont jeune et Risler aîné* (1874); the play *L'Arlesienne* (1872), for which Bizet composed the music; and *Souvenirs d'un homme de lettres* (1889). He m. in 1867 Julie Allard (1847–1940), who wrote verse and literary sketches under the name of Karl Steen. His brother Ernest D. (1837–1921), wrote historical works, novels such as *Thérèse*, and the autobiographical *Mon Frère et moi*.

Alphonse D.'s son, Léon D. (1867–1942), also became a journalist, and founded in 1899, after the Dreyfus case, the militant royalist periodical *Action Française*. He wrote novels and philosophical treatises, and frank *Souvenirs* (1914). During the S.W.W. he was a collaborator.

DAUGAVPILS. Town in Latvia S.S.R., on the Daugava (W. Dvina). A fortress of the Livonian Knights, 1278, it became the cap. of Polish Livonia. There is a timber industry. Pop. (1967) 87,000.

DAUMIER (dohmyeh'), Honoré (1808–79). French artist. B. at Marseilles, he was taken to Paris as a child and entered a lithographer's studio. He became famous for his cartoons for *La Caricature*, *Charivari* and other periodicals, once being imprisoned for an attack on Louis Philippe. His output was enormous and incl. 4,000 lithographs, but his popular success hindered appreciation of his work as a painter, e.g. his realistic 'Les Bohémiens de Paris', 'Christ Mocked' and illustrations of incidents from Cervantes.

DAUPHIN (dohfañ'). Title of the eldest sons of the kings of France from 1349 to 1830. It was originally attached to the rulers of the provinces of Vienne and Auvergne, known as the Dauphiné.

DAUPHINÉ (dohfēneh'). Old prov. of France, comprising the depts. of Isère, Drôme, and Hautes-Alpes. After the collapse of Rome it belonged to Burgundy, then was under Frankish domination, afterwards part of Arles, it was sold by its ruler to France in 1349. The cap. was Grenoble.

DÁVAO. Town in the Philippine Republic, cap. of D. prov., at the mouth of D. river on the island of Mindanao. It is the centre of a fertile district and is a busy port. Pop. (1968) 298,300.

DA'VENANT, Sir William (1606–68). English poet and dramatist. B. at Oxford, he was rumoured to be a son of Shakespeare. In 1638 he became poet laureate, and during the Civil Wars was imprisoned by Parliament. His *Siege of Rhodes* (1656) is considered the first English opera.

DAVENTRY (dān'tri). English town (bor.) in Northants, 12 m. W. of Northampton, with boot and shoe manufactures. On Borough Hill to the S.E. a B.B.C. high-power, short-wave transmitter was built in 1925. Pop. (1961) 5,846.

DAVID (c. 1060–970 B.C.). Second king of Israel. Youngest son of Jesse of Bethlehem, while still a shepherd boy he was anointed by Samuel to succeed Saul. He played the harp before Saul to banish his melancholy, and later slew the Philistine giant, Goliath, with a sling and stone. Saul's son, Jonathan, became his friend, but Saul, jealous of his prowess, schemed to murder him. D. married Michal, Saul's dau., but following further attempts on his life went into exile until Saul and Jonathan fell in battle with the Philistines at Gilboa. D. was anointed king at

DIJON (dězhoŋ'). Capital of Côte d'Or dept., France, and once capital of Burgundy. It is 165 m. S.E. of Paris, has a large wine trade; the cathedral dates from the 13th cent., the univ. from 1722. Pop. (1962) 141,104.

DILHORNE, Reginald Edward Manningham-Buller, 1st visct. D. (1905–). British lawyer. Called to the Bar in 1927, he was elected Cons. M.P. for Daventry 1943–50 and South Northants 1950–62, and became Solicitor General 1951–4 and Attorney General 1954–62. In 1962–4 he was Lord Chancellor, and in 1964 created a visct.

DILKE (dilk), Sir Charles Wentworth (1843–1911). British Liberal politician. B. in London, he became an M.P. in 1868, and expressed republican, radical, and strong imperialist views. In 1885 his political career was ended by his involvement in a divorce case. In *Greater Britain* (1868) he advocated a union of the British Empire and the U.S.A.

DILL. A plant (*Anethum graveolens*) belonging to the family Umbelliferae and resembling fennel. It is a native of S. Europe and Africa. Oil of D. and D. water, prepared from the seeds, are used medicinally.

DILL, Sir John (1881–1944). British soldier-diplomat. An Ulsterman, he became C.I.G.S. in 1940 at the time of the evacuation from Dunkirk, and in 1941 was promoted field marshal and sent by Churchill on a special mission to Washington. Roosevelt had

full confidence in him, and he attended the conferences at Casablanca, Quebec, Cairo and Teheran as senior British representative on the Combined Chiefs of Staff.

DILLON, John (1851–1927). Irish nationalist. He was the son of John Blake D. (1816–66), one of the

founders of the *Nation* and a leader of the 1848 rebellion. He entered parliament in 1880 as a follower of Parnell, took an active part in the Land League agitation, and was 4 times imprisoned. He remained a leader of the Irish group in parliament until 1918.

DILTHEY (dilt'hī), Wilhelm (1833–1911). German philosopher. Prof. at Berlin from 1882, he laid the philosophical foundations of what in opposition to the physical sciences he called *Geisteswissenschaften* (psychical sciences). He applied his analytical and descriptive psychology, centring round the concept of the *Erlebnis* (experience), to the lives and works of thinkers, poets, and musicians, and decisively influenced the course of literary studies in Germany.

DIMBLEBY, Richard (1913–65). British broadcaster and provincial newspaper owner. He joined the B.B.C. in 1936 and estab. himself as the foremost commentator on royal and state events, and current affairs (*Panorama*), on radio and television.

DIMITROV, Georgi (1882–1949). Bulgarian Communist. He was elected a deputy in 1913, and from 1919 was a member of the executive of the Comintern. In 1933 he was arrested in Berlin and charged with others with having set fire to the Reichstag. So forceful was his defence that the court was obliged to acquit him, and he went to the U.S.S.R., where he was general secretary of the Comintern until its dissolution in 1943. He returned to Bulgaria in 1945 and in 1946 became P.M. He d. in Russia.

DINAN (dēnoŋ'). Town in Côtes-du-Nord dept., N. France, on the Rance, with an airport. Hosiery is made. Pop. (1962) 16,438.

DINANT (dēnoŋ'). Ancient town in Namur prov., Belgium, on the Meuse, a tourist centre for the Ardennes. It was almost destroyed by the Germans in August 1914. There are metal and woollen industries. Pop. c. 7,000.

DINGAAN (d. 1140). Zulu king. Obtaining the

Reconstruction of a giant dinosaur (*Diplodocus*) over 70 ft. long.

throne in 1828 by murdering his predecessor, he was noted for his cruelty. In warfare with the Boer immigrants into Natal he was defeated on 16 Dec. 1838 – 'Dingaan's Day'. Escaping to Swaziland, he was murdered there.

DINGLE, Herbert (1890–). British astronomer. Prof. of the history and philosophy of science at University Coll., London, 1946–55, he wrote *Modern Astrophysics* (1924), *Through Science to Philosophy* (1937), and *Practical Applications of Spectrum Analysis* (1950).

DINGLE. The most westerly town in Ireland, situated on an inlet of D. Bay, co. Kerry, Ireland. It was a Celtic fort, and is now a fishing and market town. Pop. (1960) 1,500.

DINGO, or Australian Wild Dog (*Canis dingo*). Descended from a domesticated breed introduced from Asia by the aborigines, it is about the size of a small wolf and pale yellow in colour.

DINOSAUR (dī'nosawr). Term used in a general way to denote a number of extinct reptiles belonging to the Mesozoic age, mostly of gigantic size – some were c. 70 ft. long and weighed about 35 tons – yet with very small brains.

DIOCLETIAN (dioklē'shian), Gaius Valerius (A.D. 245–313). Roman emperor. B. in Dalmatia, he was proclaimed emperor in 284, and estab. a fourfold division of the Empire with two joint and two subordinate emperors. Under him there was a severe persecution of the Christians (303). In 305 he abdicated in favour of Galerius, and retired to his books and gardens at Salona, on the Dalmatian coast.

DÍ'ODE. An electronic device containing only 2 electrodes, an anode and a cathode, with marked unidirectional characteristics.

DIOGENES (dī-o'jenéz) (c. 412–323 B.C.). Ascetic Greek philosopher of the Cynic school, b. at Sinope. Legend has it that he lived in a tub in the temple of the Mother of the Gods. He was captured by

DINOSAUR. Footprints (measuring c. 10 in.) of three dinosaurs, probably carnivorous animals of the same general type as *Megalosaurus*, seen as if moving toward the camera. They were discovered in 1962 in the Middle Purbeck of Suttell's Quarry at Herston, nr. Swanage.

Photo: C. P. Nuttall by courtesy of the British Museum (Natural History).

successful. He left Richmond on its fall in 1865, and shortly after was captured in Georgia, and spent 2 years in prison.

DAVIS, John (c. 1550–1605). English navigator and explorer. B. near Dartmouth, he sailed in search of a N.W. passage in 1585, and in 1587 sailed to Baffin Bay through the straits named after him. In 1588 he fought against the Armada. He was killed by Japanese pirates in the straits of Malacca.

DAVIS, John William (1873–1955). American diplomat. A popular ambassador to Britain 1918–21, he was one of Wilson's advisers at the Versailles Conference.

DAVISSON, Clinton (1881–1958). American scientist. B. in Illinois, he worked under O. W. Richardson at Princeton before joining the Bell Telephone organization in 1917, and proved de Broglie's theory that electrons – and therefore all matter – have wave structure: G. P. Thompson carried through the same research independently and in 1937 the 2 men shared a Nobel prize.

DAVITT, Michael (1846–1906). Irish revolutionary. B. in co. Mayo, he began work in a factory at the age of 10, joined the Fenians in 1865, and was sentenced in 1870 to 15 years' imprisonment for treason-felony. After his release in 1877 he and Parnell founded the Land League in 1879. Imprisoned several times for his share in the land agitation, he was a M.P. 1895–9.

DAVOS (dahvohs). Town, 5,115 ft. high, in an Alpine valley in Grisons canton, Switzerland, famous as a resort for consumptives and as a winter-sports centre. Pop. (1960) 9,588.

DAVOUT (dahvöö'), Louis Nicolas, duke of Auerstädt and prince of Eckmühl (1770–1823). Marshal of France from 1804. He held high command in the *grande armée*, and distinguished himself at Austerlitz and in the campaign in Russia. His defence of Hamburg was renowned. D. rejoined Napoleon during the 100 Days, and in 1819 was made a peer.

DAVY, Sir Humphry (1778–1829). British chemist. Initially an apprentice surgeon, he also studied metaphysics, ethics and mathematics, before devoting himself to chemistry. While laboratory superintendent at the Bristol Pneumatic Institute he discovered the respiratory effects of 'laughing gas' (nitrous oxide) in 1799, and as a result was invited to the Royal Institution, London, where he became prof. of chemistry in 1802. He soon estab. a fine reputation for his lecturing and research, and at govt. request gave a course of lectures on agricultural chemistry (1803), later pub., which remained the standard work for nearly 50 years. During his classic 'Bakerian' lectures (1806–10) on electro-chemistry, he demonstrated his discovery of the metals sodium, potassium, calcium, magnesium, strontium and barium, by electrolysis. During a continental tour in 1813, with his assistant Faraday (q.v.), he investigated the electricity of torpedo-fish, burnt diamonds in oxygen to prove that they were made of carbon, and examined volcanic activity. On returning to England he investigated fire damp in coal mines and constructed the safety lamp, used from 1816. He was elected pres. of the Royal Society in 1820. Throughout his life he wrote poetry for relaxation.

DAVY JONES. Sailor's name, generally occurring in the phrase 'gone to D.J.'s locker' applied to those drowned at sea, and taken as the name of a sea-spirit or devil.

DAWES (dawz), Charles Gates (1865–1951). American statesman. In 1923 he was appointed by the Allied Reparations Commission president of the committee which produced the 'Dawes Plan' – aiming at securing that Germany should pay as much as possible as war debts. It was superseded by the Young Plan in 1929. D. was elected vice-president of the U.S.A. in 1924, received the Nobel peace prize in 1925, and was ambassador to Britain 1929–32.

DAWSON, Geoffrey (1874–1944). British journalist.

As editor of *The Times* 1912–19 and 1923–41 (the interval being caused by a difference of opinion with Lord Northcliffe), he exerted considerable influence, and used it against Edward VIII at the time of the Abdication Crisis.

DAWSON, Peter (1882–1961). Australian baritone, noted for marching songs, ballads, etc.

DAWSON. Canadian 'ghost town', cap. until 1953 of the Yukon Territory, at the junction of the Yukon and Klondike rivers, founded 1896 at the time of the Klondike gold rush when its pop. was 25,000; pop. (1966) 881.

DAY, Edith (1896–). American actress and singer. B. in Minneapolis, she appeared in the great musical successes *Rose Marie* (1925–6), *The Desert Song* (1927–8), and *Show Boat* (1928–9).

DAY, Thomas (1748–89). British author of the educational novel *Sandford and Merton* (1783–9), a children's classic for more than a century, he brought up 2 poor girls on his own educational principles, with a view to marrying whichever of the two should turn out the better. The scheme miscarried, however, and eventually he m. an heiress and lived in Essex and Surrey as a philanthropic farmer.

DAYAKS (d'aks) or **Dyaks**. Semi-savage tribes of Borneo. They are taller and less dark-skinned than the Malays, and are skilled in many arts and crafts. For hunting purposes they use the blowpipe. The custom of head-hunting has tended to die out.

DAY-LEWIS, Cecil (1904–). British poet. B. at Ballintubber, Ireland, he was ed. at Oxford and then became a schoolmaster, teaching at Cheltenham Coll. 1930–5. With Auden and Spender he was one of the influential Leftist poets of the 1930s, and first showed an individual quality in *From Feathers to Iron* (1931). In maturity he developed a gift for tangy, accomplished lyrics, and sustained narrative power, e.g. 'The Loss of the Nabara' in *Overtures to Death* (1938). Prof. of poetry at Oxford 1951–6, he has pub. critical works, translations of the *Georgics* and *Aeneid*, and detective novels under the pseudonym Nicholas Blake. In 1968 he succeeded Masfield as Poet Laureate.

DAYTON. City of Ohio, U.S.A., producing precision machinery, household appliances, electrical equipment, etc. It has an aeronautical research centre and an R.C. university. It was the birthplace of Orville Wright (q.v.). Pop. (1960) 262,332.

DAYTON. Small town in Tennessee, U.S.A., notorious as the scene of the trial (1925) of John T. Scopes, a science teacher at the high school, accused of teaching, contrary to a law of the State, that 'man is descended from the lower animals'. Scopes was fined \$100, but this was waived on a technical point. Pop. (1960) 3,500.

DAYTONA BEACH. Popular U.S. seaside resort and motor-racing centre on the Atlantic coast of Florida. Pop. (1960) 37,395.

DAZAI, Osamu. Pseudonym of Shuji Tsushima (1909–48), Japanese author. His work reflects the drunkenness and drug addiction of his life, and his ultimately successful penchant for suicide. The title of his novel *The Setting Sun* (1947) has become in Japanese synonymous with the dead of the S.W.W.

D-DAY. Name given to the day – 6 June 1944 – when the Allied invasion of Europe took place during the S.W.W. It was originally fixed for 5 June, but owing to unfavourable weather the invasion was postponed for 24 hrs. See S.W.W. In military jargon D-Day was any day for which an operation was planned, but in ordinary usage it has acquired this specialized sense. See *illus.* p. 328.

D.D.T. (Dichloro-Diphenyl-Trichloroethane). Powerful insecticide, in the form of a white powder, discovered in 1940 by the Swiss firm J. R. Geigy. Effective against flies, mosquitoes, sand flies, lice, fleas, etc., it is valuable in the control of diseases such as malaria, typhus, yellow fever and plague

also made some remarkable nature-study films as well as features with human casts e.g. *The Swiss Family Robinson* (1960).

DISPLACED PERSONS. Citizens of occupied countries brought into Germany as slave labour during the S.W.W. The Allies found c. 7½ million, and when I.R.O. funds ran out in 1952 the remaining 100,000 became the responsibility of the country (chiefly W. Germany) in which they were living. The United Nations High Commissioner for Refugees, appointed principally to cope with Arab refugees (1951) after the establishment of Israel, helped with the remaining D.P. and later refugees, e.g. 200,000 Hungarians. The Germans who fled before the advancing Russians, and the Germans and German-speakers expelled from Poland, Czechoslovakia, and Polish-occupied E. Germany, are sometimes loosely referred to as D.P.: they numbered c. 9 million. By the late 1960s the problem was greatest in Africa (Congo, Nigeria, etc.) and Asia (Tibet, Chinese in Hong Kong, Vietnam, etc.).

DISRAELI. See BEACONSFIELD, EARL OF.

D'ISRAELI (dizrá'li), Isaac (1766–1848). British scholar. Son of a Spanish Jew, who had emigrated to England from Venice, he was the father of Lord Beaconsfield (q.v.) and author of *Curiosities of Literature* (1791–3 and 1823).

DISSENTERS. Those who dissent from the Established Church in England or in Scotland. Usually the term refers to those legally styled Protestant Ds., viz. Baptists, Presbyterians, and Independents (now known as Congregationalists).

DISTEMPER. A disease common in young dogs, characterized by catarrh, cough, and general weakness. It is caused by a virus, and is very contagious.

DISTRIBUTISM. The economic theory associated with G. K. Chesterton and Hilaire Belloc. They maintained that property is essential to liberty, criticized both capitalism and socialism on the grounds that both abolish liberty, and advocated guild relations in industry and peasant ownership of the land.

DISTRICT COUNCIL. In the local govt. of England and Wales, the governing body of a county district that is not a borough. It is a corporate body but not chartered, and has a chairman instead of a mayor. There are 2 types of D.C.: Urban Districts, established in populous areas and towns; and Rural Districts, which comprise a number of civil parishes (some with parish councils and others with parish meetings). Members of both types are elected in May for 3 years, and normally one-third of the members retire each year. The functions are varied, those of the U.D.C. being greater and more extensive than those of the R.D.C.; indeed, they are approximately the same as those of a non-county borough. The chief matters dealt with are public health and sanitation; provision of council houses; maintenance of unclassified, i.e. minor, roads, etc. Together with non-county boroughs, district councils constitute the lower of the 'two-tier' organization of which the upper tier is the county council.

DISTRICT OF COLUMBIA. See WASHINGTON.

DITZEN, Rudolf. See FALLADA, HANS.

DIU (dē'-oo). Island (7 m. long) and town, off the Kathiawar pen., N.W. India, formerly belonging to Portugal (see GOA). Salt is produced. Pop. 20,000.

DIVER, or Loon. A family of birds (Gaviidae) of the order Gaviiformes. They are confined to the N. hemisphere, and usually breed in fresh water, but at other seasons of the year are mainly marine in their habits. On land the birds are scarcely able to stand, but their flight is powerful and in the water they swim and dive readily.

DIVINATION. Art of ascertaining future events or eliciting other hidden knowledge by supernatural or irrational means. There are 2 main types of D. The first depends on the interpretation of the mechan-

ical operations of chance or natural law, and includes the casting of lots and ordeals by water, fire, single combat, etc.; consultation of texts obtained by a random opening of such books as the Bible, etc.; omens drawn from the behaviour of birds and animals; examination of the entrails of sacrificed animals; and the observation of the stars in astrology. On the borderline of the subjective forms of D. are fortune-telling by cards and palmistry; manipulation of a Bible and key or the reaction of a suspended ring; and the use of the divining rod in finding water, metals, etc. To the 2nd or almost entirely subjective class, which uses external aids only to a minor extent, belong clairvoyance by crystal gazing, etc.; oracular trance-speaking and automatic writing; necromancy, or the raising of the spirits of the dead; and dreams, often specially induced.

D. played a large part in the ancient civilizations of the Egyptians, Greeks, and Romans, and is still active throughout the world at every stage of culture.

DIVINE RIGHT OF KINGS. The political doctrine that monarchy is divinely ordained, hereditary right is indefeasible, kings are accountable to God alone for their actions, and rebellion against the lawful sovereign is thus a sin against God. The doctrine became prominent in 16th cent. Europe as a weapon

against the claims of the Papacy, and in 17th cent. England was maintained by the supporters of the Stuarts in opposition to the democratic theories of the Puritans and Whigs.

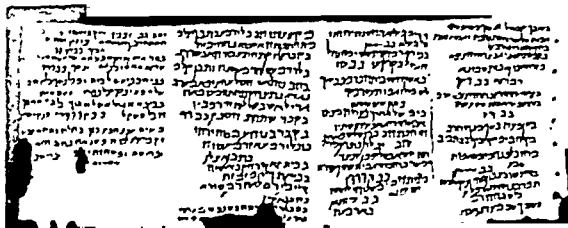

DIVORCE. The legal dissolution of a lawful marriage. In England, divorce could be secured only by the passing of a private Act of Parliament until the Matrimonial Causes Act, 1857, set up the Divorce Court and enacted that a wife could be divorced for

DIVER

adultery, a husband for adultery plus cruelty or desertion. An act of 1923 made adultery sufficient cause for divorce by either spouse; an act of 1937 (See A. P. HERBERT) extended the grounds of divorce to desertion for at least 3 years; cruelty; incurably unsound mind after detention for 5 years in a mental hospital; but laid it down that, except by leave of the court, no suit could be brought for the first 3 years of the marriage. Under the controversial *Divorce Reform Bill* (1968) it was proposed that the only ground for D. should be the irretrievable breakdown of the marriage. The petitioner would estab. this by proof of the respondent's adultery, or other behaviour rendering it unreasonable to live with him or her; the respondent's desertion for 2 years; the parties having lived apart for two years or (if the respondent objected to a decree) 5 years. Nicknamed the 'Casanovas' Charter', it aroused widespread opposition which proposals for more efficient financial safeguards for wives divorced against their will did not dispel.

In the U.S.A. divorce laws differ from state to state. Everywhere adultery is a ground, in N.Y. until 1967 the only ground. Cruelty, desertion, alcoholism, drug addiction, insanity for varying terms (10 years in N. Carolina to 2 years in Nevada) are among additional grounds in other states. In W. Virginia there is no minimum residence required in adultery cases; minimum residence period in Nevada is 6 weeks, in other states from 3 months (Ark.) to 5 years (Maryland). Some states set a time period before re-marriage is permitted. The U.S. divorce rate in 1960 was 2.2 per 1,000 pop. (the marriage rate, 8.5 per 1,000) compared with .5 per 1,000 divorce rate in 1890 (9.0 marriage rate).

DEAD SEA SCROLLS. Besides the leather scrolls found at Qumran, two originally of bronze were discovered embedded in the dust of the floor of Cave 3. As only metallic salts remained, the scrolls could not be unrolled, and Professor H. Wright Baker (right) of the Manchester College of Science and Technology solved the problem by bonding the salt crystals together and cutting the scrolls into strips with a tiny circular saw. The scrolls are apparently a record of the location of treasures of the Temple at Jerusalem, concealed in time of trouble, and never recovered, but the land-marks mentioned, and probably the treasure, have long since disappeared: a transcription from one segment is seen above.

Courtesy of Prof. H. Wright Baker.

DEATH. The permanent ending of all life processes in an animal or plant. The exact moment of its occurrence is sometimes uncertain, and modern resuscitation techniques render definition difficult, the one sure sign being putrefaction. The development of transplant surgery, however, led in 1968 to an agreed definition of D. by a conference at the World Health Organization H.Q. in Geneva: a potential donor is considered dead when his brain has totally and irreversibly ceased to work, i.e. there is no brain-body connection, muscular activity, blood pressure, or ability to breathe unaided by machine.

DEATH'S HEAD. A large species of moth (*Acherontia atropos*) of the hawk-moth family (Sphingidae). The fore-wings are mottled with yellow, brown, and black, and the hind-wings are dark yellow banded with black. The body is stout and hairy, of a dark yellow colour; black markings on the thorax often bear a striking resemblance to a skull, whence the name. It has a wing-span of nearly 6 in.

DEATH VALLEY. Narrow depression in S.E. California, U.S.A., 140 m. long, 4–16 m. wide, 280 ft. below sea-level, lowest point in N. America, bordered by mountains rising to 10,000 ft. above sea-level. It is desert most of the year (1.4 in. average annual rainfall) and is one of the world's hottest regions.

DEATH WATCH. Species of beetle (*Xestobium rufovillosum*) of the family Anobiidae. It bores in old furniture, etc., and the male, in order to attract the female, produces a ticking sound by striking its head upon a wooden surface; this is taken by the superstitious as a warning of approaching death.

DEAUVILLE (dohvèl'). Holiday resort of Normandy in Calvados dept., France, 25 m. N.E. of Caen, on the Eng. Channel and at the mouth of the Touques, opposite Trouville. Pop. (1962) 5,239.

DE BASIL, Wasily (c. 1886–1951). Russian impresario. Once colonel of a Cossack division, he became manager to the pianist Horowitz, and in 1932 (with René Blum) re-formed Les Ballets Russes de Monte Carlo, touring Europe and America, and initiating a great ballet revival.

DEBRÉ (debrā'), Michel (1912–). French statesman. B. in Paris, he escaped in 1940 to Morocco and from 1944 was a close associate of de Gaulle. On the latter's return to power in 1958 he became Min. of Justice and in 1959 became Premier Ministre, 1st to bear this title in modern times – the French 'Premier' formerly being called officially 'President of the Council of Ministers'. In 1962 he resigned on having completed the Evian agreements with the Algerian nationalists, becoming Min. of Economic Affairs 1966.

DEBRECEN (de bretsen). Hungarian town, 120 m.

E. of Budapest. It is a commercial centre, and has a univ. founded 1912. Pop. (1962) 136,719.

DEBRETT, John (1753–1822). London publisher who in 1802 pub. a *Peerage* followed by a *Baronetage* in 1808, still called by his name.

DE BROGLIE (de bröly'), Maurice, 6th duc (1875–1960). French scientist, noted for his work on atomic physics and X-rays. He was succeeded in the title by his brother Louis Victor de B., 7th duc (1892–), well known for his research in nuclear physics and the relations between wave and corpuscular theories. The latter was awarded a Nobel prize in 1929, and became prof. of physics at Paris in 1932.

DEBS, Eugene Victor (1855–1926). American Socialist. B. in Indiana, he organized the American Railway Union in 1893, and was Socialist candidate for the presidency in every election from 1900 to 1920, except that of 1916. He opposed U.S. intervention in the F.W.W., and was imprisoned 1918–21.

DEBUSSY (debü'sé'), Claude Achille (1862–1918). French composer. B. at St. Germain-en-Laye, he studied at Paris, and won the Grand Prix de Rome with his cantata *L'enfant prodigue* (1884). After studying in Rome and Russia, he returned to Paris and won fame with his *L'après-midi d'un faune* (1894). His opera *Pelléas et Mélisande* was 1st performed in 1902. He also wrote orchestral music and numerous piano pieces, chamber music, ballets, songs, etc. For his rejection of classical diatonic harmony he may be called the first of the modern composers.

DEBYE (debi'), Peter (1884–1966). Dutch-American physicist. Ed. at Munich, he subsequently held

DEATH'S HEAD MOTH, about half natural size.

DOCKS. The crowded panorama of London's dockland: 1, Royal Docks; 2, Tilbury Docks; 3, India and Millwall Docks; 4, Surrey Commercial Docks; 5, London and St. Katherine's Docks.

Photo by Aerofilms, reproduced by courtesy of the Port of London Authority.

Floating Ds. are built for the same use as the graving Ds. They are constructed of steel pontoons - hollow chambers - which are filled with water so that the floor of the D. sinks below the ship to be repaired. When the water is pumped out of the pontoons the D. rises, lifting the ship with it.

DODD, Charles Harold (1884-). British theologian. A Congregationalist, he was prof. of divinity at Cambridge 1935-49, and was general director 1950-65 of the New English Bible project, joint director from 1966 (N.T. translation pub. 1961).

DODDER. A genus of parasitic plants (*Cuscuta*), belonging to the bindweed family (Convolvulaceae). There are about 100 species, of wide distribution. The plant is without leaves or root, but has a slender stem which twines round that of some other plant, from which it draws its nourishment, penetrating its cells by means of suckers.

DODDS, Sir Charles (1899-). British biochemist. Courtauld prof. of biochemistry at London 1927-65, and pres. of the Royal Coll. of Physicians 1962, he was largely responsible for the discovery of stilboestrol, the powerful synthetic hormone used in treating prostate conditions and also for fattening cattle.

DODECANESE (Gk. '12 islands'). Group of islands of the Aegean Sea belonging to Greece. The inhabitants - mostly Greeks - are noted as sponge-fishers. Unde. ... from the 16th cent., the D. were ... 12, and in 1947 were ceded to ... (q.v.) they were formed into a nome called D., area 1,036 sq. m.; pop. (1961) 122,346.

DODGSON, C. L. See CARROLL, LEWIS.

DODO. Bird (*Didus ineptus*) which formerly inhabited the island of Mauritius, but became extinct at the end of the 17th cent. It belonged to the pigeon order (Columbiformes), but is the type of a distinct family, Dididae. It was larger than a turkey, with a

bulky body and very short wings and tail which rendered it incapable of flight.

DODSLEY, Robert (1703-64). British publisher. For a time he was a footman, and wrote *A Muse in Livery* (1732). Later he pub. Pope, Young, Grey and Goldsmith, and assisted in the production of Dr. Johnson's *Dictionary*. He wrote a number of plays and pub. a valuable collection of *Old Plays* (1744) and *Poems by Several Hands* (1748).

DOG. Member (*Canis familiaris*) of the family Canidae in the order Carnivora, which also incl. the jackals, wolves and foxes. Domestic Ds. have been in existence since prehistoric times, but it is hotly debated whether they derive by selective breeding from the wolf. Wild Ds. are found in Africa, America, Asia and Australia.

There are some 400 different breeds of D. throughout the world, the Kennel Club (1873) grouping those eligible for registration (116 breeds) into sporting breeds (hound, gundog, and terrier) and non-sporting (utility, working, and toy); the American Kennel Club (1884) adopts the classification sporting Ds., hounds, working Ds., terriers, toys, and non-sporting Ds. The premier event of the D. year is Crufts Show, Olympia, London: see CRUFT, Charles.

DOGE (dōj). The chief magistrate in the ancient constitutions of Venice and Genoa. The first D. of Venice was appointed in A.D. 697 with absolute power (modified in 1297), and from his accession dates Venice's prominence in history. The last Venetian D., Lodovico Manin, retired in 1797.

DOGFISH. Name given to a number of fishes of the order Pleurotremata. They are essentially members of the various families of sharks, differing only in their smaller size. The piked D. or spur D. (*Squalus acanthias*) is viviparous, and is the most abundant species of the British coasts.

DOGGER BANK. Shoal in the North Sea, about 70 m. off the coast of Yorkshire. In places the water is only 6 fathoms deep, but the general depth is 10-20 fathoms; it is a well-known fishing ground. An indecisive naval action was fought near the D.B. in 1915 during the F.W.W.

DOGGETT, Thomas (d. 1721). British actor, b. in Dublin, whose memory has been preserved by the prize of 'D.'s Coat and Badge', given to the winner of a sculling race on 1 Aug., open to Thames watermen in the year following their apprenticeship.

DOGS. Isle of. District of E. London, England, part of the Greater London bor. of Tower Hamlets.

DOHNANYI (doh'nahnyi), Ernst von (1877-1960). Hungarian composer. B. at Pozsony, he made an international reputation as a pianist, and wrote music of a traditional style under the influence of Brahms.

DODO

DOGFISH

DEER. Red deer (left) and fallow deer.

created in 1964, which absorbed the existing Ministry of D. (estab. after the S.W.W., in which the P.M. had been Min. of D. 1940–6, to assist co-ordination), and the 3 other depts. previously responsible: the Admiralty, Air Ministry, and War Office. It is headed by the Sec. of State for D., under whom are the Min. of D. for Administration and the Min. of D. for Equipment; individual Service Ministers were replaced 1967 by Under-Secs. for the Royal Navy, Army, and R.A.F. A new *Defence Council*—Sec. of State, Mins. of State, Chief of D. Staff and Chiefs of Staff, Permanent Under Sec. of State, Chief Scientific Adviser—controls major defence policy, replacing the Admiralty, and the Army and Air Councils. Management rests with the Admiralty, Army and Air Force Boards. This centralization was influenced by the example of the U.S.A., where the army, navy, and air force were unified by the National Security Act, 1947, under the Dept. of Defense, presided over by a Sec. of Defense with a seat in the President's Cabinet; each of the 3 services has a civilian sec. at its head, not of cabinet rank.

DEFENDER OF THE FAITH (Lat. *Fidei Defensor*). One of the titles of the English sovereign, conferred on Henry VIII by in 1521 Pope Leo X in recognition of the king's treatise against Luther. It appears on British coins in the shortened form *Fid. Def.*

DEFFAND (deffon'), Marie Anne de Vichy-Chamrond, marquise du (1697–1780). French letter-writer. She held a salon in Paris, and is remembered for her letters, particularly those to Horace Walpole.

DEFLATION. See INFLATION.

DEFOE (defō'), Daniel c. (1660–1731). English novelist and journalist. B. in Cripplegate, the son of a butcher, James Foe. He was ed. for the Nonconformist min., but became a hosier. He took part in Monmouth's rebellion, and joined William of Orange in 1688. After his business had failed, he held a Civil Service post (1695–9). He wrote numerous pamphlets, and 1st achieved fame with the satire *The True-Born Englishman* (1701), followed in 1702 by the ironic *The Shortest Way with Dissenters*, for which he was fined, imprisoned, and pilloried. In Newgate he wrote his 'Hymn to the Pillory' and started a paper, *The Review* (1704–13). Released in 1704 he travelled in Scotland (1706–7), working to promote the Union, and pub. in 1709 *A History of the Union*. During the next 10 years he was almost constantly employed as a political controversialist etc. His version of the contemporary short story 'Apparition of Mrs. Veal' (1706) had revealed a gift for realistic narrative, and *Robinson Crusoe*, based on the story of Alexander Selkirk, appeared in 1719. It was followed among others by the pirate story *Captain Singleton* (1720); *A Journal of the Plague Year* and picaresque novels *Moll Flanders* and *Colonel Jack* in 1722, and *Roxana* (1724).

His last years were given to more 'solid' work, beginning in 1724 with *A Tour through the Whole Island of Great Britain*.

DE FOREST, Lee (1873–1961). American inventor. B. in Iowa, and ed. at Yale and Chicago univs. he perfected the audition tube and other radio inventions and also worked in television.

DE FRECE, Lady. See TILLEY, VESTA.

DEGAS (degah'), Hilaire Germain Edgard (1834–1917). French impressionist painter. B. in Paris, the son of a French father and a Creole mother from New Orleans, he abandoned law in order to study at the *École des Beaux-Arts*, where he came under the influence of Ingres. He worked in Italy for 5 years, and in 1870, during the Franco-Prussian War, he served in the National Guard. He avoided the Paris Salon, and became one of the chief exponents of the French impressionist technique, working almost exclusively in pastel, and devoting himself to studies of ballet, horses and jockeys, and representations of contemporary life. He was also a sculptor. He became blind, and d. in Paris.

DE GAULLE, Charles (1890–). French statesman. B. at Lille, he graduated from Saint-Cyr in 1911 and in 1916 was severely wounded and captured by the Germans. In his *The Army of the Future* (1934) he attacked French dependence on an 'impregnable' Maginot Line, and in 1940 refused to accept Pétain's truce with the Germans, becoming leader of the Free French in England. In 1944 he entered Paris in triumph and was briefly head of the provisional govt. before resigning in protest at the defects of the new constitution of the Fourth Republic in 1946. In 1947 he founded the *Rassemblement du Peuple Français* (R.P.F.) a non-party constitutional reform movement, and when bankruptcy and civil war loomed in 1958 D.G. was called by Coty to form a govt. As Premier he promulgated a constitution subordinating the legislature to the presidency and in 1959 took office as President. Economic recovery and eventual solution of colonial problems followed, but in pursuit of his Grand Design (q.v.) he opposed 'Anglo-Saxon' influence in Europe: see **EUROPEAN UNION**. Re-elected pres. in 1965, he quelled student-worker unrest which endangered the economy in 1968, and the Gaullist party, reorganized as *Union des démocrates pour la Cinquième République*, won an overwhelming majority in the elections of the same year. Unrest recurred 1969 despite his promise of worker 'participation', and regional and senate reform. See illus. p. 10.

DEGAUSSING (dêgôus'ing). The neutralization of the magnetic field of a body by encircling it with a conductor through which a current is maintained. Ships were degaussed in the S.W.W. to avoid detonating magnetic mines.

DEGREE. The 360th part of the circumference of a circle; it is symbolized by the sign ° after a figure, e.g. 32°. It is subdivided into 60 minutes (1°=60'). A degree of latitude is the length along a meridian such that the difference between its N. and S. ends is 1°. A degree of longitude is the length between 2

DEGAS. A composition which catches the timeless pleasure of a child's summer day by the sea – 'Bains de mer; petite fille peignée par sa bonne'. Courtesy of the National Gallery.

prestige in Britain by issuing diplomas, etc., but a recent development both in the U.S. and Britain is the rise of the *au pair* girl. Generally from the Continent and studying the English language, she lives as family and receives pocket-money for her services, but increased labour-saving devices are the more usual answer to household problems.

DOMETT, Alfred (1811–87). British colonial politician and poet. B. in England, he emigrated to New Zealand in 1842, where he was P.M. 1862–3. He returned to England in 1871. His *Ranolf and Amohia* (1872) is an epic of Anglo-Maori life.

DOMINIC, St. (1170–1221). Founder of the R.C. order of preaching friars, called Dominicans. B. in Old Castile, he was sent by pope Innocent III on a mission to the Provençal Albigenses, and remained preaching among them 1205–15. In 1208 the pope substituted the Albigensian crusade to suppress the heretics by force, and this was supported by D. From D.'s mission grew the Dominican order, and in 1215 it was given premises at Toulouse. Pope Honorius III, in 1218, permitted D. to constitute his 'holy preaching' as an order, and by the time of his death it was estab. all over W. Europe. D. was canonized in 1234.

DOMINICA (dominē'ka). Island in the West Indies, most northerly of the Windward Is., about 29 m. long and containing the highest land in the group. It produces timber, limes, oranges, bananas, cocoa, and rum. The chief town is Roseau, on the W. coast; Portsmouth, the only other town, has a good harbour. D. was discovered and named by Columbus, 1493, and became British in the 19th cent. The last remaining Caribs (c. 500) have a reserve here. D. became an assoc. state of the U.K. 1967.

Area 305 sq. m. Pop. (1967) 69,780.

DOMINICAN REPUBLIC. Republic occupying the eastern two-thirds of the island of Hispaniola, W. Indies; formerly a Spanish colony, it is the oldest settlement of European founding in America. The land is mountainous, rising in the central range to 10,310 ft., and the most densely settled part is the long E.-W. valley between the central and N. ranges. The lower lands produce sugar, bananas, rice, tobacco, coffee, and cocoa; the soils of the S. parts are poorer and arid. The pop. is partly of Spanish descent, but mainly comprises people of mixed European, Indian, and African origin. The language is Spanish, and the state religion R.C. The cap. is Santo Domingo on the S. coast. Area 19,000 sq. m.; pop. (1960) 3,013,525.

Columbus discovered the island in 1492, and it was named Hispaniola ('little Spain'). After centuries of Spanish rule it became independent in 1821, and in 1844 the D.R. seceded from Haiti. It was occupied 1916–24 by the U.S.A. who landed troops when fighting broke out between rival factions in 1965; peace was restored 1966 and free elections held.

DOMINICANS. The order of friars founded by St. Dominic; they are also known as Friars Preachers, Black Friars, or Jacobins. The first house was estab. at Toulouse in 1215; in 1216 the order received papal recognition, and their rule was drawn up in 1220–1. They soon spread all over Europe, the first house in England being estab. at Oxford in 1221. The English Ds. were suppressed in 1559, but were restored to a corporate existence in 1622. Today the order is worldwide.

DOMINIONS. See BRITISH COMMONWEALTH.

DOMITIAN (dōmī'shian) (Titus Flavius Domitianus; A.D. 51–96). Roman emperor. B. at Rome, he became an emperor in 81. His reign was troubled by barbarian attacks on the Danube frontier, and in 88 the armies of the Rhine rose in revolt, but were quickly suppressed. From this time D. began a reign of terror, and was eventually assassinated.

DON. Russian river, rising in the Moscow region of the R.S.F.S.R., and entering the N.-E. extremity of

the Sea of Azov after a course of 1,200 m. In its lower reaches the D. is over 1 m. wide, and for about 4 months of the year it is closed by ice. The upper course is linked with the Volga by a canal.

DONAT, Robert (1905–58). British actor. B. in Manchester, he had a diffident charm in such roles as Gideon Sarn in *Precious Bane*, Cameron the medical student in *A Sleeping Clergyman* and the superannuated schoolmaster in *Mr. Chips* (also filmed).

DONATELLO, or Donato di Niccolò di Betto Bardi (1386–1466). Italian sculptor. With Brunelleschi he revived the classical style, and exercised a profound influence on the masters of the Italian Renaissance. After he had completed his studies in Rome he returned to his native Florence, where he executed many famous sculptures. Among his important works are: the 'David' at Florence; the equestrian statue of Gattamelata at Padua; the 'St. John' in Siena cathedral, etc.

DONATI (dohnah'tē), Giovanni Battista (1826–73). Italian astronomer. B. at Pisa, he was prof. of astronomy and director of the observatory of Florence from 1859, and carried out research on comets, stellar spectra, etc. He discovered 'D.'s Comet' on 2 June 1858.

DONBAS. One of the most important industrial regions in the Soviet Union. It incl. Donetsk and Voroshilovgrad regions in E. Ukraine and the W. part of Rostov region in the R.S.F.S.R. It is bounded by the Don and its trib. the Donets. About 40 per cent of the coal mined in the U.S.S.R. comes from the D., which has also extensive deposits of salt, mercury, lead, and other minerals.

DONCASTER. English town (co. bor.) in the W. Riding of Yorks, on the Don, and on the Great North Road, 156 m. N. of London. The principal manufactures are agricultural machinery, brass, wire, etc. Coal is extensively mined in the area. D. was a Roman station and received its first charter in 1194. D. owns a race-course, and it is here that the St. Leger Race is run every Sept., and the Lincoln (from 1965) in March. Pop. (1961) 86,402.

DONEGAL (don'égawl). Co. in Ulster, Rep. of Ireland, washed by the Atlantic on the N., W., and S.W. Most of it is mountainous, being geologically a continuation of the Highlands of Scotland. Agriculture is limited to the W. Sheep and cattle are kept. There is little industrial development, but tweed and linen are made. Deep-sea fishery is carried on. The r. Erne hydro-electric project (1952) involved the building of

DONEGAL. The hills are boldly picturesque and the strongly secured thatch of the whitewashed cottage is a reminder of the wild gales which sweep across from the Atlantic. The pleasing drystone walls are nowadays giving way to wire fencing.

Courtesy of the Irish Tourist Board

DELAWARE. Atlantic maritime state of the U.S.A. It is divided into 2 physical areas, one hilly and wooded, and the other gently undulating. The state is generally agricultural. The chief towns are Wilmington, Dover (cap.), and Newark. D. is named after Lord de la Warr, Governor of Virginia 1610-18. The 1st settlers were Dutch and Swedes about 1638, but in 1664 the area was captured by the British. D. was made a separate colony in 1702, organized as a state in 1776; it was one of the original 13 states of the U.S.A.

Area 2,057 sq. m.; pop. (1960) 446,292.

DE LA WARR, Thomas West, baron (1577-1618). American colonial governor. Appointed Gov. of Virginia in 1609, he arrived in 1610 just in time to prevent the desertion of the Jamestown colonists and by 1611 had reorganized the settlement. Both the river and state of D. are named after him.

DELCASSE (delkahseh'), Théophile (1852-1923). French statesman. He became Foreign Min. in 1898, but had to resign in 1905 because of German hostility; and again 1914-15. To a large extent he was responsible for the *Entente Cordiale* with Britain.

DELEDDA, Grazia (1875-1936). Italian novelist. B. in Sardinia, the setting of her most powerful, naturalistic novels, e.g. *Elias Portolitu* (1903) and *La Madre* (1920). She was awarded a Nobel prize in 1926.

DELFT. Town in the Netherlands in the prov. of S. Holland, 9 m. N.W. of Rotterdam, famous for its china. William the Silent (q.v.) was murdered at D., 1584. Pop. (1961) 74,454.

DELHI (de'li). Union territory of the Rep. of India from 1956. The chief town is Delhi, capital of the Republic. About 380 sq. m. are under arable agriculture, grains, sugar cane, fruits, and vegetables being the chief crops. Area 573 sq. m. Pop (1961) 2,658,612.

DELHI. Capital of the Republic of India. *Old D.* on the Jumna is an ancient city that was reconstructed by the emperor Shah Jehan in the 17th cent. and remained the capital of the Mogul Empire until the establishment of British rule in 1857. It is surrounded by a wall with 7 gates, and its chief features are the Red Fort, formerly the imperial palace (1638-48), and the Great Mosque (1644-58).

New D., on the Jumna 5 m. S.W. of Old D., was designed to house government departments when the capital of British India was moved in 1912 from Calcutta to D. George V laid the foundation stone in 1911. It was constructed to plans by Sir Edwin Lutyens and Sir Herbert Baker, and was inaugurated in 1931. It has an international airport 10 m. to the S.W.

Old D. is a centre of skilled craftsmanship (ivory carving, gold and silver embroidery, jewellery, etc.). *New D.* has a number of industrial concerns employing some 90,000 workers. The Univ. of Delhi was founded in 1922. Pop. of Old and New D. (1961) 2,061,758.

DELIBES (delēb'), Léo (1836-91). French composer of comic operas of a slight but charming character, incl. *Le Roi l'a dit* (1873) and *Lakmé* (1883), and ballets (*Coppélia*, 1870).

DELITZSCH (deh'lich), Franz (1813-90). German Lutheran theologian and Hebrew scholar, the virtual founder of the higher criticism of the Bible. His son Friedrich D. (1850-1922) was an eminent Assyriologist.

DELIUS, Frederick (1863-1934). British composer.

FREDERICK DELIUS.

Drawing by James Gunn.
Courtesy of Mrs. Edward T. Clark.

B. at Bradford, son of a German-born wool merchant, he spent an abortive period in the trade and tried orange-growing in Florida, before going to study music in Leipzig in 1887. Encouraged by Grieg, he settled in Paris to work in 1888, and in 1903 m. the artist Jelka Rosen, the couple making their home at Grez-sur-Loing, where - after being blind and paralysed from 1925 - he d. His works incl. choral works (*Appalachia, Sea, Drift, A Mass of Life, A Song of the High Hills*); the opera *A Village Romeo and Juliet* (1906) and music for the very popular play *Hassan* (1923); orchestral works such as *Brigg Fair* and *In a Summer Garden*; chamber music and songs. A shifting texture of harmonies, his music depends greatly on skilled interpretation, and his reputation owes much to the untiring advocacy of Sir Thomas Beecham (q.v.).

DELL, Ethel M. (1881-1939). British romance writer. B. in Streatham, she was sensationally successful with her emotional stories, in which the heroes were usually ugly: *Way of an Eagle* (1912), *The Keeper of the Door* (1915), and *Storm Drift* (1930).

DELOS. Greek island, smallest in the Cyclades group, in the Aegean. The great temple of Apollo (4th cent. B.C.) is still standing.

DELPHI (delfi). City of ancient Greece, situated in a rocky valley about 6 m. N. of the gulf of Corinth, on the S. slopes of Mt. Parnassus, site of a famous oracle. Here in the temple of Apollo was the *Omphalos* or conical stone supposed to stand at the centre of the earth; the oracle was interpreted by priests from the inspired utterances of the Pythian priestess. A European Cultural Centre was built nearby 1966-7.

DELPHINIUM or *Larkspur*. Genus of plants belonging to the Ranunculaceae. There are some 150 species, incl. rocket larkspur (*D. ajacis*), and great flowered larkspur (*D. grandiflorum*). See illus. p. 334.

DELTA. A triangular tract of land at a river's mouth, formed by deposited silt or sediment. Familiar examples of large Ds. are those of the Mississippi, Ganges and Brahmaputra, Rhône, Po, Danube, and Nile; the shape of the last-named is like the Greek letter Δ, and thus gave rise to the name.

DELVAUX (delvoh'), Paul (1897-). Belgian artist. A Surrealist, he uses bright colour, and against meticulously detailed backgrounds will place odd contrasts of nude and dressed figures.

DEMA'NT, Vigo Auguste (1893-). British churchman. Canon of St. Paul's 1942-9, he then became Regius prof. of moral and pastoral theology at Oxford. His books incl. *God, Man and Society* (1933), and *Religion and the Decline of Capitalism* (1952).

DEMERARA. River in Guyana, 180 m. long, which gives its name to one of the country's counties. Demerara county is the chief growing area for

DELPHI: Partly hewn from the hillside the stadium to the N.W. of the temple is well preserved. It is narrower than modern stadia, and the runners in foot-races turned a post at the far end.
Courtesy of Professor Harold A. Harris.

DORIC ORDER. See ORDER.

DORKING. English market town (U.D.) in the valley of the Mole, Surrey, near Box Hill, on the edge of the N. Downs. Pop. (1961) 22,594.

DORLING, Henry T. (1883–1968). British writer of nautical stories under the name 'Taffrail'. After some 30 years in the navy he retired in 1929, but served again in the S.W.W. Among his numerous books are *Dover-Ostend* (1933) and *The Navy in Action* (1940).

DORMAN, Sir Arthur (1848–1931). British iron-master and colliery owner, co-founder with Albert de Lande Long of Dorman, Long and Co. The largest producers of structural steel in the country, the firm has built many great bridges, incl. Sydney Harbour Bridge.

DORMOUSE. Small group of rodents, akin to rats and mice, which comprise the family Muscardinidae. They can be distinguished by their hairy tails. They are arboreal and nocturnal and in cold latitudes hibernate in winter. The Common D. (*Muscardinus avellanarius*) is reddish fawn in colour.

DORNIER (-yeh), Claude (1884–). German aircraft designer. B. in Bavaria, he founded the D. Metallbau works at Friedrichshafen, Lake Constance, in 1922. During the S.W.W. he supplied the Luftwaffe with heavy bombers such as Do.215 and Do.217 (with several sub-types).

DORPAT. German name of TARTU.

D'ORSAY (dorsā'), Alfred Guillaume Gabriel, count (1801–52). French dandy. After serving in the French army, he accompanied the earl and countess of Blessington on a tour of Italy. For 20 years he resided with Lady Blessington in London at Gore House, where he became known for his taste and accomplishments. In 1849 he returned to Paris, and shortly before his death was appointed director of fine arts.

DORSET, Earl of. See SACKVILLE.

DORSET. Co. of S.W. England on the English Channel, between Hants and Devon. The centre is occupied by the chalky Dorset Heights, rising to over 900 ft. in the E. Elsewhere the co. is low-lying. Sheep and cattle are kept, and marble and building stones quarried. The co. town is Dorchester. Along the S. coast are many holiday resorts, incl. Lyme Regis and Weymouth. Other towns include Poole, Shaftesbury, and Sherborne. The co. contains the village and ruins of Corfe Castle and fine religious buildings, incl. Wimborne Minster. D. is the centre of Thomas Hardy's Wessex. Area 978 sq. m.; pop. (1967) 337,910.

DORT. Another name for DORDRECHT.

DORTMUND (dort'moond). Industrial centre in the Ruhr, Germany, 36 m. N.E. of Düsseldorf; it is the S. terminus of the D.-Ems canal with large docks and has an airport. D. owes its importance to the Westphalian coalfield, of which it is the largest mining town. D. was bombed repeatedly during the S.W.W. Pop. (1966) 654,541.

DORY or John Dory. A sea-fish (*Zeus faber*), the type of the family Zeidae and the order Zeomorphae; found in the Mediterranean and Atlantic. There are 9–10 spines on the dorsal fin, and bony plates on the abdomen and back. In colour D. is olive brown or dull grey, with a conspicuous blotch on each side of the body. It is an excellent food fish, and grows to about 20 in.

DORMOUSE

DOS PASSOS (dus-pas'sus), John (1896–). American author. B. in Chicago, he made a reputation with the war novels *One Man's Initiation* (1919), and *Three Soldiers* (1921). His acknowledged masterpiece is the U.S.A. trilogy (1930–6), which attains a panoramic view of American existence by placing fictitious characters against the real setting of newspaper headlines, and contemporary events.

DOSTOIEVSKY (dostoyef'skē), Fyodor Mikhailovich (1821–81). Russian novelist. B. in Moscow, the son of a physician, he was for a short time an army officer. His first novel, *Poor Folk*, appeared in 1846. In 1849 D. was arrested as a Socialist revolutionary, and after being reprieved from death at the last moment was sent to the penal settlement at Omsk for 4 years, where the terrible conditions increased his epileptic tendency. Finally pardoned in 1859, he pub. the humorous *Village of Stepanchikovo*; *The House of the Dead* (1861), recalling his prison experiences; and *The Insulted and the Injured* (1862). Meanwhile he had launched 2 unsuccessful liberal periodicals in the 2nd of which his *Letters from the Underworld* appeared. Compelled to work by pressure of debt he quickly produced *Crime and Punishment* (1866), an analysis of a murderer's reactions, and *The Gambler* (1867), and then fled abroad from his creditors. He wrote *The Idiot* (1868–9), in which the hero is an epileptic like himself; *The Eternal Husband* (1870); and *The Possessed* (1871–2).

Returning to Russia in 1871 he again entered journalism and issued the personal miscellany *Journal of an Author* in which he discussed contemporary problems. In 1875 he pub. *A Raw Youth*, but the great work of his last years is *The Brothers Karamazov* (1880).

Remarkable for their profound psychological insight D.'s novels have greatly influenced Russian writers, and since the beginning of the 20th cent. have been increasingly admired and imitated abroad.

DOTTEREL. Bird (*Eudromias morinellus*) of the plover family (Charadriidae). About the shape and size of the golden plover, it is mostly plain brown in colour, with white eyebrows and breast-band. In Britain it is a summer migrant, frequenting moors.

DOUAI (doo-ā'). French industrial town on the r.

DORY

Scarpe, Nord dept. It has coal-mines, iron foundries, breweries, etc. In the English R.C. college, founded there in 1568, removed to England 1903, the D. Bible was prepared. Pop. (1962) 50,104.

DOUBS (doo). French river rising in the Jura Mountains and flowing 260 m. to join the Saône at Verdun-sur-le-Doubs. It gives its name to a dept.

DOUGHBOY (dō'-). Nickname for U.S.A. soldiers in the two world wars. One derivation is from the large buttons on the uniforms of the soldiers of the American Civil War, which were so called. In the 17th cent. a D. was a dumpling.

DOUGHTY (dow'ti), Charles Montagu (1843–1926). British poet and prose-writer. B. in Suffolk, he travelled in Arabia, 1876–8, and recorded his experiences in antique prose in *Travels in Arabia Deserta* (1888). In 1906 appeared his epic *Dawn in Britain*, a chronicle of legendary British history.

DOUGLAS (dug'las), Lord Alfred (Bruce) (1870–1945). British poet. The 3rd son of the 8th marquess of Queensberry, he became closely associated in London with Oscar Wilde. This friendship led to Wilde's action for libel against D.'s father, and ultimately resulted in Wilde's own imprisonment. He discussed his relations with Wilde in his autobiography

a succession of lagoons. The E. coast is broken by long inlets, on which are most of D.'s towns. The islands, largest of which are Fünen, Zealand, Lolland, Falster, are separated by narrow channels, e.g. Little Belt, Great Belt, and Bornholm some 100 m. to the E. The Sound separates Zealand from Sweden.

The country is poorly endowed with industrial raw materials, but has a very fertile soil and a mild climate. A highly advanced co-operative system of agriculture has been developed, and the land is intensively cultivated in this country of small holdings. Great quantities of bacon, eggs, butter, etc., as well as cereals and meat, are exported. The fishing industry is of importance. Food processing, manufacture of clothing, textiles, chemicals, and tobacco, and engineering, are among industries in the towns.

Copenhagen, the cap., on the island of Zealand facing Sweden, is connected with the mainland by rail and ferry. On Fünen is Odense. Esbjerg is an artificially constructed harbour on the W. coast. Aalborg is a port on the Limfjord, and Aarhus on the E. coast. There are ferry services with Norway and Sweden across the Skagerrak and Kattegat. D. is served by the Scandinavian Airlines System.

Government. D. is a constitutional monarchy. The House of Oldenburg ruled from the election of Christian I in 1448 as king of D. and Norway up to 1863 when the crown passed to the House of Schleswig-Holstein-Sonderburg-Glücksburg in the person of Christian IX. Frederick IX (1899–) succeeded in 1947.

Three-quarters of the members of the single house, the Folketing, are elected by proportional representation on a basis of universal suffrage at 21 (until 1961, at 23); the other quarter of the seats is allotted to parties that receive insufficient votes to gain any elective seats. The Faeroes and Greenland (q.v.) each send two representatives to the Folketing. The Social Democrats, long the strongest party, though owing to P.R. they have not had a clear majority, gave way to a non-socialist coalition in 1968. Social security legislation is advanced and a good educ. system includes univs. at Copenhagen, Aarhus, and Odense and people's high schools for adult educ.

Area 16,576 sq. m. Pop. (1967) 4,813,892.

History. The original home of the Danes was S. Sweden, whence they migrated in 5th and 6th cents. Ruled by local chieftains, they terrified Europe by their piratical raids in the 8th–10th cents. until Harald Bluetooth (c. 940–85) unified D. and estab. Christianity. Canute (1014–35) founded an empire embracing D., England, and Norway, which fell to pieces at his death. After a cent. of confusion D. again dominated the Baltic under Valdemar I, Canute VI, and Valdemar II (1157–1241). Domestic conflict then produced anarchy, until Valdemar IV (1340–75) restored order. D., Norway, and Sweden were united under one sovereign in 1397. Sweden broke away in 1449 and after a long struggle had its independence recognized in 1523. Christian I (1448–81) secured the duchies of Schleswig and Holstein, fiefs of the Holy Roman Empire, in 1460; they were held by his descendants until 1863. Christian II (1513–23) was deposed in favour of his uncle Frederick whose son Christian III (1534–59) in 1536 made Lutheranism the established religion. Attempts to regain Sweden led to disastrous wars with that country, 1563–70, 1643–5, 1657–60; equally disastrous was Christian V's intervention, 1625–9, on the Protestant side in the Thirty Years War.

Frederick III (1648–70) made himself absolute in 1665, and ruled through a burgher bureaucracy. Serfdom was abolished in 1788. D.'s adherence in 1780 to the Armed Neutrality against Britain resulted in the naval defeat of Copenhagen (1801), and in 1807 the British bombarded Copenhagen and seized the Danish fleet to save it from Napoleon. This

DENMARK. Modern methods and a rich soil make Denmark one of the world's biggest exporters of dairy and agricultural products. The gently undulating land of this small farm, with its windmill and trees, is typical of the Danish countryside.

Courtesy of the National Travel Association of Denmark.

incident drove D. into the arms of France, and the Allies at the Congress of Vienna took Norway from D. and gave it to Sweden, 1815. A liberal movement then arose, which in 1848–9 compelled Frederick VII (1848–63) to grant a democratic constitution. In 1848–50 the Germans in Schleswig-Holstein revolted with Prussian support, and in 1864 Prussia seized the provinces after a short war. N. Schleswig was recovered after a plebiscite in 1920. D. was occupied by Germany 1940–5, but a strong resistance movement was maintained.

Language. Danish, like the other languages of Scandinavia, belongs to the Germanic language group; it evolved from old Norse, becoming a separate language in the 11th and 12th cents. It was recorded on parchment in runic script towards the end of the 13th cent. and in the 14th began to be written in Latin script. By the beginning of the 16th cent. the characteristic accent with its glottal stop had become established. The literary language developed from the Jutland dialect during the 18th cent.

Literature and the Arts. Danish literature proper began to develop only in the 15th cent., a rhymed history, 1495, being the 1st book printed in the country; but much Danish folk-lore as well as history is preserved in the Latin chronicles of Saxo Grammaticus (12th cent.). In 1550 came a translation by Christian Pedersen of the Bible into the common tongue, literary interest in which was thus much stimulated. The 1st poet of note was A. K. Arrebo (1587–1637); T. Kingo (1634–1703) wrote hymns. Ludvig Holberg (1684–1754), writer of comedies and satires, held a dominating place in the early 18th cent.; later came J. Ewald (1743–81), a fine poet, and Johan Wessel (1742–85) a playwright. The 19th cent. produced several writers who achieved world fame: the story-teller H. C. Andersen (1805–75), the poet and philosopher S. Kierkegaard (1813–55), and the critic Georg Brandes (1842–1927). The playwrights J. Heiberg (1791–1860) and Kaj Munk (1898–1944); the poets H. Drachmann (1846–1908) and J. Jørgensen (1866–1956); the novelists K. Gjellerup (1857–1919), H. Oppidan (1857–1943), and J. Jensen (1873–1950) are other noted names in Danish literature.

D. Buxtehude (1637–1707) is a famous musician, Bartel Thorvaldsen (1770–1844) a famous sculptor. Painters of note were Jens Juel (1745–1802) and C. W. Eckersberg (1783–1853) who studied under David in Paris. The best-known piece of Danish sculpture is probably the Little Mermaid at Copenhagen, by E. Eriksen (1877–1959).

DENSITY. The D. of a substance is its mass per unit volume and in the metric system is usually measured in grammes per cubic centimetre. The specific gravity of a substance is the ratio of the D.

DOWN. With more than a dozen peaks rising to 2,000 ft. the Mountains of Mourne have inspired poets and songwriters and provide excellent climbing.

Courtesy of Northern Ireland Tourist Board.

and Old Treasury buildings were reconstructed in 1963 at a cost of £3 m.

DOWNPATRICK. Co. town of Down, N. Ireland, on the Quoile, 20 m. S.S.E. of Belfast. Pop. (1961) 4,196.

DOWNS, North and South. Two lines of chalk hills in S.E. England. They form two scarps which face each other across the Weald of Kent and Sussex, and are much used for sheep pasture. The N. Downs run from Salisbury Plain across Hampshire, Surrey, and Kent to the cliffs of S. Foreland. The S. Downs run across Sussex to Beachy Head.

DOWNS, The. Roadstead off E. Kent, England, between Deal and the Goodwin Sands; it is 8 m. long, 6 m. wide, greatest depth 72 ft. Several 17th cent. naval battles took place here, incl. a defeat of Spain by the Dutch in 1639.

DOWSON, Ernest (1867–1900). British poet. Perhaps the best of the 'decadent' poets of the 1890s, he suffered from tuberculosis, and in later life was very poor. His lyric 'Cynara' has a famous refrain: 'I have been faithful to thee, Cynara! in my fashion'.

DOXIADIS (doksēah'dis), Constantinos (1913–). Greek 'master-builder'. Trained as an architect-engineer, he was during the S.W.W. head of the Greek 'underground' Hephæstus, and 1948–51 was co-ordinator of the Greek Recovery Programme. He founded the Graduate School of Ekistics at Athens Technological Institute, where he is prof., and is also pres. of the Ekistic Centre of Athens, and consultant to many govts. He pub. *Architecture in Transition* (1963), and *Ekistics* (1968). See **EKISTICS**, ISLAMABAD.

DOYLE, Sir Arthur Conan (1859–1930). British writer. B. at Edinburgh, he qualified as a doctor, and practised at Southsea, 1882–90. Later he travelled in the Arctic and on the W. coast of Africa, and during the Boer War was senior physician of a field hospital in S. Africa. He wrote *The Great Boer War* (1900), and was knighted in 1902.

The first of D.'s books, *A Study in Scarlet*, appeared in 1887 and introduced to the public the famous private detective, Sherlock Holmes, and his ingenious companion, Dr. Watson. Other books featuring the same characters followed, incl. *The Sign of Four* (1889), *The Hound of the Baskervilles* (1902), and *The Valley of Fear* (1915), as well as several vols. of short stories. D. also wrote historical novels (*Micah Clarke*, 1889, and *The White Company*, 1891) and scientific romances (*The Lost World*, 1912). In his later years he became a spiritualist.

DOYLE, Richard (1824–83). British caricaturist and illustrator. Son of John D. (1797–1868), a caricaturist known as H.B., he was b. in London and started work in his father's studio. He illustrated many books,

contributed to *Punch* (the original cover being his design), and painted fanciful pictures of witches and elf-like creatures.

D'OYLY CARTE, Richard (1844–1901). British theatrical manager, famous as the producer of the Gilbert and Sullivan operas at the Savoy theatre in London, which he built.

DRACHMANN (drakh'mahn), Holger Henrik Herboldt (1846–1908). Danish author. B. at Copenhagen, he pub. his first poems in 1872, and later became known as a novelist and playwright.

DRA'CO or Flying Dragon. Genus of small lizards, inhabiting the E. Indies, Malaya, etc., of which *D. volans* is the type. They are arboreal in their habits. The ribs are prolonged and support a parachute of skin, by means of which the animal is able to glide from bough to bough.

DRACO (7th cent. B.C.). Athenian statesman, the first to codify the laws of the Athenian city-state. These were notorious for their severity; hence Draconian, meaning particularly harsh.

DRAFT. See **CONSCRIPTION**.

DRAGON. In zoology, name given to two kinds of lizards, such as the flying D. (see **DRACO**), and the Komodo D. (*Varanus komodensis*). The latter is a species of monitor, and is the largest living lizard, reaching a length of 10 ft. It is an inhabitant of Komodo, Indonesia.

DRA'GONET. A family of sea-fishes (Callionymidae) allied to the blennies and gobies, and belonging to the order Percomorphi. Like their allies they are small fishes haunting rock-pools and coastal waters, and are distinguished by their large upturned eyes and mobile mouth.

DRAGON-FLIES. Insects found throughout the world which form the order Odonata. Mostly large and brilliantly coloured, Ds. have narrow, elongated bodies, prominent, protruding eyes and minute, bristlelike antennae. The mouthparts are modified for seizing and chewing, and have strong teeth. Their 2 pairs of approximately equal, membranous, glassy wings have a net-like venation.

The nearly 5,000 species of Ds. are classified into 2 main groups or sub-orders: the Anisoptera incl. the larger and stouter members, the Zygoptera the smaller and weaker kinds. They are often known as damselflies.

DRAGOON (dragoon). Name derived from the 'dragon' or short musket used by the French in the 16th cent., and applied to a mounted soldier who carried this or some other infantry weapon. The name has been retained by certain regiments, though it no longer has its original meaning.

DRAKE, Sir Francis (c. 1545–96). English sea-captain. B. near Tavistock, he was apprenticed to the master of a coasting vessel, who left him the ship at his death. He accompanied Sir John Hawkins (q.v.) in 1567, and then after 2 voyages of reconnaissance he set out in 1572 to plunder the Spanish Main. He returned to England in 1573 with considerable booty. After serving in Ireland as a volunteer, he suggested

to the Queen an expedition to the Pacific, and in Dec. 1577 he sailed in the *Pelican* with 4 other ships and 166 men. In Aug. 1578 the fleet passed through the Straits of Magellan in 16 days and was then blown S. to Cape Horn. The remaining ships became separated and returned to England, leaving the *Pelican*, now renamed the *Golden Hind*, alone in the Pacific. D. sailed N. along the coast of Chile and Peru, plundering

DRAGON as emblem. Top, Welsh; below, Chinese.

Saints church became the cathedral in 1927, when the diocese of D. was created. Pop. (1961) 132,325.

DERBY. The most important horse-race in England, run for the D. stakes (estab. by the 12th earl of D. in 1780) on the 2nd day of the Epsom summer meeting. The distance is $1\frac{1}{2}$ m. (the record time being 2 min. 33.8 sec. by Mahmoud in 1936): the winning owner receives not less than £5,000, but the value of victory lies in prestige and use of the horse for breeding.

RECENT DERBY WINNERS

1967	<i>Royal Palace</i>	H. J. Joel
1968	<i>Sir Ivor</i>	Raymond Guest

DERBYSHIRE. Co. in the English midlands, lying to the S. of Yorks. The N.W. includes the S. end of the Pennines, with the Peak district (Kinder Scout, 2,088 ft.), a tract of desolate millstone-grit country. To the S. and E. the land is lower and flatter and yields heavy crops of cereals, etc. Dairy-farming is important. Sheep are grazed on the limestone hills. The principal rivers are the Derwent, Dove, Rother, and Trent. Coal occurs in the E. and S.W., iron is also mined, and there are large reserves of fluorspar. The chief towns are Derby (co. town), Buxton, Chesterfield, Glossop, and Ilkeston. Area 1,006 sq. m.; pop. (1967) 882,230.

DERMATITIS. Inflammation of the skin. It may occur in nearly any skin disease, but the best-known varieties, because of their legal implications, are those caused in persons engaged in occupations bringing them into contact with irritating substances such as dyes, paints, solvents or even flour, or in persons wearing clothing, such as woollen garments or fur coats, to which their skin is sensitive.

DERRY. See LONDONDERRY.

DERVISH. In Persia and Turkey, a religious mendicant, and throughout the rest of Islam a member of a Moslem religious brotherhood, not necessarily mendicant in character. The Arabic equivalent is *fakir*. There are various orders of Ds., each with its 'rule', and a special ritual. The 'howling Ds.' gash themselves with knives and claim miraculous healing powers.

DERWENTWATER. English lake in Cumberland in the Lake District, occupying part of the valley of the Derwent, which rises on Scafell Pike.

DESCARTES (dākahr't), René (1596–1650). French philosopher. B. near Tours, he served in the army of Prince Maurice of Nassau, and in 1619, while travelling on the Continent, he experienced an illumination which determined him to apply the certain methods of mathematics to metaphysics and science. He settled in Holland in 1628, where he was likely to be free from interference by the ecclesiastical authorities. In 1649 he visited the court of Queen Christina of Sweden, and d. at Stockholm.

D.'s philosophic and scientific works were elaborated by application of the method of doubt, which eliminated everything except certain clear and distinct ideas, e.g. his own existence, which could not be denied because the very act of denial asserted his own existence (*Cogito ergo sum*, 'I think, therefore I am');

everything has a cause; nothing can result from nothing; and matter is extended substance. He aimed at showing that the entire material universe can be completely explained in terms of mathematical physics, on the basis of the fewest possible ultimates – his 'clear ideas' of extended substance and its ultimate properties, divisibility, and mobility. But although all matter is in motion, matter does not move of its own accord – the initial impulse comes from God; and he also postulated two quite distinct substances – spatial substance or matter, and thinking substance or mind. This dualism preserved him from serious controversy with the Church.

D. is regarded as the discoverer of analytical geometry and the founder of the science of optics. His works include *Discourse on Method* (1637), *Meditations on the First Philosophy* (1641), and *Principles of Philosophy* (1644), and numerous books on physiology, optics, geometry, etc.

DESCHAMPS (dāshōn'), Eustache (c. 1346–c. 1406). French poet. B. in Champagne, he was the author of more than 1,000 ballades, etc., and the *Miroir de Mariage*, an attack on women.

DESERT RATS. Popular name for the British 8th Army, originating from the shoulder-bash worn by the 7th Armoured Division showing a jerboa, or desert rat, a rodent noted for its prodigious leaps.

DE SICA (sē'ka), Vittorio (1901–). Italian director and actor. B. in Sora, Caserta, he achieved international fame in 1946 with *Bicycle Thieves*, a film of subtle realism. As an actor, he is skilled in comedy touched with pathos.

DESIGN CENTRE, THE. Estab. in the Haymarket, London, in 1956 by the Council of Industrial Design (an official body set up in 1944 to improve standards in British products), the centre displays goods such as building fittings, furniture, cutlery, etc., and includes in a Design Index selected examples of

DERBYSHIRE. On the Derwent, some 2½ miles from Bakewell, is Chatsworth House, begun in 1688 by William, 1st duke of Devonshire. It replaced an earlier mansion in which Mary Queen of Scots was five times a prisoner. Still the family seat, it is famed for its library, art gallery and gardens.

Courtesy of the Trustees of the Chatsworth Settlement.

good design. Since 1957 D. Awards have been given annually for 20 outstanding specimens. Scottish D.C. in Glasgow is run on similar lines. See illus. p. 338.

DES MOINES (de mo'in). Cap. and largest town of Iowa, U.S.A., on the D.M. river, a tributary of the Mississippi. It is an important road, railway, and air centre with many manufactures. Pop. (1960) 208,982.

DESMOULINS (dāmpoolān'), Camille (1760–94). French revolutionary, who summoned the mob to arms on 12 July 1789, so precipitating the revolt that culminated in the storming of the Bastille. A prominent

also reflected a preoccupation with the individual in society. The cynical mood prevalent after the F.W.W. gave rise to the comedies of Coward and later Rattigan in England, and to the general trend elsewhere towards satire, experiment and fantasy shown in the work of Cocteau, Mayakovsky, and O'Neill, and in the early plays of Čapek, Brecht, Toller and Elmer Rice. With the advent of the Depression and the rise of Fascism, the latter writers became committed to action, and the 'thirties saw some of Brecht's best work, and the rise of the American playwrights, Odets, A. MacLeish and Irwin Shaw. The dramatists produced by the S.W.W. incl. Camus, Sartre, Anouilh and Salacrou. The nihilistic mood of the 'fifties was reflected by the 'Theatre of the Absurd' in work by Ionesco, Simpson and Beckett; this was accompanied by the more realistic drama of Osborne, Wesker, Pinter and John Arden in England, Brendan Behan in Ireland, Genet, Dürrenmatt and Ugo Betti on the Continent, and Miller, Jack Gelber and Tennessee Williams in America.

The re-association, begun by Claudel, of the poet and the playhouse in the 20th cent. led to the rise of the Irish Abbey Theatre, with plays by J. M. Synge and W. B. Yeats, and to the poetic drama of Lorca in Spain, and of T. S. Eliot, Spender, Auden and Isherwood, MacLeish and Fry, in England and America. The logical culmination of this trend was in the pure-sound plays of Dylan Thomas and Harold Pinter.

DRAPER, Ruth (1884–1956). American disease. Dau. of a N.Y. physician she developed technique of solo presentation of character studies, e.g. 'The German Governess' which won her a world-wide reputation.

DRAUGHTS, or Checkers. A game played by 2 players on a square checkered board of 64 squares. Each player has a set of 12 men which at the start of the game occupy alternate squares of the first 3 rows on 2 opposite sides of the board. A man may be moved forwards diagonally left or right to a contiguous and unoccupied square. When a man reaches the opponent's back line he becomes a king, and as a distinguishing sign another man of the same colour is placed on top of him. A king may move backwards as well as forwards. When there is a hostile piece on a contiguous square, and there is an empty square on the further side, the man or king may be moved to the empty square and the hostile piece removed from the board. If after making such a capturing move there is another hostile piece contiguous and with an empty square beyond it, such piece, being *en prise*, must be captured also. The object of the game is to leave the opponent without a move, either by capturing all his pieces or by blocking them so that they cannot move.

DRAVIDIAN. Name applied to a group of non-Indo-Aryan peoples, inhabiting the Deccan and N. Ceylon. They generally are of darker skin and shorter stature than the Aryan types of the N., and developed their own style of temple architecture. The D. languages include Tamil, Telugu, Malayalam, and Canarese.

DRAYTON, Michael (1563–1631). English poet. B. in Warwickshire, he came to London in 1590, where he pub. a vol. of poems, *The Harmony of the Church* (1591), which was destroyed by order of the archbishop of Canterbury. After a collection of pastorals in 1593 came *Idea's Mirror* (1594); a series of English historical poems; *Poems Lyrical and Pastoral* (1606); and *Nymphidia* (1627), a fairy poem. His greatest poetical work was the topographical survey of England, *Polyolbion* (1613–22), in 30 books. D. was buried in Westminster Abbey.

DREAM. Fantasy experienced during sleep. Until the 18th cent. Ds. were closely studied, especially as indications of future events, a whole code arising

for their interpretation, but then came to be regarded as an unimportant reaction to physical stimuli. In 1900 Freud revived the importance of Ds., concluding that they were an expression of unconscious wish-fulfilment, nightmares being failed Ds. induced by intense fear of 'repressed' impulses, since the function of Ds. is seen as simply an attempt to preserve the peace of mind essential for sleep. A thought of the previous day would become disturbing, by having forged a number of unconscious associations, and the D. mechanism would counter this by associating it with a basic emotional need (imagined as being gratified) and keeping it from consciousness by various disguises until the final product appeared as a dream. Most frequent on first falling asleep or just before waking, Ds. are not rapidly fleeting (as was once claimed), but occupy the same period of time as they appear to do to the dreamer. This is ascertainable by measurement of mental and physical activity during sleep, the sleeper reacting in the same way to D. stimuli as to real stimuli when awake.

DREISER, Theodore (1871–1945). American novelist, noted for his large-scale realism. B. in Indiana, he pub. in 1910 *Sister Carrie*, which was suppressed as immoral, and only became known with *Jennie Gerhardt* (1911). Later were the companion studies of big business *The Financier* (1912) and *The Titan* (1914), and his masterly study of an unscrupulous climber who ends as a murderer. *An American Tragedy* (1925), based on a real-life crime. In his later years he became a Communist. His brother, Paul Dresser (1857–1911), wrote popular songs such as 'On the Banks of the Wabash'.

DRESDEN. City of (E.) Germany, cap. of D. district, formerly cap. of Saxony. It is on the Elbe, 100 m. S. of Berlin, and is first mentioned in 1206 as a place fortified by the margraves of Meissen. D. became one of the most beautiful Ger. cities under the elector Augustus II the Strong (1694–1733), who made it a centre of art and culture, and erected the Zwinger and other rococo buildings. Count Brühl built a famous palace and the Brühl terrace. The museums contain well-known works of art. There is a conservatory of music and a technical coll. Manufactures incl. chemicals, machinery, glassware, musical instruments, and luxury goods. The manufacture of D. china, started at D. in 1709, was transferred to Meissen in 1710. Napoleon won a famous battle at D. 1813. D. was devastatingly bombed by the Allies on the night of 13–14 Feb. 1945, 6 sq. m. of the inner town being destroyed, more than 21,000 killed. The Russians took the city on 8 May. Pop. (1966) city, 505,188; dist. 1,889,779.

DRESS. The various garments which cover the human form. In ancient times D. usually remained

DRESS. A Victorian family at home in the parlour of c. 1855. On the right, mother and son are absorbed with one of the forerunners of the cinema and television – a stereoscope in which double-view photograph cards give an illusion of depth. Courtesy of Bath Assembly Rooms, Museum of Costume.

EAMON DE VALERA
Courtesy of Irish
Embassy, London.

settled. Throughout the S.W.W. he maintained a strict neutrality. He resigned after his defeat at the 1948 elections, but was again P.M. 1951-4 and 1957-9, when he retired. He was elected Pres. of the Rep. of Ireland in 1959; re-elected 1966.

DE VALOIS (de vahl'wah), Dame Ninette (1898-). Stage-name of the British dancer and choreographer Edris Stannus. B. in co. Wicklow, of Huguenot ancestry, she was a member of Diaghileff's Russian ballet, but from 1931 devoted herself (as director) to the development of the Vic-Wells Ballet, later the Royal Ballet, being created D.B.E. in 1951 and retiring in 1963. She was also founder of the Royal Ballet School, and created such ballets as *Job*, *Checkmate*, and *The Rake's Progress*. Both Frederick Ashton and Margot Fonteyn (qq.v.) were her protégés.

DE VENTER. Town in Overijssel prov., the Netherlands, on the IJssel, 28 m. S. of the IJssel Meer. It is an agricultural and transport centre. Pop. (1967) 61,623.

DEVIL. In Christian theology, the supreme spirit of Evil, or an evil spirit generally. The D. or Satan is mentioned only in the later books of the O.T., written after the Exile, but the later Jewish doctrine is that found in the N.T. Jesus recognized as a reality the kingdom of evil, of which Satan or Beelzebub was the prince. The conception of the D. thus passed into the early Church; and theology till at least the time of St. Anselm represented the Atonement as primarily the deliverance, through Christ's death, of mankind from the bondage of the D. In the Middle Ages the D. in popular superstition assumed the attributes of the horned fertility gods of paganism, and was regarded as the god of the witches. The belief in a personal D. continued at the Reformation; Luther regarded himself as the object of a personal Satanic persecution. With the development of liberal Protestant theology in the 19th cent. came a strong tendency to deny the existence of a positive spirit of evil, and to explain the D. as merely a personification. But the traditional conception was never abandoned by the R.C. Church, and such present-day theologians as C. S. Lewis maintain the assumption of the existence of a power of positive evil.

DEVIL FISH. Name given to several marine animals, on account of their formidable and ugly appearance. These include the octopus, the angler-fish (*Lophius piscatorius*), and the largest rays.

accept the treaty which ensued. Civil war followed, and in 1923 De V. was arrested by the Free State govt., and spent a year in prison. In 1926 he formed a new party, *Fianna Fáil* ('soldiers of destiny'), which in 1932 secured a majority. De V. became P.M. and For. Min., and at once abolished the oath of allegiance and suspended payment of the annuities due under the Land Purchase Acts. In 1938 he negotiated an agreement with Britain, under which all outstanding points were

DEVIL'S COACH-HORSE. A beetle (*Ocypus olens*) of the Staphylinidae. It is a common British species, black, very pugnacious, and feeding mainly on carrion. When alarmed it turns up the tip of its abdomen, and emits an evil-smelling fluid.

DEVIL'S ISLAND. Island of French Guiana, 27 m. N.W. of Cayenne. It was a convict settlement notorious for the terrible conditions of life there. Dreyfus was imprisoned 1895-9 on D.I. Transportation ceased in 1946; the remaining convicts were repatriated in 1950.

DE VINNE, Theodore Low (1828-1914). American printer, founder (1883) of the 'De V. Press', the most famous establishment of its kind in America, and a recognized authority on typography.

DEVIZES (dévī'zez). English agricultural town (bor.) in Wilts, seat of the co. assizes. Pop. (1961) 8,497.

DEVON. Co. in the S.W. of England, lying between Cornwall and Somerset, with a wild and rocky coast

DEVON. Seen from the emplacements of the citadel is Plymouth Hoe, where Sir Francis Drake played his famous game of bowls before his defeat of the Spanish Armada, and beyond is Drake's Island. From the re-erected Smeaton Lighthouse, which stood for 130 years warning ships on the Eddystone Reef, sightseers have a magnificent view of Plymouth and of the surrounding countryside. Photo: R. J. Westlake.

on N. and S. The N.E. is occupied by the mass of Exmoor, and towards the S. is the granite area of Dartmoor, culminating in High Willhays (2,039 ft.) and Yes Tor (2,028 ft.). Elsewhere, the co. is lower, and much of it is covered with rich red soil. There is a high percentage of pastureland, and in favoured areas of the S. coast specialized crops are grown. Devon cider is famous. Sheep are grazed on Exmoor and the drier parts of Dartmoor. The chief rivers are the Taw and Torridge, Axe, Otter, Exe, Teign, Dart, and the Tamar. Kaolin is worked in the S. Plymouth and Dartmouth have shipbuilding yards, and Honiton is known for its lace. The tourist industry is of great importance: leading resorts incl. Sidmouth, Exmouth, Teignmouth, Paignton, and Torquay in the S., and Lynton, Ilfracombe, Barnstaple, and Bideford in the N. Exeter is the co. town. Plymouth-Devonport forms the great naval centre. Area 2,591 sq. m.; pop. (1967) 869,840.

DEVONPORT. Port, a principal naval station with a royal dockyard and military centre at the head of Plymouth Sound, S. Devon. The 1st dockyard was built in 1689 by William III. In 1914 D. was incorporated with Plymouth (q.v.).

DEVONSHIRE, William Cavendish, 7th duke of (1808-91). British nobleman. He was largely responsible for the development of Eastbourne as an early example of town planning. His son Spencer Compton Cavendish, 8th duke of D. (1833-1908), was known from his father's accession to the title in 1858 as the marquess of Hartington. As a Liberal M.P., he held

**DEVIL'S
COACH-HORSE**

outstanding revival of the chronicle play *Abraham Lincoln* (1918) won great success, and was followed by *Mary Stuart* (1921), *Oliver Cromwell* (1921), *Robert E. Lee* and *Robert Burns* (1925).

DROGHEDA (drokh'eda). Seaport (bor.) near the mouth of the Boyne, co. Louth, Rep. of Ireland. The town was stormed by Cromwell in 1649, and in 1690 it surrendered to William III after the battle of the Boyne. Pop. (1966) 17,908.

DROITWICH (droit'ich). English town (bor.) on the r. Salwarpe, Worcs, famous for its saline springs. There is a large B.B.C. station here. Pop. (1961) 7,975.

DRÔME. French river rising in Dauphiné Pre-Alps and flowing W.N.W. for 63 m. to join the Rhône below Livron. It gives its name to D. dept.

DROMEDARY (*Camelus dromedarius*). The Arabian one-humped camel. All Ds. are now domesticated and are suited to life in the sandy deserts of Arabia and N. Africa. The hump contains fatty tissue on which the D. subsists when food is scarce.

DRÔMORE. Town (U.D.) on the r. Lagan, co. Down, N. Ireland. An abbey was founded here c. 600, probably by St. Colman, and became a bishopric. The old cathedral was destroyed in 1641, and the existing one built in the 17th cent. by Bishop Jeremy Taylor (q.v.). The diocese was united with Down in 1842. Pop. (1961) 2,121.

DROPSY. An accumulation of lymph in body cavities or tissues. If in the abdomen, it is called ascites; if local, oedema. General D. is usually a sign of disease of the heart, kidneys, or lungs. Tapping or a drug which will dilate the blood-vessels sometimes gives relief.

DROSERA. See INSECTIVOROUS PLANTS.

DROSOPHILA (drōsof'ila). Genus of flies, belonging to the family Muscidae and the order Diptera. The best-known species is the fruit-fly, *D. melanogaster*. Because of the rapidity with which it can be bred, and its well-marked variations, it is most suitable for the study of the laws of heredity.

DROUET (droo-ā'), Jean Baptiste, Comte d'Erlon (1765–1844). French soldier. B. at Reims, he served in the Revolutionary and Napoleonic wars, and in 1834 became Governor of Algeria, and in 1843 was made a marshal.

DROWNING. See ARTIFICIAL RESPIRATION.

DRUGS. Misuse of. The taking of dangerous substances, some of which have medicinal value, for non-medical purposes: a problem since the earliest times, it is in the 20th cent. increasingly so. Cheapest and most widespread are the *amphetamines*, stimulants usually taken in tablet form, such as 'purple hearts'.

Narcotics are a further step in addiction, beginning with Indian hemp (q.v.), also known as cannabis or marijuana. Next come the 'hard drugs', the powerful narcotics such as heroin, morphine and cocaine. Non-addictive, but otherwise just as grave a problem, are the *hallucinogens*, commercially developed since the S.W.W., of which the best-known are LSD and mescaline (qq.v.). Hospitalisation is the most effective form of treatment, since psychological factors are almost always involved.

Most countries strictly control production and distribution, e.g. in the U.K. it is illegal to sell poisons except from registered pharmacies, and recent legislation incl. the Drugs (Prevention of Misuse) Act 1964—with a Modification Order 1966 to cover hallucinogens—and the Dangerous Drugs Acts 1965/7. In the

U.S.A. c. 60,000 active addicts are on the records of the Bureau of Narcotics, and Scotland Yard has a Dangerous D. Squad dealing with the problem. In 1961 the International Single Convention on Narcotic Drugs replaced all earlier treaties, and in 1965 a new Narcotics Control Board was estab.

DRUIDISM. Ancient religion of the Celtic peoples of pre-Christian Britain and Gaul. The word is

DRUM. 1, Drake's drum; 2, a specimen from Uganda; 3, this drum from Ashanti was sounded at human sacrifices.

generally connected with a root meaning 'oak', this tree being regarded as sacred. *Druids* taught the immortality of the soul and a reincarnation doctrine, and were also expert in astronomy; their chief religious rite consisted in the cutting off of a mistletoe bough from the sacred oak with a golden knife. They are supposed to have offered human sacrifices.

D. was stamped out in Gaul after the Roman conquest. In Britain their stronghold was Anglesey, where they were extirpated by Agricola. They also existed in Scotland and Ireland until the coming of the Christian missionaries. What are often termed Druidic monuments—cromlechs, stone circles, etc.—are of Neolithic origin, though they may later have been used for religious purposes by the Druids.

DRUM. Musical instrument of percussion. It consists of a piece of skin, parchment, plastic or nylon, which is struck with a stick or with the hands and thus set in vibration, and which is stretched over one or both ends of a wooden or metal frame acting as a resonator. Ds. were adopted into military bands from the Turks during the 18th cent.

DRUMMOND, William, called 'of Hawthornden' (1585–1649). Scottish poet. B. at Hawthornden, near Edinburgh, he became laird there in 1610. He was the first notable Scottish poet to adopt southern English as his mode of expression.

DRUMMOND, William Henry (1854–1907). Canadian poet. B. in Ireland, he practised medicine in Quebec prov., and his poems deal with the French-Canadian voyageurs and habitants he met: *The Habitant* (1897) and *The Voyageur* (1905).

DRURY LANE THEATRE (Theatre Royal, Drury Lane). London playhouse. The first theatre bearing this name opened in 1663 on the site of earlier playhouses; the present building dates from 1812.

DRUSES (droo'zēz). A religious sect of Syria and the Lebanon, founded in the 11th cent. A.D. They are monotheists, and their scriptures are drawn from the Christian gospels, the Pentateuch, the Koran, and the Sufi allegories.

DRYAD (drī'ad). In Greek mythology, a wood nymph; each tree was supposed to be personified in its own D. or nymph. They were sometimes called hamadryads.

DRY CLEANING. Method of cleaning textiles based on the use of volatile solvents, discovered by accident in 1849 when a French tailor, John Baptiste Jolly-Bellin, noted the cleansing effect on a portion of

DROMEDARY

being cut, and only some 20 per cent are suitable as gems. There are 4 chief varieties: well-crystallized transparent stones, colourless or only slightly tinted, valued as gems; *bort*, poorly crystallized or inferior Ds.; *balas*, an industrial variety, extremely hard and tough; and *carbonado*, or industrial D., also called black D. or carbon, which is opaque, black or grey, and very tough. See CARAT.

Ds. were known before 3000 B.C.; and until their discovery in Brazil in 1725 India was the principal source of supply. Today sources incl. S. Africa (1867), the Congo, Portuguese W. Africa, Tanganyika, Ghana, Brazil and Yakutia on the Siberian plateau (1954). They may be found as alluvial Ds., on or close to the earth's surface in river beds or dried water-courses, or on the sea bottom (off W. Africa); or else in 'pipes' composed of blue ground or kimberlite, where the original matrix has penetrated the earth's crust. In the latter case the blue ground is extracted, then washed until completely disintegrated, and the residue made to flow over vibrating, sloping tables where a layer of petroleum grease arrests the Ds. This involves wastage and x-ray sorting is being developed. Natural Ds. may be exhausted by 2000 unless new deposits are found: See GEM.

Famous rough Ds. incl. the Cullinan (3,025½ carats, S. Africa 1905); Excelsior (995.2 carats, S. Africa 1893) and President Vargas (726.6 carats, Brazil 1938). Ds. are cut by the use of D. dust. The 2 most frequent forms of cutting gem Ds. were the 'brilliant' (for thicker stones) and the 'rose' for shallower ones, but in 1961 Arpad Nagy, a Hungarian merchant, evolved the 1st new method for 500 years, the 'princess'. To give full refraction of light the back of the D. is cut into angled and spaced grooves, and surface area becomes the criterion of value. See CULLINAN.

DI'ANA. Roman goddess identified with the Gk. Artemis. The dau. of Jove and twin-sister of Apollo, she was the goddess of hunting and of the moon.

DIARBEKIR. Town of Asiatic Turkey, cap. of D. il, on the Tigris. It exports copper, wool, mohair, etc. Pop. (1965) 102,600.

DIARRHOEA (di-arē'-a). Excessive action of the bowels so that the motions are fluid or semi-fluid. It is usually due to irritation by a poisonous substance taken with the food or generated by microbes in the food itself (food poisoning), or by a disease organism, as in dysentery or cholera.

DI'ARY (di'-ari). A daily record of personal events. The earliest D. extant in English is that of Edward VI, but full development of the form came in the 17th cent. with Pepys, Evelyn, and George Fox. The following cent. provides Swift's *Journal to Stella*, Boswell's *Journal of a Tour to the Hebrides* and the Ds. of John Wesley, Fanny Burney, and the country parson James Woodforde. Very detailed diaries were often kept in the 19th and early 20th cents., e.g. those of C. Greville, T. Creevey, Queen Victoria, Gladstone, Francis Kilvert, W. N. P. Barbellion, K. Mansfield, Sir Harold Nicolson, and Lady Cynthia Asquith. Foreign diarists include Emerson, Saint-Simon, Jules and Edmond Goncourt, Henri Amiel, Marie Bashkirtseff, Gide, etc. A more modern development of the D. is the fictitious form, e.g. George and Weedon Grossmith's *D. of a Nobody*, E. M. Delafield's *Ds. of a Provincial Lady*, and A. Loos's *Gentlemen Prefer Blondes*.

DI'ATHERMY. The generation of heat in body tissues by the passage of high-frequency electric currents through the body between two electrodes placed on the body. In diathermic surgery one electrode is very much reduced for cutting purposes and the other correspondingly enlarged and placed at a distance on the body. The high-frequency current produces at the tip of the cutting electrode sufficient heat to cut tissues, or to coagulate and kill tissue cells, with less bleeding than in normal surgical methods.

DI'ATOMS. Class of microscopic algae, found in

all parts of the world. They consist of single cells, known as *frustules*; the cell-wall is made up of 2 similar valves, which are usually impregnated with silica, and which fit together like the lid and body of a pill-box. Diatomaceous earths (diatomite) are made up of the valves of fossil Ds., and are used in the manufacture of dynamite and in the rubber and plastic industries.

DI'AZ (dē'ahs), Bartolomeu (fl. 1481–1500). Portuguese explorer. He extended Port. explorations down the W. coast of Africa, discovered the Cape of Good Hope (1488) and a route round the S. extremity of Africa. He served under Vasco da Gama in 1497, and d. during an expedition led by Cabral, off the Cape of Good Hope.

DI'AZ (dē'ahth), José de la Cruz Porfirio (1830–1915). Mexican President 1877–80 and 1884–1911. He gave Mexico its longest period of stable govt. but was at length driven from power and fled to Europe.

DI'AZ DE LA PEÑA (dē'ahth de lah pān'yah), Narcisse Virgile (1807–76). French landscape and genre painter. B. at Bordeaux of Spanish parentage, he excelled as a colourist.

DIBDIN, Charles (1745–1814). British song-writer. B. at Southampton, his first operetta was produced at Covent Garden in 1762. He was later connected with Drury Lane and other theatres, and wrote the words and music of about 1,400 songs, including 'Bells of Aberdovey' and 'Tom Bowling'.

DIBELIUS (dēbeh'le-oos), Martin (1883–1947). German Protestant theologian, who initiated the form criticism of the N.T. and wrote *From Tradition to Gospel*, *Gospel Criticism and Christology*, etc.

DICEY (di'si), Albert Venn (1835–1922). British jurist, prof. of law at Oxford 1882–1909. His works incl. *Introduction to the Study of the Law of the Constitution* (1885).

DICK, Sir William Reid (1879–1961). British sculptor. B. in Glasgow, he became the most prominent representative of the classical school, was elected R.A. in 1928, and was pres. of the Royal Soc. of British Sculptors 1933–8. His dignified but rather colourless works incl. the George V memorial, Westminster; the Kitchener Memorial Chapel, St. Paul's; the Roosevelt statue, Grosvenor Square, and 'Godiva' at Coventry.

DICKENS, Charles (1812–70). British novelist. B. on 7 Feb. 1812, in Portsea, the son of a clerk, he received little systematic education, although a short period spent working in a blacking factory in S. London, while his father was imprisoned for debt in the Marshalsea during 1824, was followed by 3 years in a private school. In 1827 he became a lawyer's clerk, and then after 4 years as a reporter in 'Doctors' Commons, became parliamentary reporter for the *Morning Chronicle*, to which he contributed the *Sketches by Boz*. In 1836 he m. Katherine Hogarth, three

of Ireland (formerly the Parliament House), Leinster House, in which the Dáil Éireann sits. Area of the co. bor. 46 sq. m.; pop. (1966) 568,772.

DUBLIN. Co. of the Rep. of Ireland, facing the Irish Sea. It is level and low-lying, though in the S. it rises to 2,473 ft. in Kippure, part of the Wicklow mts. The only river of importance is the Liffey, which enters D. bay. Agriculture is chiefly directed towards supplying the needs of Dublin city. Dun Laoghaire is the only other large town. Area 356 sq. m.; pop. (1966) 795,047, incl. Dublin city.

DUBNA (dōōb'nah). Town in R.S.F.S.R., 25 m. W. of Tula. It is a metal-working centre, and nuclear research is also carried on. The Germans held it for a short time in 1941 during their attempt to capture Moscow. Pop. (est.) 10,000.

DUBOIS (dübwah'), Jean Antoine (1765–1848). French R.C. missionary in India, known as the Abbé D. On being ordained in 1792 he went to S. India and remained there until 1823. He adopted Indian dress and manners, and wrote *Hindu Manners, Customs, and Ceremonies* (1816).

DUBROVNIK. Yugoslav port on the Adriatic Sea. It was a Roman station, and after centuries as an independent rep. was under Austrian rule, 1814–1919. (1967) 19,000. See RAGUSA.

DUCASSE (dūkas'), Curt John (1881–). French-American philosopher. B. at Angoulême, he became a U.S. citizen in 1910 and in 1929 prof. at Brown univ. His *Nature, Mind and Death* (1951) explores the possibility of survival through metempsychosis.

DUCCIO DI BUONINSEGNA (doo'choh dē buonēnsen'yah) (c. 1255–1319). Italian painter, the earliest of the Sienese school. His greatest work is his altar-piece for Siena cathedral (1308–11). The Nat. Gallery acquired 'Virgin and Child with Four Angels', one wing of a diptych, 1968.

DUCE (doo'chēh). Ital. for 'Leader'. The title was bestowed on Mussolini by his followers, and was later adopted as his official title.

DUCK. Bird of the family Anatidae found mainly in the northern hemisphere. The family is a large one, and comprises several sub-families such as the geese (Anserinae), swans (Cygninae), mergansers (Merginae), surface-feeding Ds. (Anatinae), and diving Ds. (Nyrociniae).

The Anatinae are distinguished by the flattened bill, moderately long and covered with a soft skin except for the nail at the tip, and provided with lamellae through which the birds are able to strain their food from the water and mud. The front toes are

webbed, and the small hind toe is free. They are mostly freshwater species, feeding on worms, insects, etc., as well as vegetable matter. The typical species is the wild D. or mallard (*Anas platyrhynchos*).

The diving Ds. (Nyrociniae), have the feet set farther back, and the hind toe lobed. The nail of the beak is usually prominent, and many of them are marine in their habits. The most familiar species is the tufted D. (*Nyroca fuligula*).

DUCKBILL. See PLATYPUS.

DUCTLESS GLANDS. Certain glands, including the pituitary, thyroid, parathyroid, adrenal, and sex, in the human body which have no ducts or canals for carrying away their products. Known as internal secretions, the latter pass directly into the blood stream. Another name for D.Gs. is endocrine glands.

DUDINSKAYA, Natalya Mikhailovna (1912–). Russian dancer. Ed. at the Leningrad School of Choreography, she became prima ballerina of the Kirov Ballet, creating leading roles in Prokofiev's *Cinderella*, Glière's *The Bronze Horseman*, Soloviev-Sedoy's *Taras Bulba* (1956), etc.

DUDI'NTSEV, Vladimir Dmitriyevitch (1918–). Russian writer. B. near Kharkov, he studied law in Moscow. In 1956 he pub. the controversial novel *Not by Bread Alone*, a product of the de-Stalinization era, which permits criticism of injustice and the bureaucratic attitude in the individual, although not of the Communist system in general.

DUDLEY. English industrial town (co. bor.), 8½ m. W.N.W. of Birmingham, in Staffs, with iron and steel, coal, brass, lime, and brick industries. Pop. (1961) 61,748.

DUFFERIN AND AVA (ah'va), Frederick Temple Hamilton-Temple Blackwood, 1st marquess of (1826–1902). British diplomat and administrator. Governor-General of Canada 1872–8, during his viceroyalty of India 1884–8 he annexed Upper Burma (1885), for which he was created marquess in 1888.

DUFFY, Sir Charles Gavan (1816–1903). Irish Nationalist. A journalist in Dublin, he founded the *Nation* as organ of the 'Young Ireland' movement, of which he was the leader. In 1852 he was elected M.P., but in 1856 emigrated to Australia, and in 1871 became premier of Victoria. He was knighted in 1873.

DUFY (düfē'), Raoul (1877–1953). French painter and designer. He was noted for his calligraphic style, varied use of colour, and for his pictures of sport and recreation.

DÜ'GONG. A mammal (*Halicorn dugong*) of the order Sirenia, or sea-cows, found in the Indian seas. It sometimes attains a length of 7 to 8 ft., and has a tapering body with a notched tail and 2 fore-flippers. Leather, ivory, and oil are obtained from it, and its flesh is edible.

DUHAMEL (dü-ahmel'), Georges (1884–1966). French man-of-letters and doctor. He pub. vols. of verse, plays, etc., but is chiefly famous as a novelist. The cycle *Chronique des Pasquier* (1933–45), a bourgeois family saga, is among his best-known works.

DUIKERBOK (dik'er-). Genus of African antelope, with a crested head, short conical horns in the males, and a large muzzle.

DUISBURG (dōō'-is boorg). Industrial city of the Ruhr, Germany, at the confluence of the Rhine and

VLADIMIR DUDINTSEV
Photo: Der Stern, Hamburg.

DUCKS. 1, sheld-duck; 2, mandarin; 3, Pekin; 4, elder; 5, Indian runner.

greatest Cons. landslide in Canadian history. In 1963 he was defeated at the polls after strong Opposition criticism of his defence policy, and lost the party leadership in 1967 following his repudiation of a 'two nations' (*deux nations*) policy for the Canadian Confederation as a backward step. A 'radical' Tory, he has been emphatic in his belief in Commonwealth unity.

DIELECTRIC. A D., which is always an insulating material, is a substance capable of supporting electric stress. The D. constant of a substance may be measured by the ratio of the capacity of a capacitor with the medium as D. to that of a similar capacitor when the D. is replaced by a vacuum. Common examples of good insulators are ceramics, glass and paraffin wax.

DIELS (dēls), Otto (1876–1954). German chemist. He was prof. of chemistry at the Berlin univ. inst. 1906–15, and at Kiel univ. 1916–45. In 1950 he and his former assistant, Kurt Alder, were jointly awarded the Nobel prize for chemistry for their research into carbon synthesis.

DIEM, Ngo dinh. See **NGO DINH DIEM**.

DIEMEN (dē'men), Anthony van (1593–1645). Dutch admiral, b. at Kuilenberg. In 1636 he was appointed Governor-General of Dutch settlements in the E. Indies, and wrested Ceylon and Malacca from the Portuguese. In 1636 and 1642 he supervised expeditions to Australia, on the 2nd of which Abel Tasman discovered land which he named Van Diemen's Land, now Tasmania.

DIEN BIEN PHU (dyen byen fōō'). Town of N. Vietnam, nr. the Laotian border, 200 m. from Hanoi. General de Castries and some 10,000 troops (metropolitan French, Vietnamese, Foreign Legionaries, and Africans from Morocco) were besieged in the Fr. Union fortress 13 March–7 May 1954 by the Communist Vietminh. Its fall led to the partition of Vietnam and indirectly to the end of the Fourth Republic in France.

DIEPPE (dē-ep'). Seaport at the mouth of the Arques, Seine-Maritime dept., N. France. From 1066–87 and 1135–1204 D. was in English hands. It has a good harbour, with sea services to Newhaven and elsewhere; fishing is carried on. There is an airport. Pop. (1962) 30,227.

During the S.W.W. the first Allied combined-operations raid was carried out on D. on 19 Aug. 1942; a force of 7,000, most of them Canadians, was put ashore and remained there for 9 hours. There were some 3,500 casualties.

DIESEL (dēzl) **ENGINE**. A type of internal combustion engine which burns heavy oil. Air, which is mixed with the oil, is compressed and thereby heated to the ignition temperature of the oil. The principle was invented in England by Herbert Akroyd Stuart (1864–1937) in 1890, and developed by Rudolf Diesel (1858–1913) in Germany. D., or compression ignition engines, are used for road, rail and marine transport.

DIET. A meeting or convention of the princes and other dignitaries of the Holy Roman (German) Empire.

DIETETICS. The science and practical application of the principles of diet or nutrition. Therapeutic D. is very important in the treatment of certain illnesses, e.g. diabetes, being used sometimes alone, and often in conjunction with drugs.

DIETRICH (dēt'rikh), Marlene. Stage-name of the German-American actress Magdalene von Losch (1902–). B. in Berlin, she won fame by her appearance with Emil Jannings in *The Blue Angel*, and went to Hollywood, becoming a U.S. citizen in 1937. Her husky, sultry singing voice added to her appeal.

DIEZ (dēts), Friedrich Christian (1794–1876). German scholar, founder of Romance philology. Prof. of modern literature at Bonn, he prepared a historical grammar (1836–44) and an etymological dictionary (1853) of the Romance languages.

DIFFERENTIAL CALCULUS. See **CALCULUS**.

DIFFERENTIAL GEOMETRY. An offspring of co-ordinate geometry and the differential calculus; it deals with the problems of curves and curvature, leads beyond the concepts of Euclidean geometry to those of Riemannian geometry, named after B. Riemann (1826–66), whose work in this subject is of inestimable value; joins hands with hyperspatial geometry; and ultimately touches upon Einstein's theory of relativity.

DIFFRACTION. The interference phenomena observed at the edges of opaque objects, or discontinuities between different media in the path of a wave train. The phenomena give rise to slight spreading of light into light and dark bands at the shadow of a straight edge. The D. grating is a device for separating a wave train such as a beam of incident light into its component frequencies (white light results in a spectrum). The regular spacing of atoms in crystals are used to diffract X-rays, and in this way the structure of many substances has been elucidated, including recently that of proteins. Sound waves can also be diffracted by a suitable array of solid objects.

DIFFUSION. Term used in physical chemistry to describe at least 3 similar processes: the spontaneous mixing of gases or liquids (classed together as *fluids* in scientific usage) when brought into contact without mechanical mixing or stirring; the spontaneous passage of fluids through membranes; and the spontaneous passage of dissolved materials both through the material in which they are dissolved and also through membranes.

One important application of the D. principle is for the separation of isotopes, particularly those of uranium. When uranium hexafluoride is forced through a porous plate the ratio of the 235 and 238 isotopes is changed slightly. With sufficient number of passages, the separation is nearly complete. There are large plants both in U.K. and U.S.A. for obtaining enriched fuel for fast reactors and the fissile uranium-235, originally required for the first atom bombs. Another application is the D. pump, used extensively in vacuum work, in which the gas to be evacuated diffuses into a chamber where it is carried away by the vapour of a suitable medium, usually oil or mercury.

DIFFUSIONISM. The theory that all civilization of a higher nature originated in one place, Egypt. The group of diffusionist anthropologists believe, and have produced considerable evidence to prove, that the culture of India, China, and Japan was spread by Phoenician commerce from Egypt, and on across the Pacific Ocean to Central America. Among the

best-known supporters of D. are Elliot Smith, W. J. Perry, S. C. Gillfillan, and Griffith Taylor.

DIGGERS or **TRUE LEVELLERS**. A 17th cent. socialist sect who became prominent in April 1649, when, headed by Gerrard Winstanley, they set up communal colonies near Cobham, Surrey, and elsewhere. They were broken up by mobs and, being pacifists, made no resistance. Their ideas considerably influenced the early Quakers.

DIGITAL COMPUTER. See **COMPUTER**.

DIGITALIS. Genus of plants of the family Scrophulariaceae, incl. the foxgloves. The leaves are the source of the drug D.

DIGITALIS (Foxglove)

the Solway Firth and England on the S. It rises to 2,695 ft. in the N. (White Coomb). From the mts. dales run S. to the plain bordering the Solway Firth; e.g. Nithsdale, Annandale, and Eskdale. The chief towns are Dumfries, the co. town, Annan, Langholm, and Lockerbie. In the S.E. is Gretna Green. Area 1,072 sq. m.; pop. (1961) 88,423.

DUMOURIEZ (dümooryeh'), Charles François du Périer (1739–1823). French general. In 1792 he was appointed Foreign Minister, supported the declaration of war against Austria, and after the fall of the monarchy was given command of the army defending Paris; he won the battle of Jemappes, but was defeated at Neerwinden in 1793, and after intriguing with the Royalists he had to flee for his life. From 1804 he lived in England.

DUNANT (dünoñ'), Jean Henri (1828–1910). Swiss philanthropist; the originator of the Red Cross. B. at Geneva, he became a physician and witnessed the battle of Solferino (1859). He helped to tend the wounded, and described their distress in *Un Souvenir*

DUMFRIES. In the foreground Devorguilla's Bridge spans the Nith. One of the most ancient in Scotland, it was built of stone c. 1280 by Devorguilla the widowed mother of John de Balliol (king of Scotland 1292–6), she also founded Balliol College, Oxford. Photo: George Outram & Co. Ltd.

de Solferino (1862) wherein he proposed the establishment of an international body for the aid of the wounded – an idea that was realized in the Geneva Convention of 1864.

DUNBAR, William (c. 1460–c. 1520). Scottish poet. Said to have become a Franciscan and to have travelled in France, he returned to Scotland about 1500, and appears to have become prominent in the court of James IV. D. is generally accounted the greatest Scottish poet before Burns.

DUNBAR, Port, royal burgh, and resort in E. Lothian, Scotland, with 2 harbours. Pop. (1961) 4,003.

DUNBARTONSHIRE. Co. of W. Scotland bordering the N. bank of the Clyde estuary. The W. border runs through Loch Long, and the E. through Loch Lomond. The country is mountainous, rising to 3,092 ft. in Ben Vorlich, and provides fine highland scenery. A detached part is lower; coal is mined there at Kirkintilloch. Tourism is important. Along the Clyde are the industrial towns of Clydebank, Dunbarton (co. town), and Helensburgh. Area 246 sq. m.; pop. (1961) 184,546.

DUNCAN, Adam, 1st visct. (1731–1804). British admiral. B. in Angus, he entered the navy in 1746, and served in the Seven Years War and the American War. D. successfully countered the mutiny of 1797 and defeated the Dutch fleet in the battle of Camperdown. He was created a visct. and retired in 1800.

DUNCAN, Isadora (1878–1927). American dancer. B. in San Francisco, she created a sensation by her lightly clad interpretations of Greek dances, reconstructed from vase paintings and other art relics. *My Life* (1928) is her autobiography.

DUNCAN, Sir Patrick (1870–1943). British statesman. B. in Banffshire, Scotland, he was one of Lord Milner's 'young men' in S. Africa, held high posts in the Transvaal, was a member of the first Union Parliament (1910), and Gov.-Gen. of the Union of S. Africa 1937–43.

DUNDALK (dundawk'). Co. town and seaport of Louth, Rep. of Ireland, at the mouth of the Castletown r. in D. Bay. It manufactures linen, cigarettes, etc., and has iron foundries. Pop. (1966) 20,002.

DUNDA'S, Henry, 1st visct. Melville (1742–1811). British Tory statesman. In 1791 he became Home Secretary, and carried through the prosecution of the English and Scottish reformers. After holding other high Cabinet posts, he was impeached in 1806 for corruption, and although acquitted on the main charge held no further office.

DUNDEE (dundē'). City of Scotland, royal burgh, and seaport on the N. side of the Firth of Tay, in Angus co. It is the chief centre of the British jute industry, and has engineering works and shipbuilding yards; linoleum, hemp, and linen factories; preserve, canning, and confectionery works; also fishing is carried on. D. is an important shipping and railway centre. The Firth, here 2 m. wide, is crossed by the Tay Bridge (railway) and the Tay Road Bridge (7,356 ft.) opened 1966. The principal buildings are the Episcopal cathedral, Caird Hall, the Albert Institute (1867), and the 15th cent. Old Steeple. The Univ. of Dundee (formerly Queen's Coll., founded 1881, and part of the Univ. of St. Andrew's from 1953) was estab. 1967. Pop. (1961) 182,959.

DUNDEE, Visct. See CLAVERHOUSE.

DUNDO'NALD, Thomas Cochrane, 10th earl of (1775–1860). British admiral. B. in Lanarkshire, he had a distinguished career in the navy, and in 1807 was elected Radical M.P. for Westminster, but in 1814 he was expelled from the navy and from Parliament for alleged connivance in a fraud. In 1817 he became commander of the Chilean fleet, and later commanded the Brazilian navy, 1823, and that of Greece 1827. He was reinstated in the British navy in 1832.

DUNEDIN. City of South Island, New Zealand. Founded in 1848 by members of the Free Church of Scotland, it is a centre for railway, sea, and air services; makes woollens, boots, and steel; and is the seat of Otago Univ. Pop. (1967) 109,400.

DUNFERMLINE (dunferm'lin). Royal burgh and manufacturing town in Fifeshire, Scotland, 12 m. N.W. of Edinburgh; it incl. the naval base of Rosyth. The chief industry is the manufacture of damask table linen. Pop. (1961) 47,159.

DUNGESS (dunjenes'). Accumulation of shingle and sand which has been built up (and still forms) by deposition and sea currents on the S. coast of Kent, England. It has a lighthouse and a coastguard station and in 1959 was approved as the site of a nuclear power station. A bird sanctuary was established on D. in 1932.

DUNHAM, Katherine (1910–). American Negro dancer. B. in Chicago, she studied ethnology and dance at the univ. there and in 1938 went to the W. Indies to study negro dancing. In 1940 she began presenting her own dances, which portray ritualized emotion, and in 1945 she founded her own school and dance company.

DUNKIRK. Seaport of N. France in the Nord dept., on the Strait of Dover, 152 m. N. of Paris. Its harbour is one of the most important in France, and canals link the town with the industrial centres of Nord and Pas-de-Calais and other regions of France, and with Belgium. The chief industries incl. iron founding, shipbuilding, and fishing; and textiles, machinery, and soap are manufactured. The town grew up round the church of St. Eloi, founded in the 7th cent. During the F.W.W. the front was for most of the time close to D.; during the S.W.W. D. was

pirates and sold as a slave to a Corinthian named Xenaiades, of whose 2 sons he was appointed tutor. He spent the rest of his life in Corinth and won a great reputation for cynical wisdom.

DION (dē-on'), Albert de, Comte (1856–1946). French pioneer of the motor industry. After producing a variety of steam vehicles, from bicycles to omnibuses (1880–95), he made (with M. Bouton) highly efficient light cars. He founded the Automobile Club of France.

DION CASSIUS (di'on kash'ius) (Cocceianus) (c. A.D. 150–235). Roman historian. He wrote in Greek a Roman History, in 80 books (of which 26 survive), covering the period from the foundation of the city to A.D. 229, giving the only surviving account of Claudius's invasion of Britain.

DIONNE QUINTUPLETS. Five girls, b. at Callander, Ontario, in 1934, the daughters of Oliya and Elzire Dionne. They were greatly under weight at birth, and their survival was largely due to the doctor in attendance, Allan Dafoe. One sister d. in 1954.

DIONYSIA. Festivals of Dionysus (Bacchus) celebrated in ancient Greece, esp. in Athens. The most important were the lesser D. in December, chiefly a rural festival, and the greater D., at the end of March, when new plays were performed.

DIONYSIUS. Name of 2 tyrants of the ancient Greek city of Syracuse in Sicily. D. the Elder (c. 432–367 B.C.) seized power in 405. His first 2 wars with Carthage further extended the power of Syracuse, but in a 3rd (383–378) he was defeated. He was succeeded by his son, D. the Younger. Driven out of Syracuse by Dion in 356, he was tyrant again in 353, but in 343 returned to Corinth.

DIONYSIUS EXIGUUS (c. A.D. 500). Greek monk and theologian, remembered as having for the first time dated the Christian calendar from the birth instead of the death of Christ.

DIONYSUS. See **BACCHUS**.

DIOPHANTUS (di-ōfan'tus). Greek mathematician who lived at Alexandria c. A.D. 250 and wrote *Arithmetica*, a treatise on the theory of numbers, which is the first known work on problems in algebra.

DIOPTRE. An optical unit in which the power of a lens is expressed as the reciprocal of its focal length in metres. The usual convention is that convergent lenses are positive and divergent lenses negative.

DIOR (dē-or'), Christian (1905–57). French fashion designer. He worked for Lelong 1942–6, estab. his own Paris salon in 1947, and made an immediate hit with the 'New Look' (very feminine after the stark wartime fashions) and a series of styles named after the letters of the alphabet Y, X, H, and A. A master of cut, he recorded his ideas in *Talking About Fashion* (1954).

DIPHTHERIA (difthē'ria). An infectious disease in which a false membrane forms on a mucous surface, usually in the throat, and death may result either from asphyxiation or from general collapse. The death rate has been much reduced by the discovery of an efficient antitoxin and a means of immunization and testing of susceptibility (Schick's method).

DIPLODOCUS. Genus of extinct reptiles, belonging to the division Sauropoda, whose fossil remains were found in the Upper Jurassic rocks of western U.S.A. They were of enormous size.

DIPLOMATIC SERVICE. See **FOREIGN RELATIONS**.

DIPLOPODA. Class of Arthropods, commonly known as millipedes (q.v.).

DIPNOI (dip'nō-i) (double breathers). An order of fishes, characterized, among other things, by having the swim bladder modified as a lung, so that when the rivers which they inhabit dry up in the hot season they are able to live buried in the mud. The living representatives of the group are hence called lung fishes or mud fishes.

DIPPER or **Water Ouzel**. Name of a bird (*Cinclus*

DIPPER

cinclus), the type of a small family (Cinclidae) of the order Passeriformes. They are allied to the wrens and thrushes, but are distinguished from all other members of the order by their aquatic habits.

DIPSOMANIA. A morbid craving for alcohol, usually appearing at intervals. It is considered to be a symptom of an underlying mental disturbance.

DIPTERA. Order of insects, characterized by

the presence of a single pair of wings, and having the mouth-parts modified for sucking. It comprises the two-winged flies.

DIRAC (dêrak'), Paul Adrien Maurice (1902–). British physicist. Lucasian prof. of mathematics at Cambridge from 1932, he has done important work in the field of quantum mechanics, and was awarded the Nobel prize in physics in 1933.

'DISCOVERY'. The vessel in which Captain Scott, commanding the National Antarctic Expedition in 1900–4, sailed to the Antarctic and back. Moored nr. Waterloo Bridge, London, it is a recruiting H.Q. for the R.N. and Royal Marines.

DISCUS. Circular disc used in ancient times at gymnastic contests, esp. at the Olympic Games, and also in modern Olympic and other athletic games.

DISINFECTANT. An agent which kills or prevents the growth of germs. Since the introduction of carbolic acid (phenol) by Lister (q.v.) in the 1870s, many different types of D. have been developed for special purposes, e.g. treatment of cuts and burns; cleansing of clothes, bedding, food processing equipment, and medical and surgical instruments. See **ANTISEPTICS**.

DISNEY, Walt (Walter Elias) (1901–66). American film-maker. B. in Chicago, he estab. his own studio in Hollywood in 1923, and his first Mickey Mouse cartoon (*Plane Crazy*) appeared in 1928; among other notable creations was the surly Donald Duck. He developed the 'Silly Symphony', a new type of cartoon based on a musical element conceived in close association with the visual image, of which *Fantasia* (1940) was the culmination. His first feature-length cartoon was *Snow White and the Seven Dwarfs* (1938), followed by *Pinocchio* (1940), *Dumbo* (1940) and others. From 1953, when *The Living Desert* was shown, D.

WALT DISNEY. Here colour-stylist and background-artist Walt Perego works on one of the many background settings for the animated cartoon of King Arthur's boyhood, *The Sword in the Stone*, based on the book by T. H. White.

© MCMLXII Walt Disney Productions.

DURBAN. A time exposure gives an air of magic to this picture of the popular winter holiday resort.

Courtesy of the South African Information Service.

DURBAN. Principal port of Natal, S. Africa, and second port of the rep. Founded in 1824 as Port Natal, it was renamed in 1835 after General Sir Benjamin d'Urban (1777-1849), lieutenant-governor of the eastern district of Cape Colony 1834-7. D.'s exports consist of coal, maize, wool, etc., whilst heavy machinery and mining equipment for the Rand is imported. It is also an important holiday resort. Natal univ. (1949) is divided between Durban and Pietermaritzburg. Pop. (1960) 681,492, of whom 196,398 were white.

DÜRER, Albrecht (1471-1528). German engraver and painter. B. at Nuremberg, in 1486 he was apprenticed to Michael Wöhlgemuth, a distinguished artist, and at the age of 13 he drew a portrait of himself from the mirror, the first self-portrait in the history of European art. After some years of travel, D. m. in 1494 Agnes Fey, whose portrait he drew many times. In 1494-5 he visited Venice. After his return to Nuremberg he executed a number of copperplates, and also his famous series of woodcuts of the

'Apocalypse'. His first important painting, *The Adoration of the Magi*, is dated 1504. In 1505 he went to Venice again, where he painted *The Feast of the Rosary* and *The Martyrdom of St. Bartholomew*. In 1512 he first became associated with the Emperor Maximilian I, for whom he did a great deal of work. In 1520 he travelled to the Netherlands, and became court painter to Charles V. He was a friend of Luther, and was greatly influenced by the Reformation. D.'s drawings and engravings are among the finest in the world.

DURGA (door'gah). Hindu goddess; one of the many names for Siva's wife.

DURHAM (dur'am), John George Lambton, 1st earl of (1792-1840). British statesman. He inherited a large estate while still a child, served in the army, became an M.P. in 1813, and in 1816 m. Lord Grey's dau. In 1828 he was created baron D. and in 1830 became Lord Privy Seal and drew up the Reform Bill. Ambassador to Russia in 1832, he became an earl in 1833; and in 1837 went to Canada as Gov.-Gen., to deal with the situation created by the rebellions. His arbitrary methods were disowned by the govt. and he at once resigned. In 1839 he laid before parliament his *Report on the Affairs of British N. America*, which marks a turning-point in the history of the Empire; it advocated that the government of the colony should be entrusted to the colonists themselves, that Upper and Lower Canada should be united as a first step towards a federation of the N. American colonies, that emigration should be encouraged, and that the construction of railways should be undertaken.

DURHAM. Co. of N.E. England, lying between Northumberland and Yorks, and facing the North Sea. Towards the W. the land rises to the crest of the Pennines (2,452 ft.) and to the E. slopes down to a coastal plain. The N. part is drained by the Wear, and the S. by tributaries of the Tees. Teesdale and Wear-
dale contain some fine scenery. In the E. the soil is fertile; on the hills to the W. many sheep are pastured. D. contains one of England's richest coalfields, this being one of the main factors for the siting of some of the principal industrial areas in Great Britain. Industry is scattered over the coalfield, but is concentrated round the estuaries of the Tyne and Tees. Gateshead, S. Shields, Jarrow, and Hebburn are on the S. bank of the Tyne; Sunderland on the r. Wear, and in the S. are W. Hartlepool, Stockton on Tees, and Darlington. The co. town is Durham. Area 1,015 sq. m.; pop. (1967) 1,547,050.

DURHAM. City (bor.) and co. town of co. D., on the Wear. D. was founded in 995, when a church was built on an eminence almost surrounded by the river; the Norman cathedral was built on the same site, and with later additions is one of England's finest ecclesiastical edifices. The remains of Bede, who d. at Jarrow, were transferred to D. Cathedral in 1370. On the same hill stands the castle, built by William I in 1072; the univ. was founded 1832. The river is crossed by 3 bridges. Pop. (1961) 20,484.

DURKHEIM (dürkem'), Emile (1858-1917). French philosopher. Prof. of sociology at Paris from 1892, he maintained that human progress is mechanically determined, and stressed the importance of precision and scientific method in all social investigations.

DURRA (doo'ra) or Dourra. Genus of grasses

LORD DURHAM

T. Phillips.

Photo: N.P.G.

The artist's father.

Courtesy of the National Gallery.

In Canada D., except by special act of the federal parliament, is possible only in B.C., New Brunswick, Nova Scotia, and Prince Edward Is., which had D. laws before entering the Confederation in 1867.

A Muslim wife cannot divorce her husband, but the husband can divorce his wife by repeating the formula 'I divorce you' 3 times. The R.C. Church does not permit divorce, and none is allowed in Italy, Spain, or Portugal. Belgium allows divorce by mutual consent; in the Netherlands the court tries to bring the spouses together before pronouncing a decree. In France a divorce law which was part of the Napoleonic code was abolished 1816, reintroduced 1884. In Russia there is a tax on divorce, increased for second and later decrees.

DIXIE. Word of uncertain origin, denoting the southern states of the U.S.A.

DIYARBAKIR. Another form of DIARBEEKIR.

DJAKARTA. Cap. of Indonesia, a city and seaport on the N.W. coast of Java. Govt. offices, the president's palace, a univ., and handsome residential buildings, all built by the Dutch, lie in the higher part of the town, the poorer quarters and business premises in the older low-lying part. D. was founded by the Dutch in 1610 and called Batavia from 1619 until 1949. A canal links it with its port at Tanjung Priok, 6 m. N.E. D. has shipbuilding yards and an airport. Pop. (1968) 3,500,000.

DJERBA (jer'ba). Island, linked to the mainland by a causeway in Roman times, off S. Tunisia. Rendered fertile by springs, it has been identified with the island of the lotus-eaters. Area 198 sq. m.; pop. (1966) 65,533.

DJIBOUTI (jibōō'ti). Port on the Gulf of Aden, founded 1888, and cap. of the Fr. Terr. of the Afars and the Issas (of Fr. Somaliland 1892–1967). It is linked by rail with Addis Ababa. Pop. (1966) 70,000.

DJILAS (jē'las), Milovan (1911–). Yugoslav revolutionary. B. in Montenegro, he became a Communist while at Belgrade univ., and was closely assoc. with Tito in developing the policy which led to the break with Moscow in 1948. However, he became critical of the régime and was arrested and imprisoned in 1956: his books, *The New Class* (1957) and *Land Without Justice* (1958), and *Montenegro* (1964) a novel of the F.W.W., have been very successful in the West. He was released in 1966.

D.N.A. See NUCLEIC ACID.

DNEPRODZERZHINSK. Town in the Ukraine S.S.R., Russia, in the Dnieper, c. 30 m. N.W. of Dnepropetrovsk. There are chemical works, etc. Pop. (1967) 219,000.

DNEPROPETROVSK. Town in Ukraine S.S.R., Russia. On the right bank of the Dnieper, it is the centre of an important industrial region, linked with the Dnieper Dam, some 37 m. downstream. D., founded in 1786, was originally named Ekaterinoslav (Catherine's glory) after Catherine the Great. Pop. (1968) 837,000.

DNIEPER (dnē'per). Russian river, rising in the Smolensk region and flowing S. past Kiev, Dnepropetrovsk, and Zaporozhe, to enter the Black Sea E. of Odessa. Total length c. 1,400 m.

The Dnieper Dam, on the Dnieper opposite Zaporozhe, built 1928–32, to the design of the U.S. engineer Hugh Cooper, is one of the chief power structures of the U.S.S.R. It was breached by the retreating Russians in 1941, repaired by the Germans who damaged it more effectively in 1943. It was repaired 1944–7 with U.S. assistance.

DOBBS, Mattiwilda (1925–). American coloratura singer. B. in Atlanta, Georgia, she was the first Negro to sing at the Metropolitan Opera—in 1956 as Gilda in *Rigoletto*; other roles incl. the Queen of Night in *The Magic Flute*.

DOBELL, Sir William (1899–). Australian portraitist and genre painter. B. in New S. Wales, he

DJAKARTA. The oriental details of the building, reflected in the water, suggest that time stands still in Indonesia, but not far away are the office blocks, cars and trucks typical of any great modern city. Courtesy of Indonesian Embassy.

worked as an architect until, in 1929, he won a travelling scholarship, and went to study art in England and in Holland. He returned to Australia in 1939, and during the S.W.W. became an official war artist. In 1943 (and twice subsequently) he won the Archibald Prize, and in 1948 the Wynne Prize. His best-known portraits incl. 'Joshua Smith', 'Margaret Olley', and 'Helena Rubinstein'. He was knighted in 1966.

DOBOUJINSKY, Mstislav (1875–1958). Russian-Lithuanian artist. B. in Leningrad, he was celebrated for his genre paintings, book illustrations (*Eugene Onegin*), and theatrical designs (*The Love of Three Oranges*, 1949).

DOBRÉE (dō'brā), Bonamy (1891–). British scholar. Prof. of English literature at Leeds 1936–55, he is best known for his complementary studies of Restoration comedy and tragedy (1924–9).

DOBRUJA (dōbroo'jah). District in the Balkans between the Danube, on the N. and W., and the Black Sea on the E. It is low-lying, partly marshland, partly fertile steppe land. Constanta is the chief town. D. was divided between Rumania and Bulgaria in 1878; in 1913 after the 2nd Balkan War Bulgaria ceded its part to Rumania, but received it back in 1940, a cession confirmed by the peace treaty of 1947.

DOBSON, Frank (1888–1963). British sculptor. Equally skilled in modelling and carving, he became pres. of the London Group in 1923, and attained European standing in 1924 when he exhibited with Epstein and others. He often used unusual stones, or metals such as oxidized silver.

DOCK. Name applied to a number of plants of the genus *Rumex*, belonging to the Polygonaceae. They are perennial herbs, natives of the temperate parts of the world, with lance-shaped leaves and small, greenish-coloured flowers. There are several British species and some 30 N. American.

DOCKS. Accommodation at ports for commercial and naval vessels. There are 2 types, viz. wet Ds. (or 'basins'), and dry Ds. (or 'graving Ds.'): the former type is used mainly for loading and unloading ships, the latter for the repair and examination of ships that need to be reconditioned.

The first enclosed wet D. in the world was completed in Liverpool in 1715. In 1686 the East India Co. considered a project to build the first dry D. in Bombay, but it was not commenced until 1748. Among the largest graving Ds. in the world is the King George V at Southampton. Completed in 1933, this D. is capable of accommodating vessels of 100,000 tons. It is 1,200 ft. long, 135 ft. wide and 45 ft. deep at spring tides.

green contents: the recipe for producing it can then be calculated exactly by a computer.

DYER, Reginald Edward Harry (1864-1927). British soldier. During riots in Amritsar in 1919 he ordered troops to open fire on a dense crowd, 379 being killed and over 1,000 injured. Following an enquiry he was ordered to resign his commission, but there was widespread controversy as to the exact circumstances of the incident.

DYNAMICS. The branch of mechanics that deals with the mathematical and physical study of the behaviour of bodies under the action of forces which produce changes of motion in them.

DYNAMITE. A high explosive consisting of a mixture of nitroglycerine and kieselguhr; it was first devised by Alfred Nobel (q.v.).

DYNAMO (dī'namo), also called generator. A machine for transforming mechanical energy into electrical energy. Present-day Ds. work on the principles described by Faraday in 1830, that an electromotive force (e.m.f.) is developed in a conductor when it is passed through a magnetic field. A simple form of D. consists of a powerful field magnet, between the poles of which a suitable conductor, usually in the form of a coil (armature), is rotated. The mechanical energy of rotation is thus converted into an electric current in the armature.

DYNE (dīn). Symbol dyn. In physics, the absolute unit of force in the centimetre-gramme-second (c.g.s.) system; it is defined as the force which produces an acceleration of one centimetre per second per second in a mass of one gramme.

DYSENTERY (dis'enteri'). Infective ulceration of the large bowel, causing copious passage of blood

and mucus (the 'bloody flux'). It may be due to *Entamoeba histolytica* (amoebic dysentery); a dysentery bacillus, especially *B. dysenteriae Shiga*; or a variety of intestinal worms.

DYSON, Sir George (1883-1964). Brit. composer. B. at Halifax, he was master of music at Winchester College 1924-37, then director, Royal College of Music, till 1952. He wrote choral and orchestral works.

DYSON, William Henry (1883-1938). Australian cartoonist. After working on papers in Melbourne and Sydney he went to London, where his best work was his political cartoons for the *Daily Herald*.

DYSPEPSIA (dispeps'ia). Disturbance of digestion. Of the numerous possible causes the chief are a faulty diet, excessive drinking or smoking, nervous disorder, general lack of tone with sagging of the stomach (visceroptosis), chronic inflammation of the stomach lining (gastritis), and cancer of the stomach.

DYSPROSIUM (disprō'zium). One of the yttrium group of rare earths (symbol Dy, at. no. 66, at. wt. 162.51) discovered in 1886 by Lecoq de Boisbaudran. The free element has not yet been isolated.

DZERZHINSKY, Ivan (1909-). Russian composer. Encouraged by Shostakovich, D. has produced music for the mass audience, and is best known for his opera *Quiet Flows the Don* (1934).

DZUNGARIAN (dzōōngah'rēahn) **GATES**. Ancient route in central Asia on the border of Kazakh S.S.R. (U.S.S.R.) and Sinkiang-Uighur region (China), 290 m. W.N.W. of Urumchi. Long abandoned, since the Mongol hordes passed through on their way to Europe, it was surveyed by the Russians in 1953 as a possible railway route.

E The second vowel and fifth and most often used letter of our alphabet. In Lloyd's Register of Shipping it formerly represented a 2nd-class rating.

EAGLE. Name given to a number of genera of large birds of prey of the family Falconidae. The typical genus *Aquila* includes the golden E. (*A. chrysaetus*). It has a wing-span of 6 ft. and is dark brown; in Britain it is now confined to the highlands of Scotland. The larger spotted E. (*A. clanga*), of Central Europe and Asia, is a very rare visitor to Britain.

The sea E. (*Haliaeetus*) incl. the white-tailed sea E. (*H. albicilla*) which is now only an irregular visitor to Britain; mainly a carrion-feeder, it breeds on sea cliffs. The American white-headed sea E. or bald E. (*H. leucocephalus*) is the symbol of the U.S.A.; rendered infertile through the ingestion of agricultural chemicals, it is rapidly becoming extinct.

The E. was anciently regarded as sacred to Zeus, and the bearer of his thunderbolts. It was the standard of the Roman legions, and hence was adopted as an imperial symbol by the Russian, German, and Austrian empires, and also by Napoleon.

GOLDEN EAGLE

EAKER, Ira Clarence (1896-). American Air Force commander. B. in Texas, he entered the U.S. Army in 1917, served in the Philippines 1919-22, and achieved distinction as an air pilot. He commanded the 8th Air Force 1942-4, and also 1943-4 the U.S. Army Air Forces in U.K.

EAKINS, Thomas (1844-1916). American artist chiefly famous for his realistic portraits but who also painted accurate sporting pictures.

EALING. Residential district, bor. of Greater London, England. The first British sound-film studio was built here in 1931, taken over by the B.B.C. in 1956. Pop. (1967) 302,570.

EAMES, Charles (1909-). American designer. B. in the Middle West, in 1939 he won (with Eero Saarinen, q.v.) a furniture competition sponsored by the Museum of Modern Art, N.Y., with a design for a moulded plywood chair. Production difficulties having been solved by 1946, his new technique greatly enlarged the scope of furniture design. He is also noted for his sales and educational cartoon films, and designs for toys and exhibition stands.

EAR. The organ of hearing. The external ear (pinna) is a funnel to collect sound. From it a short tunnel leads to the middle ear (tympanum), a small cavity in the temporal bone from which the Eustachian tube runs to the back of the nose, connecting it with the outside air. The tough membrane of the eardrum completely separates the middle from the outer ear; it vibrates when struck by sound waves, and nerves convey the impressions to the brain.

EARHART, Amelia (1898-1937). American airwoman. B. in Kansas, she was the first woman to

who encouraged his development. His best-remembered work is 'Variations on a Nursery Song'.

DOLCE (dol'che), Carlo (1616-86). Italian painter. His pictures are distinguished for tender beauty and modest colouring. 'St. Andrew' in the Pitti Palace, Florence, is considered his masterpiece.

DOLCI (dol'chē), Danilo (1924-). Italian social worker, best known for his activities in Sicily from 1952 in providing full employment in this perpetually depressed area. He has pub. *Waste* (1963) etc.

DOLÉ (dohl). Town in Jura dept., E. France, on the Doubs and the Rhine-Rhône canal. It was the birthplace of Pasteur. Iron and steel goods, chemicals, etc., are manufactured, meat processed. Pop. (1962) 25,863.

DOLERITE (dol'erit). A dark, heavy, coarsely crystalline rock, resembling basalt, but generally found as a dyke or sill intruded into other rocks and not as a volcanic lava.

DOLET (dohleh'), Étienne (1509-46). French scholar and printer, author of *Dialogus de imitatione Ciceroniana* (1535) and *Commentariolum linguae Latinae* (1536), etc. He was imprisoned for 'atheism' and burnt at the stake.

DOLGELLAU (dolgeth'li). Market and co. town (U.D.) of Merionethshire, N. Wales, on the Uonion river, at the foot of Cader Idris. Pop. (1961) 2,267.

DOLIN, Anton. Stage-name of the British dancer and choreographer Patrick Healey-Kay (1904-).

In 1915 he made his début as an actor and, after studying ballet with Nijinska, joined the Diaghileff Co. in 1923. Dancing leading roles in many classical and modern works, he later partnered Karsavina, and was *premier danseur* of the Vic-Wells Ballet 1931-5, when the Markova-D. Ballet was formed. With Markova he founded the Festival Ballet in 1950 and

DOLMEN

in 1962 was visiting Director of Ballet at the Rome Opera. His choreographic work incl. the ballet *Rhapsody in Blue*.

DOLLAR. Name applied to many silver coins, and esp. to the standard unit of money in the U.S.A., adopted in 1785. The word is derived from the Germ. *Thaler*. The D. is also the money unit of Canada, Australia (from 1966), Hong Kong and Brit. Honduras, and there are dollars under various names of the Latin American republics.

DOLLFUSS, Engelbert (1892-1934). Austrian statesman. A Christian Socialist, he was appointed Chancellor in 1932, and in 1933 suppressed parliament and ruled by decree. Negotiations for an alliance with the Austrian Nazis broke down. On 12 Feb. 1934 he crushed the Social Democrats by force, and in May Austria was declared a corporate state. The Nazis attempted a coup d'état on 25 July; the Chancellery was seized and D. murdered. D., who was only 4 ft. 11 in. in height, was known as the 'pocket chancellor'.

DOLLOND, John (1706-61). British optician. The son of a Huguenot refugee silk-weaver, he made several important improvements in optical instruments, and in 1761 became an F.R.S., and optician to George III.

DOLMEN. Type of prehistoric monument, taking the form of a chamber built of large stone slabs, which are roofed over by a flat stone which they support. Ds. are grave chambers of the Neolithic period, found in Europe and Africa, and occasionally in Asia as far as Japan. In Wales they are known as cromlechs.

DOLMITSCH, Eugène Arnold (1858-1940). Swiss

musicologist, b. at Le Mans, who became anglicized. After studying music at Brussels and London, he started workshops at Haslemere, Surrey, for the making of harpsichords, clavichords, and other early instruments. With members of his family he instituted in 1925 an annual festival at Haslemere for the performance of early instrumental music, and in 1928 a D. Foundation was estab.

DOLPHIN (dol'fin). Genus of cetaceans, of which the typical member is the true, or common, D.

DOLPHIN

(*Delphinus delphis*), found in all temperate and tropical seas. Dark grey to black on the upper part the D. is whitish beneath, reaches some 7 ft. in length, and has about 100 teeth in its 6 in.-long 'beak'. Of high intelligence (they are popular performers in oceanariums), Ds. have been the subject of much research in recent years. They are thought once to have gone about on land (their flippers have the bone structure of a 5-toed limb and there are vestiges of hind limbs), and to have been covered with hair. They emit sounds (some audible to humans) which they use for echo-ranging or sonar, so that they can detect objects otherwise invisible in clouded water, and reach speeds in the water of 30 to 35 m.p.h. through specialized modifications of the skin, etc., which are not yet fully understood. In the U.S. the Ds. are often known as porpoises. The name D. is also given to the beautiful game fish *Coryphaena hippurus*, which may be up to 5 ft. long.

DOMENICHINO (-nēkē'noh), or Domenico Zampieri (1581-1641). Italian artist. B. at Bologna, he assisted Caracci in some of the frescoes at the Farnese, and in 1630 began work on the frescoes in the Capella del Tesoro in Naples. D.'s principal works incl. 'Adam and Eve' and the 'Martyrdom of St. Agnes'.

DOMESDAY BOOK. Record of the survey of England carried out in 1086 by officials of William the Conqueror. Its purpose was to provide the necessary information for the levying of the land-tax and other dues, and to ascertain the value of the crown lands. It also enabled the king to discover the wealth and power of his barons, and who were their vassals. Northumberland and Durham were omitted, and also London, Winchester, and certain other towns. The D.B. is preserved in 2 vols. at the Public Record Office, London. The name is derived from the belief that its judgment was as final as that of Doomsday.

DOMESTIC SERVICE. The oldest form of employment for women, it was generally ill-paid and little-esteemed, and the mobilization of women in the S.W.W. combined with later widened opportunities in other fields to shrink available labour. The National Institute of Houseworkers (1946) helped to raise

DOMENICHINO. Menzinger Agucchi, a patron for whom the artist executed many works in Rome and Naples.

EASTBOURNE. The sun lounge on Grand Parade commands a fine view of the sea; at the rear still stands the Wish Tower, one of the martello defence chain against Napoleon.

Photo: H. C. Dea Ltd.

at Kampala, Uganda, has 3 constituent colleges—the Univ. Coll., Nairobi (1961), Univ. Coll., Dar es Salaam (1961), and Makerere Univ. Coll. (1949).

EAST ANGLIA. District of E. England, formerly a Saxon kingdom, roughly corresponding to Norfolk and Suffolk. Once almost isolated by fens and woods, E.A. remains a specialized region. The Univ. of E.A. was founded at Norwich in 1962.

EAST BENGAL. See **BENGAL**; **PAKISTAN**.

EASTBOURNE. English seaside resort in Sussex, 64 m. S.S.E. of London. The old town lies about a mile inland; the modern town extends along the coast for some 3 m., with a pier and fine marine parades; its development was largely due to the 7th duke of Devonshire. E. became a county borough in 1911. At E. the South Downs terminate in Beachy Head (q.v.). Pop. (1961) 60,897.

EASTER. Feast of the Christian Church, commemorating the Resurrection of Christ. Its English name is derived from Eostre, a goddess of Spring honoured by the pagan Anglo-Saxons during April. The festival grew out of the early Christians' observance of the Jewish Passover, and from very early times there has been considerable variation in the date of the annual celebration. By an Act of Parliament passed in 1752 Easter Day is the first Sunday after the full moon which happens upon or next after March 21, and if the full moon happens upon a Sunday then Easter Day is the Sunday following. Yet the full moon referred to is not the real moon, but a hypothetical one, and tables are given in the Book of Common Prayer for determining Easter in any given year. Easter may fall on one of 35 days from 22 March to 25 April, and several attempts have been made (e.g. in 1928) to avoid the inconvenience of a movable feast by establishing a fixed Easter. So far, however, ecclesiastical influence has told against it.

E. has been from ancient times the most important feast in the Christian year. Many popular customs, which probably go back to pagan times, are also associated with it throughout Europe, e.g. the giving of E. eggs. Eggs are a symbol of life and fertility, and the breaking of the chicken through the shell was taken as symbolical of Christ's resurrection.

EASTER. Island, about 64 sq. m. in area, in the S. Pacific Ocean, about 2,300 m. W. of Chile, to which country it belongs. It was discovered on Easter Sunday, 1722, and is famous for its huge carved statues and stone houses, the work of neolithic peoples who may have been of South American origin. Pop. (est.) 600, nearly all Polynesians.

EASTERN ORTHODOX CHURCH. The Christian

Church of many nations inhabiting the eastern part of Europe and the N. and W. of Asia, including Greeks, Russians, Rumanians, Serbians, Bulgarians, Georgians, and Albanians; in the last 200 years it has spread into China, Korea, Japan, and Alaska, as well as among the tribes of Siberia and central Asia. Today it is a federation of self-governing Churches, some of which were founded by the Apostles and their disciples, which conduct services in their own language, and follow their own customs and traditions, but are in full communion with one another. The senior church of Eastern Christendom is that of Constantinople, whose chief bishop bears the title of oecumenical patriarch, and has primacy of honour.

The Church's teaching is based on the Bible; and the Nicene-Constantinopolitan Creed (325-81) is the only confession of faith used. The centre of Eastern worship is the Eucharist, celebrated with little change since the 6th cent. The ritual is elaborate, and accompanied by singing in which both men and women take part, but no instrumental music is used. Besides the seven sacraments the prayer book contains many other services for daily life. There is an impressive marriage service during which the bride and groom are crowned. There are many monasteries, the most famous being Mt. Athos in Greece, which has flourished since the 10th cent. During the last century contacts between Eastern and Anglican Christians have become more frequent, and several societies have been started for its promotion, e.g. the Fellowship of St. Alban and St. Sergius.

EAST INDIA COMPANY. An English commercial company that was chartered by Queen Elizabeth I in 1600 and given the monopoly of trade between England and the E. In the 18th cent. it became in effect the ruler of a large part of India, and a form of dual control by the Company and a committee responsible to Parliament in London was introduced by Pitt's India Act, 1784; following the Indian Mutiny in 1857, the Crown took complete control of the govt. of British India, and the India Act of 1858 abolished the Company.

EAST KILBRIDE. Town in Lanarkshire, Scotland, 7 m. S. of Glasgow, built under the New Towns Act, 1946. It enveloped Long Calderwood, birthplace of William and John Hunter. Construction started in 1949. It has a jet-engine factory (1953) and a laboratory of mechanical engineering. Pop. (1961) 31,972.

EASTLAKE, Sir Charles Lock (1793-1865). British artist. B. at Plymouth, he painted a famous study of Napoleon as a prisoner on board the *Bellerophon*. He became an R.A. in 1830, and P.R.A. in 1850.

EAST LONDON. Port and resort on the S.E. coast of Cape Province, S. Africa. It has a good harbour, is the terminus of a railway from the interior, and is a

EASTER. With only their heads above ground, a group of statues in their temporary positions, awaiting the completion of work on the backs before they were taken to temple platforms elsewhere on the island. Courtesy of Thor Heyerdahl.

large power stations at Ballyshannon. The co. town is Lifford. Area 1,865 sq. m.; pop. (1966) 108,549

DONEGAL. Market town and port of co. Donegal, Rep. of Ireland, at the head of D. Bay. Pop (1966) 1,100.

DONETS. River of the U.S.S.R. rising in Kursk region and flowing c. 670 m. to join the Don 60 m. E. of Rostov. In the bend formed by the Don and the D. lies one of the richest coalfields in Europe. See **DONBAS**.

DONETSK. City in the Ukrainian S.S.R., cap. of D. region, 380 m. S.E. of Kiev. In the Donbas, D. is a railway centre and has an airport. It has blast furnaces, rolling mills, and other works engaged in heavy industry. Founded in the 1870s by a Welshman named John Hughes, it was called Yuzovka after him; it was renamed Stalino c. 1935, Donetsk in 1961. Pop. (1967) 823,000.

D'ONGOLA. Region of the Northern prov. of the Rep. of the Sudan, lying on both banks of the Nile. Its chief town is New D., some 45 m. above the 3rd cataract, which was founded c. 1812 to replace Old D., some 75 m. up river, destroyed by the Mamelukes. The latter was cap. of the Christian kingdom of D. 6th–15th cents. Area 27,520 sq. m.; pop. c. 150,000.

DÖNITZ (dön'its), Karl (1891–). German admiral who was C-in-C. of the German navy, 1943–5, and succeeded Hitler as head of the state. At Nuremberg in 1946 he was sentenced to 10 years' imprisonment, and was released 1956.

DONIZETTI (donēdzet'tē), Gaetano (1797–1848). Italian composer. B. in Lombardy, he composed 64 operas, of which the best known are *Lucrezia Borgia* (1833), *Lucia di Lammermoor* (1835), *La Fille du Régiment* and *La Favorita* (1840), and *Don Pasquale* (1843). They show the influence of Rossini and Bellini, and their chief feature is their unending flow of brilliant and expressive melodies.

DONKEY. Popular name for Ass (q.v.).

DONNE (dun), John (1571–1631). British poet. He was brought up in the R.C. faith, and matriculated early at Oxford to avoid taking the oath of supremacy. Before entering Lincoln's Inn as a law student in 1592 he travelled on the Continent. During his 4 years at the law courts he was notorious for his wit and reckless living. In 1596 he sailed as a volunteer with Essex and Raleigh, and on his return became private secretary to Egerton, Keeper of the Seal. This appointment was ended by his marriage to Ann More, niece of Egerton's wife, and they endured many years of poverty. The more passionate and tender of his love poems were probably written to her. In 1615 D. took orders in the C. of E. His wife d. 2 years later; and from 1621 to his death he was Dean of St. Paul's. His sermons place him among the greatest orators of his century, and his passionate poems of love and hate, violent, tender, or abusive, give him a unique position among English poets. His verse was not pub. in collected form until after his death.

DONNYBROOK. Locality, formerly a village, in co. Dublin, Rep. of Ireland, famous for riotous fairs which were stopped in 1855. It is now part of Dublin city.

DONOGHUE (don'ohū), Stephen ('Steve') (1884–1945). British jockey. Between 1915 and 1925 he rode 6 Derby winners, thus beating Fred Archer's record

of 5 Derby victories, and 1921–3 achieved the 'hat-trick' by winning 3 successive Derbys.

DOOLITTLE. Hilda (1886–). American poetess. She came to Europe in 1911, and was associated with Ezra Pound and the British writer, Richard Aldington (q.v., to whom she was m. 1913–37), in founding the Imagist school of poets, whose members advocated the presentation of a clear-cut visual image in poetry, and the writing of short, concentrated poems in free rhythms. Her books include *Sea Garden* and *Hymen*.

DOOLITTLE, James Harold (1896–). American aviator. In 1925 he won the Schneider Trophy Race, and in 1932 estab. world speed records for land planes. During the S.W.W. he led the U.S. bomber squadron which made a spectacular daylight raid on Tokyo in April 1942, and later held commands in N. Africa, the Mediterranean and Britain. He was created Hon. K.C.B. in 1945, and 1959–62 was chairman of the U.S. Space Technology Laboratories.

DOOMSDAY BOOK. See **DOMESDAY BOOK**.

DOON. River of Ayrshire, Scotland, which flows for 36 m. through Loch D. to the Firth of Clyde.

DOONE. Family of freebooters who lived on Exmoor, according to legend, until they were exterminated in the 17th cent. They feature in Blackmore's novel *Lorna Doone* (1869). The D. Valley is near Lynton.

DOPPLER, Christian Johann (1803–53). Austrian physicist. He became prof. of experimental physics at Vienna, and formulated 'D.'s Principle', which states that in the same way as the pitch of a sound alters if the body from which it proceeds is moving relatively to a fixed observer, so the light from a moving star varies in colour.

The D. Radar Navigational System for aircraft is an airborne equipment requiring no ground installation. In a typical system 4 separate beams of microwave energy are radiated from an antenna in the aircraft to the surface of the earth and some of the energy is reflected back. Due to the D. phenomenon the frequency of the reflected signal from each of the 4 beams is shifted by an amount proportional to the velocity of the aircraft, and is modified by the angles of the various beams. This data is processed in a computer and enables the pilot to fix his position.

D.O.R.A. Short for the Defence of the Realm Act, passed in Nov. 1914, which conferred extraordinary powers on the Govt. with a view to the proper prosecution of the war.

DORCHESTER. Co. town (bor.) of Dorset, England, on the r. Frome, 7 m. N. of Weymouth. Roman remains include a theatre, encampments, and walls. Thomas Hardy was born nearby, and D. is the Casterbridge of the novels. Pop. (1961) 12,266.

DORDOGNE (-dōn'). River of France rising in Puy-de-Dôme dept. and flowing 300 m. to join the Garonne 14 m. N. of Bordeaux. It gives its name to a dept. and is harnessed for power.

DORDRECHT (-rekht). River port on an island in the Maas, S. Holland, Netherlands, 12 m. S.E. of Rotterdam. It is an inland port with shipbuilding yards and makes heavy machinery, plastics, etc. The first assembly of the United Provinces took place at D., 1572. Pop. (1967) 88,475.

DORÉ (doh'reh), Gustave (1832–83). French artist. B. at Strasbourg, he was a skilled lithographer at 11, and was also active as a painter, etcher, and sculptor. His lasting reputation rests on his illustrations for Rabelais (1854), Dante, Cervantes, the Bible, Milton and Poe, which range from the sardonically humorous to the dark and harrowing.

DÖRIANS. Race of ancient Greece. They entered Greece from the N. and conquered most of the Peloponnese from the Achaeans; this invasion appears to have been completed before 1000 B.C. Their chief cities were Sparta, Argos, and Corinth.

JOHN DONNE
Portrait on loan to the
N.P.G. from the collection of
the Marquis of Lothian.

home consumption. (2) The tropical coastal region, which provides the main products for export. (3) The Oriente, stretching eastward from the Andes towards the Amazon basin, for the most part undeveloped tropical forest. (4) The Galapagos Islands, made up of 13 large and numerous smaller islands, and possessing rich fauna and vegetation and fishing grounds. Most important of E.'s rivers is the Guayas; Guayaquil, linked by road and rail with Quito, is the chief port.

E. is predominantly agricultural. The chief exports are cacao, bananas, and coffee. The minerals include petroleum, gold, sulphur, and copper. A rail connection between Quito and San Lorenzo was opened 1957 and a coastal highway is under construction.

Area (govt. est.) 116,270 sq. m.; pop. (1967 est.) 5,585,400, of whom 39 per cent are Indian, 41 per cent Mestizos, 10 per cent Mulattos and Negroes, and 10 per cent white. Spanish is the official language, but most of the Indians speak only Quichua. Roman Catholicism is the prevailing religion.

HISTORY. E. was conquered by the Incas shortly before the arrival of the Spaniards in the 16th cent. After an abortive revolt in 1809, E. became in 1822 part of Bolivar's republic of Colombia, seceding peacefully to become an independent republic in 1830. There have been many revolutions and the constitution of 1967 was devised to prevent rule by a military junta, as in 1963-6. There is a pres. elected for 4 yrs. and an elected chamber of deputies and senate. In 1942 E. ceded half her Amazonian terrs., occupied by Peru in 1941, but the agreement was denounced by E. in 1961 and 1967.

ECZEMA (ek'zēma). An allergic skin affection marked by itching, the formation of vesicles, and the exudation of fluid. It is often complicated by infection due to scratching. The treatment is that of the allergic condition.

EDAM. Town in the Netherlands on the river IJ, N. Holland prov., famous for its round red cheeses. Pop. (est.) 4,000.

EDDA. Name given to 2 collections of early Icelandic literature, which together constitute our chief source for the old Scandinavian mythology. The term strictly applies to the *Younger* or *Prose E.*, compiled by Snorri Sturluson, a priest, about 1230. The *Elder* or *Poetic E.* is the name given to a collection of poems, discovered by Brynjólfur Sveinsson, about 1643, and written by unknown Norwegian poets of the 9th to 12th cents.

EDDINGTON, Sir Arthur Stanley (1882-1944). British astronomer. Prof. of astronomy at Cambridge from 1913, and director of the univ. observatory from 1914, he did work of the highest importance on the motions and equilibrium of stars, their luminosity and atomic structure, and became a leading exponent of Einstein's relativity theory. In his *Expanding Universe* (1933) he expressed the theory that in the spherical universe the outer galaxies or spiral nebulae are receding from one another. He was knighted in 1930 and received the O.M. in 1938.

EDDY, Mary Baker (1821-1910). American founder of the Christian Science movement. *Née* Baker, she was b. in New Hampshire, and was brought up as a Congregationalist. Her faith in Divine healing was confirmed by her recovery from injuries caused by a fall in 1866, and a pamphlet *Science of Man* (1869) was followed by *Science and Health* (1875), which she constantly revised until her death. In 1876 she founded the Christian Science Association, and among her disciples was A. G. Eddy, whom she m. as her 3rd husband in 1877. In 1879 the Church of Christ, Scientist, was estab., and although living in retirement after 1892 Mrs. E. continued to direct the activities of the movement until her death.

EDDYSTONE. Lighthouse in the English Channel, 9 m. off the coast of Cornwall and 14 m. S.S.W. of Plymouth, completed in 1882, the fourth on the E.

EDELWEISS

rocks, of whose presence its light warns mariners; it can be seen up to 17½ m. away.

EDELWEISS (eh'del-vīs). Alpine plant (*Leontopodium alpinum*) belonging to the family Compositae. It has white flower-heads and grows at great heights.

EDEN, Sir Anthony. See LORD AVON.

EDEN. The 'garden' in which, according to the book of Genesis, Adam and Eve were placed after their creation, and from

which they were expelled for disobedience. It is usually assumed that it was in Mesopotamia, and that two of its rivers were the Euphrates and the Tigris.

EDENTATA. An order of mammals, comprising the families of sloths, ant-eaters, armadillos, pangolins, and ant-bears. They are practically confined to South and Central America.

EDFU (ed'foo). Ancient town and trade centre on the left bank of the Nile, Upper Egypt, with an almost perfect Ptolemaic temple dedicated to Horus. Pop. (est.) 18,500.

EDGAR (944-75). King of all England from 959. Called the Peaceful, he was the younger son of King Edmund, and strove successfully to unite English and Danes as fellow subjects.

EDGEHILL. Ridge in S. Warwick, England, where the 1st battle of the Civil War took place in 1642, between Royalists under Charles I and Parliamentarians under the Earl of Essex. The result was indecisive.

EDGEWORTH, Maria (1767-1849). Irish novelist. B. in Oxfordshire, she was the dau. of the writer, inventor and educationist, Richard Lovell E. (1744-1817). Her first novel, *Castle Rackrent* (1800), dealt with the Anglo-Irish country society, and was followed by the similar *The Absentee* (1812) and *Ormond* (1817), and the English *Belinda* (1801).

EDINBURGH, Philip, duke of. See PRINCE PHILIP. The dukedom of E. was first conferred in 1726 by George I on his eldest grandson, Frederick, who d. 11 months later and never became king. It was revived in 1866 for Victoria's 2nd son Alfred (1844-1900), and became extinct on his death.

EDINBURGH. City and capital of Scotland; co. tn.

EDINBURGH. The beauty and rich cultural life of this ancient city have earned her the title of 'Athens of the North'. Here, upon the high central embankment known as the Mound, are the National Gallery and Royal Academy of Scotland. To the right the Scott Memorial towers over Princes Street, one of the finest thoroughfares in Europe, and Edinburgh castle dominates the skyline to the left.

Courtesy of Edinburgh Corporation.

(1929), and also in *Without Apology* (1938), and *Oscar Wilde: a Summing Up* (1940). In 1902 he m. the poetess Olive Custance, and in 1911 he became an R.C. A vol. of verse, *In Excelsis*, was pub. in 1924 and his complete *Sonnets and Lyrics* in 1935.

DOUGLAS, Clifford Hugh (1879–1952). British Social Credit theorist. Ed. at Cambridge, he was employed 1900–14 as a construction engineer on railways in India, Argentina, and Britain. In a series of works – *Economic Democracy*, *Credit Power*, *Social Credit* and *The Monopoly of Credit* – he put forward his economic theory of Social Credit, and in 1935–6 he acted as reconstruction adviser to the govt. elected in Alberta on a Social Credit (q.v.) programme.

DOUGLAS, Gavin (or Gawain) (1475–1522). Scottish poet. A son of the earl of Angus, he became bishop of Dunkeld in 1515, and was very active in Scottish politics. He wrote 2 allegories, *The Palace of Honour* and *King Hart*, but his best work is his translation of Virgil's *Aeneid*, the first Eng. version of one of the great classical poets.

DOUGLAS, George. Pseudonym of the Scottish novelist George Douglas Brown (1869–1902). B. in Ayrshire, he is chiefly famous for *The House with the Green Shutters* (1901), a grimly realistic study of Scottish provincial life.

DOUGLAS, Lloyd Cassell (1877–1951). American author. For many years a Lutheran and Congregationalist pastor, he achieved fame by his novels on religious themes, *The Robe* and *The Big Fisherman*.

DOUGLAS, Norman (1868–1952). English writer. His travel books, such as *Siren Land* (1911) and *Old Calabria* (1915), are witty and sensually appreciative, as is his most famous novel *South Wind* (1917). *Looking Back* and *Late Harvest* are autobiographical.

DOUGLAS OF KIRTLESIDE, William Sholto Douglas, 1st baron (1893–). British air marshal. During the S.W.W. he was A.O.C.-in-C. of Fighter Command 1940–2, Middle East Command 1943–4, and Coastal Command 1944–5. In 1946–7 he was Military Gov. of the British Zone of Germany, and in 1949–64 was chairman of B.E.A.

DOUGLAS, Cap. (bor.) of the Isle of Man, on the E. coast of the island. It is a holiday resort, and terminus of the shipping routes from and to Fleetwood and Liverpool. Pop. (1961) 18,837.

DOUKHOBORS (dōō') or Dukhobortzi. Russian religious sect, also known as 'Christians of the Universal Brotherhood', some of their teachings resembling those of the Quakers. They were long persecuted, mainly for refusing military service – Tolstoy organized a relief fund for them – but in 1898 were permitted to emigrate and settled in Canada where they number c. 13,000, mainly in British Columbia and Saskatchewan. Refusing to send their children to school (where militarism might be taught) the extremist group, 'The Sons of Freedom', have staged demonstrations and terrorism in recent years leading to the imprisonment of c. 100 members of the sect by 1963.

DOULTON (dol'ton), Sir Henry (1820–97). British ceramist. He developed special wares for the chemical, electrical and building industries and in 1846 estab. the world's first stoneware drainpipe factory. From 1870 he created at Lambeth and Burslem a reputation for art pottery and domestic tablewares.

DOUMER (doomär'), Paul (1857–1932). French statesman. He was elected pres. of the Chamber in 1905, in 1927 became pres. of the Senate, and in 1931 Pres. of the Rep. He was assassinated by Gorgulov, a mad White Russian émigré.

DOUMERGUE (doomerg'), Gaston (1863–1937). French statesman. After holding many cabinet posts, he became in 1923 pres. of the Senate, and 1924–31 was Pres. of the Rep.

DOUW (dow) or **DOW**, Gerard (1613–75). Dutch painter. B. at Leyden, he studied under Rembrandt.

DOVER. The floodlit castle is a landmark for visitors arriving by sea. Built on a site fortified from very early times, it covers some 34 acres and is one of the finest examples of British medieval fortification, although considerable changes were made in the Napoleonic period under threat of invasion.

Photo: Ray Warner Ltd.

He was fond of painting half-length figures in window alcoves, and is famous for exactitude in detail.

DOVE. See **PIGEON**.

DOVER. One of the Cinque Ports (q.v.) market town, seaport, and municipal bor. on the S.E. coast of Kent, and the nearest point of Britain to the Continent, being only 21 m. from Calais. D.'s modern development has been chiefly due to the cross-Channel traffic, which includes train-ferry and other passenger and goods services. D., the terminus of Watling Street, was the Roman Portus Dubris. The beacon, or pharos, on the cliffs, built c. A.D. 50, is reputed to be one of the oldest buildings in Britain. The Lord Warden of the Cinque Ports is Constable of Dover Castle. D. is the main centre of the Channel coast defence system and during the S.W.W. suffered heavily from enemy shelling and aerial bombardment; 212 civilians were killed. Pop. (1961) 35,248.

DOVER, Strait of. Strip of water separating England from France, and connecting the English Channel with the North Sea. About 22 m. long, and 17 m. wide at the narrowest part (Dover to Cap Gris Nez).

DOWDEN, Edward (1843–1913). Irish critic and poet, who was prof. of English literature at Trinity Coll., Dublin, from 1867 till his death. He edited many of Shakespeare's plays, and wrote *Shakespeare: a Study of his Mind and Art* (1875).

DOWDING, Sir Hugh Caswall Tremenheere, 1st baron (1882–). British air chief marshal. A member of the R.F.C. (later R.A.F.) in 1914, he was chief of Fighter Command at the outbreak of war in 1939, a post he held through the Battle of Britain. He retired in 1942 and was created a baron in 1943. He has written works on spiritualism.

DOWLAND, John (1563–1626). English composer. He failed to estab. himself at Elizabeth's court – he was an R.C. convert – but later reverted to Protestantism and from 1612 was patronized by the Stuarts. He is remembered for his songs to lute accompaniment.

DOWN. Co. in the S.E. of N. Ireland, facing the Irish Sea on the E., and adjoining Armagh on the W., Antrim on the N. In the S. are the Mourne mts., in the E. Strangford sea lough. The co. town is Downpatrick. Area 952 sq. m.; pop. (1966) 286,930. See illus. p. 354.

DOWNING STREET. Street in Westminster, England, leading from Whitehall to St. James's Park, named after Sir George Downing (d. 1684), a diplomat under Cromwell and Charles II; No. 10 is the official residence of the Prime Minister. Poorly built, the D.S.

12–15 lb. On becoming mature some 6 yrs. later, and assuming a silver breeding livery instead of their earlier yellowish colouring, these Es. were then thought to make their way back to the Sargasso Sea (from which they originally came as larvae) to spawn. It is now suggested, however, that these Es. cannot muster strength for the return journey and consequently never breed and that they are actually of the same species as the American common E. (*Anguilla rostrata*), although the latter may reach 4 times their weight because of more favourable conditions. The eggs of American Es. laid at the northern limits of the spawning grounds would be held in the Sargasso Sea for a year before being carried by the Gulf Stream to Europe, Africa and the Mediterranean; those laid at the southern limits would be carried much more rapidly to the richer feeding grounds of the American coasts by the Antilles and Florida ocean currents, with resultant differences in development.

The morays or painted Es. are represented by some 100 species in tropical and temperate seas; they are often brilliantly coloured and very fierce. The conger Es. are all marine and are distinguished from freshwater species by the total absence of scales, and are common on British coasts.

EEL-GRASS or Glass Wrack. A genus of plants (*Zostera*) belonging to the family Naiadaceae. *Z. marina* is the typical species. They are remarkable among flowering plants in being adapted for a marine life, being completely submerged at high tide.

EGAN, Pierce (1772–1849). Sporting writer. B. in London, he became a sporting journalist and wrote *Life in London* (1821), illustrated by Cruikshank.

EGBERT (d. 839). King of the W. Saxons. The son of Ealhmund, an under-king of Kent, he succeeded to the W. Saxon throne in 802, and by 829 he had united England for the first time under one king.

EGG. In animals, the ovum, or female reproductive cell. It corresponds to the sperm cell or spermatozoon of the male, and when fecundated by this develops by division into further cells, into the embryo.

EGGLESTON, Edward (1837–1902). American writer. B. in Indiana, he became a 'circuit rider', i.e. an itinerant pastor of small Methodist churches, and then a minister. His *Hoosier Schoolmaster* (1871) tells of life among backwoodsmen of Indiana.

EGMONT, Lamoral, count of (1522–68). Flemish patriot. B. in Hainault, he defeated the French at St. Quentin in 1557 and Gravelines in 1558, and became stadtholder of Flanders and Artois. From

1561 he helped to lead the movement against Spanish misrule, but in 1567 the duke of Alba was sent to crush the resistance, and E. was beheaded.

EGRET. Genus of birds (*Egretta*) in which both sexes develop a long train of loose-webbed feathers during the breeding season. These snowy-white plumes were formerly so much in demand for hat ornaments that Es. were almost exterminated until the wearing of them was prohibited by law. The great white heron (*E. alba*) which grows to a length of 3 ft. and the little E. (*E. garzetta*), 2 ft. long, are found

EGRET

in Asia, Africa, S. Europe and Australia and rarely visit Britain.

EGYPT (ē'jipt). Country of N.E. Africa, lying between the Mediterranean in the N. and the Republic of Sudan in the S. Egypt consists in the main of a low

plateau through which the Nile flows towards the N., depositing alluvium which forms a narrow strip of fertile land on both banks; here the great majority of the population is concentrated. This fertile strip is

EGYPT. The Great Sphinx, 189 ft. long, and with a shrine of the sun god Harmachis between its paws, was sculptured from an outcrop of rock used by the builders of the Great Pyramid of Khufu as a stone quarry. It is said to be a portrait of Khafra whose own pyramid (right) still has some of its original casing. Courtesy of the Egyptian State Tourist Administration.

bounded on the E. by the Arabian and on the W. by the Libyan desert. Before reaching the Mediterranean the Nile forms a triangular delta with a width of 150 m. at the seaward end. Most of E. is almost rainless. The principal tree is the date palm. The ass, camel, sheep, and buffalo are the chief domesticated animals.

About 99 per cent of the population live in the cultivated area and in towns; 60 per cent of them are *fellahin* or peasants, living at a bare subsistence level. Most of them are Mohammedans, but about 1,500,000 are Coptic Christians.

AGRICULTURE. Rain being rare, cultivation depends, as from time immemorial, on the Nile, but control of its waters throughout the year, once largely wasted in a single annual flood, has been completed by the erection of the Aswan High Dam. Cotton accounts for $\frac{2}{3}$ of exports, and wheat, barley, rice, vegetables and sugar cane are grown. Large landowners have been eliminated under Nasser by limitation of individual holdings to c. 100 acres.

INDUSTRY. Industrialisation has been accelerated under Nasser, and a programme of nationalisation of banks, manufacturing and trading concerns undertaken. Soap, sugar, flour, pottery, cement, and glass are produced. Ancient emerald mines are still worked, and other minerals incl. building stone, manganese, phosphate rock, talc and petroleum.

TOWNS. The capital is Cairo, at the head of the Nile delta. Alexandria and Port Said are Mediterranean ports, while Suez lies at the S. end of the Canal.

GOVERNMENT. The 1964 constitution, in force until a plebiscite ratifies a permanent one, provides for a Pres. nominated by the Nat. Assembly (elected by universal suffrage) and confirmed by plebiscite. The country is divided into 2 districts, Upper and Lower E., subdivided into governorates.

Area 386,198 sq. m.; pop. (1966) 30,083,000. **History.** ANCIENT. The Egyptian state was founded c. 3200 B.C. by the semi-legendary Menes, who united Lower E., in the delta, to his own kingdom of Upper E. in the Nile valley. Following the Archaic Period of the 1st and 2nd Dynasties (32nd–29th cents.), the 'Old Kingdom' reached the height of its power under the 4th Dynasty kings, who built the great pyramids at Gizeh (c. 26th cent. B.C.), and then gradually sank

DRAGON-FLY. Resting after the tremendous effort of freeing itself from the pupa-case, the perfect insect waits for its wings to dry and harden. Below, the empty case still grips the stem, only the split thoracic cuticle showing the point of emergence. Photo: G. Ronald Austing.

Spanish ships as far N. as California, and then, in July 1579, S.W. across the Pacific. He rounded the Cape in June 1580, and reached England in Sept. Thus the 2nd voyage round the world, and the 1st made by an Englishman, was completed in a little under 3 years. When the Spanish ambassador demanded D.'s punishment, the Queen knighted him on the deck of the *Golden Hind* at Deptford.

In 1582 D. was chosen mayor of Plymouth, and in 1584-5 he represented Bossiney in parliament. In a raid on Cadiz in 1587 he burnt 10,000 tons of shipping, 'sing'd the King of Spain's beard', and delayed the Armada for a year. He was stationed off Ushant in 1588 to intercept the Armada, but was driven back to England by unfavourable winds. During the fight in the Channel he served as a vice-admiral in the *Revenge*. D. sailed on his last expedition to the W. Indies with Hawkins in 1595, and in Jan. 1596 d. on his ship off Nombre de Dios.

DRAKENSBERG (drah'kens-). Mountain range in S. Africa, on the boundary of Basutoland and Orange Free State with Natal; highest point is Mont aux Sources, 11,000 ft., near which is Natal National Park.

DRAMA. A story interpreted to an audience by actors, in which such elements as dancing, music, singing, etc., are only subsidiary.

ORIENTAL D. is characterized by fixed conventions and an avoidance of all semblance of reality. This is true in Japan of both the aristocratic *No* plays developed in the 14-16th cents. and of the popular *Kabuki* which originated in the 17th cent., and also applies to the less literate Chinese theatre and to Indian drama.

GREEK D. arose from the lyrical dithyramb chanted by a chorus in praise of Dionysus when, according to tradition, Thespis added a single actor. D. rapidly developed with the inauguration of the Athenian festivals: Aeschylus, Sophocles, and Euripides perfected tragedy, and comedy reached its greatest heights under Aristophanes and Menander.

All that survives of **ROMAN D.**, e.g. the comedies of Terence, the farces of Plautus, and the tragedies of Seneca, is directly based on the Greek tradition.

MEDIEVAL. Something of the classical tradition was probably carried on into the Dark Ages by wandering entertainers. But in about the 10th cent. Church ritual began to assume dramatic form, and thence developed the mystery cycles and miracle plays. Essentially amateur productions, they were popular all over Europe in the 12th-16th cents.

RENAISSANCE. The rediscovery of classical D. brought a new beginning in the Italian courts at the end of the 15th cent., and at the same time the *commedia dell' arte*, depending on the actors' improvisation, was evolved among the people. This cleavage did not exist in Spain, where Lope de Vega and Calderón de la Barca were the outstanding dramatists.

In England, too, there was no rigid class demarcation. Early experiments in the morality, interlude, comedy, and tragedy, were followed by the work of the young univ. men. Lyly, Greene, Peele, Kyd, and Marlowe, which prepared the way for Shakespeare.

17TH CENT. In England tragedy declined, although erratic strength still appears in Webster, Massinger, Middleton, and Ford. New vitality in comedy came with the comedy of humours of Jonson, which, combining with the witty comedy of Beaumont and Fletcher, produced the early plays of Shirley, and the later Restoration works of Etherege, Wycherley, and Congreve. The playhouses became the resort of the courtier, so that although the comedy of manners flourished, there was no place for great tragedy, despite the efforts of Dryden, Otway, and Lee.

In France the intellectual interests of the age found expression after the middle of the cent. in the work of Corneille, Racine, and Molière.

18TH CENT. In this period less vital examples of the older types of tragedy and comedy were written by Sheridan, Goldsmith, Marivaux and Voltaire, but a new sentimental genre was exploited by Cumberland and Kelly in England; and by Diderot, Beaumarchais, Goldoni, and Lessing abroad. This sentimentalism was coloured by romantic aspirations in Schiller and Kotzebue.

19TH CENT. The most popular form was the melodrama, which left nothing behind of literary value. In France Victor Hugo gave full expression to romanticism, but otherwise it was the period of the sentimental problem drama represented by S. Knowles, B. Lytton, and Boucicault in England; and Hebbel, Augier, and Dumas fils on the Continent. The latent vitality of the latter was exploited by Ibsen and Strindberg, who secured the triumph of realism — a development paralleled less forcefully by Robertson, Pinero, and H. A. Jones in England; and by Sardou, Hervieu, Lavedan, Becque, Brieux, Sudermann, Hauptmann, and Wedekind in Europe.

20TH CENT. In Russia, the native realistic tradition combined with the inspiration of Ibsen to produce the Moscow Arts Theatre and Chekhov, and elsewhere the plays of Oscar Wilde, Shaw, Bridie and Pirandello

DRAMA. The Asolo theatre, originally built inside the great hall of Asolo Castle, near Venice, by Antonio Locatelli in 1798. It was torn down in the 1930s but in 1951 acquired for restoration, as seen above, in Florida.

Courtesy of the John Mable Ringling Museum of Art, Florida

Stone was discovered. As this contained the same inscription in Gk. as well as the hieroglyphic and demotic scripts, it afforded the clue to the decipherment of the Egyptian inscriptions. Excavation continued throughout the 19th cent., and gradually assumed a more scientific character, largely as a result of the work of Sir Flinders Petrie from 1880 onwards, and the formation of the Egyptian Exploration Fund in 1892. The most sensational discovery so far made was Tutankhamen's tomb in 1922, the only royal tomb with all its treasures intact. Special branches of E. developed in more recent years are the study of prehistoric Egypt, and the search for papyri, preserved by the dryness of the climate; besides ancient Egyptian writings, many lost Gk. and early Christian works have been recovered.

EHRENBURG, Ilya Grigorievich (1891–1967). Russian writer. B. in Kiev, he spent many years in France before returning permanently to Russia in 1940. Apart from his brilliance as a war correspondent during both world wars, he is noted for *The Adventures of Julio Jurenito* (1930), a satire on the post-war decay of European civilisation, *The Fall of Paris* (1942), and the controversial *The Thaw* (1954), which depicted artistic circles in the U.S.S.R., and contributed to the temporary slackening of literary restraint in the 1950s. He was awarded the Order of Lenin in 1944. He pub. 5 vols. of autobiography 1961–4.

EHRlich (ehr'likh), Paul (1854–1915). German bacteriologist. B. in Silesia, he became director of the Royal Institute for Experimental Therapy at Frankfurt in 1906. He did some cancer research, but his most famous discovery was salvarsan, an arsenical compound of great value in the treatment of syphilis. With Mechnikov he shared the Nobel prize for physiology in 1908.

EICHENDORFF (i'khendorf), Joseph, Freiherr von (1788–1857). German poet and novelist. B. in Upper Silesia, he held various judicial posts, wrote romantic stories, but is chiefly remembered as one of the greatest lyricists in the German tongue.

EICHMANN (ikh'man), Karl Adolf (1906–62). Austrian Nazi war criminal. As an S.S. official he was appointed in 1937 to study Zionist and Palestinian questions, promoted the Anschluss (q.v.) as a Gestapo agent, and in 1938 became head of the Bureau of Jewish Emigration in Vienna. Within 6 mths. in 1939 he organised the deportation of 35,000 Jews from Czechoslovakia, and later became chief of the Jewish Emigration Centre in Berlin and the Gestapo's office for the registration of Jews, combined and renamed the E. Department in 1941. Not only did his dept. organise special squads for exterminating Jews, but he personally supervised the despatch of 180,000–200,000 Hungarian Jews to the Auschwitz gas chambers, and on 2 occasions offered to 'sell' Jews to the Allies. In 1960 he was abducted from Argentina by Israeli agents, tried in Israel during 1961 for the extermination of 6 million Jews, and sentenced to death.

EIDER (i'der), Large marine duck, *Somateria mollissima*, highly valued for its soft down, used in stuffing quilts and cushions. It breeds in northern latitudes, from the Farne Islands to Spitzbergen, and in Iceland and Norway it is bred for its down.

EIFFEL (i'fel) **TOWER**. Iron tower in the Champ de Mars, Paris, built 1887–9 to the design of the French engineer Gustave Alexandre Eiffel (1832–1923) for the Exhibition of 1889. It is 984½ ft. high.

EIGER. See ALPS.

EIGHTH ROUTE ARMY. The Chinese 'Red Army' formed in 1927 when the Communists broke away from Kuomintang and estab. a Soviet government in Kiangsi, in S.E. China. When the Japanese invaded China in 1937 it was recognised as a section of the national forces under the name 8th R.A.

EILAT (älah't). Port founded in 1948 at the head of

the Gulf of Aqaba, Israel's only outlet to the Red Sea. Formerly a fishing village close to Aqaba, Jordan it, occupies the site of the biblical Elath (Deut. 2, v. 8) and is on a fine bay. There are copper mines and granite quarries nearby. Since 1957 E. has been linked to Beersheba and Ashdod, on the Mediterranean, by an oil pipeline, first begun following the Suez Canal crisis, and in 1958 the 148 m. Beersheba–E. highway was opened. Pop. (est.) 2,000.

EINAUDI (änow'dé), Luigi (1874–1961). Italian statesman and economist. B. in Piedmont, he became a senator in 1919 and was professor of economics in several Italian universities until removed by the Fascists. In 1945 he was appointed governor of the Bank of Italy and in 1946 Vice-Premier. In 1948–55 he was President of the Italian Republic.

EINDHOVEN. Town in N. Brabant prov., the Netherlands, on the Dommel. It is a manufacturing centre, chiefly of electric light bulbs and equipment. Pop. (1967) 183,637.

EINSTEIN (in'stín), Albert (1879–1955). German-Swiss physicist, framer of the theories of Relativity (q.v.). B. at Ulm, in Württemberg, of Jewish stock, he lived with his parents in Munich and then in Italy. After teaching at the polytechnic school at Zürich he became a Swiss citizen and was appointed an inspector of patents at Berne. In his spare time he

took his degree of Ph.D. at Zürich, and some of his papers on physics were of so high a quality that in 1909 he was given a chair of theoretical physics at the university. After holding a similar post at Prague (1911), he returned to teach at Zürich (1912), and in 1913 took up a specially created post as director of the Kaiser Wilhelm Institute for Physics, Berlin. In 1905 he had pub. his first theory – the so-called special theory of Relativity – and in 1915 he issued

his general theory. His latest conception of the basic laws governing the universe was outlined in his unified field theory made public in 1953; and of the 'Relativistic Theory of the Non-symmetric Field', completed 1955, E. wrote that this simplified the derivations as well as the form of the field equations and the whole theory becomes thereby more transparent, without changing its content. He received the Nobel prize for physics in 1921. He was deprived of his post at Berlin in 1933 and became professor of mathematics and a permanent member of the Institute for Advanced Study at Princeton, N.J., U.S.A., and during the S.W.W. worked for the U.S. Navy Ordnance Bureau. Besides his treatises on Relativity, he wrote *My Philosophy* (1933), *The World as I See It* (1935), and (with Leopold Infeld) *The Evolution of Physics* (1938).

EINSTEINUM. See TRANSURANIUM ELEMENTS.
EINZIG (intzig), Paul (1897–). British financial journalist. Hungarian-born, he became London correspondent of the *New York Commercial and Financial Chronicle* in 1945, also serving on the staff of the *Financial Times* 1945–56. His books incl. *The Economic Consequences of Automation* (1956) and *The History of Foreign Exchange* (1962).

EIRE (ä'r'e). Irish name for Ireland (q.v.). It was used 1937–49 for the part of the island called the Irish Free State 1922–37.

EISENACH (i'senakh). Town on the r. Hörsel, in Erfurt district, (E.) Germany, with pottery, worsted, and machinery industries. J. S. Bach was b. at E. Pop. (est.) 52,000.

DRESS. Ready for the afternoon visit c. 1900 superbly gowned by Worth.

Courtesy of Bath Assembly Rooms, Museum of Costume.

unmodified for cents. Greek D. was extremely simple; from the 7th to the 1st cent. B.C. the main D. for both men and women was the tunic, called the *chiton*, which consisted of a rectangular woollen cloth fastened on each shoulder by a pin. The male garment of the Romans was the *toga*, which was usually white.

MIDDLE AGES. During the Middle Ages costumes did not change much in style for cents., but differed widely from place to place. There was also a wide difference between the costumes of different classes. The typical head-gear was the hood. Women wore a veil or fold of mantle, but this was abandoned in the 15th cent. for various kinds of caps, some with horns, some with butterfly-wings of gauze. Fashion,

in the modern sense, was evident in the 15th cent., the two main centres being Venice and Paris.

16TH CENT. In the 16th cent. all points became blunted. As an instance, in the previous cent. shoes were excessively pointed – men's shoes became so long that the points were curled up and attached to the knees – but in the 16th cent. they seemed for a time excessively wide. In the first part of the cent. women's clothes were bell-shaped and kept in position by petticoats. Later the ruff developed, and men wore the doublet, the legs being exposed and covered with tight-fitting hose.

17TH CENT. The main outlines of Elizabethan costume were retained during the reign of James I, but with the accession of Charles I costumes became more elegant. Women were not so tightly waisted. The short puffed breeches of the men extended downwards to the knee and were adorned with rosettes of ribbon, as were also the shoes. Puritans wore the same styles in general outline, but the materials were plainer. Cavaliers and Roundheads wore the same kind of wide-brimmed, high-crowned hat, but the Roundheads abandoned the plume. French modes were introduced at the restoration of Charles II, and the male costume became more elaborate than that under Charles I. Men began to wear flowing wigs in imitation of Louis XIV. During the rest of the cent. the costume of both sexes gradually stiffened, and the male D. began to consist of the 3 garments which, with various modifications, have remained the typical male attire ever since.

18TH CENT. Women's clothes lost some of their stiffness. Men's coats were richly embroidered, and the waistcoat assumed something of its present form. In the 1770s the head-dress of both men and women became very high – women's hair was sometimes dressed to the height of 2 or 3 ft. and was crowned with ships, windmills, and various other ornaments.

DRESS. A lesson in the minut c. 1760.

Courtesy of Bath Assembly Rooms, Museum of Costume.

Towards the end of the cent. men adopted the plain cloth of the English country gentleman, and wore a high-crowned hat.

19TH CENT. Trousers were worn by all classes, and men's clothes became more sombre in tone, until about 1850 black clothes were introduced for evening and formal wear. The top hat was by this time universal. Women's clothes were more varied than men's. The crinoline was introduced in the '40s, but was later replaced by the bustle. In the middle '90s the chief eccentricity was the leg-o'-mutton sleeve. Men's clothes developed a new informality with the introduction of the 'suit' and of the bowler hat and 'gent's boater'.

20TH CENT. During the Edwardian epoch men became more formal, and the frock coat was revived. Women had narrow waists, and wore much lace. The 'hobble' skirt, worn with a large hat, was introduced about 1910. By 1925 a new type of female D. appeared – the narrow straight garment extending down to the knees, and having the waist round the hips. Plus-fours were worn by men, and the Homburg or Trilby was introduced. In the '30s skirts grew longer, and after the S.W.W. austerity came the even longer skirts and femininity of the 1948 'New Look'. In the 1950s came the return to modified 'Edwardian' for men (so-called 'Teddy Boys'), and (for women) to the straight line and dropped waist of the '20s in the Dior H-look and A-line of 1954–5. Late in the 1950s the waist disappeared altogether with the advent of the 'Sack', and in the early 1960s of a modified and better-cut version of this – the 'Shift', and the hem-line rose to just below the knee. The development of man-made fabrics, and of the ready-to-wear industry catering largely for a teenage market, led in the mid-1960s to the 'swinging' era of London's Carnaby Street in Soho, and mini-skirts 8 in. and more above the knee.

DREW, George Alexander (1894–). Canadian Progressive Conservative politician. He entered the Ontario legislature in 1939, was provincial premier 1943–8, and 1949–56 was leader of the opposition in the Federal Parliament. In 1957–64 he was High Commissioner to the U.K.

DREYFUS, Alfred (1859–1935). French soldier. B. in Mulhouse of a Jewish family, he held a post in the War Ministry when in 1894 he was accused of betraying military secrets to Germany, court-martialled, and sent to Devil's Island. In 1896 it was discovered that the real criminal was a Maj. Esterhazy; the High Command nevertheless attempted to suppress the facts, and used forged documents to strengthen their case. After a violent controversy, during which Clemenceau and Zola were prominent among D.'s champions, a re-trial in 1899 found him guilty with extenuating circumstances and he received a pardon. In 1906 the Court of Appeal declared him innocent, and he was reinstated in his military rank.

DRIBERG, Thomas Edward Neil (1905–). British writer and Labour politician. A war correspondent during the S.W.W. and in Korea, he was elected M.P. for Maldon 1942–55 (as an Independent 1942–5) and Barking since 1959, becoming Chairman of the Lab. Party Nat. Exec. 1957–8. He is a contributor to many periodicals, has broadcast and appeared on television, and in 1956 pub. studies of Beaverbrook – he was on the staff of the *Daily Express* 1928–43 – and Guy Burgess.

DRILL. A large baboon (*Papio leucophaeus*) of W. Africa, characterized by a very short tail and a long prehensile great toe. Its face is black with no colouring as in the mandrill. It is mainly arboreal.

DRINKWATER, John (1882–1937). British poet. B. in Leytonstone, Essex, he was an insurance clerk for 12 years, before becoming associated as manager and producer with the Birmingham Repertory Co. His 1st vol. of verse appeared in 1906, and he contributed accomplished lyrics to *Georgian Poetry*. His

ELBRUZ—ELECTRICITY

ELBA. Picturesque Porto Azzurro, one of the unspoilt fishing villages on the island that was Napoleon's kingdom 5 May 1814 to 26 Feb. 1815. Courtesy of the Italian State Tourist Office.

ELBRUZ. Highest mt. in Europe, 18,467 ft., in the Caucasus, Georgia S.S.R.

ELBURZ. Volcanic mt. range in N.W. Persia, close to the S. shore of the Caspian, rising in Mt. Demavend to 18,500 ft.

ELDER. In the Presbyterian Church the Es. or ruling Es. are laymen who assist the minister (or teaching E.) in the government of the church.

ELDER. Genus of small trees or shrubs (*Sambucus*) of the family Caprifoliaceae. The common *S. nigra*, found in Europe, N. Africa, and W. Asia, has smooth bark, pinnate leaves, and in early summer bears heavy heads of small, sweet-scented, white flowers, which are succeeded by clusters of small, black berries. The most handsome species, the scarlet-berried *S. racemosa*, is found in parts of Europe, Asia and N. America.

ELDON, John Scott, 1st earl of E. (1751-1838), British Lord Chancellor. B. at Newcastle, he became an M.P. in 1782, and was Lord Chancellor of the rules governing and 1807-27, during which period the rules governing the use of the injunction and precedent in Equity finally became fixed.

ELEANOR (el'anor) OF AQUITAINE (c. 1122-1204). Queen of Henry II of England. The dau. of the duke of Aquitaine, she m. Louis VII of France in 1137, but the marriage was annulled on grounds of consanguinity in 1151, and she shortly after m. Henry of Anjou, who in 1154 became king of England as Henry II.

ELEANOR OF CASTILE (d. 1290). Queen of Edward I of England. The dau. of Ferdinand III of Castile, she m. Prince Edward in 1254, and accompanied him on his crusade in 1270. She d. at Harby, Notts.

ELECTORS. The seven German princes who elected the emperor from the 13th cent. until the dissolution of the Holy Roman Empire in 1806. These were commonly the archbishops of Mainz, Cologne, and Trier, the king of Bohemia, the duke of Saxony, the margrave of Brandenburg, and the palatine of the Rhine.

ELECTRICAL ENGINEERING. Branch of engineering concerned with the electrical industry, embracing all aspects of electrical technology incl. radio and electronics.

ELECTRIC FISH. Name given to certain fish that have electricity-producing powers. The best-known example is the S. American *Electrophorus electricus*, in which the lateral tail muscles are modified to form electric organs; current passing from tail to head is strong enough to stun another animal.

ELECTRICITY. The fundamental constituent of matter. A general term used for all phenomena

caused by electric charge whether static or in motion. The fact that amber has the power, after being rubbed, of attracting light objects, such as bits of straw and feather, is said to have been known to Thales of Miletus (600 B.C.) and to Pliny (A.D. 70). In his studies on these attractions, William Gilbert (1544-1603), Queen Elizabeth I's physician, found that many substances possess this power, and he called it electric after the Greek word meaning amber. The attracting power may be transferred by contact from one body to another by conductors, such as metals. On the other hand, paraffin wax, hard rubber and dry glass do not transmit the power, and are called insulators. It was not until the early 1700s that 2 types of E. were recognized, and that unlike kinds attract each other and like kinds repel. The charge on glass rubbed with silk came to be known as positive E., and the charge on amber rubbed with wool as negative E. These two charges were found to annul one another when brought together. In 1800, Volta found that a series of little cells containing brine, in which were dipped plates of zinc and copper, gave an electric current, which later in the same year was shown to evolve hydrogen and oxygen when passed through water (known as electrolysis). Humphry Davy, in 1807, decomposed soda and potash, both thought to be elements, and separated the metals sodium and potassium; a discovery which led the way to electro-plating (q.v.). Other properties of electric currents discovered were the heating effect, now used in lighting and warming our homes, and the deflection of a magnetic needle, described by Oersted in 1820 and elaborated by Ampère in 1825. This work made possible the electric telegraph. For Michael Faraday the fact that an electric current passing through a wire caused a magnet to move suggested that moving a wire or coil of wire rapidly between the poles of a magnet would induce an

ELEANOR OF CASTILE. At the 9 stopping places of the Queen's funeral cortège the Westminster Abbey, to 'Westminster crosses' were erected by Edward I. Three of the originals remain - at Waltham Cross (seen here), Northampton and Geddington - the one at Charing Cross, London, is a modern reconstruction.

ELECTRICITY. The tungsten iodine lamp developed in the 1960s has double the life of conventional designs, since evaporated tungsten from the filament is redeposited by a reversible chemical reaction with iodine added to the gas filling. It also gives 15 per cent more light. Courtesy of The British Lighting Council Ltd.

a tablecloth on which turpentine had spread from an overturned lamp; introduced into Britain in 1886. Under the 'charged system', a non-inflammable solvent (perchloroethylene) is used under strictly controlled conditions in closed machines. The older 'white spirit' method still accounts for 30 per cent of all D.C., but it is not fully automatic.

DRYDEN, John (1631–1700). British poet. B. at Aldwinkle, Northants, he came to London in 1657, and although in 1659 he pub. *Heroic Stanzas*, in memory of Oliver Cromwell, he hastened to celebrate the Restoration with *Astraea Redux* (1660). In 1663 he m. Lady Elizabeth Howard, and was already embarked on his career as a dramatist. He produced more than a score of plays, including the comedy *Marriage à la mode* (1672); *Tyrannic Love* (1669) and *The Conquest of Granada* (1669–70), which represent the culmination of 'Heroic Tragedy'; and *All for Love* (1678). Much excellent criticism is contained in the prefaces to D.'s plays and in his *Essay of Dramatic Poesy* (1668). D.'s work as a satirist and didactic poet begins with *Absalom and Achitophel* (1681), which was followed by *The Medal* (1682); *MacFlecknoe*; *Religio Laici*, a justification of Protestantism; and *The Hind and the Panther* (1687), a defence of Roman Catholicism, to which he was converted after the accession of James II. At the Revolution of 1688 D. as an R.C. was deprived of the laureateship to which he had been appointed in 1668, and having also lost his pension supported himself by writing for the stage, and by translations, notably that of Virgil (1697). Among his many other works are *Annus Mirabilis* (1667); his odes on 'St. Cecilia's Day' (1687), and to the 'Memory of Mrs. Anne Killigrew' (1686); and *Fables* (1699), verse paraphrases of stories from Chaucer, Boccaccio, and Ovid. D. was buried in Chaucer's grave in Westminster Abbey.

He was the greatest literary figure of his age; a master of all verse forms, he particularly excelled in the heroic couplet, and created modern English prose style.

DRY-POINT. A method of drawing on a metal plate with a sharp point; 'dry' indicates that no acid is used in its production. The incision made on the plate makes a furrow which turns up a rough edge or fringe of metal called the 'burr'. When the plate is inked for printing, the burr collects the ink and gives an effect of great richness and a soft velvety quality to the dark portions. Dürer made a few D.-Ps., and it was much used by Rembrandt in his later work, and in more recent times by J. M.

DRY CLEANING. Some 700,000 garments are dry-cleaned daily in Britain, and more than 16 tons of solid dirt is removed from the cleaning fluid. The average recovered from a two-piece suit is 1½ oz.

Courtesy of the National Federation of Dyers and Cleaners.

Whistler, A. Legros, W. Strang, Muirhead Bone, F. Dodd, and H. Rushbury.

DRYSDALE, George Russell (1912–). Australian artist. B. in Sussex, England, he went to Australia as a child. He studied art in Melbourne, London and Paris, and became known particularly for his drawings and paintings of the Australian Outback. He was awarded the Wynne Prize in 1947, and in 1962 became a member of the Commonwealth Art Advisory Board.

DU BARRY, Marie Jeanne Bécu, comtesse (1743–93). Mistress of Louis XV of France. The dau. of a

dressmaker, she m. Comte Guillaume du B., and in 1769 was presented at court. She is said to have been strikingly handsome, not without wit, and frank to the point of vulgarity. She exercised great influence on Louis. On the latter's death in 1774 she was

DUBLIN. The Republic's High Court of Justice, known as Four Courts because it once housed the courts of Exchequer, Common Pleas, King's Bench and Chancery, was built 1786–1800 to the design of James Gandon and Thomas Cooley. Only the outer walls remained after heavy shelling by Michael Collins in 1922, but restoration was completed in 1931.

Courtesy of the Irish Tourist Board.

banished to a convent, but later went to live at Luciennes. At the Revolution she fled to London, but returned to Paris in 1793, when she was arrested and guillotined.

DUBCEK (dōōb'chek), Alexander (1921–). Czechoslovak statesman. A Slovak, he lived in the Soviet Union 1925–38, and during the S.W.W. was a resistance leader in the Tatra mtns. In 1968 he became First Sec. of the Czechoslovak Communist Party and launched a liberalisation campaign: see CZECHOSLOVAKIA. He was arrested by invading Soviet troops, but later released.

DUBLIN. Cap. and co. bor. of Rep. of Ireland, at the mouth of the Liffey, on the coast of co. D., facing the Irish Sea. The greatest port of the republic, D. draws its exports from the whole state, and is the largest collecting and distributing centre. In D. is the world's largest brewery (Guinness); other industries include the manufacture of poplin and linen, biscuits, and machinery, and there are shipyards, flour-mills, railway yards, and engineering shops. The city is a great route focus, roads, railways, and canals converging there, and has a handsome airport. The river channel has been artificially deepened and miles of granite quays built.

The present city was founded in 840 by the Danes who were finally defeated in 1014 at Clontarf, a N. suburb of the city. From 1171, when Henry II landed in Ireland, D. was the centre of English rule until 1922; D. castle dates from 1200. The 18th cent. saw the architectural development of D. as it increased in importance. A good deal of damage was done to prominent buildings (e.g. the Custom House) in the rising of 1916 and in 1922. There are 2 cathedrals, both Protestant: St. Patrick's founded in 1190, Christ Church in 1038, rebuilt in 1172. Trinity Coll. (1591 Protestant) and Univ. Coll. (1851 R.C.) were merged 1968 as the Univ. of D. Other interesting buildings are the City Hall (1779), the Four Courts (1796), the Art Galleries and Museum, the General Post Office, the R.C. pro-Cathedral of St. Mary (1816), the Bank

the Ruhr. It is the largest inland port in Germany, with important coal-mines, iron and steel, chemical, shipbuilding and engineering industries. The N. suburb of Hamborn was incorporated in 1929, and until 1935 it was called D.-Hamborn. During the S.W.W., D. was heavily bombed from 1940 until its capture by U.S. troops after severe fighting 30 March 1945. Pop. (1966) 477,770.

DUKAS (dükahs'), Paul (1865–1935). French composer. B. in Paris, he was prof. of composition at the Paris Conservatoire, and composed the opera *Ariane et Barbe-bleue*, the ballet *Le Péri*, and the very popular orchestral scherzo *L'Apprenti Sorcier* (The Sorcerer's Apprentice).

DUKE (Lat. *dux*, a general). Highest title in the English peerage. It was unknown in England until 1337, when Edward III created his son Edward D. of Cornwall. The oldest Scottish duchy is Hamilton, 1643.

DUKES, Ashley. See **RAMBERT**.

DULCIMER (dul'simer). Musical instrument, consisting of a shallow box strung with wire strings which are struck with small wooden hammers.

DULLES, John Foster (1888–1959). American statesman. B. in Washington the s. of a Presbyterian minister, he was ed. at Princeton, the Sorbonne and George Washington univ., before being admitted to the Bar. At 19 he attended the Hague Peace Conference of 1907, and took part in the 1919 Paris Peace Conference. He was senior U.S. adviser at the U.N. founding conference in 1945 and was prominent in the drafting of the Japanese Peace Treaty in 1951. D. became Sec. of State in 1952 and criticized Britain's actions during the Suez crisis in 1956. Suffering from cancer, he resigned office and d. in 1959.

His brother, Allen D. (1893–1969), a lawyer, was director of the Central Intelligence Agency 1953–61.

DULUTH (dulooth'). U.S. port on Lake Superior, by the mouth of the St. Louis river, Minnesota. It manufactures steel. Pop. (1960) 106,884.

DULWICH. Suburb of London, England, part of the inner London bor. of Southwark. It contains D. College (founded 1619 by Edward Alleyn), the Horniman Museum (1901) with a fine ethnological collection, D. Picture Gallery (1814, rebuilt 1953

after S.W.W. bombing), D. Park and D. Village, still pleasantly rural.

DUMAS (dūmah'), Alexandre (1802–70). French novelist and dramatist, called D. the Elder. B. at Villers-Cotterets, he was the son of a French general, and through his paternal grandmother inherited a strain of Negro blood. When he was 20 he went to Paris, and in 1829 had a resounding success with his play *Henri III et sa Cour*. Another great success was *Antony* (1831), and altogether he wrote more than 20 plays. The famous historical novels began to appear in 1836, and in a vast output D. was assisted by collaborators, incl. Auguste Maquet. It was with Maquet's help that he wrote *Les Trois Mousquetaires* (The Three Musketeers, 1844) and its sequels; also in 1844 he pub. the *Comte de Monte-Cristo*. Another series centres round Henri IV, and a 3rd deals with the French Revolution, e.g. *Le Collier de la Reine* (The Queen's Necklace). Best known of the many other novels are *La Tulipe Noire* (The Black Tulip) and *Les frères Corses* (The Corsican Brothers). In 1832 appeared *Impressions de Voyage*, the first of a series of entertaining travel books. *Mes Mémoires* gives the story of his life to 1832. His natural son Alexandre D. the Younger (q.v.) was also a writer.

DUMAS, Alexandre (1824–95). French dramatist and novelist known as D. the Younger, to distinguish him from his father, Alexandre Dumas the Elder (q.v.). His novels and miscellaneous writings have been eclipsed by his plays, of which the first, *La Dame aux Camélias* (1852), had an outstanding success as the first important comedy of manners of the 19th cent. in France; the novel had appeared 1848.

DU MAURIER (dü mō'ryā'), Daphne (1907–). British novelist; 2nd dau. of Sir Gerald du M. (q.v.). Her most famous books incl. *Jamaica Inn* (1936), *Rebecca*, *Hungry Hill*, and *My Cousin Rachel*. Many have been successfully filmed. She has also pub. *Gerald*, a *Portrait* (1934) and the *Du Mauriers*. In 1932 she m. Lt.-Gen. Sir Frederick Browning.

DU MAURIER, George Louis Palmella Busson (1834–96). British author and artist. B. in Paris, the son of a French refugee who became an English subject during the Revolution, he settled in London in 1860 and secured a place on the staff of *Punch*. Besides illustrating books and periodicals, he wrote novels: *Peter Ibbetson* (1891), *Trilby* (1894) – story of a natural singer able to perform only under the hypnosis of Svengali, her tutor – and *The Martian* (1897).

DU MAURIER, Sir Gerald (1873–1934). British actor-manager, son of George du M. He made his stage début in 1894, and in the following year appeared in the stage version of his father's *Trilby*. He subsequently appeared in many plays and films.

DUMBARTON. Co. town and royal burgh of Dunbartonshire, Scotland, sit. on the Clyde estuary, at the mouth of the Leven. It has shipyards, iron foundries, an aircraft factory, distillery, etc. Pop. (1961) 26,335.

DUMBARTON OAKS. An 18th cent. mansion near Washington, D.C., U.S.A., scene of a conference held 21 Aug–29 Sept. 1944, between Britain, the U.S.A., and the U.S.S.R. for preliminary discussions of the structure and aims of a new international league to enforce peace. After the Russians (who were not then at war with Japan) had left, a Chinese delegation arrived. The conference ended on 7 Oct., agreement having been reached for a draft programme for a conference held at San Francisco 25 April–25 June 1945, at which the United Nations was founded.

DUMFRIES (dumfrēs'). Co. town and royal burgh of Dumfriesshire, Scotland, on the r. Nith. It is a centre of tweed and hosiery manufacture, a market town, and a road and railway junction. Pop. (1961) 27,275. See illus. p. 362.

DUMFRIESSHIRE. Co. of S. Scotland, bordering

DUGONG. Slow-moving and harmless, the dugong is herbivorous and becoming rare. It is sometimes suggested as the original of the mermaid legend, but a close-up view is disillusioning. Photo: Associated Press.

chair and an electric shock at 1,800–2,000 v. administered.

ELECTRODE. A conductor by means of which a current passes into or out of a substance, e.g. the electrodes of an electrolytic cell, an electric furnace, a discharge-tube, or a radio valve. The term is also applied to conducting elements separated by an insulating material as in a capacitor. *See also* ANODE and CATHODE.

ELECTRO-ENCEPHALOGRAPHY. In E.E. electrodes are fixed to the scalp and by means of electronic apparatus the electrical discharges of the brain can be studied. It is used in studying and diagnosing conditions in the brain, such as epilepsy and tumours.

ELECTROLYSIS. The production of chemical changes by ionic migration and discharge. Certain compounds, principally acids, bases, and salts, are decomposed by the passage of an electric current. Its most important application is in electro-plating.

ELECTROLYTE. A conducting medium or solution in which the electric current flows by virtue of chemical changes or decomposition and the consequent movement and discharge of ions in accordance with Faraday's laws of electrolysis (q.v.). The term E. is frequently used to denote a substance which, when dissolved in a specified solvent, produces a conducting medium. The term 'ionogen' has been suggested as an alternative to the term E. when used with this meaning.

ELECTROMAGNETIC INDUCTION. The production of an electromotive force in a circuit by a change of magnetic flux through the circuit. The e.m.f. so produced is known as an induced e.m.f., and any current that may result therefrom as an induced current. If the change of magnetic flux is due to a variation in the current flowing in the same circuit the phenomenon is known as self-induction; if due to a change of current flowing in another circuit, as mutual induction.

ELECTROMAGNETIC SYSTEM OF UNITS. A system of absolute electrical units (e.m.u.) based on the c.g.s. system (q.v.) and having, as its primary electrical unit, the unit magnetic pole. It involves the choice of the permeability of free space as a fourth fundamental unit.

ELECTROMAGNETIC WAVES. The 'waves' which occur in the natural process by which electric and magnetic effects are propagated. Electromagnetic waves are known as radio-waves, heat rays, infra-red rays, light, ultra-violet rays, X-rays, etc., depending on their frequencies.

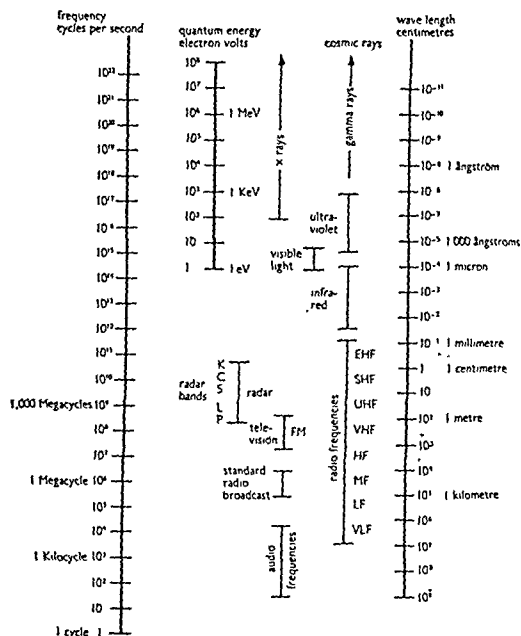

ELECTROMOTIVE FORCE. That force (e.m.f.) which tends to cause a movement of electricity in a circuit. The electrical condition for generating electromagnetic energy by the transfer of electricity in a certain direction. It is measured by the amount of energy generated by the transfer of unit quantity of positive electricity in that direction. This direction is called the direction of e.m.f.

The e.m.f. in a circuit is the excess of the sum of the e.m.f.s. of its constituent parts in one direction over the sum of those in the other direction. Symbol E or V. Practical unit: volt.

ELECTRON. An elementary particle containing the smallest known negative electric charge (4.803×10^{-10} e.s.u.) and having a mass of 9.11×10^{-28} gram at rest.

ELECTRON GUN. A structure comprising a cathode and one or more electrodes for producing an electron beam. It is an essential part of many electronic devices such as cathode-ray tubes (television tubes), electron microscopes, etc.

ELECTRONICS. The branch of science which deals with the emission of electrons from conductors, with the subsequent motion of these electrons, and with the construction of electronic devices. From

ELECTROMAGNETIC WAVES. Frequency spectrum of radiations from the sub-audible long waves (bottom), to the short wave cosmic rays (top).

Courtesy of Penguin Books from A Dictionary of Electronics by S. Handel.

1940 E. developed at an enormous rate due to the war-time need for radar (q.v.), and this impetus was maintained after the S.W.W. both for military and civil purposes. In the defence field E. forms an integral part of control and guidance systems for ballistic missiles, and methods for their detection, i.e. the Distant Early Warning system. Research into space requires the most advanced electronic techniques, for the control of artificial satellites from take-off to landing. In the civilian field E. played an integral part in the development of computers (q.v.). With the increasing complexity of electronic equipment there was an urgent need to save weight (in spacecraft) and bulk (in computers, etc.) which led to miniaturization. This has been possible due to the invention of the transistor (q.v.) and solid state circuitry (*see* SOLID CIRCUIT).

ELECTRON MICROSCOPE. An instrument similar to an optical microscope but using a beam of electrons instead of a beam of light, and electron instead of optical lenses. An electron lens is an electromagnetic or magnetic arrangement to control and focus the beam. Electrons are not visible to the naked eye, so instead of an eyepiece there is a fluorescent screen or a photographic plate on which the electrons are made to form an image. Since the wave-length associated with electrons is very much shorter than that of light much greater magnifications and resolutions are possible. Direct magnifications of 200,000 and total magnifications (after enlargement) of 3,000,000 have been achieved. The development of the E.M. has made possible the observation of very minute organisms, viruses, and even some molecules.

ELECTRON VOLT. A convenient unit for energy in atomic physics. It is the energy acquired by a particle carrying unit electronic charge when it falls through a potential difference of 1 volt, and is approximately equal to 1.602×10^{-19} erg.

ELECTRO-PLATING. The electro-deposition of metals upon metallic surfaces for decorative and/or

the scene of one of the most momentous events in British history – the evacuation of the bulk of the B.E.F. and a large number of French troops, 337,131 in all. The port was reopened to shipping in 1946, and Dunkirk gives its name to the 50-year Anglo-French treaty of alliance signed there on 4 March 1947. Pop. (1962) 28,388.

DUN LAOGHAIRE (doon lā'reh). Port of Dublin, Rep. of Ireland, lying 6 m. S.E. of Dublin, known as Kingstown 1821–1922. It has regular sea services with Holyhead and Liverpool. Pop. (1966) 51,772.

DUNLIN. A species of sandpiper (*Tringa alpina*) belonging to the snipe family (Scolopacidae). Very common as a shore bird on all coasts of the British Isles, it is about the size of a lark, and in summer is chestnut above, with a black patch on the breast.

DUNLOP, John Boyd (1840–1921). Scottish inventor. B. in Ayrshire, he practised as a veterinary surgeon in Belfast. To help his child win a tricycle race, he bound on rubber hose to the wheels and inflated it (1887). Later he took out a patent for pneumatic rubber tyres and was one of the founders of the D. Co. formed to market them.

DUNKIRK. Under a storm of shells and bombs the 'little ships' came across the Channel to the rescue. This historic photograph shows some of the troops waiting in orderly files for their embarkation.

DUNMOW (dun'mō). GREAT D. is an English market town on the Chelmer, Essex, on the site of a Roman station. LITTLE D., 2 m. away, is the scene of the annual D. Flitch trial. The ceremony, first held in 1244, consists of the presentation of a flitch of bacon to any married couple who 'will swear that they have not quarrelled nor repented of their marriage within a year and a day after its celebration'. Pop. Gt. D. c. 3,500.

DUNNE, Finley Peter (1867–1936). American humorist. B. at Chicago, he contributed (1891–1900) sketches to the *Times-Herald* of Chicago, supposed to be the work of Martin Dooley, an Irish-American saloon-keeper and philosopher with a gift for pungently humorous comment on the affairs of the day.

DUNNE, John William (1875–1949). British philosopher. In *An Experiment with Time* (1927) he developed *Serialism*, a theory framed to afford a rational explanation of phenomena ascribed to telepathy or clairvoyance. D.'s other important works incl. *The Serial Universe* (1934), *The New Immortality* (1938), and *Nothing Dies* (1940).

DUNSANY (dun-sā'ni), Edward John Moreton Drax Plunkett, 18th baron D. (1878–1957). Irish author. He succeeded his father in the barony in 1899, and became famous for his fantastic stories, notably the Jorkens series, and plays.

DUNS SCOTUS, John (c. 1265–c. 1308). Medieval scholastic philosopher, known as *doctor subtilis*. B. in Scotland, he became a Franciscan monk and was ordained in 1291. He studied and lectured at Oxford and Paris, and was later transferred to Cologne, where he d. D.S. wrote commentaries on the Bible and

Aristotle, and is generally regarded as the leader of the Franciscan school which criticized the Aristotelianism of the Dominican, St. Thomas Aquinas.

DUNSTABLE (dun'stabl). English town (bor.) in S.W. Beds, 30 m. N.W. of London. Whipsnade zoo is near. Printing, engineering, etc., are carried on. Pop. (1961) 25,618.

DUNSTAN, St. (c. 924–88). English prelate and statesman. B. near Glastonbury, the son of a West Saxon noble, he became a monk, and c. 945 was appointed abbot of Glastonbury. There he rebuilt the church and made the abbey a famous centre of education. Under Edred and Edgar he was chief minister, and in 959 he became bishop of London and in 961 archbishop of Canterbury.

DUNSTERVILLE, Lionel Charles (1865–1946). British soldier. He was a school friend of Rudyard Kipling, who had him in mind when creating the character of Stalky in *Stalky & Co*. In 1918 D. commanded an expedition to the Caucasus to save the Baku oilfields from the Turks and Bolsheviks, as described in *The Adventures of Dunsterforce* (1920).

DUNWICH (dun'ich). Village on the coast of E. Suffolk, England; all that remains of a once substantial town, gradually washed away and submerged.

DUODECIMAL SYSTEM. System of arithmetic notation using 12 as a base, superior to the decimal system in that 12 has a high divisibility (2, 3, 4, 6) and the gross (12 dozen) also has numerous divisors. D. societies exist for its promotion in the U.K. and U.S.

DUPARC (dūpahrk') (Marie Eugène) Henri (Fouques) (1848–1933). French composer. B. in Paris, he studied under César Franck, and later helped to found the National Musical Society. His songs, though only 15 in number, are of great importance for their high intrinsic quality and their place in the history of French song-writing.

DUPLEIX (düpläks'), Joseph François (1697–1763). French administrator. He first went to India in 1715 and became Governor-General of French India in 1742. He made it his object to eject the British from India and to establish French supremacy in native politics. Clive's victory at Arcot in 1751 destroyed his plans, and in 1754 he was recalled.

DU PONT (düpoñ'), Eleuthère Irénée (1771–1834). American chemical manufacturer. B. in Paris where he studied gunpowder manufacture under Lavoisier (q.v.), he later managed his father's printing works, pub. counter-revolutionary pamphlets, but was forced by the Revolution to flee to America, there founding the chemical manufacturing firm of D.P. de Nemours at Wilmington, Delaware, in 1802. This firm has provided explosives for every war in which the U.S. has since been engaged and in 1950 was appointed by the U.S. Atomic Energy Commission to run its Savannah River plant. Nylon (1938), the first synthetic fibre, was a D.P. invention.

DUPRÉ (düprä'), Marcel (1886–). French composer. Director of the Paris Conservatoire 1954–6, where he was a prof. 1926–54, he has been organist of St. Sulpice since 1934 and in 1961 was Pres. of the Académie de Beaux Arts. D.'s numerous organ works have enriched the instrument's repertory.

DURALUMIN. An aluminium base alloy containing copper, manganese, magnesium, silicon, and iron. Developed by a German engineer, Wilm, before the F.W.W., it possesses the remarkable property of 'age hardening', and is exclusively used in the rolled or forged condition.

DURAS (dürah'), Marguerite (1914–). French writer. Ed. at the Sorbonne, she graduated in law, and her works incl. short stories (*Des Journées entières dans les Arbres*), plays (*La Musica*), film scripts (*Hiroshima Mon Amour*), and novels such as *Le Vice-Consul* (1966), evoking an existentialist world from the actual setting of Calcutta.

DURAZZO. Italian form of DÜRRES.

ELGIN MARBLES. Housed in a gallery specially built, and opened in 1963, the marbles include this panel from the Parthenon frieze showing horsemen in the annual Panathenaic procession to the shrine of Athene in celebration of the union of Attica under Theseus. Photo: British Museum.

Mary Ann Evans (1819–80). B. at Chilvers Coton, Warwicks, she received a strictly evangelical upbringing, but on moving to Coventry with her father in 1841 was converted to free thinking. In 1844 she undertook a translation of Strauss's *Leben Jesu*, and in 1850 began contributing to the *Westminster Review*, of which she became assistant editor under John Chapman 1851–3. At this period she made the acquaintance of Carlyle, Harriet Martineau, Herbert Spencer, and George Henry Lewes. Lewes was married but separated from his wife, and in 1854 E. entered upon a union with him which she regarded as a true marriage and which continued until his death. With Lewes' encouragement she pub. 'Amos Barton', the first of the *Scenes of Clerical Life*, in 1857 under the name of George Eliot. These were successful, and in the following years she won fame with *Adam Bede*, which like its successors, *Mill on the Floss* (1860) and *Silas Marner* (1861), was set in her native county. Less happy were *Romola* (1863), dealing with 15th cent. Italy, and *Felix Holt, the Radical* (1866), which entered the political field. Her next novel, *Middlemarch* (1872), returned to a Warwicks background and is now recognized as E.'s finest work and one of the greatest novels of the cent. Her final work, *Daniel Deronda* (1876), an impassioned plea against antisemitism, tends to lose itself in obscurity. She also wrote some poetry. In 1880 she m. her old friend John Cross (1840–1924). See illus. p. 394.

ELIOT, Sir John (1592–1632). English statesman. B. in Cornwall, he became an M.P. in 1614, a vice-admiral, through Buckingham's patronage, in 1619, and in 1626 was sent to the Tower for demanding Buckingham's impeachment. In 1628 he was primarily responsible for the Petition of Right, and with other parliamentary leaders was imprisoned in the Tower in 1629, where, refusing to submit, he died.

ELIOT, Thomas Stearns (1888–1965). American-

born poet and critic; a British subject since 1927. B. at St. Louis, Missouri, he was ed. at Harvard, Paris, and Oxford. He settled in London in 1915 and was for a time a bank clerk, later lecturing and entering publishing. In 1917 E.'s first book of verse, *Prufock and other Observations*, caused a sensation by its daringly experimental verse form and rhythms. His reputation was estab. by the desolate modernity of *The Waste Land* (1922). *The Hollow Men* (1925)

T. S. ELIOT

Photo: Angus McBean.

renewed the same note, but *Ash-Wednesday* (1930) revealed the change in religious attitude which led him to become an Anglo-Catholic. Among his other works are *Four Quarters* (1944), a religious sequence in which he seeks the eternal reality, and the poetic dramas *Murder in the Cathedral* (1935), *The Cocktail Party* (1949), *The Confidential Clerk* (1953), and *The Elder Statesman* (1958). In 1948 he received the O.M. and a Nobel prize: Medal of Freedom 1964.

ELISABETHVILLE. Town of the rep. of Congo (cap. Kinshasa), cap. of the prov. of S. Katanga, and centre of a great copper- and uranium-mining region. It was re-named Lubumbashi 1966. Pop. (est.) 130,000.

ELI' SHA. Hebrew prophet, the successor of Elijah in the mid-9th cent., B.C.

ELIZABETH I (1533–1603). Queen of England. The dau. of Henry VIII and Anne Boleyn, she was b. at Greenwich on Sept. 7, 1533. In Mary's reign her Protestant sympathies brought her under suspicion, and she lived in retirement at Hatfield until in Nov. 1558 she became queen. Her first task was to bring about a religious settlement sufficiently broad to exclude any extremists.

ELIZABETH I. Her court painter, Marcus Gheeraerts (1561–1635), shows the Queen, splendidly triumphant, before representations of the Armada, which is storm-tossed and defeated, to the right. Gheeraerts was later also court painter to James I. Courtesy of the Duke of Bedford: Woburn Collection.

Many unsuccessful attempts were made by Parliament to persuade E. to marry or settle the succession. Courtship she found a useful diplomatic weapon, and she sought emotional relief in flirtation with a succession of favourites, among them Leicester, Raleigh, and Essex.

The arrival in England in 1568 of Mary, Queen of Scots, and her imprisonment by E. caused a political crisis and a rebellion of the feudal nobility of the N. followed in 1569. Friction between English and Spanish seamen hastened the breach with Spain. When the Dutch rebelled against Spanish tyranny E. secretly encouraged them; Philip II retaliated by aiding Catholic conspiracies against her. This undeclared war continued for many years, until the landing of an English army in the Netherlands in 1585, and Mary's execution in 1587, brought it into the open. Philip's Armada, in 1588, met with total disaster.

The war with Spain continued with varying fortunes to the end of the reign, while events at home foreshadowed the conflicts of the 17th cent. Among the Puritans discontent was developing with E.'s religious settlement; and several were imprisoned or executed. Parliament showed a new independence, and in 1601 forced E. to retreat on the monopolies

(*Sorghum*), also known as Indian millet, grown as cereals in parts of Asia, Africa, etc. *S. vulgare*, is the chief cereal of many parts of Africa.

DURRELL, Laurence George (1912–). English poet and novelist. B. in India, he was for a time in the Foreign Service, and has lived mostly in the E. Mediterranean countries about which he writes. His verse incl. *A Private Country* (1943), *Cities, Plains and People* (1946), and *On Seeming to Presume* (1948); and his tetralogy *Justine, Balthazar, Mountolive and Clea* (1957–60) made him one of England's leading novelists: on the Continent his reputation stands even higher. His brother, Gerald Malcolm D., (1925–) is a zoologist and writer and runs the Jersey Zoological Park.

L. G. DURRELL

DÜRRENMATT, Friedrich (1921–). Swiss dramatist. The son of a Protestant pastor, he writes in German, and takes crime and violence as the mainstay of his grotesquely farcical tragedies. These incl. *The Visit* in which a millionairess corrupts a village by bribing the people to avenge her grudge against a girlhood lover, and *The Physicists* (1962), dealing with 3 normal nuclear physicists who take refuge from mad reality in a Swiss asylum.

DÛRRES (dōō'rās). Chief port of Albania, cap. of D. district, chief commercial and communications centre of the country with flour mills, soap and cigarette factories, distilleries and an electronics plant. It is 20 m. W. of Tirana. Pop. (1966) 45,935.

DUSE (dōō'se), Eleanora (1859–1924). Italian actress. B. in Lombardy, she began acting at the age of 4, and when 14 played Juliet in Verona. In 1879 her success in Zola's *Thérèse Raquin* led to her engagement as leading lady in Cesare Rossi's company. She estab. a reputation as one of the greatest actresses of all time. Her association with D'Annunzio began in 1897, and is recorded in his novel *Il Fuoco* (*The Flame of Life*). He wrote *La Gioconda* for her. She made her last London appearance in 1923, and d. during a visit to America.

DUSHANBE (dōōshan'bā). Cap. of Tadzhik S.S.R., U.S.S.R., and of D. region, c. 100 m. N. of the Afghan frontier and 200 m. S. of Tashkent. An important road, rail and air centre. D. has cotton mills, tanneries, meat-packing factories, printing works, etc., and is the seat of Tadzhik state univ. Developed as Stalinabad from 1929 on the site of the ancient village of D., it reverted to its old name in 1951. Pop. (1967) 332,000.

DÜSSELDORF. German industrial city on the right bank of the Rhine, 16 m. N.N.W. of Cologne, cap. of N. Rhine-Westphalia. It is a great river port, and a leading industrial centre of the Ruhr area. There are large iron foundries, engineering, textile, and chemical works, paper mills, breweries, etc. Art and cultural life make it an important city of W. Germany. Pop. (1966) 696,615.

DUSTPOWL. Name given to a large area in the U.S.A. covering western Kansas, and parts ('panhandles') of Oklahoma and Texas which lie just to the S. It is swept by winds from N. to S. The native grasses which formerly covered it and held down the soil were removed to make way for wheat-farming, and during the drought years of 1934–7 hundreds of tons of loose topsoil was blown away into the Gulf of Mexico. Many of the farmers abandoned their worthless farms and migrated westward (see Steinbeck). By planting trees as windbreaks and re-intro-

ducing suitable grasses, etc., much of the area has been rehabilitated.

DUTCH ART, LANGUAGE, LITERATURE. See under NETHERLANDS.

DUTCH EAST INDIES. See INDONESIA.

DUTCH GUIANA. See SURINAM.

DUTT, Toru or Tarulata (1856–77). Indian author and poetess. B. in Calcutta of a Christian family, she visited France as a young girl and later translated French poems and speeches into English. She also wrote a French novel, *Le Journal de Mlle. D'Arvers*, and, in English, *Ancient Ballads and Legends of Hindustan*.

DUUN, Olav (1876–1939). Norwegian novelist. B. near Trondheim, he made this neighbourhood the scene of all his novels. Best known are the series which tell the story of the Juvik family from about 1800 down to our own times.

DUVAL (dūvah'), Claude (1643–70). English highwayman. B. in Normandy, he came to England at the Restoration as a valet, but turned highwayman, and his gallantry was as famous as his robberies. He was hanged at Tyburn.

DUVEEN OF MILLBANK, Joseph D., baron (1869–1939). British art patron. Son of Sir Joseph D. (d. 1908), who estab. in 1866 an antique business in Hull and through whose generosity the Turner Wing at the Tate Gallery was completed, he was created a baron in 1933, taking his title from the site of the Tate, whose further extensions he financed. He also made lavish gifts to the National Gallery, National Portrait Gallery and British Museum, and endowed a chair of history of art at London univ.

DUVIVIER (dūvivyer'), Julien (1896–). French film director, of such French classics as *Poil de Carotte*, *Un Carnet de Bal*, *La Fin du Jour* (1938).

DVINSK. Russian name of DAUGAVPILS.

DVOŘÁK (dvor'zhahk), Antonín (1841–1904). Czech composer. B. near Prague, the son of a butcher, he early showed a talent for music, and in 1857 went to Prague. There he entered an organ school and supported himself by playing the viola in cafés, etc. In 1862 he joined the orchestra of the Prague National Theatre, later gained an appointment as a church organist, and also taught. A patriotic hymn for chorus and orchestra gained him popularity in 1872, and in 1875 an annual allowance from the Austrian govt. gave him financial independence. His series of Slavonic dances (1877) were a further success, and his *Stabat Mater* was performed by the London Musical Society in 1883. In 1892–5 he was director of the National Conservatory in New York. His interest in Negro music is evident in the *New World Symphony* (1893) and such works as the *Nigger Quartet*. In 1895 he returned to Prague, where he later became head of the Conservatoire. D. wrote 9 operas, incl. *The Water Nymph* (*Rusalka*); large-scale choral works, the *Carnival* and other overtures, violin and 'cello concertos, chamber music, piano pieces, songs, etc.

DYE. Substance which, applied in solution to fabrics, imparts a colour resistant to washing. Direct Ds. combine with the material of the fabric, yielding a coloured compound; indirect Ds. require the presence of another substance (a mordant), with which the fabric must first be treated, and which will cause precipitation of the coloured compound in the fibres; vat Ds. are usually colourless soluble substances which on oxidation by exposure to air yield an insoluble coloured compound.

Naturally occurring Ds. incl. indigo, madder (alizarin), logwood and cochineal, but industrial Ds. are usually synthetic, and are classified according to the substances from which they are produced, or the characteristic chemical groupings in the molecules, e.g. the azo-dyestuffs, acridine, anthracene and aniline. Colour can now be diagnosed by photoelectric instruments which measure the red, blue and

ELM, with flowers and fruit.

ELLIS, Vivian (1904–). British composer. He studied the piano under Myra Hess and composition at the R.A.M. and began his career as a concert pianist. Among his successes were the music for A. P. Herbert's *Bless the Bride* (1947) and *Water Gipsies* (1955), and the music and lyrics for *And So to Bed* (1951). He has also composed film music and songs.

ELLO'RA. Archaeological site in the N.-W. Deccan, Maharashtra State, India, with 35 cave temples—Buddhist, Hindu and Jain—varying in date from the late 6th cent. to the 9th cent. They incl. some of the greatest of India's architectural treasures: Visvakarma (an assembly hall c. 86 ft. long with a huge image of the Buddha), Tin Thal (a 3-storeyed Buddhist monastery cave), the Ramesvara cave (with beautiful sculptures) and Siva's Paradise, the great temple of Kailasa.

ELLSWORTH, Lincoln (1889–1951). American explorer. With Amundsen and Nobile he flew the dirigible *Norge* from Spitzbergen to Alaska in 1926, and in 1931 joined Wilkins in a trans-Arctic submarine expedition. He also made important flights into the Antarctic in 1935 and 1939.

ELM. A common genus (*Ulmus*) of trees of the Ulmaceae family, distributed throughout the temperate latitudes of the N. hemisphere, and in mountainous parts of the tropics. The common European E. (*U. campestris*) is distributed widely throughout Europe, N. Africa and Asia Minor and may grow to 150 ft.; its small, purplish-brown flowers are borne in tufts and appear before the leaves. Other species are the Scotch or wych E. (*U. montana*) found in N. Britain, where it is indigenous, and the N. American white E. (*U. americana*) and red or slippery E. (*U. fulva*). [The fungus disease *Ceratocystis ulmi*, which first appeared in the Netherlands, has greatly reduced the numbers of E. trees in Europe and N. America.]

ELMAN, Mischa (1891–1967). American violinist. Russian by birth, he received his musical education at Odessa and St. Petersburg and made his first professional appearance at Berlin in 1904 and in London the following year. A romantic player, he was noted chiefly for his rendering of Tchaikowsky. E. became American in 1923.

EL PASO (pah'soh). City of Texas, U.S.A., on the Rio Grande, at the foot of Mt. Franklin (7,100 ft.); it is the centre of a prosperous agricultural, mining, and cattle-raising area. Pop. (1960) 276,687.

ELPHINSTONE (el'finstōn), William (1431–1514). Scottish statesman and churchman. B. at Glasgow, he became bishop of Ross in 1481, held high ministerial posts, and estab. Aberdeen university in 1494.

EL SALVADOR. See SALVADOR, EL.

ELSIE, Lily (1886–1962). English actress B. in London, she appeared in many pantomimes and light comedies on the English stage, notably in *A*

Chinese Honeymoon in 1902, and as Sonia in *The Merry Widow* in 1907.

EL SINORE. Another form of HELSINGÖR.

ELSSLER, Fanny (1810–84). Austrian dancer, b. in Vienna. She and her sister, Thérèse E. (1808–78), were trained for the ballet at Naples. They usually danced together, and achieved an immense triumph in Berlin in 1830, and later appeared in other European capitals and in the U.S.A. Fanny m. a banker in 1851; Thérèse m. Prince Adalbert of Prussia.

ÉLUARD (ehlü-ard'), Paul. Pseudonym of the French poet Eugène Grindel (1895–1952). B. in Paris of working-class parents, he expressed the suffering poverty of the people in his verse, and was a leader of the Surrealists. He fought in the F.W.W. which inspired his *Poèmes pour la Paix* (1918), and was a member of the Resistance in the S.W.W. His other vols. incl. *Chanson complète, Au Rendezvous Allemand* and *Un Leçon de morale*.

ELVIN, Violetta (1925–). American ballerina. B. in Russia as Violetta Prokhorova, she was ed. at the Bolshoi Theatre School. She was prima ballerina with the Royal Ballet 1951–6, and has made such films as *The Queen of Spades*.

ELWES (el'wez), Simon (1902–). British portrait painter. He studied at the Slade and in Paris, and later became a successful portrait painter in England and the U.S.A. An official war artist in the S.W.W., he painted portraits of F.Ms. Sir William Slim, Smuts, and Lord Wavell.

ELY. City in Cambs on the Ouse, 15 m. N.N.E. of Cambridge. It was chief town of the former admin. co. of the Isle of E. The cathedral, which dates from the 11th cent., is one of the largest in England. E. is an agricultural town with beet-sugar works. Pop. (1961) 9,815.

ELY, Isle of. A former administrative co. of England, in the geographical co. of Cambs (q.v.), with which it was linked from 1964.

ELYOT, Sir Thomas (c. 1490–1546). English diplomat and scholar. In 1523 he was made clerk to the Privy Council by Wolsey, and in 1531 pub. *The Governour*, the first treatise on education in English.

ELYSEE (älēzā'), Palace of the. Building in Paris

ELY. The cruciform cathedral is seen from the bishop's garden to the south-east. Its 215 ft. octagonal tower, with partially detached side turrets, was designed by Alan of Walsingham, the sacrist [1322–8], to replace a Norman structure which collapsed in 1322.

Photo: A. W. Kerr

fly the Atlantic - in 1928, as a passenger from Newfoundland to Burry Port, Wales; also the first woman to fly the Atlantic alone, in 1932 from Harbour Grace to Londonderry, in 15 hrs. 18 min. While making a Pacific flight in July 1937 she disappeared without trace. She was the wife of G. P. Putnam, American publisher.

EARL. In the British peerage, the 3rd title in order of rank, coming between marquess and viscount; it is the oldest of British titles, being of Scandinavian origin. The premier earl is Arundel, now united with the dukedom of Norfolk. An earl's wife is a countess.

EARL MARSHAL. In England, the 8th of the great Officers of State; the office has been hereditary since 1672 in the family of Howard, the dukes of Norfolk. The E.M. is head of the College of Arms, and arranges State processions and ceremonies.

EARLOM (er'lom), Richard (1742-1822). British mezzotint engraver, the first to use the point in mezzotint work. His engravings after Hogarth's *Marriage à la Mode* are best known.

EARLY ENGLISH. In architecture, name given by Thomas Rickman (1776-1841) to the first of the 3 periods of English Gothic. It covers the period from about 1189 to about 1280, and is characterized by lancet-windows without mullions, often grouped in threes, fives, or sevens; the pointed arch; pillars of stone centres surrounded by shafts of black Purbeck marble; dog-tooth ornament, etc. Salisbury cathedral is almost entirely Early English.

EARTH. The planet on which we live: it is the 3rd planet outward from the sun, lying with its satellite, the moon, between Venus and Mars. Its path round the sun, i.e. that of its revolution, is an ellipse of which one focus is formed by the sun. The mean distance of the E. from the sun is about 93 million miles. The plane of its orbit is called the ecliptic, and it is inclined to the earth's equatorial plane at an angle of $23\frac{1}{2}^\circ$; it is this inclination that is responsible for the phenomena of the seasons. The E., moving at an average speed of $18\frac{1}{2}$ m. a second, makes a complete circuit in the solar year, which measures 365 days 5 hr. 48 min. 46 sec. It has also a daily movement, rotating about its own axis in 23 hr. 56 min. 4.1 sec., which is responsible for day and night. By using atomic clocks it has been possible to prove that the E.'s rate of rotation is slowing down.

The E. is an oblate spheroid; its equatorial diameter is 7,926.7 m. and its polar diameter 7,900 m.; its equatorial circumference is 24,902 m. and its polar circumference 24,860 m. The area of the land surface of the globe is 57.5 million sq. m.; the sea floor covers 139.4 million sq. m. or over 70 per cent. The greatest known height on the E.'s surface is Mt. Everest, which reaches 29,002 ft. above sea-level; the greatest oceanic depth reached is 37,800 ft. (7 m.) in the Marianas trench, off Guam, in the S. Pacific, by the bathyscaphe *Trieste* (U.S.N.) Jan. 23, 1960.

The origin of the E. is disputed, one theory being that it may have been formed from a swarm of meteorites which arose when matter, drawn from the sun by the attraction of a passing star, condensed. It is thought to consist of an inner core extending c. 800 m. from the centre (possibly solid iron and nickel); an outer core c. 1,400 m. thick (possibly molten iron and nickel); and a mantle of solid rock c. 1,800 m. thick, separated from the outer crust (varying in thickness from 3 to 5 m. beneath certain points in the oceans to c. 30 m. beneath the continents) by the Mohorovičić Discontinuity (see **MOHOLE**). The age of the elements composing the crust and atmosphere is est. at 5,000 million years. Crustal movements have been intensively studied in recent years, and it is probable that in the last 150 million years Britain and N. America have moved from positions near the equator, with at the same time a widening of the gap between them of c. 1,000 m. An analysis

of radioactive materials in the crust suggests that it was formed c. 2,800 million years ago.

EARTHQUAKE. A shaking or convulsion of the earth's surface, the scientific study of which is called seismology. Most Es. are due to sudden earth movements, generally along faults (fractures or breaks) in the strata - these tectonic Es. are the greatest and most widespread in their effects. Es. of one kind or another are constantly occurring, and severe Es. occur every fortnight or so. The great majority are in marine areas.

The chief zones of E. activity constitute two belts: (a) the circum-Pacific belt, running from the islands in the western Pacific to Japan, the Aleutians, and down the whole of the W. coast of the American continent to Antarctica; (b) the Mediterranean belt, which stretches from the Cape Verde Is. and Portugal along the mountain backbone of Europe into Asiatic Turkey, through the Himalayas to Indonesia, where it connects with the former belt. E. disaster areas incl. Tokyo and Yokohama and Agadir and Skopje (qq.v.).

EARTHWORMS. Name given to those members of the Oligochaeta which are mainly terrestrial in their habits. Es. are hermaphrodite, and deposit their eggs in cocoons. They live by burrowing in the soil, feeding on the organic matter it contains. They play a most important role in the formation of humus, by irrigating

the soil, and levelling it by transferring earth from the deeper levels to the surface as castings. The common British Es. belong to the genera *Lumbricus* and *Allolobophora*. These are comparatively small, but some tropical forms reach 3 or 4 ft., and *Megascolides australis*, of Queensland, attains 11 ft. in length.

EARWIG. Insects, forming the family Forficulidae and order Dermaptera. The fore-wings are short and leathery, and serve to protect the hind-wings, which are large and are folded fan-wise when at rest. The family is represented in Britain by several species. It feeds at night on the tender parts of plants, flowers, etc., and also on other insects, dead or living. It rarely flies.

EASEMENT. In law, a class of rights which a person or persons may have over the land of another. The commonest example is a right of way; others are rights to bring water over another's land, and to prevent building so as to exclude light from existing windows.

EAST. Point of the compass indicating that part of the horizon where the sun rises, i.e. when facing N., E. is to the right. The E. has held an important place in various religions; ancient pagan temples had their altars at the E. end, a practice bound up with sun-cult and sacrifices made facing the rising sun. In the 2nd cent. it became customary for Christians to worship facing the E., and also to bury the dead with their feet towards the E., so that on the resurrection-morn they would be facing the quarter whence Christ was to come in glory.

EAST AFRICA. General term covering Kenya, Tanzania, and Uganda (qq.v.): in 1967 the EAST AFRICAN COMMUNITY superseded earlier organisations for shared services in the three countries - communications, co-ordination of commerce and industry, finance, social and research services, and labour and industrial relations. The H.Q. is at Arusha in Tanzania, and the Legislative Assembly has 9 members from each country. The *University of E.A.* (1963)

bringing together employers requiring labour and workers seeking employment. In the U.K. these may be organized by the State or a local authority, or as a business venture; a similar system operates in the U.S.A. Following the recommendations of the royal commission in England on the Poor Laws, a national system was estab. by the Labour Exchanges Act of 1909; this was originally controlled by the Board of Trade, but in 1917 control was transferred to the Ministry of Labour. When unemployment insurance was introduced in 1912 its administration was entrusted to the E.E.s., which also became responsible during and after the S.W.W. for the registration of men and women for national service.

EMPSON, William (1906–). English poet. B. in Yorks, he has been prof. of English literature at Tokyo, Peking and from 1953 at Sheffield. His verse, *Collected Poems* (1955), is obscure and he has pub. unusual critical studies, e.g. *Seven Types of Ambiguity* (1930) and *The Structure of Complex Words* (1951).

EMU (ē'mu). Bird of the Dromaeidae family of the *Ratitae* type. With the exception of the ostrich, the largest of living birds, it is found only in Australia and stands about 5 or 6 ft. high. The E. has small rudimentary wings, short feathers on the head and neck, and a curious bag or pouch in the windpipe of the female that enables it to emit the characteristic loud booming note. In appearance it is dull and dowdy.

EMU

ENA'MEL. A vitrified substance used as a coating for pottery and porcelain; when transparent it is known as a 'glaze'. Also a vitreous substance of various colours used for decorative purposes on a metallic or porcelain surface. In *cloisonné* the various sections of the design are separated by thin metal wires or strips soldered to the metal base.

The art of enamelling dates back to ancient times, and is believed to be of Western Asiatic origin. The Egyptians, Greeks, and Romans enamelled their jewellery, and enamel-work dating from between the 6th and the 9th cents. has been found in the British Isles. Byzantium was famed for enamels from about the 9th to the 11th cents., the finest known work of this period being the famous altar-piece at St. Mark's, Venice, which was brought from Constantinople.

These were emulated in Europe, and some magnificent work was produced in Saxony, Brunswick, and in the Rhine valley. German enamellers were later employed in France, and during the 13th and 14th cents. the art was introduced into Italy. The chief centres of enamelling during the 15th and 16th cents. were the cities of Lorraine and Limoges. Enamelling was not introduced into China until about the 13th cent.

ENAMEL. The Castellain brooch in the British Museum, found in S. Italy and dated c. 600.

ENCAUSTIC PAINTING. A process of painting, commonly used in ancient times by the Egyptians, Greeks, and Romans, in which a medium consisting chiefly of wax was employed.

ENCKE (eng'keh), Johann Franz (1791–1865).

German astronomer. He was famed for his observations on comets, esp. the one of 1819 that bears his name, although it had been previously observed in 1786, 1795, and 1805.

ENCLOSURES. The conversion of common lands into private property, or the substitution of enclosed fields for the open-field system. This process, which has been almost entirely limited to England, began in the 14th cent. and became widespread in the 15th and 16th, the enclosed fields often being used for sheep-rearing. The distress thus caused led to serious rebellions in 1536, 1569, and 1607, while the numerous government measures against depopulation introduced during 1489–1640 were sabotaged by the land-owning J.P.s. A new wave of E. during 1760–1820 reduced the yeomanry to agricultural labourers, or drove them off the land. A reaction came after 1860, and in 1876 E. of commons was limited by statutes.

ENCYCLICAL (ensī'klikal). Ecclesiastical term, denoting a letter addressed by the Pope to all the bishops of the R.C. Church.

ENCYCLOPEDIA (ensiklope'dia). An alphabetical work of reference covering either the entire field of human knowledge or one specific subject. The earliest extant E. is the *Historia Naturalis* of Pliny the Elder (A.D. 23–79). The first alphabetical E. in English was the *Lexicon Technicum* (1704), compiled by John Harris. In 1728 Ephraim Chambers pub. his *Cyclopaedia*, which co-ordinated the scattered articles by a system of cross-references, and was translated into French (1743–5). This translation formed the basis of the *Encyclopédie* ed. by Diderot and d'Alembert, pub. 1751–72. By this time the system of engaging a body of expert compilers and editors was estab., and in 1768–71 the *Encyclopaedia Britannica* first made its appearance.

Famous foreign Es. incl. the Chinese E. (printed 1726); the German *Conversations-Lexikon* of Brockhaus; and the French *Grand Dictionnaire Universel du XIX^e Siècle* of Pierre Larousse (1865–76).

ENDIVE (en'div). Annual plant of the Compositae family, grown for use in salads and cooking.

ENDOCRINE GLANDS. See DUCTLESS GLANDS.

ENERGY. There are many forms of E. – the ability to do work – mechanical, electrical, chemical, thermal, nuclear, etc. According to the special relativity theory, E. and mass are equivalent, being related by Einstein's equation $E=mc^2$ where E is energy, m is the equivalent mass and c is the velocity of light.

ENFIELD. Bor. of Greater London, England. It has an old parish church and a grammar school founded in 1557, and incl. Edmonton (q.v.). At E. Lock is the Royal Small Arms factory. Pop. (1967) 266,640.

ENGELS, Friedrich (1820–95). German socialist. B. at Barmen, he was sent in 1842 to work in the family cotton-factory at Manchester by his father, and there he estab. contact with the Chartists, and collected material for his *Condition of the Working Class in England* (1845). In 1844 began his lifelong friendship with Marx, in collaboration with whom he worked out the materialist interpretation of history and in 1847–8 wrote the *Communist Manifesto*. Returning to Germany during the 1848–9 revolution, E. worked with Marx on the *Neue Rheinische Zeitung*, and fought on the barricades in Baden. After its defeat he returned to Manchester, and for the rest of his life largely supported Marx and his family. The lessons of 1848 he summed up in his *Peasants' War in Germany* (1850) and *Revolution and Counter-Revolution in Germany* (1851).

ENGINEERING. The design, construction and maintenance of works, machinery, and installations for civil or military purposes, e.g. roads, railways, bridges, harbour installations, engines, ships, aeroplanes generation, transmission and use of electrical

leading wool-exporting port. Pop. (1960) 116,056 (49,295 white).

EAST LOTHIAN. A south-eastern county of Scotland lying between the Firth of Forth and the North Sea on the N. and Berwickshire on the S. The N. part is a broad plain, where agriculture is the leading industry; in the S. the land rises to the Lammermuir hills (1,749 ft.). The Tyne is the only important river. Coal, iron ore, and limestone are obtained. Haddington is the co. town. Area 267 sq. m.; pop. (1961) 52,653.

EASTMAN, George (1854–1932). American inventor and philanthropist. B. at Waterville, N.Y., he was interested in photography, and after manufacturing dry plates produced the first effective roll film in 1884 and in 1888 the 'Kodak' camera. He gave many millions of dollars to educational institutions.

EAU DE COLOGNE (ō de kolōn'). A refreshing perfume whose invention is ascribed to Giovanni Maria Farina (1685–1766) who moved from Italy to Cologne in 1709, and there manufactured the perfume.

EBBW (e'boo) **VALE.** Mining town (U.D.) in Monmouthshire, England; there are large iron, steel, and tinplate works. Aneurin Bevan (q.v.) was M.P. for E.V. 1929–60. Pop. (1961) 28,631.

EBERT (eh'bert), **Friedrich** (1870–1925). German statesman. B. at Heidelberg, he was a saddler, and was elected to the Reichstag as a Social Democrat in 1912. He opposed the F.W.W. and on the abdication of the Kaiser in Nov. 1918 became Chancellor and formed a provisional govt. In 1919 he was elected 1st Pres. of the rep. and was re-elected in 1922.

E'BONITE. A dark brown, horny substance produced by the prolonged heating of rubber with approx. half its weight of sulphur. It is mainly used as an electrical insulator.

E'BONY. Hardwood, obtained from trees of the genus *Diospyros* of the family Ebenaceae found in the tropics. It is very heavy, hard and black; takes a fine polish; and is used in cabinet-making, inlaying, and also for piano-keys, knife-handles, etc.

EBORACUM. Roman name for YORK. The archbp. of York subscribes himself 'Ebor'.

ÉBOUE (ehboo-eh'), **Félix** (1884–1944). French colonial governor, the first Negro to be appointed. He became Gov. of Guadeloupe in 1936, of Chad in 1938, and as a supporter of the Free French was made Gov.-Gen. of Equatorial Africa by De Gaulle.

ECCLES, Sir John Carew (1903–). Australian physiologist. A student of Sir Charles Sherrington (q.v.) he worked at Oxford until 1937, and was prof. of physiology at the Australian Nat. Univ., Canberra, from 1951–66, when he undertook research in Chicago for the American Medical Assocn. For his research on conduction in the central nervous system he was elected F.R.S. in 1941, and in 1963 shared the Nobel prize (with Hodgkin, q.v., and Huxley) for physiology and medicine.

ECCLES. English industrial town (bor.) in Lancs, 4 m. W. of Manchester, of which it forms a suburb. The town, noted for its cakes, makes cotton and other textiles. Pop. (1961) 43,184.

ECHEGARAY (āchāgahrah'-i), **José** (1832–1916). Spanish dramatist. B. at Madrid, he became an engineer and professor of mathematics, and later was a cabinet minister, but is chiefly remembered as a playwright. He wrote some 60 dramas, the best of them being *O locura o santidad* (1877) and *El gran galeoto* (1881), and received the Nobel prize in 1904.

ECHIDNA (ekid'na) or **Spiny Ant-eater.** Name given to a family comprising 2 genera of mammals, in the order Monotremata, found in Australia and New Guinea. They slightly resemble the hedgehog,

are terrestrial in their habits, and subsist entirely upon ants, which they dig out by their powerful claws and lick up by their prehensile tongue. When attacked Es. roll themselves into a ball, or try to hide by burrowing in the sand.

ECHINODERMA or **Echinoderms** (eki'no-). One of the great phyla of the animal kingdom, divided into 5 main classes typified by the sea urchins (Echinoid), the starfish (Asteroid), the brittle star (Ophiroid), the feather-star or sea-lily (Crinoid), and the sea-cucumber (Holothuroid). They are exclusively marine animals, and most of them have a body covered with knobs or spines (echinoderma - Gk. for 'prickle-skinned') and small stalked out-growths which normally keep them fixed to the sea bottom.

ECHO SOUNDING and **ranging.** Sonar equipment (Sound Navigation and Ranging) is employed in underwater detection, ranging and depth measurement by means of a process similar to that used in radar. The time taken for an acoustic beam in the audible or supersonic range to travel to the underwater object, whose distance is required, and back to the source enables the distance to be found since the velocity of sound under water is known. See SONAR.

ECKHART (c. 1260–1327). German mystic, called Meister E. B. near Gotha, he became a Dominican, was provincial of the order for Saxony 1304–11, taught in Paris, Strasbourg, and Cologne, where in 1326 he was accused of heresy; in 1329 a number of his doctrines were condemned.

ECLIPSE OF THE MOON. The earth, moving between the sun and the moon, obscures its satellite at the apex of the umbra, or region in total darkness. The penumbra is the area in partial darkness surrounding the umbra.

ECLIPSE (ēklips'). Es. are of 2 kinds: solar and lunar. A solar E. occurs when the moon passes in front of the sun, and conceals it either totally or partially; during a total E. the sun's outer atmosphere (the corona) is visible to the naked eye. The next British total E. will take place in 1999. A lunar E. occurs when the moon passes into the shadow of the earth; direct sunlight is then cut off from the moon's surface, and the moon becomes dim until emerging from the shadow. Lunar Es. may be either total or partial.

ECOLOGY. The study of living organisms as they exist in their natural habitats. The term was first introduced by the German biologist, Ernst Haeckel, in 1866, but it did not come into general use until the present cent. The field of E. embraces all living organisms, and therefore the human race; but in the latter case it merges with sociology, etc.

ECONOMICS. The scientific study (formerly known as 'political economy') of the production, distribution and exchange of 'wealth' - anything and everything conducive to material welfare. Notable economists incl. Adam Smith, Ricardo, Malthus, J. S. Mill, Marx, W. S. Jevons and J. M. Keynes (qq.v.). The chief point in dispute in modern times is the respective spheres of state and private enterprise.

ECUADOR (ek'wador). A republic of S. America, situated on the W. coast, across the equator (from which it derives its name), and bounded by Colombia and Peru. The capital is Quito, 8,400 ft. above sea-level.

E. falls into 4 zones: (1) The Andean region or Sierra, formed by the Eastern and the Western Cordillera (of which the highest mountain is Chimborazo, 20,700 ft.), with the inter-Andean valleys; this district supplies the principal agricultural produce for

common native species, but Forestry Commission plantations naturally tend to the more rapidly exploited conifers.

Economic Life. England is primarily industrial, relying on imports to fill many of her needs, and since the S.W.W. has encountered recurrent difficulties in achieving a 'balance of payments' by an expansion of exports. Her industrial power was first built on the reserves of coal in the N. and Midlands, the iron and steel industries which grew up nearby, and their dependent railway engineering works, shipbuilding yards, etc. These are all still of importance, as are the cottons of Lancs and the woollens of Yorks, but the emphasis has shifted to the newer and more diversified industries. These incl. the manufacture of cars and commercial vehicles; all types of aircraft; hovercraft; electronic, nuclear power and telecommunications equipment; mining, agricultural and textile machinery; scientific instruments; finished diamonds; fertilisers, and other chemical products, especially those from petroleum; all kinds of man-made fibres; paper, leather and plastic goods; pottery and glass - for industrial and personal use; film and television programmes; sound recordings; and fashion goods. Exports of these are supplemented by 'invisible earnings' from world-wide banking and insurance interests and overseas investments.

The recent tendency has been for new industry to concentrate in the S.E., but long-term govt. schemes to revitalise declining areas, such as the N.E. (see TEESIDE), are proving successful. The govt. Industrial Reorganisation Corporation (1966) encourages efficiency and mergers to eliminate waste are frequent. New mineral surveys have revitalised old resources, e.g. Cornish tin and china clay resources; extended the scope of others, e.g. Yorkshire's potash and Derbyshire's fluorspar; and made entirely new discoveries, e.g. the oil and natural gas of the North Sea. The cap. is London, and other important towns are Birmingham, Bradford, Bristol, Canterbury, Coventry, Leeds, Leicester, Liverpool, Manchester, Newcastle, Norwich, Oxford, Plymouth, Portsmouth, Sheffield, Southampton, Stoke-on-Trent, Winchester and York.

The agricultural industry is increasingly mechanised, requiring fewer workers, and intensive. The chief crops are cereals (wheat, barley, oats and rye), vegetables (potatoes, beans, peas, cabbages, turnips), and sugar beet. Breeding cattle are exported and excellent meat, butter, cheese and milk produced on high quality grazing. Sheep are important both for meat and wool, and pigs for fresh meat and a bacon industry. Eggs and chicken, espec. on the controversial broiler-house system, are produced. Fruit - apples, pears, plums, cherries and strawberries - is grown in the southern half of the country; and tomatoes, salad crops, and flowers are grown under glass or in the open in favourable areas. Cod, haddock and herring are the chief catches in the great E. coast fishing ports, such as Hull, Grimsby, Yarmouth, and Lowestoft, and there are specialities such as oysters at Whitstable or lobsters in Cornwall.

Communications. The road and rail systems are being closely co-ordinated. British Rail (London, Midland, Western, Southern, Eastern and North-Eastern regions) provides fast passenger links between the principal towns, and freight-liner trains for goods, and the road system is being modernised with a series of fast motorways. Internal and external air services are good, and there has been general modernisation of seaports, besides such developments as the Milford Haven oil terminal and the bulk handling facilities at Immingham (q.v.).

Population. The English people are descended in the main from Anglo-Saxon and Danish stock, but with a British or Celtic strain surviving in the S.W. and on the Welsh border. Through the cents. there

has been an intermixture of Norman, French, Flemish, German and Jewish elements, and many have Scottish, Irish or Welsh blood in their veins. Before, during and after the S.W.W. there was a substantial influx of Continental refugees - Jewish, German, Polish, Lithuanian, Hungarian, Czech, etc. - and of people from the Irish Republic. Labour shortage in the 1950s and 1960s, and other special conditions, led to the arrival of the Italian and Spanish workers, and such increasing numbers from the West Indies, India, Pakistan and other Commonwealth countries that legislation was introduced to stem the flow. The table gives the administrative cos. under the recent reorganisation, with an est. pop. for 1967: census figs. were (1801) 8,892,536 and (1851) 17,927,609, both incl. Wales; (1901) 30,813,043, (1951) 41,572,585, and (1961) 43,874,061, all excl. Wales.

Religion. The Church of England (see ANGLICAN COMMUNION) is the estab. church, but there are substantial other Protestant and Roman Catholic denominations, as well as Jewish, Hindu, Moslem and other communities.

Language. English is universal, although Welsh, Yiddish, Hindi, Urdu, etc. may be spoken as a second language.

COUNTIES OF ENGLAND

	Area in sq. m.	Population	Admin. H.Q.
Bedfordshire	477	432,940	Bedford
Berkshire	725	598,220	Reading
Buckinghamshire	749	552,470	Aylesbury
Cambridgeshire and Isle of Ely	831	296,930	Cambridge
Cheshire	1,015	1,486,470	Chester
Cornwall	1,375	356,200	Truro

EDISON. In his physics laboratory at West Orange, New Jersey, the great inventor holds one of his 'Edison Effect' lamps. By his discovery of this 'effect' in 1880 he revealed one of the fundamental principles on which modern electronics rests.

Courtesy of U.S. Dept. of the Interior.

of Midlothian, near the S. shores of the Firth of Forth. The site during Roman times was occupied by British or Welsh tribes, and c. 617 was taken by Edwin of Northumbria, from whom the town took its name. The early settlement grew up round a castle on Castle Rock, whilst about a mile to the E. another burgh, called Canongate, grew up round the abbey of Holyrood, founded in 1128 by David I. It remained separate from E. until 1856. Robert Bruce made E. a burgh in 1329, and estab. its port at Leith. In 1544 the town was destroyed by the English. After the union with England in 1707, E. lost its political importance, but is still culturally pre-eminent. E. univ., with a famous medical school, dates from 1583 and Heriot-Watt Univ. (1885: univ. status 1966) is a technical institution.

E. castle contains St. Margaret's chapel, the oldest building in Edinburgh. The palace of Holyrood House was built in the 15th and 16th cents. The Parliament House, begun in 1632, is now the seat of the supreme courts. The episcopal cathedral of St. Mary, opened in 1879, and St. Giles parish church (mostly 15th cent.) are the principal churches. The two most renowned thoroughfares are Princes Street and the Royal Mile. The part known as New Town was started in 1767.

E. is not a great industrial city, but printing and book publishing are important. It attracts many tourists, especially to the annual E. festival, founded 1947. E. ranks as an independent co., and is administered by a town council of 70 members, presided over by the Lord Provost. The port of Leith was incorporated in 1920; the city covers c. 55 sq. m.; pop. (1961) 468,378.

EDIRNE (edēr'ne). Turkish city, capital of E. il, on the Maritza, about 140 m. W.N.W. of Istanbul. Pop. (1965) 46,000.

EDISON, Thomas Alva (1847–1931). American inventor. B. in Ohio, of Dutch-Scottish parentage, he became first a newsboy and then a telegraph operator. His first invention was an automatic repeater for telegraphic messages, and was followed by over 1,000 others, including various telegraphic devices; the carbon transmitter (of assistance in the production of the Bell telephone); the phonograph; the incandescent lamp; a new type of storage battery; and the kinesiographic camera, an early form of cinematography. He anticipated the Fleming diode thermionic valve.

EDMONDS, Walter Dumaux (1903–). American author of historical novels set in the 19th cent., such as *Drums along the Mohawk* and *Chad Hanna* (1940).

EDMONTON. Locality, once a town, part of the Greater London bor. of Enfield. Charles Lamb lived and d. here: the Bell inn is referred to in Cowper's *John Gilpin*.

EDMONTON. Capital of Alberta Province, Canada, on the N. Saskatchewan river. It is the centre for a mining and petroleum-bearing area to the N. and also for an agricultural and dairying region. Petroleum pipelines link E. with Superior, Wisconsin, U.S.A., and with Vancouver, B.C. Pop. (1966) 401,299

EDMUND (c. 840–70). King of East Anglia from 855. In 870 he was defeated and captured by the Danes at Hoxne, and martyred on refusing to renounce Christianity. He was canonized and his shrine at Bury St. Edmunds became a place of pilgrimage.

EDMUND IRONSIDE (c. 989–1016). King of England. The son of Ethelred the Unready, he led the resistance to Canute's invasion in 1015, and on Ethelred's death in 1016 was chosen as king by the citizens of London, while the Witan elected Canute. E. was defeated by Canute at Assandun (Ashington). Essex, and they divided the kingdom between them.

EDOM. The southern district of Palestine, which stretched from the Dead Sea to the Gulf of Aqaba. The original settlers are supposed to have been descendants of Esau.

EDRISI (ēdrēsē) or Idrisi (c. 1099–1164). Arab geographer. B. at Ceuta, he became attached to the court of Roger II of Sicily, for whom he prepared a geographical account of the then known world, compiled in 1154.

EDUCATION. In its widest sense, E. begins at birth and continues so long as the mind is capable of receiving impressions. The most primitive human groups have always prepared the young for the sort of life they have to live: had they not done so the group would soon have vanished; and some sort of instruction of the young is common among other mammals and birds. In the more restricted sense of imparting knowledge dependent on literacy, E. has become almost world wide.

Formal E. in the present-day sense is of European origin, though China can boast of an allied form of instruction dating from an imperial decree of 165 B.C. which set up open competitive examinations for the recruitment of members of the Civil Service. The earliest known European educational systems are those of ancient Greece – in Sparta, devoted particularly to development of military virtues, in Athens to the good of the rep. in a wider sense, but both, as in China, accorded only to the privileged few.

EDUCATION. Language learning the modern way. These American children use specially designed recorders, and the teacher (with headphones and microphone) stands in front of a console from where he controls the class.

Courtesy of Electronic Classrooms, Ltd.

ENGLISH ART. John Constable's pictures, mainly of East Anglia, seem to recapture completely the very essence of the English scene. Above is his 'Hay Wain', a treasure of the National Gallery.

and by A.D. 80 had reached the Scottish Lowlands. After a brief period of resistance Roman culture was accepted, the upper classes becoming completely Romanised. Christianity was introduced from Ireland in the 4th cent.

ANGLO-SAXON ENGLAND (407-1066). An obscure 200 years followed the withdrawal of the Romans in 407, during which the Germanic Angles and Saxons overran all England except Cornwall, Wales, and Cumberland; how far the Celtic population survived is uncertain. In the 6th cent. Christianity was introduced among the pagan invaders by missionaries from Rome. England was divided into several kingdoms, the chief being Northumbria, Mercia, Kent, and Wessex, whose kings battled for supremacy until in 829 they all accepted Egbert of Wessex as overlord. His successors were confronted with the Danish raiders, and although Alfred expelled the Danes from Wessex in 878 he had to cede to them the N. and E. of England. During the 10th cent. this was reconquered and a real national unity achieved, but Danish raids began again in 991, and during 1016-42 England was ruled by Danish kings. Norman influence, predominant under Edward the Confessor, prepared the way for the Norman conquest of 1066.

EARLY MIDDLE AGES (1066-1307). As England advanced towards unity, the Anglo-Saxons had developed from a tribal society to a system somewhat akin to the feudalism introduced by the Norman kings. The contrast between the law and order they had established, and the disorder of Stephen's reign, made a return to a strong monarchy generally acceptable; nevertheless, when John attempted to claim more than was his due by feudal standards, barons, Church, and towns united against him to assert their privileges in Magna Carta (1215). This alliance was

renewed against Henry III, in a struggle whence emerged the House of Commons, an assembly of knights and burgesses, side by side with the older baronial assembly, or House of Lords. The combination of king, lords, and commons began with Edward I's Model Parliament of 1295. Edward completed the conquest of Wales begun by the Normans, and attempted unsuccessfully to conquer Scotland. In Ireland Henry II had estab. a lasting colony in 1171.

LATER MIDDLE AGES (1307-1485). Dynastic, trade and other interests led to the 100 Years War with France (1338-1453). The financial problems created by this war enabled parliament to secure control of taxation, and of the king's choice of ministers by the weapon of impeachment. The later 14th cent. was filled with unrest. The Black Death (1348-9) created a serious labour shortage, and attempts to deal with it led to bitter class struggles, culminating in the Peasants' Revolt, 1381. In spite of the failure of the rising, serfdom steadily declined during the 15th

An Anglo-Saxon king consults with his witan, an early equivalent of a 'privy council', in this drawing in an 11th century manuscript in the British Museum. On the right, an execution in progress.

into anarchy. Unity was recovered under the 11th and 12th Dynasties (the 'Middle Kingdom', c. 22nd–18th cents. B.C.); there followed another period of anarchy, resulting in the conquest of E. by the Semitic Hyksos. Their expulsion in 1580 B.C. marks the beginning of

the 'New Kingdom'. Under the 18th Dynasty (1580–1370) a succession of able kings, notably Thothmes III (reigned 1484–1451), founded an empire in Palestine and Syria extending to the Euphrates. The golden age of Amenhotep III probably continued under Ikhnaton (q.v.) — although it is thought by some historians that his neglect of imperial defence for religious reforms led to the loss of most of E.'s possessions in Asia — and also under the 19th Dynasty (Ramesses II and Ramses III). However, during the 20th Dynasty there was undoubtedly a decline in Egyptian strength, and power within the country passed from the pharaohs to the priests of Ammon. Under the Late New Kingdom (1090–663 B.C.) E. was often divided between 2 or more dynasties; the nobles became virtually independent, and in the 7th cent. the Assyrians established their suzerainty over E. Psammetichus I (663–609) and his successors restored to E. its independence and unity, and attempted to restore the empire. This national revival ended when Cambyses in 525 brought E. under Persian rule, which survived, except for a period of independence c. 405–340, until Alexander conquered E. in 332. When his empire was divided E. went to Ptolemy, whose descendants ruled until Cleopatra's death in 30 B.C.

RELIGION. The prehistoric Egyptian religion turned on the worship of totemic animals believed to be the ancestors of the clan. Totems later developed into gods, represented with the heads of the animals sacred to them, e.g. the hawk was sacred to Ra and Horus, the ibis to Thoth, the jackal to Anubis. The cult of Osiris, who was murdered, was mourned by his sister and wife Isis, and rose again, was a fertility ritual similar to those of Tammuz and Dionysus; by a natural development Osiris became a god of the underworld. Under the 18th Dynasty a local deity of Thebes, Ammon, came to be regarded as supreme, a

reflection of recovered national unity. Ikhnaton attempted, without success, to establish the monotheistic cult of Aton, the solar disc, as the one national god. Immortality, conferred by the magical rite of mummification, was originally the sole prerogative of the king, but was extended under the New Kingdom to all who could afford it.

MEDIEVAL AND MODERN. After its conquest by Augustus in 30 B.C. Egypt passed under the rule of Roman, and later of Byzantine, governors, and after the Arab conquest of 641 under that of representatives of the Caliphs. Christianity succeeded paganism as the national religion, and was succeeded in turn by Islam. After the 9th cent. Egypt passed to a series of native dynasties, and in the 13th cent. to the Mamelukes, or military aristocracy. The Turks conquered Egypt in 1517, but after 2 cents. of rule by Turkish pashas the Mamelukes regained control.

Contact with Europe began with Napoleon's invasion and the French occupation of 1798–1801. A period of anarchy followed, until in 1805 an Albanian officer, Mehemet Ali, was appointed pasha; the title was later made hereditary in his family. Under his successors large sums of British and French capital were invested in Egypt, while the opening of the Suez Canal in 1869 made the country of great strategic importance. Discontent with foreign domination led to a nationalist revolt in 1881–2, put down by British forces. Henceforward the govt. was mainly in the hands of British civilian agents who directed their efforts particularly to the improvement of E.'s finances. On the outbreak of the F.W.W. in 1914, nominal Turkish suzerainty was abolished and E. was declared a British protectorate. Post-war agitation by the nationalist Wafd party led the way to establishment of an independent kingdom in 1922 (see FUAD; FAROUK). Britain retaining responsibility for the military protection of E. In 1936 all British troops were withdrawn except from the Suez Canal zone. Following a military coup in 1952 the monarchy was abolished in 1953, and Gen. Neguib declared E. a republic with himself as president; Neguib was displaced in 1954 by his prime minister, Lt.-Col. Nasser. By an agreement reached that year the last British units left the canal zone on June 13, 1956; on July 26 Nasser nationalised the canal. Border clashes between

Egyptian and Israeli patrols led in Oct. to an Israeli invasion of E., and joint Franco-British military intervention to protect the canal. Nasser immediately blocked it, but after the U.N. ended hostilities 3 weeks later, it was cleared under their auspices and traffic resumed; traffic was again interrupted 1967 as a result of renewed hostilities between E. and Israel (q.v.). E. and Syria united in 1958 to form the United Arab Republic, of which Nasser became president; but Syria broke away from the union in 1961; E. continued to use the name U.A.R. See also SUDAN, Republic of.

EGYPTOLOGY. The study of ancient Egypt. Interest in the subject was first stimulated by Napoleon's expedition of 1798, during which the Rosetta

enclosures, whereby the small farmer was driven off the land or reduced to being a landless labourer. At the same time mechanical progress and the rise of the factory system converted England from an agricultural to an industrial country without a serious rival. Two new classes emerged from the change, the industrialists and the exploited industrial workers, bitterly hostile to one another yet united in a demand for parliamentary reform.

THE 19TH CENTURY (1815–1900). The alliance of the industrialists with the Whigs produced a new

The Reform Bill of 1832 had abortive predecessors. Doyle's cartoon shows Lord Althorp, Chancellor of the Exchequer in Lord Grey's administration handing over the second Reform Bill to the Lord Chancellor, Lord Brougham, in the House of Lords. Like the first, it was rejected and it was the third Reform Bill which actually passed both houses.

party, the Liberals, who in 1832 carried a Reform Bill transferring political power from the aristocracy to the middle classes. For the next 40 years Liberalism, with its ideology of free trade and *laissez-faire*, was triumphant. The working classes, excluded from the franchise, created their own organizations in the trade unions and the Chartist movement, although the latter disappeared during the years of mid-Victorian peace and prosperity (1850–75). After 1875 Britain's industrial monopoly found rivals in Germany and the U.S.A., and she was obliged to seek new markets and sources of raw materials. The Conservatives made themselves the mouthpiece of the new imperialism, and launched Britain on a career of expansion in Egypt, S. Africa, and elsewhere. The outstanding feature of the history of the Empire in the 19th cent. was the development of Canada, New Zealand, Australia, and later of S. Africa, into self-governing dominions. The economic crisis of the later 19th cent., which encouraged imperial development, also induced the working classes, largely enfranchised in 1867 and 1885, to revive the militant trade unionism and political movement of Chartist days. From an alliance of trade unions and small socialist bodies emerged the Labour Party in 1900.

THE 20TH CENTURY. After 1900 Britain's commercial and colonial rivalry with Germany led to her abandonment of her traditional isolationist policy, and to her entry into the system of alliances dividing Europe and into a feverish armaments race. At home a Liberal government attempted to satisfy with social reforms a working class demanding a higher standard of living. In 1914 a general strike and a civil war in Ireland seemed imminent, and the F.W.W. created a host of new problems. During the post-war years Ireland won her independence, unrest swept India, and a wave of mass strikes culminated in the general strike of 1926. After a few years of comparative prosperity an unprecedented economic crisis devastated most of the world during 1929–31; among its results was the coming to power of the British National Government in 1931. The years that followed were dominated by the approach

of the S.W.W. of 1939–45. Like the F.W.W. this was followed by a general movement towards the Left throughout Europe, one feature of which was the return in 1945 for the first time of a Labour government with an overall majority, whose programme included nationalisation (q.v.) and a generally planned economy. The Conservatives returned to power 1951, Eden taking over from Churchill in 1955 until replaced, following Suez, by Macmillan in 1957. The latter's ill-health led to his replacement by Sir Alec Douglas-Home in 1963, and Labour, under Harold Wilson, narrowly returned to power in 1964, increasing their majority in 1966.

Neither party succeeded in solving the country's recurrent economic difficulties, though both attempted entry to the Common Market, and there was a similar confusion on defence commitments and other major issues. There was a blurring of party lines, and a tendency to political alienation in the country at large, but towards the end of the 1960s came a resurgence of energy, revised alignments, and a more vigorous clash of opinion from which new advances would be possible.

SOVEREIGNS OF ENGLAND

ENGLISH LANGUAGE. In its origin E. belongs to the western division of the Germanic languages. Towards the end of the 7th cent. 4 main dialects can be distinguished, the Jutish of Kent, the Saxon of the south, the S. Anglian or Mercian of the Midlands, and the N. Anglian or Northumbrian north of

PRESIDENT EISENHOWER. On a visit to London in 1959 the President (left) is welcomed by Prime Minister Macmillan. He received greater popular acclaim from the crowds than had ever before been accorded to a visiting head of state, and made a historic television appearance with Macmillan.

Photo: Topix.

EISENHOWER (i'zenhower), Dwight David (1890–1969). 34th President of the U.S.A.; Supreme Commander of all the Allied armies in the west during the S.W.W. B. at Denison, Texas, he graduated at West Point Military Academy in 1915, but saw no active service during the F.W.W. In 1935 he served in the Philippines at Manila under MacArthur, and from 1940 held high staff appointments at Washington. In June 1942 he was sent to England as U.S. Commander in the European theatre. In Nov. 1942 he became C-in-C. of the American and British forces on the occasion of the invasion of N. Africa, and in July 1943 he took command of the Allied invasion of Sicily. It was E. who announced the unconditional surrender of Italy on Sept. 8, 1943. In Dec. he was appointed Supreme Commander of the Allied invasion of Europe, and from Oct. 1944 he was in command of all the Allied armies in the west. After the war 'Ike', as he was familiarly styled by his men, was given an official reception in Washington; in Sept. 1945 he was appointed Military Governor of the U.S. zone of Germany, and in Nov. Chief of Staff of the American Army. In Dec. 1950 he became Supreme Allied Commander, Europe, resigning in 1952 when, as a Republican, he was elected President. Re-elected in 1956 (the first Republican since 1900 to hold the Presidency twice in succession), in 1957 he introd. his 'Eisenhower Doctrine', a policy of giving aid, in consultation with the U.N., to any Middle Eastern countries requesting it, especially against international Communist aggression. This was approved by the U.K. but denounced by certain M. Eastern countries, e.g. Egypt, as an excuse for extending American influence.

EISENSTEIN (i'senstin), Sergei Mikhailovich (1898–1948). Soviet film director. A pioneer in the use of editing techniques, notably montage (as a means of propaganda) in *The Battleship Potemkin* (1925), he was also noted for his costume dramas (with his own designs), and won the Order of Lenin in 1938 with *Alexander Nevsky*, the 1st part of a planned but uncompleted trilogy. The 2nd part, *Ivan the Terrible* (1944), was banned in Russia. He is also famous for his beautiful sense of composition.

EISTEDDFOD (istedh'vod) (Welsh, 'sitting'). Traditional Welsh gathering for the encouragement of the bardic arts of music, poetry, literature, etc. The E. traditionally dates from pre-Christian times, but it was discontinued from the late 17th until the beginning of the 19th cent., since when it has been

held annually. The meetings last 3–4 days. Musical and literary contests take place, prizes, medals, and bardic degrees being awarded. The culminating ceremony is that of the 'chairing' of the bard.

EKATERINBURG. Pre-revolutionary name of SVERDLOVSK.

EKATERINODAR. Pre-revolutionary name of KRASNODAR.

EKATERINOSLAV. Pre-revolutionary name of DNEPROPETROVSK.

EKISTICS (Gk. *oikos*, home). The science of human settlements, a term coined by C. A. Doxiadis (q.v.). It involves the full inter-relationship of man and his environment by the co-operation of architect, engineer, town-planner, sociologist, economist, etc.

E'LAND. S. African antelope (*Taurotragus oryx*). Pale fawn in colour, it is about 6 ft. high, and both sexes have spiral horns about 18 in. long.

ELASTICITY. The property possessed by a body of automatically recovering its original shape when deforming forces are removed. There are several types of E. According to Hooke's law for an elastic solid, the stress set up within the body is proportional to the strain to which it is subjected. Stress is measured as a force per unit area and strain as the change in length per unit length. The ratio of stress to strain is called *the modulus of E.*, and *the value of the stress* at which the material ceases to obey Hooke's law is called *the elastic limit*.

ELATH. See EILAT.

ELBA. Rugged island in the Mediterranean Sea, 6 m. off the W. coast of Italy. Iron ore is exported from Portoferraio, the capital, to the Italian mainland, and there is fishing. E. was the place of exile of Napoleon 1814–15. Area 86 sq. m.; pop. (est.) 30,000. See illus. p. 378.

ELBE. One of the principal rivers of Germany, rising on the S. slopes of the Riesengebirge in Czechoslovakia, and flowing generally N.W. across the German plain to the North Sea. It is 725 m. long.

ELBERFELD. See WUPPERTAL.

ELBING. German form of ELBLAG.

ELBLAG. Polish river port 7 m. from the mouth of the r. E. which debouches into the Zalew Wislany (Frisches Haff). It has shipyards, engineering works, car and tractor factories, etc. Pop. 76,000.

EKISTICS. Designed by Doxiadis (q.v.), the Graduate School of Ekistics of the Athens Technological Institute was estab. at the foot of Mount Lycabettus in 1958, and has an international student body. In the background is the headquarters of Doxiadis Associates.

Courtesy of Doxiadis Associates.

Chaucer's mastery of versification was not shared by his much less effective successors, Lydgate, Occleve, and Hawes; most original of them was Skelton. More successful were the anonymous authors of songs and carols, and of the ballads, which (e.g. those concerned with Robin Hood) formed a complete cycle. Drama flowered in the form of miracle and morality plays, and

prose, although still awkwardly handled by Wycliffe in his translation of the Bible, rose to a great height with Malory in the 15th cent.

The Renaissance, which had first touched E.L. through Chaucer, came to delayed fruition in the 16th cent. Wyatt and Surrey acclimatized the sonnet and blank verse in typically Elizabethan forms, and prepared the way for Spenser, Sidney, Daniel, Campion, etc. With Kyd and Marlowe drama emerged into theatrical form; it reached the highest

SIR PHILIP SIDNEY.

level in Shakespeare and Jonson. Elizabethan prose is represented by Hooker, North, Ascham, Holinshed, Lyly, etc., but English prose reached full richness and variety in the 17th cent., which produced the Authorised Version of the Bible, Bacon, Milton, Bunyan, Taylor, Browne, Walton, and Pepys. Greatest of the 17th cent. poets were Milton and Donne; others include the religious writers Herbert, Crashaw, Vaughan, and Traherne, and the Cavalier lyricists Herrick, Carew, Suckling, and Lovelace. To the Restoration belong Butler (1612-80), poet, and Dryden, poet, dramatist, and critic, the founders of religious and political satire; the best of the court poets, Rochester; and the once popular Cowley, Waller, and Denham. Drama is represented by Dryden; Otway and Lee in tragedy; Etherege, Wycherley, Congreve, Vanbrugh, and Farquhar in comedy.

With the 18th cent. opened the Augustan Age in England. Pope perfected the poetic technique of Dryden; while in prose Steele and Addison evolved the form of the polite essay, Swift achieved supremacy in satire, and Defoe exploited his gifts as the genius of journalism. This cent. also saw the development of the novel through the long-drawn intricacies of Richardson to the robust narrative of Fielding and Smollett, the sentiment of Sterne, and the Gothic 'terror' of Horace Walpole. The standards established by the 'Augustans' were maintained by Johnson and the members of his circle - Goldsmith, Burke, Reynolds, Sheridan, etc., - but the 'romantic' element present in the work of the poets Thomson, Gray, Young, and Collins was soon to overturn them. The forgeries of Chatterton, Macpherson's *Ossian*, and the work of the Wartons are significant of the new attitude.

The poetry of Cowper, Blake, and Crabbe no longer fits into the old categories, and the *Lyrical Ballads* (1798) of Wordsworth and Coleridge forms the manifesto of the new age. Byron, Shelley, and

GEORGE ELIOT. Chalk drawing by Sir F. W. Burton.
Photo: N.P.G.

the reign of Victoria are Tennyson, Browning, Arnold, the members of Rossetti's circle, Morris and Swinburne, and the solitary Fitzgerald. Among the other great prose writers of the era are Macaulay, Newman, Mill, Carlyle, Ruskin, and Pater. To the transition period at the end of the cent. belong the poetry and novels of Meredith and Hardy; the work of Butler and Gissing; and the plays of Pinero, Jones, and the Irishman Oscar Wilde.

The Victorian tradition in poetry was continued in the new cent. by Bridges; his contemporary Hopkins was a notable experimenter in verse forms. Kipling, Newbolt, Belloc, Davies, Hodgson, De la Mare, Housman, Chesterton, Masefield, Noyes, and Drinkwater were other poets of the opening cent. Best-remembered poets of the F.W.W. are Sassoon, Brooke, Owen, and Graves. Poets of the succeeding years incl. Dame Edith Sitwell, T. S. Eliot, Auden, Day Lewis, MacNeice and Spender. Unusual elements entered the novel with Henry James, Conrad, Kipling, and George Moore. New middle-class realism was in the novels of Wells, Bennett, E. M. Forster, and Galsworthy. Maugham, Hugh Walpole, James Joyce, D. H. Lawrence, Aldous Huxley, Priestley, Virginia Woolf, Christopher Isherwood, Evelyn Waugh, Graham Greene, and Ivy Compton Burnett are later writers of fiction. Writers for the English stage incl. another outstanding Irishman, Bernard Shaw, as well as Galsworthy, Maugham, Priestley, Barrie, Lonsdale, Coward, Graham Greene, Bridie, Rattigan, Emlyn Williams, and the writers of poetic drama, e.g. T. S. Eliot, Fry, Auden, and Isherwood. The '50s and '60s produced what has been called the 'kitchen sink' school of dramatists - e.g. Osborne and Wesker - and the English 'Theatre of the Absurd' in the plays of N. F. Simpson; other leading playwrights were Harold Pinter and John Arden. Post-S.W.W. poets included Thom Gunn, Roy Fuller, and Philip Larkin; and novelists of the same period were William Golding, Iris Murdoch, Angus Wilson, Muriel Spark, Lawrence Durrell, John Braine, Kingsley Amis, C. P. Snow, Pamela Hansford Johnson, John Wain and Anthony Powell. Among prose writers of the cent. are W. H. Hudson, Lytton Strachey, T. E. Lawrence, Osbert Sitwell, Winston Churchill, G. M. Trevelyan, Arnold Toynbee, George Orwell, and Bertrand Russell. For other literatures in

Keats form a second generation of Romantic poets. In fiction Scott took over the Gothic tradition from Mrs. Radcliffe, to create the historical novel, and the quiet genius of Jane Austen estab. the novel of the comedy of manners. Criticism attained new heights in Coleridge, Lamb, Hazlitt, and De Quincey.

ELECTRICITY. Pressure must be varied to suit the needs of the area by transformers at the primary and secondary sub-stations, and ranges from the 33,000 volts required by heavy industry to the domestic 230/250 volts.

Courtesy of the Central Electricity Generating Board

electric current. He did this in 1831, producing the first dynamo, afterwards the basis of electrical engineering. The characteristics of currents were crystallized by G. S. Ohm (c. 1827) who showed that the current passing along a wire was equal to the electromotive force (e.m.f., or driving press.) across the wire multiplied by a constant, which was the conductivity of the wire. The unit of resistance is named after Ohm, e.m.f. is named after Volta (volt), and current after Ampère (amp). The work of the late 1800s indicated the wide interconnections of E. (with magnetism, heat and light), and the discovery by J. Clerk Maxwell (c. 1855) of a single electromagnetic theory explaining both electric waves and light. The universal importance of E. was decisively proved, by the connection between atoms and E. The structure of the atom itself, hitherto thought to be the ultimate particle of matter, was found to be composed of a positively charged central core, the nucleus, about which negatively charged electrons rotate in various orbits. E. generated on a commercial scale was available from the early 1880s and used for electric motors driving all kinds of machinery; for lighting, by carbon arc, but later by incandescent filaments, first of carbon and then of tungsten, enclosed in glass bulbs partially filled with inert gas under vacuum. Light is also produced by passing E. through a gas or metal vapour, or a fluorescent lamp. Other practical applications include telephone, radio, television, X-ray machines, etc.

ELECTRICITY SUPPLY. The principal energy sources for E. generation are coal, water power, oil and natural gas, with contributions from wind power, geothermal power and, increasingly, nuclear energy. E. is generated as alternating current, usually in large turbo-alternators, because of the ease of changing the voltage (that is, 'pressure') for transmission and distribution. See RANCE.

Britain has one of the world's largest inter-connected E.S. systems, comprising large power stations

feeding into a national grid: highest voltage 400,000. Coal, formerly the main fuel, was uneconomic by 1967 and being replaced by ever cheaper nuclear fuel. Elsewhere there are co-ordinated systems through transmission links, involving for example power pools of groups of undertakings in the U.S.A., and inter-country connections on the continent of Europe. Among specialized power units which convert energy directly to electrical energy without the intervention of any moving mechanisms, the most promising are thermionic converters. These may use conventional fuels such as propane gas, as in portable military power packs, or, when refuelling is to be avoided, expensive radioactive fuels, as in unmanned navigational aids, and spacecraft. See illus. p. 662.

ELECTROCARDIOGRAM. A recording on a chart of the electrical impulses from the heart, used to diagnose heart conditions, e.g. heart attacks.

ELECTROCUTION. Popular name for a method of execution in use in many of the states of the U.S.A. The criminal is strapped in a special electric

ELECTRICITY. Simplified general diagram illustrating the theory of a thermionic conversion triode using radioactive fuel.

Courtesy of the Fairey Co. Ltd

after Epicurus (341–270 B.C.), a Greek philosopher who taught in Athens from 306 B.C. E. held human happiness to be the highest good, and his scheme of morality has been summed up in 4 canons: the pleasure which produces no pain is to be embraced; the pain which produces no pleasure is to be avoided; the pleasure is to be avoided which prevents a greater pleasure or produces a greater pain; and the pain is to be endured which averts a greater pain or secures a greater pleasure. His 'pleasure' was not sensual gratification, but the rational satisfaction of a healthy mind in a healthy body. The most distinguished Roman Epicurean was Lucretius.

EPIDAU'RUS. Ancient Greek city on the E. coast of Argolis. Originally famous for the temple of the god of healing, Asclepius, E. is now noted for its beautiful and well-preserved amphitheatre where the Nat. Theatre holds an annual festival.

EPIGRAM. A short poem, originally an inscription of a votive or funerary character, but later a short, witty, and pithy saying. The chief Latin epigrammatists were Catullus and Martial; in English literature the E. has been employed by Ben Jonson, Herrick, Pope, Swift, Prior, Landor, and Yeats.

EPIGRAPHY (Gk. *epigraphēin*, 'to write on'). The art of writing with a sharp instrument on hard, durable materials, and also the scientific study of that art. Epigraphical writings are called inscriptions.

EPILEPSY. A chronic disorder marked by attacks of loss or alteration of consciousness, usually with convulsions, corresponding to a sudden release of psychic pressure. The cause may be hereditary defect, injury, or disease.

EPINAL (ehpēnah'l). Capital of Vosges dept., France, on the Moselle. A cotton-weaving centre, it dates from the 10th cent. Pop. (1962) 34,806.

EPIPHANY (ēpī'fani). A feast of the Christian Church, held on Jan. 6 in commemoration of the manifestation of Christ to the world.

EPI'RUS (Gk. 'mainland'). Country of ancient Greece; the N. part is in modern Albania; the remainder, in N.W. Greece, is divided into four nomes, Arta, Thesprotia, Yanina, Preveza. Area 3,572 sq. m.; pop. (1961) 351,167.

EPI'SCOPACY. That system of Church govt. in which administrative and spiritual power over a district (diocese) is held by a bishop. The Roman Catholic, Eastern Orthodox, Anglican and Protestant and Methodist Episcopal (U.S.) churches are episcopalian; E. also exists in some branches of the Lutheran Church, esp. in Scandinavia.

EPISTLE (epī'sl). In modern usage a word applied to letters of antiquity, or with a suggestion of pomposity and literary style. The best-known Es. are those contained in the N.T., and those of Horace, Boileau, Voltaire, Ben Jonson, Dryden, and Pope.

EPHING. English town (U.D.) in Essex, 16 m. N.E. of London. Pop. (1961) 9,998. **EPHING FOREST**, covering about 10 sq. m., was once a royal hunting ground; it became public property, controlled by the Corporation of the City of London, in 1882.

EPSOM. Old market town of Surrey, England, 15 m. S.S.W. of London. Epsom salts were obtained from its mineral springs from 1618, and it became a spa. Epsom Downs, 1½ m. to the S., is the site of a famous racecourse. With Ewell E. forms the bor. of E. and Ewell. Pop. (1961) 71,177.

EPSOM SALTS. Hydrated magnesium sulphate, $MgSO_4 \cdot 7H_2O$, known as a saline purgative. The name is derived from a bitter saline spring at Epsom, Surrey, which contains the salt in solution, but the E.S. of commerce come from Germany and U.S.A.

EPSTEIN (ep'stēn), Sir Jacob (1880–1959). British sculptor. B. in New York of Russo-Polish parents, in 1904 he came to England, where most of his major work was done. In 1907–8 his series of figures for the British Medical Assoc.'s building in the Strand,

EPSTEIN. Above the nave of Llandaff Cathedral his sculpture 'Christ in Majesty', poised in mid-air, and appearing weightless. Photo: British Travel and Holidays Association.

London, provoked a storm of criticism, as did the tomb of Oscar Wilde in Paris (1909). These were followed by, amongst others, the 'Rima' memorial to W. H. Hudson in Hyde Park, 1925; 'Genesis', 1931; 'Ecce Homo', 1933; 'Adam', 1939; 'Lucifer', 1945; the aluminium 'Christ in Majesty' for Llandaff Cathedral, 1957; and 'St. Michael and the Devil' for Coventry Cathedral, 1959. All his great sculptures were carved in stone or marble as expressions of human emotions, and their lack of the purely aesthetic conventions of form and elegance almost invariably aroused furious protest. E. became equally well known for his portrait busts, e.g. of Vaughan Williams, Einstein and Blake, whose vitality and insight earned him his reputation as a romantic sculptor. Knighted in 1954.

EQUATOR. The *terrestrial equator* is the great circle whose plane is perpendicular to the earth's axis, i.e. to the line joining the poles. Its length is 24,901.8 English miles, divided into 360° of longitude. The *celestial equator* or *Equinoctial* is the circle in which the plane of the terrestrial equator intersects the celestial sphere.

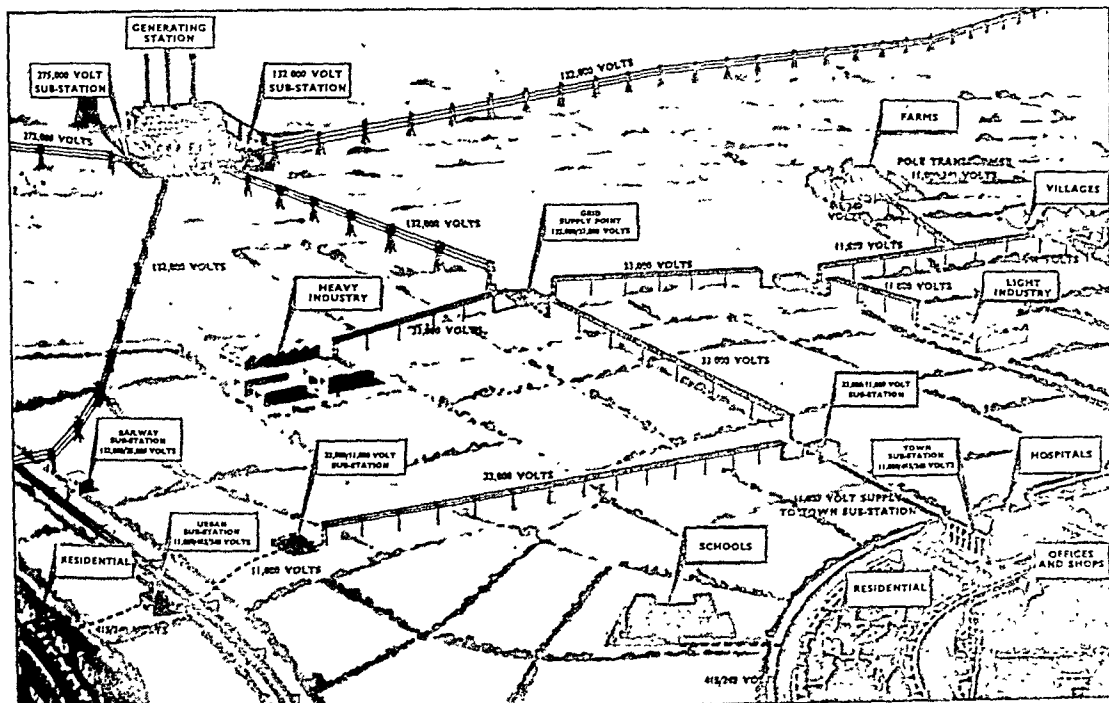

EQUATORIAL GUINEA. See GUINEA, Equatorial.

EQUATORIAL UNION. Group formed in 1960 by the Republics of Congo (cap. Brazzaville) and Chad and the Central African Republic (qq.v.).

EQUINOXES (ēkwīnoksēz; Lat., 'equal nights'). The 2 points at which the sun during its apparent annual course among the stars crosses the celestial equator; when the sun is in either equinox the day and night are of equal length, 12 hours each, all over the earth.

EQUITIES. Stocks and shares (qq.v.) which differ from debentures and preference shares in not paying interest at fixed rates.

EQUITY (ēk'wītī). In law, a term denoting the mitigation of the ordinary rules of law where the application of these would operate harshly in a particular case; sometimes it is regarded as an attempt to achieve 'natural justice'. So understood,

ELECTRICITY. Pressure must be varied to suit the needs of the area by transformers at the primary and secondary sub-stations, and ranges from the 33,000 volts required by heavy industry to the domestic 230/250 volts.

story was confirmed in 1963 when a Norwegian expedition, led by Helge Ingstad, discovered remains of a Viking settlement (dated c. 1000) near the fishing village of L'Anse-aux-Meadows at the northern tip of Newfoundland. The Vinland Map (c. 1440, pub. 1965) gives further confirmation and names a co-explorer, Bjarni. See VINLAND.

ERIC THE RED (fl. 982–1000). The alleged discoverer of Greenland. According to a 13th cent. saga he was the son of a Norwegian chieftain, was banished

MAX ERNST. A pioneer of the Dadaist collage method, Ernst also used the Surrealist technique of *frottage*, by which lead rubbed over paper placed on an object, e.g. a piece of cloth, brings into relief the weave, etc., producing suggestive impressions of mysterious landscapes, forms, etc. The painting shown here is *La Ville Peirifiée*.

Courtesy Manchester City Art Gallery.

from Iceland c. 982 for homicide, sailed westward, and discovered a land which he called Greenland.

ERIDU (ā'ridoo). Ancient city of Mesopotamia, according to tradition the cradle of Sumerian civilization. On its site is the Iraqi village of Tell Abu Shahrain.

ERIE (ē'ri). City on the Pennsylvania bank of Lake E., U.S.A., with heavy industries and a trade in iron, grain, and freshwater fish. Pop. (1960) 138,440.

ERIE, Lake. Fourth largest of the 'Great Lakes' of N. America connected to L. Ontario by the Niagara river, on which are the famous falls, by-passed by the Welland Canal. It is 250 m. long.

ERIGENA (erē'jena), Johannes Scotus (c. 815–77). Medieval philosopher. He was probably an Irishman and according to tradition travelled in Greece and Italy before Charles the Bald invited him to France (before 847), where he became head of the court school. He is said to have visited Oxford, to have taught at Malmesbury, and to have been stabbed to death by his pupils. As a thinker he tried to combine Christianity with Neo-Platonism.

ERIN (ē'rin). Poetic name for Ireland derived from the dative case Éirinn of the Gaelic name Ériu, possibly derived from Sanskrit 'western'.

ERITREA (ārētrā'a). Prov. of Ethiopia with a coastline of 670 m. on the Red Sea. The interior is mountainous but the valleys and intermediate plains are cultivated with the aid of irrigation. The capital is Asmara, connected by rail to Massawa, the chief port. An Italian colony from 1889, E. was conquered by the British in 1941, and was under British military administration until 1952 when, following a decision of the U.N., it was federated with Ethiopia. E. enjoyed autonomous status 1952–62 and there was Moslem nationalist unrest 1966–7. Area 45,745 sq. m.; pop 1,104,000.

ERIVAN. Alternative transliteration of YEREVAN.

ERMINE (er'min). Name given to the stoat when in its white winter coat. In northern latitudes the

coat becomes completely white, except for a black tip to the tail, but in warmer regions the back may remain brownish. The fur is used commercially.

ERNIE. Electronic Random Number Indicator Equipment. Machine designed and produced by the Post Office Research Station to select and print out a long series of random 9-figure numbers to indicate the prize-winners in the monthly premium-bond draws. Numbers are printed out every 2½ seconds.

ERNST, Max (1891–). French Surrealist painter. B. in Brühl, nr. Cologne, he studied philosophy at the Univ. of Bonn and first exhibited in Berlin in 1916. He was an active Dadaist and in 1922 went to Paris where he helped found the Surrealist movement in 1924. Exiled by the Nazis in 1933, E. went to New York, became a U.S. citizen in 1948 and French in 1958.

ERNST, Paul (1866–1933). German writer. He propagated heroic and classical ideals and a blending of 'Nordic' and Greek spirit. His most outstanding works incl. the drama *Demetrios* (1905), the critical essays *Der Weg zu Form* (1906), the partly autobiographical novel *Der Schmale Weg zum Glück* (1903) and *Das Kaiserbuch* (3 vols., 1923–8), an epic.

EROS (Cupid, Amor). In the Hellenic and Roman pantheon, the god of love. Originally a god of fertility and son of Chaos, he is later described as the son of Aphrodite, and is represented as a youth blindfolded, armed with arrows and winged.

ERSE (ers). An early Scottish form of 'Irish', the word was applied in the 18th cent. English literary world to the Gaelic language of Scotland, and occasionally to the Irish Gaelic as well.

ERSKINE, Ralph (1914–). British architect. Trained at the Regent Street Polytechnic, he settled in Sweden in 1939, where his work has developed with particular emphasis on sub-arctic conditions. See *illus.* under SWEDEN.

ERSKINE, Thomas, 1st baron (1750–1823). British Lord Chancellor. B. in Edinburgh and called to the Bar in 1778, he appeared for the defence in a number of trials of parliamentary reformers for sedition, and when the Whigs returned to power in 1806 he became Lord Chancellor and a baron.

ERTZ, Susan. British writer. B. at Walton-on-Thames, she m. Major J. McCrindle in 1932. Her novels, incl. *Madame Claire* (1929) and *Frail Vessels* (1950), show a development of character against a detailed background.

ERVINE (er'vin), St. John Greer (1883–). British dramatist and novelist. B. in Belfast, he is primarily a dramatist and first gained success in 1911 with *Mixed Marriage* at the Abbey Theatre, Dublin. In 1915 he was manager of the Abbey Theatre, and his most important play, *John Ferguson*, was performed there the same year. E.'s other works incl. the plays *Anthony and Anna* (1926) and *Robert's Wife* (1937), novels, biographies and books on theatrecraft.

ERYSIPELAS (erisip'elas). An acute disease of the skin due to infection by a streptococcus. Starting at some point where the skin is broken or injured, the infection spreads, producing a swollen red patch with small blisters, and general fever.

ERZERUM (ār'zeroom). Turkish town, capital of E. il, a commercial centre at the meeting-place of routes from Europe and Asia, and seat of an Armenian bishopric. Pop. (1965) 106,300.

ERZGEBIRGE (ärzgebërge). Mountain range – the 'ore mountains' – on the German-Czech frontier, where the rare metals uranium, cobalt, bismuth, arsenic and antimony are mined. Some 90 m. long, its highest summit is Mt. Klinovec (Keilberg) in Czechoslovakia, 4,080 ft.

ESAU (ē'saw; Heb. 'hairy'). O.T. character; the son of Isaac and Rebekah, and the elder twin brother of Jacob, who tricked Isaac into giving him the blessing intended for E. by donning goatskins.

ELECTRON MICROSCOPE. A beam of electrons from the electron gun (q.v.) (1) pass through the electromagnetic lenses (2, 4, 6), and the whole microscope must be kept under high vacuum to allow free passage to these electrons. The condenser (3) concentrates the beam on the specimen (5), and the transmitted electrons are focussed by the objective (4) to form a magnified image on the intermediate screen (5) which is further enlarged by the projector (6). The electron image is projected on to the angled fluorescent viewing screen (9) converted to a visible image (as in a TV set) which the operator can view in the microscope (7) through the window (8).

protective purposes. A current is passed through a bath containing a solution of a salt of the plating metal, the object to be plated being the cathode; the anode is either an inert substance or the plating metal. Among the metals most commonly used for plating are zinc, nickel, chromium, cadmium, copper, silver, and gold. E. is used in the preparation of printers' blocks, gramophone records, and in many other processes.

In electro-polishing the object to be polished is made the anode in an electrolytic solution and by carefully controlling the conditions the high spots on the surface are dissolved away leaving a high-quality stain-free surface. This technique is useful in polishing irregular stainless steel articles, etc. In electro-refining the impure metal is made the anode with a thin sheet of pure metal as the cathode in an electrolytic bath. When a current is passed pure metal deposits on the cathode, leaving the impurities either as an insoluble sludge or in solution.

ELECTROSTATICS. That branch of electricity which deals with the behaviour of stationary electric charges.

ELECTROSTATIC SYSTEM OF UNITS. A system of electrical units (e.s.u.) based on the c.g.s. system (q.v.), and having, as its primary electrical unit, the unit of quantity of charge. It involves the choice of the permittivity of free space as a fourth fundamental unit.

ELEMENTS. See CHEMISTRY, INORGANIC CHEMISTRY and individual elements.

ELEPHANT. Name given to the 2 surviving species of the Proboscidea, the Asiatic (*Elephas maximus*)

ELEPHANT. Traffic problems in Africa sometimes differ from those of the rest of the world, and when a family of elephants chooses to cross the road in Kruger National Park they have absolute right of way. Courtesy of Satsur.

and African (*Elephas africanus*) Es. A full-grown E. is 8–10 ft. high, has a thick, grey, wrinkled skin, a large head, and a long trunk used to obtain food and water. The upper incisors or tusks, which grow to a considerable length, are a source of ivory. The African E. has very large ears and a convex forehead, and the Indian species has smaller ears and a flattened forehead. Es. are herbivorous, and live in herds. With a reputation for intelligence, the E. is quickly tamed, and in India, Burma and Siam is widely used for transport. The period of gestation is about 19–22 months (the longest amongst mammals) and the life span is probably about 60–70 yrs. Es. do not breed readily in captivity, and this, together with the (now illegal) slaughter of African Es. for ivory, is leading to their extinction.

ELEPHANTIASIS. In the human body, a gross local enlargement and deformity, especially of a leg, the scrotum, a labium of the vulva, or a breast. The commonest is the tropical variety due to infestation by the parasite filaria; the enlargement is due to chronic blocking of the lymph channels and consequent overgrowth of the skin and tissues.

ELEUSIS (el'úsís). Greek town in Attica nome, 11 m. N.W. of Athens, on E. Bay, with shipyards, olive-oil presses, cement and soap works, etc.; one of the oldest towns in Greece, with a famous temple of Demeter. Pop. 11,000.

EL FERROL DEL CAUDILLO. See FERROL.

ELGAR, Sir Edward (1857–1934). British composer. B. in Broadheath, Worcs., the son of an R.C.

SIR EDWARD ELGAR.
Bust by P. Hedley, 1927.
Photo: N.P.G.

church organist and musician, E. had little formal musical education and he gained his first experience in conducting when appointed bandmaster of the staff of a lunatic asylum in 1879. He gained fame as a composer with his *Enigma* variations in 1899, and although his most celebrated work, the magnificent oratorio setting of Newman's *The Dream of Gerontius*, was a failure when performed in Birmingham the following year, it was a great success at Düsseldorf in 1902. Many of his earlier and hitherto unknown works were then performed and are now well known, incl. the popular *Pomp and Circumstance* marches. He was knighted in 1904, and became Master of the King's Musick in 1924. Among his later works are several oratorios, 2 symphonies, chamber music, songs and the tone-poem *Falstaff*.

ELGIN (el'gin). Scottish royal burgh and city, co. town of Moray, on the r. Lossie, with woollen mills, sawmills, whisky distilleries, etc. Pop. (1961) 11,971.

ELGIN MARBLES. Collection of ancient Greek sculptures mainly from the Parthenon at Athens, assembled by the 7th earl of Elgin. Sent to England in 1812, bought for the nation in 1816 for £35,000, they are now in the British Museum. See illus. p. 382.

ELGINSHIRE. Name until 1920 of MORAYSHIRE.

ELIJAH (el'jah). Hebrew prophet during the reigns of Ahab and Ahaziah (c. mid-9th cent. B.C.). A native of Gilead and representative of Jehovah, he defeated the prophets of Baal, and was said to have been borne up to heaven in a fiery chariot in a whirlwind.

ELIOT, Charles William (1834–1926). American educator. B. in Boston, he was president of Harvard 1869–1909, and was mainly responsible for making it the leading establishment of higher learning in U.S.A.

ELIOT, George. Pseudonym of the British writer

the form during the closing years of the 19th and beginning of the 20th cent., in the work of R. L. Stevenson, Anatole France, Gautier, Sir Max Beer-bohm, and later of Chesterton and Belloc. The literary journalistic tradition of the E. has been continued by E. V. Lucas, Robert Lynd, the American James Thurber, Sir Desmond MacCarthy, etc., and the critical essay by George Orwell, Cyril Connolly, F. R. Leavis, T. S. Eliot, etc. The E. was generally adopted in 19th cent. Europe as a vehicle for literary criticism, but the 'true' E. is usually regarded as being particularly English in spirit.

ESSEN. The Altenessener Berkwerks.
Courtesy of German Information Bureau.

ESSEN. German city in North Rhine-Westphalia; centre of the great coal-mining and iron and steel industries of the Ruhr. The Krupp's steel and armament plants here, largest in Germany, were repeatedly bombed during the S.W.W. Pop. (1966) 716,078.

ESSENESE (esēnz'). A body of pre-Christian Jewish ascetics in Palestine who regulated their life according to rules resembling those of later monasticism, and practised community of goods. It has been claimed that both St. John the Baptist and Christ himself may possibly have lived for a time among the E., perhaps at Qumran (q.v.), and sayings of Jesus seem to reflect both the influence of Essene teaching and antipathy to certain aspects.

ESSEQUIBO (esekē'bo). Principal river of Guyana. Navigable for 50 m., it rises in the Acari mts. on the Brazilian border and flows N. for c. 600 m.

ESSEX, Robert Devereux, 2nd earl of (1566–1601). English soldier and statesman. Eldest son of the 1st earl, he saw service in the Netherlands in 1585–6 and distinguished himself by his courage at the battle of Zutphen. From 1587 he became a favourite with Elizabeth, who created him Master of the Horse and a K.G. In 1599 he led an army against Tyrone in Ulster, but was outgeneralled, made an unauthorised truce with Tyrone, and returned without permission to England. He was forbidden to return to court, and Elizabeth's refusal to renew the monopoly of sweet wines he had enjoyed goaded him to madness. At the head of a body of supporters, he marched into the City, but was promptly arrested, tried for treason, and beheaded on Tower Green.

ESSEX, Robert Devereux, 3rd earl of (1591–1646). English soldier. Eldest son of the 2nd earl, he commanded the Parliamentary army at the drawn battle of Edgehill in 1642. Following a disastrous campaign in Cornwall, he resigned his command in 1645.

ESSEX. Co. of S.E. England, bounded on the S. by the Thames estuary, and on the E. by the North Sea. It is for the most part predominantly low-lying but undulating, the only high land is in the N.W. The N. two-thirds of E. belong geologically to E. Anglia: the soil is composed of the same highly fertile glacial clays which yield heavy crops of cereals, sugar beet, fruits, and vegetables. The southern part is composed of heavier clays, and was originally

ROBERT DEVEREUX,
2nd earl of Essex.

ESSEX. The Clunlac Priory of St. Mary of Prittlewell, near Southend, was from the 12th century to its dissolution in the 16th the most wealthy community in the south-east of the county. Above the windows of the prior's chamber look down on the cloister garth.

densely forested. Parts of the forest remain, e.g. Epping Forest, but most has been cleared, and dairying is an important industry. In the S.W. the co. borders on Greater London. The co. town is Chelmsford; Colchester is the centre of an oyster industry; Southend, Brightlingsea, Clacton, Frinton, Dovercourt are seaside resorts; Harwich and Tilbury are ports. Area 1,419 sq. m.; pop. (1967) 1,268,610.

The Univ. of E. (1962) has its H.Q. at Wivenhoe Park, Wivenhoe, 3 m. S.E. of Colchester.

ESTATE. In law, the interest which a person has in any property. *Real E.* is an interest in any freehold land; *personal E.* the interest in any other kind of property.

ESTER. An organic compound formed by the reaction between an alcohol and an acid, with the elimination of water. Es. correspond to inorganic salts. They are important in explosives, plastics, photographic films, and rayon; vegetable and animal fats and oils; soaps, paints and varnishes; flavourings and perfume.

ESTHER. Chief character in the O.T. book of E., which relates that as consort of the Persian king Ahasuerus, she prevented the extermination of her people by the vizier Haman – a deliverance celebrated at the Jewish festival of Purim.

ESTIENNE (ätyen'; Latinized as Stephanus). French family of printers and scholars, who were estab. in Paris as printers in the 16th cent. **ROBERT E.** (1503–59) was the royal printer in Latin, Greek, and Hebrew, and on becoming a Protestant moved in 1551 to Geneva, where he produced the first Greek N.T. to be divided into verses.

ESTONIA (Estonian Soviet Socialist Republic). A constituent republic of the U.S.S.R., occupying the peninsula between the Gulf of Finland and the Baltic Sea, and bordering Latvia to the S. It is a low-lying extension of the Russian plain. The climate is suited to hardy agriculture, and the country is heavily forested. The capital is Tallinn, a port on the Gulf of Finland; Paldiski and Pärnu are other ports; the largest town inland is Tartu, which has a university.

E. was Russian from 1721 until, following the Revolution of 1917, it won independence in 1920 after a struggle. In 1939 E. was occupied by Russia, and in 1940 became a S.S.R. of the U.S.S.R. The Germans overran E. in 1941, were ejected in 1944. The Estonian language is akin to Finnish. Area 18,300 sq. m.; pop. (1968) 1,304,000.

ESZTERGOM (es'ter-). Hungarian city on the Danube, 25 m. N.W. of Budapest, birthplace of St.

Her Majesty Queen Elizabeth the Second.
Photo: Baron Studios.

question. Yet her prestige remained unabated, as was shown by the failure of Essex's rebellion in 1601.

ELIZABETH II (1926–). Queen of the U.K. The elder dau. of King George VI, Princess Elizabeth Alexandra Mary was b. at 17 Bruton Street, London, W.1., the home of her maternal grandparents, on April 21, 1926. She was ed. privately, and although she became heiress presumptive to the throne on King George's accession did not undertake any official duties until she was 16. During the S.W.W. she served in the A.T.S., and by an amendment to the Regency Act she became a State Counsellor on her 18th birthday, acting in this capacity during the King's visit to Italy in 1944. She m. her third cousin, the Duke of Edinburgh (see PHILIP), in Westminster Abbey on Nov. 20, 1947, and they have 4 children, Prince Charles Philip Arthur George, b. Nov. 14, 1948, Princess Anne Elizabeth Alice Louise, b. Aug. 15, 1950, Prince Andrew Albert Christian Edward, b. Feb. 19, 1960, and Prince Edward Antony Richard Louis, b. March 10, 1964. On the death of George VI in 1952 she succeeded to the throne while in Kenya with her husband at the beginning of a projected tour of Ceylon, Australia and N.Z. Since the Coronation in 1953 they have made a number of goodwill tours – in the Commonwealth, the U.S.A., etc. – with great success.

ELIZABETH (1900–). Consort of George VI. Born the Lady Elizabeth Angela Marguerite Bowes-Lyon, she is the 3rd dau. of the 14th Earl of Strathmore and Kinghorne (d. 1944), through whom she is descended from King Robert Bruce. Ed. privately, she spent most of her early life at her birthplace or at her father's Scottish seat, Glamis Castle, Angus. On April 26, 1923, she m. Albert duke of York and their 2 children, Queen Elizabeth II and Princess Margaret [Rose], were b. in 1926 and 1930 respectively. When her husband ascended the throne as King George VI in 1936 she became Queen Consort, and was crowned with him in 1937. She adopted the style Queen Mother after his death.

ELIZABETH (1709–62). Empress of Russia. Dau. of Peter the Great, she carried through a palace

revolution in 1741 and supplanted her cousin, the infant Ivan VI, on the throne. She possessed much of her father's energy and statesmanship, continued his policy of westernization, and allied herself with Austria against Prussia.

ELIZABETH (1843–1916). Queen of Rumania, consort of Carol I. Under the pen-name 'Carmen Sylva' she pub. many vols. of romances, verse, etc.

ELIZABETH. City in New Jersey, U.S.A., the first English settlement in N.J., 1664. It has motor-car and tool factories, oil refineries, chemical works, etc. Pop. (1960) 107,698.

ELIZAVETPOL. Former name of KIROVABAD.

ELK. Largest deer (*Alces alces*) inhabiting N. Europe, Asia, Scandinavia, and America, where it is known as the moose. It is brown in colour, stands about 6 ft. high at the shoulders, has very large palmate antlers, a fleshy muzzle, short neck, and long legs; and feeds on leaves and shoots.

ELKINGTON, George Richards (1801–65). Founder of the British electro-plating industry. B. in Birmingham, he inherited his uncles' silver-plating business there, and in partnership with his cousin, Henry E., developed commercially the application of electricity to metals.

ELLERMAN, Sir John Reeves (1862–1933). British ship-owner. B. at Hull, he formed the Ellerman line in 1901, which subsequently embraced shipping interests all over the world. He was created a bart. in 1905. His son, also Sir John Reeves E. (1909–), is a world authority on rodents.

ELLESMERE PORT. English town (bor.) on the Mersey and the Manchester Ship Canal, a petroleum importing and refining centre. Pop. (1961) 44,714.

ELLICE ISLANDS. See GILBERT AND ELLICE ISLANDS.

ELLINGTON, Edward Kennedy (1899–). American instrumentalist and composer, known as 'Duke' E. B. In Washington of part Negro origin, he became a pianist at night clubs and restaurants before forming his own band. Later he became one of the world's most famous composers of jazz. His works incl. *Creole Rhapsody* (1931) and *Black and Tan Fantasy* (1938).

ELLIPSE (el'ips). In geometry, a closed curve which is the locus of a point which moves so that the sum of its distances from 2 fixed points, the foci, is constant. The diameter passing through the foci is the major axis, and the diameter bisecting this at right angles is the minor axis.

ELLIS, Henry Havelock (1859–1939). British writer and sexologist. B. in Surrey, he studied medicine in London, spent 4 years as a schoolteacher in Australia, and later returned to England and qualified as a doctor. After only a short time in general practice he turned his attention to literary and scientific work. He is chiefly famous as the author of many works on the psychology of sex, incl. *Studies in the Psychology of Sex* (7 vols., 1898–1928), but he was also a literary critic and essayist of note.

ELLIS, Mary (1900–). American actress and vocalist. B. in New York, she first appeared on the stage in 1918, and made her reputation in a wide range of N.Y. productions, incl. *The Blue Bird* (1919) and *Rose Marie* (1924), in which she created the title role. She has frequently appeared in London – notably in *The Dancing Years* in 1939 and *Mourning Becomes Electra* (1955–6).

ELK

ETHIOPIA. Addis Ababa is often the venue for conferences of African states. Emperor Haile Selassie (right) is here awarding an honorary degree to a visitor, President Tubman of Liberia. Photo: Keystone

people of Hamitic origin. The E. part is settled by a number of Somali peoples. Other people represented include Negroes and Falashas, a Jewish group. The pop. generally adhere either to the Coptic Church or Islam, Christians predominating in some N. provs. and Moslems in some of the southern; there is also a pagan element. The economy is agricultural and pastoral, crops incl. coffee—the chief export—cereals, cane sugar, and oil seeds; and sheep, cattle and goats are raised, hides, etc., being exported. Some salt, gold and potash is worked, and there is thought to be other mineral wealth incl. oil. Addis Ababa (the cap.) is linked by rail with Djibouti, and by road with Asmara (which has a rail line to Massawa) and with Assab via Dessie. Dire Dawa is commercially important. Most populous of the 14 provs. are Hararge, Shoa, Tigre and Wollo; Eritrea (q.v.) gives E. a coastline. Pop. (1965) 22,590,400.

HISTORY. Long subject to Egypt, E. became independent about the 11th cent. B.C. Christianity was introduced from Egypt c. A.D. 330 and was adopted as the national religion, but the Arab conquests of the 7th cent. isolated E. from the rest of Christendom. Diplomatic relations were estab. c. 1500 by the Portuguese, and contact with Europe was renewed when the explorer Bruce arrived in 1769. Since 1850 Ethiopian history has turned on the attempt to establish the authority of the central government over the local chieftains. National unity was attained under Menelek (reigned 1889–1913). Italian penetration from Eritrea resulted in war in 1895–6, ending with the Ethiopian victory of Adowa. Menelek's successors were Lej Yasu, deposed in 1916, and the empress Zauditu; with her was associated Ras Tafari, who succeeded as Haile Selassie in 1930. E. was conquered by the Italians in 1935–6, but in 1941 Haile Selassie returned from exile and with the aid of British forces expelled the Italians. His policy, before and after his exile, aimed at strengthening the central government. Under the constitution of 1955, there is a Council of Ministers responsible to the Emperor, who also nominates the Senate, but the Chamber of Deputies, elected by universal suffrage for 4 years, has a gradually increasing power.

LANGUAGE AND LITERATURE. The various languages of Ethiopia constitute today the chief representatives of the S. branch of the Semitic family. The chief literary and the ecclesiastical language is Ge'ez; Amharic is the principal colloquial language of the highlands; other languages spoken include Tigrina, round Aksum, and Tigre in Eritrea, both dialects of

Ge'ez. Ethiopian literature can be traced from the 5th cent. but apart from translations there are only a few chronicles, hymns, and diplomatic correspondence.

ETHNOLOGY. That branch of anthropology that is concerned with the characteristics and distribution over the globe of the races of mankind; also of their cultural conditions and achievements.

ETHYL ALCOHOL. Colourless liquid C_2H_5OH with a pleasant odour, b.p. $78.5^\circ C.$, density 0.789 g./ml. miscible with water or ether, and burning in air with a pale blue flame. The vapour forms an explosive mixture with air and may be used in high-compression internal combustion engines.

It is made by fermentation of many carbohydrates, by absorption of ethylene and subsequent reaction with water, or by the reduction of acetaldehyde in the presence of a catalyst. It is rapidly absorbed in the human body from the stomach and upper intestine and affects nearly every tissue, particularly the central nervous system. Tests have shown that the feeling of elation, etc., usually associated with drinking alcoholic liquors is due to the loss of inhibitions or removal of the restraining influences of the higher cerebral centres. It also results in dilatation of the blood vessels, particularly of the skin where a flushing is commonly observed. This loss of heat from the skin actually produces a physical cooling inside the body, despite the feeling of warmth experienced.

The digestive system is also affected and alcohol is absorbed unchanged from the gastro-intestinal tract into the circulation and intoxication depends on its degree of concentration. It can be detected and measured in the blood (legal limit for British motorists 80 mg in 100 millilitres) and in the breath.

ETNA. Volcano on the E. coast of Sicily, 10,755 ft. in height (10,870 ft. in 1861) – the highest European volcano. There have been many violent eruptions.

ETON. English town (U.D.) in Bucks on the N. bank of the Thames, opposite Windsor. Pop. (1961) 3,901.

E. College, one of the largest and most famous of England's public schools, was founded in 1440 by Henry VI. The present constitution dates from 1871, and the governing body consists of a Provost appointed by the Crown and 10 fellows. The boys number over a thousand; seventy Collegers live in the College, the remainder, called King's Scholars and Oppidians, live in houses held by the masters. King George III's birthday is celebrated each year on June 4th. Famous old Etonians include Chatham, Wellington, Gladstone, Lord Avon, Macmillan, and Sir Alec Douglas-Home.

ETRUSCANS. Ancient people of northern Italy. Their chief settlements were the twelve cities of Etruria, including Volaterrae, Tarquinii, Clusium, Caere, and Vetulonia, each of which seems to have been independent. The height of their power was reached about 500 B.C. In 474 B.C. they were defeated by the Carthaginians in a naval battle off Cumae, and about 400 B.C. their northern conquests were lost by the irruption of the Celts into N. Italy. Thereafter the E. entered into a period of decline, and they gradually succumbed to the rising power of Rome.

Some knowledge of their art, religion, and language

ETON. In the centre of the 'school yard' at Eton College stands a bronze statue of the founder, Henry VI, and behind is Lupton's Tower, commemorating Roger Lupton, provost of the college 1503–35, whose tomb is in the chapel. Photo: A. W. Kerr.

EMBROIDERY. A French 14th cent. embroidered wall-hanging, illustrating the story of Tristram and Isolde. Courtesy of the Victoria and Albert Museum.

erected in 1718 for Louis d'Auvergne, count of Evreux. It was later the home of Mme de Pompadour, Napoleon I and Napoleon III, and in 1870 became the official residence of the presidents of France.

ELYSIUM (il'zi-um), or the Elysian Fields. In classical mythology, a paradise (sometimes called the Islands of the Blessed) for those who found favour with the gods; it was situated near the r. Oceanus.

ELZEVIR (el'zev'er). Dutch printing house of the 17th cent., founded by Louis E. (1540-1617), b. at Louvain. Obligated to leave Belgium in 1580 on account of his Protestant and political views, he settled at Leyden as a bookseller and printer. Of his 7 sons, 5 went into the printing business. Among the firm's publications were editions of Latin, Greek, and Hebrew works, French and Italian classics, etc.

EMBA. River, 380 m. long, in the Kazakh S.S.R., Russia, draining into the N. part of the Caspian Sea. It flows through country rich in petroleum.

EMBROIDERY. The art of decoration by means of a needle and thread. Ancient Egypt, Greece, Phrygia, Babylon, and China were renowned for their E. There are many references to such work in the Bible. The earliest Anglo-Saxon work extant is the stole and mantle found in the tomb of St. Cuthbert at Durham (A.D. 905). E. has been used for the adornment of costumes, gloves, book covers, curtains, ecclesiastical vestments, etc. In Britain, early in the 20th cent., E. on canvas and linen for household purposes, together with appliqué, was popular.

EMBRYO'LOGY. The study of the changes undergone by living matter in the early life-history or ontogeny of a new individual, during the period in which it acquires the adult form of its species.

EMDEN. Port of Germany at the mouth of the r. Ems. Connected with the Ruhr by the Dortmund-Ems canal, E. became an importer of Scandinavian iron ore and timber, exporting Ruhr coal. Pop. (1966) 43,000.

EMERALD. A precious stone, a bright, grass-green variety of beryl. It is transparent or translucent, and the finest come from Muzo, in Columbia. See RUBY.

EMERGENCE, or Emergent Evolution. Philosophical theory, propounded in the 20th cent. by C. Lloyd Morgan, S. Alexander, and C. D. Broad, who maintain that life 'emerges' or 'grows naturally' out of matter, and mind emerges out of life.

EMERSON, Ralph Waldo (1803-82). American poet and essayist. B. at Boston, Mass., and ed. at Harvard, he became a Unitarian minister at Boston. In 1832 he resigned and went abroad, meeting Carlyle, who had a deep and lasting influence on his thought. On his return to America in 1833 he settled at Concord, where he led the Transcendentalists. He made a second visit to England in 1847, and incorporated his impressions in *English Traits* (1856). This had been preceded by two vols. of *Essays* (1841, 1844), and *Representative Men* (1850). Later works incl. *The Conduct of Life* (1860), *Society and Solitude* (1870), and *Letters and Social Aims* (1876). His verse (1847 and 1864) is remarkable for its quality of thought, and as a prose-writer E. possessed a brilliant and clear style.

EMERY, Walter Bryan (1903-). British archaeologist. As director of the Egyptian Govt. survey of Nubia 1929-34, he made outstanding discoveries at Ballana and Qustol, and as field director of the Egypt Exploration Soc. from 1952 supervised the final survey of the country before it was flooded by the Nile waters, following the raising of the Aswan Dam in 1963-4: he pub. *Egypt in Nubia* (1965). He has also excavated in Egypt, producing a remarkable study of the archaic period, and since 1951 has been Edwards prof. of Egyptology at London.

EMERY. A variety of corundum (q.v.), greyish-black and opaque, and containing a quantity of haematite and magnetite. Its hardness is second only to the diamond's, and it is much used as an abrasive.

EMINENCE GRISE (ehmēnois' grēz; Fr., 'grey eminence'). Name given to the Capuchin friar François Leclerc du Tremblay (1577-1638), who from 1612 was the intimate friend and adviser of Richelieu. Always he worked behind the scenes, and since his time the term *éminence grise* has been applied to other manipulators of power without immediate responsibility. He was also known as Père Joseph.

EMMET, Robert (1778-1803). Irish patriot. In 1803 he led an unsuccessful revolt in Dublin, was captured, tried, and hanged. His youth and courage have made him the best-loved of Ireland's heroes.

EMPE'DOCLES (c. 490-430 B.C.). Greek philosopher and scientist. He lived at Agragas (Agrigento) in Sicily, and is famous for his analysis of the universe into the 4 elements - fire, air, earth, and water - which through the action of love and discord are eternally constructed, destroyed, and constructed anew. According to tradition, he committed suicide by throwing himself into the crater of Mt. Etna.

EMPIRICISM (-isizm). Philosophical theory which maintains that all human knowledge is based ultimately on sense experience (Gk. *empeiria*, experience or experiment). It is the opposite of intuitionism.

EMPLOYERS' ASSOCIATIONS. Employers' organisations formed for purposes of collective action. In the U.K. there were formerly 3 main organizations, which in 1965 combined as the Confederation of British Industry (q.v.); one of the largest in the U.S.A. is the National Assoc. of Manufacturers.

EMPLOYMENT EXCHANGES. Agencies for

R. W. EMERSON
Photo: Concord Antiquarian Society, Mass.

Jaques-Dalcroze (q.v.), prof. of harmony at Geneva. He devised a series of 'gesture' songs, designed to be sung simultaneously with certain bodily actions.

EURIPIDES (c. 484-407 B.C.). Ancient Greek dramatist. The youngest of the 3 great tragedians of ancient Athens, he lived in retirement (apart from his normal terms of service with the Athenian conscript army) and wrote over 80 plays, of which 19 have survived. These show marked innovations in dramatic technique and in the treatment of dramatic themes, and E. was bitterly criticized for his 'impiety' and religious unorthodoxy, and for the sympathy he showed to slaves, beggars, and to women characters like Medea. All the plays are marked by realistic character drawing and, whereas earlier playwrights had presented ideal heroes, E. shows ordinary men and women as they really were. Towards the end of his life he went into voluntary exile at the court of Macedonia.

His surviving plays are: *Rhesus*, *Cyclops* (a satiric drama), *Alcestis* (438), *Medea* (431), *Hippolytus* (428), *Hecuba* (c. 426), *Children of Heracles* (c. 425), *Suppliant Women* (c. 424), *Madness of Heracles* (c. 423), *Andromache* (c. 420), *Ion* (c. 418), *Trojan Women* (415), *Electra* (c. 413), *Iphigenia in Tauris* (c. 413), *Helen* (412), *Phoenissae* (c. 410), *Orestes* (408), *Iphigenia in Aulis* (405), and *Bacchae* (405). There are verse translations of a number of these by Gilbert Murray.

EUROPA. In Greek mythology, a maiden who was courted by Zeus in the guise of a white bull. She mounted on to his back, whereupon the god swam out to sea and transported her to Crete. As the name implies, E. personifies the European continent.

EUROPA NOSTRA (Our Europe). International federation estab. in 1963 by the representatives of 18 organizations (e.g. Italia Nostra, National Trust, Irish Georgian Soc., Vieilles Maisons Françaises) in 11 European countries to organize public opinion for the preservation of historic sites, buildings and monuments. The 1st pres. was Prince F. Caracciolo.

EUROPE. Continent forming the western extremity of the Euroasiatic land mass; the Ural Mountains are usually considered to mark its eastern limit, the frontier between the U.S.S.R. and Turkey and Persia its south-eastern. At one time the Caucasus Mountains were considered to mark the limit of Europe in this area, but the extension of European Russia into former Asiatic territories has pushed the line farther to the S. On all other sides E. meets the sea; it narrows towards the west. E., which forms about $\frac{1}{4}$ of the world's land surface, has a length of about 2,400 m. from the North Cape to Cape Matapan, in S. Greece, and a breadth from Cape St. Vincent to the Urals of c. 3,150 m. The surface of the continent is divided into 3 main areas: (1) the North European Plain, which includes S. England and contains many great cities, such as London, Paris, Berlin, and Moscow, besides fertile agricultural lands; (2) the Central European Highlands, consisting of the Sierra Nevada, Pyrenees, Alps, Apennines, Carpathians and Balkans; and (3) the Scandinavian highland, including the N. of the British Isles.

The main rivers flow into northern or inland seas. The Volga, the Don, the Dnieper, the Northern Dvina, and the Western Dvina rise on the Valdian plateau, to the N.W. of Moscow, and the Danube, the Rhine, the Rhône, the Po, and the Adige flow from the Alps.

E. has many lakes, notably Geneva, Constance, Lucerne, Neuchâtel, Maggiore, Garda, and Como in the Alps; Vänern, Vättern, Mälaren, Mjøsa, and Randsfjord in the peninsula formed by Norway and Sweden; Ladoga, Onega, Peipus, and Ilmen in N. Russia; Saima and innumerable others in Finland. The largest islands are Spitsbergen, Iceland, Gt. Britain, Ireland, Sardinia, Corsica, Sicily, Novaya Zemlya, and Crete.

GEOLOGY. The oldest rocks found in Europe, those of the Archaean and Palaeozoic periods, cover most of the northern part of the continent including the N. and W. of Gt. Britain, and are also found in Brittany, Central France, and Spain. The more recent rocks of the Mesozoic and Cainozoic periods form a continuous belt in the central plain from the North Sea into Russia.

CLIMATE. Most of E. lies within the N. temperate zone, but parts of Norway, Sweden, and Russia are N. of the Arctic Circle. The British Isles and the western coastal areas of continental countries are washed by the Gulf Stream. There are four main climatic regions in E.: (1) southern in the Mediterranean region, characterized by an absence of rainfall in summer; (2) western, near the Atlantic and eastward to the Oder, with warm summers and cold winters, and rainfall evenly distributed throughout the year; (3) eastern or continental, with extremes of heat in summer and cold in winter; and (4) the sub-Arctic climate of the northern regions.

POPULATION. E. is remarkable for the high average density of its population. Several countries of the W. support an average of over 600 persons per sq. m. On the N. European Plain the highest densities are towards the W. There is a zone of high density along the S. edge of the plain, from the Ukraine to N.E. France, caused by the high quality of the soils and the occurrence of the major coalfields. Anthropologically 3 main racial types are found, though most Europeans show physically a blending of types. The 'Alpine' people, broad-headed and rather stocky, are found in Central E., especially the highlands. The 'Slavs' of Eastern E. are similar to the 'Alpine'. The 'Nordic' type of N.W. Europe have

EUROPE. Physical features of the continent.

power, and a very wide range of applications of science to civilization. To practise E. professionally a university or college training in addition to practical experience is required, but technician engineers usually receive their training through apprenticeships or similar training schemes. The main divisions of E. are aeronautical, chemical, civil, electrical, gas, marine, mechanical, mining, metallurgical, municipal, production, radio and structural E.

ENGLAND. A country of Europe, part of the United Kingdom of Great Britain and Northern Ireland. It occupies the largest part of the island of Great Britain, bounded on the N. by Scotland, on the W. by Wales; its E. coast is washed by the North Sea, its S. coast by the English Channel, and its W. coast by the Atlantic Ocean and the Irish Sea. Area 50,332 sq. m. incl. inland water; pop. (1967) 45,680,870.

Physical. The main physical features are, in the extreme N., the Cheviot Hills, and, southward, the Cumbrian Mountains and the Pennines which reach as far south as Derbyshire. The Welsh borderlands include Radnor Forest and the Black Mountains. In Devon and Cornwall, Dartmoor, Exmoor, and Bodmin Moor are other stretches of high land. The Cotswold Hills extend from Bristol into Lincolnshire; to the S.E., and separated by a broad vale, is a parallel line of hills, consisting of the Marlborough Downs, Chiltern Hills, and East Anglian Heights. Between London and the S. coast the N. and S. Downs enclose the Weald. At their W. end they are joined to Marlborough Downs by the extensive, low, chalk plateau of Salisbury Plain. Smaller groups of hills occur particularly in the W. Midlands, Dorset, and Somerset, and N.E. Yorkshire. The principal lowlands are the Vale of York, East Anglia, the Midlands, the London Basin, the Cheshire Plain, and Hampshire.

The whole of England is well watered, and the many good estuaries have encouraged the growth of great ports (London on the Thames, Bristol on the Avon, Liverpool on the Mersey, Hull on the Humber,

Newcastle on the Tyne). Of the rivers the most important is the Thames which flows from the Cotswolds to the N. Sea, passing through Oxford, Windsor, and London. The Severn rises in Wales and reaches the Bristol Channel below Gloucester. Other important rivers are the Trent and the Great Ouse, both flowing into the N. Sea, and the Mersey. A network of canals linking the ports with centres of industry, constructed in the 18th and 19th cents., lost importance with the growth of modern road and rail transport, but is being increasingly used for recreation and amenity. In the Cumbrian Mountains Windermere and other lakes are famed for their beauty. E. includes several smaller islands, among them the Isle of Wight and the Scilly Isles. (See also ISLE OF MAN.)

CLIMATE. The climate is temperate (mean coldest temperature about 5°C., warmest 15°C.), and for most of the year the country lies within the influence of the south-westerly variable winds which are cool and generally rain-bearing, though their impact changes unpredictably. Considerable seasonal and regional variations occur, and there are three climatic areas: (1) the west, with warm summers, mild winters, and abundant rainfall; (2) the south-east, with warm summers, cold winters, and less rain; (3) the north-east, with cool summers and cold winters. Throughout its length the W. coast is warmer than the E.

VEGETATION. E. was once a land of forests, with grasslands and bogs where the soil did not favour the growth of trees. Through the centuries the woodlands have been cleared until today they cover only a small percentage of their former area. The N. mountains lie within the sub-arctic belt of coniferous forests, while Sherwood, Dean, and the New Forests are deciduous. The oak and the beech are the most

ENGLAND. Rural serenity at Batemans, in the Sussex village of Burwash. Kipling made his home here when he retreated from Rottingdean, harassed by coachloads of sightseers from nearby Brighton. Photo: British Travel and Holidays Assn.

ENGLEHEART, George (1752–1829). English miniature painter. B. at Kew, he studied under Joshua Reynolds and in 40 years painted nearly 5,000 miniatures incl. copies of many of Reynolds' portraits.

ENGLISH ART. Painting. Little can be said with authority about E. medieval painting – apart from some fine illuminated MSS. – since such few wall paintings, etc., as have survived have often suffered deliberate damage on religious grounds or been incompetently restored. In Tudor times painting became for the first time mainly secular, and the first well-known artist is Holbein, who came from Germany to paint the court of Henry VIII. Among his followers was the miniaturist Nicholas Hilliard, who estab. a tradition of English excellence in this field which was continued by Samuel Cooper, Richard Cosway and George Engleheart. The Flemish Van Dyck, employed as a court painter by Charles I from 1632, greatly influenced English portrait painters, as in turn did Sir Peter Lely and Godfrey Kneller.

ENGLISH ART. A pioneer of the truly English school of painting was William Hogarth. This is a detail from one of his famous series of 1734 *Marriage à la Mode* – the onset of dis-solute boredom in the countess 'Shortly after the Marriage'.
Courtesy of the National Gallery.

William Hogarth was the first great English artist, Thomas Rowlandson following in the same tradition. More sedate are the famous painters of the 18th cent. conversation piece, the German-born Johann Zoffany and Arthur Devis. A truly indigenous form is the sporting picture, George Stubbs being the great 18th cent. master, although the Sartorius and Alken families also produced fine work, as did Sir Edwin Landseer in the next cent. and Sir Alfred Munnings in the 20th. George Morland's pictures of rural life have a similar vigorous realism.

Among the native portrait painters Sir Joshua Reynolds, Thomas Gainsborough – also a superb landscape artist – and Sir Thomas Lawrence hold high place in the late 18th and early 19th cents. Rather apart was the genius of the visionary William Blake and the water-colourist Samuel Palmer, who came under his influence. Among painters specializing in landscape in the same period were Richard Wilson,

Paul Sandby, Alexander Cozens, J. R. Cozens, John Crome, Thomas Girtin, J. S. Cotman, David Cox, Peter de Wint and – the giants in genius and influence – J. W. M. Turner and John Constable. See illus. p. 390.

In Victorian times the subject picture was popular and there was a pleasant domestic school which incl. J. C. Horsley. An outstanding group were the Pre-Raphaelites – Millais, Holman Hunt and Rossetti, but these and G. F. Watts, Ford Madox Brown, Lord Leighton and Sir Edward Burne-Jones have suffered in reputation in the 20th cent., although there are signs of a revival of interest.

J. M. Whistler, the American who introduced the doctrine of Art for Art's Sake and settled in Chelsea, had as his disciple W. R. Sickert, who also admired Degas and with Wilson Steer introduced Impressionism to England. Sickert headed the Camden Town group which incl. Spencer Gore and Harold Gilman. Among artists of the 20th cent. are Duncan Grant, Sir Frank Brangwyn, Sir William Nicholson, Augustus John, Paul Nash, Ben Nicholson, Christopher Wood, Graham Sutherland, Ivon Hitchens, Stanley Spencer, John Bratby, Francis Bacon and Victor Pasmore.

Sculpture. In addition to some early Celtic work, there are some fine medieval ecclesiastical sculptures, e.g. Wells Cathedral and the Henry VII chapel in Westminster Abbey. Foreign artists such as Roubillac were extremely popular in the 18th cent. but John Flaxman is the first outstanding English name. Well known in the 19th cent. were Sir Francis Chantrey, Alfred Stevens, and Lord Leighton, and Sir George Frampton at the turn of the cent. The 20th cent. has seen a remarkable flowering with the work of Epstein, Eric Gill, Frank Dobson, Henry Moore, Barbara Hepworth, Michael Ayrton, and Reg Butler.

Architecture. The main styles in English architecture are: Saxon, Norman, Early English (of which Westminster Abbey is an example), Decorated, Perpendicular (15th cent.), Tudor (a name chiefly applied to domestic buildings of the period, c. 1485–1558), Jacobean, Stuart (incl. the Renaissance and Queen Anne styles), Georgian, and the Gothic revival of the 19th cent. Notable architects incl. Wren, Inigo Jones, Vanbrugh, Hawksmoor. Sir Charles Barry, Sir Edwin Lutyens, Sir Hugh Casson, Sir Basil Spence, Sir Frederick Gibberd, and Denys Lasdun.

Universality of materials – steel, glass – has merged the English tradition with the international trend to austere skyscrapers, but recent years have seen such strikingly imaginative works as Coventry Cathedral by Sir Basil Spence, with the integrally designed tapestry by Graham Sutherland, and Liverpool Cathedral by Sir Frederick Gibberd, incorporating in the lantern 50-ft. high glass panels designed by John Piper.

ENGLISH CHANNEL. Stretch of water between England and France, leading in the W. to the Atlantic Ocean, and in the E. via the Strait of Dover to the North Sea. It is 280 m. long from W. to E.; 17 m. wide at its narrowest (Cap Gris Nez to Dover) and 110 m. at its widest (Ushant to Land's End). See CHANNEL SWIMMING and CHANNEL TUNNEL.

ENGLISH HISTORY. PREHISTORIC AND ROMAN BRITAIN. From c. 2500 Britain was inhabited by people who came from the E. and S.; they practised agriculture and left as their monument the long barrows in S. England. Another group, called 'beaker folk', introduced bronze-working c. 1800 B.C.; they constructed Stonehenge and other great religious structures. Several waves of Celtic invaders followed from c. 1000 B.C.; the use of iron was introduced c. 450 B.C. The Celts traded with Europe and their tribal organisation was developing into a system of kingdoms when Julius Caesar made his visits in 55 and 54 B.C. The Roman conquest began in A.D. 43.

united Europe against him. In N. Europe Sweden, after a cent. of glory, ceased to be a great power with the death of Charles XII (1697–1718), while 2 new powers arose: Russia, regenerated by Peter the Great (1682–1725), and Prussia. The rivalries of Prussia and Austria, and of Britain and France in India and Canada, produced the War of the Austrian Succession (1740–8), and the Seven Years War (1756–63); when they ended Prussia was estab. as a European power, and France had lost its colonial empire to Britain.

The spirit of revolt against absolute monarchy was voiced by the *philosophes*, whose humanitarian doctrines prepared the way for the French Revolution (1789–95). The opposition of the Austrian and Prussian monarchies provoked the wars of 1792–1815, during which the French armies spread revolutionary ideas throughout Europe. The dictatorship of the Jacobins (1792–4) saved France in 1792, but the Terror (1793–4) so terrified the bourgeoisie that they accepted the military despotism of Napoleon (1799–1814). His aggressions aroused throughout Europe a popular resistance which brought about his overthrow.

For 30 years the Holy Alliance attempted to hold back the popular movements which had arisen from the French and Industrial Revolutions, Liberalism, nationalism, and Socialism. In spite of the failure of the 1848 revolutions, by 1871 Germany and Italy were unified, and France was a republic.

With the Greek War of Independence (1821–9) the decadence of Turkey became evident. A struggle for the domination of the Balkans followed, in which Russia was matched at first against Britain and France, and later against Austria and Germany. The Balkan question, Franco-German hostility, and colonial rivalries divided Europe into 2 armed camps – the Triple Alliance (1882) of Germany, Austria and Italy, and the Franco-Russian Alliance (1891), with which Britain was linked by the Entente Cordiale, 1904, and an agreement with Russia, 1907. The last of a succession of international crises plunged Europe into the F.W.W. of 1914–18.

Russia became a Communist republic in 1917 and after the war Germany and Austria became democratic republics, Italy and Hungary Fascist dictatorships. The Austrian and Turkish empires disappeared, new states – e.g. Poland, Czechoslovakia, Yugoslavia – arising from the ruins. A new stage opened with Hitler's coming to power in 1933. Germany and Italy embarked on a policy of aggression in Spain, Austria, Czechoslovakia, and Albania, while Britain and France wavered between appeasement and resistance until the S.W.W. broke out in 1939. During 1939–41 Germany overran much of Europe, incl. most of European Russia. Germany's attack on Russia in June 1941, coupled with Japan's attack on the U.S.A. later that year, brought both Russia and the U.S.A. into the war and eventually turned the tide. Completely defeated, Germany and Austria were occupied by the Allied powers.

Russia emerged from the war as the greatest European power, with the small countries of E. Europe as satellites under Russian domination. Treaties of peace were concluded by the Allies in 1947 with Hungary, Italy, Finland, Rumania, and Bulgaria, in 1955 with Austria. The British, U.S., and French zones of (W.) Germany were recognized by those occupying powers in 1949 as the Federal German Republic; the Russian zone of (E.) Germany was proclaimed a separate democratic republic later the same year. Russian hostility to western Europe drew the countries of that part of the continent together and into close alliance with the U.S.A. (see NORTH ATLANTIC TREATY), but the closing of the gap between standards of life E. and W. of the Iron Curtain, reinforced by doctrinal

differences between the Soviet Union and China, led to a relaxation of the Cold War. Tension was renewed 1968 over Czechoslovakia.

EUROPEAN UNION. Since the break-up of the Roman Empire, which had united southern and western Europe, incl. Britain within the fence of Roman peace, the idea of a united Europe has been many times revived. Military reunions, such as those imposed by Charlemagne, Napoleon, and Hitler did not last, but peaceful achievement of the aim was advocated by Grotius (17th cent.), Kant (18th cent.), and Briand, Robert Schuman, Adenauer and de Gasperi (qq.v.) in the 20th cent. A start was made towards the end of the S.W.W. in the economic field through Benelux (q.v.). After the war came the European Recovery Programme (see MARSHALL, GEORGE C.) estab. as the Organization for European Economic Co-operation (OEEC) 1948, and renamed Organization for Economic Co-operation and Development (q.v.) in 1961. Also in 1948 the Brussels Treaty

The European School in Luxembourg for children of the staff of the European Communities represents the hope of a united continent.

Courtesy of the Information Service of the European Communities.

(q.v.) was signed, from which came Western European Union and the Council of Europe (q.v.).

The EUROPEAN COMMUNITY consists of the European Coal and Steel Community (1952), European Economic Community (EEC, popularly called the Common Market, 1957), and the European Atomic Energy Community (Euratom, 1957). These 3 share from 1967 the following institutions: a Commission (H.Q. Brussels, limited by 1970 to 9 members, which initiates Community action); Council of Ministers (H.Q. Brussels, consisting of a representative minister from each member govt. according to the subject discussed, which makes decisions on the Commission's proposals); European Parliament (H.Q. Luxembourg, with members nominated by the national parliaments, and provision for eventual direct election, which must be consulted on major issues and can dismiss the Commission by an adverse vote); and European Court of Justice (H.Q. Luxembourg, to safeguard interpretation of the Rome treaties, q.v.) Members, often referred to as the Six, are Belgium, France, W. Germany, Italy, Luxembourg, and the Netherlands; repeated British applications for membership have been blocked by France.

Allied with Britain in her wish to join the group are the Outer Seven (Austria, Britain, Denmark, Norway, Portugal, Sweden and Switzerland) who formed the European Free Trade Association (EFTA) in 1959.

EUROPIUM. An extremely rare chemical element. Symbol Eu; atomic number 63; atomic weight 152. It is of little importance at present.

EUSEBIUS (c. 260–c. 340). Bishop of Caesarea

cent. Popular anticlericalism found expression in the Lollard movement, which anticipated the Reformation. When Richard II moved towards absolutism, parliament replaced him by Henry IV, who was obliged to grant it unprecedented powers. Henry V's attempt to conciliate the nobility by renewing the French war ended in his son's reign in disaster, and led directly to the Wars of the Roses (1455-85). Order, restored by Edward IV, was maintained after a change of dynasty by Henry VII, who broke the political power of the feudal nobility.

TUDOR ENGLAND (1485-1603). Henry VIII followed this up by bringing the Church under royal control, repudiating the papal power, dissolving the monasteries, and confiscating their wealth. In this policy he received the enthusiastic support of parliament and the landowners, who benefited by the confiscated lands. Under Edward VI the English Church adopted Protestant doctrines; after a Catholic reaction under Mary I, Elizabeth I adopted a compromise whereby the Church's doctrines became Protestant and its ritual semi-Catholic. These changes coincided with, and encouraged, a movement whereby many of the free peasantry who had arisen after the disappearance of serfdom were evicted to make room for sheep-farms. Modern capitalism began with the development of the woollen industry and of trade with Russia, Turkey, and later with India. Trade rivalries combined with political reasons to involve England under Elizabeth I in war with Spain, whence the country emerged as a major naval power.

Sir Robert Walpole – the first 'prime minister' – has a word with the Speaker, Arthur Onslow. After Hogarth.

The accession in 1603 of James VI of Scotland as James I of England united the crowns of the two countries. See UNITED KINGDOM; also BRITISH COMMONWEALTH; IRELAND; SCOTLAND; WALES.

THE ENGLISH REVOLUTION (1603-89). Under James I the uneasy co-operation between king and parliament, which had continued through the Tudor period, ended. The gentry and merchants, enriched by Church lands, enclosures, foreign trade, and industry, took advantage of the Crown's financial needs, produced by the inflation which followed the import of American silver, to seize control of the state machine. The issues were complicated by the struggle between the State Church and the Puritans, who became identified with the parliamentary opposition. During the revolution of 1640-60 England passed through civil war to republicanism, and thence to military dictatorship. The Restoration of 1660 restored to the monarchy the show rather than the substance of power. Charles II worked with considerable success to reverse the work of the revolution, but James II's attempts to carry this process further provoked a new revolution in 1688-9, which placed political power in the hands of the Whig landowners and merchants. Ireland, which had been finally conquered by the Tudors, rose for her independence in 1641 and 1689, only to be reduced to the status of a colony. Meanwhile the foundations of the Empire were laid in N. America and India, a process which involved England in three wars with the Dutch. The accession of James I had brought England and Scotland under one king. Among the results of the revolution of 1688 was the union of their parliaments in 1707.

THE 18TH CENTURY (1689-1815). Another result of 1688 was the second 100 Years War with France, the successor of Holland as England's commercial and colonial rival. In this series of seven wars British sea-power proved decisive, and the French were ousted from N. America and India. At home the supremacy of parliament found expression in the establishment of cabinet government under Walpole (1721-42). The power of the Whig landowning and merchant oligarchy, supreme since 1714, was challenged by George III, and for 70 years (1760-1830) the Tories were almost continuously in office. Those years were troubled by the successful revolt of the American colonies (1775-83) and the French Revolution (1789-99), which stimulated the growth of the democratic movement in England. In Ireland a powerful movement arose for complete independence, which Pitt countered by carrying through a parliamentary union with Britain (1800). At home agriculture was revolutionised by a new wave of

Queen Elizabeth presides over parliament. An illustration from Robert Glover's *Nobilitas Politica et Civilis* (1608).

the New Zealander Edmund Hillary and the Sherpa Tensing.

EVERSHED, John (1864–1956). British astronomer. B. in Surrey, he devoted himself to solar observations, surveying solar prominences in particular detail, and in 1909 discovered the radial movement of gases in sunspots ('E. effect'). He also gave his name to a spectroheliograph, the 'E. spectroscope'.

EVESHAM (évz'-). English town (bor.) on the Avon, in S.E. Worcs, 14 m. S.E. of Worcester, in the fertile Vale of E. In the battle of E., 4 Aug. 1265, Edward, Prince of Wales, defeated Simon de Montfort, who was killed. Pop. (1961) 12,608.

EVOLUTION. Most usually, the organic E. of living creatures. Some conception of an evolutionary process may be traced in antiquity in writers such as Lucretius (1st cent. B.C.), but serious speculation was not renewed until the 18th cent. by Erasmus Darwin, grandfather of Charles Darwin, and Lord Monboddo. J. B. Lamarck in 1809 advanced a general theory of E., but the main contribution to the rise of evolutionary doctrine before Charles Darwin's *The Origin of Species* (1859) was the work of the geologist Lyell (q.v.). The evidence for continuous E. of living matter is provided by fossils, by vestigial organs or limbs in living species which are found to be fully functioning in other animals of similar construction, by geographical distribution and geology. Darwin assigned the major role in E. to natural selection, which resulted in the survival of the fittest, but the method by which E. takes place is still uncertain. Later followers of Lamarck maintain that an organism is moulded by its environment, to which it in turn endeavours to adapt itself, the consequent alterations in structure being transmitted to later generations—the concept of 'inheritance of acquired characters'. This theory is now largely discredited and it is thought that the vital factors in E. are the random changes in the hereditary constitution of an organism, upon which the environment may exert an encouraging or discouraging influence. A striking example of such changes in modern times is the rapid spread of the all-black form of *Biston* (*Amphi-*

EVEREST. The final ridge seen from the south shoulder, as Hillary and Tensing encountered it.

Photo: The Mount Everest Foundation.

dasis) *betularia*, first observed in Manchester in 1848. Prior to this date, only the light-coloured form was known. This moth is invisible on lichenized tree-trunks. The black form (*f. carbonaria*) has now replaced the light form through all industrial regions in Britain and elsewhere where trunks are black, up to a level of 98 per cent of the population. Kettlewell has shown that this represents a 30 per cent advantage; he has also suggested that there may be physiological differences between the two forms. This phenomenon is taking place in many different moth species. It is referred to as Industrial Melanism.

EVREUX (ehvrö'). Chief town of Eure dept., Normandy, France, on the Iton. It has an 11th cent. cathedral and a bishop's palace. Pop. (1962) 40,158.

EVZONES (ev'zönz). Riflemen of the Greek army, characterized mainly by their picturesque dress with its spreading skirt.

EXCAVATOR. Machine designed for soil stripping, earth moving, ore extraction, etc., and usually of the track-mounted 'crawler' or more easily manoeuvred and adaptable rubber-tyred type. Modern multi-storey concrete buildings which need vertical access have led to their increasing use.

EXCISE. MS AND EXCISE.

EXCOMMUNICATION. The temporary or permanent exclusion of an offender from the rights and privileges of membership of a religious community. In the Middle Ages the popes claimed the right to excommunicate recalcitrant sovereigns, and the emperors Henry IV, Frederick I and Frederick II; and John, Henry VIII, and Queen Elizabeth I of England were among those excommunicated.

EXECUTOR. The person appointed by Will to carry out the testamentary instructions of the deceased. An E. can be appointed only by a Will or a Codicil to a Will, and he may refuse to act. The duties of an E. are to bury the deceased and to prove the Will and take out letters of administration of the estate. He must then pay the deceased's debts from the estate, collect any monies due, and distribute the estate according to the testamentary directions.

EXETER, David G. B. Cecil, marquess of (1905–). Athlete and administrator. As Lord Burghley, he won 8 British championships and the 400 metre hurdles in the 1928 Olympic Games. He was a Cons. M.P. 1941–3, and succeeded his father as marquess in 1956.

EXETER. English city (co. bor.), co. town of Devon, on the Exe, 9 m. from its mouth. It is a rly. junction, and a market centre, and manufactures agricultural implements. The cathedral dates from 1280–1369 and was restored in the 1870s. There is an Elizabethan Guildhall; the grammar school was founded in 1332. E. is the seat of a university constituted in 1955, and of a bishopric. It was badly damaged by German air raids in 1942. Area 14 sq. m.; pop. (1961) 80,215.

EXHIBITION. Term used to denote a collection of works of art, industrial products, etc., displayed to the public at a museum, art gallery, etc. A national E. had been held in Paris as early as 1798, but the 1st great international E. was that held in London in 1851 under the patronage of the Prince Consort (see CRYSTAL PALACE). Notable later Es. were the one held in Paris in 1889, for which the Eiffel Tower was erected; the World's Columbian Exposition, held at Chicago in 1893; the British Empire E. at Wembley, 1924–5; the Festival of Britain, 1951 – for which the Royal Festival Hall on the South Bank of the Thames was built; and the 1964–5 World's Fair in New York.

EXISTENTIALISM. Philosophical system propounded about 1943 by the French philosopher J. P. Sartre. Its main tenet is that in all important matters 'Existence precedes Essence', or in simpler language 'Facts come before Ideas'. In the evolution of man the facts of human nature come first and it

EVOLUTION. On the left the peppered moth and its black form are seen at rest on a lichenized tree-trunk, and on the right the two forms are side by side on a polluted oak trunk in Birmingham.

the Humber, which collectively form Anglo-Saxon or O.E. This tongue retained much of the complex Germanic grammar, and was inflectional.

King Alfred's active interest in literature made the W. Saxon dialect the prevailing literary language until the early part of the 10th cent.

The Norman Conquest did not at first greatly affect English, and it is possible that interaction with the related speech of the Danes settled in the country played the greater part in the dropping of many inflections and the creation of a much simpler language than O.E. by the end of the 12th cent.; but it had no standard form, and documents of the M.E. period (c. 1200–1400) are written in a variety of dialects. Thanks in particular to the influence of Chaucer, the dialect of London came to be accepted as a literary standard, an early indication of this being that Gower (c. 1330–1408), though of Kentish origin, wrote in the London, not the Kentish, dialect. This tendency was confirmed by the setting up in London in 1477 of the first printing press; Caxton, like Gower from Kent, used the London dialect in his publications in English. By c. 1650 printers had generally adopted a fixed orthography. But adoption of a standard form of written English did not abolish spoken dialects and local

U.S.A. Surviving dialects often help to elucidate the history of pronunciation.

Spoken by perhaps 5,500,000 people in 1600, English is now the first language of more than 300,000,000, and the second of many others.

ENGLISH LAW. One of the 2 great European legal systems, Roman law being the other. E.L. has spread to the U.S.A., Canada, Australia, and New Zealand, and has greatly influenced Indian law. It has a continuous history dating from the local customs of the Anglo-Saxons, traces of which survived until 1925. After the Norman Conquest there grew up, side by side with the Saxon shire courts, the feudal courts of the barons and the ecclesiastical courts. From the king's council developed the royal courts, presided over by professional judges, which gradually absorbed the jurisdictions of the baronial and ecclesiastical courts. By 1250 the royal judges had amalgamated the various local customs into the system of Common Law, i.e. law common to the whole country. A second system known as Equity (q.v.) developed in the Court of Chancery, in which the Lord Chancellor considered petitions. In the 17th–18th cents. the Common Law absorbed the Law Merchant, the international code of mercantile customs.

During the 19th cent. virtually the whole of E.L. was reformed by legislation, e.g. the number of capital offences was greatly reduced. The Judicature Acts 1873–5 abolished a multiplicity of courts, and in their place established the Supreme Court of Judicature, organized in the Court of Appeal and the High Court of Justice; the latter has 3 divisions – the Queen's Bench, Chancery, and Probate, Divorce, and Admiralty Divisions. All Supreme Court judges may apply both Common Law and Equity in deciding cases. From the Court of Appeal there may be a further appeal to the House of Lords.

A unique feature of E.L. is the doctrine of Judicial Precedents, whereby the reported decisions of the courts form a binding source of law for future decisions. A judge is bound by decisions of courts of superior jurisdiction, but not necessarily by those of inferior courts.

ENGLISH LITERATURE. The earliest surviving O.E. poems – *Beowulf* and the epic fragments *Finnes-burh*, *Waldhere*, *Deor* and *Widsith* – reflect the heroic age and Germanic legends of the 4th–6th cents., although probably not recorded until the 7th cent. Heroic elements also survive in several elegiac lyrics, e.g. *The Wanderer*, *The Seafarer*, and in many poems with a specifically Christian content, e.g. *The Dream of the Rood*; the Saints' Lives, e.g. *Elene*, by the 8th cent. poet Cynewulf; and the biblical paraphrases, e.g. *Genesis*, formerly attributed to Caedmon. These poems are all written in unrhymed alliterative metre. The great prose writers of the early period were the Latin scholars Bede, Aldhelm, and Alcuin, and it was left to Alfred to found the tradition of English prose with his translations and his establishment of the Anglo-Saxon Chronicle; other prose writers of the time are Aelfric and Wulfstan.

With the Conquest began the ascendancy of Norman-French in cultural life, and it was not until the 13th cent. that the native literature regained its strength. Prose was concerned chiefly with popular devotional use, but poetry emerged most typically in the metrical chronicles, e.g. Layamon's *Brut*, and the numerous romances based on the stories of Charlemagne, the Arthurian legends, the classical episodes of Troy, etc. First of the great English poets was Chaucer, whose early work was moulded by the predominant French influence, but who came to his maturity under that of Renaissance Italy. Of purely native inspiration was *The Vision of Piers Plowman* of Langland in the old alliterative verse, and the anonymous *Pearl*, *Patience*, and *Gawayne and the Grene Knight*.

The cabinet room at 10 Downing Street, the Prime Minister's residence, where modern English history is made. Covered in green baize, the table tapers at each end to allow the Prime Minister, who sits at the centre of one side (the armchair right), to see who is speaking. Photo: Crown Copyright.

variations of pronunciation in different parts of E., many of which survive into the second half of the 20th cent. despite the widespread levelling influence of broadcasting. In the 1960s a regional 'accent' had become a social and career asset rather than a liability.

Almost purely Germanic at the time of the 5th cent. invasions, English borrowed certain Celtic and Latin words from the defeated inhabitants of Britain in the 6th to 10th cents. Many words used by the later Danish and Norse settlers passed into the general vocabulary, and from c. 1150 English absorbed a number of Norman-French words, particularly those concerning the Church, state, law, and feudal system.

From the middle of the 13th cent. the Romance element in E. is as important as the Germanic. These French borrowings closely resembled their Latin originals and prepared the way for continued and extensive Latinization of vocabulary. Greek words were also adopted, particularly with the growth of the various sciences from the 17th cent. During the 14th to 17th cents. words, many of them nautical, were adopted from the Low Countries and N. Germany, and from the 17th cent. onwards have been borrowed freely from every language, and also from other English-speaking communities, notably the

structure contained in a bony socket and having considerable freedom of rotatory movement. It is kept moist by the secretion of the lacrimal glands. Light enters it through the circular opening of the iris, passes through the lens, where it is focused, and strikes on the delicate inner membrane, the retina; thence the impulse is transmitted to the brain by the optic nerve.

EYEBRIGHT. Common wild flower of the genus *Euphrasia*, Scrophulariaceae family, found in fields throughout Britain. It is 2–6 in. high, bearing whitish flowers streaked with purple. The name indicates its former use as an eye-medicine.

EYRE (ār), Edward John (1815–1901). British colonial governor. B. in Yorks, he emigrated to Australia and made journeys into the interior, described in his *Expeditions into Central Australia*

(1845), and in 1864 became gov. of Jamaica. In 1865 he suppressed a Negro rising with harshness, was suspended and not reinstated.

EYRE. Lake in S. Australia, discovered by E. J. Eyre in 1840, area c. 3,000 sq. m. In dry seasons it is a salt marsh, in wet a lake; it was full in 1950 for the first time since its discovery.

EYSENCK (i'senk), Hans Jurgen (1916–). British psychologist. Ed. at the Univ. of London, he became prof. of psychology there in 1955. He has attacked the usual methods of psychotherapy, notably Freudian psychoanalysis, pointing out that spontaneous remission would equally account for the cures claimed. Instead, he favours behaviour therapy which has links with J. B. Watson and Pavlov (q.v.), and advocates the treatment of symptoms rather than imaginary underlying causes.

EYSTON (ē'ston), George Edward Thomas (1897–). British racing motorist. He won many records in small cars at Brooklands and in 1937–8 took the world's land speed record 3 times, in U.S.A. See also **SPEED RECORDS**.

EZEKIEL (ezē'ki-el) (b. c. 622 B.C.). Prophet of the O.T. A priest of Jerusalem and member of the family of Zadok, he was carried into captivity with King Jehoiachin by Nebuchadnezzar in 597 B.C. While in Babylonia he preached the downfall of Jerusalem as retribution for the sins of Israel.

EZRA. Scribe of the clan of Zadok, who by permission of Artaxerxes led c. 1,500 Jews from Babylonia back to Jerusalem (458 B.C.) where he instituted reforms, including the eradication of intermarriage, and re-establishment of the Mosaic Law, as told in the O.T. book named after him.

F The sixth letter of the alphabet. Its capital form has changed little from what we see in the earlier Semitic alphabets.

FABER, Frederick William (1814–63). British hymn writer. A clergyman of the C. of E., he became an R.C. priest in 1845, and superior of the Oratory of St. Philip Neri (Brompton Oratory) in 1849. He wrote 'Hark, Hark, my Soul'.

FABERGÉ (fahbärjeh), Peter Carl (1846–1920). Russian goldsmith. Of Huguenot descent, he was b. at St. Petersburg, and his workshops there and in Moscow were celebrated for the exquisite delicacy of their products, especially the use of gold in different shades. Among F.'s masterpieces was the series of imperial Easter eggs (illustrated), the first of which was commissioned by Alexander III for the Tsarina in 1884. He d. in exile.

FABIAN SOCIETY. Socialist propagandist and research organization, founded in 1884. Its name is derived from Fabius Cunctator (q.v.), and refers to the evolutionary methods by which it hopes to attain socialism by a succession of gradual reforms. In its early days it was dominated by Bernard Shaw and Sidney Webb: it still plays its part and in 1963 Harold Wilson first outlined in a F.S. meeting his plans for changing the machinery of British govt.

FABTIUS. Name of an ancient Roman family, of whom the best known is Quintus F. Maximus, known as *Cunctator* (Delayer). As commander against Hannibal 217–214 B.C., he continually harassed his armies without ever risking a set battle.

FABLE. A story, either in verse or prose, in which the animal kingdom, and even inanimate objects, are

endowed with the mentality and speech of human beings in order to point a moral. The best-known Fs. include those of Aesop (5th cent. B.C.), Phaedrus and Avianus, La Fontaine, Gay, Lessing, etc.

FABRE (fahbr), Jean Henri (1823–1915). French entomologist, called the 'Insects' Homer' because of his remarkably vivid and intimate descriptions of wasps, bees, and other insects. B. in Aveyron, he became a schoolmaster but retired in 1871 to Sérignan. He pub. *Souvenirs entomologiques*.

FABRICIUS, Geronimo (1537–1619). Italian anatomist. He was prof. of surgery and anatomy at Padua from 1562, and did pioneer work that won him the title of the father of embryology.

FACTORY ACTS. Acts of parliament concerned with conditions of work, hours of labour, safety, and sanitary provisions in factories and workshops. The first was the Health and Morals of Apprentices Act 1802, and this was followed in 1819 by the Cotton Mills Act, which forbade the labour of children under 9 and reduced the hours of labour of those under 16 to 72 per week. Ashley's Act of 1845 forbade night work to women, and in 1847 Ashley (later the 7th earl of Shaftesbury) was responsible for passing the 10-hours bill. The first factory inspectors were appointed in 1833. Legislation was subsequently extended and consolidated, and by an act of 1963 offices, shops, and railway premises, in which conditions had often been unsatisfactory, were covered.

FADDEN, Sir Arthur William (1895–). Australian statesman. B. in Queensland, he became leader of the Country Party (1941–58), was briefly P.M. (Aug.–Oct. 1941), and Deputy P.M. 1949–58,

English, *see under* AUSTRALIA, CANADA, IRELAND, NEW ZEALAND, SCOTLAND, SOUTH AFRICA, UNITED STATES OF AMERICA, WALES.)

ENGLISH-SPEAKING UNION. Society for promoting the fellowship of the English-speaking peoples of the world, founded in 1918 by Sir Evelyn Wrench.

ENGRAVING. The art of incising marks of any kind upon any hard substance, esp. on blocks of metal or wood for purposes of reproduction. There are three main types of print-making: (1) relief prints made by means of wood-cutting and wood engraving; (2) intaglio prints made by means of engraving and etching upon metal; and (3) surface prints made by means of lithography. *See* AQUATINT; DRY-POINT; ETCHING; MEZZOTINT.

ENNIS. Co. town (U.D.) of Clare co., Rep. of Ireland, on the r. Fergus, 20 m. N.W. of Limerick; it is a market centre, with flour mills; furniture is made. Pop. (1961) 5,678.

ENNISKILLEN. Co. town (bor.) of Fermanagh co., N. Ireland, situated between the Upper and the Lower Lough Erne. It is a market town, with some light industry. Pop. (1961) 7,227.

ENNIUS (en'i-us), Quintus (239–169 B.C.). Early Roman poet. B. near Tarentum in S. Italy, he wrote tragedies based on Greek models. His epic poem, the *Annales*, deals with Roman history and earned him the name of 'father of Roman poetry'.

ENOSIS. *See* CYPRUS.

ENSCHEDÉ (ens'khedā). Textile manufacturing centre in Overijssel prov., the Netherlands. Pop. (1967) 136,503.

ENSOR, James, baron (1860–1949). Belgian artist. B. at Ostend, he became noted particularly for his dissonant use of colour and his 'decadent' and satiric pictures, whose skeletons and masked figures represented his view of humanity and its falsity. One of his best-known paintings is 'Entrance of Christ into Brussels' (1888).

ENTAIL. The settlement of land on a successive line of persons, usually the 'heirs of the body' of the settlor. 'Estates tail' are (1) general or (2) special. The former descend to the eldest child, regardless of sex, the latter to the eldest male child or the eldest female child or according to some other specific arrangement. Such settlements are increasingly rare in modern times, and the power to make them has often been destroyed by legislation, cf. restrictions in certain states of the U.S.

ENTE'BEE. Town in Uganda, on the N.W. shore of L. Victoria, 19 m. S.S.W. of Kampala. It lies 3,863 ft. a.s.l., and has technical schools, a botanical garden, and a first-class international airport. Founded 1893, it was the admin. centre of Uganda 1894–1962. Pop. (1967) 11,000.

ENTENTE CORDIALE (āntānt' kordē-ahl'). The 'friendly understanding' estab. between Britain and France in 1904, when France recognised Britain's 'special interests' in Egypt, while Britain professed herself disinterested in Morocco.

ENTERIC. A general name for infective fevers of the intestine, especially typhoid and paratyphoid.

ENTOMOLOGY. *See* INSECT.

G. B. SHAW. Water-colour by Sir Bernard Partridge, 1925. Photo: N.P.G.

ENVER PASHA (1881–1922). Turkish statesman and soldier. He led the military revolt in 1908 which resulted in the Young Turk revolution, and was killed fighting the Bolsheviks in Turkestan.

ENWONWU (enwon'wu), Ben (1921–). Nigerian sculptor. B. in Eastern Nigeria, he became Federal Art Adviser to the Nigerian govt., and his works incl. a statue of Elizabeth II in the House of Representatives at Lagos, and a Risen Christ in wood in Ibadan univ. chapel.

ENZYMES. Organic catalysts secreted by living organisms, by means of which the various chemical changes necessary for life of the cell are controlled. Some are found in natural secretions, such as the digestive juices, pepsin and trypsin; more frequently they can be obtained only from the interior of cells. But there is a vast number of vegetable Es., e.g. diastase, which converts starch into sugar.

EOLITHS (ē'-oliths). The simplest and most primitive form of specially shaped stone implements, dating from the Tertiary period. Their recognition as artifacts was largely due to Benjamin Harrison in 1899 and Reid Moir more recently in E. Anglia.

Ē'OS. Greek goddess of the dawn, better known by the Roman name of Aurora.

EOTVOS (öt'vösh), Roland von, Baron (1848–1919). Hungarian scientist. B. at Budapest, he investigated problems of gravitation, and constructed the double-armed torsion balance for determining variations of gravity.

EPAMINONDAS (ēpaminon'das) (c. 420–362 B.C.). Theban general and statesman, who won a decisive victory over the Spartans at Leuctra in 371, and fell in the moment of victory at Mantinea.

ÉPERNAY (ēpernā'). Town in Marne dept., France, centre of the champagne industry. Pop. (1962) 22,799.

EPHEDRINE (ef'edrin). A member of a group of drugs, called sympathomimetic amines, which incl. adrenalin and benzedrine. It occurs in the *Ephedra* genus of shrubs, found in warm temperate zones.

EPHESUS (ef'esus). Ancient city of Asia Minor, a centre of the Ionian Greeks, with a famous temple of Artemis (Diana). St. Paul visited the city and addressed one of his epistles to the Christians there. E. was destroyed by the Goths in A.D. 262.

EPIC. A narrative poem dealing at length with some great action such as the Babylonian *Gilgamesh*, Homer's *Iliad* and *Odyssey*, the Indian *Rāmāyana* and the Anglo-Saxon *Beowulf*. The primary or authentic epics were chanted at great feasts, and their main theme is always the deeds of heroes. The literary or secondary epic is written in imitation of the older epics, and is intended for reading. Virgil's *Aeneid* is the greatest Latin epic poem, and later examples are Milton's *Paradise Lost*, Tasso's *Jerusalem Delivered*, and Hardy's *Dynasts*.

EPICTE'TUS (fl. c. A.D. 90). Greek Stoic philosopher. B. at Hierapolis in Phrygia, he lived for many years in Rome as a slave, but eventually secured his freedom, attended the lectures of a Stoic, and became a Stoic philosopher himself. He taught that men are in the hands of an all-wise providence, and that they should endeavour to do their duty in the position to which they are called.

EPICURE'ANISM. System of philosophy named

ENWONWU. The artist at work on a group. Courtesy of the Nigerian Ministry of Information.

on the back and a white breast; the Scandinavian gyrfalcon (*F. gyrfalcon*); the Greenland F. (*F. candicans*); almost white and lightest of the true Fs.; the 'saker' and the much smaller 'lanner', both Mediterranean species; the hobby (*F. subbuteo*); the merlin (q.v.); and the kestrel (q.v.)—all the last 3 breeding in Britain. See FALCONRY.

GREENLAND
FALCON

FALCONRY. The use of specially trained falcons and hawks to capture birds or small mammals, practised from ancient times in the Near East, and introduced from the Continent to Britain in Saxon times. The Normans, the Tudors and Stuarts were all fond of F., but it fell into desuetude after the Civil War: in modern times revival has been attempted.

FALKIRK (fawl'-). Large burgh in Stirlingshire, Scotland, overlooking the fertile Carse of F. It is a centre of light-casting industry on the central coal-field; other industries include brewing and distilling, tanning, and the manufacture of chemicals and enamelled goods. Carron ironworks lie 2 m. N. Pop. (1961) 38,043.

FALKLAND (fawk'-), Lucius Cary, 2nd viscount (c. 1610-43). English royalist. Before the Civil War he earned a high reputation as a patron of literature and scholarship. Elected to the Long Parliament, he showed himself a zealous opponent of absolute monarchy, but the proposal to abolish episcopacy alienated him, and he went over to the king. Plunged into despair by his failure to secure a compromise peace, he flung away his life at the battle of Newbury.

FALKLAND ISLANDS. British Crown Colony in the S. Atlantic about 300 m. to the E. of the southern part of S. America. The islands are administered by a governor, with executive and legislative councils. There are 2 main islands, E. Falkland and W. Falkland, and a number of islets. Sheep are reared, and there are whale and seal industries, and surrounding seaweed beds are a potential source of alginates used in textile dyes and as a food additive. The cap. is Stanley (pop. 1,100), on the coast of E. Falkland. Area excl. dependencies 4,618 sq. m.; pop. (1966) 2,164; of S. Georgia, 22. Attached to the group are the dependencies of S. Georgia, and S. Sandwich islands. (See also BRITISH ANTARCTIC TERRITORY.)

The islands were sighted by Davis in 1592, claimed by Britain in the 18th cent., and colonized in 1833. Argentina has claimed them periodically (an armed group landed by air 1966), and there were govt. negotiations 1968. In 1948 both Argentina and Chile advanced claims on the Antarctic dependencies.

In the BATTLE OF THE FALKLAND ISLANDS, a British naval victory of the F.W.W. fought off E. Falkland on Dec. 8, 1914, a British force under Vice-Admiral Sturdee destroyed almost the entire German squadron commanded by Admiral von Spee that had just been successful in the battle of Coronel (q.v.).

FALLA (fahl'yah), Manuel de (1876-1946). Spanish composer. B. at Cadiz, he lived in France where he was influenced by the impressionists, esp. Debussy and Ravel. His first work of importance, the opera *La Vida Breve* (1905), was followed by the ballets *El Amor Brujo* and *The Three-Cornered Hat* (1919); *Nights in the Gardens of Spain*, songs, pieces for the piano and the guitar. The folk-idiom is an integral part of his compositions.

FALLADA, Hans. Pseudonym of the German novelist Friedrich Rudolf Ditzgen (1893-1947), author of the novel *Kleiner Mann - was nun?* (*Little man, what now?*), treating the unemployment problem.

FALLOPIUS, Gabriello (1523-62). Italian anatom-

ist. He taught at Ferrara, Pisa, and Padua, and made a particular study of the generative organs; the Fallopian tubes are named after him.

FALL-OUT. Radiation scattered in the debris of a nuclear explosion. In war-time attack the first danger, provided that the blast and fire hazards have been survived, is gamma radiation. In tests, however, the deposit of F. on the ground is delayed, and the chief peril is from radioactive components, e.g. strontium, which either enter the body and cause cancer, or burn on contact with the skin.

Radiation is measured in Rads, and is cumulative in effect. Comparative safety lies below 100 R, though long-term genetic or carcinogenic changes are probable up to 300 R; deaths begin at 450 R and there is a 50 per cent chance of death occurring over a period of days or weeks.

FALLS, Cyril Benthall (1888-). British military expert. An official historian of the F.W.W., he was military correspondent of *The Times* 1939-53 and Chichele prof. of the history of war at Oxford 1946-53.

FALMOUTH. English seaport (bor.) on the S. coast of Cornwall, on the W. side of Carrick Roads, the estuary into which empty the Fal and other streams. Ship repairing and marine engineering are the main industries. Pop. (1961) 15,427.

FAMAGUSTA (fahmahgoos'tah). Seaport on the E. coast of Cyprus. The harbour is the only one on the island that can accommodate medium-sized vessels, and exports citrus fruits and other agricultural produce. To the N. the site of Enkomi-Alasia has yielded undeciphered inscriptions of c. 1200 B.C., etc. See illus. p. 230. Pop. (1966) 39,200.

FAMILY PLANNING. The spacing of the birth of children to safeguard the health of the mother and the balance of family life. The prevention of conception is opposed on religious grounds in that it is immoral to frustrate the natural purpose of the sexual relationship, but is often advocated by medical men to prevent the transmission of hereditary disease and by economists to mitigate poverty, especially in eastern countries such as India, which are undergoing a population 'explosion'. Birth control by contraception has only become a generally adopted practice, most commonly using some chemical or mechanical means, in the last few generations: in the 1960s an oral contraceptive taken by the woman to induce an extension

FALL-OUT. An American-designed fall-out shelter which provides for life to continue as usual. Beyond the far wall of the living space are (left to right) shower and sanitary facilities; kitchen with sink, water tanks and food storage; folding bed; and additional food stores. Courtesy of Shelters for Living, Inc.

E. appears as an element in practically all mature legal systems, and in a number of modern codes the judge is instructed to apply to the decision of particular cases both the rules of strict law and the principles of E.

In England E. originated in decisions of the Lord Chancellor's court, the Court of Chancery, on matters that were remitted to it because there was no remedy available in the Common Law courts, or the remedy there was inadequate. Gradually it assumed the appearance of a distinct system of legal rules, as precise and limited in their operation as the rules of Common Law, and developed by the same method as the Common Law, i.e. by the doctrine of judicial precedent. Thus, in the 19th cent., there existed 2 great systems of English law—Common Law and E.—side by side, and applied in separate law courts, until the Judicature Acts, 1873–5, established a single High Court of Justice, in which each judge was given full powers to apply both Common Law and E. to the decision of any case before him. Equitable principles exist side by side with principles of Common Law in many branches of the law, and particularly in the law of contracts, of real and personal property, and of torts (or civil wrongs). One of the greatest contributions made by E. to English law is the institution of the trust.

EQUIVALENT WEIGHT. A chemical term for the combining proportions of a substance by wt., relative to hydrogen as standard. The Gram E.W. of an element is the number of g. of that element which will combine with or replace 1 g. of hydrogen or 8 g. of oxygen.

ÉRARD (ärahr'), Sébastien (1752–1831). French musical-instrument maker. He set up as a manufacturer of pianofortes in Paris c. 1777, and invented (1823) the grand pianoforte with double escapement.

ERASMUS, Desiderius (?1466–1536). Dutch scholar and humanist. B. at Rotterdam, the illegitimate son of Rogerius Gerardus (whose story is told in Charles Reade's novel, *The Cloister and the Hearth*), he himself adopted the Latin-Greek name which means 'beloved'. As a youth he was a monk in an Augustinian monastery near Gouda, but in 1495, after becoming a priest, he went to study at Paris, and in 1499 paid the first of a number of visits to England. Here he met Linacre, More, and Colet, and for a time he was Lady Margaret professor of Divinity and of Greek at Cambridge. His pioneer edition of the Greek N.T. was pub. in 1516, and an edition of St. Jerome and the *Colloquia*, a series of dialogues on contemporary topics, in 1519. In 1521 he went to Basle, where he edited the Christian Fathers. More than 3,000 of his letters have survived.

The *Erasmus Prize* (1958) of 100,000 guilders (£11,500) is awarded annually to outstanding contributors to internat. understanding, usually in social or cultural fields, e.g. Martin Buber, Sir Herbert Read, Robert Schuman, Jan Tinbergen.

ERASTIANISM. The theory that the Church should be subordinated to the State. The name is derived from Thomas Erastus (1524–83), a German-Swiss theologian, who maintained in his writings that the Church should not have the power of excluding persons as a punishment for sin.

ERATO'STHENES (fl. 235 B.C.). Greek geographer and mathematician. His map of the ancient world was the first to contain lines of latitude and longitude; he calculated the earth's circumference with an error of less than 200 m.

ERBIUM. Metallic element; symbol Er, atomic number 68, at. wt. 167.27. It is one of the rare earths, and was discovered in 1843 by Mosander.

ERCKMANN-CHATRIAN (er'kahn-shatrëon'). Pen-name of 2 French writers in collaboration. Émile Erckmann (1822–99) and Alexandre Chatrian

(1826–90). Their work, dating from 1847, incl. many novels, e.g. the series dealing with the Napoleonic wars: *L'Ami Fritz* (1864), *Histoire d'un Conscrit de 1813*, and *Waterloo* (1865).

ERFURT (er'foort). City in (E.) Germany, on the Gera, cap. of E. district, in a rich agricultural area. Before the S.W.W., when it was virtually destroyed, it had a 13th cent. cathedral, a converted monastery where Luther resided for a time, and many other historic buildings. Pop. (1966) 191,887.

ERG. In physics, the unit of energy in the c.g.s. system. It is the energy expended when a force of 1 dyne is exerted through a distance of 1 cm. It represents a very small amount of work, ten million ergs being approximately equal to $\frac{1}{4}$ ft lb.

ERGONOMICS. The study of the relationship between a man and his work. The main objective is to optimize the performance of a skill in the sense of mechanical efficiency, physiological compatibility (i.e. reducing muscular stress) and psychological effectiveness (i.e. reducing fatigue, coding displayed data to suit perceptual characteristics, taking account of peculiarities of memory). Some emphasis is laid upon dynamic systems, for example, in designing optimum instrument layout in vehicle control, but the science also deals with static optimization of work benches, furniture, and the whole environment.

ERGO'STEROL. The substance which, under the action of the ultra-violet rays in sunlight, gives rise to vitamin D—the vitamin which affects bone-formation and deficiency of which produces rickets. The sterol occurs in ergot (hence the name), in yeast, and in other fungi. The principal source of commercial E. is yeast.

ERGOT. A parasitic fungus, *Claviceps purpurea*, which attacks the rye plant. It forms large grains usually black in colour from which E. alkaloids (used in childbirth) are extracted. Infected bread causes ergotism, with gangrene or convulsions.

ERHARD, Ludwig (1897–). German statesman. B. in Bavaria, he studied economics and sociology

LUDWIG ERHARD.

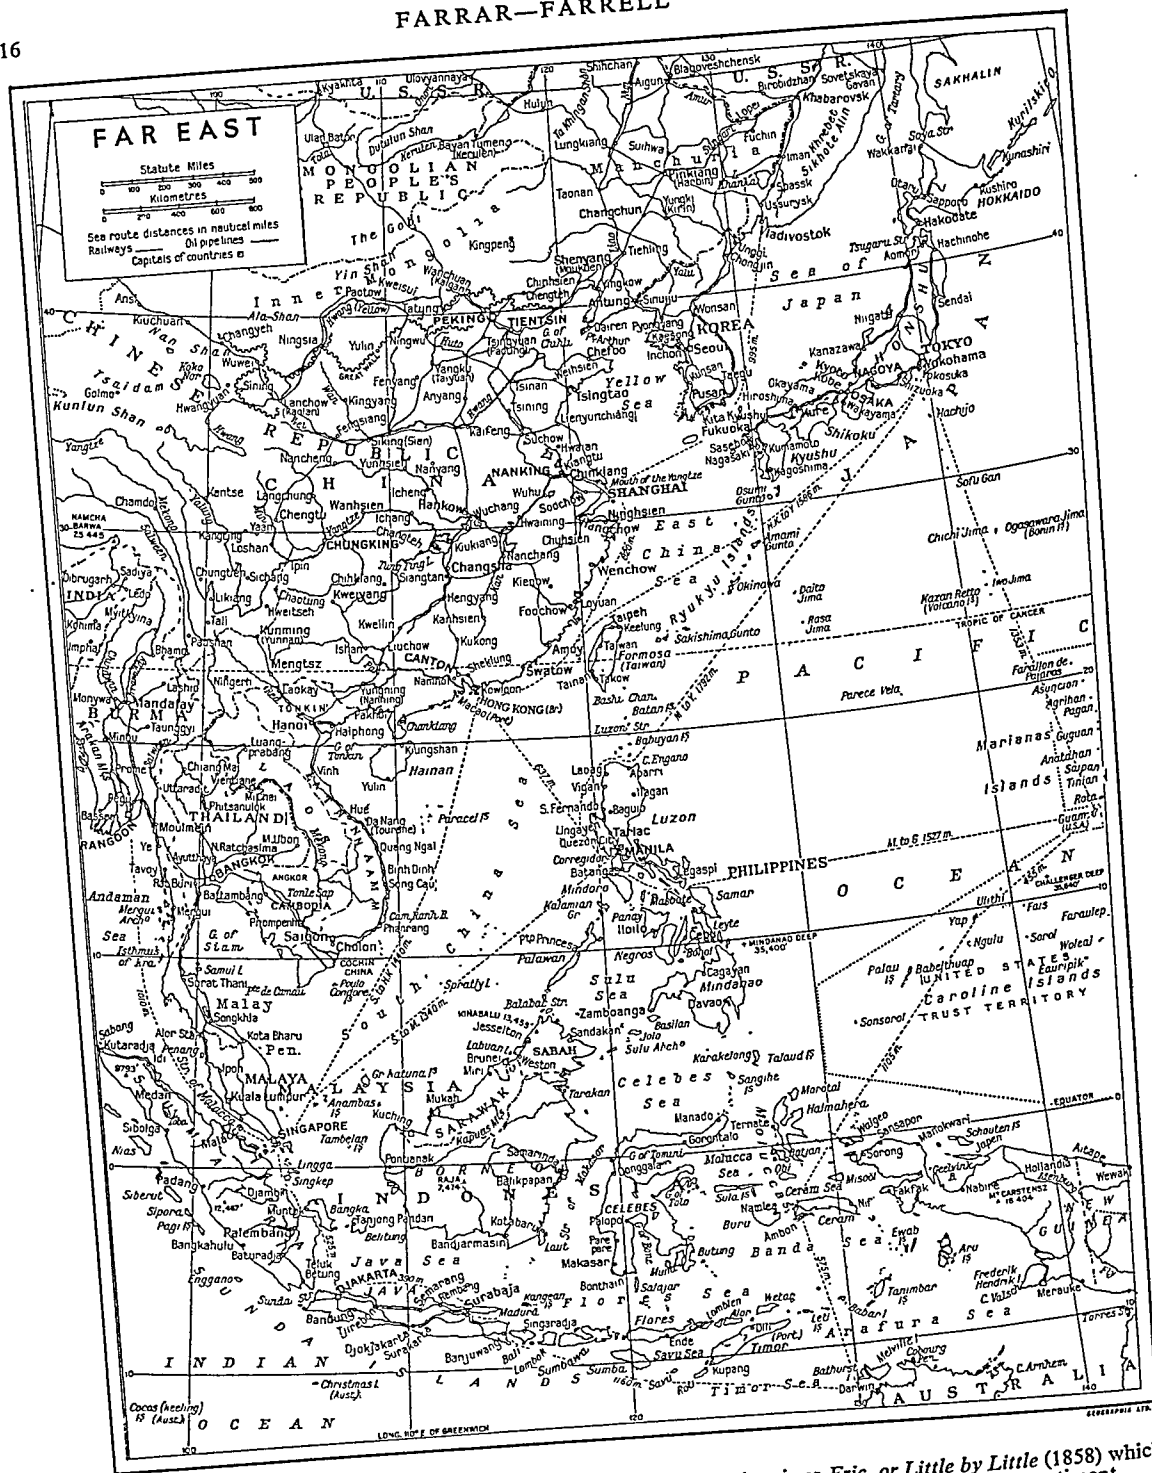

Courtesy of the Embassy of the Federal Republic of Germany.

at Nuremberg and graduated in commercial science at Frankfurt. After holding posts in economic and industrial research work, he was elected to the Bundestag, as a member of the Christian Democratic Union, in 1949, becoming Min. for Economics the same year. He became Vice Chancellor in 1957, and succeeded Adenauer as Chancellor of the Federal Rep. (1963–6). The 'economic miracle' of W. Germany's recovery after the S.W.W. is largely attributed to E.'s policy of 'social free enterprise' (*Marktwirtschaft*).

ERICA (er'ika). In botany, the heaths; the typical genus of the family Ericaceae. There are about 500 species, distributed through Africa and Europe.

ERICACEAE (erik'a'së-ë). Family of dicotyledonous flowering plants. They are herbs, small shrubs, or small trees, but mostly have woody, creeping stems and are often evergreen. Widely distributed in the cool and temperate parts of the world, they incl. the heaths and the rhododendron.

ERICSSON (er'ikson), Leif. Norse explorer who traditionally sailed W. from Greenland c. A.D. 1000 to find a country first sighted by one of his predecessors in 986. Landing with 35 companions in N. America, he called it 'Vinland', because he discovered grape vines growing, and spent a winter there. The

FARRAR, Frederick William (1831–1903). British churchman. Ordained in the C. of E. in 1854, he became headmaster of Marlborough Coll. (1871–6), and dean of Canterbury in 1895. He wrote a very popular *Life of Christ* (1874), and also school stories,

notably the pious *Eric, or Little by Little* (1858) which later became a byword for moralizing sentiment.

FARRELL, James Thomas (1904–). American novelist. B. in Chicago, he worked as a clerk, filling station assistant, and reporter. In his trilogy *Studs*

Earlier E. had sold his birthright to Jacob for a 'mess of red pottage'. He was the ancestor of the Edomites. Typically he was a nomadic hunter, compared with Jacob the less barbaric pastoralist.

ESBJERG (ez'byerg). Port of Denmark on the W. coast of Jutland, and W. termination of the rail and ferry service across Denmark and Sweden to Stockholm. Pop. (1965) 55,882.

ESCALATOR. A mechanism consisting of a continuous series of steps (or trolleys), which travel in ascending or descending direction. Es. are driven by a motor generally housed in the upper landing. This motor drives the gears and the sprockets, which in turn operate the

driving chains which carry the steps and also the wheels which drive the hand rail. The first E. was exhibited in Paris in

1900. Es. of the London Underground normally move at a minimum speed of about 2 m.p.h.

ESCAPE VELOCITY. The V. which would have to be imparted to a body in order for it to escape from the planet of origin, without the application of further power. In the case of the earth, E.V. is 7 miles per sec.; the value for the moon is $1\frac{1}{2}$ miles per sec., for Mars 3.1 miles per sec., and for Jupiter as much as 37 miles per sec.

ESCAUT. French form of **SCHELD**.

ESENIN (yesay'nin), Sergey (1895–1925). Soviet poet. B. in Konstantinovo (renamed Esenino in his honour), of peasant stock, he went to Petrograd in 1915, attached himself to the Symbolists, greeted the Revolution, revived peasant traditions and folklore, and initiated the Imaginist group of poets (1919). Disillusioned by the political development, he went abroad, m. the American dancer, Isadora Duncan, and afterwards a granddau. of Leo Tolstoy, became the head of the Moscow bohemians and committed suicide.

E'SHER. English town (U.D.) in Surrey, on the Mole, 15 m. S.W. of London. There are some remains of Wolsey's palace. In the district is Sandown Park racecourse. Pop. (1961) 60,586.

E'SKILSTUNA (-toonah). Manufacturing town 52 m. W. of Stockholm, Sweden, with iron foundries, steel and armament works. Pop. (1966) 64,830.

ESKIMO. People inhabiting the Arctic coasts of N. America, the eastern islands of the Canadian Arctic, and the ice-free coasts of Greenland. Of uncertain origin, they are generally long-headed, of medium height, flat-faced, with prominent cheekbones, sallow complexion, dark eyes, and lank black hair. Traditionally, they construct their homes from stones, peat, bones, driftwood and skins—snow igloos being used only for temporary camps in winter travel

ESKIMO. Miniature stone carving: medicine man or shaman with drum. Courtesy of the National Film Board of Canada.

— and rely on oil from blubber for light and heat and on their reindeer herds for all other wants. In practice this picture is increasingly modified as western civilization extends in the Arctic. The skill which the Es. show in the construction of their *kayaks* (skin-covered canoes) and in their remarkable small-scale carvings is easily adapted to the modern situation, and they are first-class mechanics.

The E. language possesses dialects, but has no striking divergencies. The conditions of their life make rather for individualism than distinctive tribal organization. The E. has belief in a soul, in survival after death, in taboos, charms and amulets and formerly in the medicine man or *angakok*, but Christianity has been adopted by many. They number c. 35,000.

ESKIMO DOG. Semi-domesticated dog kept by Eskimoes in Alaska for drawing sledges. They are strong and fierce, similar in appearance to sheepdogs.

ESKISEHIR. City in Turkey, 125 m. W. of Ankara, exports meerschaum, chromium, and magnesite; makes cotton goods, tiles; assembles aircraft. Pop. (1965) 174,500.

ESPARTO. A grass (*Stipa tenacissima*), native to S. Spain and N. Africa, now widely grown in dry, sandy situations throughout the world. The plant is 3 to 4 ft. high, producing greyish-green leaves up to 3 ft. long, which are used for paper-making, ropes, baskets, mats, cables, etc.

ESPEHAN. See **ISFAHAN**.

ESPARTO GRASS

ESPERANTO. International language invented by Dr. L. L. Zamenhof of Warsaw (1859–1917), who pub. the first book on it in 1887. It consists of natural roots and develops on natural lines, and has a literature of original and translated works.

ESPINO'SA, Edouard (1872–1950). Maître de ballet. Son of Leon E. (1825–1903), who was a pupil of the early 19th cent. ballet masters, he became ballet master and principal dancer at various London theatres, wrote many books on ballet technique, and helped to found modern Br. ballet.

ESPIONAGE. See **SECRET SERVICE**.

ESQUIMAULT (eskwimawlt). Canadian naval station, at S. of Vancouver Island, B.C. Pop. (est.) 6,500.

ESSAY. Literary form, dealing in a discursive meditative way with some particular subject; a personal note is more or less marked. The E. first became a recognized genre and name with the first edition of Montaigne's essays in 1580. Bacon's essays (1597) are among the most famous in English. Abraham Cowley, whose Es. appeared in 1668, was the first English essayist to bring ease and freedom to the genre, but it was with the development of periodical literature in the 18th cent. that the E. became a widely used form. The great names are Addison and Steele, with their *Tatler* and *Spectator* papers, and later Johnson and Goldsmith. A new era was inaugurated by Lamb's *Essays of Elia* (1820); to the same period belong Leigh Hunt, Hazlitt, Sainte Beuve and De Quincey and the Americans Emerson and Thoreau; Hazlitt may be regarded as the originator of the modern critical E., and his successors incl. Arnold and Gosse. Macaulay, whose Es. began to appear shortly after those of Lamb, presents a strong contrast in his vigorous but less personal tone. There was a considerable revival of

FAURÉ (föhreh'), Gabriel Urbain (1845-1924). French composer. A pupil of Saint-Saëns, he became prof. of composition at the Conservatoire in 1896, and was director 1905-20. He is remembered for his songs, chamber music, and a *Requiem* (1887).

FAUST (fowst). Legendary magician. The historical F. appears to have been a wandering mountebank, who appeared in Germany during the opening decade of the 16th cent. But earlier figures such as Simon Magus and Theophilus contributed to the F. legend. In 1587 appeared the first of a series of Faust books. Marlowe's tragedy of *Dr. Faustus* was acted in 1594. In the 18th cent. the story was a subject for pantomime in England, and puppet plays in Germany. In Germany the serious possibilities of the theme were first pointed out by Lessing; Goethe made F. a symbol of Man's striving after the infinite. Later Lunarcharski, Dorothy Sayers, and Paul Valéry took up the theme. F. has also inspired musical works by Schumann, Berlioz, Gounod, Boito, and Busoni.

FAUVISM. Art movement originating in Paris with the founding of the Salon d'automne in 1903, by Matisse and his friends. Their chief source of inspiration was the work of Van Gogh. Others who participated in the movement were Roualt, Derain, Bonnard, and Vlaminck. In 1905 the art critic L. Vauxcelles called the gallery in which they exhibited 'une cage aux fauves' (cage of wild beasts).

FAWCETT, Percy Harrison (1867-1925). British explorer. After several expeditions to delineate frontiers in S. America during the rubber boom, he set off in 1925, with his eldest son John and a friend, into the Mato Grosso to find the 'cradle of Brazilian civilization'. Their fate is unknown although F.'s younger son Brian F., who edited an account of his father's expeditions in *Exploration Fawcett* (1953), tried to follow up the trail.

FAWKES (fawks), Guy (1570-1606). English conspirator. B. at York, he was converted to Catholicism as a youth, served in the Spanish army in 1593, and in 1604 joined in the Gunpowder Plot to blow up the King and the members of both houses of Parliament. He was arrested in the cellar underneath the House on Nov. 4, 1605, tortured and executed.

FAYUM (fīyoom'). Prov. of Upper Egypt, S.W. of Cairo. Numerous very realistic mummy portraits of the 1st-4th cents. A.D. have been found here: they probably reflect Greek influence, since the area was largely settled by Greeks.

FAZ. See **FEZ**.

FECAMP (fekh'ān). A seaport and resort of N. France, 22 m. N.N.E. of Hayre in the dept. of Seine Maritime. The main industries are shipbuilding and fishing. Pop. (1962) 19,851.

FECHNER (fekh'ner), Gustav Theodor (1801-87). German psychologist. He became prof. of physics at Leipzig in 1834, but in 1839 through failing eyesight turned to the study of psychophysics, i.e. the relationship of physiology and psychology. He devised a method (Fechner's Law) for the exact measurement of sensation.

FEDDEN, Sir Roy (1885-). British aeroplane designer. As chief engineer of the Bristol Aeroplane Co., 1920-42, he was responsible for the design, etc., of the Bristol aero engines.

FEDERAL BUREAU OF INVESTIGATION (F.B.I.). Agency of the Dept. of Justice in the U.S.A. which investigates those violations of federal law not specifically assigned to other agencies, being particularly concerned with internal security, and which owes its unique position to the work of its director from 1924, J. Edgar Hoover (q.v.). Field divisions are maintained in over 50 major cities, and crime reports are turned over to it by more than 4,500 police agencies. There are c. 185,000,000 fingerprint cards on its files. Its Special Agents, known as G-men from the dept.'s code letter, are between 23 and 41 on entry, and

have special qualifications in law, accounting, or auditing. During the S.W.W. the F.B.I. shared espionage duties with the armed forces. In 1964 it was criticised by the Warren Commission for not having warned the Secret Service that Oswald was a potential threat to Pres. Kennedy.

FEDERALISM. A system of govt. under which two or more separate states unite under a common central gov., while retaining a considerable degree of local autonomy. A federation should be distinguished from a confederation, a looser union of states for mutual assistance. The oldest example of a federal state in Europe is Switzerland, which after 6 cents. as a confederation adopted a federal constitution in the 19th cent. The Soviet Union has been a federation since 1922, and the U.S.A. since 1789. Within the Commonwealth there are federal govts. in Canada (1867), Australia (1901), and Malaysia, linking Malaya, Singapore (till 1965), Sarawak and Sabah (1963). For latest developments in Europe, see **EUROPEAN HISTORY**.

FEDERAL UNION. See **STREIT, CLARENCE**.

FEDERATION OF BRITISH INDUSTRIES. See **CONFEDERATION OF BRITISH INDUSTRY**.

FELLING, Sir Keith (1884-). British historian. Chichele prof. of modern history at Oxford 1946-50, he pub. a 2-vol. history of the Tory Party 1640-1832 (1924-38), a study of *British Foreign Policy 1660-1672* (1930), and an interesting biography of *Neville Chamberlain* (1946). He was knighted 1958.

FEININGER (fī'-), Lyonel (1871-1956). American artist. B. in New York, the son of German immigrants, he worked for a time at the Bauhaus, and helped to found the Bauhaus in Chicago. Fond of the sea and ships, he portrayed them with romantic sensitivity in dreamlike translucence and purity of line.

FEISAL I (fī'sal) (1885-1933). King of Iraq. Descended from Mohammed, he was b. at Taif, represented Jiddah in the Turkish parliament of 1913, and became associated with the Arab national movement. Proclaimed king of Syria in 1920, he had to leave the country when it became a French mandate, but in 1921 was elected king of Iraq. His grandson Feisal II (1935-58) succeeded his father, King Ghazi, in 1939, and following the regency of his uncle Abdul Ilah was king of Iraq 1953-8 and Head of State of the Arab Federation Feb.-July 1958. He was assassinated with his uncle when an army revolt estab. a rep.

FELDSPARS, FELSPARS. Important mineral group in rock formation, particularly of igneous rocks. They range through a great number of minerals, containing aluminium silicate and varying proportions of silicates of sodium, potassium, calcium, and barium; are white, grey, or pink in colour; and crystallize in the monoclinic or triclinic system.

FELIDAE (fel'idē). Family of carnivores, which includes the lion, tiger, leopard, European wild cat, domesticated cat, etc.

FELIXSTOWE. Popular English holiday resort (U.D.) on the coast of Suffolk between the Orwell and Deben estuaries. The docks are increasingly important, and are being developed to rival Harwich. Pop. (1961) 17,254.

FELLINI, Federico (1920-). Italian film director. With strongly subjective poetic imagery, he has directed *I Vitelloni* (1953), *La Strada* (1954), *La Dolce Vita* (1960), and $8\frac{1}{2}$ (1963) - i.e. he had by this time made $8\frac{1}{2}$ films.

FELONY. A legal term for a wide variety of criminal offences. In Britain the original distinction, now mainly of historical interest, between felonies and misdemeanours, the 2 classes of criminal offences, was that Fs. were punishable by the forfeiture of the offender's whole property. Fs. were therefore the more serious offences. Under U.S. law, both State and

Stephen, and former ecclesiastical cap. of Hungary, with a fine cathedral. Pop. c. 25,000.

ÉTAPLES (ehtah'pl). Fishing port and seaside resort on the Canche estuary, Pas de Calais dept., France. During the F.W.W. it was an important British base and hospital centre. Pop. (1962) 8,647.

ETCHING. A print or impression on paper, taken from a metal (usually copper) plate, in which the picture has been 'etched' or bitten-in by means of some corrosive acid or chemical. The method was invented in Germany about 1500, the earliest dated print being of 1513. Whereas in the earlier method of engraving (q.v.) on metal the picture is cut into the metal surface by means of a sharp instrument called a burin or graver, used with a pushing action, in etching it is drawn on the plate by means of a sharp delicate metal point, which allows much greater

ETCHING. This example of the art – a portrait of Clement de Jonghe in the Victoria and Albert Museum – is the work of Rembrandt, its greatest master.

freedom of action. Among the earliest etchers were Dürer, van Dyck, Hollar, and Rembrandt. Since then great interest has been shown in it by many artists, e.g. Whistler, W. Strang, D. Y. Cameron, F. Brangwyn, W. Sickert, Muirhead Bone, etc.

ETHANE. A colourless, odourless gas, formula C_2H_6 , b.p. $88^\circ C.$, the second member of the series of paraffin hydrocarbons of the general formula C_nH_{2n+2} . Its chief importance is as a fuel in the form of natural gas.

ETHELBERT (c. 552–616). King of Kent, England. He succeeded his father, Eormenric, in 560, and gradually extended his authority over Middlesex, Essex, E. Anglia, and Mercia. He m. the Frankish princess, Bertha, who was a Christian, and favourably received St. Augustine in 597. In due course he was baptized.

ETHELRED I (d. 871). King of Wessex, England, elder brother of Alfred the Great. He succeeded his brother Ethelbert in 866, and his reign was spent in war with the Danish invaders. A defeat at Reading was followed by a victory at Ashdown.

ETHELRED II (968–1016). King of England; called the Unready, i.e. redeless, lacking in foresight. The son of King Edgar, he became king in 978 after the murder of his half-brother, Edward the Martyr. He tried to buy off the Danish raiders by paying Danegeld, and in 1002 ordered the massacre of the Danish settlers – so provoking an invasion by Sweyn of Denmark. War with Sweyn and Sweyn's son, Canute, occupied the rest of E.'s reign.

ETHER or **ETHYLETHER**. (C_2H_6)₂O. Colourless, volatile, inflammable liquid, b.p. $35^\circ C.$, slightly soluble in water, miscible with alcohol. It is prepared by treatment of ethyl alcohol with excess concentrated sulphuric acid at $140^\circ C$. It is used as an anaesthetic by vapour inhalation and as an external cleansing agent before surgical operations. It is also used as a solvent in the preparation of explosives and collodion and in the extraction of oils, fats, waxes, resins, and alkaloids.

The term E. is also applied to a series of organic compounds of the general formula R-O-R', where R and R' are different radicals.

ETHEREGE (eth'erej) or **ETHEREDGE**, Sir George (c. 1635–c. 1691). British dramatist. B. probably at Maidenhead, his first play, *Love in a Tub*, was produced in 1664, and was a great success. *She Would If She Could*, a lively but immoral piece, followed in 1667, and his best comedy, *The Man of Mode*, in 1676. E. is the founder of the comedy of intrigue.

ETHICAL MOVEMENT. Movement designed to establish, maintain, and further the moral or ethical factor as the real substance and fundamental part of religion. It had its rise in U.S.A. in 1876, when Felix Adler founded an Ethical Society in New York. In 1888 the first English E. Society was founded by Dr. Stanton Coit, the successor of M. D. Conway, at the Chapel in South Place, Finsbury, that became the South Place Ethical Society.

ETHICS. The branch of philosophy that is concerned with moral judgments of right and wrong, good and bad. So far as Europe is concerned, it may be said to have originated as a systematic intellectual study with Socrates in the 5th cent. b.c., but considerably earlier there was intense ethical speculation in India and China. Plato's *Republic* is an exposition of the nature of justice or righteousness, and ethical theory was advanced by Aristotle's *Nicomachean Ethics* and kindred writings. The Cyrenaics, Epicureans, and Stoics advanced theories that have been many times revived. The 'Christian ethic' is mainly a combination of N.T. moral teaching with ideas drawn from Plato and Aristotle. Hobbes, Shaftesbury, Hutcheson, Hume, and Bishop Butler are notable 17–18th cent. British ethical philosophers. One of the greatest individual contributors to ethical theory was Kant, with his 'categorical imperative'. The utilitarian ethic was ably expounded by Bentham, J. S. Mill, Sidgwick, and Herbert Spencer; they were opposed by such thinkers as F. H. Bradley and T. H. Green, who linked ethics with metaphysics, and emphasized the place of the individual in organized society. Leading modern ethicists are G. E. Moore, A. C. Ewing, C. D. Broad, and H. Rashdall.

ETHIOPIA. In ancient geography, name given by the Greeks at first to the whole of N. Africa, later restricted to an area covered by present-day Nubia, Sennar, and Kordofan in the Republic of Sudan and the W. of the independent empire in N.E. Africa which is 20th cent. Ethiopia. E. consists of elevated plateaux and mountain ranges with a narrow coastal belt on the Red Sea, and is watered by the head-streams of tributaries of the Nile, e.g. the Takazze, the Abbai (which drains L. Tana, one of several large lakes), and the Blue Nile.

The northern part of the country is inhabited by Amharas, numbering about 2 million. Over half the population is made up of Gallas, an agricultural

Africa. It was discovered in the 15th cent., passed to Spain in 1778, and became one of the 2 overseas provs. of Spanish Guinea. In 1968 it became part of Equatorial Guinea (q.v.), of which its port of Santa Isabel is the capital.

FERNELEY, John (1782–1860). British artist. B. in Leics., he is famed for his hunting scenes.

FERNS. Name used loosely to cover all groups of the Pteridophyta, the best-known of which are the Equisetaceae (Horse Tail), Lycopodiaceae (Club Moss), and Selaginellaceae (Selaginella) families, and the Filicales, the true fern group.

The true Fs. are a group of non-flowering plants represented by about 150 living genera and a number of fossil forms; they are perennial herbs, with usually a low-growing rootstock, while the leaves, known as fronds, vary widely in size and shape.

Fs. are classified into 8 main families. By far the most common in Britain is the Polypodiaceae, in which are included the polypody (*Polypodium*), shield fern and male fern (*Aspidium*), hart's tongue (*Scolopendrium*), maiden hair (*Adiantum*), and bracken (*Pteris*).

FERNS. Left to right: common polypody, adder's tongue, hart's tongue, mountain buckler.

FERRAR, Nicolas (1592–1637). Founder of the Anglican monastic community at Little Gidding, Hunts, in 1625, which devoted itself to religious offices and the preparation of harmonies of the Scriptures, and was broken up by the Puritans in 1647.

FERRARA (ferrah'rah), Andrea (fl. 16th cent.). Italian armourer, who towards the end of the 16th cent. gained a European reputation as a swordmaker.

FERRARA. City and archbishopric in Emilia-Romagna dept., N. Italy, on a branch of the Po delta, 32 m. W. of the Adriatic Sea. It is the capital of F. prov., and has a Gothic palace and a cathedral, consecrated 1135. The free univ. was founded in 1391. F. is a trade and agricultural centre. Pop. (1966) 157,625.

FERRET. Small mammal of the Mustelidae family, related to the badger, weasel otter, and polecat. It belongs to the same genus, *Putorius*, as the last named, and may be described as a half-tamed albino polecat. It is about 14 in. long, with yellowish-white fur, and pink eyes. It is used to hunt rabbits, rats, etc.

FERRIER, Kathleen (1912–53). British contralto singer. B. in Lancs., and originally a student of the piano, she made a brilliant reputation in oratorio and opera. Notable appearances were in *The Rape of Lucretia* (1946) and *Das Lied von der Erde* (1947).

FERRIER, Susan Edmundstone (1782–1854). Scottish novelist. B. in Edinburgh, she became a close friend of Sir W. Scott. Her first novel, *Marriage*

FERTILIZER. Combine-drilling a cereal crop with fertilizer – Fisons 49. Courtesy of Fisons Ltd.

(1818), was followed by *Inheritance* (1824), and *Destiny* (1831), all of which give a lively picture of Scottish manners and society.

FERRO-ALLOYS. Alloys of iron with a high proportion of manganese silicon, chromium, molybdenum, etc. They are used in the manufacture of alloy steels.

FERRO'L. City, port, and naval station on an inlet on the N.W. coast of Spain. It possesses a good sheltered harbour, whose narrow entrance is strongly guarded by forts, and there are shipbuilding and ship repairing industries, etc. Pop. (1965) 82,070.

FERTILITY DRUGS. Drugs developed in Sweden in the mid-1950s, the best-known being gonadotrophin. Made from hormone extracts (FSH and LH) taken from the human pituitary gland, it stimulates ovulation in women. In the 1960s it was still in the experimental stage and multiple births were a risk, e.g. the sextuplets born in Birmingham in 1968.

FERTILIZERS. Substances containing the twenty-odd chemical elements necessary for healthy plant growth, and which are used to compensate the deficiencies of poor soil or of soil depleted by repeated cropping. They may be (a) *Organic*, e.g. farmyard manure, composts, bonemeal, blood and fishmeal, which have been in immemorial use. (b) *Inorganic*, in the form of compounds, mainly of nitrogen, phosphate and potash, which have come into use on a tremendously increased scale since the S.W.W. The compounds are most frequently administered in solid form, but 'non-pressure' liquid Fs. are frequently used in market gardening and 'pressure' liquids, such as anhydrous ammonia (containing 82 per cent nitrogen), are being increasingly used on larger farms and by contractors.

FESCUE (fes'kü). Widely distributed genus (*Festuca*) of grasses. Two species are common in Britain: meadow F., which grows from 2 to 5 ft. high, and sheep's F., which is 6 in. to 2 ft. high.

FETI (fä'ti), Domenico (c. 1589–1624). Italian artist. B. in Rome, he became court painter in Mantua in 1613. He is chiefly remarkable for his small religious works with landscape settings which combine naturalism and sensitive colour.

FETISHISM. Belief in the supernatural power of some object, inanimate or otherwise, which is known as a fetish. Any object that can pass into the possession of an individual can become a fetish to him, but it may be communally owned. F. in some form is common to most civilizations. With the primitive races, e.g. the African Negro, F. is religio-magical.

FEUCHTWANGER (foikht'vahnger), Lion. Pseudonym of the German author J. L. Wetcheek (1884–1958). B. in Munich of Jewish parentage, he estab. an international reputation with his sympathetically realistic portrayal of 18th cent. Jewish life

has been obtained from excavated tombs. The principal medium is sculpture, but pottery, bronze-ware, and mural painting are also noteworthy. Etruscan religion seems to have been derived from Asia Minor, and shows many signs of Greek influence. The language, despite a large number of inscriptions, mainly funerary, and a certain number of words derived by the Romans from Etruscan, is still very imperfectly known.

ETTY, William (1787–1849). British artist. B. at York, he served 7 years' apprenticeship to a Hull printer, and in 1806 went to London at the invitation

ETTY. A student of the Venetian masters, Etty captured a similar richness of flesh tints.

Photo: Victoria and Albert Museum.

of his uncle, William E., himself a fine draughtsman. With Opie's aid he was admitted to the R.A. schools, becoming a student of Sir Thomas Lawrence in 1807, and first gained success at the Academy with 'Tele-machus rescuing Antiope' in 1811. He visited Italy in 1816 and 1822, was elected R.A. in 1828, and lived in London until 1848 when he retired to York. In his work E. aimed to paint great moral truth and regarded his numerous nude paintings as a dedication to 'God's most glorious work'.

ETYMOLOGY. The branch of linguistic science which deals with the ultimate origin and history of individual words. It has 2 chief aspects: *phonetic*,

dealing with the changes in sounds, and *semantic*, with the changes in meaning.

EUBOEA (ūbē'-a). Largest of the Greek islands. It lies off the E. coast of Greece, in the Aegean Sea, and is about 110 m. long. The chief town is Chalcis, connected by a bridge to the mainland. Area 1,450 sq. m. The nome of E., area 1,480 sq. m., includes several small islands and had a pop. (1961) of 165,758.

EUCALYPTUS (ūkalip'tus). Genus of trees of the Myrtaceae family, practically confined, in the natural state, to Australia and Tasmania, where they are commonly known as gum trees. About 90 per cent of Australian timber belongs to the E. group, which comprises about 400 species. **EUCALYPTUS OIL**, used in medicine, is obtained from the leaves of certain species by aqueous distillation.

EUCALYPTUS

EUCHARIST (ū'karist). The most solemn and universally observed of the Christian sacraments. The word comes from the Greek for 'thanksgiving', and refers to the statement in the Gospel narrative that Christ gave thanks over the bread and the cup. Other names for it are the Lord's Supper, Holy Communion, and (amongst Catholics) the Mass. Members of the C. of E. are required to participate in the E. at least 3 times a year, Easter to be one.

EUCKEN (oi'ken), Rudolf Christoph (1846–1926). German philosopher. B. in E. Friesland, he taught philosophy at Basle and Jena, and in 1908 was awarded the Nobel prize for literature. His systematic teaching is founded on the idealistic philosophy of Kant and Fichte, and centres round man's spiritual

life which transcends nature, engages and brings into action all his faculties, and reaches perfection religion. His memoirs were pub. in 1921.

EUCLID (u'klid) (fl. 300 B.C.). Greek mathematician, who lived at Alexandria and wrote the *Stoicheia* (Elements) in 13 books, of which 9 deal with plane and solid geometry, and 4 with arithmetic. His main work lay in the systematic arrangement of previous discoveries, and the geometrical books remained a standard textbook for over 2,000 years and were still in regular use in English schools in the present cent.

EUGÈNE (ūjēn') of Savoy, Prince (1663–1736). Austrian general. The son of Prince Eugène Maurice of Savoy-Carignano, he was b. in Paris. When Louis XIV refused him a commission he entered the Austrian army, and served against the Turks at the defence of Vienna in 1683, and against the French on the Rhine and in Italy 10 years later. In 1697 he expelled the Turks from Hungary by his triumph at Zenta. In the War of the Spanish Succession he shared with Marlborough in his great victories, and won many successes as an independent commander in Italy. He vainly protested against the dismissal of Marlborough, and suffered several defeats before the peace settlement at Rastatt in 1714. He again defeated the Turks in 1716–18, and fought a last campaign against the French in 1734–5.

EUGENICS (ūjēn'iks). Term derived from the Greek for 'well born', coined by Sir Francis Galton (q.v.) for the science that he defined as the study of agencies under social control which may improve or impair the racial qualities of future generations either physically or mentally. The pioneer of the science was Galton.

EUGÉNIE (ōjēhnē') (1826–1920). Empress of the French. Dau. of a grandee of Spain, the count of Montijo, she m. in 1853 Louis Napoleon, soon after he became French emperor as Napoleon III. After Sedan she fled to England, and settled with him at Chislehurst. Later she lived at Farnborough, where she built a mausoleum in which she, her husband and her son, who was killed in the Zulu War, were buried.

EULER (oi'ler), Leonhard (1707–83). Swiss mathematician. B. at Basle, he became professor of physics at St. Petersburg in 1730. Summoned to Berlin in 1741 by Frederick the Great, he spent 25 years there and then returned to Russia. He laboured not only in pure mathematics, but also in astronomy, optics, etc.

EUMENIDES. In Greek mythology the Furies or spirits of vengeance, usually represented as winged women with snake-like hair. They were sometimes known as *Eriyēs* (Furies) and sometimes by the propitiatory name of E. (Kindly ones).

EUNUCH (ū'nuk; Gk. *eunoukhos*, one in charge of a bed). In Eastern countries originally a bed-chamber attendant (generally a castrated male person) employed in a harem or zenana. Es. often filled high offices of state in China, India, Persia, etc. The *castrati* of Italy were famous throughout the cents. for the beauty of their voices, but on the accession of pope Leo XIII in 1878 the practice of castrating boys for this purpose ceased.

EURASIAN (ūrā'shan). In India and the E. Indies a term formerly used to denote a person born of a European and an Asiatic, and his or her progeny; it was almost exclusively derogatory and often insulting.

EURATOM (European Atomic Energy Community). See under EUROPE, UNIFICATION OF.

EURE (ōr). French river rising in Orne dept. and flowing S.E., then N., to the Seine. Chartres is on its banks; length 70 m. It gives its name to two depts., E. and E.-et-Loire.

EURHYTHMICS (ūrith'miks). Practice of co-ordinated bodily movement as a help to musical development. It was founded by the Swiss musician

FIELD STUDIES. The study of ecology, geography, geology, history, archaeology, and allied subjects, in their natural environment. The Council for the Promotion of F.S. was estab. in Britain in 1943, and Flatford Mill, Suffolk, was the first research centre estab.

FIESOLE (fē-ā'sōlā). Italian town 4 m. N.E. of Florence, with many Etruscan and Roman relics. The cathedral was completed 1028. Pop. (1960) 12,600.

FIFE, Alexander William George Duff, duke of (1849-1912). Son-in-law of Edward VII. He succeeded his father as 6th earl in 1879, and was created a duke in 1889 on his marriage to Princess Louise Victoria Alexandra Dagmar (1867-1931), later Princess Royal, eldest dau. of Edward VII. They had two daughters: Alexandra, duchess of F. in her own right (1891-1959), m. in 1913 Prince Arthur of Connaught (1883-1938); and Maud (1893-1945) m. Lord Carnegie, later 11th earl of Southesk.

FIFE. Co. in E. Scotland facing the North Sea and the Firth of Forth; the only high land is in the N.W. The chief rivers are the Eden and the Leven. Agriculture, linen-weaving, and coal-mining are important; the chief mining centres are Dysart, Leven, Dunfermline, Cowdenbeath, and Kirkcaldy. The co. town is Cupar. Area 504 sq. m.; pop. (1961) 320,541.

FIFE. A kind of small flute. Originally from Switzerland, it was known as the Swiss pipe and has long been used by British Army bands.

FIFTEEN. The. Name given to the Jacobite rebellion of 1715, which was led by the 'Old Pretender' (James Edward Stuart) and the earl of Mar, with the object of placing the former on the throne. Mar was checked at Sheriffmuir, and the revolt collapsed.

FIFTH COLUMN. A group within a country secretly aiding an enemy attacking from without. The term originated in 1936, during the Spanish Civil War, when General Mola boasted that the Franco supporters were attacking Madrid with 4 columns, and that they had a 'fifth column' inside the city. This technique was employed by the Nazis in the S.W.W.

FIFTH MONARCHY MEN. Revolutionary Puritan sect. Their name and theology were derived from the prophecies of the 4 monarchies in the O.T. book of Daniel, which they identified with Babylon, Persia, Greece, and Rome (including the papacy). The execution of Charles I they saw as the beginning of the downfall of Rome. At first they supported Cromwell's government, but later they plotted against him. A revolt in London in 1661 was soon suppressed.

FIG. Fruit of *Ficus carica*, the cultivated F. tree, and of a number of other species. The tree is grown particularly in Mediterranean lands, and in California, parts of Australia, S. Africa, etc. The fruit is exported fresh or dried; besides its use as a food, it is used in the preparation of laxatives.

FIGWORT. Genus (*Scrophularia*) of plants of the Scrophulariaceae family, including some common British weeds. The species F. grows 2 to 3 ft. high, with purplish flowers emitting a disagreeable smell.

FIJI. British crown colony, consisting of about 322 mainly volcanic islands in the Melanesian archipelago, Pacific Ocean. About 106 is. are inhabited; the largest are Viti Levu (4,010 sq. m.), and Vanua Levu (2,137 sq. m.). The vegetation is tropical.

FIJI. The drinking of kava (q.v.) has great ceremonial importance. After the root and stem have been macerated in water, as seen here, the resultant liquor is a narcotic.

Photo: Aerofilms Ltd.

Jungle and forests, providing valuable timber, occupy generally the S.E. sides of the islands. The drier parts are under grass. Bananas, coconuts, sugar cane, rice, fruit, and vegetables are grown. Fishing is carried on. There is considerable industrial development, e.g. sugar and rice mills; copra, biscuit, and soap factories; and gold is mined. The cap. is the city of Suva, on Viti Levu.

The group was discovered by Tasman in 1643, visited by Cook in 1773, and ceded to Britain in 1874. The native peoples are of Negroid stock with a Polynesian admixture, but from c. 1880 Indians were introduced to work the sugar plantations and now outnumber them. There has been little intermarriage and racial tension, as the Indian majority Federal Party seeks a common roll and independence from Britain, has greatly increased. Under the Constitution Order of 1966, the Gov. appoints an executive Council of Ministers and there is a Legislative Assembly, mainly elected on 3 communal rolls (Fijian, Indian and other races). The Fijians are chiefly Methodist and the Indians Hindu. Area 7,036 sq. m.; pop. (1966) 483,250 (208,000 Fijians; 250,000 Indians).

FILEY (fil'j). English seaside resort on the Yorkshire coast. Pop. (1961) 4,705.

FILLMORE, Millard (1800-74). 13th President of the U.S.A. B. in New York, he was elected Vice-President in 1848, and succeeded on the death of Zachary Taylor; he was President 1850-3. A Whig, he advocated reconciliation of North and South, and compromise on the slavery issue, and since he pleased neither side failed to gain re-nomination.

FILM. Roll of specially coated thin transparent material on which a series of photographs can be recorded (see CINEMATOGRAPHY), and, by the eye's persistence of vision, 'moving pictures' projected from it on to a screen. The first moving pictures were shown in the 1890s: Edison persuaded James J. Corbett (1866-1933), American world boxing champion (1892-7), to act a boxing match for a film. Lumière in France; R. W. Paul in England; Latham in the U.S.A. and others were making moving pictures of a few minutes' duration of actual events (e.g. the Derby, shown in London, on the evening of the race, 1896), and of simple scenes such as a train coming into a station.

In 1902 Georges Méliès of France made a fantastic story film, *A Trip to the Moon*, which ran in London for 9 months; and in 1903 Edwin S. Porter directed for Edison *The Great Train Robbery*, a story in a contemporary setting; it cost about £100, was shown all over the world, and earned more than £20,000.

For a number of years, films even of 'indoor'

FIG. 1, staminal (male) flower; 2, pistillate (female) flower; 3, section.

COUNTRIES OF EUROPE

	Area in sq. m.	Population (in 1,000s)	Capital

trees are pines, larches, firs, birches, and willows.

MINERALS. Coal is abundant in Great Britain, Germany, France, Belgium, Czechoslovakia, Poland, and Russia; Great Britain, Germany, France, Belgium, Sweden, Austria, Czechoslovakia, Russia, and Spain have deposits of iron ore. Copper, lead, zinc, gold, platinum, silver, quicksilver, salt, sulphur, and graphite are all obtained in E. There are large oilfields in the Caucasus and W. Ukraine and both oil and natural gas offshore beneath the North Sea.

Industrialisation began in the W. where the aptitude of the people, presence of minerals that could be worked with comparative ease, and accessibility to overseas territories offering both raw materials and markets all helped the process; but after the F.W.W. industrial development spread eastwards, and was accelerated after the S.W.W. especially in Ukraine and other countries of the U.S.S.R. or under Russian influence.

RELIGION. The majority are Christian (45% Roman Catholic and 25% Protestant or Orthodox), the rest incl. Moslems in the Balkans and Caucasasia, and in Britain; Jews; and - espec. in Communist countries - an increasing proportion of atheists.

ORGANISATION. As yet the European Community (see EUROPEAN UNION) is militarily inferior to both U.S.A. and U.S.S.R., and financially and industrially inferior to the U.S.A., but in trade it is the largest world importer of industrial and agricultural products, and of commodities from the developing countries. A customs union and common agricultural policy already exist, and there are plans for complete regulation of foreign trade and transport; full mobility of workers under uniform conditions of employment; united scientific and technical research; common tax laws, currency, social welfare, and civil and commercial law; and political institutions enabling E. to act as a single unit. The Action Committee for the *United States of E.* (1955) incl. 50 trade union and political leaders from the Six: Britain joined in 1968.

EUROPEAN HISTORY. Ancient. Throughout the many thousands of years of the Palaeolithic Age the inhabitants of E. lived by hunting or fishing; then came the Neolithic Age, during which agriculture and the domestication of animals began. The working of bronze, introduced into Crete from Egypt and Syria c. 3000 B.C., spread over the Mediterranean, and reached Britain and Germany after 1750 B.C.

Greece was overrun c. 1500 B.C. by Greek-speaking barbarians, who founded the Mycenaean civilisation, and c. 1100 B.C. subdued the Cretan Minoan civilisation. Iron-smelting, introduced into Greece from Armenia c. 1000 B.C., reached N. and W. Europe c. 750-500 B.C. New invaders overran Greece c. 1100 B.C. and destroyed the Mycenaean civilisation. In the city-states they established, monarchy gave place to the rule of a landed aristocracy, which with the growth of a merchant class yielded in turn to democracy. During the 6th-4th cents. B.C. the distinctively Greek culture arose, which the conquests of Alexander (334-323) spread over the Near East.

By the 3rd cent. B.C. the city-republic of Rome had become mistress of the Italian peninsula. The Carthaginian war added Sicily and Spain to its empire, and in 146 B.C. Greece became a Roman province. Meanwhile the Celtic peoples of C. Europe had spread over what is now France, Britain, Ireland and N. Italy, and penetrated Spain. Rome subdued the Celts of Italy and Spain in the 2nd cent. B.C., France in the 1st, and Britain in the 1st cent. A.D. Under Augustus the Rhine and the Danube became the Empire's northern frontiers. Rome's conquests made possible not only the maintenance of order, the circulation of trade, and the diffusion of Graeco-Roman culture, but the dissemination of Christianity, the toleration of which Constantine ordered in 312. But the expansion of the Empire ended in the 2nd

long heads, blond colouring, and blue eyes. The 'Mediterranean' type, found in the countries fringing that sea, are long-headed with dark hair and eyes.

LANGUAGES. Most European languages belong to the Aryan group. Celtic is still spoken to some extent in Wales, the Isle of Man, the Scottish Highlands, Ireland, and Brittany. The main divisions of the Teutonic group of languages are High and Low German; English; Dutch and Flemish; Scandinavian in Iceland, Denmark, Norway, and Sweden. Slav languages are spoken by Russians, Poles, Lithuanians, Letts, Wends, Czechs, etc., while French, Spanish, Portuguese, Italian, and Rumanian are Romanic languages. The few non-Aryan tongues include Magyar, Basque, and Turkish.

VEGETATION. S. of the Alps the trees are mainly evergreens. Rice, maize, millet, and wheat are among the cereals cultivated in this region, and olives, grapes, oranges, lemons, figs, and chestnuts thrive. Central E. is particularly rich in cereals and also produces large quantities of fruit. Most of its forests are deciduous, oak, beech, ash, etc. In the N. the chief

FINGER PRINTS. A system of identification by means of the ridges on the skin of a person's finger tips. No two F.P.s. are exactly alike, and they remain constant in pattern throughout life. The classification was originated and practised in India and adopted by the police in England in 1901.

FINLAND. A republic of N. Europe lying N. of latitude 60°, one-third being N. of the Arctic Circle.

FINLAND. Built on islands in the heart of the Saimaa lake area, Europe's largest inland waterway system, Savonlinna is the centre of many steamer routes. Established here in 1475 as an eastern frontier fortress, Olavinlinna Castle is one of Scandinavia's finest medieval monuments. The girl wears one of Finland's several national costumes.

Courtesy of the Finnish Tourist Information Centre.

The Saimaa Canal, linking the Saimaa lake area of Finland and the Gulf of Finland, but with half its length in the U.S.S.R., was modernized 1968.

Most of the population is Finnish-speaking, but about 8½ per cent speak Swedish, with a small number of Russian, German, and, in the N., Lapp speakers. The national religion is Evangelical Lutheran. There are 6 universities, one each at Helsinki, Jyväskylä, Oulu and Tampere, and two at Turku.

Timber, pulp and paper industries are the mainstay of the economy, but there are metal and engineering industries, and copper and iron ore are mined. Many streams supply hydroelectric power. In modern design furniture, ceramics and glass, F. has a high reputation. Agriculture—cereals and dairy products—is confined to the better land of the south. The chief towns are Helsinki, the cap. and main port, Turku (former cap.) and Tampere, the largest industrial centre. The pres. is elected for 6 years, and appoints a Council of State, and there is a single legislative Chamber.

Area 130,124 (incl. 12,189 sq. m. inland water) sq. m.; pop. (1967) 4,664,000.

History. The Finns are of Asiatic origin and migrated to present-day F. in the 7th and 8th cents., finding there a people from whom the Lapps of today are probably descended. Sweden conquered and attempted to Christianize the Finns in the 12th cent., but it was some 150 years before they abandoned paganism. F. was part of the kingdom of Sweden for 600 years, but had a fair amount of self-govt. From early in the 18th cent. Russia and Sweden disputed possession of F. which in 1809 became a grand duchy of Russia with almost complete autonomy except in foreign affairs. A national movement secured the recognition of Finnish as the official language in 1863 (before that it had been Swedish). Later Russia attempted to reduce Finnish liberties, and after the Russian Revolution F. proclaimed itself an independent republic in 1917. In 1939 Russia attacked and defeated F. which in 1940 ceded territory N.W. of

Leningrad to Russia. In 1941 F. joined Germany in attacking Russia and advanced to its old frontier. The Russian offensive in 1944 regained the disputed land and led to an armistice by which, besides the cessions made in 1940, F. ceded the Petsamo area on the Arctic coast, giving the R.S.F.S.R. a frontier with Norway (cessions confirmed by the peace treaty between F. and the Allies, 1947).

LANGUAGE AND LITERATURE. Finnish, like Estonian, to which it is closely related, belongs to the Finno-Ugrian family of languages. Some fragments in Finnish have come down from the 12th cent.; the first book was an ABC published in 1544. A complete Bible in Finnish was issued at Stockholm in 1642. But the predominance of the Swedes and Swedish in F. inhibited the growth of a Finnish literature until the 19th cent. when it was launched with the publication in 1835 of Lönnrot's verse epic *Kalevala* (q.v.). The novelist Emil Sillanpää (1888–1964) was awarded a Nobel prize 1939.

MUSIC. F. gave to the arts a man of world fame in the person of the composer Sibelius (q.v.).

FINLAND, Gulf of. An eastern arm of the Baltic Sea, with U.S.S.R. on the S. and Finland on the N.

FINLAY, George (1799–1875). Historian chiefly remembered for his history of Greece from 146 B.C.

FINN MAC CUMHAILL (fin makool'). Hero of Gaelic folklore. He is believed to be identical with the general who organized a regular army for Ireland at the bidding of Cormac mac Airt (fl. c. A.D. 250), and his braves are sharply individualized.

FINSEN, Niels Ryberg (1860–1904). Danish physician. He was the first to develop light treatment scientifically, using artificial light, particularly the carbon arc. He received the Nobel prize in 1903.

FINUCANE, Brendan (1920–42). British air ace of the S.W.W. B. in Ireland, he shot down 32 enemy aircraft and damaged many others before being killed near Pointe du Touquet in France.

FIR. A term widely applied to trees of the order Coniferales, but correctly referring only to members of the genus *Abies* and a few other species. The F. is distinguished from the pine by bearing its needle-like leaves singly, trees of the genus *Pinus* bearing theirs in groups. The Fs. are pyramidal and evergreen, retaining their leaves for 6–9 years, but shedding a number every year, so that the tree is never without foliage. Common European Fs. include the silver F. (*A. pectinata*), spruce F. or Christmas tree (*Picea excelsa*), and Douglas F. (*Pseudotsuga Douglasii*). N. America has 10 native species.

FINLAND. Jean Sibelius.
Photo: Olav Gunvar.

FIRBANK, Ronald (1886–1926). English novelist. Set in the Edwardian decadent period, his work appeals to a small band of enthusiasts, but his malicious humour pals in large quantities. It incl. *Caprice* (1916), *Valmouth* (1918), set in an imaginary West Country, and the posthumous *Concerning the Eccentricities of Cardinal Pirelli* (1926).

FIRDOUSI (c. A.D. 940–1020). Persian poet, famous for the epic poem *Shahnama*, the Book of Kings, which relates the

history of Persia in 60,000 verses.

FIREARMS. Weapons from which missiles are discharged by the combustion of an explosive. They are generally divided into 2 main sections: artillery (q.v.), (ordnance or cannon) which have a bore greater than 1 in., and small arms (q.v.), with a bore of less than 1 in. Although gunpowder was known 60

cent. A.D., and economic and administrative defects, added to the successive invasions by the barbarians on the northern frontiers, led to its disintegration.

Medieval. During the 4th–6th cents. W. Europe was overrun by Anglo-Saxons, Franks, Goths, and Lombards, although the traditions of Roman culture and administration were kept alive by the Church. In E. Europe the Empire survived, with its capital at Constantinople, whence Christianity reached the Balkans and Russia; the rival claims of the Pope and the Byzantine Patriarch led to a cleavage which became permanent in 1054. During the 7th–8th cents. Christendom was threatened by the Arabs, who conquered Spain.

Charlemagne united France, W. Germany and N. Italy, and in 800 received the title of emperor from the Pope. With the dissolution of his empire France and Germany came into existence as separate states. A period of confusion followed, accentuated by the Viking raids, during which the feudal system arose. As revived in 962 by Otto I the Empire was confined to Germany and N. Italy; he adopted for it the title Holy Roman Empire, used, long after the reality had become shadowy, until 1806. The claim to authority over secular princes put forward by Gregory VII (1073–85) and his successors provoked a conflict between empire and papacy which lasted for nearly 200 years and discredited both. Papal influence was strengthened by the Crusades (1096–1272), but the transfer of the papacy to Avignon (1309–71) and the Great Schism (1378–1417) weakened its prestige.

Town life and trade, which had declined under the barbarians, revived after Charlemagne's day. The revival began in the Italian cities, notably Venice, Genoa, Florence, and Milan, which traded with the Near East, and thence with C. Asia and China. From the 12th cent. these cities, like the German and Flemish cities, estab. themselves as self-

governing republics, and in the 14th–15th cents. fostered the culture of the 'Renaissance'.

From the conflict of monarchy with feudal nobility centralised nation-states emerged in W. Europe in the 14th–15th cents.; a feature common to most of the new states was the existence of parliamentary assemblies, representing both landowners and cities. In E. Europe the political situation was unsettled by the Turkish conquest of the Balkans, culminating in the capture of Constantinople in 1453.

Modern. Throughout the 16th–17th cents. European politics turned on the rivalry of France and the Habsburgs, who held Spain and its empire, Austria, the Netherlands and the imperial crown, while after 1517 they were further complicated by the Protestant Reformation. Protestantism took 2 main forms: the more conservative Lutheranism, which was adopted by many German princes, and in Scandinavia; and the radical and democratic Calvinism, which gained many adherents in the Netherlands, Scotland, and France. The Catholic Church attempted to meet the challenge with the Counter-Reformation.

The struggle against Spain of the Netherlands and England in the later 16th cent. ended in the establishment of the United Provinces (or Dutch Rep.), 1648, and the emergence of the United Provinces and England as maritime powers. France was torn by religious wars (1562–98), until Henry IV introduced toleration and consolidated the absolute monarchy. Inside Germany the attempt of the Habsburgs to restore the power of Church and Empire led to the Thirty Years War (1618–48), as a result of which France succeeded Spain as the dominant power of Europe.

During the 17th cent. the supremacy of parliament was estab. in England; elsewhere, parliamentary institutions gave way to absolute monarchy, which found its supreme expression in Louis XIV of France (1643–1715). Until 1688 he successfully pursued an aggressive foreign policy but thereafter his ambitions

EUROPEAN HISTORY. The beginning of Germany's military domination of modern Europe. Bismarck, in light tunic, watches William I of Prussia proclaimed German emperor in the Hall of Mirrors at Versailles on 18 Jan., 1871, after the crushing defeat of France in the Franco-Prussian War. Painting by Anton von Werner.

FIRST WORLD WAR. One of the maze of trenches on the western front in France and Flanders. In winter the men might be up to their armpits in water in low-lying sections.

Photo: Imperial War Museum.

invaded Belgium, whereupon on August 4 Britain declared war on Germany.

In spite of the resistance of the Belgian fortresses, the Germans advanced rapidly through Belgium, forcing back the French Army and the B.E.F., which had been positioned at Mons. On Sept. 6, when the Germans were a few miles from Paris, the Allied counter-attack opened on the Marne, and drove the Germans back to the Aisne. The Belgian Army, driven into Antwerp, evacuated it on Oct. 9 with British assistance, and retreated down the coast to join the Allies. By Oct. 19 the opposing lines had been extended to the sea at Nieuport, and the struggle had settled down into trench warfare. German attempts to break through at Arras and Ypres failed to change the situation.

An immediate offensive was launched by the Russians into E. Prussia, forcing the Germans to withdraw troops from the W., until stopped by Hindenburg's victory at Tannenberg (Aug. 26-30). The Russians also overran Galicia.

The German fleet early withdrew to its bases, and confined itself mainly to submarine raids and mine-laying. Australia, New Zealand, or Japanese forces soon occupied German Pacific possessions—Japan had declared war on Aug. 22. The German Pacific squadron escaped to the Atlantic and defeated a British squadron off Coronel on Nov. 1, but was itself destroyed on Dec. 8 off the Falkland Isles. By Sept. 1916 the German colonies in Africa were in Allied hands.

Throughout 1915 both sides made attempts to break through on the western front, with little result. These offensives incl. those made by the Allies at Neuve Chapelle (March), Vimy Ridge (May), and Loos (Sept.), and by the Germans at Ypres (April), during which poison gas was first used. In Dec. Sir Douglas Haig replaced Sir John French as British C-in-C. On the eastern front German offensives by Mackensen in the S. and Hindenburg in the N. regained all that had been lost, and expelled the Russians from Poland.

Turkey, which entered the war on Nov. 1, 1914, launched an offensive in the Caucasus, and in 1915 unsuccessfully attacked the Suez Canal from Palestine. A British force invaded Mesopotamia, occupied Kut, and threatened Baghdad. A naval attack on the Dardanelles in Feb.-March, intended to open communication with Russia through the Black Sea, was followed by landings on the Gallipoli peninsula in April. Although further ground was gained in Aug., Gallipoli had to be evacuated in Jan. 1916.

Italy, hoping to secure control of the Adriatic, declared war on Austria in May 1915, while Greece, Bulgaria, and Rumania were still hesitating. The

German victories in the E. and the Gallipoli failure persuaded Bulgaria to join the German and Austrian attack on Serbia. The Serbian armies retreated to the Adriatic, and at Salonika finally joined the Allied forces, which had landed at the invitation of the pro-British Greek P.M. Venizelos.

The Germans opened 1916 on the western front with an attack in Feb. on the Verdun salient which continued till June, and 'bled France white', but failed to break through. The Allies replied with their offensive on the Somme, during which tanks were first used, and between July and Nov. carried their line forward 7 m. A further French offensive at Verdun in Oct.-Dec. recovered some lost ground. During June-Aug. the Russians' successful advance in S. Galicia encouraged the Rumanians to declare war and invade Transylvania. The Germans hit back from Transylvania and Bulgaria, and in Dec. occupied Bucharest.

In Mesopotamia a British force defended Kut against the Turks from Dec. 1915 to April 1916, when it had to surrender. The Arabs of the Hejaz rebelled against Turkish rule in 1916, and the revolt, aided by T. E. Lawrence, rapidly spread as far N. as Damascus; nevertheless, the Turks made another unsuccessful attack on the Suez Canal in August.

In Feb. 1915 the Germans announced they would use submarines to sink merchant-ships found in British waters, to which Britain replied by seizing all cargoes destined for Germany. The sinking of the *Lusitania* with many Americans on board aroused deep indignation in the U.S.A., and American protests forced Germany to abandon the submarine campaign in April 1916. On May 30 the High Sea Fleet put to sea, and the following day a general fleet action was fought off Jutland. Although the British losses were the heavier, the battered German fleet remained in port for the rest of the war. Renewed submarine warfare in Feb. 1917 resulted in the U.S.A. entering the war in April.

In March 1917 anti-war feeling led to the overthrow of the Russian monarchy. The attempts of the new Liberal government to continue the war destroyed its popularity, and on Nov. 7 the Bolsheviks took power with a programme of immediate peace. Fighting ceased on the eastern front in Dec., and in March 1918 peace was signed at Brest Litovsk. The example of the Russian Revolution did much to strengthen the anti-war movement in Germany.

Early in 1917 the Germans withdrew N. of the Somme to their new defences, the Hindenburg Line. The Allied offensive of April captured Vimy Ridge, but French losses were so heavy that widespread mutinies resulted. In June the British captured Messines Ridge and straightened out the Ypres salient, but an advance from Ypres towards the coast (Passchendaele offensive) in July-Nov. failed. The French during Aug.-Oct. recovered considerable

FIRST WORLD WAR. The war leaders at Downing Street in 1918: left to right, Marshal Foch, Georges Clemenceau, Lloyd George, Vittorio Orlando and Baron Sonnino.

Photo: Central Press Photo.

from c. 313. Prominent in the Council of Nicaea, he wrote an Ecclesiastical History down to A.D. 324.

EUSTACHIO (ā-oostah'kē-ō), Bartolommeo (d. 1574). Italian anatomist, the discoverer of the Eustachian tube, leading from the middle ear to the pharynx, and of the Eustachian valve in the right auricle of the heart. He was physician to the popes.

EVANGELICALISM. The doctrines that distinguish those in the Christian churches who place supreme emphasis on the saving power of the blood of Jesus Christ shed for the redemption of mankind. Although in a sense all protestants are evangelical, the term often refers to Low Church Anglicans. (See **ANGLICAN COMMUNION**.) The World Evangelical Fellowship (founded 1951) unites churches and individuals who hold evangelical beliefs.

EVANGELIST (Gk. *euangelos* 'bringing good news'). Term used in the N.T. for one who is charged with a travelling mission to spread the gospel among the heathen. With reference to one of the authors of the four Gospels, it does not occur until the 3rd cent.

EVANS, Sir Arthur John (1851–1941). British archaeologist. B. in Herts, he was the son of Sir John E. (1823–1908), an authority on the Neolithic and Bronze Age periods in Europe. His excavation of Knossos (q.v.) on Crete resulted in the discovery of the pre-Phoenician Minoan script and in proving the existence of the Minoan civilisation of which all trace had disappeared except in legend. Notable among his pub. works are *Scripta Minoa* (1909) and 4 vols. on the *Palace of Minos*.

EVANS, B(enjamin) Ifor, baron E. of Hungershall (1899–). British scholar. Prof. of English Language and literature at Queen Mary Coll., London 1944–51, he has pub. novels (*In Search of Stephen Vane*, 1946), and *The Language of Shakespeare's Plays* (1951); created life peer 1967.

EVANS, Caradoc (1878–1945). Welsh novelist and playwright. B. in Carmarthenshire, he worked as a draper's assistant before entering journalism. His biting satirical novels, especially his first, *My People* (1915), and his play *Taffy* (1923) aroused much anger in Wales. His 2nd wife was the Countess Barcynska (Oliver Sandys q.v.).

EVANS, Dame Edith (1888–). British actress.

B. in London, she is best known for her playing of Lady Bracknell in *The Importance of Being Earnest* (1939). A very versatile actress, she has appeared in Shakespeare, Restoration Comedy, Wilde and Shaw and in films.

EVANS, Sir E. R. G. R. See **MOUNTEVANS**.

EVANS, Maurice (1901–). American actor. B. in Dorset, he scored a success in *Journey's End* in 1929, and in 1935 went to the U.S., taking citizenship in 1941. His roles incl. Richard II and Macbeth as well as modern parts, e.g. *The Browning Version*.

EVA PERÓN. Name 1952–9 of **LA PLATA**.

EVATT, Herbert Vere (1894–1965). Australian Labour statesman. B. in N.S.W., he became a Labour member of the legislative assembly of N.S.W. in 1925 and was a justice of the High Court of Australia (1930–40). He was a member of the War Cabinet 1941–6, Min. for External Affairs 1941–9, and succeeded Chifley as leader of the Labour Party 1951–60. In 1960–2 he was Chief Justice of N.S.W.

EVE. See **ADAM**.

EVELYN, John (1620–1706). English diarist and author. B. in Surrey, he enlisted for 3 years in the Royalist army (1642), but withdrew on finding his estate exposed to the enemy and lived mostly abroad until 1652. He declined all office under the Commonwealth, but after the Restoration enjoyed great favour, received court appointments, and was one of the founders of the Royal Society. He was the friend of Pepys, and like him remained in London during the Plague and the Great Fire. Of his more than 30 books the most important is his diary, first pub. 1818, which covers the period 1640–1706.

EVEREST, Mount. The highest mountain in the world, in the Himalayan range on the Tibet-Nepal frontier (formerly 29,002 ft., but unofficially est. at 29,028 ft. – the range is said to be rising), it was named after Sir George Everest (1790–1866), Surveyor General of India. Among the most memorable expeditions to conquer E. are that of 1924 led by Col. E. F. Norton, when Mallory and Irvine were last seen at 28,239 ft., their fate being unknown; that led by Eric Shipton which discovered the southern route in 1951, opening the way to success, and the 1953 expedition led by John Hunt, when the summit was first reached by

EVEREST. Seen from the north, or Tibetan, side which is the one the Indian and Chinese expeditions claim to have attempted. Below are the tents of the unsuccessful British expedition of 1922, led by Brig.-Gen. Bruce, and Incl. Mallory, Somervell, and Norton.

Photo: The Mount Everest Foundation.

FISH. External features of perch (top) and trout. A, mouth; B, jawbone; C, gill-cover; D, lateral line; E, pectoral fin; F, pelvic fin; G, anal fin; H, caudal fin; I, adipose fin; J, dorsal fin; K, soft dorsal fin; L, spinal dorsal fin.

number. Those in front are termed the pectoral fins, and those beneath the abdomen the ventral fins; behind these appears the anal fin, and on the median line of the back the dorsal fin. The fins are composed of thin bones lightly covered with skin. Fishes are usually covered with scales of varying size and thickness, whose number remains constant throughout life. Along the side of most Fs. appears the 'lateral line' which is the chief sense organ; the number of scales appearing on this line is used as a means of identification of species.

Fs. breathe by means of 'gills', i.e. layers of tissue supported on bony arches, situated in the head. Water enters through the mouth and passes over the gills where the oxygen is absorbed by the blood vessels. The water then goes out through the gill slits at the sides of the head. Many Fs. have an air bladder; in the case of the lung-fishes this serves as a lung, but in other fishes it alters the specific gravity of the fish in accordance with the surrounding water.

The coloration of Fs. is usually such that it will conceal the animal in its surroundings, and in many varieties the colour changes with the background. At the spawning season, however, they display their colours, which often become much brighter. Reproduction is by means of eggs, which are frequently very small and numerous; some, e.g. guppies, are livebearers and the eggs hatch inside the body.

FISHER, Andrew (1862-1928). Australian Labour statesman. B. in Scotland, he went to Australia in 1885, and entered the Australian parliament in 1901. He was Prime Minister in 1908, 1910-13, and 1914-15, and then High Commissioner in London until 1921.

FISHER, Herbert Albert Laurens (1865-1940). British historian. B. in London, he was for most of his life a don at New Coll., Oxford. In 1916-22 he was President of the Board of Education in the Lloyd George Coalition ministry, and was mainly responsible for the 'Fisher' Education Act of 1918, intended to establish a really national system of education. Most important of his writings is a still useful *History of Europe* (1935). He received the O.M. in 1937.

FISHER, John (c. 1469-1535). British churchman. B. at Beverley, he was created bishop of Rochester in 1504, and was an enthusiastic supporter of the New Learning and a friend of More and Erasmus. But in 1535 he was tried on a charge of denying the royal supremacy and beheaded. Together with More he was canonized in 1935.

FISHER, John Arbuthnot, 1st baron (1841-1920). British admiral. Joining the navy in 1854, he served in the Crimean War, held various commands and was First Sea Lord 1904-10, when he carried out many

radical reforms and innovations, including the introduction of the Dreadnought battleship. He returned to the post in 1914, but resigned in the following year, disagreeing with Churchill over Dardanelles policy.

FISHER OF LAMBETH, Geoffrey Francis, baron (1887-). British churchman. Ordained in 1913, he was headmaster of Repton 1914-32, bp. of Chester 1932-9 and of London from 1939 until he succeeded Temple (q.v.) as abp. of Canterbury. He played a leading part in the World Council of Churches, was in 1960 the first holder of his office to visit the Pope for 600 years, and received a life peerage on retirement in 1961.

FISHGUARD. Seaport on the N. coast of Pembrokeshire, Wales, with ferry connections to and from Ireland. With Goodwick it forms U.D.; pop. (1961) 4,898.

FISHING AND FISHERIES. The increasing demand for fish as food has led to the development of improved marketing organizations for the catches, and of powerful ships with special refrigerating equipment, or fish-factory ships which enable filleting, processing, etc., to be done at sea, designed to exploit the deep-water resources out of reach of the smaller, older-type boats. Japan, with a population largely dependent on sea-food, has evolved new techniques for locating shoals (e.g. sonaric and radar methods) and catching them (e.g. electrical charges and chemical baits); and the North Sea countries have experimented with the artificial breeding of fish eggs and release of the small fry into the sea. The future lies with intensive breeding and farming in controlled areas, feeding and management of the 'herds' being effected by underwater workers. F. has a number of ancillary industries, e.g. net manufacture, and the processing of such by-products as oil, fish meal, glue and manure.

FISSION, Nuclear. See **ATOMIC ENERGY**.

FISTOULARI (fistoolah'rē), Anatole (1907-). Anglo-Russian conductor. B. at Kiev, he first conducted at 7, made an international reputation and in 1948 became a British subject. In 1946 he founded the London International Orchestra, and has since been its principal conductor.

FITZGERALD, Edward (1809-83). British poet and translator. B. in Suffolk, he lived a life of quiet study and retirement, and in 1859 pub. his poetic version of the *Rubaiyat of Omar Khayyam*, less a translation than an original creation.

FITZGERALD, Francis Scott Key (1896-1940). American novelist of the Jazz Age, b. in Minnesota. *This Side of Paradise* (1920) reflected his experiences at Princeton and made him known in the bright post-war society of the east. His most famous book is *The Great Gatsby* (1925), in which the narrator resembles his author, and *Gatsby*, the self-made millionaire, is lost in the soul-less 'Society' he enters.

FITZHERBERT, Maria Anne (1756-1837). Morganatic wife of the Prince of Wales, later George IV. She became Mrs. F. by her 2nd marriage in 1778, and after her husband's death in 1781 entered London society. She secretly m. the Prince of Wales in 1785, and finally parted from him in 1803. Henceforward she lived in retirement in Brighton.

FITZROY, Robert (1805-65). British vice-admiral and meteorologist. B. in Suffolk, he entered the navy in 1819, and in 1828 succeeded to the command of H.M.S. *Beagle*, then engaged on a survey of the Patagonian coast, and in 1831 was accompanied by Charles Darwin on a 5 years' survey. In 1843-5 he was Gov. of New Zealand.

FIVES. A game of handball played by 2 or 4 players in a court enclosed on 3 or 4 sides: the ball is struck by the hand. It dates from the 14th cent., and was probably derived from the French *jeu de paume*. The name F. may refer to the 5 fingers, or that there

EXHIBITION. The Canadian and Ontario pavilions at Expo 67, Montreal, dominated by the inverted steel pyramid (right) known as the Katimavik—Eskimo for meeting place.

Courtesy of the Centennial Commission, Ottawa.

is these facts which determine man's qualities, his purpose, and his 'essence'. Therefore E. is a philosophy which insists on facing the facts of man's nature. Historically speaking, E. is derived partly from the German philosopher Heidegger's cynical and subjective attitude to humanity, and partly from Kierkegaard's conception of man as an isolated and lonely individual dependent solely on God. Sartre himself ignores the religious element in Kierkegaard and is an example of atheist Existentialist, but it is possible to be a Christian Existentialist, e.g. Jaspers.

E'XMOOR. English moorland in Devon and Somerset, near the Bristol Channel. The highest point is Dunkery Beacon (1,707 ft.), and much is over 1,000 ft. There are red deer and a native breed of pony. E. national park, 265 sq. m., covering all E. and the coastline from Minehead to Combe Martin, was designated in 1954.

EXMOUTH. English port (U.D.) and popular resort at the mouth of the Exe, S. Devon, 9 m. S.W. of Exeter. The docks were opened in 1869. Pop. (1961) 19,740.

EXPANDING UNIVERSE. In astronomy, a theory framed to account for phenomena exhibited by the extra-galactic nebulae (q.v.), viz. their even distribution through space, and the fact that the spectral lines in the light which they emit are displaced towards the long wave (red) end of the spectrum, of which the only known cause can be motion away from us. The theory of the E.U. interprets these observed properties— even distribution in space and 'red-shift'— as indicating an expansion of the universe, whereby every galaxy is receding from all the others.

EXPLOSIVES. Materials capable of a sudden release of energy and rapid formation of a large volume of gas, leading when compressed to the development of a high-pressure wave (blast). Combustion, explosion, and detonation differ essentially only in rate of reaction, and many explosives are capable under suitable conditions of undergoing relatively slow combustion. The explosive violence of atomic and hydrogen bombs arises from the tremendous amount of energy released by the conversion of mass into energy, according to Einstein's mass-energy equivalence, $E = mc^2$, where c is the velocity of light. It has been calculated that if it were possible to convert one pound of matter completely into energy it would be equivalent to eleven thousand million kilowatt hours of energy.

EXPRESSIONISM. Term applied to a style of painting, sculpture, or literary composition which is concerned with the inner world of feeling rather than the outer world of fact. An expressionist paint-

ing does not imitate nature but distorts natural appearance in order to convey what the artist feels about some subject; or it may consist purely of colours and forms which are entirely unrelated to nature, but express the mood of an artist. Some of Van Gogh's paintings may be described as 'expressionist'. Picasso in his picture of 'Guernica' expresses all the horror of war by means of distorted forms. Matisse's works are (in his own words) expressions of 'balance, of purity and serenity, devoid of any troubling subject matter'. The most important painters associated with the movement were Klee, Marc, Kandinsky, and Chagall.

EXTROVERT and INTROVERT. Two psychological types first defined by the Swiss psychologist C. G. Jung about 1916. The E. is the practical person whose energies are directed outwards towards the objective world; the soldier and the engineer are typical Es. The I., on the other hand, is the dreamer whose main energies are turned inwards in contemplation of his own imaginations and fancies; typical Is. include the poet and the musician.

EYCK (ik), Van. Family of early Flemish artists. Hubert van E. (c. 1370–1426) was probably b. at Maas Eyck or Alden Eyck on the Maas. Little of his work has survived. His 'Adoration of the Lamb', an altarpiece originally painted for Jodocus Vijdts who presented it to the cathedral of St. Bavon in Ghent, was finished after Hubert's death by his brother Jan van E. (c. 1390–1441), who like Hubert was court painter to Philip the Good, duke of Burgundy. He is chiefly famous for his portraits, painted with great care and exact likeness; his 'The Marriage of Giovanni Arnolfini' (1434) and 'Man in a Red Turban' are in the National Gallery.

EYE. The organ of sight. It is a roughly spherical

JAN VAN EYCK. 'The Marriage of Giovanni Arnolfini' (1434). An inscription says 'Jan van Eyck was here' and it is thought he was a witness, being represented as one of the tiny figures in the circular wall mirror—reflected as if standing in the doorway. *Courtesy of the National Gallery.*

mural decorations with historical and religious subjects.

FLASH POINT. The temperature at which a liquid when heated under standard conditions gives off sufficient vapour to ignite on the application of a small flame. F.P. tests are carried out with the Pensky-Martens instrument. The Fire Point of the material itself is obtained by continuing the test and noting the temperature at which ignition occurs. For safe storage (fuel oil, etc.) the Flash and Fire Points must be high enough to reduce fire risks to a minimum, and such that no appreciable quantity of oils are driven off during exposure to the weather.

FLAUBERT (flohbar'), Gustave (1821–80). French novelist. B. at Rouen, he entered Paris literary circles in 1840, but in 1846 retired to his native place, where he remained for the rest of his life. His masterpiece *Madame Bovary* appeared in 1857 and roused much controversy by its psychological portrayal of the wife of a country doctor, driven to suicide by a series of unhappy love affairs. *Salammô* (1862) earned him the Legion of Honour in 1866, and was followed by *L'Éducation sentimentale* (1869), and *La Tentation de Saint Antoine* (1874). F. estab. himself as the master of the short story by his *Trois Contes: Un Cœur simple, Hérodias, and La Légende de Saint-Julien l'Hospitalier* (pub. 1877).

FLEMISH ART. 'Virgin and Child with Angels' by Quinten Matsys.
Courtesy of the National Gallery.

FLAX. A plant of the Linaceae family which yields valuable commercial products. The common F. or linseed plant (*Linum usitatissimum*) is of almost world-wide distribution. It has a stem 20–50 in. high, bearing small leaves and bright blue flowers. Apart from the fibres yielded by the stem, the seeds produce linseed oil and their residue forms cattle food. The long fibres are used in the manufacture of linen, the shorter fibres are made into twine, and the short-

est of all used in paper manufacture. The chief producing areas are in Russia, Belgium, Holland, the Baltic countries, and Northern Ireland.

FLAXMAN, John (1755–1826). British sculptor. B. at York, he studied at the R.A. and for 12 years was employed by Wedgwood as a designer. He became an R.A. in 1800, and in 1810 he was appointed first prof. of sculpture at the academy. His best-known works incl. the monument to Reynolds in St. Paul's, and the statues of Burns and Kemble in Westminster Abbey.

FLEABANE. Plants of the genus *Erigeron*, Compositae family, resembling a dwarf michaelmas daisy.

FLEAS (Siphonaptera or Aphaniptera). Group of wingless insects, with mouth-parts adapted for sucking the blood of their host. The most important varieties are *Pulex irritans*, which lives on man, and the rat F. (*Xenopsylla cheopis*) which transmits plague.

FLECKER, James Elroy (1884–1915). British poet. B. at Lewisham, he entered the consular service, and went to Constantinople in 1910 and in 1911 to Smyrna. In 1913 ill-health obliged him to visit Switzerland, where he d. of consumption. He pub. several vols. of verse, incl. *The Bridge of Fire* (1907), *The Golden Journey to Samarkand* (1913) and *The*

RAT FLEA AND LARVA

Old Ships (1915). He also wrote the dramas *Don Juan* and *Hassan*, the latter being performed in 1923 with incidental music by Delius.

FLEET STREET. Street in London, England, running from Temple Bar eastwards to Ludgate Circus, named after the River F. With adjoining streets it contains the offices and printing establishments of many of the leading British newspaper and press agencies.

FLEETWOOD. English fishing port (bor.) and holiday resort in Lancs at the mouth of the Wyre. Leather belting is manufactured and gravel deposits are exploited. Pop. (1961) 27,760.

FLEMING, Sir Alexander (1881–1955). British bacteriologist. B. in Ayrshire, he studied medicine in London, qualifying in 1906, and subsequently researching and lecturing in bacteriology and clinical pathology; he was prof. of bacteriology at London univ. 1928–48. His first notable discovery was lysozyme (1922), followed in 1928 by penicillin (q.v.), an antibiotic which saved many lives in the S.W.W. In 1945 he shared the Nobel prize with E. B. Chain and Sir Howard Florey, who had developed penicillin for practical use, and was knighted in 1944.

FLEMING, Ian (1908–64). British author. Son of an army officer, he was ed. at Eton, Sandhurst, and Munich and Geneva univs. After a number of years with Reuters, he worked successively with banking and stockbroking firms, and in the S.W.W. was personal asst. to the Director of Naval Intelligence. From 1953 he became famous as the author of suspense novels featuring the ruthless, laconic 'James Bond', Secret Service agent, No. 007.

FLEMING, Sir John Ambrose (1849–1945). British electrical physicist and engineer. B. at Lancaster, he was prof. of electrical engineering at Univ. College, London, 1885–1926, and was knighted in 1929. He was a pioneer in the development of the telephone, electric light, and radio.

FLEMISH. A branch of the West Germanic, or more especially the German division of the Germanic, languages (q.v.), spoken in the northern half of Belgium and in the Nord dept. of France. In opposition to the introduction of French as the official language in the F. provinces of Belgium after 1830 there arose a strong Flemish movement, led by scholars like J. F. Willems (1793–1846) and writers such as H. Conscience (1812–83), and although equality of French and F. was not achieved until

FABERGÉ. Easter gifts made for the Russian court, each a superb example of jeweller's and goldsmith's art. The coronation egg (right centre) is in red gold and lime-yellow enamel and just contains the yellow gold and strawberry enamelled coach to its left. Courtesy of Wartski and Faber & Faber Ltd.

when he was also Treasurer (a post he had previously held 1940–1).

FADEYEV, Alexander Alexandrovich (1901–56). Russian novelist. B. nr. Moscow, he enrolled at 17 among the partisans resisting Kolchak in E. Siberia and *Razgrom* (1927, *The Rout*) reflects his experiences. His novel of the S.W.W. *The Young Guard* (1945) was acclaimed, and he was gen. sec. of the Soviet Writers Union 1946–55, but then fell in disfavour. He took to drink and shot himself.

FAENZA (fah-en'tsah). City on the r. Lamone in Ravenna prov., Emilia-Romagna, Italy. It has many medieval remains, incl. the 15th cent. walls, and has been famous since the 13th cent. for 'faience pottery'. Pop. (1960) 51,000.

FAEROES (fär'ös). Group of 21 islands (17 inhabited) belonging to Denmark, in the N. Atlantic, between the Shetlands and Iceland. The largest are Stromo, Osterø, Vaagø, Suderø, and Sando, and the capital is Torshavn on Stromo. The principal industries are fishing, sheep-rearing, and the catching of sea-birds for their feathers. In 1948 the F. were granted home rule. Area 540 sq. m.; pop. (1968) 37,000.

FAGUET (fahgā'), Émile (1847–1916). French literary critic, author of *Histoire de la littérature française depuis le XVIIe siècle* (1885–94).

FAHRENHEIT (-hit), Gabriel Daniel (1686–1736). German physicist, inventor of the Fahrenheit thermometric scale, in which freezing point of pot. chlor. was 0°, the freezing point of water was 32° and boiling point 212°. He was b. at Danzig, but lived mainly in England and Holland.

FAINTING. A sudden and temporary suspension of consciousness and movement, due to failure of the supply of blood, and consequently of oxygen, to the brain. The cause is generally a fall in blood pressure due to shock, heart disease, fatigue, privation, or – in air pilots – to the action of centrifugal force in drawing blood away from the head.

FAIRBANKS, Douglas (1883–1939). American actor. B. at Denver, Colorado, he starred from 1915 in films such as *The Three Musketeers*, *The Thief of Baghdad* and *Don Q*, and was the most famous of the silent screen's swashbuckling heroes. He and Mary Pickford, whom he m. in 1920, were idolized as 'the world's sweethearts'. His son by a previous marriage, Douglas F. (1909–), achieved similar screen renown in *Catherine the Great* and *The Prisoner of Zenda*. He was created an hon. K.B.E. in 1949 for his distinguished efforts in the Allied cause.

FAIRBANKS. Town in Alaska, U.S.A., on the Chena Slough, a trib. of the r. Tanana, terminus of

the Alaska railway and of the Alaska Highway through Canada to Seattle. It is a centre for gold-mining and the fur trade and has sawmills. The University of Alaska is at College, 3 m. N.W. Pop. (1960) 13,311.

FAIRBRIDGE, Kingsley (1885–1924). S. African educationist. B. in S. Africa, he founded the Child Emigration Society in 1909 while studying at Oxford, after visiting slums in London and other cities, and originated a scheme for a group of schools, known as the Fairbridge Farm Schools, in Britain and the Dominions, intended to provide education and a career in the Doms. for deprived children.

FAIREY, Sir Charles Richard (1887–1956). British aircraft manufacturer. In 1915 he founded the F. Aviation Co. Ltd. at Hayes, Middlesex, which produced many famous models such as the Firefly, Albacore and Swordfish; he is also known as the inventor and developer of the wing flap.

FAIRFAX OF CAMERON, Thomas Fairfax, 3rd baron (1612–71). English soldier, C.-in-C. of the parliamentary army in the Civil War. With Cromwell he formed the New Model Army, defeated Charles I at Naseby, and suppressed the risings of 1648.

FAISAL, Ibn Abdul Aziz (1903–). King of Saudi Arabia. The younger brother of King Saud, on whose accession in 1953 he was declared Crown Prince, he has frequently represented his country at the U.N. He was P.M. 1953–60 and from 1962, when he also became C.-in-C. of the army; he has been continuously Foreign Min. since 1953. Remarkable for his balanced statesmanship, he has assisted the steady modernization of his country. In 1964 he emerged victorious from a lengthy conflict with his brother, the reactionary King Saud, and was proclaimed king.

FAIZABAD (fizahbahd'). Town in Uttar Pradesh, India, at the head of navigation of the r. Gogra, with sugar refineries and an agricultural trade, cap. of F. district. Pop. (1961) 88,296.

FAKIR. In Oriental countries, a religious beggar, usually a member of a sect, order, or special caste. Originally a Mohammedan term for mendicants akin to dervishes, it is widely used in India for ascetics who practise varieties of self-torture.

FALAISE. French town 20 m. S.S.E. of Caen, in Calvados dept., Normandy. It is a market centre, and manufactures cotton and leather goods. The castle was that of the first dukes of Normandy, and William the Conqueror was b. at F. Pop. (1962) 6,711.

FALANGE ESPAÑOLA (fahlahn'khe espanyño'-lah) (Spanish phalanx). Spanish Fascist Party, founded by José Antonio de Rivera, son of Primo de Rivera. It was closely modelled in programme and organization on the Italian Fascists, and on the Nazis. In 1937, when Franco assumed its leadership,

it was declared the only legal party, and altered its name to Traditionalist Spanish Phalanx.

FALCON. Bird of the genus *Falco* in the family Falconidae. Of world-wide distribution, the Fs. are birds of prey with short, hooked beaks and sharp claws, remarkable for their keen sight and swiftness of flight. Notable are the wide-ranging peregrine (*F. peregrinus*), persecuted almost to extinction in Britain, of which there are American and Australian varieties, and which is blue-grey with dark markings

KING
FAISAL

and speed until air-compressibility effects were felt near the speed of sound. Twin-jet Meteor fighters were in use at the end of the war and the jet has now ousted the piston engine on nearly all military types and for civil use also, either as a turbo-prop or pure jet, since by flying high (50,000 ft.) these engines are more economical as well as more powerful.

To exceed sonic speed, mere retraction of excrescences was insufficient, and wings are now swept back, engines buried in wings, tail units and even bodies eliminated (all-wing, delta Δ designs). Wings will certainly be made extremely thin, small, of new materials, and 'solid' construction for true supersonic aircraft. The research model X-15 has an immensely long pointed body with tiny, straight and extremely thin, solid steel aerofoils, and has flown at 4,000 m.p.h. (1962). The highest speed for a production plane (1959) was recorded by a Convair 106a at 2,455 m.p.h. In other fields, 1958 saw the inauguration of the first transatlantic jet service, a Comet IV of B.O.A.C.; in 1959 the first hovercraft (SR-N1) was demonstrated in the U.K. and vertical take-off aircraft were developed, e.g. Hawker P-1127 in 1961, which were also capable of supersonic level flight. Supersonic airliner projects are the Anglo-French Concorde (see CIVIL AVIATION); Russian Tu-144 (maiden flight 1968; 120 passengers, 1500 m.p.h., 4,000 m. range), and American Boeing-2707. Development of swing wing or variable geometry aircraft, capable of much higher speeds, encountered setbacks in both Europe and U.S.A. in the late 1960s. See AEROPLANE: BALLOON: GLIDING: JET PROPULSION.

FLINDERS, Matthew (1774–1814). British navigator. B. in Lincs, he joined the navy in 1789, and explored the Australian coasts, 1795–9 and 1801–3.

FLINT, Sir William Russell (1880–). Scottish artist. B. in Edinburgh, he was pres. of the Royal Soc. of Painters in Water Colours 1936–56: he was knighted in 1947.

FLINT. Town (borough) of Flintshire, N. Wales, on the left (S.W.) shore of the Dee estuary, 12 m. N.W. of Chester. A port until the silting up of the estuary, F. is the centre of a coal- and lead-mining area, with paper mills and chemical works. The castle was built by Edward I in 1276. Pop. (1961) 13,690.

FLINT. City of Michigan, U.S.A., on the F. river. Manufacture of motor-cars is the chief industry. Pop. (1960) 196,940.

FLINT. A compact, hard, brittle rock, brown, black, or grey in colour, found in nodules in chalk deposits. It consists of fine-grained silica, compressed into a homogeneous mass. When broken, the nodule has a shell-like fracture. Owing to their hardness, F. splinters are used for abrasive purposes, and when ground into powder for pottery manufacture.

Flint implements made by chipping one F. against another were widely used by Palaeolithic and Neolithic Man. The earliest F. implements, belonging to the Palaeolithic Age, are simple, while those of the Neolithic Age are more expertly cut, and are often ground or polished. Such are found in many parts of Britain. In historic times they were used for making fire, by striking a F. against steel, which produces a spark, and for discharging guns. Cigarette-lighter Fs. are made from cerium alloy.

FLINTSHIRE. Smallest of the Welsh counties. Bordering the Dee estuary and the Irish Sea, with a detached part to the S., it is roughly rectangular. The

FLORENCE. The interior of the octagonal baptistery of St. John. Difficult to date, it may be 5th century, but was extensively restored in the 11th century. It has bronze doors by Andrea Pisano and Lorenzo Ghiberti.

central part is hilly, and the principal rivers are the Dee and Clwyd. The chief occupations are agriculture and coal-mining. The co. town is Mold; other towns are Flint, Holywell, Rhyl, and Prestatyn. Area 256 sq. m.; pop. (1961) 149,888.

FLODDEN. Site 3 m. S.E. of Coldstream, Northumberland, England, of the battle fought on Sept. 9, 1513, between the Scots under James IV and the English under the earl of Surrey, in which James and the flower of his nobility were slain.

FLOOD. The disaster which, according to Genesis, obliterated the human race except for a chosen few. See NOAH. Excavations at Ur by Woolley (q.v.) revealed an 8 ft. layer of water-laid clay, suggesting a local deluge prior to 4000 B.C. over an area c. 400 m. by 100 m. which may have been the origin of the story.

FLORA. Roman goddess of flowers, youth, and of spring. Festivals were held in her honour.

FLORENCE. City of central Italy on the Arno, 55 m. from its mouth; it is the capital of the province of F. and of Tuscany, a railway junction, and a manufacturing centre.

The Roman town of Florentia was built c. 187 B.C. on a former Etruscan site. It was besieged by the Goths, A.D. 405, visited by Charlemagne 786. In 1052, with the rest of Tuscany, F. passed to the countess Matilda of Tuscany. It was the scene of many later conflicts between the popes and the emperors, and was governed by nobles. 'Arti' or trade guilds began to grow up, until the feudal lords and the emperors were overcome, and in 1250 F. was proclaimed a republic. Ten years of Guelph supremacy made F. one of Italy's chief cities, but thereafter the struggle between papal supporters (Guelphs) and those of the emperors (Ghibellines) continued. From 1434 the city's history was bound up with the Medici family. In 1532 she lost her independence, and became capital of the duchy of Tuscany.

F. is famed for its art treasures; the Pitti Palace, the Uffizi Gallery, the cathedral of Santa Maria del Fiore, 1420–34, and many other fine buildings; and when the Allied forces approached the city in the summer of 1944 they received an order that 'the whole of F. must rank as a work of art of the first importance'. The Germans, on the other hand, planned and carried out the systematic destruction of five of F.'s historic bridges (they spared the Ponte Vecchio, with only a narrow footway between its old shops), and of medieval buildings along the Arno. Much was repaired, but in 1966 the worst floods for 700 years caused £57,000,000 damage to buildings and art treasures. Pop. (1961) 438,138.

Palaeolithic flint hand-axe and scraper.

of the 'safe period' was developed. *See also* ABORTION and STERILIZATION.

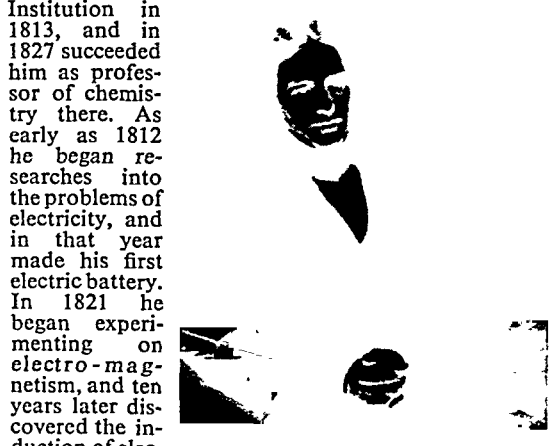

FANCY, The. Formerly the popular name for pugilists and for those who frequented the prize-ring.

FANGIO (fan'jō), Juan Manuel (1911–). Argentine racing motorist, 5 times world champion 1951–7, when he retired. His inspired, coldly brilliant, text-book precision is judged to have made him the finest racing driver of all time.

FANSHAWE, Sir Richard (1608–66). English poet. B. in Herts, he was an ardent Royalist, and after the Restoration was ambassador at Madrid. He translated Camoens' *Lusiad* (1655).

FANTIN-LATOURE (fontan'-lahtōōr'), Henri (1836–1904). French artist. B. at Grenoble, he excelled in lightly delicate still-lives and flower paintings, genre pictures and portraiture. 'Homage to Delacroix' is a portrait group of Baudelaire, Champfleury, Legros, Whistler, and himself.

FARADAY, Michael (1791–1867). British chemist and natural philosopher. B. in London, the son of a blacksmith, he became a laboratory assistant to Sir Humphry Davy at the Royal Institution in 1813, and in 1827 succeeded him as professor of chemistry there. As early as 1812 he began researches into the problems of electricity, and in that year made his first electric battery. In 1821 he began experimenting on electro-magnetism, and ten years later discovered the induction of electric currents and made the first dynamo. Many more epoch-making discoveries in all fields of electricity followed; and in 1845 he began a second great period of research in which he discovered what he announced as the magnetization of light. He delivered highly popular lectures at the Royal Institution, and pub. many treatises on scientific subjects. In 1835 he was given a government pension, and in 1858 a house at Hampton Court, where he d. Deeply religious, he was a member of the Sandemanian sect. F.'s *laws of electrolysis* are (1) the chemical effect resulting from electrolysis is directly proportional to the quantity of electricity which has passed through the electrolyte; and (2) the quantity of each substance chemically changed, or liberated, at an electrode by the passage of a definite quantity of electricity is directly proportionate to the equivalent weight (q.v.) of the substance. F.'s *law of induced c.m.f.*, associated with him but not enunciated by him, is: the induced c.m.f. round any circuit is proportional to the rate of change of magnetic flux (q.v.) through the circuit. A *farad* is the practical unit of electrostatic capacitance and it is equivalent to 9×10^{11} E.S. units. It is the capacitance of a capacitor in which a charge of 1 coulomb produces a change of potential difference of 1 volt between its terminals.

MICHAEL FARADAY. By Thomas Phillips, 1842.

By Thomas Phillips, 1842. Photo: N.P.G.

FAR EAST. Geographical term for all that part of Asia lying E. of the Indian sub-continent. *See also* SOVIET FAR EAST and map p. 416.

FAREHAM. English market town (U.D.) in

Hampshire, 6 m. N.W. of Portsmouth. It trades in bricks, wheat, coal, etc. Pop. (1961) 58,277.

FARGO, William George (1818–81). American pioneer expressman. In 1844 he estab. with Henry Wells (1805–78) and Daniel Dunning the first express company to carry freight west of Buffalo. Its success led to his appointment as sec. of the newly estab. American Express Co. in 1850, of which he was pres. 1868–81. He also estab. Wells Fargo & Co. (1851) carrying goods express between N.Y. and San Francisco via Panama.

Fargo, a town on the Red r., in North Dakota, is named after him. Pop. (1960) 46,662.

FARINA (fahrē'na), Johann Maria (1685–1766). Italian perfumer. A native of Novara in Piedmont, he settled in Cologne in 1709 and was the inventor of eau-de-Cologne.

FARINGTON, Joseph (1747–1821). English artist. Chiefly famous for his engraved views of the Lake District, he kept a diary (discovered in 1921) which illuminates the contemporary scene.

FARMAN (fahrmo'n'), Henry (1874–1958). French air pioneer. In 1907 F. made his first flying experiments, and by 1909 had estab. a record by flying 100 m. He experimented with new models, and with his brother Maurice founded an aircraft works at Billancourt, important as the source of machines for the French army, and other countries, incl. England, which also made wide use of F.'s inventions, e.g. air-screw reduction gears, in the S.W.W.

FARNABY, Giles (c. 1550–1650). English composer. He is thought to have been b. in Cornwall and studied at Oxford. He composed pieces for the virginal, and for voices (madrigals).

FARNBOROUGH. English town (U.D.) in Hants, 3 m. N. of Aldershot. The mansion of Farnborough Hill was occupied by the Empress Eugénie, and she, her husband, and her son are buried in a mausoleum at the R.C. church she built. At F. is the Royal Aircraft Establishment. Pop. (1961) 31,437.

FARNE. Group of small rocky islands off the coast of Northumberland, England. An ancient chapel is said to be on the site of St. Cuthbert's hermitage. There are 2 lighthouses, that on Longstone being the scene of the rescue by Grace Darling (q.v.), 1838.

FARNESE (fahrneh'se). Name of a famous Italian family who held the duchy of Parma 1545–1731.

FARNHAM. English market town (U.D.) on the Wey, Surrey, 38 m. S.W. of London. The parish church was originally part of Waverley Abbey, which, founded in 1128, was the first Cistercian establishment in England. At Moor Park, Swift wrote some of his works. Pop. (1961) 26,927. Other English places called Farnham are in Dorset, Berks, Suffolk.

FAROE ISLANDS, FAROES. *See* FAEROES.

FAROUK (fahrōōk') (1920–65). King of Egypt. The son of Fuad (q.v.), he succeeded him in 1936. In 1952 he was compelled to abdicate, his own son Fuad being temporarily proclaimed in his stead. He adopted the title Prince of Egypt.

FARQUHAR (far'kar), George (1677–1707). Irish dramatist. B. in Londonderry, he became an actor in Dublin, but in 1698 went to London, where in 1699 his first play *Love and a Bottle* was produced. *The Constant Couple* (1700), was followed by a sequel *Sir Harry Wildair* (1701). The best of his later plays are *The Recruiting Officer* (1706), and *The Beaux' Stratagem* (1707).

FARRAGUT, David Glasgow (1801–70). American seaman. B. nr. Knoxville, Tennessee, son of a Spanish emigrant, he took New Orleans in 1862, after destroying the Confederate fleet, and in 1864 effectively put an end to blockade-running at Mobile, besides other dashingly heroic exploits. The ranks of vice-admiral (1864) and admiral (1866) were specially created for him by Congress.

FLY. 1, horse fly; 2, soldier fly; 3, blow fly; 4, forest fly.

Certain keys can be depressed to extend the range of the F. to three octaves.

FLUX, MAGNETIC. See MAGNETIC FLUX.

FLY. Name given to the winged stage of many insects, such as dragon-fly, butterfly, caddis-fly, etc.: by zoologists it is used to mean a two-winged insect of the order Diptera. Flies form one of the largest orders of insects, and number about 90,000 described species, of which more than 5,200 inhabit the British Isles. They normally possess a single pair of membranous wings. Hind-wings are represented by a pair of knob-like organs borne on slender stalks. These are the halteres or balancers: they function in maintaining equilibrium during flight. The mouth-parts project from the head in the form of a proboscis. In most Fs. they are used for sucking in fluid substances, but in blood-sucking Fs. they are modified in order to pierce the skin of their victims.

Fs. undergo complete metamorphosis; their larvae are always without true legs, and the pupae are only rarely enclosed in cocoons. They are generally sombrely coloured, but some species are banded with yellow or white, others are metallic green or blue, while some are densely hairy. The sexes are usually very closely alike.

Fs. are usually classified into three sub-orders, viz. Nematocera, including the crane-flies, mosquitoes, midges, and gall-flies; Brachycera, including the horse-flies and robber-flies; and Cyclorhapha, including the house-fly, blow-fly, flesh-fly, etc.

FLYING LEMUR. Small insectivorous mammal, *Colugo* (q.v.), or *Galeopithecus*.

FLYNN, Errol (1909–59). Australian actor. B. in Tasmania, he tackled every kind of job before his good looks and gaily reckless personality attracted the film scouts. His films incl. *Captain Blood* (1935) and *The Master of Ballantrae* (1953). In his autobiographies he was characteristically frank.

FOCAL LENGTH (of a lens). The point to which a parallel beam of light is concentrated is termed the principal focus of a lens (q.v.) and the distance from the focus to the lens is the F.L. The F.L. depends on the refractive index of the material of which the lens is made and on the curvature of its faces.

FOCH (fosh), Ferdinand (1851–1929). Marshal of France. B. at Tarbes, he was commissioned in 1873, and was appointed to the general staff. At the beginning of the F.W.W. he defended Nancy; he was largely responsible for the victory of the Marne, and commanded on the N.W. front Oct. 1914–Sept. 1916. He was appointed chief of general staff in 1917, entrusted with the co-ordination of the Allied armies in March 1918, and created generalissimo in April. He launched the Allied advance in July which ended the war. After the war he received the O.M. and was made a field marshal.

FOG or MIST. Cloud which collects at the surface of the earth, composed of water vapour which has condensed on particles of dust in the atmosphere. Cloud and fog are both caused by the air temperature falling below dew point (see Dew). The thickness of F. is dependent on the number of water particles it contains. Usually, F. is formed by the meeting of 2 currents of air, one cooler than the other, or by

warm air flowing over a cold surface. Sea Fs. commonly occur where warm and cold currents meet, and the air above them mixes. F. frequently forms on calm nights over the land, as the land surface cools more rapidly than the air immediately above it. Officially, F. refers to a condition when visibility is reduced to 1 kilometre (1,100 yards) or less, and mist or haze to that giving a visibility of 1–2 kilometres. A mist is produced by condensed water particles, and a haze by smoke or dust. Most industrial areas have a continual haze of smoke over them, and if the temperature falls suddenly, a dense yellow F. forms. To enable small bomber forces to take off in the S.W.W. from 1942 heat from petrol jets was used to clear F., the method being known as F.I.D.O. (Fog Intensive Dispersal Of), but it is too expensive for normal use. See SMOG.

FOGAZZARO (fogahtsah'roh), Antonio (1842–1911). Italian poet and novelist. B. at Vicenza, he pub. vols. of verse incl. *Valsolda* (1876), and in 1881 his first novel *Malombra*. His reputation was estab. by *Piccolo Mondo antico* (1896).

FOGGIA (fod'jah). City and episcopal see of Apulia region, cap. of F. prov., S. Italy. The cathedral, dating from c. 1170, was rebuilt after an earthquake in 1731. Pop. (1966) 134,581.

FOKINE (fokén'), Mice (1880–1942). Russian choreographer. B. in St. Petersburg, he became chief choreographer to the Russian Ballet, and by his work with Diaghilev revitalized the art of ballet. His creations incl. the 'Dying Swan' for Pavlova; *Les Sylphides*, *Le Spectre de la Rose*, *Petrouchka*, *Carnaval*; and for the Ballet Theatre of N.Y. *Paganini* and *Barbe Bleue*. He d. in N.Y.

FOKKER, Anthony Herman Gerard (1890–1939). Dutch aeronautical engineer and aircraft designer; he founded aircraft factories in Germany and at Amsterdam. In 1924 he went to U.S.A. and became director of Atlantic Aircraft.

FOLEY, John Henry (1818–74). Irish sculptor. B. in Dublin, he first exhibited at the R.A. in 1839. His most important works include the statue of the Prince Consort for the Albert Memorial; statues of Burke and Goldsmith in Dublin, etc.

FOLIES-BERGERE (folé' berzhär'). Music-hall in Paris named after its original proprietor and famous for its lavish productions.

FOLK DANCE. A dance peculiar to a particular people, nation, or country. European F.Ds. are derived from the dances accompanying the native customs and ceremonies of pre-Christian times. Distinctive national characteristics are particularly noticeable in those countries which have had to struggle for national independence. F.D. has tended to die out in industrialized countries; its preservation

FOLK DANCE. The Morpeth Rant danced in the open air a festival organized by the English Folk Song and Dance Society. The old traditions take on new life as a relaxation from modern tensions.

Lonigan (1932-5) he described a youth growing up in the district of the city in which he lived during the depression. Later books incl. *A World I Never Made* (1936), and other books protesting against social and economic handicaps.

FARS. Region, prov. No. 7, of Persia, on the N.E. shore of the Persian Gulf. The cap. is Shiraz; Bushire is the chief port. Wheat, barley, fruits, tobacco are grown. Persepolis (q.v.) is within the region. Pop. (1966) 1,600,000.

FARTHING. Formerly the smallest English coin, a quarter of a penny. It was introduced, originally as a silver coin, in Edward I's reign. The copper F. became general in Charles II's time, and the bronze in 1860. It became obsolete Jan. 1, 1961.

FASCES (fa'séz). In ancient Rome, bundles of rods carried in procession by the lictors in front of the chief magistrates, as a symbol of their power over the lives and liberties of the people. An axe was included in the bundle. The F. were adopted by the Fascists as their badge.

FASCISM (fash'izm). The totalitarian nationalist movement founded in Italy by Mussolini; also similar movements elsewhere. Its units were originally called *fasci di combattimento*, *fascio* meaning a bundle or group; later it adopted as its emblem the *fascies* (q.v.). Between the 2 world wars F. movements arose in many other countries.

F. was essentially a product of the economic and political crisis of the inter-war years. It protected the existing social order by its forcible suppression of the working-class movement, and by providing scapegoats for popular anger in the Jew or the foreigner or the Negro; it also provided the machinery for the economic and psychological mobilization of the nation for war. In its propaganda it made great use of revolutionary phrases. Its ideology denied all rights to the individual in his relations with the State, personified in the infallible 'leader' (*Duce*, *Fuehrer*). Science, art, and education were brought under state control. Women were driven from economic and public life.

In Italy F. arose in 1919. In Oct. 1922 Mussolini was invited to take power by the king, and the Fascist régime ended with his fall in July 1943.

Outside Italy and Nazi Germany, Fascist or semi-Fascist régimes included the dictatorships of Horthy in Hungary, Pilsudski in Poland, Dollfuss in Austria, Franco in Spain, Salazar in Portugal, Pétain in France, and Perón in Argentina. The Fascist movements in Belgium, Holland, and Norway all assisted in the conquest of their countries by the Nazis. Sir Oswald Mosley's British Union of Fascists gained considerable notoriety 1932-9 and was revived as the Union Movement after the S.W.W., and in 1962 the National Socialist Movement was founded by Colin Jordan, having strong links with the U.S. Nazi Party (founded 1958) and led by George Lincoln Rockwell (assassinated 1967). Japanese F., which held power 1932-45, combined European ideas with emperor-worship, Shintoism, and feudal ideology.

FAST, Howard (1914-). American author. Long a member of the Communist Party, he broke away in 1957 on the suppression of the Hungarian revolt. His historical novels incl. *Citizen Tom Paine* (1943).

FAT. The principal component of the adipose tissue in animal bodies. In chemistry the name is applied to the glyceryl esters of certain fatty acids.

FATES. In Greek and Roman mythology, the spirits who determined the destiny of each newborn child, and in particular the length of its life. They are pictured as three old women spinning, their names being Clotho, Lachesis, and Atropos.

FATHER DIVINE. American Negro evangelist, George Baker (c. 1870-1965). As F.D., Dean of the Universe, he led the World Wide Kingdom of Peace (Christianity mixed with Judaism, etc.) from the

1920s: H.Q. Philadelphia, Penn, but with a famous 'Heaven' or religious community in Harlem, N.Y. His wife was known as Mother D.

FATHER-LASHER. Name given to 2 fish of the Cottidae family, *Cottus scorpius* and *C. bubalis*, which occur in British seas and are widely distributed.

FATHERS OF THE CHURCH. Name applied to certain teachers and writers of the early Christian Church, particularly eminent for their learning and orthodoxy, experience, and sanctity of life, who lived from the end of the 1st to the end of the 7th cent., a period of 600 years divided by the Council of Nicaea (325) into the Ante-Nicene and Post-Nicene Fathers. The most important of the Ante-Nicene Fs. are the Apostolic Fathers - Clement of Rome, Ignatius of Antioch, Polycarp of Smyrna, and 'Barnabas' - Justin Martyr, Tatian, Irenaeus, Clement, Origen, Tertullian, Cyprian, and Gregory Thaumaturgus. Of the Post-Nicene Fs. the most memorable are Cyril of Alexandria, Athanasius, John Chrysostom, Eusebius of Caesarea, Cyril of Jerusalem, Basil the Great, Ambrose of Milan, Hilary of Poitiers, Augustine, pope Leo I, Boethius, Jerome, Gregory of Tours, pope Gregory the Great, and Bede.

FATHOM. Unit of measurement, equal to 6 ft., used in taking marine soundings. The word originally meant the distance between the finger-tips with the arms outstretched. In mining and in handling timber F. signifies a measurement of 6 ft. square.

FATIMITES. Name given to a Moslem dynasty which was founded by Obaidallah, who claimed to be a descendant of Fatima, Mohammed's daughter, and her husband, Ali, in N. Africa in A.D. 909. In 969 Egypt was conquered and the dynasty continued until overthrown by Saladin in 1171.

FATTY ACIDS. Group of organic compounds, the higher members of which are found combined with glycerol in fats. They include formic acid, acetic acid, butyric acid, palmitic acid, and stearic acid.

FAULKNER, John Meade (1858-1932). English author. A remarkable stylist, he is best remembered for *The Lost Stradivarius* (1895), a ghost novel, *Moonfleet* (1898), a story for boys, and *The Nebuly Coat* (1903).

FAULKNER, William (1897-1962). American novelist. Son of a declined aristocratic family, he was b. in Mississippi, and aft r service in the R.C.A.F. and R.A.F. during the F.W.W. wrote prolifically but without publishing anything of importance, until his first novel of a war veteran, *Soldier's Pay* (1926). However, he did not strike his true vein until he returned to Oxford, the town in which he had spent his youth and on which he was to model Jefferson in

the co. of Yoknapatawpha, the setting of his major novels. These began with *Sartoris* (1929); *The Sound and the Fury* (1929), dealing with a Southern family in decline and sometimes rated as his finest work; *As I Lay Dying* (1930); *Light in August* (1932), a study of segregation which concerned him deeply; *The Unvanquished* (1938), stories of the Civil War; and *The Hamlet* (1940), *The Town* (1957) and *The Mansion* (1959), a trilogy covering the rise of the materialist Snopes family. His experimental and turgid style - sentences sometimes running over a page - hindered popular recognition and a book such as *Sanctuary* (1931) was deliberately conceived as a horrific money-spinner. Also notable are *Intruder in the Dust* (1948), *Requiem for a Nun* (1953, dramatized 1955), and *The Reivers* (1962). In 1949 he was awarded a Nobel prize.

own line by the defending team is called a 'safety' and scores 2 points to the other side. Padded clothing and helmets are worn and substitutes are allowed for injured players. Forward passing is allowed. Only the man with the ball may be tackled and his team-mates may run with him to block opponents from tackling. The side 'in possession' must make at least 10 yds. in every 4 attempts or the ball goes to the opponents. The game is divided into four 15-minute periods. Four officials are required to handle a college game. There are 3 sets of rules—collegiate, professional, and high school; they are very complicated and change from year to year.

FOOTBALL (Association). 'Soccer' has developed from robust, rural football of the past. In 1863 the Football Association was formed to co-ordinate existing rules. It is popular in every country in the world with the exception of the U.S.A.

A team is broadly divided into defence, a goal-keeper, 2 full-backs, and 3 half-backs; and attack, 5 forwards. The 5 backs now generally each mark an opposing forward. The field has a half-way line, marked with a 10 yd.-radius centre circle, 2 penalty areas (each 44 yds. by 18 yds.), and 2 goal areas (each 20 yds. by 6 yds.). Corner kicks are taken from a 1 yd. segment, when the ball goes behind the goal-line off a defender; a ball kicked over the touch-lines is thrown in by one of the opposing side. The goal-keeper only is allowed to touch the ball with his hands, then only in his own penalty area and he must clear the ball after 4 paces. For major offences committed within defenders' penalty area, a penalty kick may be awarded by the referee to the attacking team. This is taken 12 yds. from the goal centre, with the goal-keeper only within the area. The game is started from the centre spot. It is played for 2 periods of 45 minutes each, the teams change ends at half-time. The game is controlled by a referee; 2 linesmen indicate when the ball is kicked into touch.

The Football Association Cup competition was inaugurated in 1872. The Football League was founded in 1888. The Fédération Internationale de Football Association (1904) organized in 1930 the first of the quadrennial competitions for the 'World Cup' or Jules Rimet trophy: winners 1930 Uruguay; 1934, 1938 Italy; 1950 Uruguay; 1954 Germany; 1958, 1962 Brazil; 1966 England. To win 3 times in succession is to win it outright. The European Cup (1958) is contested annually.

FOOTBALL (Australian). Australia has its own code of football. It is played with 18 men a side, 2 reserves being allowed for each team. Each side is

FOOTBALL (Australian)

Black Team (attacking bottom goal): 1, Full-back; 2, Right full-back; 3, Left full-back; 4, Right half-back; 5, Centre half-back; 6, Left half-back; 7 and 8, Followers; 9, Rover (ruck); 10, Right centre (wing); 11, Centre; 12, Left centre (wing); 13, Right half-forward; 14, Centre half-forward; 15, Left half-forward; 16, Right full-forward; 17, Left full-forward; 18, Full-forward.

White team (attacking top goal): A, Full-back; B, Left full-back; C, Right full-back; D, Left half-back; E, Centre half-back; G, Right half-back; H, Rover (ruck); I to K, Followers; L, Centre; M, Left centre (wing); N, Right centre (wing); P, Left half-forward; Q, Centre half-forward; R, Right half-forward; S, Left full-forward; T, Right full-forward; U, Full-forward.

placed in 5 lines of 3 men each. Three men follow the ball all the time. The 2 goal-posts, at each end, are 20 ft. high and 7 yds. apart. On either side are 2 smaller posts. The football is oval, and weighs a little more than a Rugby ball. A goal (6 points) is scored when the ball is kicked between the goal-posts, if it is not touched on the way. If the ball passes between a goal-post and one of the smaller posts, or hits a post, the score is a 'behind,' or one point. There are no scrums, line-outs, or off-side rules. A player must get rid of the ball as soon as he starts to run, by kicking, punching or bouncing it every 10 yds. No tackling is allowed as in Rugby.

The Code originated on the Australian goldfields in the '50s of last century.

FOOTBALL (Rugby). 'Rugger' originated at Rugby school in 1823. The game takes place between 2 teams of 15 players a side, on a playing field not to exceed 110 yds. by 75 yds. with areas behind each goal terminated by a dead-ball line. The goal is 18 ft. 6 in. wide and the cross-bar 10 ft. from the ground, with goal-posts extending beyond this height. The object is to score goals or tries with an oval leather ball. A try is made by touching down the ball by hand over the opposing side's goal-line. A try is converted into a goal if a member of the scoring team kicks the ball through the goal-posts at any height above the cross-bar. The kick may be taken from any point on a line parallel to the touch-lines, passing through the point where the try was scored. Scoring is based on points, 3 for a try, 5 for a try converted into a goal, 3 for a drop goal, and 3 for a penalty or free kick.

The set scrummage, a feature of Rugger, is used to re-start the game after certain infringements of the laws. The 15 players on each side usually comprise 8 forwards, 2 half-backs, 4 three-quarter backs and 1 full-back. In all matches a referee and 2 touch-judges must be appointed or mutually agreed upon.

The Rugby Union, governing amateur Rugby, was formed in 1871. The Rugby League was founded in

Federal, Fs. are defined as the most serious crimes, and the distinction is more logically sustained.

FÉNELON, François de Salignac de la Mothe (1651–1715). French writer and ecclesiastic. A son of the comte de Fénelon, he entered the priesthood in 1675 and in 1679 was made spiritual director to a sisterhood of ex-Huguenot proselytes, for whom he wrote his *Traité de l'Éducation des Filles* (1687). His *Démonstration de l'Existence de Dieu* was intended to bring the philosophy of Descartes into line with Catholic thought. In 1689 he was appointed tutor to the duke of Burgundy, grandson of Louis XIV, and wrote for him his *Fables*, *Dialogues des Morts*, *Télémaque*, and *Plans de Gouvernement*. *Télémaque* (1699) with its picture of an ideal commonwealth had the effect of a political manifesto, and Louis banished F. to Cambrai, where in 1695 he had been consecrated archbishop.

F's. mystical *Maximes des Saints* (1697) led to a quarrel with the Jansenists, rupture with Bossuet, and condemnation by pope Innocent XII.

FÉ'NIANS. Irish-American revolutionary secret society, founded in 1858 and named after the ancient legendary warrior band of the Fianna. It aimed at the establishment of an Irish republic. An attempt to invade Canada from the U.S.A. in 1866 and a rising in Ireland in 1867 failed completely, but the society continued down to the Irish civil war of 1922.

FENNEC. Species of fox (*Fennecus zerda*) found in the Sahara desert. Its coat is mainly pale fawn, and it has large ears.

FENNEL. Genus of plants (*Foeniculum*) of the Umbelliferae. The common F. is a perennial, reaching 2 or 3 ft. in height, and bearing large umbels of fragrant yellow flowers. It grows wild in S. Britain, and is used in cookery and sauces and as a garnish.

FENS. Level, low-lying tracts of land in E. England, W. and S. of the Wash, measuring some 70 m. from N. to S. with a maximum width of 35 m. They fall within the counties of Lincs, Hunts, Cambs, and Norfolk, consisting of a huge area once a bay of the North Sea, but now crossed by numerous drainage canals and forming some of the most productive agricultural land in Britain. The first drainage attempts were made by the Romans, but later attempts were unsuccessful until in 1634 the 4th earl of Bedford brought over the Dutch water-engineer Vermuyden who introduced Dutch methods. Burwell Fen and Wicken Fen, N.E. of Cambridge, have been preserved undrained as plant and animal reserves.

FERBER, Edna (1887–1968). American author. B. in Michigan, she was originally a reporter for the *Chicago Tribune*. Her novel *Show Boat* (1926) was adapted as an operetta by Jerome Kern and Oscar Hammerstein II, and her plays, in which she collaborated with G. S. Kaufmann, incl. *Dinner at Eight* (1932) and *Stage Door* (1936).

FERDINAND. Name of 3 Holy Roman emperors. Ferdinand I (1503–64) succeeded his brother Charles V as emperor in 1556. Ferdinand II (1578–1637), king of Bohemia and Hungary, succeeded his uncle Matthias as emperor in 1619, and by his fanatical Catholicism provoked the Bohemian revolt, which led to the 30 Years War. Ferdinand III (1608–57) succeeded his father Ferdinand II in 1637. The outstanding event of his reign was the conclusion of the 30 Years War in 1648.

FERDINAND (1861–1948). King of Bulgaria. Son of Prince Augustus of Saxe-Coburg-Gotha, he was elected prince of Bulgaria in 1887, and in 1908 proclaimed Bulgaria's independence of Turkey and assumed the title of Tsar. In 1915 he entered the F.W.W. as Germany's ally, and in 1918 abdicated and retired to Coburg.

FERDINAND I, called the Great (d. 1065). King of

Castile. He united all N.W. Spain under his rule or that of his brothers, and began the reconquest of Spain from the Moors.

FERDINAND V of Castile, and II of Aragon (1452–1516). First king of all Spain. In 1469 he m. his cousin Isabella, who in 1474 succeeded to the throne of Castile. When in 1479 F. inherited the throne of Aragon the 2 great Spanish kingdoms were brought under a single government for the first time. The outstanding events of his reign included the introduction of the Inquisition in 1480, the expulsion of the Jews and the surrender of the Moors at Granada in 1492, Columbus' discovery of America, and the conquest of Naples in 1500–3.

FERDINAND (1865–1927). King of Rumania. He succeeded his uncle Charles I in 1914, and in 1916 declared war on Austria. The Allied victory was followed by the acquisition of Transylvania from Hungary, Bukovina from Bulgaria and Bessarabia from Russia, and in 1922 F. was crowned king of All Rumanians.

FERGHANA (fergah'na). Town in Uzbek S.S.R., in the fertile F. valley, capital of the important cotton- and fruit-growing F. region; nearby are petroleum fields. Pop. (est.) 35,000.

FERGUSON, Harry (1884–1960). British engineer. B. in Co. Down, a farmer's son, he pioneered the development of the tractor, joining forces with Henry Ford in 1938 to manufacture in America. He also experimented in cars and aircraft machinery.

FERMANAGH (fermah'nah). Co. in the southern part of N. Ireland. The centre is occupied by a broad trough of lowland, in which lie Upper and Lower Loughs Erne. The highest points are Cullcagh (2,188 ft.) and Belmore (1,312 ft.), and the main river is the Erne. The chief occupation is agriculture, and livestock are raised. The co. town is Enniskillen; smaller towns include Lisnaskca and Irvinestown. Area 657 sq. m.; pop. (1966) 49,876.

FERMAT (fermah'), Pierre de (1601–65). French mathematician. His method of calculating probability developed from his work with Pascal on the properties of numbers, and he is regarded as a founder of modern theory. His *Last Theorem*, though he himself may have discovered a complete proof, has never been demonstrated by anyone else.

FERMI, Enrico (1901–54). American physicist. B. in Rome, he was prof. of theoretical physics there 1926–38, when he settled in the U.S. The same year he was awarded a Nobel prize for having proved the existence of new radioactive elements produced by bombardment with neutrons and his discovery of nuclear reactions produced by slow neutrons. He was prof. at Columbia Univ., N.Y., 1939–42 and from 1946 at Chicago. The U.S. Atomic Energy Commission made a special award to him in 1954 for outstanding work in nuclear physics, and these annual awards have subsequently been known as F. Awards.

FERMOY. Town (U.D.) on the r. Blackwater, co. Cork, Rep. of Ireland; once an important garrison town, it is a salmon-fishing centre. Pop. 3,200.

FERNANDEL (fernandel'). Stage-name of French comedian Fernand Contandin (1903–), adopted because his mother-in-law used to refer to him as 'F. d'elle'. B. in Marseilles, he achieved an international reputation by his role as a country priest in *The Little World of Don Camillo* (1953) and as quins in *The Sheep has Five Legs* (1953). He has astonishing facial mobility.

FERNANDEZ (fernahn'deth), Juan (fl. 1570). Spanish navigator. As a pilot on the Pacific coast of S. America, he discovered in 1563 the islands off the coast of Chile that now bear his name; on one of these Alexander Selkirk, the original Robinson Crusoe, lived. In 1576 he may have sighted Easter Island, as well as Australia and New Zealand.

FERNANDO PO. Island in the Bight of Biafra, W.

was appointed Sec. of State by Washington in 1789 and took office in 1790. The Sec. of State is charged, under the direction of the President, 'with the duties appertaining to correspondence with the public ministers and the consuls of the United States, and with representatives of foreign powers accredited to the United States, and to negotiations of whatever character relating to the foreign affairs of the United States'.

Most other countries of the world have a Min. of Foreign Affairs who is a member of the cabinet (or equivalent body).

Up to the 18th cent. there was no specialized diplomatic body in any European country. After 1818 diplomatic agents were divided into: ambassadors, papal legates, and nuncios; envoys extraordinary and ministers plenipotentiary and other ministers accredited to the head of state; ministers resident; *chargés d'affaires* who may deputize for an ambassador or minister, or be themselves the representative accredited to a minor country. Heads of diplomatic missions are assisted by counsellors, secretaries, and attachés (military, labour, cultural, press, etc.). In 1925 eleven countries - Belgium, Brazil, France, Germany, Italy, Japan, Portugal, Russia, Spain, Turkey, and the U.S.A. - sent representatives of the rank of ambassador to one another; after the S.W.W. the representatives of a number of countries, incl. many formerly represented by a minister, envoy, or *chargé d'affaires* as well as newly created states, were elevated to the rank of ambassador. Consuls are state agents with commercial and political responsibilities in foreign towns, but are not 'travel agents'.

FORELAND, North and South. Headlands on the Kent coast, England. N.F., with one lighthouse, lies 2½ m. E. of Margate; S.F., with two, lies 3 m. N.E. of Dover.

FORESTER, Cecil Scott (1899-1966). British author. His dual reputation rests on the varied excellence of such books as *Payment Deferred* (1926), a subtle crime novel; *Brown on Resolution* (1938), a study of patriotism; *The African Queen* (1938) and *The Earthly Paradise* (1940), dealing with Columbus; and on his series of the Napoleonic era covering the career - from midshipman to admiral - of the redoubtable Horatio Hornblower.

FORESTRY. The science of growing timber as a crop, made necessary by increasing demand for wood and the depletion of the world's timber reserves. Original forest areas have been drastically reduced during the last 3 cents., particularly in Europe, e.g. only 5% remains in U.K., 10-20% in France, Spain and Belgium and 50% in Sweden and Finland. The remaining productive forest area is about 18% of the earth's entire land surface. F. is complicated by the great life span of trees, and the vast areas involved, and its success depends upon sustaining the yield, by planting young trees to replace those cut down. Soft wood is the most commonly used timber and 80% of the world's trade is in conifers, used for paper pulp and construction, supplied by Sweden, Finland, and U.S.S.R. Temperate hardwoods from U.S.A. and Canada, used in furniture, railway sleepers, etc., account for another 18%, and tropical hardwoods of which there are great reserves in Africa, Asia, and S. America are the least used, only 2% being needed for special purposes. The value of trees extends beyond their worth as timber: they modify climate, prevent soil erosion etc., and reforestation is of prime importance in countries such as Tunisia.

FORFAR. Co. town (burgh) of Angus, Scotland, 13 m. N.N.E. of Dundee. The chief industry is linen and jute manufacture. Pop. (1961) 10,252.

FORFARSHIRE. Name from 16th cent. until 1928 of ANGUS.

FORGERY. The falsification of any written instrument with intent to deceive. F. is not limited to spurious signatures.

FORGET-ME-NOT

FORGET-ME-NOT or Scorpion Grass. Common wild flower belonging to the Boraginaceae family (genus *Myosotis*) found in Europe, N. America, N. Asia, and Australia. The flowers are blue, pink, or white. The species *M. scorpioides* and *M. sylvatica* are much cultivated.

FORLÌ (forlè). City and market centre in Emilia-Romagna region, Italy, cap. of F. prov. It has a cathedral, old churches, and a citadel. Felt, majolica, paper are made. Pop. (1966) 101,073.

FORMALDEHYDE. A gas, H_2CO at ordinary temperatures, condensing at $-21^\circ C$. It has a powerful penetrating smell and burning taste. In aqueous solution it is used as a biological preservative.

FORMBY, George (1904-61). English comedian. Following the death in 1921 of his father George F. sen., one of music-hall's famed comedians, he appeared under a pseudonym for 18 months, until he had proved his worth. On stage and screen he established a reputation as the not-so-gormless Lancashire lad, and sang such songs as 'Mr. Wu' and 'Cleaning Windows', accompanying himself on the ukelele.

FORMENTOR PRIZES. So named from Cape F. on Majorca where the selectors first met, there are 2 awards of \$10,000, both first given in 1961: the Prix F. is for an unpublished work of fiction, the MSS. being submitted by participating publishers and the winning book published simultaneously in the countries concerned; and the International Publishers' Prize is for any recently published work of fiction from any source.

FORMIC ACID (CH_3O_2). One of the fatty acids, a colourless, slightly fuming liquid that melts at $8^\circ C$ and boils at $101^\circ C$. Specific gravity 1.22. It occurs

FORESTRY. Canada exceeds all other countries in her exports of both wood-pulp and paper, and is the source of more than half of all newspaper pages printed daily. Some lakes, such as this in the Gatineau pulpwood region of western Quebec, carry more than 150,000 cords of pulpwood on their frozen surfaces at the close of the cutting season.

Photo: Malak, Ottawa.

Jud Süß (1917). Later were *Die hässliche Herzogin* (1923, *The Ugly Duchess*), set in the 14th cent.; and *Erfolg* (1930, *Success*) a skit on Hitler's Putsch.

FEUDALISM (fūd'-) (Lat. *feudum*, a fief). The system which arose during the 4th–10th cents., whereby land was held in return for service. Under it all land, in theory, belonged ultimately to the king, who might hold his kingdom from another king, and grant the use of the land and the right to exact services, and often to administer justice and levy taxes, to a tenant-in-chief, who in turn might grant portions of it to vassals, and so on. The most important of a vassal's obligations was that of military service. The economic basis of F. was the manor, cultivated by serfs bound to the soil, who held portions of the manor fields in return for labour services. The system declined from the 13th cent. onward, owing partly to the development of a money economy, partly to the many peasants' revolts of 1350–1550. In England serfdom became extinct in the 16th cent. and feudal dues paid by landowners to the Crown were abolished in 1660.

FEUERBACH (foi'erbahkh), Ludwig Andreas (1804–72). German philosopher, author of *Das Wesen des Christentums* (1841), trans. in 1853 by George Eliot under the title of *The Essence of Religion*. F. maintained that God is an outward projection of man's inner self; men have created an idea of ideal humanity which may replace God.

FEVER. Disorder due to raising of the body temperature above normal. It is generally the reaction of the organism to the presence in the blood stream of a foreign substance, usually a protein. This is most often produced by invading micro-organisms.

FEZ. Northern cap. of Morocco, a sacred Mohammedan city situated in a valley N. of the Great Atlas mts. It manufactures silk, woollen, and cotton goods, etc., and was originally the only place where the fez was made. The Kairwan Islamic Univ. dates from 859 and a second univ. was founded 1961. Pop. (1965) 249,000.

FEZZA'N. Desert area of c. 214,000 sq. m. in Libya with many oases. Formerly a prov., it was split into smaller divisions in the reorganisation of 1963.

FIANNA FAIL (fē-an'a foil) (Soldiers of Destiny). Irish republican party, founded by De Valera in 1926. It aims at the establishment of a united and completely independent all-Ireland republic.

FIBRES, Man-made. The original stimulus to the development of extruded F. was the search for an alternative to carbon filaments in electric lighting, and Sir Joseph W. Swan patented an artificial silk in 1883, but the pioneer of commercial textiles was Count Hilaire de Chardonnet (1839–1924). Artificial silk, called rayon from 1926, began a social revolution in textiles, Courtaulds being the pioneers of the viscose process (patented by C. F. Cross and E. J. Bevan 1892). The revolution was completed by the introduction of the first fully synthetic fibre in 1938, nylon (q.v.) developed by DuPont. Today the 4 main fibre types are nylon; the acrylics used in knitwear (also developed by DuPont, e.g. Orlon 1944); the polyesters (e.g. Terylene, discovered by J. R. Whinfield and J. Dickson of the Calico Printers Association 1940 and developed by I.C.I.); and the spandex or elastomeric F (e.g. Lycra, DuPont 1959) which replace traditional rubber yarns. The variants are as endless as their uses in clothes, carpets, industry, etc., but espec. notable are the foambacks or laminates, and texturised types (e.g. Crimplene 1959). A world-wide industry has resulted, since air-conditioning renders climate immaterial, and both raw materials and finished product are easily transported. See **KNITTING**.

FIBROSITIS. Inflammation and overgrowth of fibrous tissue, especially of the sheaths of muscles; muscular rheumatism.

FICHTE (fikh'te), Johann Gottlieb (1762–1814). German philosopher. B. in Silesia and ed. at Jena and

Leipzig, he was an admirer of Kant and in 1792 pub. a *Critique of Religious Revelation*, a critical study on Kantian lines. While professor at Jena (1793–9), F. wrote a number of important works on the theory of knowledge. In 1799 he was accused of atheism, and was forced to resign his post. He moved to Berlin, where he lectured and devoted himself to public affairs. At the same time he delivered his *Addresses to the German People* on the foundations of true prosperity; his *Staatslehre* (Theory of Politics) describes a Utopian state founded on rational principles, but with a tendency towards dictatorship.

FIDEI DEFENSOR (fid'e-i dēfen'sōr). (Lat., 'defender of the faith'). The title conferred by pope Leo X upon Henry VIII of England in recognition of a treatise that the latter had written against Martin Luther. The title has ever since been included in the style of English sovereigns.

FIELD, Marshall (1835–1906). American merchant who in 1865 founded in Chicago the firm that became Marshall Field & Co., the great dept. store.

FIELDFARE. A bird (*Turdus pilaris*) of the thrush family (Turdidae), a winter migrant in Britain, breeding in Scandinavia, N. Russia, and Siberia. It has a pale-grey lower back, with black tail.

FIELDING, Gabriel. Pseudonym of British novelist Alan Gabriel Barnsley (1916–), descended from a brother of Henry F. (q.v.). He is best known for his trilogy about the Blaydon family *Brotherly Love* (1954), *In the Time of Greenbloom* (1956), *Through Streets Broad and Narrow* (1960).

FIELDING, Henry (1707–54). English novelist. B. in Somerset, he was a contemporary of the elder Pitt and H. Fox at Eton. In 1725 he attempted to abduct an heiress at Lyme Regis, and after some years of life as a man-about-town began writing for the stage, his chief successes in this medium being the burlesque *Author's Farce* (1730), and *Tom Thumb* (1730), and his adaptations from Molière. His first novel was *Joseph Andrews* (1742), a parody of Richardson's *Pamela*; it was followed by the ironic *Jonathan Wild the Great* (1743), and in 1749 by his masterpiece *Tom Jones*, 'a comic epic in prose'. F. had been called to the Bar in 1740, and in 1748 was appointed J.P. for Middlesex and Westminster. Here he was eminently successful, and his concern for social evils, especially prison conditions, emerges in his last novel *Amelia* (1751). In 1754 F. sailed to Portugal to improve his health, writing on the way *A Journal of a Voyage to Lisbon*, and d. and was buried at Lisbon two months after his arrival.

FIELD MARSHAL. Title given to the highest-ranking officer in the British Army, introduced from Germany by George II in 1736.

FIELD MOUSE. See **MOUSE**.

FIELD OF THE CLOTH OF GOLD. Name given to the meeting between Henry VIII and Francis I of France in June 1520, between Guines and Ardres, near Calais. The magnificence of the dresses was the origin of the name.

FIELDS, Gracie. Stage-name of British comedienne and singer Grace Stansfield (1898–). B. in Rochdale, she was originally a mill-girl, but her remarkable voice and personality soon brought her fame in the musical *Mr. Tower of London* (1918), and her film successes from 1931 incl. *Sally in our Alley*, *Sing as We Go*, *Keep Smiling*, etc. Her home and hotel on Capri are tourist attractions

J. G. FICHTE. Drawing by Henschel. Courtesy of Schiller National-Museum, Marbach.

songwriter, author of 'The Old Folks at Home', 'My Old Kentucky Home', etc.

FOUCAULT (fookoh'), Jean Bernard Léon (1819-68). French physicist. He produced in 1851 the pendulum named after him, which demonstrates the rotation of the earth on its axis, and was the inventor of the gyroscope.

FOUCHE (foosheh'), Joseph, duke of Otranto (1759-1820). French statesman. B. near Nantes, he was elected to the National Convention, and organized the conspiracy which overthrew Robespierre. Napoleon employed him as Police Minister.

FOUGASSE (foogah'). Pseudonym of the British cartoonist C. Kenneth Bird (1887-1965). Art editor of *Punch* 1937-49, and editor 1949-53, he had a style distinguished by simple, bold outlines.

FOUNTAINS ABBEY. Cistercian abbey situated 8 m. N. of Harrogate, in the W. Riding of Yorks, England. It was founded c. 1132, and suppressed in 1540. A plan formed in 1946 to restore the ruins as a monastic establishment came to nothing.

FOUR FREEDOMS. President Roosevelt in his address to Congress on Jan. 6, 1941, defined the 'four essential human freedoms' as freedom of speech and expression, freedom of every person to worship God in his own way, freedom from want, and freedom from fear.

FOURIER (fooryeh'), François Charles Marie (1772-1837). French Socialist. B. at Besançon, he spent most of his life as a clerk, and d. at Paris. In his *Le nouveau monde industriel* (1829-30), he advocated that society should be organized in units of c. 1,800 people living and working in co-operation.

FOUR SQUARE GOSPEL ALLIANCE. Religious movement started in Ireland in 1915 and now organized in the Elim Four Square Gospel Alliance. It stresses the inspiration of the Bible, bodily healing through anointing with oil, adult baptism by immersion, the millennial return of Christ, etc.

FOURTEEN POINTS. The terms proposed by President Wilson of the U.S.A. in his address to Congress on Jan. 8, 1918, as a basis for the settlement of the F.W.W. that was shortly about to reach its climax. They included: open diplomacy; freedom of the seas; removal of economic barriers; international disarmament; adjustment of colonial claims; German evacuation of Russian, Belgian, French, and Balkan territories; the restoration of Alsace-Lorraine to France; autonomy for the Austro-Hungarian peoples and those under Turkish rule; an independent Poland; and a general association of nations. Many of the 'points' were embodied in the peace treaties following the war.

FOURTH (of July). Independence Day in U.S.A.; the anniversary of the day in 1776 when the Declaration of Independence was adopted by the Continental Congress.

FOURTH ESTATE. Name applied to the Press. The first to do so was Burke.

FOWEY (foi). English port and holiday resort (bor.) in Cornwall nr. the mouth of the Fowey estuary. It is being developed as an outlet for the Cornish clay mining industry. Pop. (1961) 2,237.

FWLER, Henry Watson (1858-1933) and Francis George (1870-1918). British scholars, authors of a number of English dictionaries: *Modern English Usage* (1926), is the work of the elder brother.

FWLIANG. See KING-TE-CHEN.

FOX. A dog-like carnivorous mammal; fem. vixen.

Vulpes vulpes, the common European red fox, is reddish-brown, changing to white underneath, with a white-tipped tail. In Britain it is hunted as a sport. Silver or black F. is farmed for its pelt.

FOX, Charles James (1749-1806). English Whig statesman. The son of the 1st baron Holland, he entered parliament in 1769 as a supporter of the court, but in 1774 went over to the opposition. In 1782 he became Sec. of State in Rockingham's govt., but resigned when Shelburne succeeded Rockingham. He allied with North in 1783 to overthrow Shelburne, and formed a coalition ministry. When the Lords threw out F.'s bill to reform the govt. of India, George III dismissed the ministry, and in their place installed Pitt.

F. now became leader of the opposition, although co-operating with Pitt in the impeachment of Hastings, etc. He welcomed the French Revolution, but the 'Old Whigs' deserted to the govt. in 1792, leaving F. and a small group of 'New Whigs' to oppose Pitt's war of intervention and his persecution of the reformers. On Pitt's death in 1806 a ministry was formed with F. as For. Sec., which at F.'s insistence abolished the slave trade. He opened peace negotiations with France, but d. before their completion, and was buried in Westminster Abbey.

FOX, George (1624-91). Founder of the Society of Friends. B. in Leics, he was apprenticed to a shoemaker, but in 1647 became a travelling preacher. In 1650 he was imprisoned for blasphemy at Derby, where the name of 'Quakers' was first applied to him and his followers, and altogether spent 6 years in prison. He later went on missionary journeys to the W. Indies, America, Germany, and Holland. His *Journal* appeared in 1694.

FOX, John (1516-87). English Protestant propagandist. B. at Boston, he became a canon of Salisbury in 1563. His *Book of Martyrs* (1563), by its lurid descriptions of the Marian persecutions, helped to make hatred of popery a force in English life.

FOXGLOVE. Genus of flowering plants (*Digitalis*) of the family Scrophulariaceae found in Europe, W. Asia, and the Canaries; they bear showy spikes of bell-like flowers, varying from 1½ to 5 ft. in height. The wild species produce purple to reddish flowers.

FOXHOUND. Small hound specially trained for fox-hunting. It is a combination of the old southern hound, with its keen nose, and the speedy greyhound, and has been bred in England for over 300 years.

FOX-HUNTING. As a recognized sport, this dates from the last half of the 17th cent. In the 18th cent. it was practised by noblemen and country squires, but at the beginning of the 19th cent. it developed into a national pastime. Among the most famous 'hunts' are the Quorn, Pytchley, Belvoir, and Cottesmore. There is a recognized F.-H. season from the 1st Monday in November until the following April. F.-H. was introduced to the U.S. by early settlers from England, and continues in the south and middle-eastern regions.

FOX-TERRIER. A small, smooth- or rough-haired dog, originally used to run with the hounds but now kept mainly as a house dog.

FOX-TROT. Modern ballroom dance of transatlantic origin that made its appearance just prior to the F.W.W. Its name derives from the alternately rapid and slow movements of the fox.

FOYLE. Sea-loagh on the N. coast of Ireland, traversed by the frontier of N. Ireland and the Irish Republic.

C. J. FOX. A contemporary caricature of Fox as Demosthenes satirizing his fondness for platform oratory. He was famous for his splendid debating powers and was a great rival of the younger Pitt.

happenings were 'shot' out of doors by daylight – and its admirable climate was the basis of Hollywood's outstanding success as a centre of film production, though the first film studio was Edison's at Fort Lee, N.J., U.S.A. In England, the pioneer company of Cricks and Martin set up a studio at Mitcham (where a romantic domestic drama, *For Baby's Sake*, was made in 1908).

D. W. Griffith, the great American director, revolutionized film technique and made it in essentials what it is today. He introduced, e.g., the close-up, the flash-back, the fade-out and the fade-in. His first 'epic' was *The Birth of a Nation* (1915), and his second, *Intolerance*, with magnificent and spectacular scenes in the Babylonian section that have never been surpassed, followed in 1916, at a cost (present values) second only to *Cleopatra* (1963).

At first, the players' names were considered of no importance, though one who appeared nameless in *The Great Train Robbery*, G. M. Anderson, afterwards became famous as 'Broncho Billy' in a series of cowboy films – the first 'Westerns'. The first 'movie' performer to become a name was Mary Pickford – cinemagoers found this young actress so attractive that they insisted on knowing who she was; and in the Hollywood of the 'twenties' – helped to pre-eminence by the F.W.W. which virtually stopped film production in Europe – many stars were created: Rudolph Valentino, Douglas Fairbanks Sr., Lilian Gish, Gloria Swanson, Richard Barthelmess, and Greta Garbo outstanding among dramatic actors; Charles Chaplin, Harry Langdon, Buster Keaton, Harold Lloyd among comedians.

Concern for artistry began with Griffith; but developed in Europe, particularly Russia and Germany, whose directors exploited the film's artistic possibilities, during both the silent and the sound era. It is important to remember that silent films were never silent; there was always a musical background, integral to the film, whether played by the solo pianist in the suburban cinema, or the 100-piece orchestra in the big city theatre. The arrival of talking films (*The Jazz Singer*, 1928) proved a setback only to those artists with limited vision who exploited the mere novelty value of sound. Other directors, actors and actresses survived the transition and achieved a wider perspective by the marriage of sight and sound. Among the directors who succeeded were Jean Renoir in France, Lang and Murnau in Germany, Hitchcock in Britain and America, and Pudovkin and Eisenstein in Russia. After the S.W.W. Japanese films were first seen in the western world (although the industry dates back to the silent days),

and India produced some films of merit. Ingmar Bergmann (Sweden) and David Lean (England), were noteworthy post-war directors.

The introduction of sound banished from the screen a number of the silent stars and totally changed the style of acting from something close to mime to something more realistic even than that of the stage. It also brought to the screen many theatrical stars, e.g. in England Alec Guinness, Edith Evans, Laurence Olivier, Flora Robson, Ralph Richardson, Noël Coward. Stars made by the 'talkies' have included the Marx Brothers, Clark Gable, Katherine Hepburn, German-born Marlene Dietrich (U.S.A.); Raimu, Jean Gabin, Françoise Rosay, Fernandel (France); Peter O'Toole, Robert Donat, Tom Courtenay, Peter Sellers, Elizabeth Taylor, Richard Burton (Britain).

Apart from story films, the industry produces news films; 'documentaries', depicting factual life, of which the pioneers were the American Robert Flaherty (*Nanook of the North*, 1920, *Man of Aran*, 1932–4, etc.) and the Scottish John Grierson (e.g. *Drifters*, 1929, *Night Mail*, 1936); cartoon films, which achieved their first success with Patrick Sullivan's *Felix the Cat* (1917), later surpassed in popularity by Walt Disney's Mickey Mouse. To supply the needs of TV, some film studios switched over to producing short, often serial, pictures for that medium, making a story, or a section of a serial, in a few days (much as the earliest story films were made) instead of, as in feature films for the cinema screen, 'shooting' in a day no more material than will cover 90–120 seconds of showing time.

Interest in the history and development of film technique led to the formation in Britain of the British Film Institute (1933) with which is linked the National Film Theatre (1951) where borrowed films as well as the Institute's treasures are shown to members; the Film Library of the Museum of Art in N.Y.C. caters for a similar public.

In the 1950s the third phase of the cinema came with Cinemascope, which again gave greater artistic scope to the film-maker, just as sound had done in the 1920s. To meet increasing competition from TV for the viewing public, the cinema industry has countered, partly by the creation of smaller production companies centred round stars, directors and writers; and partly in the production of long-run, wide-screen spectacles (block-busters) based on historical and biblical themes., e.g. *Cleopatra* (1963) costing £15,000,000 and the Russian version of *War and Peace* (1969) running over 6 hours. See also CENSORSHIP.

FINCH, Peter (1916–). British actor. B. in London, he was brought up in Australia, where he made his début in 1935. First appearing in London in *Daphne Laureola* in 1949, he has played in Shakespeare (Iago, Mercutio), and has achieved an international film reputation, notably in the title role of *The Trials of Oscar Wilde*.

FINCH. Name applied to birds of the family Fringillidae of the order Passeriformes. They have a short, stout, conical bill, and are mainly seed-eaters. The family is divided into 2 sub-families: the true Fs. (Fringillinae), e.g. chaffinch, goldfinch, canary, etc., and the buntings (Emberizinae).

FINE GAEAL (fin' gäl') (United Ireland). Irish political party, formed in 1933 under the leadership of W. J. Cosgrave, who resigned in 1944, and led since 1965 by his son. Since the introduction of the republic by Costello, the basic conservatism of F.G. has weakened.

FILM. D. W. Griffith's *The Birth of a Nation* (1915) combined, in its story of the American Civil War, dramatic art and the potentialities of the cine-camera. The 'still' above shows the Ku Klux Klan. Courtesy of the British Film Institute.

BULLFINCH

He succeeded his father, Leopold II, in 1792. During his reign Austria was 5 times involved in war with France, in 1792-7, 1798-1801, 1805, 1809, and 1813-14. He assumed the title of emperor of Austria in 1804, and abandoned that of Holy Roman Emperor in 1806.

FRANCIS I
Wallace Collection.

FRANCIS I (1494-1547). King of France. He succeeded his cousin Louis XII, and from 1519 European politics turned on the rivalry between him and Charles V, which led to war in 1521-9, 1536-8, and 1542-4. In 1525 F. was defeated and captured at Pavia, and released only on signing a humiliating treaty. At home F. developed absolute monarchy.

FRANCIS II (1544-60). King of France. He m. Mary, Queen of Scots, in 1558, and succeeded his father, Henry II, in 1559. He was completely under the influence of his mother, Catherine de' Medici.

FRANCISCANS, Friars Minor, or Grey Friars. R.C. order of friars founded in 1209 by Francis of Assisi (q.v.). Sub-divisions were the strict Observants, the Conventuals, who were allowed to own property corporately, and the Capuchins. The F. were noted for their preaching and ministrations amongst the poor, and included such scholars as Roger Bacon. There was also a Second Order of nuns known as Poor Clares after St. Clare (q.v.). The Third Order, or Tertiaries, consisted of lay men and women who adopted a modified form of the Franciscan régime, without abandoning business and family life.

FRANCIS FERDINAND (1863-1914). Archduke of Austria. He became heir to his uncle, the Emperor Francis Joseph, in 1889. While visiting Sarajevo on June 28, 1914, he and his wife were assassinated by Serb nationalists; Austria used the episode as an excuse for attacking Serbia, precipitating the F.W.W.

FRANCIS JOSEPH (1830-1916). Emperor of Austria-Hungary. He succeeded his uncle, Ferdinand I, on his abdication in 1848, and after the suppression of the 1848 revolution set out to estab. an absolute monarchy. But he was defeated in the Italian War of 1859 and the Prussian War of 1866, and had to grant Austria a parliamentary constitution in 1861 and Hungary equality with Austria in 1867. His only son committed suicide in 1889, and the empress was assassinated in 1897.

FRANCIS OF ASSISI (as'e'sé) (1182-1226). Italian R. Catholic saint. The son of a wealthy merchant, his life was changed by two dreams during an illness following spells of military service when he was in his early twenties. He resolved to follow literally the behests of the N.T. and to live a life of poverty and service while preaching a simple form of the Christian gospel. F. attracted many followers, and in 1209 founded an Order of Friars.

Many stories are told of his ability to charm wild animals and to influence men in all walks of life. In 1219 he went to Egypt to convert the Sultan, and

lived for a month in his camp. Returning to Italy, he resigned his leadership of the friars, and in 1224 he suffered a mystical experience during which he is said to have received the *stigmata* or 5 wounds of Christ. He d. at Assisi, and was canonized in 1228.

FRANCIS OF PAOLA (pow'lah), St. (c. 1416-1507). Founder of the R.C. Order of Minims (so called because they went further in austerity than the Franciscan 'Minors'), which received papal approval in 1474.

FRANCIS OF SALES (1567-1622). French R. Catholic saint. B. in Savoy, he became bishop of Geneva in 1602, and in 1610 he founded the Order of the Visitation, a congregation of nuns.

FRANCIUM. Element, at. no. 87, at. wt. 223. Discovered by Mlle Perey in 1939, it is a radioactive metal. See TABLE OF TRANSURANIUM ELEMENTS.

FRANCK (frónk), César Auguste (1822-90). Belgian composer. B. at Liège, he became a teacher and in 1858 organist at the church of St. Clotilde, Paris. There he remained until his death. Much of his music is religious in character and subject. Best known are the Symphonic Variations for piano and orchestra, the violin sonata, and the oratorios *Redemption*, and *Les Béatitudes*, a choral masterpiece.

FRANCO BAHAMONDE, Francisco (1892-). Spanish dictator. B. in Galicia, he entered the army in 1910, served in Morocco, and was appointed Chief of Staff in 1935 and Gov. of the Canary Islands in 1936. Dismissed from this post by the Popular Front govt., he plotted an uprising with German and Italian assistance, and on the outbreak of civil war organized the invasion of Spain by Moorish troops and foreign legionaries. After the death of General Sanjurjo, he took command of the insurgents (Nationalists), proclaiming himself *Caudillo* (leader) of Spain, and the defeat of the Republic with the surrender of Madrid in 1939 brought all Spain under his govt. On the outbreak of the S.W.W., in spite of Spain's official attitude of 'Strictest neutrality', his pro-axis sympathies led him to send aid, later withdrawn, to the German side. At home, he curbed the growing power of the *Falange*, and in 1942 reinstated the *Cortes*, which in 1947 passed an act by which Spain became a realm, with F. as head of state for life and entitled to choose his successor. In spite of his attempts in the early 1960s to stabilize the economy and introduce some labour reforms, there was growing criticism of his régime even from its formerly firm supporters—the Church, Army and Civil Service.

FRANCO-PRUSSIAN WAR, 1870-1. See FRENCH HISTORY.

FRANK, Anne (1929-45). German diarist. B. at Frankfurt-am-Main, she fled to Holland with her family in 1933 to escape Nazi anti-Semitism. Under the occupation they remained in a sealed-off room in Amsterdam 1942-4, when betrayal resulted in Anne's death in Belsen concentration camp. Her diary during her period in hiding was pub. in 1947, and as a martyr to the Nazi régime she has been commemorated in the names of villages and schools for refugee children.

FRANK, Bruno (1886-1945). German author. B. at Stuttgart of Jewish parentage, he settled in Munich and emigrated to U.S.A. when the Nazis came to power. He made a name with historical novels such as *Tage des Königs* (1924), *Trenck* (1926), etc.

FRANK, Leonhard (1882-1961). German novelist.

Courtesy of the Spanish Embassy.

FRANCIS OF ASSISI

ground before Verdun, and took the Chemin des Dames.

The war on the Italian front went on the whole in favour of the Italians, until in Oct. 1917 the Germans and Austrians attacked at Caporetto. The Italian line collapsed, and was pushed back beyond the Piave with very heavy losses. British and French troops were sent to the Italian front, and an Allied Council was set up to secure a unified strategy.

In Mesopotamia Gen. Maude captured Kut in Feb. 1917 and Baghdad in March. An advance from Egypt into Palestine, halted at Gaza in April, was resumed under Gen. Allenby in Oct., and captured Jerusalem in Dec.

The German submarine campaign reached its height in April 1917, when 196 British ships were lost, but the convoy system then put into operation caused losses to diminish steadily. The submarine was also combated by extensive mine-laying, while the naval raids on Zeebrugge and Ostend in April–May 1918 blocked 2 dangerous bases.

On the western front the Germans began what was intended to be the final offensive on March 21, 1918; by June the Allies had lost all they had gained since 1915, and the Germans had again reached the Marne. They had nowhere succeeded, however, in breaking the Allied line, and the Allies were now being reinforced by U.S. troops, who first saw fire in June. The danger forced the Allies to appoint a supreme commander, Gen. Foch, in April.

Greece had declared war in June 1917, when the Allies deposed the pro-German Constantine. In Sept. 1918 the Allies attacked Bulgaria, which quickly made peace, and in Oct. they expelled the Austrians from Serbia. An Austrian offensive on the Piave in June failed, and in Oct. the last Allied offensive on the Italian front began. On Nov. 3 Austria signed an armistice. In Palestine Allenby captured almost the entire Turkish army at Megiddo in Sept.; Syria was overrun, and Damascus and Aleppo surrendered. The Turkish army on the Tigris also surrendered, and Constantinople itself was threatened. Turkey signed an armistice on Oct. 30.

To a German offensive at Rheims on July 15 Foch replied on July 18 by an attack on the Marne, which by Aug. 3 had reached Soissons. On Aug. 8 a British attack at Amiens drove the Germans back 7 m. At the beginning of Sept. they were back behind the Hindenburg Line, which by the end of the month the British had broken. The Americans went into action as an independent army on the French right. During Oct. the Belgian coastline was occupied, the British reached the Scheldt, the French advanced over the Aisne, and the Americans down the Meuse.

Inside Germany revolutionary feeling was growing, and when on Oct. 29 the fleet at Kiel was ordered to prepare for sea, mutiny followed. Within a few days the revolution spread to all the main cities. Negotiations for an armistice began on Nov. 6; the Kaiser abdicated on Nov. 9, and on Nov. 11 the armistice was signed in the forest of Compiègne. Peace with Germany was signed at Versailles on June 28, 1919, and with Austria, Bulgaria, and Hungary respectively at St. Germain (Sept. 10), Neuilly (Nov. 27), and Trianon (June 4, 1920). A final settlement with Turkey was not reached until the Treaty of Lausanne was signed in 1923.

The Versailles Treaty was not signed by China, and on Wilson's submitting it to the U.S. senate it was rejected as insufficiently safeguarding American sovereignty in the League of Nations: instead a joint congressional resolution declaring peace with Germany and Austria was signed July 2, 1921 by Pres. Harding, and ratified by the senate Oct. 18. Strictly speaking, the U.S.A. was an 'associated' rather than an 'allied' power.

FIRTH, Raymond William (1901–). British

anthropologist, prof. at London univ. since 1944, he has conducted social research surveys in Africa, Malaya, New Guinea, and Polynesia, and pub. many anthropological studies, incl. *Elements of Social Organization* (1951), and *Economics of the N.Z. Maori* (1959).

FISCHER (fī'sher), Emil (1852–1919). German chemist. Working with Julius Tufel, he produced synthetic sugars and from these the various enzymes. He was prof. of chemistry at Berlin from 1892, and a pioneer biochemist.

FISCHER, Hans (1881–1945). German chemist. Prof. at the Technische Hochschule at Munich, he received the Nobel prize in chemistry in 1930 for his discovery of the red colouring matter in blood.

FISCHER-DIESKAU (fisher-dē'skow), Dietrich (1925–). German singer. A baritone, he is a member of the Berlin and Vienna Operas, and has sung in concerts and festivals all over Europe. He is particularly famous for his interpretation of Schubertian songs.

FISH. Name applied to 3 classes of aquatic vertebrate animals. The body is adapted for freedom of movement in water. In most families the skeleton is composed of bone, but in the lamprey, shark and skate families it is of cartilage. The fins vary in

CLASSIFICATION OF FISHES

Class Marsipobranchii

Order, Hyperoartia; family: Petromysnidae; including lampreys.

Order, Hyperotreta; family: Myxinidae, including hag-fish, borer.

Class Selachii

SUB-CLASS, Euselachii

Order, Pseudotremata; 7 families, including the sharks, dog-fish, monk-fish or angel-fish.

Order, Hypotremata; 5 families including the rays, torpedo, skate, devil-fish.

SUB-CLASS, Holocephali; family Chimaeridae; Chimaera, rabbit-fish.

Class Pisces

SUB-CLASS, Palaeopterygii

Order, Chondrostei; family Acipenseridae; sturgeon.

SUB-CLASS, Neopterygii

Order, Isospondyli; 9 families, including the herring, sprat, shad, pilchard, sardine, anchovy, salmon, trout, char, grayling.

Order, Haplomi; family Esocidae; pike.

Order, Ostariophysi; 2 families including car, goldfish, barbel, gudgeon, tench, minnow, chub, dace, roach, bream.

Order, Apodes; 6 families including eels, conger.

Order, Syngnathii; 3 families including skipper, gar-fish, flying-fish.

Order, Solenichthyes; 2 families including snipe-fish, pipe-fish, sea-horse.

Order, Anacanthini; 3 families including hake, cod, haddock, whiting, pollack, burbot.

Order, Zeomorphi; 2 families including John Dory, boar-fish.

Order, Percomorphi; 31 families including bass, perch, horse mackerel, bream, red mullet, wrasse, sand eels, wevers, mackerel, tunny, sword-fish, goby, dragonet, cat-fish, sticklebacks.

Order, Heterosomata; 3 families including turbot, brill, halibut, dabs, plaice, soles.

Order, Plectognathi; 3 families including trigger-fish, globe-fish or puffer, sun-fish.

Order, Pediculati; family: Lophiidae; angler, fishing-frog.

SUB-CLASS, Crossopterygii

Order, Actinistia; family: Coelacanthidae; coelacanth.

Order, Dipneusti; 2 families of lung-fishes.

anthropologist. B. at Glasgow, he was ed. at the univ. and at Cambridge, and in 1890 won acclaim with *The Golden Bough*. This study of primitive religion and sociology on a comparative basis was a pioneer work, still valuable although F.'s attitude was romantic rather than scientific.

FRÉCHETTE (frehshet'), Louis Honoré (1839–1908). French-Canadian poet. B. in Quebec, he became a barrister, but owing to his advocacy of Canadian union with U.S.A. was driven into exile there until 1871. He sat in the Canadian parliament 1874–8. His vols. of poetry *Les fleurs boréales* and *Les oiseaux de neige* were crowned by the French academy in 1880.

FREDERICK I (c. 1123–90). Holy Roman Emperor, known as Barbarossa (red-beard). Originally duke of Swabia, he was elected emperor in 1152, and was engaged in a struggle with the papacy 1159–77, which ended in his submission; the Lombard cities, headed by Milan, took advantage of this to establish their independence of imperial control. F. joined the 3rd Crusade, and was drowned in Asia Minor.

FREDERICK II (1194–1250). Holy Roman Emperor, called 'the Wonder of the World'. Son of Henry VI, he was elected emperor in 1212. He led a crusade in 1228–9 which recovered Jerusalem by treaty without fighting. At the same time he quarrelled with the Pope, and a feud began which lasted at intervals till the end of his reign. F., who was a complete sceptic in religion, was perhaps the most cultured man of his age.

FREDERICK III (1831–88). King of Prussia and German Emperor. The son of William I, he m. Princess Victoria, eldest dau. of Queen Victoria, in 1858. In outlook he was a liberal, and frequently opposed Bismarck's policy. He became emperor in 1888, but d. of cancer 3 months later.

FREDERICK VIII (1843–1912). King of Denmark. He served in the war with Prussia in 1864, and shared in the work of government until he succeeded his father, Christian IX, in 1906. He was the brother of Queen Alexandra, and the father of Christian X of Denmark and Haakon VII of Norway.

FREDERICK IX (1899–). King of Denmark. In 1935 he m. Princess Ingrid of Sweden, and succeeded his father, Christian X, in 1947. His eldest dau. Princess Margrethe, heiress to the throne, m. 1967 Fr. diplomat Count Henri de Laborde de Montpezat who took the title H.R.H. Prince Hendrik.

FREDERICK I (1657–1713). King of Prussia. He became elector of Brandenburg in 1688, and assumed the title of king of Prussia in 1701.

FREDERICK II, called the Great (1712–86). King

of Prussia. He received a Spartan education from his father, Frederick William I, and in 1730 was threatened with death for attempting to run away. Soon after his accession in 1740 he attacked Austria, and by the peace of 1745 secured Silesia. The struggle was renewed in 1756–63, and in spite of assistance from Britain F. had a hard task to hold his own against the Austrians and their Russian allies; the skill with which he did so proved him to be one of the great soldiers of history. At home he encouraged industry and agriculture, reformed the judicial system, fostered education, and established religious toleration.

FREDERICK WILLIAM. Name of 4 kings of Prussia. Frederick William I (1688–1740), who succeeded in 1713, largely founded the Prussian army. Frederick William II (1744–97), king from 1786, waged war on the French Revolution. Frederick William III (1770–1840), who succeeded him in 1797, warred with France in 1806 and 1813–15. He permitted the abolition of serfdom and other reforms, but in his later years persecuted the Liberals. Frederick William IV (1795–1861), king from 1840, was a firm believer in the divine right of kings; the Prussian revolution of 1848 occurred during his reign.

FREDERICK WILLIAM (1620–88). Elector of Brandenburg, called 'the Great Elector'. He succeeded to Brandenburg-Prussia in 1640, and by successful wars with Sweden and Poland made it the second state in Germany.

FREDERICK WILLIAM (1882–1951). Last Crown Prince of Germany, eldest son of Wilhelm II. During the F.W.W. he commanded a group of armies on the western front. In 1918 'Little Willie', as he was called in England, retired into private life.

FREDERICTON. Canadian city, cap. of New Brunswick prov., on the r. St. John. The University of New Brunswick, founded 1785, is at F., which is a lumbering and mining centre. Pop. (1966) 22,460.

FREDRIKSSTAD. Norwegian port at the mouth of the r. Glommen, dating from 1570, a centre of the timber trade with shipyards. Pop. (1967) 30,006.

FREE CHURCHES. Those Protestant denominations in England and Wales, that, unlike the C. of E., are not established by the State. The chief are the Baptist Union, the Congregational Union, the Methodist Church, and the Presbyterian Church. In 1940 these joined for common action in the Free Church Federal Council, representing some 7 million Free Churchmen.

FREE CHURCH OF SCOTLAND. Name given to the body of Scottish Presbyterians who seceded from the Established Church of Scotland in 1843. In 1900 all but a small section that retains the old name combined with the United Presbyterian Church to form the United Free Church, which reunited with the Church of Scotland in 1929.

FREEDMAN, Barnett (1901–58). British artist. He produced posters, book illustrations and war studies as an official Admiralty artist in the S.W.W., but is chiefly remembered for his revival of lithography.

FREEDOM (of a city, etc.). In England the right of participating in the privileges of a city or borough. Persons possessing such are known as freemen. Birth, apprenticeship, and marriage are qualifications and a borough may admit distinguished persons as honorary freemen. Before 1835 borough freedom was regulated by the borough charter, and freemen enjoyed the parliamentary vote, and a share in the income from borough property.

FREEDOM, Presidential Medal of. Highest civilian honour conferred in the U.S.A. in peacetime. Instituted by Kennedy in 1963, it is awarded to those 'who contribute significantly to the quality of American life' and a list of recipients is pub. each Independence Day. It replaced the Medal of Freedom, instituted 1945, which had been conferred on no regular basis; only 24 awards had been made.

FREMANTLE. Most highly mechanized of Australia's ports, Fremantle was further redeveloping her harbour facilities in the 1960s, and rapidly expanding her population.

Courtesy of the Agent General for Western Australia.

were originally 5 players, who had to make 5 points to win. In Britain the game is practically confined to public schools and colleges, and there are 3 main forms, viz. Eton F., Rugby F., and Winchester F.

FIVE-YEAR PLAN. An overall economic plan for an extended period with specific targets. From 1928 the basis of economic planning in the U.S.S.R., aimed particularly at developing heavy and light industry in a primarily agricultural country, the idea has since been adopted by other Communist countries, notably China, and is generally used as an incentive for increasing production, agricultural as well as industrial – not always successfully. The idea also became popular in western countries. The Russian 1966–70 plan aimed at 25% increase in agriculture and 50% in industry; this was shelved 1967 and even the one-year plans then adopted were reduced 1968.

FLAG. Plant of the *Iris* genus, which grows in damp places and in marshes in Britain and throughout Europe. It has a thick rootstock, from which rise stiff, blade-like monocotyledonous leaves, and stems about 2 ft. high. The flowers are large, and usually yellow. Cultivated varieties include the purple Garden F.

FLAGS in bloom.

FLAG. The British National F., the so-called 'Union Jack', unites the crosses of St. George, St. Andrew, and St. Patrick, representing England, Scotland, and Ireland; the Merchant F. places the National F. in the canton of a red F.; similarly placed on a large St. George's Cross it becomes the distinguishing F. of the Royal Navy. The Stars and Stripes, 'Old Glory', is the F. of the United States; the 50 stars represent the 50 States now in the Union, the 13 stripes the 13 original States. The F. of Russia places the crossed hammer and sickle, representing the workers of town and country, on the red F., the emblem of revolution. The Fs. of the Scandinavian countries bear crosses; the Danish 'Dannebrog' (strength of Denmark) is the oldest national F., used for 700 years. The Red Cross originated in Switzerland, and its emblem is the Swiss F. with its colours reversed.

A flag is flown upside-down as a signal of distress; is dipped as a salute; and when flown a little below the masthead is a sign of mourning. The 'Blue Peter', blue with a white centre, announces that a vessel is about to sail; a F. half red and half white that a pilot is on board. Many public bodies, as well as shipping lines and yacht clubs, have their own distinguishing Fs.

The British Royal Standard combines the emblems of England, Scotland, and Ireland; the United States Presidential Standard displays the American Eagle, surrounded by 50 stars.

U.N. FLAG

FLAGELLANTS (flajel'-ants). Religious fanatics who either allow others to scourge them as a means of discipline and penance, or who scourge themselves. Such flagellation is known in many religions from ancient times, and there were notable outbreaks of this type of extremist devotion in Christian Europe

in the 11th–16th cents.: it is still practised to a minor extent in some R.C. countries.

FLAGELLATA (flajel'la). Order of microscopic animals in the sub-kingdom Protozoa. The name is derived from the presence in each individual of one or more flagella – whip-like processes – usually at the front end of the body, which by actively lashing the water drive the protozoan forwards.

FLAGSTAD, Kirsten (1895–1962). Norwegian soprano singer. She was without rival in Wagnerian opera.

FLAHERTY, Robert (1884–1951). American film director. B. in Michigan. He exerted great influence by his pioneer documentary of Eskimo life *Nanook of the North* (1920); later were *Man of Aran* and *Elephant Boy*.

FLAMBOYANT. In architecture, term applied to late Gothic style of French architecture, contemporary with the Perpendicular style in England. It is characterized by flame-like decorative work in windows, balustrades, and other projecting features.

FLAMEN (flā'men). The sacrificial priest in ancient Rome. The office was held for life, but was terminated by the death of the F.'s wife (who assisted him at ceremonies) or some breach of demeanour. At first there were 3 Fs., but another 12 were later added.

FLAMINGO (*Phoenicopterus*). A bird of the order Ciconiiformes. All members of the family (Phoenicopteridae) have very long legs and down-bent bills, specially adapted for sifting mud, from which they obtain their food of worms and molluscs, etc. They are able to swim and to fly, but usually confine themselves to wading. They live in large colonies, the nest being built of mud in shallow water, and are found in great numbers in the Carmargues, in S. America, etc.

The common F. (*P. roseus*) is white tinted with pink; the wings, as in all species, are bright red bordered with black.

FLAMMARION (flahmahre-on'). Nicolas Camille (1842–1925). French astronomer. B. at Montargis. In 1858, he joined the staff of the Paris observatory, and in 1882 estab. his own observatory at Juvisy. He wrote *L'Astronomie populaire* (1879) and many other popular expositions.

FLAMSTEED, John (1646–1719). First Astronomer Royal of England. B. near Derby, he was appointed astronomer to Charles II in 1675, and began systematic observations at Greenwich in the following year. From 1684 he was rector of Burstow in Surrey.

FLANAGAN, Bud. Stage-name of the British comedian Robert Winthrop (1896–1968). Leader of the 'Crazy Gang' (1931–62), he also played in variety all over the world, and with his partner Chesney Allen popularized such songs as 'Underneath the Arch'.

FLANDERS. A region of the Low Countries which in the 8th and 9th cents. extended from Calais to the Scheldt, and is now covered by the Belgian provinces of E. and W. Flanders, the French dept. of Nord, and part of the Dutch prov. of Zeeland.

W. Flanders lies along the coast of Belgium; cap., Bruges. Area 1,248 sq. m.; pop. (1966) 1,036,670. *E. Flanders* adjoins W.F. on the E.; cap., Ghent. Area 1,147 sq. m.; pop. (1966) 1,301,073.

FLANDRIN (flondra'n), Jean Hippolyte (1809–64). French artist. B. at Lyons, he painted battle-pieces and then, under the influence of Ingres, produced

FRENCH ART. Manet's last important work 'A Bar at the Folies-Bergère' dates from 1882. A performance is in progress and the mirror behind the barmaid reflects her back, her top-hatted customer and the audience.

Courtesy of Courtauld Institute Galleries, London.

FRENCH ART. Prior to the 15th cent. the artistic genius of the French was best expressed in architecture and sculpture. The miniatures of Jean Fouquet and the Limbours' *Très riches heures* stand out in the 15th cent. The 16th cent. artists were influenced by the Italians, but the miniature tradition was kept up by the Clouets and Corneille de Lyons. A great sculptor of the age was Jean Goujon. The most famous names of the 17th cent. include Poussin, Claude Lorrain, Philippe de Champaigne, Blanchard, and Bourdon.

In the 18th cent. F.A. became dominant throughout Europe. The great masters were Watteau, Chardin, Fragonard, Lancret, Boucher, and the sculptor Houdon. The neo-Classical school was founded by David. He was followed by Ingres. Delacroix was the leader of the Romantic movement. Gérault excelled as a history and animal painter.

The 19th cent. produced 2 famous schools of painting—the *Barbizon* and the *Impressionist*. The landscape painters of the Barbizon school incl. Millet, Corot, Daubigny, and Theodore Rousseau; the most famous Impressionists were Monet, Manet, Pissarro, Sisley, Degas, and Renoir. More subjective painters were Toulouse-Lautrec and Van Gogh, and it was the latter, with Cézanne and Gauguin, whose fresh approach to the technique of painting prepared the way for many 20th cent. developments. In the 1850s the graphic artists Daumier and Guys did their best work; and other outstanding artists were Courbet, the Douanier Rousseau, Bonnard, the *Pointillist* Seurat, and the sculptor Rodin.

The 20th cent. saw Paris as the home of 2 schools of painting in particular: Fauvism, showing the influence of Gauguin with his emphasis on pure colour, e.g. Matisse, Derain, Vlaminck, Dufy, and Friesz; and Cubism, deriving from Cézanne, and with exponents as diverse as Matisse and Derain, Picasso, Braque, and Juan Gris. Other notable artists are Chagall, the Dadaist Duchamp, the Surrealist Max Ernst, Rouault, Soutine, Utrillo, Modigliani, and Maillol the sculptor.

FRENCH COMMUNITY. Title taken by France and those overseas territories which adhered to it in the referendum held in 1958 on the proposed new constitution of the 5th Republic. See TABLE.

FRENCH GUIANA (gē-ah nah). French overseas dept. in the N. of S. America, adjoining Surinam. Only c. 12 sq. m. is under cultivation, but the forests are rich in timber, gold is mined, and there is commercial shrimp fishing. The capital is Cayenne. Off the coast is Devil's Island (q.v.). Area 34,000 sq. m.; pop. (1961) 33,698 (incl. Inini).

FRENCH GUIANA. See GUIANA.

FRENCH HISTORY. Before its conquest by Caesar (57–51 B.C.), France, then called Gaul, was occupied by independent tribes, mostly Celtic. During the 5 cents. of Roman rule they accepted Roman civilization and the Latin language. As the empire declined in the 5th cent. Germanic tribes overran the country, until a Frankish chief, Clovis (481–511), brought the other tribes under his rule and accepted Christianity. Under his successors, the Merovingians, the country sank into anarchy, until unity was restored by Pepin (741–68), founder of the Carolingian dynasty. Charlemagne (768–814) made France the centre of a great empire, but under his incompetent successors the great nobles became semi-independent, and the Norsemen invaded France and settled in Normandy. The first kings of the house

FRENCH HISTORY. The return of Louis XVI and his family to Paris in October 1789.

1898, it brought about a cultural and political revival of F. The F. movement was promoted for political reasons by the Germans in both world wars.

The great figures of F. literature are the poet Guido Gezelle, and the novelists Cyriel Buysse, Stijn Streuvels, and Felix Timmermanns.

FLEMISH ART. The style of painting developed in Flanders (Belgium) from the 14th cent. and distinguished by colourful realism, keen observation, and masterful technique. Hubert and Jan van Eyck made Bruges the first centre of F.A.; other schools arose in Tournai, Ghent, and Louvain. The great names of

FLIGHT. Orville Wright lies face downwards to pilot the Wright biplane making the first powered, sustained and controlled flight at Kittyhawk, N. Carolina, on Dec. 17, 1903: he covered 120 ft. in 12 sec. To the right, on foot, is Wilbur Wright.

that period were Roger van der Weyden, Dierick Bouts, Hugo van der Goes, Hans Memlinc, and Gheerardt David. In the 16th cent. Italian influences made themselves felt, and the centre shifted to Antwerp, where Quinten Matsys worked. Whilst Jerome Bosch painted creatures of his own wild imagination, the pictures of P. Brueghel are faithful reflections of F. life. The Italian influence was strong

FLIGHT. The moment of release: U.S.A.F. rocket aircraft X-15, leaving the 'mother' plane, was piloted by Robert M. White at 4,105 m.p.h. on June 27, 1962.

cent., it has shipyards, breweries, etc., and is concerned with the Greenland whale fisheries. Pop. (1950) 102,045.

FLETCHER, Sir Banister Flight (1866–1953). British architect. The son of the architect Banister F. (1833–99), he was pres. of the R.I.B.A. 1929–31, and wrote a standard *History of Architecture on the Comparative Method*.

FLETCHER, Hanslip (1874–1955). British artist. He was noted for his architectural drawings, especially in *Changing London* (1943) and *Bombed London* (1948).

FLETCHER, John (1579–1625). English dramatist. B. at Rye, Sussex, he was left an orphan of restricted means when his father d. in disgrace with Queen Elizabeth. Of the 50 plays once attributed to his partnership with Beaumont (q.v.), only 7 are now generally recognized: the remainder are divided between F. and collaborators such as Massinger. Among those credited to F. alone are the pastoral drama *The Faithful Shepherdess* (1610), the tragedy *Bonduca* (c. 1614), and *Rule a Wife and Have a Wife* (c. 1624).

FLIGHT. The Hawker P-1127 strike aircraft was the first of the vertical take-off type to be designed for operational service and has been flying successfully since 1961.

Courtesy of Bristol Siddeley.

FLEUR-DE-LIS (flör de lê; Fr. flower of the lily). A heraldic device which represents a lily, borne on coats of arms since the 12th cent., and adopted by the Bourbons of France.

FLIGHT, History of. The aeroplane is a development of the model glider, first flown by Sir George Cayley (1773–1857) in 1804, but not until the invention of the petrol engine did powered flight become feasible with the building of the Wright brothers' biplane in 1903. In Europe France led in aeroplane design (Voisin brothers) and Louis Blériot brought aviation to Britain by crossing the Channel in 1909. In that year A. V. Roe flew a motor-cycle-engined triplane and in 1911 Robert Blackburn produced two all-metal (steel) monoplanes and wireless telegraphy was demonstrated. In 1912 Sopwith and Bristol both built small biplanes and the first big twin-engined aeroplane was the Handley Page bomber in 1917.

The stimulus of the F.W.W. and rapid development of the petrol engine led to increased power (from 100 to 800 h.p. between 1917 and 1930) and speeds rose from 100 to 200 m.p.h. Streamlining then became imperative: non-essential excrescences were retracted into the body and wings and exposed parts were shaped to reduce drag, and eventually the biplane was replaced by the internally braced monoplane structure, e.g. the Hawker Hurricane and Supermarine Spitfire fighters and Avro Lancaster and Boeing Flying Fortress bombers of the S.W.W.

On May 15, 1941, the first British jet aircraft, the Gloster E. 28/39, flew from Cranwell, Lincs, powered by a turbo-jet i.e. engine invented by Sir Frank Whittle; the Heinkel He 280 twin-jet prototype also flew about this time. The rapid development of this new power-plant led to enormous increases in power

early *chansons de geste* which were superseded by the Arthurian romances (seen at their finest in the work of Chrétien de Troyes in the 12th cent.), and by the classical themes of Alexander, Troy, and Thebes. Other aspects of F. medieval L. are represented by the charming *Aucassin et Nicolette*, the allegorical *Roman de la Rose* of Guillaume de Lorris (c. 1230) and Jean de Meung (c. 1275), and the satiric *Roman de Renart*, the historians Villehardouin, Joinville, Froissart, and Comines, and the 1st great F. poet, François Villon.

Renaissance to the 18th cent. Greatest poet of the Renaissance is Ronsard, leader of the *Pléiade*, set between Marot who opens the 16th cent. and Régnier

MOLIÈRE

at its close. In prose the period produced the broad genius of Rabelais and the essayist Montaigne. In the 17th cent. came the triumph of form with the great classical dramatists Corneille, Racine, and Molière, and the graceful brilliance of La Fontaine, and the poet-critic Boileau. Masters of prose in the same period include the philosophers Pascal and Descartes; the preacher Bossuet; the critics La Bruyère, Fénelon and Malebranche; and La Rochefoucauld, Cardinal de Retz,

Mme de Sévigné, and Le Sage.

The 18th cent. was the era of prose, with Montesquieu, Voltaire, Rousseau; the scientist Buffon; the encyclopaedist Diderot; Vauvenargues; the novelists Prévost and Marivaux; and the memoir writer Saint-Simon, whose observations greatly illuminated the age.

The 19th and 20th cents. Poetry was reborn with the 'Romantics' Lamartine, Hugo, Vigny, Musset, Leconte de Lisle, and Gautier; novelists of the same school were George Sand, Stendhal and Dumas père, while criticism is represented by Sainte-Beuve, and history by Thierry, Michelet, and Taine. The realist novelist Balzac was followed by the school of Naturalism, whose representatives were Flaubert, Zola, the Goncourt brothers, Alphonse Daudet, Maupassant, and Huysmans. 19th cent. dramatists incl. Hugo, Musset, Dumas fils, and Mirbeau. Symbolism, a movement of experiment and revolt against classical verse and the materialist attitude, with the philosopher Bergson as one of its main exponents, found its first expression in the work of Gérard de Nerval, who was later followed by Baudelaire, Verlaine, Mallarmé, Rimbaud, Corbière, and the prose writer Villiers de l'Isle Adam; later writers in the same tradition were Henri de Régnier and Laforgue.

In the late 19th and early 20th cents. drama and poetry revived with Valéry, Claudel, and Paul Fort, who advocated 'pure poetry'; other writers were the novelists Gide and Proust, and the critics Thibaudet (1874-1936) and later St. John Perse, also a well-known poet. The Surrealist movement, which developed from 'pure poetry' through the work of Éluard and Apollinaire, influenced writers as diverse as Giraudoux, Louis Aragon, and Cocteau. The in-

NATHALIE SARRAUTE

evitable literary reaction against the Symbolists incl. Charles Péguy, Rostand, Mme de Noailles, and Romain Rolland. 20th cent. novelists in the Naturalist tradition were Henri Barbusse, Jules Romains, Julian Green, François Mauriac, Francis Carco, and Georges Duhamel. Other prose writers are Maurois, Malraux, Montherlant, Anatole France, Saint-Exupéry, Alain-Fournier, Pierre Hamp, and J. R. Bloch, while the theatre flourished with plays by J. J. Bernard, Anouilh, Beckett, and Ionesco. The S.W.W. had a profound effect on French writing, and distinguished post-war writers incl. the Existentialist Sartre, and Camus, 'Vercors', Simone de Beauvoir, Alain Robbe-Grillet, Romain Gary, Nathalie Sarraute and Marguerite Duras.

FRENCH REVOLUTION. The revolution of 1789-99 which abolished feudalism and absolute monarchy in France. It began with the meeting in 1789 of the States General, later called the National Assembly. An attempt at counter-revolution was frustrated by the storming of the Bastille. The Assembly abolished feudal privileges and drew up a constitution which in 1791 was accepted by Louis XVI. Threats of foreign intervention led to war with Austria and Prussia in 1792. The monarchy was overthrown, the National Convention declared France a republic, and Louis was executed for treason. The democratic party, or Jacobins, estab. the dictatorship of the Committee of Public Safety, headed by Robespierre, and crushed opposition through the Revolutionary Tribunal. In 1794 the right overthrew Robespierre, and set up the Directory, which maintained a middle course between royalism and Jacobinism until Napoleon seized power in 1799.

FRENCH SOMALILAND. See SOMALILAND, FR.

FRENCH SUDAN. See MALI.

FRENCH WEST AFRICA. Former grouping of French colonies (Senegal, Guinea, Ivory Coast, Upper Volta, Dahomey, Sudan, Mauritania, Niger) administered by a governor-general from Dakar. It broke up following the birth of the Fifth Republic in 1958.

FRENEAU (frenō'), Philip Morin (1752-1832). American poet. Earliest outstanding poet of American birth, he was b. in N.Y. His *A Political Litany* (1775) was a mock prayer for deliverance from British tyranny, and he was twice captured by the British in voyages to and from the W. Indies, where some of his best poems were written.

FREQUENCY. The rate of repetition of a cycle; the reciprocal of the period. The unit of F. is the cycle per second (c/s), but in Continental literature it is known as the hertz (symbol Hz). Audio F. is F. within the range audible to the normal human ear; ultrasonic F. is above the audio F. range, and radio F. is any F. at which electromagnetic radiation is used for telecommunications. Radio Fs. are commonly given in thousands of cycles (kilocycles) per second, millions of cycles (megacycles) per second, or thousands of millions of cycles (kilomegacycles) per second. The standard F. for a.c. generation in the U.K. is 50 c/s.

See ELECTROMAGNETIC WAVES.

FRERE (frēr), John (1740-1807). British archaeologist. High Sheriff of Suffolk and M.P. for Norwich, he discovered at Hoxne, Suffolk, deposits of palaeolithic tools in 1790. His deduction that these must, from their situation, ante-date the conventional biblical time-scale was very much ahead of his era.

FRESCO (fres'kō). Term applied to a process of painting on plaster walls before the plaster is dry; also applied to the picture or design produced in this way. Some of the earliest frescoes are on the walls of the palace of Knossos in Crete.

FRESNAY, Pierre. Stage-name of French actor Pierre Laudenbach (1897-). His films incl. *La Dame aux Camélias*, *Monsieur Vincent*, *La Grande Illusion*, and *Les Aristocrates*.

FLOREY, Howard Walter, baron (1898–1968). British pathologist. B. in Australia, he was prof. of pathology at Oxford 1935–62. He began work on penicillin in 1938, and in 1945 won with Sir Alexander Fleming (q.v.) the Nobel prize for medicine. He was awarded a life peerage and O.M. 1965.

FLORIDA. The most southern state of U.S.A.; mainly a large peninsula jutting into the Atlantic which it separates from the Gulf of Mexico. For the most part rolling countryside, suitable for agriculture, it has many lakes in the central region; in the S. a great expanse of standing water, the Everglades, is being drained for agriculture; c. 2,000 sq. m. are preserved as a National Park. Rivers are of little importance, but swamps abound. Miami is the largest city; other towns are Tallahassee (the capital), Jacksonville and Tampa. Oranges, grapefruit, watermelon and vegetables are produced in great quantity; fish and shellfish are important; growing industries incl. food processing; chemicals and paper; and minerals incl. phosphate and rare earth metals. The U.S.A.F. Missile Test Centre is at Cape Kennedy. Area 58,560 sq. m. (incl. 4,298 sq. m. of water); pop. (1960) 4,890,001.

F. was named after the day of its discovery by Juan Ponce de Leon who landed there on Easter Day (Span. *Pascua florida*) in 1513. It became a state of the Union in 1845.

FLORIN. Coin, common to many European lands, first minted in Florence in 1252. The obverse bore the image of a lily, which led to the coin being called *fiorino* (from *fiore*, flower). This F. was a gold coin. The British silver F. of 2s. was first struck 1849.

FLORIO, Giovanni (c. 1553–1625). English translator. B. in London, the son of Italian refugees, he taught French and Italian at Oxford, but is best known for his translation of Montaigne (1603).

FLOTOW (floh'toh), Friedrich, Freiherr von (1812–83). German composer. Of his 18 operas only *Martha* (1847) is remembered.

FLOTSAM AND JETSAM. F.: goods found floating on the sea after a shipwreck. J.: goods deliberately sunk in the sea to lighten a vessel which is wrecked. Under British law F. and J. belong to the Crown, unless the true owner is known or a franchise has been granted to such goods.

FLOUNDER (*Pleuronectes flesus*). A species of salt- and freshwater flat-fish, whose skin varies in colour from black to grey, the underside being white. Both eyes are on the same side of the body. It is related to the dab and plaice and is used as a food.

FLOWER, Robin Ernest William (1881–1946). Celtic scholar and poet. B. in Yorks, he joined the staff of the British Museum in 1906 and was deputy keeper of MSS. 1929–44. His works include *Ireland and Medieval Europe* (1927), translations of Irish poetry and prose, and several vols. of original verse.

FLOWER. The blossom of a plant. The F. is characteristic of the Phanerogams (flowering plants), its function being the production of reproductive

organs and the formation of seed. The essential parts of the F. are the androecium, which includes the anthers (containing the pollen) or male nucleus, and the filaments on which they are borne; and the gynaecium, which consists of the ovary (containing ovules) or female nuclei and the style, culminating in the stigma.

FLUKE. Parasitic flat worm (*Fasciola hepatica*), belonging to the order Trematoda, that causes rot and dropsy of the liver, in sheep, cattle, horses, dogs, and man. Only the adult encysted stage of its life history is passed within the body, after ingestion by the host. The cyst dissolves in the stomach and the young fluke passes to the liver.

FLUORESCENCE. The process of emission of electromagnetic radiation resulting from the absorption of certain types of energy, in which case it is a luminescence lasting a minute fraction of a second after the exciting energy is removed. F. is also used to mean the radiation emitted as well as the emission process, and in X-ray F. it is the characteristic X-rays emitted when X-rays of a higher frequency are absorbed. This is used in analysis. F. is made use of in strip and other lighting, and was developed rapidly during the S.W.W. because of its greater efficiency of illumination, compared with the incandescent lamp. Other important applications are in fluorescent screens for television, cathode-ray tubes, etc.

FLUORIDES. Salts of hydrofluoric acid. F. occur naturally in all water to a differing extent. Pilot experiments in Great Britain, America and elsewhere have indicated that a concentration of fluoride of 1 part per million in water retards the decay of teeth in children by more than 50 per cent. If the natural concentration of F. is less than 1 part per million, the recommended policy of the Min. of Health in Britain is to add sufficient sodium fluoride to the water to bring it up to this amount, but implementation is entirely up to each local authority.

FLUORINE. Chemical element, symbol F., at no. 9, at. wt. 19, which was discovered by Scheele in 1771 and isolated by Moissan in 1886. It occurs naturally as the minerals fluorspar (CaF_2) and cryolite (Na_3AlF_6) and is a member of the halogen family. At ordinary temperatures it is a pale yellow, highly poisonous and reactive gas and it unites directly with nearly all the elements. Hydrogen fluoride is used in etching glass, and the Freons, which all contain fluorine, are widely used as refrigerants and propellants. Combined with uranium as UF_4 it is used in the separation of uranium isotopes.

FLUORSPAR or Fluorite. A cubic mineral (CaF_2), usually violet-tinted. The Blue-john from Derbyshire is a fibrous variety used as an ornamental stone. Colourless F. is used in the manufacture of microscope lenses, for the glaze on pottery, and in the Bessemer process of steel manufacture.

FLUSHING. Port on Walcheren Island, Zeeland, Netherlands, of great strategic importance, for it commands the entrance to the navigable Scheldt estuary, one of the principal sea entries to the continent of Europe. Before the S.W.W. the terminus of a regular sea service to and from Tilbury, England, it is a bathing resort with shipyards and railway workshops. De Ruyter was b. at F. The Dutch form of the name is Vlissingen. Pop. (1967) 38,564.

FLUTE. Genus of musical instruments, including the piccolo, the concert F., the bass or alto F., etc. They are cylindrical in shape, with a narrowed end, containing the aperture, across which the player blows. The air vibrations produce the note, which can be altered by placing fingers over lateral holes.

LIVER FLUKE

FLOWER. Some of the forms recognized by botanists. Regular: 1, campanulate (bell-shaped); 2, rotate (wheel-shaped); 3, tubular; 4, urceolate (urn-shaped); 5, globular. Irregular: 6, papilionaceous (butterfly-shaped); 7, spurred; 8, personate (mask-like); 9, labiate (lipped).

birds, living in the northern hemisphere, and include the finches, linnets, sparrows, buntings, etc.

FRISCH (frish), Max (1913–). Swiss writer. Ed. at Zürich univ. and technical high school, he was first a foreign correspondent and then an architect until 1955, when he had just estab. a reputation with his satirical novel *Stiller* (1954: *I'm not Stiller*). Among his works are the plays *Nun singen sie wieder* (1945), and *Andorra* (1961), and the novel *Homo Faber* (1957).

FRISIANS (fri'zians). Chain of low-lying islands lying 3 to 20 m. off the N.W. and N. coasts of the Netherlands and the N.W. coast of Germany, with a northerly extension off the W. coast of Denmark. They are divided between Germany, the Netherlands, and Denmark.

FRISIANS. A Germanic people who in Roman times occupied the coast of Holland, and may have taken part in the Anglo-Saxon invasions of Britain. Their language was closely akin to Anglo-Saxon, with which it formed the Anglo-Frisian branch of the West Germanic languages. It is almost extinct in the Ger. districts of E. Friesland, has attained some literary importance in the N. Frisian Is. and Schleswig, and developed a considerable literature in the W. Frisian dialect of the Dutch prov. of Friesland.

FRITH, William Powell (1818–1905). British artist. He was especially noted for his large-scale works with numerous accurately observed figures, e.g. 'Ramsgate Sands', bought by Queen Victoria; and 'Derby Day' in the Tate Gallery.

FRITILLARY. Name of several butterflies in the family Nymphalidae. All the Fs. are orange in colour with black markings, but vary in size, the silver-washed F. (*Argynnis paphia*) being the largest. The Fs. are common in British woodlands.

FRIULI-VENEZIA GIULIA (fr̥'oolē venet'seah). Autonomous region of Italy, bordered on the E. by Yugoslavia. Formed in 1947 from the provs. of Udine and Gorizia, to which Trieste was added after its cession to Italy in 1954, it was granted autonomy in 1963. The name Friuli, derived from Forum Juli, a Roman settlement in the area, was long used for the greater part of the two provs. forming the region. Area 3,111 sq. m.; pop. (1961) 1,205,222.

FRO'BISHER, Sir Martin (c. 1535–94). English navigator. B. in Yorks, he made his first voyage to Guinea in 1554. In 1576 he set out in search of the N.W. Passage; and visited Labrador, and Frobisher Bay, in Baffin Land. A 2nd and 3rd expedition sailed in 1577 and 1578. F. served as vice-admiral in Drake's W. Indian expedition of 1585, and in 1588 was knighted for his share in the defeat of the Armada. He was mortally wounded in 1594 while attempting to relieve Brest.

FROEBEL (frö'bel), Friedrich August Wilhelm (1782–1852). German educationist. B. in Thuringia, he came into contact with Pestalozzi, and evolved a new system of education utilizing instructive play, described in *Education of Man* (1826), etc. In 1836 the first kindergarten was founded, in Blankenburg.

FROG. Amphibian of the family Ranidae with a world-wide distribution, especially abundant in tropical and sub-tropical areas and generally sharing with the toad (q.v.) a lengthy larval period, when the eggs hatch into fish-like 'tadpoles', which gradually lose their gill slits and tail and develop lungs and legs. The common English Grass F. (*Rana temporaria*) is typical of its genus; the body is yellowish-brown, short and stout; the eyes large and prominent; and the fore-limbs short, with only 4 fingers, whereas the hind-legs are long and powerful with 5 webbed toes enabling it to jump and swim rapidly. It hibernates in winter, lives in damp places, migrating to water to spawn in the spring, and captures its prey (slugs, insects, etc.) by shooting out the tip of its tongue which carries a viscid secretion. Other species of

interest are the edible F. (*R. esculenta*), of England and Europe, of which only the legs are eaten; the bull-frog of eastern N. America (*R. catesbyana*), about 7 in. long (exclusive of the legs) and with a croak that carries for miles; and the flying Fs. of the Malayan area (*Rhacophorus*) which have completely webbed fore- and hind-feet which serve as 'parachutes'.

FROGBIT. Small water plant (*Hydrocharis*) with submerged roots, floating leaves, and small green and white flowers. It is common in England.

FROG-HOPPERS. Family of small brown insects (*Cercopidae*) in the division Exopterygota, which leap a considerable distance when touched, and live by sucking the juice from plants. The larvae, known as *froth-flies*, are pale green, and surround themselves with a mass of froth.

FROISSART (frwahsahr'), Jean (1338–1410). French chronicler. B. at Valenciennes, he became secretary to Queen Philippa, wife of Edward III of England. He travelled in Scotland and Brittany, accompanied the Black Prince to Aquitaine, and in 1368 was in Milan in the company of Chaucer and Petrarch. Later he entered the Church, and d. canon at Chimay. His *Chronique de France, d'Angleterre, d'Écosse, d'Espagne*, etc., records often at first hand the events of the years 1326–1400.

FROME (froom). English town (U.D.) on the river F., Somerset. It is a market centre, and has brewing, printing, and agricultural industries. Pop. (1961) 11,440.

FROMM, Erich (1900–). German-American psychoanalyst and philosopher. B. in Frankfurt, he has written a number of influential books on modern society and its standards incl. *Escape from Freedom* (1941), *The Sane Society* (1955), and *Sigmund Freud's Mission* (1959), in which he finds Freud 'a typical puritan'.

FRONDE. The French civil wars of 1648–53. They fall into 2 stages: the attempt of the Paris *parlement* in 1648–9 to limit the powers of the monarchy, and the revolt of the great nobles, headed by Condé, against the rule of Mazarin in 1650–3.

FRONTENAC ET PALLUAU (fron'tnahk'e pahl-lüh'), Louis de Buade, comte de (1620–98). Governor of French Canada. He began his military career in 1635, and was appointed Governor of Canada in 1672. Although efficient he quarrelled with the local

FROG. An American green frog, showing the powerful hind-limbs in action as it leaps. In swimming only these legs, with their webbed feet, are used and the forelegs are held tightly against the body.

Photo: G. Ronald Austing.

bishop and his followers and was recalled in 1682. A disastrous war with the Iroquois followed, and F. was reinstated in 1689.

FROST, David (1939–). British broadcaster. From Cambridge, he joined the B.B.C. and achieved celebrity with satiric late-night shows such as 'That Was the Week That Was' and controversial interview programmes, also telecast in U.S.A.

in England was largely the work of Cecil J. Sharp.

FOLKESTONE (fōk'ston). English port and holiday resort (bor.) on the S.E. coast of Kent, 6 m. S.W. of Dover. There is a regular sea service between F. and Boulogne. Pop. (1961) 44,129.

FOLKLORE. The oral traditions and culture of the people. The term F. was coined in 1846 by W. J. Thoms (1803–85), but the founder of the scientific study of the subject was Jacob Grimm (1785–1863). The approach to F. has varied greatly: M. Müller (1823–1900) interpreted it as evidence of nature myths; J. G. Frazer (1854–1941) was the exponent of the comparative study of primitive and popular F. as mutually explanatory; Sir Laurence Gomme (1853–1916) adopted the historical method; and Malinowski and Radcliffe-Brown have examined the material as an integral element in a living culture.

FOLK SONG. Body of traditional song forming the spontaneous musical expression of a people. Many F.Ss. originated as a rhythmic accompaniment to manual work. Pure F.S. is melodic not harmonic, and the modes used are distinctive of the country from which it comes. The interest in ballad poetry in the later 18th cent. led to the discovery of a rich body of F.S. in Britain and on the Continent. In addition to Negro F.S., the cosmopolitan background of the U.S.A. has brought forth a wealth of material derived from European and S. American sources. A great revival of interest, starting in the 1950s, was led by Alan Lomax, John Jacob Niles, Theo Bikel, Pete Seeger, Woody Guthrie and Bob Dylan, and dealt with contemporary topics, e.g. atomic warfare and racial prejudice.

FONDA, Henry (1905–). American actor. He has appeared in both stage and screen versions of *Mister Roberts*, *Point of No Return*, and *Caine Mutiny Court Martial*, and was acclaimed for his production of the film *12 Angry Men*.

FONTAINEBLEAU (fontānblo). French town 37 m. S.S.E. of Paris, in Seine-et-Marne dept. It lies in one of the most beautiful forests of France, for long a favourite haunt of landscape painters. The town is renowned for its royal palace, founded in the 10th cent. Mme de Montespan lived there in the reign of Louis XIV and Mme du Barry in that of Louis XV. Napoleon signed his abdication there in 1814. Pop. (1962) 22,704.

FONTANA (fontah'nah), Domenico (1543–1607). Italian architect. He was employed by pope Sixtus V, and his principal works include the Vatican library, the completion of the dome and lantern of St. Peter's, and the royal palace at Naples.

FONTANE, Theodor (1819–98). German poet and novelist. B. in Brandenburg, he was one of the finest of modern ballad poets. In his later years he wrote realistic stories including *Irrungen, Wirrungen* (1888), and *Der Stechlin* (1899).

FONTANNE, Lynn. See ALFRED LUNT.

FONTENOY (fontnwa'h). Village in Hainaut prov., Belgium, 5 m. S.E. of Tournai, where Marshal Saxe and the French defeated the British, Dutch, and Hanoverians under the duke of Cumberland in 1745.

FONTEYN, Dame Margot (1919–). British dancer. Née Margaret Hookham, she made her début with the Sadler's Wells Ballet in *The Haunted Ballroom* in 1934 and 1st appeared as Giselle in 1937, eventually becoming prima ballerina of the Royal Ballet. Technically impeccable and with unique beauty of line, she is supreme among the world's classical dancers. She was created D.B.E. in 1956, and since 1954 has been pres. of the Royal Academy of Dancing. In 1955 she m. Roberto E. Arias, Panamanian ambassador to the U.K. 1955–8 and 1960–2: a one-time political colleague shot and severely wounded him 1964. See illus. under BALLET.

FOOCHOW. Port and walled city, with extensive suburbs, on the r. Min cap. of Fukien prov., S.E.

China. There is a naval dockyard at F., which exports tea, timber, leather, and lacquered goods. It was opened to foreign trade in 1842. Pop. (1965) 616,000.

FOOD. The general term for what is eaten by man and other creatures to sustain life. It is used in the formation and repair of body tissues, and for the production of heat and energy. Certain necessary chemical elements and complex groupings must be provided from which the body can make all it needs. These are the essential constituents: *proteins* for body building and repair, found in meat, fish, eggs, and some vegetables; *fats* to provide energy, e.g. butter, lard, and suet; *carbohydrates* also provide energy and are found in bread, potatoes, sugar, and cereals, which form the bulk of the diet; *vitamins* (q.v.) required only in small quantities to assist the body to make full use of its F.; *minerals*, also needed in small quantities, incl. salt; calcium (bone building) from milk; and iron (blood formation) from meats and green vegetables. The energy value of F. is expressed in calories.

FOOD POISONING. Acute illness caused by poisonous food, or by micro-organisms contained in food, or their products. Some fish and mushrooms are naturally poisonous. Lead or arsenic are sometimes introduced into food during manufacture. Preservatives have caused illness. Milk, oysters, etc., may carry typhoid fever. Uncooked meat may carry harmful organisms. Pork may carry the round-worm *Trichinella*, and rye the parasitic fungus ergot. The most dangerous food poison is the bacillus which causes botulism (q.v.).

FOOT, Isaac (1880–1960). British liberal politician. A staunch Nonconformist, an ardent collector of Cromwelliana, and an effective fighter against privilege, he held office (Min. of Mines 1931–2) only briefly. Of his sons Sir Dingle F. (1905–), once a Liberal, became in 1964 Solicitor-General in the Labour govt. and was knighted; and Michael F. (1913–) was a Labour M.P. 1945–55 and from 1960, and has been long assoc. with the Socialist weekly *Tribune*. See also CARADON, LORD.

FOOT AND MOUTH DISEASE. A highly contagious eruptive fever caused by a virus that attacks cattle and other animals, causing the milk yield of cows to deteriorate, and animals with young to abort. Control is by isolation and destruction of affected animals, or, on the Continent, inoculation.

FOOTBALL (American). Harvard university is said to have introduced the game to the U.S.A. in 1875. It is played on a field 330 ft. by 160 ft. marked in

5 yd. lines, with goal-lines at 10 yds. from each end. The goals and ball are as those used for English Rugby. It is played between 2 teams, each of 11 men, made up of 7 linemen or forwards (a 'centre,' 2 'guards,' 2 'tackles,' 2 'ends'), a quarterback, 2 half-backs and a full-back. Each team's objective is to score most points. A touch-down scores 6 points and allows the scoring team to try for an extra point. This they can do when the ball is put into play again on the 2 yds. line, by getting the ball over the line again by running or passing or by kicking a goal. A field goal (3 points) is scored by either a drop kick or place kick. A touch-down behind their

FUKUOKA. Japanese industrial town and port on the N.W. coast of Kyushu island. Pop. (1965) 647,000.

FULBRIGHT, William (1905–). American politician. A Rhodes Scholar, he lectured in law at the Univ. of Arkansas 1936–9, and as a senator from 1945 was responsible for the *F. Act* (1946) which enabled thousands of Americans to study overseas and overseas students to enter the U.S. Chairman of the Foreign Relations Committee from 1959, he is a strong internationalist and supporter of the U.N.

FULHAM. See LONDON.

FULLER, Richard Buckminster (1895–). American architect. Charles Eliot Norton professor of poetry at Harvard 1961–2, he is the great exponent of the geodesic dome, e.g. the 277 ft. dome for the H.Q. of the American Soc. of Metals in Cleveland and the St. Louis climatron (q.v.).

FULLER, Roy (1912–). British poet and novelist. A London solicitor, he pub. his first *Poems* (1939), and in 1968 became prof. of poetry at Oxford. Later vols. incl. *Epitaphs and Occasions* (1951), *Brutus's Orchard* (1957) and *Collected Poems* (1962); and the novel *My Child, My Sister* (1965).

FULLER, Thomas (1608–61). English author. Rector at Broadwindsor, Dorset, from 1634, he served as a chaplain to the Royalist army, and in the Restoration became the king's chaplain. He is known for his *Worthies of England* (1662).

FULMAR (fool'-). Name given to several species of petrels of the family Procellariidae, which are similar in size and colour to the common gull. The *F.*

(*Fulmarus glacialis*) is found in the N. Atlantic and visits land only to deposit its single egg. The giant Pacific *F.* (*Macronectes gigantea*) has a wingspan of 7 ft.

FULMINATES. The salts of fulminic acid (C:NOH), the chief being silver and mercury. They detonate, i.e. are exploded by a blow.

FULTON, Robert (1765–1815). American engineer and inventor. B. in Pennsylvania, he went to England in 1787 where he devoted himself to engineering in connection with inland navigation. In 1797 he moved to Paris where he produced a submarine, the *Nautilus*. After experimenting in steam navigation on the Seine in 1803, he returned to America and the first steam vessel of note, the *Clermont*, appeared on the Hudson in 1807, sailing between New York and Albany. The first steam warship was the *Fulton* of 38 tons, made in 1814–15.

FUMITORY. Genus (*Fumaria*) of the plant family Fumariaceae, native to Europe and Asia. The common *F.* grows abundantly as a weed in Britain, and produces red or white flowers.

FUNCHAL (foonshahl'). Port, cap. of Madeira Is., overseas district of Portugal. It is on the S. side of Madeira, on a harbour capable of accommodating ocean-going ships. *F.* is popular as a holiday and health resort. Pop. (1967) 43,300.

FUNCHAL. Another name for MADEIRA.

FUNCTIONALISM. Term applied to a style of architecture and furniture characterized by a tendency to exclude everything that serves no practical purpose. It was a reaction against the 19th cent. practice of imitating earlier styles, and its finest achievements are in the realm of industrial building. Its leading exponents were the German Bauhaus school, and the Dutch group de Stijl; the most prominent architects in the field are Le Corbusier and Walter Gropius (qq.v.).

FUNDAMENTALISM. Name given to a religious movement which arose in U.S.A. just after the F.W.W.

and was characterized by insistence on complete belief in the literal inspiration of the Bible and such doctrines as the Virgin Birth, the physical resurrection of Christ, the Atonement, and the Bible miracles which were regarded as fundamental to the Christian faith. In 1925 *F.* was publicized by the 'Dayton Trial'. See DAYTON.

FÜNEN. German form of FYN.

FÜNKIRCHEN (five churches). German name of PÉCS.

FUNGI. Wild ungi: left to right; common mushroom, shaggy cap, parol mushroom, morel.

FUNGI (fun'ji). In botany, class of plants forming with the algae the Thallophyta. Unlike the algae they have no chlorophyll, and hence must get their food from organic substances. They are either parasites, living on living plants or animals, or saprophytes living on dead matter. *F.* include bacteria, the slime fungi, moulds, mildew, rusts and smuts, mushrooms, toadstools, puff-balls, etc. *F.* reproduce by means of spores. Some fungi are edible, but many are highly poisonous.

FUR. Animal skin bearing handsome hair worn for warmth; also, in the case of rarer species, regarded as a luxury, e.g. in ancient China, Greece and Rome,

FUNGI. The cultivation of mushrooms has reached the status of an industry, and grown in well-ventilated, steam-heated sheds, they give an all-year-round crop. There is no wasted space — other trays equally crowded are on the racks beneath these, where the fungi are ripe for gathering.

Courtesy of the Mushroom Information Bureau.

and as a status symbol in medieval Europe and, especially for women, in modern times. The modern *F.* trade originated with the exploitation of N. America from the late 17th cent. by the Hudson's Bay Co., etc.: the principal distributing centres are London, New York, and Leningrad. Mink (q.v.) is hard-wearing and long-lasting and has long been the most popular of the high-priced *Fs.*, and lends itself to ranch breeding — more humane than trapping — but chinchilla and Russian sable are even more valuable. In the 1960s there was a trend in fashion towards longer-haired and colourful *Fs.* with deleterious effect on wild-life, e.g. the leopard. Artificial *F.* fabrics formerly offered little competition, but

FULMAR

1895 and plays under Northern Union rules. In this game there are only 13 players a side.

FOOTE, Robert Bruce (1834–1912). British geologist. Going to India at 24 he spent 33 years with the geological survey and founded the study of the sub-continent's prehistory, discovering numerous sites and advancing theories that later excavation has confirmed.

FORAIN (foran'), **Jean Louis** (1852–1931). French artist. He excelled in Rembrandtesque lithographs and satirical etchings on subjects drawn from the law courts, politics, or the stage.

FORAMINIFERA. Single-celled marine animals of the Protozoa enclosed by a thin shell.

FORBES, George William (1869–1947). Prime Minister of New Zealand at the head of a coalition government 1930–5, and subsequently leader of the opposition and of the National Party.

FORBES, (Joan) Rosita (1893–1967). British traveller. Her journeys were recorded in her many books, incl. *From the Red Sea to the Blue Nile* (1928) (Arabia), *The Forbidden Road – Kabul to Samarkand* (1937) (Afghanistan and Russia), and *Islands in the Sun* (1950) (W. Indies).

FORBES, Stanhope Alexander (1857–1947). Irish painter, b. in Dublin. He studied at the R.A. schools and in Paris; was a founder of the 'Newlyn school' and was elected R.A., 1910.

FORBES-ROBERTSON, Sir Johnston (1853–1937). British actor-manager. A pupil of Phelps, he acted under his own management from 1896, and was a striking Hamlet. He appeared with his wife Gertrude Elliot in a number of successes incl. *Jerome K. Jerome's The Passing of the Third Floor Back*, and *Kipling's The Light That Failed*. In 1931 he was knighted. His dau. *Jean F.-R.* (1905–62) also estab. a reputation as an actress, and her roles incl. *Hebda Gabler*, *The Constant Nymph*, and a highly successful *Peter Pan*.

FORCE. In mechanics *F*. is that which tends to change the state of rest or uniform motion of a body in a straight line and is measured by the product of its mass (*m*) and its acceleration (*a*). $F=ma$. See **NEWTON, ISAAC**.

FORD, Ford Madox (1873–1939). English writer, né *Ford Madox Hueffer* – he changed his name in 1919 – he was a grandson of *Ford Madox Brown* (q.v.). He was founder-editor of the *English Review* (1908), to which *Hardy*, *D. H. Lawrence*, and *Conrad* contributed. His verse is forgotten, but his novels incl. the historical trilogy *The Fifth Queen*, *Privy Seal* and the *Fifth Queen Crowned* (1906–8), dealing with *Catherine Howard*, and the war tetralogy *Parade's End* (*Some Do Not*, *No More Parades*, *A Man Could Stand Up* and *Last Post*, 1924–8), with its hero *Christopher Tietjens*.

FORD, Henry (1863–1947). American motor-car manufacturer. B. in Michigan, he built his first car in 1893 and 10 yrs. later founded the *F. Motor Co.* His model *T* (1908–27) was the first to be constructed by purely mass-production methods, and 15,000,000 of these historic cars were made. A pacifist, he visited Europe 1915–16 in an attempt to end the war, and in 1936 he founded with his son *Edsel B. Ford* (1893–1943) the philanthropic *Ford Foundation*. As pres. of the firm he was succeeded in 1919 by *Edsel* and in 1945 by his grandson *Henry F. II* (1917–): chairman 1960. In 1955 an annual *Atoms for Peace* prize was estab. as a memorial to *Henry* and *Edsel*, the 1st recipient being *Niels Bohr* (q.v.).

FORD, John (1586–1640). English poet and dramatist. B. in Devon, he was noted for an imaginative and dramatic study of incest between brother and sister in *'Tis Pity She's a Whore* (1633). The best of his other pieces are *The Broken Heart* (1633) and the chronicle play *Perkin Warbeck* (1634).

FORD, John (1895–). Irish-American film director. Active since the silent days, he was one of the

original creators of the 'western'; *Stagecoach* being a masterpiece of the genre. His other films incl. *The Informer*, *Grapes of Wrath*, *Two Rode Together*, and he was co-director of the 1st cinerama story film *How the West was Won*.

FORDE, Daryll (1902–). British anthropologist. Prof. at London since 1945, he is known for his researches among N. American Indians and in Nigeria. His books include *Habitat*, *Economy and Society* (1934) and *African Worlds* (1953).

FOREIGN LEGION (*Légion Étrangère*). Popular name of the French *régiments étrangers*, formed in 1835. Men of any nationality may join the Legion, but the officers are French. *Aubagne*, nr. *Marseilles* is its H.Q.; till 1962 *Sidi Bel Abbes*, *Algeria*.

FOREIGN OFFICE. See **FOREIGN RELATIONS**.

FOREIGN RELATIONS. Formal relations between one sovereign state and another. In the U.K., F.R. are handled by the Foreign Office, a govt. dept. at the head of which is the Sec. of State for Foreign Affairs, with a seat in the cabinet, a dept. which dates from 1782. Before that there were 2 principal secs. of state, one of whom, the Sec. for the Southern Dept., dealt with home, Irish, and colonial affairs, and with relations with Mediterranean countries, while the other, the Sec. for the Northern Dept., dealt with relations with the rest of Europe. In 1782, the Southern Dept. became the Home Office and its foreign sections were transferred to the Northern Dept., which became the F. Office. The Sec. of State for Foreign Affairs (re-named in 1968 the Sec. of State for Foreign and Commonwealth Affairs) negotiates all treaties, and is responsible for all communications with foreign states and Commonwealth countries, and for the protection of British subjects abroad.

The Foreign Office worked 1943–65 through the Foreign Service, created by an amalgamation of the F.O. staff and the diplomatic, consular, and commercial diplomatic services, but from 1965 the overseas representational services of the Foreign Office and the Commonwealth Relations Office, together with the Trade Commission Service, were merged in the new H.M. Diplomatic Service. The Foreign and Commonwealth Relations Offices themselves, were amalgamated as the Foreign and Commonwealth Office in 1968. See **CIVIL SERVICE**.

In the U.S.A., F.R. are the concern of the State Dept. (1789). *Thomas Jefferson*, then Min. to France,

HENRY FORD with his first wife in his first car, built in 1893. From this model developed the Ford car and the great Ford Motor Co. Also in the photograph is Ford's grandson, *Henry*, who became chairman of the company in 1960

colour, infused a feeling of dynamic motion into their work. F. flourished until the advent of the F.W.W.

FYEN. Another form of FYN.

FYFE, David Maxwell. See **LORD KILMUIR.**

FYFFE, Will (1885-1947). Scots comedian. He began acting with his father's stock company but

by 1921 had achieved great success on the halls, with his vividly portrayed character sketches. His greatest hit was the song 'I Belong to Glasgow'.

FYN (fin). Island forming part of Denmark; it lies between the mainland and Zealand. The cap. is Odense. Area 1,130 sq. m.; pop. (1967) 408,000.

FYZABAD. Another form of FAIZABAD.

G The 7th letter of our alphabet. It was formed by the Romans by adding a 'tail' to the letter C which represented the K sound.

GABES (gah'bes). Town and port on the Gulf of G., Tunisia, N. Africa, 70 m. S.W. of Sfax, standing on the site of the Roman town of Tacapae. G.'s chief product is dates. Pop. (1966) 76,356.

GABIN (gahban'), Jean. Stage-name of French actor Jean Moncorgé (1904-), noted for the realism of his performances in such films as *Pépé le Moko* (1937), *Le Quai de Brumes* (1938), and *Le Jour se lève* (1939).

GABLE, Clark (1901-60). American actor. A star for more than 30 years in 90 films; he was celebrated for his romantic nonchalance and tough-with-women roles, e.g. as Rhett Butler in *Gone with the Wind*.

GABLONZ. German form of JABLONEC.

GABO, Nahum (1890-). Russian sculptor. One of the leading exponents of Constructivism, he left Russia in 1923 and settled first in London, in U.S.A. from 1946. In his sculpture he has made use of modern synthetic materials.

GABON (gahboon'). Republic on the Atlantic coast of Africa, S. of Cameroon. Formerly a French territory, it remained within the French Community on attaining independence in 1960. It has a broad coastal plain, rising to a hilly interior; the equator passes through it. Cocoa, coffee and timber are produced and minerals incl. manganese, uranium, oil and natural gas, and gold. The cap. and chief port is Libreville. Area 103,000 sq. m.; pop. (1965) 470,000.

GABOON, GABUN. Alternative forms of GABON.

GABOR (gah'bor), Dennis (1900-). Hungarian-British physicist. Ed. in Budapest and Berlin, he was engaged in industrial research in England 1934-48, when he became reader (1949) then prof. (1958-67) of applied electron physics at the Imperial College of Science and Technology. In 1958 he invented a type of colour TV tube, distinguished by its reduced depth, and simpler but more effective design. He was elected F.R.S. in 1956.

GABORIAU (gahbör-ö'), Emile (1835-73). French novelist. He found fame with *L'Affaire Lerouge* (1866), first of a detective series; he created the detective M. Lecoq.

GABRIEL. An archangel who is mentioned in the book of Daniel, and in the N.T. announces the birth of John the Baptist to Zacharias and of Christ to the Virgin Mary.

GADDI (gah'dē). Name of three Florentine religious painters, viz. Gaddo G. (c. 1260-1333), and his son Taddeo G. (1300-66) and grandson Agnolo G. (c. 1333-96).

GADE (gah'dheh), Niels (1817-90). Danish violinist and composer. He succeeded Mendelssohn as conductor at Leipzig and his most popular work is the overture *Echoes from Ossian*.

GADIDAE (gad'idē). Family of fish found in the northern hemisphere, incl. haddock, cod, and turbot.

GAELIC (gā'lik). One of the two main branches of

the Celtic languages (q.v.), comprising Irish Gaelic, Scottish Gaelic, and Manx (qq.v.).

GAETA (gah-ā'tah). Italian seaport on the Gulf of G., 73 m. S.E. of Rome. The cathedral was consecrated in 1106. Pop. (1960) 20,000.

GAGARIN, Yuri (1934-68). Russian cosmonaut. B. in Smolensk Region, son of a collective farmer, he

qualified as a foundryman. He became a pilot 1957, and joined the Communist Party in 1960. On 12 April 1961 he successfully completed the first manned space flight, orbiting the Earth at 18,000 m.p.h. He was killed on a routine training flight.

YURI GAGARIN

GAINSBOROUGH, Thomas (1727-88). British artist. B. at Sudbury, Suffolk, he began to paint while still at school, and in 1741 went to London where he learnt etching and studied at the Academy

of Arts, but remained largely self-taught. In 1759 he settled at Bath, becoming famous as a painter of high society - his portraits of Sir Charles Holte, Garrick, and the 'Blue Boy' belong to this period. In 1768 he became one of the original members of the Royal Academy, and in 1774 went to London where his sitters incl. the royal family, Mrs. Siddons, Dr. Johnson, Burke, and Sheridan. His portraits are noted for their clear tones, graceful lines and a naturalistic approach, generally free from classical influence. In landscape, which he preferred to the portraiture which earned his living, he followed the Dutch as one of the first English artists to substitute real scenery for imaginary Italian.

GAINSBOROUGH. English town (U.D.) and canal trade centre on the r. Trent, Lindsey, Lincs. Agricultural implements are manufactured. Pop. (1961) 17,276.

GAITSKELL (gāt'skel), Hugh Todd Naylor (1906-63). British Labour statesman. Ed. at Oxford, he became head of the dept. of Political Economy at Univ. Coll., London, in 1938. In 1945 he was elected M.P. for S. Leeds, and was Min. of Fuel and Power 1947-50, when he succeeded Cripps, 1st as Min. of Economic Affairs and then as Chancellor of the Exchequer until Oct. 1951. When the 'Bevanite' controversy arose within the Labour Party, he took

THOMAS GAINSBOROUGH, after a self-portrait. Photo: N.P.G.

in stinging ants, nettles, sweat, and pine needles.

FORMOSA. Island off the S.E. coast of China, separated from it by the F. Strait. F. was Chinese from 1683 until 1895 when it was ceded to Japan, becoming Chinese again after Japan's defeat in 1945. When the Communists conquered all the Chinese mainland in 1949 the Nationalist Govt. fled to F. where its status as the legal govt. of China continued to be recognized by the U.S.A. The cap. is Taipei. It produces rice, tea, sugar, fruits, jute, camphor, etc.; there are flour mills, sugar refineries, cotton factories, glass and brick works, and some mining of copper, coal, aluminium, salt. With American assistance, F. has achieved independent economic prosperity and there is an efficient American-trained and equipped army, navy and air force. The Pescadores Is. some 35 m. W. of Formosa (area 50 sq. m.; pop. 110,000) are heavily garrisoned, as are Quemoy (60 sq. m.) and Matsu (11 sq. m.), from which loudspeaker propaganda and intermittent shelling are exchanged with the nearby mainland of China. Area 13,890 sq. m.; pop. (1966) 12,993,000.

FORRESTAL, James Vincent (1892–1949). American Democratic statesman. He served in the F.W.W. as a naval aviator, assisted Roosevelt from 1940 in work on national defence, and as Sec. of the Navy from 1944 visited the war zones, accompanying the assault troops at Iwo Jima. He was the first Sec. of the Dept. of National Defense (1947–9), a post created to unify the 3 services at the end of the S.W.W.

FORSSMANN, Werner (1904–). W. German heart specialist. In 1929 he originated by experiment on himself the technique of cardiac catheterization, passing a thin tube from an arm artery up into the heart itself and then having X-ray photographs taken. In 1956 he was awarded a joint Nobel prize with A. F. Cournand and D. W. Richards of America.

FORSTER, Edward Morgan (1879–). British author. B. in London and ed. at King's Coll., Cambridge, he pub. his first novel *Where Angels Fear to Tread* in 1905. He undermines the superficial situations of his plots with unexpected insights in *The Longest Journey* (1907), *A Room with a View* (1908), and *Howard's End* (1910). *A Passage to India* (1924), his most famous book, explores the relationship between English and Indians through the incident of a possibly non-existent assault on a stolid Englishwoman by the charming Dr. Aziz. F. is always concerned with the interplay of personality and the contrast between the conventional and the instinctive. His critical work incl. *Aspects of the Novel* (1927). Awarded O.M. 1969.

FORSTER, John (1812–76). British biographer and critic. Literary critic and later editor of *The Examiner*

(1847–56), he wrote (1872–4) a *Life of Charles Dickens* whose friend he was, which is a standard biography.

FORSTER, William Edward (1818–86). British reformer. He was a Bradford woollen manufacturer, who entered parliament in 1861 as a Liberal. In Gladstone's government of 1868–74 he was Vice-President of the Council, and secured the passing of the Education Act (1870) and the Ballot Act (1872). He was Chief Secretary for Ireland, 1880–2.

FORSYTHIA (forsí'thia). Flowering shrub, allied to the olive (Oleaceae family), frequently cultivated in British gardens; the bright yellow flowers appear in spring before the leaves.

FORTALEZA (fortahlá'zah). Cap. and port of Ceara state, Brazil. Pop. (1960) 514,818.

FORTAS, Abe (1910–). American lawyer. Partner in a Washington law firm, he became known in 1962 by the Gideon Case (in Florida a man named Earl Gideon had been convicted, after having been refused a lawyer, and appealed), in which he estab. that everyone had a right to legal counsel in a criminal trial. He became a member of the Supreme Court 1965.

FORT DE FRANCE (for de froñs). Cap., chief commercial centre, and port of the French West Indian island of Martinique. Pop. (1960 est.) 60,648.

FORTH. River and firth in S.E. Scotland. Its head-streams rise on the N.E. slopes of Ben Lomond, near the Perth–Stirlingshire border, and it runs for about 45 m. to Kincardine, where it is crossed by a road bridge, and the Firth of F. begins; the Firth is c. 50 m. long and c. 16 m. wide where it joins the North Sea. At Queensferry near Edinburgh is the Forth Bridge (railway) opened 1890; a road bridge nearby was constructed 1958–64.

FORTH AND CLYDE CANAL. Canal, constructed 1768–90, across the lowlands of Scotland, connecting the Firth of Forth with the r. Clyde. It is 33 m. long, and runs from Grangemouth to Bowling.

FORT KNOX. U.S. army post and gold depository in Kentucky, established 1917 as a training camp. The depository was constructed 1936–7 and after the S.W.W. held gold valued at more than £3,000,000,000.

FORTUNA. In Roman mythology, the goddess of chance and good fortune.

FORT WILLIAM. Scottish town and resort near the head of Loch Linnhe, Inverness-shire, below the south-west end of the Caledonian Canal. The fort was named after William III in 1690. Near are aluminium and chemical works, which use locally produced hydro-electricity. Pop. (1961) 2,715.

FORT WORTH. City of Texas, U.S.A.; it is one of the great grain and railway centres of the southern U.S.A. Pop. (1960) 356,268.

FORTY-FIVE. The. Name given to the Jacobite rebellion of 1745, led by Prince Charles Edward. With his army of Highlanders 'Prince Charlie' occupied Edinburgh and advanced into England as far as Derby, but then turned back. The rising was crushed by the duke of Cumberland at Culloden in 1746.

FOSSIL (Lat., *fossilis*, dug up). Organic remains which have been preserved in rocks; the majority are of marine origin or lived in swamps, lakes, etc. Fs. may be formed by refrigeration, e.g. the N. Siberian mammoths; the preservation merely of the skeleton; carbonization, e.g. wood and leaves converted into coal; the formation of a mould or cast round the organism; petrification, etc. Fs. provide evidence of the condition of the earth at successive epochs, and of the life-history of the world.

FOSTER, Myles Birket (1825–99). British artist. He produced mainly landscapes with figures, usually of children, at first as wood-engravings for illustrations, but after c. 1861 as paintings in water colours.

FOSTER, Stephen Collins (1826–64). American

Publishers Ltd.

uncertain pitch made her records more effective than her concerts. She made her début in Rome (1909) as Gilda in *Rigoletto*, and from 1916 sang in U.S.A.

GALLIFORMES. The order of birds that includes the game birds.

GALLI'POLI. City and port in European Turkey, on the W. shore of the Dardanelles, giving its name to the peninsula on which it stands. In the F.W.W. an unsuccessful campaign was undertaken, from Feb. 1915 to Jan. 1916, first naval and then military with British Empire and French troops under Sir Ian Hamilton, to force these narrows and thus open up communication with Russia.

GALLIUM. Chemical element. Symbol Ga; at. wt. 69.72; at. no. 31. A grey metal liquid at near room temperatures, it is very scarce and was discovered in 1875 by Lecoq de Boisbaudant.

GALLIVARE (gal'vahr'e). Iron-mining centre in a sparsely populated part of Swedish Lapland, 40 m. N. of the Arctic Circle. Pop. c. 3,300.

GALLON. A British liquid and dry measure. Its capacity is 4 quarts or 8 pints or 277.274 cu. in., and 2 gallons make a peck.

GALLOWAY (gal'ō-). An ancient district of S.W. Scotland comprising Wigton and Kircudbright cos. noted for its horses and black, hornless cattle.

GALLS. On plants, vegetative growths caused by the presence of insects of the Cynipidae (gall fly, q.v.) family, which lay their eggs on the plant. An irritation is set up, and a swelling arises. The grubs live within the swelling. Among the commonest Gs. are bedeguar (on roses) and oak apples.

GALLSTONE. Biliary calculus; a hard, insoluble, pebble-like accretion formed in the human gall-bladder or bile duct by the precipitation of salts, chiefly cholesterol, from relatively stagnant bile. The size varies from a grain of sand to a walnut.

GALLUP, George Horace (1901-). American journalist and statistician, founder in 1935 of the American Institute of Public Opinion and deviser of the *G. Polls*, in which public opinion is gauged by questioning a number of representative individuals.

Bronze bust by David Evans,
1929. Photo: N.P.G.

New York. Formerly a leading American sports columnist, he began writing fiction in 1936, and his books incl. *The Small Miracle* (1952), *The Snow Goose* (1941), and *Flowers for Mrs. Harris* (1958).

GALLI-CURCI (gahl' lē-koor'chē), Amelita (1889-1963). Italo-American coloratura soprano. Her superb technique allowed her voice to reach astonishing heights with a smooth, warm, and well-rounded tone, but her

the series are *A Modern Comedy* (1929), which contained *The White Monkey*, *The Silver Spoon*, and *Swan Song*, and the short stories *On Forsyte Change* (1930). Among G.'s novels outside the Forsyte group are *The Country House* (1907), *Fraternity* (1909), *The Patrician* (1911), and *The Dark Flower* (1913). In

GALWAY. Spanish arch, which has only its appearance to justify the name, used to be called 'the Arch Blind in One Eye' because one of its passageways was blocked. Built with the fort near the quay in 1590-1643, the *Canabhallo* once formed part of the town walls.

Courtesy of the Irish Tourist Board.

1906 G. also estab. himself as a dramatist with *The Silver Box*; later plays include *Strife* (1909), *Justice* (1910), *The Skin Game* (1920), *Loyalties* (1922), and *Old English* (1924). In all his work G. was deeply concerned with social conditions, and tackled problems such as the conflicts between employers and workmen, landed gentry and the manufacturers, and the prison system. He received the O.M. in 1929. His collected poems were pub'd in 1934.

GALT, John (1779-1839). Scottish novelist. B. n Ayrshire, he moved to London in 1804 and 1826-9 was in Canada. He is best known for the *Annals of the Parish* (1821) in which he portrays the life of a Lowlands village, using the local dialect.

GALTON, Sir Francis (1822-1911). British anthropologist. B. at Birmingham, he studied medicine, explored in Africa, made pioneer researches in meteorology, and then, under the influence of his cousin Charles Darwin, studied heredity. He wrote *Hereditary Genius* (1869), *Natural Inheritance* (1889), etc., and endowed a chair of Eugenics, a study he founded, at London. He was knighted in 1909.

GALVANI (gahlvah'nē), Luigi (1737-98). Italian scientist. B. at Bologna, where he taught anatomy, he discovered galvanic or voltaic electricity in 1762, when investigating the contractions produced in the muscles of dead frogs by contact with charged metal.

GALVANIZING. Process for rendering iron rust-proof, by plunging it into molten zinc (the dipping method), or by electro-deposition, in which zinc is electro-plated from aqueous solution.

GALVANOMETER. Instrument for indicating small electric current by means of its magnetic effect. There are many different types. The two main classes are (1) moving-magnet Gs. in which a small magnet is suspended at the centre of a coil of wire through which the current to be measured is passed and the resulting deflection of the magnet noted, and (2) moving-coil Gs. in which a small coil carrying a current to be measured is suspended between the poles of a permanent magnet and the deflection of the coil noted.

FRACTIONS. In mathematics a fraction is a number which indicates one or more equal parts of a whole. The usual way of denoting this is to place below a horizontal line the number of equal parts into which the unit is divided, and above the line the number of these parts actually comprising the fraction, thus $\frac{3}{4}$. Such fractions are called *vulgar Fs.* A *proper F.* is one in which the numerator is less than the denominator; an *improper F.* is one in which the numerator is greater than the denominator, e.g. $\frac{5}{4}$. An improper F. can therefore be expressed as a mixed number, e.g. $1\frac{1}{4}$.

A *decimal F.* is one in which the F. is expressed by figures written to the right of the units figure after a dot or point (the decimal point). The digits on the right of the decimal point indicate the numerators of vulgar Fs. whose denominators are 10, 100, ...

FRA DIAVOLO (frah dyah'-). Name by which the Italian brigand Michele Pezza (1771–1806) was known. A renegade monk, he led a gang in the mountains of Calabria for many years, but was eventually executed at Naples. He has no link with Auber's opera.

FRAGONARD (frahgonahr'), Jean Honoré (1732–1806). French artist. He studied under Boucher in Paris, and is famous chiefly for his light-hearted *rococo* paintings of love in romantic settings.

FRAMPTON, Sir George James (1860–1928). British sculptor. His most famous works are 'Peter Pan' in Kensington Gdns. and the Nurse Cavell memorial nr. St. Martin's, London.

FRANC. French coin, so named from *Francorum Rex* (king of the Franks) that was inscribed thereon about 1360, when it was a gold coin. The monetary unit as now known dates from the French Revolution. It is divided into 100 centimes, and there are also Belgian and Swiss francs.

FRANCE (froñs), Anatole. Pseudonym of the French writer Jacques Anatole Thibault (1844–1924). B. in Paris, he pub. a critical study of Alfred de Vigny (1868), which was followed by several vols. of poetry and short stories. His earliest novel was *Le Crime de Sylvestre Bonnard* (1881); later books include *Thaïs* (1890), *Crainaubeille* (1905), the satiric *L'île des Pingouins* (1903), and *La révolte des Anges* (1914), and the autobiographical series beginning with *Le Livre de mon Ami* (1885). He was elected to the

French Academy in 1896, and in 1921 was awarded a Nobel prize for literature.

FRANCE. Republic of western Europe, bordering on Spain in the S.W., Italy, Switzerland, and Germany in the E., Belgium and Luxemburg in the N.E., and facing the Mediterranean, Atlantic Ocean, and English Channel on the S., W., and N. respectively. Area (incl. Corsica) 212,961 sq. m.; pop. (1967) 49,700,000. In 1881 the northern part of METROPOLITAN FRANCE,

Rheims, with a bay in the S.W. to include the basin of Aquitaine, are lowlands, while to the S. are highlands. The core of the mountainous area is the *massif central*. Westward, the mountains of Auvergne merge into the plateau of the Limousin and the hills of Quercy. To the E. the Auvergne merge into the Cevennes. The Pyrenees, forming a natural boundary between France and Spain, stretch from the Mediterranean to the Atlantic. The Alps, with their foothills and subsidiary ranges, cover most of F's. surface to the E. of the Rhône. The highlands of the S. are cut through by the valleys of the Rhône and the Aude. N. of the Rhône, the Jura mts. curve round to the Rhine at Basle. W. of the Rhine are the Vosges, merging into the Langres plateau in the N. The Ardennes farther N. abut on the low-lying country stretching to the North Sea.

With the exception of Sète, there is no natural harbour between the Spanish frontier on the Mediterranean and the Rhône estuary. Farther E. only Marseilles and Toulon are of importance. The principal port of S.W. France is Bordeaux on the Garonne, 60 m. from the sea. The shores of Brittany afford some of the best natural harbours, including Lorient and Brest. From Normandy, where Cherbourg is of great importance, to the Belgian frontier, most of the harbours are either in estuaries or are man-made.

The rivers can be divided into four systems. (a) the Rhône, (b) the Garonne, (c) the Loire, and (d) the Seine. With the exception of the Rhône, which rises in the Swiss Alps, these rise in the *mass central*.

Both in scenery and in climate F. is a land of contrasts. Normandy and Brittany may be compared for climate with Devon and Cornwall, while much of the N.E. endures sharp winters. S. of Lyon the climate merges into the Mediterranean zone. There is a noticeable difference in the flora of the N., which resembles that of southern England, and the S., in which the olive and the vine predominate.

AGRICULTURE. About one-third of the crops raised in F. are cereals, of which wheat is the most important, followed by oats, barley, and rye. Sugar beet is grown in the N.W. Among the other crops are flax, hemp, forage crops, hops, tobacco, colza, potatoes, fruits, of which the grape is most important: just over 3 million acres were under the vine in 1968, but the acreage is diminishing slowly (nearly 3½ million acres in 1938). The principal wine-producing areas are the S. with Hérault dept. as a centre; the Bordeaux district; Touraine and Anjou; the Rhône valley; Burgundy; Champagne; Alsace; and the Charentes

FRANCE. Burgundy is one of the country's greatest wine-producing areas, and this is one stage in the pressing of the grapes. Courtesy of the French Govt. Tourist Off. ce.

ANATOLE FRANCE, in middle life.

but achieved independence in 1962 as part of the new state of Algeria (q.v.).

PHYSICAL FEATURES. F. may be roughly divided into 2 parts: to the N. of a line from Bordeaux to

Meghna. At Allahabad it receives its chief tributary, the Jumna.

GANGRENE. Local death of tissues, due to destruction of tissue through injury, burning, freezing, etc.; poisoning; or failure of the blood supply, as where a bandage is too tight or the vessels are abnormally contracted, or where a vessel is blocked with a blood clot (thrombosis). The affected parts are painful and sensitive and feel cold, and their skin turns brownish or violet. The mass may become infected (wet G.). Amputation may be necessary.

GANJA. Former name of KIROVABAD.

GANNET or Solan Goose. Sea-bird (*Sula bassana*) in the family Sulidae. When full-grown it is white with black-tipped wings, but the young are speckled. It breeds on cliffs, the nest being roughly made of grass and seaweed. Only one white egg is laid.

GARAY (gor'oi), János (1812–53). A Hungarian writer, author of historical plays, stories, and lyrics.

GARBO, Greta. Assumed name of the Swedish actress Greta Lovisa Gustafsson (1905–). She was trained at the Royal Theatre dramatic school, Stockholm, made her first film *The Story of Gosta Berling* in 1924, and then went to the U.S.A., where she played in *The Torrent* (1926), becoming one of Hollywood's first 'stars'. Her later films incl. *Anna Christie* (1930), her first 'talkie', *Mata Hari* (1931), *Queen Christina* (1933), *Anna Karenina* (1935), *Camille* (1936), and *Ninotchka* (1939). A great personality rather than a great actress, she has become a legend.

GARBORG, Arne Evensen (1851–1924). Norwegian novelist, playwright, and poet, a pioneer in the literary use of 'new Norwegian', a language derived through the native *Landsmaal* dialect from old Norsk.

GARCIA LORCA (gahrthé'-ah lork'ah), Federico (1899–1936). Spanish poet. B. in Granada, he had a special affinity with the gipsies of the region, and his *Romancero gitano* (1928, *Gipsy Ballad-book*) has all the spirit of Andalusian songs. In 1929–30 L. visited New York, and his experiences are reflected in *Poeta en Nuevo York*. Returning to Spain, he founded a touring theatrical company and himself wrote plays such as *Bodas de sangre* (*Blood Wedding*) and *La Casa de Bernarda Alba* (*The House of Bernarda Alba*). His finest poem is his *Lament* for the bullfighter Sánchez Mejías. He was shot by the Falangists.

GARD (gahr). French river, 35 m. long, a tributary of the Rhône, which it joins 4 m. above Beaucaire. It gives its name to G. dept.

GARDEN, Mary (1877–1967). Scottish soprano singer. She went to the U.S. at six, and was star of the Chicago Opera 1910–31, finding her greatest role as Mélisande in Debussy's opera. She retired in 1931.

GARDEN CITY. Town built in a rural area and designed to combine town and country advantages, with its own industries, controlled developments, private and public gardens, cultural centre, etc. The idea was proposed by the Englishman Ebenezer Howard, who in 1899 formed the G.C. Association, and the first G.C. was Letchworth near Hitchin. A 2nd, Welwyn, 22 m. from central London, was started in 1919. The New Towns Act, 1946, provided machinery for developing new towns on some of the principles advocated by Howard (e.g. Stevenage, begun in 1947), and there have been various similar schemes in Europe and in the U.S., but on the whole these have not kept the economic structure, or the industrial self-sufficiency or the permanent rural belt which formed an integral part of Howard's original idea.

GARDINER, Samuel Rawson (1829–1902). British

historian. Prof. of modern history at King's Coll., London, 1877–85, he was noted for his impartial objectivity, and especially for his well-documented series of books on the English Civil War period.

GARDINER, Stephen (c. 1493–1555). English churchman and statesman. After being secretary to Wolsey, he entered the king's service, became bishop of Winchester in 1531, and on Mary's accession was created Lord Chancellor. He played a prominent part in the attempted restoration of Catholicism.

GARDNER, Erle Stanley (1889–). American author. B. in Mass., he was in 1911 admitted to the California Bar, and in 1932 wrote his first crime story featuring the lawyer-detective Perry Mason, hero of film and television versions of later cases.

GARDNER, Dame Helen (1908–). British scholar. She specialises in the metaphysical poets, and has ed. the poetry and prose of Donne, and in 1966 became Merton Prof. of English Literature at Oxford. She was created D.B.E. 1967.

GARDNER, John (1917–). British composer. Prof. at the R.A.M. from 1956, he has produced a symphony (1947), the opera *The Moon and Sixpence* (1957), based on the Maugham novel; and other works incl. film music.

GARFIELD, James Abram (1831–81). 20th President of the U.S.A. B. in a log cabin in Ohio, he entered politics as a Republican and served with distinction in the Civil War on the side of the North. He was inaugurated President in 1881, but a few months later was shot in a Washington station by a madman.

GARGOYLE. Spout projecting from the roof-gutter of a building with the purpose of directing water away from the wall. The term is usually applied to the ornamental forms found in Gothic architecture; these were carved in stone and took the shape of fantastic animals, angels, or human heads.

GARHWAL. Himalayan district of Uttar Pradesh, India. It contains several shrines sacred to Hindus, e.g. Badrinath and Kedarnath. Area 5,628 sq. m.; pop. (1961) c. 1,000,000.

GARIBALDI (gahrébah/dé), Giuseppe (1807–82). Italian patriot. B. in Nice, he became a sailor, and in 1834 joined Mazzini's Young Italy society. Condemned to death for treason, he escaped to S. America where he lived the life of a soldier of fortune. He returned to Italy during the 1848 revolution, served with the Sardinian army against the Austrians, and commanded the army of the Roman republic in its defence of the city against the French. He subsequently lived in exile until 1854, when he settled on Caprera. He again fought against the Austrians in

* In 1964 reorganised to form the new depts. of L'Essonne (cap. Evry-Petit-Bourg), Hauts-de-Seine (Nanterre), Ville de Paris, Seine-Saint-Denis (Bobigny), Val de Marne (Créteil), Val d'Oise (Cergy) and Les Yvelines (Versailles).

(brandy). Silk is produced in 15 depts. Market-gardening and the growing of early vegetables are widespread. The richest pastoral areas are Normandy, Perche, and Flanders. Forestry and fishing are important. F. is self-sufficing in foodstuffs.

INDUSTRY. Minerals incl. coal in the N.E., the richest seams being in the Nancy and Longwy-Briey areas; iron and bauxite; and more recently oil from the Parentis field in the Landes; natural gas in the Lacq area in the Pyrenean foothills; and uranium near Autun, Clermont-Ferrand, Limoges and Nantes. Industry was formerly concentrated almost entirely in the N.E., Paris and Rhône valley areas, but under a series of post-war development plans new growth is being encouraged especially at the site of recent mineral discoveries, and hydroelectric stations now supply half the country's power. The chief manufactures are motor vehicles, radio and television sets, chemicals, textiles and processed foods.

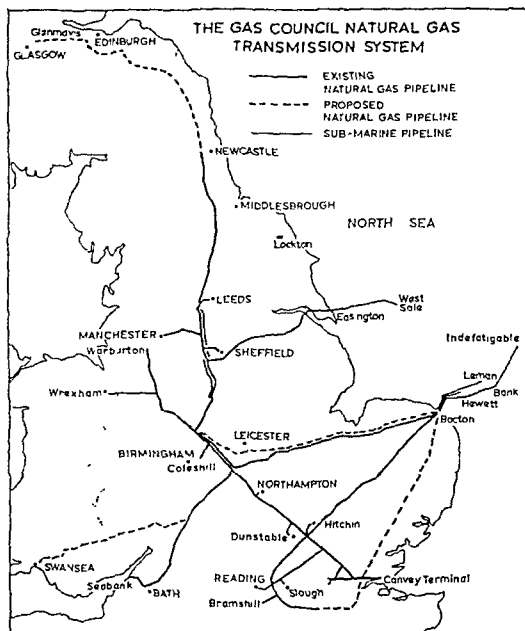

GOVERNMENT Under the constitution of 1958, as amended 1962, the 5th Republic has a pres. directly elected by universal suffrage, a National Assembly and a Senate which incl. overseas representatives. In 1968 De Gaulle announced drastic reforms of the Senate (incl. its merger with the Economic and Social Council) and of regional govt. to be put to the nation in a referendum, in which he was defeated 1969.

POPULATION. With a basis of 'Alpine' and 'Mediterranean', the French show representatives of every European physical type. About half the pop. still lives near to the soil. The great majority of the pop. are Roman Catholics but there is no State Church. Protestants number c. 1 million.

The largest towns are Paris, Marseilles, Lyons, Toulouse, Bordeaux, Nice, Nantes, and Strasbourg. There are 95 depts., in each of which the central government is represented by a prefect and to facilitate economic planning is divided into 21 regions, each with a regional prefect who is also prefect of one of its depts.: Alsace, Aquitaine, Auvergne, Bourgogne, Bretagne, Centre, Champagne, Franche-Comté, Languedoc, Limousin, Loire (Pays de la), Lorraine, Midi-Pyrénées, Nord, Normandie (Haute), Normandic (Basse), Région Parisienne, Picardie, Poitou-Charentes, Provence-Côte d'Azur-Corse, Rhône-Alpes. See FRENCH HISTORY, LANGUAGE, LITERATURE, etc.

FRANCESCA (fran'hches'kah). Piero della (c. 1418-92). Italian artist. A member of the Umbrian school, he was one of the earliest painters in oils. His masterpiece is the series of frescoes of the Legend of the True Cross in the church of San Francesco, Arezzo. Described as the greatest geometrician of his day, he has since been called the first Cubist because of the geometrical construction of his work.

FRANCIS II (1768-1835). Holy Roman Emperor.

GAS. 'Orion' the jack-up type rig designed specifically for drilling in the North Sea, seen in operation.

Courtesy of the Gas Council.

GASKELL, Elizabeth Cleghorn (1810–65). British novelist. B. at Chelsea, *née* Stevenson, she was brought up by an aunt in Knutsford, Cheshire, the Cranford of her later writings. She m. William G., a Unitarian minister. Her first novel, *Mary Barton* (1848), depicts the problems of life among Manchester factory-hands. Her masterpiece was *Cranford* (1853), a delicate study of village life. Later books include *Ruth* (1853), *North and South* (1855), *Sylvia's Lovers* (1863–4), and the unfinished *Wives and Daughters* (1866). She was a friend of Charlotte Brontë, and her life of her is a standard work.

GASOLINE. A mixture of hydrocarbons derived from petroleum, whose main use is as a fuel for internal combustion engines. It is colourless and highly volatile. In U.S.A. petrol is called gasoline.

GASPERI (gahspā'rē), Alcide de (1881–1954). Italian statesman. Imprisoned by the Fascists 1926–8, he was released to work in the Vatican Library. A founder of the Christian Democrat party, he was P.M. 1945–53, and worked for European unification.

GAS POISONING. Intoxication by gas. House gas contains a high proportion of carbon monoxide, which combines with the haemoglobin of the blood and prevents it from taking up oxygen, so that death is caused by failure of oxygen supply to the brain. The skin of the victim is stained pink by the haemoglobin. See GAS WARFARE.

GASSENDI (gasēndē'), Pierre (1592–1655). French philosopher, friend of Kepler and Galileo, prof. of mathematics from 1645 at the Collège Royal, Paris, and exponent of Epicurus.

GASTEROPODA. Class of molluscs, including snails, whelks, etc. They have a well-developed head and a rough tongue, and move by means of muscular contractions of the ventral surface or 'foot'. Except in the very simplest forms, the body is asymmetrical.

GASTRITIS. Inflammation of the lining of the stomach. It may be caused by corrosive poisons (e.g. lysol, caustic soda, strong acids), too high a concentration of alcohol, or infection. Chronic gastritis, which is common and responsible for much indigestion, may be caused by habitual failure to masticate food properly, dietary indiscretions, and

excessive use of alcohol, medicines, tea, and coffee.

GAS WARFARE. The offensive use of G. to produce a toxic, irritant, or lethal effect on the human body. The idea of G.W. developed with industrial chemistry, so that by 1899 at The Hague Conference the use of toxic substances for war was foreseen by the Great Powers, who (with the exception of the U.S.) pledged abstinence from their employment. However, in 1915 during the F.W.W., the Germans launched a cylinder attack with chlorine against the Allies, who subsequently retaliated in kind. G. shells and mustard G. were also used, accounting for many casualties – immediate and long-term. Chlorine is an example of a lung irritant and mustard G. of a vesicant; other types incl. adamsite, a sneeze gas, and chloropicrin, a tear gas. Most insidious and difficult to detect are nerve Gs., found on German airfields after the S.W.W.; these attack the central nervous system through any moist surface of the body, esp. the eyes. In the S.W.W. there was no G.W. – largely because of more effective counter-measures, e.g. respirators to filter out the noxious substances.

GATESHEAD. English port and industrial town (co. bor.) in Durham, on the Tyne opposite Newcastle. It is an engineering centre, and has chemical, glass, railway workshops, shipyards, etc. Pop. (1961) 103,232.

GATUN (gahtōōn'). U.S. town in the Panama Canal zone, 7 m. S. of Colon on the Atlantic coast. Lake G. was created by the building of G. dam, part of the Panama canal works, on the r. Chagres. Pop. c. 3,000.

GA'TWICK. Location in Surrey, England, 27 m. S. of London, formerly noted for its racecourse, obliterated by the construction 1956–8 of Gatwick Airport, London.

GAUCHO (gow'chō). South American tribe, part Indian part Spanish, inhabiting the Argentine and Uruguayan pampas. They are nomadic, fine horse-men, and expert in the use of the lasso and bolas.

GAUDIER-BRZESKA (gōdyā'-bresh'ka), Henri (1891–1915). French sculptor. He studied art at Bristol, Nuremberg and Munich, and became a member of the English Vorticist movement. His sculptures incl. 'The Dancer' and 'The Embracers'.

Best known for his fervently anti-war *Der Mensch ist Gut* (1917; *Man is Good*), he also wrote *Die Ursache* (1920; *The Cause of the Crime*) and *Karl und Anna* (1927; dramatized 1929).

FRANKAU (fran'kō), Gilbert (1884–1952). British novelist, best remembered for *Peter Jackson*, *Cigar Merchant* (1919) which reflected in its setting his experience in his father's tobacco business. His dau. Pamela F. (1908–67) was also a novelist.

FRANKEL, Benjamin (1906–). British composer. Originally a watchmaker's assistant, he studied the piano in Germany, and continued his studies in London while playing jazz as a violinist in night-clubs. He has written numerous film scores, and chamber music of an individual, serious quality.

FRANKFURT-AM-MAIN. City of W. Germany, 45 m. N.N.E. of Mannheim. F. was a free city until in 1866 it was incorporated in Prussia. F.-am-M. is a very important commercial centre and inland port, with electrical and machinery industries, and the headquarters of the I.G. Farbenindustrie. Heavily damaged during the S.W.W., it became the H.Q. of the U.S. zone of occupation and of the Anglo-U.S. zone, 1947–9. Pop. (1966) 678,506.

FRANKFURT-AM-MAIN.

The original 16th cent. house where Goethe lived from his birth in 1749 until 1775 was destroyed by bombing in 1944. The new Goethehaus, opened in 1951, four years after its foundation stone was laid by André Gide, is a Goethe museum like its predecessor (opened in 1897), with archives and a library representative of German literature of the period.

Courtesy of the German Tourist Information Bureau.

FRANKFURT-AN-DER-ODER. City in E. Germany, 50 m. E.S.E. of Berlin, cap. of F. dist. Its industries include chemicals, iron and steel goods, particularly machinery, paper, and leather. Pop. (1966) 60,000.

FRANKFURTER, Felix (1882–1965). American lawyer. B. in Vienna, but ed. in U.S., he became an attorney in New York. He was prof. of administrative law at Harvard 1914–39, and was then appointed an associate justice of the Supreme Court (1939–62). As a teacher and author he made many important contributions to legal traditions and literature.

FRANKINCENSE. A resinous product obtained from trees of the *Boswellia* genus, Burseraceae family, natives of Africa, India, and Arabia, and used in incense.

FRANKLIN, Benjamin (1706–90). American statesman, scientist, and writer. B. in Boston of poor parents, he ran a printing business in Philadelphia so successfully that by 1749 he could retire and devote himself to science. His proof that lightning is a form of electricity, his discovery of the distinction between negative and positive electricity, and his invention of the lightning-conductor, made him internationally famous. He was elected to the Pennsylvania Assembly, and in 1754 put forward the first plan for a federation

BENJAMIN FRANKLIN.
Courtesy of the Pennsylvania Historical Society.

of the American colonies. As agent for Pennsylvania in London 1764–75, he used his influence to procure the repeal of the Stamp Act. Returning to America, he helped to draw up the Declaration of Independence, and as ambassador to France, 1776–85, negotiated an alliance with France and the peace settlement with Britain. He was president of Pennsylvania 1785–8, and took part in the drafting of the U.S. constitution. During his later years he wrote an autobiography.

FRANKLIN, Sir John (1786–1847). British explorer. B. in Lincs, he fought at Copenhagen and Trafalgar, took part in expeditions to Australia, the Arctic, and N. Canada, and in 1845 commanded an expedition in search of the N.W. Passage on which he perished. His fate remained a mystery until 1859, when records were discovered by a search party.

FRANKLIN. A district of Northwest Territories, Canada; area 549,253 sq. m.

FRANKS. A Germanic people from whom France derived its name. They overran Belgium and N. France in the 4th–5th cents.; their king, Clovis, accepted Christianity and founded the French monarchy. His successors extended their rule over all France and W. Germany. In France the Fs. and Gallo-Romans became fused in the 9th cent. into a single people speaking a modified form of Latin.

FRASER, Bruce Austin, 1st baron F. of North Cape (1888–). British admiral. Controller of the navy 1939–42, and responsible for its expansion in the S.W.W. and the development of special amphibious vessels, he next became successively C.-in-C. of the Home, British and Eastern Pacific fleets (1943–6), co-operating with the American fleet in the successful conclusion of the Japanese war. He was made a peer in 1946, Adm. of the Fleet in 1948, and was First Sea Lord 1948–51.

FRASER, Peter (1884–1950). New Zealand Labour statesman. B. in Scotland, he joined the I.L.P. in 1908. In 1910 he went to N.Z. and soon became prominent in the Labour movement there. He held various cabinet posts 1935–40, and was P.M. of the Dominion 1940–9.

FRASER. Canadian river, in British Columbia. It rises in the Yellowhead Pass of the Rockies and flows N.W., then S., then W. to the Strait of Georgia. It is 785 m. long and famous for salmon.

FRATERNITIES. Student societies peculiar to U.S. univs. and colls. Usually named with Gk. letters, they are nominally secret, with badge, passwords, motto and initiation rites, some of a degrading nature. They have a central governing body and a 'chapter' at each coll. Although mainly residential, some Fs. are purely honorary, membership being on the basis of scholastic distinction, e.g. Phi Beta Kappa, earliest of the Fs. founded at William and Mary Coll., Va., in 1776. Sororities are the feminine equivalent.

FRAUD. In law, to establish F., three things are essential: (1) The statement must be factually untrue and made with the intent that it should be acted upon; (2) the person making the statement knows it is untrue or remains deliberately careless whether it is true or not; (3) the party to whom the statement is made acts upon it to his detriment. A contract based on F. may be voided by the injured party in addition to his having an action for damages.

FRAUNHOFER (frown'höfer), Joseph von (1787–1826). German physicist. B. in Bavaria, he was apprenticed to a glass cutter, and in 1807 founded an optical institute. The dark lines in the solar spectrum (F. lines), that revealed the chemical composition of the sun's atmosphere, were first accurately mapped by him.

FRAY BENTOS (frah'ē bān'tos). River port in Uruguay, famous for its meat-packing industry, and particularly for corned beef. Pop. (est.) 10,000.

FRAZER, Sir James George (1854–1941). Scottish

GEDDES (ged'ez), Sir Eric (1875–1937) British. Cons. politician. Primarily an expert in railway administration, he was Min. of Transport under Lloyd George 1919–21, and as chairman of the 1921 committee on national expenditure recommended drastic economies known as the 'G. axe'.

GELONG (gēlong). Port and city on an inlet of Port Phillip Bay, Victoria, Australia. It exports wool and wheat, and manufactures textiles, glass, fertilizers, etc. Prince Charles was a student at the C. of E. Grammar School, the 'Eton of Australia', in 1966. Pop. (1966) 104,974.

GEIGER (gī'ger) **COUNTER**. Geiger-Müller, Geiger-Klemperer, Rutherford-Geiger counters are devices often referred to under the generic name G.C. (derived from the name of Hans G. (1882–1945), one-time student of Rutherford and prof. of physics at Kiel who was active in their development). They are used for detecting and/or counting nuclear radiations and particles. The principle on which the G.C. operates is the detection of the momentary current which passes between electrodes in a suitable gas when a nuclear particle or a radiation pulse causes ionization in the gas. The electrodes are connected to electronic devices which enable the intensity of radiation or the number of particles passing to be measured.

GEISHA (gā'sha). Female entertainer (music, singing, dancing, etc.), in Japanese tea-houses and private parties. Gs. survive mainly as a tourist attraction.

GELBER, Jack (1932–). American playwright. Ed. at the univ. of Illinois, he was unknown until his very frank study of drug addiction *The Connection* was produced 'off-Broadway' in 1959, and in Paris and London in 1961, and also filmed.

GELDERLAND. Prov. of the Netherlands lying between the IJssel Meer on the N.W. and the German frontier on the S.E. It is drained by the IJssel, the Waal, and the Maas, and is a cattle-rearing area with flax, wheat, sugar beet, and tobacco as important crops. The scrubland in the N.W., called the Valuwe, is a favourite holiday district. The cap. is Arnhem; other towns are Nijmegen, Apeldoorn, and Zutphen. It includes part of the S.E. polder drained from the Zuider Zee. Area 1,930 sq. m.; pop. (1966) 1,434,439.

GELIBOLU. Another form of GALLIPOLI.

GELLIVARE. Another form of GÄLLIVARE.

GELSENKIRCHEN (gel'zenkēr'khen). City in the Ruhr, W. Germany, 6 m. N.E. of Essen, centre of the coal-mining area, with many iron and steel works. Devastated in the S.W.W., it made a rapid recovery. Pop. (1966) 362,508.

GEM. A mineral, precious by virtue of its composition, hardness, and rarity, cut and polished for ornamental use, or engraved. Of 120 minerals known to have been used as gemstones, only about 25 are in common use in jewellery; of these the diamond, emerald, ruby and sapphire are classified as precious, and the topaz, amethyst, opal, aquamarine, etc., as semi-precious. Among synthetic precious stones to have been produced successfully, on a commercial scale, are rubies and sapphires (first produced by the Frenchman Verneuil in 1904 and 1909 respectively), emeralds (first made by German scientists c. 1930), and diamonds (first made by G.E.C. in U.S.A. in 1955). Pearls are technically not Gs., though the term is sometimes extended to cover them.

GEMSBOOK. See ORYX.

GENE (jēn). The unit of inherited material situated on the chromosome within the cell nucleus. It has a constant effect on the development of the individual bearing it, other conditions being constant. Gs. are indivisible, duplicate themselves, and are highly stable, though occasionally they mutate.

GENEALOGY. The study and tracing of family pedigrees. Formerly of limited aristocratic interest,

G. is increasingly popular both in Britain and the U.S.A. The Soc. of Genealogists in London (estab. 1911) with its library, thousands of family papers, marriage index (6,000,000 names of persons married before 1837), collection of parish register copies, etc., undertakes and assists research.

GENÉE (zhēnā'), Adeline. Stage-name of the British dancer Dame Adeline Genée-Isitt (1878–). B. in Denmark, she went to London at 19 where she danced many years and was pres. of the Royal Academy of Dancing 1920–54, being created D.B.E. 1950. The *Adeline G. Theatre* (1967) at E. Grinstead, Sussex, commemorates her work.

GENERAL. An official of superior rank having wide authority. Usually in military sense – a G. officer commanding a body of troops larger than a regiment, or more than one arm of the service. In the British and U.S. armies the ranks are Maj.-G., Lt.-G. and G. Supreme commanders in Britain are field marshals, and in the U.S. Gs. of the army.

GENERAL ASSEMBLY. See SCOTLAND, CHURCH OF.

GENE'TICS. The scientific study of heredity, variation, development, and evolution. It accounts for the resemblances and differences to be found among organisms of related descent. Normal cells contain paired chromosomes, which separate during the formation of the germ cell, ultimately containing only one set. When male and female germ cells fuse, the chromosomes pair themselves off independently,

NORMAL MALE KARYOTYPE

GENETICS. The number and shape of the chromosomes, formed by the linking together of the DNA molecules of a cell, are characteristic of a species. Above are the human chromosomes (male) in a very thinly spread-out skin cell grown in tissue culture. Below they have been provisionally arranged in order of size, though several of the same size have not yet been distinguished from one another. The last pair are the sex chromosomes, the male Y being very small, and the inset shows a slightly enlarged XX pair from a female cell.

Photo: Dr. D. T. Hughes, Chester Beatty Research Institute

FREEFALLING. Sport also known as skydiving, which entails falling from an aircraft and then, by a correct positioning of the body, gliding down from anything up to 12,000 ft. until 2,000 ft. — the level at which a parachute must be opened. In 1960 J. W. Kittinger (U.S.A.) estab. a height record of 102,800 ft.

FREE FRENCH. Movement formed by Gen. de Gaulle in England in June 1940, consisting of French soldiers who continued to fight against the Axis after the Franco-German armistice. They took the name Fighting France in 1942 and served in many campaigns, among them Gen. Leclerc's advance from Chad to Tripolitania 1942, the Syrian campaigns 1941, the campaigns in the Western Desert, the Italian campaign, the liberation of France, and the invasion of Germany. Their emblem was the Cross of Lorraine (illus.), which was used by Joan of Arc.

FREEHOLD. An estate in land which is for an indefinite period and is therefore contrasted with a leasehold, which is always for a fixed term of years. In practical effect, a F. is absolute ownership.

FREEMAN, John (1915–). British diplomat. Editor of the *New Statesman* 1961–5, he also estab. a reputation in television interviews. He was High Commissioner in India 1965–8, and Ambassador to Washington from 1969.

FREEMAN, Richard Austin (1862–1943). British novelist. Himself a doctor, he created a medical detective, Dr. Thorndyke, who appeared in numerous books: the model for his hero was the authority on poisons and medical jurist A. S. Taylor (1806–80).

FREEMASONRY. Linked national organizations open to men over 21, united by the possession of a common code of morals and beliefs, and of certain traditional 'secrets'. Apart from requiring a belief in the 'Great Architect of the Universe' and acceptance of its moral code, English F. maintains strict impartiality in politics and religion. F. is descended from an operative guild of masons which existed in the 14th cent., and by the 16th was admitting men unconnected with the building trade. The name 'freemason' may mean a full member of the guild, or one working in free-stone, i.e. a mason of the highest class. Modern F. originated with the formation of the 1st Grand Lodge, or governing body, in 1717, and during the 18th cent. spread from Britain to America, the colonies, and Europe. In France and other European countries, F. assumed a political and anti-clerical character; it has been condemned by the papacy, and in certain countries was suppressed by the State. Both in Britain and the U.S.A. the freemasons maintain hospitals and institutions for their sick or aged members, and schools for their orphans.

FRESIA. Genus of plants of the Iridaceae family. It grows from a corm and produces funnel-shaped flowers in a wide range of colours.

FREETHOUGHT. The intellectual movement which arose in Europe following the Reformation, chiefly in critical opposition to the dogmatic statement of the Christian faith. In Britain it was represented by the Deists in the 17th and 18th cents., who were followed by Carlile, Holyoake, Bradlaugh, Lord Morley, J. B. Bury, Bertrand Russell, and many others. Its propagating organizations are the Rationalist Press Association and the Secular Society, and it found a historian in J. M. Robertson.

FREETOWN. Capital of Sierra Leone, W. Africa. It has an excellent harbour. Pop. (1963) 128,000.

FREE TRADE. International trade free from all tariffs except those levied for revenue purposes only. The case for F.T., first put forward in the 17th cent., received its classic statement in Adam Smith's *Wealth of Nations* (1776). The movement towards F.T. began with Pitt's commercial treaty with France in 1786, and triumphed with the repeal of the Corn Laws (1846). Britain's superiority to all rivals as a manufacturing country in the Victorian age made F.T. to her advantage, but when that superiority was lost the demand for Protection was raised, notably by Joseph Chamberlain. The Ottawa Agreements (q.v.) of 1932 marked the end of F.T. until in 1948 an international treaty, the *General Agreement on Tariffs and Trade* (GATT), came into operation. A drastic series of resultant international tariff reductions was agreed in the Kennedy Round Conference 1964–7, and an International Trade Centre was estab. in 1964 within the GATT organization to help developing countries. See also EUROPEAN UNION.

FREE WILL. The metaphysical doctrine that men are endowed with a Will as an independent faculty that enables them to choose between different courses of action. The theological dogma of F.W. states that man was so created by God that he may choose between good and evil. The opposite view is determinism (q.v.), necessitarianism, or predestination.

FREEZING. The change from a liquid to a solid state, as when water becomes ice. For a given substance, F. occurs at a definite temperature, known as the *freezing point*, that is invariable under similar conditions of pressure, and the temperature remains at this point until all the liquid is frozen. The amount of heat per unit mass that has to be removed to freeze a substance is a constant for each particular substance and is known as the latent heat of fusion. Water expands just before freezing point is reached. Ice is lighter than water, therefore: and if pressure is applied the freezing point will be lowered, as expansion is retarded. The presence of dissolved substances in the liquid also lowers the freezing point, the amount of lowering being proportional to the molecular concentration of the solution: 2 practical applications of this principle are seen in anti-freeze mixtures for car radiators and the use of salt to melt icy roads.

FREGE (frä'ge), Gottlob (1848–1925). German philosopher. The founder of modern mathematical logic, he pub. in 1884 *The Foundations of Arithmetic* which was to influence Wittgenstein. His work, neglected for a time, has attracted renewed attention in recent years in Britain and the U.S.

FREIBURG-IM-BREISGAU (fri'boorg-im-bris-gow). City in Baden-Württemberg, Germany. It is the seat of an archbishopric and a univ., and manufactures tobacco, paper, etc. Pop. (1966) 156,628.

FREJUS. French town in Var dept., the Roman Forum Julii, seat of a bishopric from the 4th cent. It was the scene of a disastrous flood in 1958, due to the bursting of a dam on the Reyran r., in which at least 300 were killed. Pop. (1962) 20,318.

FREMANTLE. Chief port of W. Australia, at the mouth of the Swan r., 12 m. S.W. of Perth. It has boat-building yards, sawmills, iron foundries, etc., and exports wheat and timber. Pop. (1967) 32,680.

FRENCH, Sir John. See YPRES, EARL OF.
FRENCH ANTARCTICA. Territory, in full French Southern and Antarctic Territories, created 1955 and consisting of Adélie Land, on the antarctic continent (136° to 142° E. long.), and the Kerguelen and Crozet archipelagos and Saint Paul and Nouvelle Amsterdam islands in the southern seas. It is admin. from Paris, but Port-aux-Français on Kerguelen is the chief centre, with several research stations. There are also research stations on Amsterdam and in Adélie Land, and a meteorological station on Possession Is. in the Crozet archipelago: Saint Paul is uninhabited. Total area 3,900 sq. m.: pop. c. 150 research workers.

the Guard, the oldest in the British Army; it was reconstituted in 1862. It consists of army officers of distinction under a captain, a peer, whose appointment is political. Theoretically the first bodyguard of the Sovereign, its functions are ceremonial.

GENUS (jē nus). A number of species in the animal or plant world, when recognized to be related, are grouped together into a genus; in the Linnean nomenclature each species is given 2 names, the former of which is that of the genus; e.g. the domestic dog is known biologically as *Canis familiaris*. Genera are grouped into families, and these into orders.

GEOGRAPHY. The study of the distribution and interrelation of phenomena connected with the earth's surface. The earliest geographers strove to determine the shape and size of the earth and the distribution of land and sea. The most notable were Herodotus (c. 484–c. 425 B.C.), Erastotenes (c. 284–204 B.C.), and Ptolemy (c. A.D. 150). During the 16th cent. the great cartographers Mercator, Hondius, and Blaeu made use of the information collected by explorers and travellers in the construction of their maps. Saxton and Speed contributed much to the map of England.

In 1488 Diaz discovered the Cape of Good Hope. The Atlantic crossing of Columbus in 1492 was followed by further exploration of the coasts of Africa, Asia, and America including Vasco da Gama's discovery of a sea-route to India (1497), and the circumnavigation of the globe by a ship of Magellan's

fleet (1521): Magellan himself was killed in the Philippines, April 27, 1521. Hartogs discovered the W. coast of Australia (1616), Tasman reached New Zealand (1642). Cook sailed round New Zealand (1769), and explored part of the E. coast of Australia (1770). S. America was penetrated by Humboldt (1800), Africa by Livingstone and Stanley (mid 19th cent.). The N. Pole was reached by Peary (1909), and the S. by Amundsen (1911) and Scott (1912). Systematic survey of the bed of the ocean and life in the seas began with the *Challenger* expedition (1872–6).

G. in the 20th cent. has several branches: *Physical* geographers study landscapes and the natural processes by which they have been formed, including earth movements, and the effects of weather, running water, and moving ice. They are also concerned with weather and its causes, and with climate. *Economic G.* is concerned with the distribution and modes of occurrence of industrial raw materials; the means whereby they are assembled for manufacture, often over considerable distances; and the accessibility to markets for the finished products. It also includes natural factors governing agriculture, the crops produced and their markets; and the reasons for differences in types of farming in different areas. *Human G.* concerns man in relation to his environment, the distribution of settlement, urban and rural; and the special adaptations of different peoples and cultures to the conditions in which they live. *Historical G.* seeks to reconstruct the G. of past periods, e.g. the Norman

THE GEOLOGICAL TIME SCALE

Eras	Periods and Systems	Derivations of Names	Approximate dates in years	Distinctive Life	
CAINOZOIC <i>Kainos or Cenozoic = recent</i> <i>Zoe = life (Recent life)</i>	{ QUATERNARY Recent or Holocene Glacial or Pleistocene }	Holos = complete	Present day 25,000 1,000,000	{ Modern Man Stone-Age Man

of Capet, which assumed the crown in 987, ruled only the district round Paris, and were surrounded by vassals stronger than themselves. During the 11th-13th cents. the royal power was gradually extended, with the support of the Church and the townspeople, but progress was later retarded by the 100 Years War (1337-1453). The restoration of the royal power was finally achieved by 1500, through the policies of Louis XI (1461-83) and the annexation of Burgundy and Brittany to the crown.

Charles VIII's Italian wars initiated a struggle with Spain for supremacy in W. Europe which lasted 2 cents. (1503-1697). Protestantism made considerable progress in France, and was adopted by a party of the nobles for political reasons; the result was a succession of civil wars, fought under religious slogans (1562-98). Henry IV (1589-1610) restored peace, established religious toleration, and made the monarchy absolute. His work was continued by the great ministers Richelieu and Mazarin, who by their intervention in the 30 Years War secured Alsace and made France the leading power in Europe. Louis XIV (1643-1715) embarked on an aggressive policy which united Europe against him; in his reign began the conflict with Britain which lost France her colonies in Canada and India. Misgovernment and unsuccessful wars aroused increasing discontent and resulted in the French Revolution (q.v.).

The revolution abolished feudalism and absolute monarchy, but failed to establish democracy. Foreign attempts at intervention led to wars (1792-1802, 1803-15), which gave Napoleon his opportunity to set up his military dictatorship. After Waterloo the Bourbon monarchy was restored. Charles X's attempt in 1830 to substitute absolute for limited monarchy provoked a revolution which placed his cousin, Louis Philippe, on the throne; he in turn was overthrown in 1848, and the 2nd Republic set up. Its president, Louis Napoleon, Napoleon I's nephew, restored the empire in 1852, with the title of Napoleon III. His ambitious foreign policy ended in defeat in the Franco-Prussian War (1870-1) and

the foundation of the 3rd Republic.

The new republic had an uneasy career, and on several occasions conflict between the clerical and militarist right and the Radical and Socialist left threatened civil war. Meanwhile a new colonial empire was being built up in Africa and Indo-China. After 1900 politics were largely dominated by the approach of the F.W.W. The war left France exhausted, and desperately seeking security in a system of E. European alliances. An unsuccessful Fascist coup in 1934 prepared the way for the victory in 1936 of a Radical-Socialist-Communist alliance, which introduced many social reforms; this broke down in 1938, and it was an alliance of the Radicals with the right which declared war on Germany in 1939. The German invasion of 1940 allowed the extreme right to set up a puppet dictatorship under Pétain, but resistance was maintained by the Free French under de Gaulle and the *maquis* until the liberation of 1944. The republic was re-established by a national govt., from which de Gaulle broke away to form a right-wing opposition in 1946-7, and the Communists were ejected in 1947. Open warfare with the Communists in Indo-China (q.v.) ended after 7½ years in the Geneva agreement of 1954, but a series of unstable govts. paved the way for the return to power of de Gaulle in 1958 and the inauguration of the 5th Republic. In 1962 independence was granted to Algeria (q.v.), and from 1963 France was economically strong. De Gaulle abroad offered friendship to W. Germany and E. Europe, condemned Israel and also the U.S. in Vietnam, opposed Britain's Common Market membership, and encouraged French-Canadian nationalism. Gaullists achieved only a bare majority in the 1967 elections, but in reaction to student unrest and mass strikes, achieved in 1968 the largest majority in Fr. republican history. In the new govt. then formed Couve de Murville (q.v.) replaced Pompidou (q.v.) as P.M. Continuing unrest led to a referendum 1969 on an increased degree of regional govt. and reform of the senate, and on the rejection of his proposals De Gaulle himself resigned. Pompidou became the Gaullist candidate as his successor.

FRENCH INDIA. Former French possessions in India consisted of Pondichéry, Chandernagore, Karikal, Mahé, and Yanam (Yanam). By 1954 they had been transferred to India.

FRENCH LANGUAGE. One of the Romance languages, F. is a development of the Vulgar Latin used for ordinary intercourse in Roman Gaul. Dialects spoken N. of the Loire formed the *langue d'oïl* and to the S. the *langue d'oc*, and by 813, when an assembly of bishops at Tours decided to abandon Latin in their preaching, the tongue spoken in N. Gaul differed sufficiently from Latin for the existence of a F.L. to be affirmed. Modern F. was evolved from Francien, the dialect of the Île de France, which gained supremacy over other northern rivals in the 13th cent. Although the medium of a rich and varied literature, it remained a vulgar tongue until in 1539 the Decree of Villers-Cotterêts enforced F. as the vehicle of administration and justice.

From the beginning of the 17th cent. the F.L. became fixed: the F. Academy (founded in 1635) became its guardian, and Richelet's *Dictionnaire* (1680) stabilized its form and meaning. Developed by the *salons* and by the classical writers, F. became the polite language of Europe. The democratization of France at the Revolution assisted the gradual disappearance of the *patois*, and prepared the way for the rejuvenation of the romantic period.

Today F. is spoken not only in France but in the French Community and by several millions of Swiss, Belgians, and F. Canadians in the U.S.A. as well as in Canada.

FRENCH LITERATURE. The Middle Ages. The *Chanson de Roland* (c. 1080) is the greatest of the

GEORGE III

Photo: N.P.G.

parliament, and by wholesale bribery built up his own party, the 'king's friends'. His autocratic policy was largely responsible for the loss of the American colonies, and his influence was constantly exerted against Catholic emancipation and other reforms. He was subject throughout his life to attacks of lunacy, which in 1811 became permanent. He m. in 1761 Princess Charlotte of Mecklenburg-Strelitz.

GEORGE IV (1762–

1830). King of Great Britain. He received a strict up-

bringing from his father, George III, and early reacted into a life of debauchery. He secretly m. an R.C. widow, Mrs. Fitzherbert, in 1785, but in 1795 he also m. Princess Caroline of Brunswick in return for a settlement of his debts. He acted as regent during his father's madness 1811–20, and succeeded him as king. On his accession in 1820 he attempted to divorce Caroline, but the project was dropped for fear of revolution.

GEORGE V (1865–1936). King of Great Britain. The 2nd son of Edward VII, he served in the navy until 1892, when on his elder brother's death he became heir to the throne. In 1893 he m. Princess May of Teck (Queen Mary) and had 5 sons and a dau. He succeeded his father in 1910 and was crowned in 1911. During the F.W.W. he paid several visits to the front, and concerned himself actively with war policy. During all the great crises of his reign, notably in 1910, 1914, and 1931, he played the part of a wise but unobtrusive counsellor.

GEORGE VI (1895–1952). King of Great Britain. The 2nd son of George V, he served in the navy in the F.W.W. (being present at the battle of Jutland) and then in the R.A.F.; subsequently studying at Cambridge. Created duke of York in 1920, he m. in 1923 the Lady Elizabeth Bowes-Lyon, and 2 dau. were born, Elizabeth (q.v.) in 1926 and Margaret [Rose] (q.v.) in 1930. On Edward VIII's abdication in 1936 he succeeded to the throne, and was crowned in 1937. With his consort he visited France (1938), Canada and U.S.A. (1939), and S. Africa (1947). During the S.W.W. he visited the Normandy and Italian battlefields. He was endeared to his people by an exemplary family life, a strong sense of duty, and the personal courage to overcome a speech impediment and endure ill-health.

GEORGE VI. He came to the throne at a time of national crisis and reigned through a troubled period in world history. He often referred to the sustaining happiness of his home life, and here we see him with his family in a detail from a painting (1950) by H. J. Gunn.

GEORGIA. The climate is subtropical at Sukhumi and palm trees frame the entrance to the State Drama Theatre.

Photo: Novosti Press Agency.

GEORGE. Name of 2 kings of Greece. **George I (1845–1913),** 2nd son of Christian IX of Denmark, became king of Greece in 1863. He was assassinated at Salonika in 1913. **George II (1890–1947)** became king on the expulsion of his father king Constantine in 1922, but in 1923 was himself overthrown. He was restored by a military coup d'état in 1935, and soon abolished the constitution and set up a dictatorship under Metaxas (q.v.). He went into exile 1941–6.

GEORGE, Henry (1839–97). American land reformer. His solution of all economic problems by a 'single tax' on land values, expounded in *Progress and Poverty* (1879), attracted many people.

GEORGE, St. Patron saint of England. He is said to have been martyred at Lydda in Palestine, probably under Diocletian, but the other elements of his legend are of doubtful historicity. The story of St. G. and the Dragon, evidently derived from the Perseus legend, first appears in the 6th cent. The cultus of St. G. was introduced into western Europe by the Crusaders, and his feast day is April 23.

GEORGE (geh-ohr'ge), Stefan (1868–1933). German poet. His early poetry was influenced by the French Symbolists but his conception of himself as the seer and leader of a small band regenerating the German spirit first appears in *Der Teppich des Lebens* (1899). *Der Siebente Ring* (1907, *The Seventh Ring*) contains some of his finest verse and deifies the young man whom he sees as a substitute for Christ. *Das Neue Reich* (1928) shows his realization that the F.W.W. had failed to exert the purifying effect he had hoped for. He rejected Nazi overtures, and went to Switzerland, where he died.

GEORGE CROSS. The supreme civilian award in Britain for acts of the greatest courage in circumstances of extreme danger, instituted in 1940. It consists of a silver cross with a medallion in the centre bearing a design of St. George and the Dragon, and is worn on the left breast before all other medals except the V.C. The G.C. was conferred on the island of Malta in 1942. The George Medal, also instituted in 1940, is a civilian award for acts of great courage. The medal is silver and circular, bearing on one side a crowned effigy of the sovereign, and on the reverse St. George and the Dragon. It is worn on the left breast.

GEORGETOWN. Seaport and cap. of Guyana, near the mouth of the Demerara. Founded 1781, and named by the British, it was held 1784–1812 by the Dutch who re-named it Stabroek; it was ceded to Britain in 1814. Pop. (1966) 176,100.

GEORGE TOWN. Chief port of the Federation

FREUD (froid), Sigmund (1856–1939). Originator of psychoanalysis (q.v.). He was b. of Jewish parents in Freiberg, Moravia, and from 1860 lived at Vienna until, following the Nazi occupation in 1938, he migrated to London. He was influenced by Charcot and the researches into hysteria by the Viennese physician, Josef Breuer. With the latter he collaborated in the development of the cathartic method, which employed a hypnotic technique, but he soon abandoned hypnotism and developed the method of free association; this still remains the basic procedure in psychoanalysis. F.'s many books include *The Interpretation of Dreams* (1900), *The Psychopathology of Everyday Life* (1901), *Totem and Taboo* (1913), *The Ego and the Id* (1923), *The Future of an Illusion* (1927), and *Civilization and its Discontents* (1930). His dau. Anna F. (1895–), a naturalized British citizen, is a psychoanalyst and in 1938 became director of the Hampstead Child Therapy Clinic. His grandson Lucian F. (1922–), son of Ernst F., is an artist noted for his portraits and still-lives.

SIGMUND FREUD'

Photo: Ernst Freud.

FREYBERG (fri'-), Bernard Cyril, baron (1889–1963). New Zealand soldier. B. in London, he was ed. at Wellington Coll., N.Z., and served in the F.W.W., becoming the youngest brigadier-general in the British Army; he won the V.C. and D.S.O. with 2 bars, and his courage became legendary. During the S.W.W. he commanded the N.Z. expeditionary force, and Allied forces in Crete in 1941, and later fought in the Western Desert and in Italy, receiving a third bar to his D.S.O. He was Gov.-Gen. of N.Z. 1946–52.

FREYTAG (fri'tahg), Gustav (1816–95). German writer. B. in Silesia, he was a journalist in Leipzig from 1848, wrote plays, a fine treatise on dramatic technique (1863), and the realistic novels *Soll und Haben* (1855), and *Die verlorene Handschrift* (1864). He also pub. a collection of historical documents, *Bilder aus der deutschen Vergangenheit* (1859–67), and a series of historical novels *Die Ahnen* (1872–80).

FRIAR (Lat. *frater*, Fr. *frère*). Name given to monks of all orders, but originally the title of members of

the mendicant orders, the chief of which were the Franciscans or Minors (Grey Friars), the Dominicans or Preachers (Black Fs.), the Carmelites (White Fs.), and Austin Friars (Augustinians).

FRIAR'S BALSAM. A compound tincture of benzoin. It is used (1) in boiling water as an inhalant, (2) internally, a few drops swallowed often on a lump of sugar against coughs and colds, and (3) externally to cover abrasions.

FRIBOURG (fréboor'). City in Switzerland, on the r. Sarine, cap. of F. Canton. Pop. (est.) 29,000. The leading products of the canton are cheese, esp. in the Gruyère district, timber, and tobacco. Area 645 sq. m.; pop. (1960) 159,800.

FRICK, Wilhelm (1877–1946). German Nazi leader. A Bavarian, he was among Hitler's earliest followers. As Reich Minister of the Interior (1933) he sponsored legislation against the Jews, the trade unions, and the Press. In 1943 he succeeded von Neurath as 'Protector' of Bohemia-Moravia. Arrested in 1945, he was tried at Nuremberg, found guilty, and hanged.

FRICTION. F. is the force which prevents one body sliding over another, and it occurs in solids, liquids, and gases. The coefficient of F. between 2 solid surfaces is equal to the force required to move one surface over the other, divided by the total force pressing the 2 surfaces together. F. is greatly reduced by the use of lubricants such as oil, grease, and graphite, and air bearings are now used to minimize the F. in high-speed rotational machinery. In other instances F. is deliberately increased by making the surfaces rough, e.g. brake linings, driving belts, soles of shoes, and tyres. F. is also important in problems of fluid flow.

FRIEDRICHSHAFEN (frē'drikshahfen). Town and tourist centre on the N.E. shore of Lake Constance, Baden-Württemberg, S. Germany. Zeppelins were made there. Pop. c. 28,000.

FRIENDLY SOCIETY. The F.S. movement arose mainly as an attempt to meet the needs caused by loss of income through sickness. In Great Britain the movement was the successor in this field of the great medieval guilds, but the period of its greatest expansion was in the late 18th and early 19th cents., following the passing in 1797 of the 1st legislation providing for the registration of F.Ss. There are now some 9,000 registered Ss. and their funds total c. £300,000,000; among the largest are the National Deposit, Odd Fellows, Foresters, and Hearts of Oak. In the U.S. similar 'fraternal insurance' bodies incl. the Modern Woodmen of America (1883) and the Fraternal Order of Eagles (1898).

FRIENDS, Society of. See QUAKERS.

FRIESE-GREENE (fréz-), William (1855–1921). British photographer and early experimenter in cinematography. Although his patent of 1890 was upheld in U.S. in 1910, the 1st functional moving-picture camera is generally credited to the French physiologist Marey, in 1888.

FRIESLAND (fréz'-). Province of the Netherlands, bordering the IJssel Meer. Parts are below sea-level; reclamation of the former Zuyder Zee is adding to its agricultural area. The Frisian breed of cattle is famous. Leeuwarden is the cap. and largest town. Area 1,250 sq. m.; pop. (1966) 506,311.

FRIESZ, Othon (1879–1949). French artist. One of the most robust of the Fauves, he was the son of a sea-captain and had an instinct for rich colour and volume in landscapes, still-life, or interpretations of figures, e.g. 'Bathers' and 'Portrait of the poet Fernand Fleuret'.

FRIGATE. Originally a small swift undecked sailing vessel, used in the Mediterranean. The name was first applied to a type of warship in the 18th cent. See WARSHIP.

FRINGILLIDAE (frin'il'idē). Family of birds in the order Passeriformes. They are small, hard-billed

FRESCO. 'Isaiah' - one of Michelangelo's frescoes for the Sistine Chapel in the Vatican.

DIVISIONS OF GERMANY

	Area in sq. m.	Pop. in 1,000s	Capital
Federal Republic of (Western) Germany			Bonn

	137,561	76,874	

*Divided 1945–52 into *Länder* (Brandenburg, Mecklenburg, Saxony, Saxony-Anhalt, Thuringia) based on the old duchies; re-divided 1952 into 14 districts (*Bezirke*) each named after its chief town: Dresden, Erfurt, Frankfurt-on-Oder, Gera, Halle, Karl-Marx-Stadt (Chemnitz), Kottbus, Leipzig, Magdeburg, Neubrandenburg, Potsdam, Rostock, Schwerin, Suhl.

NOTE: More than 45,000 sq. m. (from which the German inhabitants fled during the S.W.V.V. or were subsequently expelled) were in Polish or Russian occupation.

pottery. There are huge chemical works at Leuna, nr. Leipzig; the textile industry is important at Wuppertal and Karl-Marx-Stadt, while Krefeld manufactures silk and velvet. Optical and scientific instruments are produced at Stuttgart and Dresden. Leverkusen, nr. Cologne, and Mannheim and Ludwigshafen specialize in artificial dyes. Tourism is important, especially in the Black Forest.

People and Government. The largest centres in G. are Berlin, Hamburg, Munich, Cologne, Essen, Düsseldorf, and Frankfurt-am-Main. Approximately two-thirds of the pop. are Protestants and one-third Catholics. A

factor in the striking economic expansion of the W. German rep. in the post-war period was the influx of the foreign workers from Italy, Spain, etc. Important in European and also in world politics is the W. German pressure for a re-union of the two republics, which is linked to a varying extent with a revival of the German claim for restoration of the former frontier and the 'lost' territories sometimes incl. the Sudetenland.

GERMANY. The Klingentor, one of the picturesque medieval gate towers of Rothenburg-ob-der-Tauber in Bavaria, once a free Imperial city.
Courtesy of the German Tourist Information Bureau.

The Federal Republic of Germany was created in 1949 by the union of the British, American, and French zones (excl. at that time Saarland, q.v.); it

achieved full sovereignty and was recognized by the Western powers in 1955. The Russian zone, it was hoped, would eventually enter the Federal Republic. It has a parliament of 2 houses: the *Bundestag*, or federal diet, elected by universal suffrage for 4 years, and the *Bundesrat*, or federal council, consisting of the members of the govts. of the *Länder* or states. The pres. is elected for 5 years for a maximum of 2 terms by the federal assembly which consists of the *Bundestag* and an equal number of popularly elected representatives from the *Länder*. The govt. is headed by the federal chancellor, chosen by the *Bundestag*.

The *German Democratic Republic*, formerly the Russian zone, was also set up in 1949, but is recognized only by the Communist powers. Under the Constitution of 1968 there is a single-party, popularly elected people's chamber (*Volkskammer*) which nominates the members of the Council of State (supreme legislative and executive organ) and Council of Ministers. The Communist Party retains all real power. The pop. and economy were in decline, owing to emigration to the W., until 1964 but the mid-sixties saw a marked improvement in prosperity.

By the Potsdam Agreement, 1945, those parts of Germany lying E. of the Oder-W. Neisse rivers were placed (i) under Russian administration: the northern part of former East Prussia; (ii) under Polish administration: the southern part of former East Prussia and the territory lying between the pre-war and post-war frontiers of E. Germany. See also **BERLIN**.

GERMISTON. S. African industrial town in the Witwatersrand gold-mining area, Transvaal. Pop. (1960) 204,605, of whom 84,419 were white.

GERM WARFARE. The use of biological agents to produce disease or death in man, animals, or crops. Of the 2 main types, the first comprises the use of hormones (normally used as weed-killers) to destroy crops; the second type consists of the living agents, e.g. disease-bearing insects, bacteria, viruses, and fungi. If the intention was to enfeeble the population and lower morale, agents causing sickness would be used, e.g. rabbit fever (tularemia) and undulant fever (brucellosis); but to kill, plague, typhus, cholera, and smallpox would need to be used. To be effective, such agents must be highly infective; able to withstand heat, light, and drying; rapidly disseminated; able to cause high initial mortality; and foreign to the part of the world against which they are directed, so that there is no natural immunity. The only protection is an informed populace and an alert and highly efficient public-health organization, adequately equipped for the detection and isolation of infected cases, and possessed of suitable counter-measures.

GERONA (khārōn'ah). Rich prov. of Catalonia, Spain, producing copper, lead, cork, wine, etc.; bounded on the E. by the Mediterranean, on the N. by France. Its coast, the Costa Brava, is a tourist resort. Area 2,272 sq. m.; pop. (1960) 351,369. The cap. is G., pop. (est.) 30,000.

GERRY (ger'i), Elbridge (1744–1814). American politician. Gov. of Massachusetts, in 1812 he had his men redraw the map of the state's senatorial districts to gain congressional election, the shape resembling a salamander: hence 'gerrymandering' to denote politic evision of electoral boundaries.

GERS (zhār). Fr. river, 110 m. long, rising in the Lannemezan Plateau and flowing N. to join the Garonne 5 m. above Agen. It gives its name to a dept.

GE'RSHWIN, George (1898–1937). American jazz musician. B. in Brooklyn of Jewish parents, he composed popular jazz songs, notable for their instinctive rhythm and melody. He also wrote more serious music, in which he incorporated the essentials of jazz, e.g. the tone poem *An American in Paris*, *Rhapsody in Blue* (1924), and the opera *Porgy and Bess* (1935).

FROST, Robert Lee (1874–1963). American poet. B. in San Francisco, he had no formal ed. until 11, and 1900–12 farmed unsuccessfully in New Hampshire, combining this with teaching and writing poetry. In 1912 he sailed to England where he pub. *A Boy's Will* (1913), and with this and *North of Boston* (1914), estab. his reputation. Returning to the U.S. and to farming in 1915, he won Pulitzer poetry prizes with *New Hampshire* (1923), *Collected Poems* (1930), *A Further Range* (1936), and *A Witness Tree* (1942). He wrote with an American individuality and a simplicity that masked a penetrating vision.

ROBERT FROST

FROST. Condition of the weather when the temperature of the air is below freezing point (32°F.). Water in the atmosphere then freezes and crystallizes on exposed objects. As cold air is heavier than warm, *Ground Fs.* are the more common type. *Hoar F.* is formed by the condensation of water particles in the same way as dew collects.

FROSTBITE. Change produced in tissues by the action of cold, most common in the feet, hands, nose, and ears. The blood supply being cut off, the affected part starts to die (gangrene; necrosis). The treatment is massage with snow or cold water.

FROUDE (frood), James Anthony (1818–94). British historian. B. in Devon he was at first strongly influenced by the Oxford Movement, but subsequently became sceptical and was affected by the teaching of Carlyle. His *History of England from the Fall of Wolsey to the Defeat of the Spanish Armada* (1856–70) revealed his gift for dramatic realization of historic events. As Carlyle's literary executor he pub. his *Reminiscences* (1881) and the *Letters and Memorials of Jane Welsh Carlyle* (1883). He was prof. of modern history at Oxford 1892–4. His brother, Richard Hurrell F. (1803–36), collaborated with Newman in the Oxford Movement.

FRUCTOSE or Fruit Sugar ($C_6H_{12}O_6$). A sugar occurring with glucose in honey and cane sugar, and in grape juice, etc. It is somewhat sweeter than cane sugar, from which it is prepared on a large scale.

FRUIT FLY. A small yellow fly (*Drosophila melanogaster*) which breeds in fermenting fruit juices. Because of its rapid reproduction and simple structure – it has 8 chromosomes – it has been of great use to geneticists in the study of heredity.

FRUNZE (froon'ze). Capital (formerly Pishpek) of Kirgiz S.S.R., U.S.S.R., and F. region, situated in the fertile Chu valley. Its industries include the making of textiles, metal goods, and leather, and food preserving. A univ. was estab. in 1951. Pop. (1967) 396,000.

FRY, Christopher (1907–). British dramatist. Originally a teacher, he became by 1940 director of the Oxford Repertory Players, and after the S.W.W. was a leader of the revival of verse drama, notably *The Lady's Not for Burning* (1948), *Venus Observed* (1950), and *A Sleep of Prisoners* (1951). He has also translated plays by Anouilh and Giraudoux.

FRY, Elizabeth (1780–1845). British philanthropist. B. at Norwich, *nee* Gurney, she joined the Society of Friends in 1798, and in 1800 m. Joseph F., a London merchant. In 1810 she became a minister in the society. She first visited Newgate prison in 1813, and formed an association for the improvement of female prisoners in 1817. In 1818 she inspected the prisons of northern England and Scotland with her brother, Joseph Gurney, and their report pub. 1819

had great influence both at home and abroad. She subsequently travelled widely on the Continent. Her descendant, Margery F. (1874–1958), was a leading authority on penal reform and on social questions affecting women. She was principal of Somerville Coll., Oxford, 1926–31.

FRY, Roger Elliott (1866–1934). British painter and art critic. B. in London, he was chiefly responsible for introducing the French post-impressionist painters to England. His own paintings show a fine sense of design and mastery of technique. He was Slade prof. of Art at Cambridge from 1933.

FUAD I (foo'ahd) (1868–1936). King of Egypt. The son of the Khedive Ismail, he succeeded his elder brother, Hussein Kiamil, as sultan of Egypt in 1917, and when Egypt was declared independent in 1922 he assumed the title of king. Fuad II (1952–), grandson of Fuad I, was king of Egypt 1952–3 between the abdication of his father Farouk (q.v.) and the establishment of the republic.

FUCHS, Karl Emil Julius. See under SECRET SERVICE.

FUCHS (fookhs), Sir Vivian (1908–). British explorer. Before the S.W.W. he accompanied several Cambridge expeditions as geologist, exploring in Greenland and Africa as well as Antarctica, led the Falkland Islands Dependencies Survey from 1947–50, and was appointed director of the Scientific Bureau there in 1950. In 1957–8 he led the Commonwealth Trans-Antarctic Expedition and was knighted on his return. See ANTARCTICA.

FUCHSIA (fū'shia). Genus of exotic plants of the Onagraceae family, composed of a number of small shrubs native to S. America but frequently cultivated in Britain. The genus was named in 1703 after Leonhard Fuchs, German botanist (1501–66). The red, purple, or pink flowers hang downwards, and are bell-shaped.

FUEHRER (fu'rer), Der. German for 'the leader'; the name given to Adolf Hitler (q.v.) by his followers.

FUEL. Any source of heat or energy embracing the entire range of all combustibles and including anything which burns, i.e. nuclear Fs.

FUJIYAMA (fooji-yah'mah). Volcano on Honshu island, Japan, 60 m. W.S.W. of Tokyo; it rises in a snow-capped cone to 12,390 ft., and has a prominent place in Japanese art. A weather station was estab. on the summit in 1932.

FUKIEN (fookyen'). Province of S.E. China, bordering the Formosa strait, opposite the island of Formosa. Tea is the leading crop on the higher land, rice on the lowlands; timber, camphor, lacquer are also produced. The cap. is Foochow. Area 47,000 sq. m.; pop. (1957) 14,650,000.

FUJIYAMA. In Japan some 85 per cent of the country's total area is mountainous, and arable land is scarce. The average size of farms is less than 2½ acres and even steep slopes are cultivated so that Fujiyama itself, the country's highest mountain, overlooks terraces which resemble a giant staircase.

Courtesy of the Japanese Embassy.

GIOLITTI (jōlīt'i), Giovanni (1842–1928). Italian statesman. B. at Mondovì, he was P.M. in 1892–3, 1903–5, 1906–9, 1911–14, and 1920–1. He opposed Italian intervention in the F.W.W.

GIONO (jō'nō), Jean (1895–). French novelist, whose books are chiefly set in Provence. *Que ma joie demeure* (1935: *Joy of Man's Desiring*) is an attack on life in towns and a plea for a return to country life. In 1956 he pub. a defence of Gaston Dominici, who allegedly murdered an English family on holiday, maintaining that the old farmer exemplified the misunderstandings between town and country people.

GIORGIONE (jorjō'ne) (1478–1511). Name by which the Venetian artist, Giorgio di Castelfranco, is known. He was a leader of the High Renaissance, and influenced Titian and others. His masterpiece is the 'Madonna and Child Enthroned with Two Saints', an altar-piece for the church of Castelfranco.

GIOTTO (jot'tō) **DI BONDONE** (1266/76–1337). Italian painter, sculptor, and architect. B. at Vespignano, N. of Florence, he infused new life into Italian art, painting in a naturalistic style and depicting sacred personages as real people. He is chiefly famous for his frescoes in churches at Assisi, Padua, and Florence. In 1334 he was appointed master of the cathedral at Florence and official architect of the city. He collaborated with Andrea Pisano in decorating the cathedral façade with statues, and designed the Campanile, which was completed after his death. See ITALIAN ART.

GIRAFFE. Specimens from northern Africa tend to have white 'socks', which show particularly on the forelegs of the animal illus. here. The young are born singly and in 3 days are able to trot almost at adult pace.

Africa, S. of the Sahara Desert.

GIRALDUS CAMBRENSIS (Gerald the Welshman) (c. 1146–1220). Welsh bishop and historian. B. in Pembrokeshire, he was elected bishop of St. David's in 1198. One of the foremost Latinists of his age, he wrote a history of the conquest of Ireland by Henry II and *Itinerarium Cambrense*.

GIRAUDOUX (zhērōhdō'), Jean (1882–1944). French diplomat, author of light-weight novels, e.g. *Simon le pathétique* (1918), an autobiographical window on adolescence, and plays incl. the humorous renderings of Greek legends *Amphitryon 38* (1929) and *La guerre de Troie n'aura pas lieu* (1935).

GIRGENTI. Another form of AGRIGENTO.

GIRL GUIDES. A youth organization for girls estab. in 1910 by Lord Baden-Powell and his sister, Agnes Baden-Powell. As reorganized 1967 it has 3 branches: Brownie G. (7–11), Guides (10–16), and Ranger G. (14–20) with adult leaders known as Guiders. The World Assn. of G.G. and Girl Scouts (the name by which they are known in U.S.A.) ensures international co-operation.

GIRO (jī'rō). System of receiving and making payments through a current account with the Post Office. Beginning in Austria in 1883, it spread through W. Europe, and was introduced in the U.K. in 1968 (H.Q. Bootle). The name derives from Gk. *gyros* 'circle', since the money goes round and round.

GIRONDE (zhērōnd'). Navigable French estuary off the Bay of Biscay, formed by the mouths of the Garonne and Dordogne rivers. It is 50 m. long and 2 to 6 m. wide. It gives its name to the largest dept. of France.

GIRON'DINS. The right-wing republican party in the French Revolution, so called because a number of their leaders came from the Gironde. They were driven from power by the Jacobins in 1793.

GIRTIN, Thomas (1775–1802). English painter. The poetic spirit and technical innovations of this friend and contemporary of Turner revolutionized landscape painting in water-colour, and were part of the romantic attitude of the early 19th cent.

GISSING, George Robert (1857–1903). British author. B. in Yorks, he taught for many years in London and the U.S.A., leading a life of near destitution. His first novel, *Workers in the Dawn*, appeared in 1880 but it was not until *Demos* (1886), which dealt with socialist ideas, that G. became at all widely read. Among his later books are *New Grub Street* (1891), the autobiographical *Private Papers of Henry Ryecroft* (1903), and a study of Dickens. His books depict, with a realism and sincerity born of experience, the degrading effects on men and women of the struggle against circumstances and poverty.

GIULINI (gūlē'ni), Carlo Maria (1914–). Italian conductor. Principal conductor at La Scala, Milan, 1953–5, he is the outstanding conductor today of Italian grand opera, e.g. Verdi's *Don Carlos* at Covent Garden in 1958. He is also a fine interpreter of modern composers, as well as of Brahms, Haydn and Mozart.

GLACE (glas) **BAY**. Port on Cape Breton Island, Nova Scotia, Canada, centre of a coal-mining area. Pop. (1966) 23,516.

GLACIER. A compacted mass of ice which originates in mountains in the snowfields above the snowline, where the annual snowfall exceeds the annual melting and drainage. It moves slowly down a valley or depression, and is constantly replenished from its source. The scenery produced by the passing of Gs. is characteristic. When a G. moves over an uneven surface crevasses are formed in it; if it reaches the sea it breaks up to form icebergs.

GLADIATORS. Professional fighters, recruited mainly from slaves, criminals, and prisoners of war, who fought to the death for the entertainment of the ancient Romans. The custom, which originated in the practice of slaughtering slaves on a chieftain's grave, was introduced into Rome from Etruria in 264 B.C., and survived until the 5th cent. A.D.

GLADIO'LUS. Genus of plants of the Iridaceae (iris) family. The tall leafy stems arise from corms and bear a spike of brightly coloured, irregular flowers. The perianth is funnel-shaped, and in the cultivated varieties may be any shade but blue.

GLADSTONE, William Ewart (1809–98). British Liberal statesman. B. in Liverpool, the son of a rich merchant, he was ed. at Eton and Oxford, and entered parliament as a Tory in 1833. In Peel's govt. he was Pres. of the Board of Trade 1843–5, and Colonial Sec. 1845–6. He left the Tory Party with the Peelite group in 1846, and after 1859 identified himself with the Liberals. He was Chancellor of the Exchequer in Aberdeen's govt. 1852–5, and in Palmerston and Russell's govts. 1859–66. Becoming P.M. in 1868–74, he carried through a series of important reforms, incl. the disestablishment of

CARLO MARIA GIULINI
Photo: Godfrey MacDonnic.

FURNITURE. In the Middle Ages domestic furniture was frequently painted in bright colours, and the oak cupboard illustrated which is dated c. 1500 would have been decorated with sacred or heraldic subjects, long since worn away.

teristic of medieval husbandry.

FURNESS. Peninsula and district comprising the northerly detached portion of Lancashire, England, separated from the main part of the co. by Morecambe Bay. Barrow has iron and shipbuilding industries. F. abbey, now in ruins, was founded in 1127.

FURNITURE. Term that includes everything movable that is needed in buildings for human habitation and work. It includes those forms of F. which are used for (1) rest, e.g. chairs, couches, and beds; (2) work, e.g. desks and tables; (3) storage, e.g. chests and cupboards; and (4) decoration, e.g. picture frames. F. is made of a variety of materials incl. wood, metal, stone, glass, plastic, and textiles.

FURNITURE BEETLE.

See WOODWORM.

FURSE, Roger (1903–). British stage designer. He designed the settings and costumes of many plays, incl. Old Vic productions of Shakespeare.

FURTSEVA, Ekaterina (1910–). Russian politician. The only woman member of the presidium of the Communist Party of the Soviet Union, she became in 1960 Min. of Culture, and encouraged fuller international co-operation in this field.

FURTWÄNGLER (foort'vengler), Wilhelm (1886–1954). German conductor. He succeeded Nikisch at Leipzig, and with the Eerlin Philharmonic Orchestra. His interpretations of Tchaikovsky and the German romantics, especially Wagner, were regarded as classically definitive. A denazification tribunal cleared him of the charge of having favoured the Hitler régime.

FURNITURE. A walnut baby trotter of c. 1700: the upper ring opens to admit the child.

since the S.W.W. there has been increasingly successful use of synthetic fibres such as nylon.

FURIES. In Greek mythology, the Erinyes or Eumenides, the daughters of Earth or of Night, represented as winged maidens, with serpents twined in their hair. They punished such crimes as filial disobedience, murder, and inhospitality.

FURLONG. A measure of length—220 yds. or 40 rods, poles, or perches. 8 Fs. make one statute mile. Originally it was the length of the furrow in the common field character-

FURNITURE. Top of a marquetry table of the last years of Charles II: the flowers, of various woods, are inlaid on ebony.

FUSEL OIL (C₆H₁₂O), also called potato spirit. A liquid with a characteristic unpleasant smell, obtained as a by-product when distilling the product of any alcoholic fermentation, and used in paints, varnishes, essential oils, and plastics.

FUSHUN (foo-shoon). Great coal-mining centre in Liaoning prov., China, 25 m. E. of Shenyang. It has aluminium, steel, and chemical works. Pop. (1967) 1,000,000.

FUSIN (foo-sin). Industrial town in Liaoning prov., China, 95 m. N.W. of Shenyang. Pop. (1967) 500,000.

FUSION, Nuclear. See ATOMIC ENERGY.

FUST (foost), Johann (c. 1400–66). German printer and bookseller of Mainz. His partnership with Gutenberg (q.v.) ended in 1455. F. sued Gutenberg for debt, and with aid of his son-in-law, Peter Schöffer, carried on the business. He is supposed to have d. in Paris of the plague. He was often wrongly confused with the magician Johann Faust (q.v.).

FUTURISM. Literary and artistic movement which burst on Paris in 1909 with a general manifesto by F. P. Marinetti, Italian poet and mountebank, extolling 'a new beauty . . . a roaring motor-car, which runs like a machine gun, is more beautiful than the Winged Victory of Samothrace . . . we wish to glorify war'. Together he and Carrà, Boccioni and

FURNITURE. Hepplewhite chair in painted satinwood with his favoured motif, the Prince of Wales feathers, forming the entire splat.

FURNITURE. Oak bed dated c. 1568 from Sizemore Hall Westmorland. With its inlays of various woods and the elaborate figures and panels of the back, it illustrates the importance attached to this article of furnishing by our ancestors.

Russolo issued further manifestos praising the dynamism of modern life. These artists differed from Cubists in fragmenting their forms with penetrating shafts of light, which, together with their use of

silicates of lime, soda, and potash, to which are added metallic oxides, for colouring and opacity, and borates, phosphates, etc., for special purposes.

There are three main divisions of manufactured glass. Blown G. contains silica, potash, and lead oxide, which are mixed with broken G. (cullet) in crucibles, heated therein till viscous, when the G. is blown or drawn into tube. For sheet G., large tank-furnaces are used. Pressed or plate G. is prepared in pots or crucibles and thinned by power-driven rollers; it is then cooled, annealed, and further polished. Optical G., homogeneous and transparent, is cooled slowly in crucibles, re-heated, and then subjected to prolonged cooling.

Modern advances have led to safety G., laminated G., ultra-violet ray G., heat-treated G., and G. fibres. These fibres were first manufactured as a heat-insulating material, later for vibration control. They have recently been developed as yarn for electric motor and domestic appliances, dress materials, etc.

The decorative use of G. is very ancient, blown G. reaching perfection in 18th dynasty Egypt, the Chinese excelling in imitation of rare stones, and the Graeco-Roman era being represented by the Portland vase (q.v.). High points in later glassware are the Byzantine G. mosaics, medieval European stained G., the delicate filigree of 15th cent. Venice, and English table glass of the 18th cent. Engraved G. by individual artists (e.g. Laurence Whistler, and the products of the Steuben works in the U.S.) is today often used for presentation pieces, the methods being diamond-point engraving (developed in 16th cent. Italy) and copperwheel engraving (originating in Bohemia): the commercial processes are sand-blasting and acid etching.

GLASTONBURY. Market town (bor.) in Somerset, England. Nearby are 2 excavated lake villages thought to have been occupied for c. 150 years before the Romans came to Britain.

The first church on the site was traditionally founded in the 1st cent. by Joseph of Arimathea: the ruins of the great Benedictine abbey built in the 10th–11th cents. by Dunstan (q.v.) and his followers were excavated in 1963 and the site of the grave of King Arthur and Queen Guinevere was thought to have been identified. Pop. (1961) 5,796.

GLAUBER'S SALT. Crystallized form of hydrated sodium sulphate, first described by J. R. Glauber (1604–68), German chemist. It is used as an aperient.

GLAZUNOV, Alexander Constantinovich (1865–1936). Russian composer. B. at St. Petersburg, he studied under Rimsky-Korsakov, and became director of the St. Petersburg Conservatoire in 1905. In 1928 he settled in Paris. G. composed 8 symphonies, a violin concerto, symphonic poems, etc.

GLEIWITZ. German form of GLIWICE.

GLEIZES (glez), Albert (1881–1953). French artist. An exponent of Cubism, exhibiting at the Salon des Indépendants in 1911, he pub. in 1912 *Du Cubisme*—the first book of Cubist theory. Influenced by medieval art, he returned to the Catholic Church soon after settling in southern France in 1939, and his later work is mainly on religious themes.

GLENCOE (glenkō). Glen in N. Argyll, Scotland, where members of the Macdonald clan were massacred in 1692, John Campbell, earl of Breadalbane, being the chief instigator. A chairlift to the plateau above it, for use in winter sports, was completed in 1960.

GLENDOWER, Owen (c. 1359–c. 1415). Welsh hero. He headed a revolt against the English in N. Wales, and defeated Henry IV in three campaigns, 1400–2. But from 1405 the struggle went against him and Wales was reconquered by 1413.

GLIDING. The art of using air currents to fly heavier-than-air craft without engines. Technically speaking G. involves the gradual loss of altitude;

gliders designed for soaring flight (utilizing air rising up a cliff face or hill, warm air rising as a 'thermal' above sun-heated ground, etc.) are known as sail-planes. Pioneers incl. Cayley, Lilienthal, Chanute, Montgomery, and Orville Wright, who made the first soaring flight of any duration (9 min. 45 sec.) in the U.S.A. in 1911. The British G. Assoc. dates from 1929. Launching may be by rubber catapult from a hilltop; by a winch which raises the glider like a kite; or by aircraft tow. In the S.W.W. towed troop-carrying gliders were used by the Germans in Crete and the Allies at Arnhem. Distances of well over 500 m. and heights of over 46,000 ft. have been attained.

GLIERE (glē-ār'), Reinhold (1875–1956). Russian composer. B. at Kiev, of Belgian descent, he was director of the conservatoire in his native city 1914–20. He then returned to Moscow as head of the music section of the Dept. of People's Education, and made a close study of folk-music, as is shown by his opera *Shah Senem* (1925), based on an Azerbaijan folk-tale. Also notable for their fine grasp of orchestral effect are his symphonies and the symphonic poem *Les Sirènes* (1908).

GLINKA, Michael (1803–57). Russian composer. B. near Smolensk, he broke away from the prevailing Italian influence, and turned to Russian folk-music as the inspiration of *A Life for the Tsar* (1836). His later works incl. another opera *Ruslan and Ludmilla* (1842), and the orchestral *Kamarinskaya*.

GLIWICE (gljēv'tse), Town in Polish-occupied Silesia, with coal-mining, iron, steel, and electrical industries. Pop. (1966) 164,000.

GLOBE THEATRE. Octagonal theatre open to the sky, built by Burbage, Shakespeare, and others in 1599 on the Bankside, Southwark, and burnt down in 1613.

GLOBIGERINA (glōbijeri'na). Genus of Foraminifera which are preserved in chalk. The conical spiral shells accumulate at the bottom of deep seas, forming 'G. ooze'.

GLOSSOP. Manufacturing and market town (bor.) in Derbyshire, England, with large cotton and allied industries. Pop. (1961) 17,490.

GLOUCESTER (glos'ter), Henry William Frederick Albert, duke of (1900–). 3rd son of George V. Created duke of G. in 1928, he followed an army career until 1936, and was Gov. Gen. of Australia

GLENCOE. The unhappy memories of the glen find no reflection in the enjoyment of the hikers and campers who make it the focal point of their Easter week-end.

Photo: George Outram & Co. Ltd.

GALAXY. The radio corona of the Great Nebula in Andromeda (M31), a galaxy similar to our own in its spiral structure and 2 million light-years distant, extends far beyond the visible nebula. The superimposed radio image shows some of the radio isophotes — contour lines along which radiation strength or radio brightness is everywhere equal — obtained by a survey using the Jodrell Bank 250 ft. reflector at a wavelength of 73 cm. The radiation is thought to be by cosmic ray electrons spiralling in magnetic fields.

Photograph by Mt. Wilson & Palomar Observatories.
Radio image by Jodrell Bank Observatory

the official line, and had a resounding victory over Bevan when elected party leader in 1955. His attempt in 1959 to modify party policy on nationalization and the split in 1960 between advocates of unilateral disarmament and the official multilateralist line threatened his position, but he was re-elected in 1960 and at his death had achieved undisputed authority. His wife, (Anna) Dora G., also keenly interested in politics, was created a life peer as baroness G. in 1964.

GALAPAGOS ISLANDS. Group of 13 large and many smaller islands in the Pacific Ocean, 695 m. W. of Ecuador, of which they form a prov. The cap. is San Cristobal, on San Cristobal Island. There are sulphur deposits. Area c. 3,000 sq. m.; pop. (1967) 3,100.

GALASHIELS (galashēlz). Scottish town (burgh) in Selkirkshire, on Gala Water; famous for its tweeds. Pop. (1961) 12,374.

GALATEA (galatē'a). In Greek mythology, a sea nymph who loved Acis, and when he was killed by Polyphemus transformed his blood into the river Acis. Pygmalion made a statue (later named G.) which was brought to life by Aphrodite.

GALATI (galat'). Rumanian city on the Danube below its confluence with the Seret, cap. of G. region, an important river port with shipyards. Industries incl. iron and steel, notably the Gheorghe Gheorghiu-Dej works (1965), textiles, sweets and foodstuffs, perfumes and cosmetics. Pop. (1966) 151,349.

GALATIA. Ancient prov. of Asia Minor, occupying part of the inland plateau. It was occupied by the Gauls in the 3rd cent. B.C., and in 25 B.C. became a Roman province.

GALAXY. The star system in which the Solar System lies. It contains about 100,000 million stars, of which the sun is fairly typical, and also a vast quantity of interstellar matter, together with the concentrations of gas and dust known as *galactic nebulae*. The stars in our G. are arranged in the form of a double-convex lens, with a pronounced nucleus: the total distance from one side of the G. to the other is about 100,000 light-years.

Other Gs. are very remote from us, the Andromeda Spiral, one of the nearest, lies at a distance of over 2,000,000 light-years; only this and the 2 southern Nubeculae or Magellanic Clouds are visible to the naked eye, but the Palomar 200 in. telescope can photograph about 1,000 million separate Gs. They are of various types: spiral (radioastronomy investigations have estab. that our own has this structure), elliptical, and irregular. They tend to form groups and our own G. is a member of the so-called 'Local Group', of which other members are the Andromeda and Triangulum Spirals, the Nubeculae, and various dwarf Gs. such as the Sculptor System. Apart from the members of the Local Group, all the Gs. are receding from us at tremendous speeds: the most remote systems so far measured, 3C-295 in Boötes, is about 5,000 million light-years away, and is receding at almost 90,000 miles per second.

GALAZ. German form of GALATI.

GALEN (gā'len) (c. 130-c. 200) Greek physician. B. at Pergamum, Mysia, Asia Minor, he was accounted second only to Hippocrates among the physicians of antiquity. He was skilled in anatomy and physiology. Some 80 of his 500 treatises have survived.

GALICIA (galish'ia). Former kingdom and prov. of N.W. Spain, divided in 1823 into the provs. of Corunna, Lugo, Orense, and Pontevedra. Galicia was also the name of a prov. of central Europe, formerly a part of Austria, part of Poland after the F.W.W., divided 1945 between Poland and Russia. It occupied the northern slopes of the Carpathians, stretching southwards to the frontiers of Czechoslovakia and Rumania.

GALILEE (gal'ilē). A Roman prov. of Palestine, bounded by Samaria on the S., Phoenicia on the W., Coele Syria on the N., the r. Jordan on the E. The SEA OF GALILEE, a lake in the Jordan valley, lies 65 m. N. of the Dead Sea, and is frequently mentioned in the Gospels.

GALILEO (galēl'ō) Galilei (1564-1642). Italian scientist. B. at Pisa, he studied at the univ. there, and was prof. of mathematics. An opponent's demonstration — by dropping 2 stones of unequal weight from the top of the Leaning Tower — confirmed his view that all falling bodies, great or small, descend with equal velocity, making him unpopular with the orthodox scientists, and he resigned his chair in 1591. From 1592 to 1610 he was prof. of mathematics at Padua. He improved the recently invented telescope, and with it was the first man to see satellites of Jupiter. His astronomical observations led him to accept the Copernican system, which he advocated in his *Dialogues on the two chief systems of the Universe*, pub. in 1632. The book was banned, and G. was summoned to Rome by the Inquisition, and eventually made to recant his views.

GALL (gahl), Franz Joseph. See PHRENOLOGY.

GALLAS. Race of Hamitic people inhabiting a large area of E. Africa in Abyssinia and Kenya.

GALLE (gahl'tch), Johann Gottfried (1812-1910). German astronomer, who in 1846 discovered the planet Neptune.

GALL FLY. Small hymenopterous insects of the family Cynipidae. They are similar in appearance to wasps and lay their eggs in leaves, twigs, or roots of plants causing galls, i.e. swellings of various kinds.

GALLICO, Paul William (1897-). American author. Of Italo-Austrian parentage, G. was b. in

scandalized Edwardian society, as did her passion for tiger skins, and the beauty of her white skin and red hair: her admirers incl. Lord Curzon. Her biography was written by her grandson Sir Anthony G. (1922–), also a novelist: *The Ram in the Thicket* (1957), *Kick Turn* (1963), and *The Terminal* (1965).

GLYNDEBOURNE (glind-). An English estate nr. Lewes, Sussex, where is an admirably equipped opera house estab. by J. Christie (q.v.) for staging new and old operatic works at an annual summer festival.

GNAT. Family of flies (Culicidae) in the order Diptera, also known as mosquitoes. The eggs are laid in water, where they hatch into worm-like larvae, which after passing through a pupal stage emerge as perfect insects. Well-known species are the Common G. (*Culex pipiens*), abundant in England; the carrier of malaria (*Anopheles maculipennis*); and the banded mosquito (*Aedes aegypti*) which transmits yellow fever. Only the female is capable of drawing blood, since the male possesses no piercing mandibles.

GNAT, with larva and pupa.

GNEISS (nis). Metamorphic rock, often found in association with schists and granites. It has a foliated structure, consisting of an alternation of micaceous and granular bands. Garnets commonly occur in G.

GNOSTICISM (nost'izizm). Name applied to a religious movement contemporary with the rise of Christianity, that is sometimes regarded as a series of Christian heresies, but is better represented as an attempt to form a synthesis of Christian theology, Greek philosophy, and elements derived from the ancient mystery cults of the Mediterranean world. The Gnostics maintain that they possess an esoteric knowledge of the inner meaning of religion, the *gnosis*, by means of which they were able to attain to illumination and immortality. They conceived the world as a series of emanations or aeons proceeding from the highest of several gods, and they recognized a clear distinction between spirit and essentially evil matter. The Albigenses and other heretics were probably inheritors of Gnostic ideas, as were the Sufis, or mystics of Islam.

GNU (noo). A large, white-tailed S. African antelope (*Connochaetes gnu*). Also a larger brindled gnu (*Gorgon taurinus*) of central and E. Africa.

GOA (gō'ah). Former Portuguese prov. in India, it included besides Goa proper, on the Malabar coast, the settlements of Diu and Damão. Although it had been Portuguese since 1505, from 1950 India demanded its transfer to her, and when Portugal refused, first set up a land blockade (1954), then forcibly seized G. (1961), incorporating it in the Rep. of India (1962): G. rejected by referendum a merger with Maharashtra (1967) and remains a Union Territory. Area 1,426 sq. m.; pop. (1960) 625,831.

GOAT. Genus of ruminants (*Capra*), similar in appearance to the sheep. It is probably Persian in origin, but various species are now found in all parts of the world. Gs. are frequently kept for milk, but the Angora and Cashmere Gs. produce mohair. There are many species of G.; the English type (*Capra hircus*) is usually brown, sometimes with white patches, has short hair and tapering horns. Gs. are usually bearded and the males have an unpleasant smell. The Rocky Mountain G. of America and the Ibex are wild varieties.

GOBELIN (goblan'). Name of a French tapestry manufactory, originally founded as a dyeworks in Paris by Gilles and Jean G. about 1450. The firm began to produce tapestries in the 16th cent., and in 1662 the establishment was purchased by Colbert

for Louis XVI. With the support of the State it still continues to make tapestries.

GÖ'BI. Desert in Asia lying partly in the Mongolian People's Republic, partly in Inner Mongolia region, China. It extends c. 500 m. from N. to S., and 1,000 m. from E. to W. The sandy, waterless part occurs in the S.W., while the rest is a succession of stony plains and ranges of hills. In some parts sheep and cattle are reared, and where water is available for irrigation crops are grown by the nomadic Mongol and Kalmuck inhabitants. In the desert, relics of prehistoric cultures have been discovered.

GOBINEAU (göbēnō'), Joseph Arthur, comte de (1816–82). French diplomat and writer. His most influential work was his *Essai sur l'inégalité des races humaines* (1855), where he maintained the doctrine of the innate superiority of the white or 'Aryan' race. This quasi-scientific thesis fitted well with the rising nationalist spirit in Germany.

GOD. The Supreme Being: the Creator, Sustainer, and Ruler of the universe. It used to be thought that the idea of God was divinely revealed to man at an early stage of his history, and that this original monotheism degenerated into polytheism. The view most generally held nowadays is that the God-idea has arisen in the course of ages, and that it may be traced perhaps to a kind of primitive fetishism. The next stage was probably the deification of the forces of nature, as in the Vedic hymns and in the mythology of ancient Greece. A riotous polytheism followed, out of which men here and there – the Hebrew Prophets in particular – gradually evolved the concept of One God, who is all-good, all-powerful, all-wise. The study of the God-idea is the subject of theology and of the science of religion, although the latter word may comprise world-faiths such as Buddhism in which there is, at least in the earliest form, no God or gods. Deism is the name given to that system of monotheism in which God is regarded as the Creator but as working only through the laws of nature, whereas Theism holds that He is still actively interested in His creation. Pantheism is the identification of God and the universe. In the course of cents. the conception of God as a Person has been spiritualized, and in Christianity He is revealed as a Trinity of Persons (not a triad of three gods as in present-day Hinduism or in ancient Egypt). In the Gospel of St. John, God is identified with Love.

GO'DALMING. English town (bor.) on the river Wey in Surrey. It has tanning, hosiery, paper, and agricultural industries. Charterhouse school was moved there from London in 1872. Pop. (1961) 15,771.

GODDARD, Rayner, baron (1877–). British judge. Son of a solicitor, he was Lord Chief Justice 1946–58, and estab. his reputation beyond the courts for pithily lucid judgments.

GODDEN, Rumer (1907–). British author. B. in Sussex, she spent much of her youth and later life in India, as is reflected in the background of her novels *Black Narcissus* (1939) and *The River* (1946).

GODFREY, William (1889–1963). British cardinal. B. in Liverpool, he was domestic prelate to pope Pius XI 1930–8, titular archbishop of Cius 1938–53 and Apostolic Delegate to Britain 1938–54. Abp. of Liverpool from 1953 until he succeeded Cardinal Griffin as abp. of Westminster in 1956, he was created cardinal in 1958, and was a member of the Preparatory Commission for the Second Vatican Council.

GODFREY DE BOUILLON (c. 1060–1100). Crusader. The 2nd son of Count Eustace II of Boulogne, with his brothers Baldwin and Eustace he led in 1096 a force of 40,000 Germans to take part in the 1st Crusade. After Jerusalem was taken in 1099, he was elected its ruler, but refused the title of king.

GODÍ'VA, Lady. Wife of Leofric, earl of Mercia.

GALVESTON. City and port in Texas, U.S.A., at the entrance to G. Bay. It exports cotton, petroleum, wheat, timber; has dry docks, petroleum refineries, etc. It is subject to hurricanes, one in 1900 killing 8,000 people. Pop. (1960) 67,175.

GALWAY (gaw'l'wā). County of Rep. of Ireland on the W. coast, in Connacht. The E. part is low-lying. In the S. are the Slieve Aughty mts. W. of Lough Corrib is Connemara, a wild area of moors, hills, lakes, and bogs. In the S. is G. Bay with the Aran islands. The Shannon is the principal river. G. is the county town; other towns include Ballinasloe, Tuam, Clifden, and Loughrea, near which deposits of lead, zinc and copper were found 1959. Area 2,293 sq. m.; pop. (1966) 148,340.

GALWAY. Co. town and fishing port of G. co., Rep. of Ireland, on G. Bay, at the mouth of the Corrib. The Univ. Coll. became in 1968 the Univ. of Galway. Pop. (1966) 24,597.

GAMA (gah'mah), Vasco da (c. 1460–1524). Portuguese navigator. B. at Sines, he was chosen by Emanuel I to command an expedition sent in 1497 to discover the Cape route to India. The land he touched on Christmas Day, 1497, he named Natal. Crossing the Indian Ocean, he arrived at Calicut in May 1498, and arrived back in Portugal in Sept. 1499. In 1502 he founded a Portuguese colony at Mozambique and sacked Calicut in revenge for the murder of some Portuguese seamen. After 20 years of retirement, he was despatched to India again as Portuguese viceroy in 1524, but d. 2 months after his arrival in Goa.

GAMBETTA, Léon Michel (1838–82). French statesman. After Sedan he was one of the founders of the French Republic and organized a fierce resistance against the German invaders. In 1881–2 he was Prime Minister for a few weeks.

GAMBIA. State of W. Africa, comprising St. Mary's Island (area 29 sq. m.) on which is Bathurst, the cap., and a strip of up to 20 m. wide extending inland for about 200 m. on both sides of the river G. (area c. 4,000 sq. m.). The river is bordered by swamps from which the land rises to bush country. Ground nuts are the principal export.

British traders estab. a settlement in the area in 1618. G. was made a Crown Colony in 1888, and following the grant of self-govt. in 1963, became independent 1965 within the Commonwealth, but rep. status was rejected in a nat. referendum 1965. A Treaty of Assocn. with Senegal was signed 1967. Pop. (1965) 320,000.

GAMBLING. The playing of games of pure chance into which skill does not enter, e.g. roulette and all games in which dice (or other mechanical means) are used to decide the chance; or wagering on some fortuitous event. In the U.K. the Betting and Gaming Act (1960) relaxed previous prohibitions and in 1966 licence duties on gaming were introduced; in the U.S.A. gambling is regulated by individual states.

GAME LAWS. In Britain the laws relating to game preservation and the punishment of poachers and trespassers 'in pursuit of game'. The Game Act, 1831, defines game as hares, pheasants, partridges, grouse, heath or moor game, black game, and bustards.

GAMELIN (gahmlān'), Maurice Gustave (1872–1958). French general. French C.-in-C. and Generalissimo of the Allied armies in France in 1939, he was replaced by Weygand on the enemy breakthrough at Sedan in 1940, and tried as a scapegoat before the Riom 'War Guilt' court in 1942. He refused to defend himself, and was deported to Germany until released by the Allies in 1945.

GAMMA RADIATION. Very high-frequency electromagnetic radiation emitted by the nuclei of radioactive substances during decay, similar in nature to X-rays. See diagram under entry ELECTROMAGNETIC WAVES.

GANANA. Somali name of the r. JUBA.

GANDHI, Indira. See NEHRU.

GANDHI, Mohandas Karamchand (1869–1948). Indian social and political leader, called Mahatma (Great Soul) G. B. in the state of Porbandar, he studied law in London, and in 1893 went to S. Africa, where he stayed for some years successfully leading the Indian community in their passive resistance to discriminatory legislation. In the Boer and Zulu wars and in the F.W.W. he organized ambulance units before returning to India in 1915 to struggle for Indian home rule, by the method of 'non-violent non-co-operation' (*satyagraha*, defence of and by truth). In his choice of this method he was influenced by Christian and Tolstoyan ideals as well as by the traditions of his native Hinduism, and throughout his career he was consistent in his advocacy of peaceful resistance, even in the face of Japanese threats to India in the S.W.W. During a series of campaigns of non-co-operation 1920–44, in the course of which he was imprisoned several times, he estab. an influence over the British authorities and over the Congress (nationalist) Party, which sought to retain all his life although never himself in office; in the negotiations which evenually led to the attainment of independence in 1947 he played an active part behind the scenes. While developing (1932–9) his economic and educational plans to the benefit of the Indian masses, he undertook severe 'fasts unto death' on behalf of the 'Untouchables' and during the last weeks of 1947 undertook fasts to end the rioting and anti-Moslem violence which followed Partition. These led to a great reaction in public feeling, but his advocacy of Moslem-Hindu friendship deeply offended the Hindu extremists, and he was assassinated by a Hindu nationalist on Jan. 30, 1948.

GANEŚA (ganā'sa). One of the principal Hindu gods, represented as elephant-headed, and worshipped as a remover of obstacles.

GANGES. Great river of India and Pakistan. the most sacred river of the Hindus. It rises in the Himalayas and pursues a course of 1,557 m. to reach the Bay of Bengal through a wide delta, the main stream flowing through E. Pakistan as the Padma and the

GANGES. The ghats or ritual bathing steps at Benares. Photo: J. Allen Cash.

thyroid gland is accompanied by protrusion of the eyeballs, palpitation, etc.

GOLD. A heavy, valuable, yellow metallic element, with symbol Au, atomic number 79, and atomic weight 197.0. G. has long been valued for its durability, malleability, and ductility, and because it may be easily recognized. It is unaffected by temperature changes and is highly resistant to acids. Its main uses are in coin and jewellery.

South Africa produces almost 75 per cent (30,500,000 fine oz. p.a.) of the world's G. and other major producers are the Soviet Union, Canada, U.S.A., and Australia. For manufacture, G. is alloyed with another strengthening metal, fineness being measured by the parts of pure G. in 24. See CARAT.

GOLDBERG, Arthur Joseph (1908–). American lawyer. B. in Chicago, he was legal adviser to the A.F.L.—C.I.O., helping to draft their merger agreement, and is a strong believer in the solution of industrial disputes by mediation. He was Sec. of Labour 1961–2, a justice of the Supreme Court 1962–5, and ambassador to the U.N. 1965–6.

GOLD. Miners drilling in a gold-bearing layer on the Ventersdorp Contact Reef in the Transvaal.

Courtesy of the Anglo-American Corp. of S.A. Ltd.

GOLD COAST. Name given by Europeans, on account of the alluvial gold washed down by the rivers, to part of the W. coast of Africa, from Cape Three Points to the mouth of the Volta r. Portuguese and French navigators visited this coast in the 14th cent., and in 1618 the British set up a trading settlement which developed into the colony of the Gold Coast (24,000 sq. m.); with its Ashanti and Northern Territories dependencies plus British Togoland it became Ghana (q.v.) in 1957.

GOLDCREST. The smallest British bird (*Regulus cristatus*), it is sometimes called the golden-crested wren, but has no link with the wrens. Olive green, with a bright yellow streak across the crown, it builds usually in conifers.

GOLDEN FLEECE. In Greek legend, the F. of the ram Chrysomallus, which hung on an oak tree at Colchis guarded by a dragon, and was taken by Jason and the Argonauts. It is also the name of an order of knighthood formerly awarded in Spain and in Austria, which was instituted by Philip the Good, duke of Burgundy, in 1429, and freshly inaugurated in Vienna in 1713 by Charles VI.

GOLDEN ROD. Popular name for the tall, leafy perennials of the *Solidago* genus of the Compositae. Each stem bears a head consisting of a great number of small yellow flowers.

GOLDEN GATE, California, U.S.A. Strait linking San Francisco Bay and the Pacific, spanned by a

bridge which was completed in 1937, which has a single span of 4,200 ft.

GOLDFINCH. Songbird (*Carduelis carduelis*) commonly found in Europe and N. Africa, and in many other parts of the world. It is brilliantly coloured — black, white, and red about the head, and gold and black wings. Most Gs. leave Britain in the autumn.

GOLDFISH. Fish of the carp family (*Carassius auratus*) found in eastern Asia. Greenish brown in its natural state, it has for cents. been bred by the Chinese, taking on highly coloured and freakishly shaped forms. In Japan G. breeding developed rapidly among low-class warriors dismissed by their feudal lords on the Emperor's restoration in 1868, and keeping them became an almost universal Japanese hobby: today enormous quantities are shipped abroad.

GOLDING, Louis (1895–1958). British novelist. A descendant of Russian refugees, he was at his best in portraying life in the Jewish community of his native Manchester disguised as 'Doomington', as in *Magnolia Street* (1932).

GOLDING, William (1911–). English poet and novelist, whose books have a deep moral significance, e.g. *Lord of the Flies* (1954) in which savagery takes over among a group of English schoolboys on a Pacific island and *Pincher Martin* (1956), flashbacks of a drowning man.

GOLDONI, Carlo (1707–93). Italian dramatist. B. at Venice, he wrote popular comedies for the Sant'Angelo theatre, incl. *Don Giovanni Tenorio* (1736), *La bottega di caffè*, *La locandiera*, *La casa nova*, etc. In 1761 G. moved to Paris, where he directed the Italian theatre, gave It. lessons at the court, and d. in extreme poverty.

GOLDSMITH, Oliver (1728–74). British author. B. in Ireland, the son of a clergyman, he was ed. at Trinity Coll., Dublin and went to Edinburgh to study medicine in 1752. After 18 months he proceeded to Leyden, but left without a degree and wandered through France, Switzerland, and Italy. Returning to England in 1756 he became an usher, before settling to hackwork from which he never escaped, e.g. his *History of England*, and *Animated Nature*. His earliest work of literary importance was *The Citizen of the World* (1762), a series of letters by an imaginary Chinese traveller. In 1761 he met Johnson, and became a member of his 'club'. In 1764 he estab. his reputation with his poem *The Traveller*, and followed it with his collected essays in 1765, and his novel,

The Vicar of Wakefield (1766), sold according to Johnson's account to save him from imprisonment for debt. A further poem, *The Deserted Village* (1770), was followed by his dramatic masterpiece, *She Stoops to Conquer* (1773), which far exceeds the earlier comedy, *The Good-Natur'd Man* (1768).

GOLD STANDARD. The linking of money with

GAS. From the Sahara natural gas flows through a pipeline to Port Arzew on the Algerian coast, and is there liquefied at a temperature of -161°C and reduced to 1/600th of its original volume. Special tankers (left) then carry it to the Canvey Island methane terminal where frozen-ground storage units (right) 130 ft. in diameter and 130 ft. deep each have a capacity of 11 million therms of liquefied gas. Courtesy of the Gas Council.

the war of 1859; and in 1860, at the head of his 1,000 Redshirts, conquered Sicily and Naples for the new kingdom of Italy. He led 2 unsuccessful expeditions to liberate Rome from papal rule in 1862 and 1867, served in the Austrian War of 1866, and fought for the French in the Franco-Prussian War.

GARLIC. Perennial plant of the Liliaceae family, the bulb of which has a strong odour and flavour. The edible G. is *Allium sativum*.

GARNET. A group of minerals used as gems and abrasives. They are usually pale pink to deep red, and are of common occurrence in gneiss and schist, crystallized limestones, etc.

GARONNE. River rising in the Spanish Pyrenees, then flowing N.W. through France to the Gironde estuary. Toulouse and Bordeaux are the chief towns on it. It gives its names to the depts. of Haute-Garonne, Tarn-et-Garonne, and Lot-et-Garonne.

GARRICK, David (1717-79). British actor. B. in Hereford, he was ed. at Lichfield grammar school and also briefly under Johnson, of whose circle in London he was to become a member, and both set out for the capital together in 1737. He made his debut in 1741, and his Richard III and Lear brought him fame, so that he was engaged for Drury Lane. In 1747 he became joint-patentee of the theatre with his own co. The expressiveness and naturalness of his acting, and his gift of mimicry, broke startlingly with the traditional chanting delivery and he excelled in a variety of parts incl. Hamlet, Benedick, Archer in *The Beaux' Stratagem* and Abel Drugger in *The Alchemist*. He himself wrote plays, e.g. *The Clandestine Marriage* (1766, with Colman), and made numerous adaptations. He retired from the stage in 1766, but continued as a manager.

GARTER, Order of the. The senior British order of knighthood, founded by Edward III c. 1347. Its distinctive badge is a garter of dark blue velvet, with the motto of the order, *Honi soit qui mal y pense*, in gold letters, worn below the left knee. Membership is limited to 25 knights, and to members of the royal family and foreign royalties; appointments are made by the sovereign without ministerial recommendation. St. George's Chapel, Windsor, is the chapel of the order. See **BLUE RIBAND**.

GARY (gahrē), Romain (1914-). French writer and diplomat. In the S.W.W. he served as a pilot with the Free French, then entered the diplomatic service and was consul-general in Los Angeles 1956-60. His novels incl. *Education Européenne* (1945) and *Les Racines du Ciel* (1956: *The Roots of Heaven*).

GARY. City of Indiana, U.S.A., at the southern end of Lake Michigan. It contains the largest steel and cement works in the world, those of the United States Steel Corporation. Pop. (1960) 178,320

GAS. Word first used by J. B. van Helmont

(1577-1644) for what may be defined as a form of matter that has neither volume nor shape, and such that when a given quantity of it is introduced into a vessel, it will fill the vessel completely. Gs. behave according to certain fundamental laws relating pressure, volume, and temperature. See **BOYLE, R.** and **CHARLES'S LAW**. Examples of gases are the elements hydrogen, helium, nitrogen, neon, etc., and among compounds, carbon monoxide, carbon dioxide, and nitrous oxide.

Natural gas is the gaseous form of the complex mixture of hydrocarbons called petroleum; crude oil is the liquid form, and bitumen the solid form, which is found at the surface when the lighter hydrocarbons have escaped to the atmosphere. Natural G. and oil are retained below the surface only if there is an adequate impervious capping layer laid down over the top of the accumulation, which is usually found in association with coal reserves. The capping is usually shale.

When oil deposits first began to be exploited the G was regarded as a waste product, but since the S.W.W. has been increasingly utilized as fuel, and large deposits have been discovered, notably under the North Sea, in Siberia, in the Netherlands, North Africa, and Australia. Natural G. is usually 90% methane, but may also contain varying proportions of ethane, propane, and butane - used in the petrochemical industry - helium, hydrogen, sulphur, etc., all industrially utilisable.

For 150 years the traditional gas-making process was by coal carbonisation, but from c. 1960 the process has increasingly been based on oil, and then from 1965 increasingly on natural gas. See illus. p. 462

GASCONY. Ancient province of S.W. France. Henry II of England gained possession of it through his marriage to Eleanor of Aquitaine in 1152, and it was often in English hands until 1451. It was united with the royal domain in 1607 under Henry IV.

GAS ENGINES. Type of internal combustion engine, in which gas (coal gas, producer gas, or gas from a blast furnace) is used as the fuel. The first practical G.E. was built in 1860 by Lenoir, and the type was subsequently developed by Otto.

Insigla of the Garter

GOOD FRIDAY (probably a corruption of God's Friday). In the Christian Church, the Friday before Easter, which is kept in memory of the Crucifixion.

GOODHART, Arthur Lehman (1891–). American jurist. He was prof. of jurisprudence at Oxford 1931–5. His books incl *English Law and the Moral Law* (1953) and *Law of the Land* (1966).

GOODMAN, Benny (1909–). American clarinetist, the 'king of swing'. B. in Chicago, he has had his own band since 1934, and has made celebrated recordings, e.g. 'Blue Skies' and 'King Porter Stomp'. Bartók's *Rhapsody* for clarinet and violin was written for him.

GOODMAN, Nelson (1906–). American philosopher. Prof. of philosophy at the Univ. of Pennsylvania from 1951, he is especially concerned with the theory of knowledge and problems of language, e.g. *Fact, Fiction and Forecast* (1955).

GOODWIN SANDS. Group of shoals about 6 m. off the E. coast of Kent, England, 8–10 m. from N.–S. The sands are exposed at low tide, but despite lightships and buoys, ships frequently go aground. According to legend, the sands represent the submerged island of Lomea, which in the 11th cent. belonged to earl Godwin.

GOODWOOD. The Sussex seat of the duke of Richmond and Gordon, 3½ m. N.E. of Chichester, England. On the downs adjoining is G. Park and racecourse, where horses have been raced since 1802. There was a motor-racing track 1948–66.

GOODYEAR, Charles (1800–60). American inventor, who developed vulcanized rubber in 1839.

GOOLE. English market town and port (bor.) at the junction of the Don and Ouse, 24 m. W. of Hull, in Yorks, W. Riding. It is connected with the North Sea by the 47 m.-long Humber estuary, and its industries include shipbuilding and -repairing, flour-milling, making of fertilizers and clothing. Pop. (1961) 18,875.

GOONHILLY. Post Office satellite tracking station in Cornwall, England. It is equipped with a communications satellite transmitter-receiver in permanent contact with most parts of the world, and able to handle 500 transatlantic telephone calls and a television channel simultaneously.

GOOSANDER. Fish-eating duck (*Mergus merganser*). The drake has a black and grey back, black and white wings, and a green head; the rest of the body is white with a rosy tinge. The duck, sometimes known as the Dun-diver, has a chestnut head, and a long crest, which is absent in the male.

GOOSE. Name given to birds forming the subfamily Anserinae. Both sexes are similar in appearance; they have short, webbed feet, placed nearer the front of the body than in other members of the order Anatidae, and the beak is slightly hooked. They feed entirely on grass and plants, 'grey' geese being very destructive to young crops. The commonest variety is the grey-lag G. (*Anser anser*) which is the ancestor of the tame goose. This is the only variety which nests in Gt. Britain. The genus also includes the bean G. (*A. fabalis*), the pink-footed G. (*A. brachyrhynchus*), and the white-fronted G. (*A. albifrons*), all of which breed in the Old World, and visit Britain in winter. The G. builds a nest of grass and twigs on the ground, and from 5 to 9 eggs are laid, white or cream-coloured, according to the species.

GOOSEBERRY. Edible fruit of *Glossularia reclinata*, a low-growing bush allied to the currant

bushes. The bush is straggling in its growth, bearing straight sharp spines singly or in groups, and rounded, lobed leaves. The flowers are green, and hang on short stalks. The fruits are generally globular, green, and hairy, but there are reddish and whitish varieties.

GOOSSENS, Sir Eugene (1893–1962). British composer and conductor, member of a remarkable musical family of Belgian extraction that settled in Britain in 1873. He wrote chamber music, operas (*Judith* and *Don Juan*), and symphonies, and is remembered as one of Beecham's young men in the great days of Beecham opera and as conductor of the Sydney Symphony Orchestra 1947–56. His brother Léon G. (1897–) is a celebrated oboist.

GOPHER (gō'fer). N. American rodent. It is a burrowing animal, and does much damage to crops.

GORDIMER, Nadine (1923–). S. African writer. Her 1st novel appeared in 1953, *The Lying Days*, and has been followed by a number of others incl. *Occasion for Loving* (1963) and vols. of short stories (*Friday's Footprint*). She gives a delicately observant picture of S. African life.

GORDON, Adam Lindsay (1833–70). Australian poet. B. in the Azores, he was sent to Australia in 1853, and lived a varied life as mounted policeman, sheep farmer, politician, etc. *Sea Spray and Smoke Drift*, a collection of some of his best poems, was pub. in 1867, followed in 1870 by *Bush Ballads and Galloping Rhymes*. He committed suicide.

GORDON, Charles George (1833–85). British general. B. at Woolwich, he joined the Royal Engineers in 1852, and served in the Crimean War, and in the Chinese War of 1860. In the latter he suppressed the Taiping rebellion and became known as 'Chinese G.'. In 1874 he went to Egypt, and 1877–9 was governor of the Sudan. He spent the next few years in India, China, Ireland, Mauritius, the Cape, and Palestine. He was sent back to the Sudan in 1884 to rescue English garrisons which were at the mercy of native rebels under the Mahdi, but was himself besieged by the Mahdi's army in Khartoum. A relief expedition under Wolseley arrived on Jan. 28, 1885, to find that Khartoum, after a siege of 10 months, had been captured, and G. killed, 2 days before.

GORDON, Douglas (1909–). British radiologist, holding appointments at Moorfields Eye Hospital, Wilkesden General Hospital, and the West End Hospital for Neurology and Neurosurgery. He began research in medical ultrasonics in 1953. In 1962 he invented the ultrasonic tomograph which achieved a major advance in medical diagnosis by showing details not demonstrable by X-rays.

GORDON, Lord George (1751–93). Protestant fanatic, who organized the Protestant protest against the Catholic Relief Act of 1778, which led to the disgraceful 'Gordon Riots'. G. was tried for treason, but acquitted. G. and the 'No Popery' riots figure in Dickens' *Barnaby Rudge*.

GORDON, John Rutherford (1890–). British journalist. He worked on the *Evening News* and the *Daily Express*, before becoming editor (1928) and editor-in-chief (1957) of the *Sunday Express* of which his column 'Current Events' is a well-known feature. He is a trustee of the Beaverbrook Foundation.

GORDON, Richard O. (1921–). British author. After qualifying and practising as a doctor, he pub. a series of light-hearted novels on the career of a young medical aspirant beginning with *Doctor in the House* (1952).

GORDONSTOUN. Public school nr. Elgin, Morayshire, Scotland, founded by Kurt Hahn (q.v.) in 1935, which emphasizes a spartan outdoor life and achievement of objectives, e.g. in mountain-climbing and sailing. Prince Philip and Prince Charles were both ed. there. The estate was formerly the seat of the Gordon Cumming family, Sir William Gordon Cumming, 4th bt., being the centre of the baccarat

GORTON, Guy Grey (1911–). Australian Liberal statesman. Son of a Victorian fruit-grower, he studied at Oxford, and served in the R.A.A.F. during the S.W.W. He was Min. for the Navy 1958–63; assisted the Min. for External Affairs 1960–3; became Min. for Interior and also for Works 1963; and was Min. for Education and Science from 1966 until he became P.M. in 1967 after the death of Holt (q.v.).

GOSCHE, (gō'shen), George Joachim, 1st visct. (1831–1907). British Liberal politician. He held several cabinet posts under Gladstone 1868–74, but broke with him in 1886 over Irish Home Rule. In Salisbury's Unionist govt. of 1886–92 he was Chancellor of the Exchequer, and 1895–1900 was 1st Lord of the Admiralty.

GOSHAWK. Bird (*Accipiter gentilis*) used in falconry; similar in appearance to the peregrine falcon, but with short wings and short legs.

GOSPEL. Word used in the N.T. generally to signify the message of salvation; later it was applied to the 4 written Gs. of Matthew, Mark, Luke, and John. Although the first 3 give approximately the same account or synopsis (thus giving rise to the name Synoptic Gs.), their differences from John have raised many problems, discussed in a vast literature.

The so-called 5th G., or G. of St. Thomas, is a 2nd cent. collection of 114 sayings of Jesus found in a Coptic translation in one of 13 papyrus codices, discovered in Upper Egypt in 1946, which were apparently the library of a Gnostic community. Strongly influenced by Gnostic teaching, it is nevertheless interesting for comparison with the canonical Gs.: there is no reason to believe that it was written by St. Thomas, the name being used merely to give authority.

GOSPORT. English port (bor.) and naval depot to the W. of Portsmouth harbour, Hants. Pop. (1961) 62,436.

GOSSE (gos), Sir Edmund William (1849–1928). English author. Son of a marine biologist, who was a member of the Plymouth Brethren, G.'s childhood was shadowed by the narrow tenets of the sect in Victorian times, and in his one great original book *Father and Son* (published anonymously in 1907) he describes the conflict between the generations, even where affection exists. G. worked as a librarian, first at the British Museum, and from 1904–19 in the House of Lords, and was knighted in 1925. He was influential as a critic and an authority on French and Scandinavian literature.

GÖTEBORG. Swedish port at the mouth of the Göta and at the W. end of the Göta canal. Pop. (1966) 443,292.

GOTHA (gō'tah). Town in E. Germany, at the N. edge of the Thuringian forest, 15 m. W.S.W. of Erfurt. It was a former cap. of the duchy of Saxe-Coburg-Gotha, and has a castle and 2 observatories; it makes pottery, soap, aircraft, etc. The *Almanach de G.*, an annual survey of the royalty, aristocracy and diplomatic ranks of Europe, first appeared at G. in 1764. Pop. (1966) 60,000.

GOTHENBURG. German form of Göteborg.

GOTHIC ARCHITECTURE. The various styles of architecture which are grouped under the heading of Gothic have certain features in common, viz. the vertical lines—tall pillars, spires, etc.—which take the place of the horizontal lines of previous styles, the pointed arch, rib vaulting, and the flying buttress. G.A. originated in Normandy and Burgundy in the 12th cent., and prevailed in W. Europe until the 16th cent. when classic architecture was revived. The term Gothic was at first used disparagingly of medieval art by Renaissance architects.

In France, G.A. may be divided into 4 periods, viz. (a) early Gothic, 1130–90, when ogival vaults were introduced; (b) lancet Gothic, 1190–1240, when pointed arches were tall and narrow; (c) radiating Gothic, 1240–1350, which takes its name from the

A superb example of Perpendicular Gothic architecture, Winchester cathedral (1475). The lines of the vertical tracery give an effect of lacework in stone. Photo: A. W. Kerr.

series of chapels which radiate from the cathedral apse; and (d) late Gothic or the Flamboyant style, 1350–1520. Examples of the different periods are (a) Notre Dame, Paris (begun 1160); (b) Chartres (begun 1194); Bourges (begun 1209); Rheims (begun 1211); and Amiens (begun 1221); (c) Sainte Chapelle, Paris (1226–30); and (d) St. Gervais, Paris.

In Italy Gothic had a classical basis. A notable example of Italian Gothic is Milan cathedral.

The Gothic style in Germany appeared, until the end of the 13th cent., to have been imported from France, e.g. Cologne cathedral, the largest in N. Europe, was built after the model of Amiens (q.v.).

In England the Gothic style is divided into Early English (1200–75), Decorated (1300–75), and Perpendicular (1400–1575), qq.v.

GOTHS. An E. Germanic people who settled on the shores of the Black Sea, about the 2nd cent. A.D. One branch, the Ostrogoths, was conquered by the Huns c. 370, while another, the Visigoths, migrated to Thrace. The latter raided Greece and Italy under Alaric (395–410), sacked Rome, and set up a kingdom in S. France. Expelled thence by the Franks, they estab. a Spanish kingdom which lasted until the Moorish conquest of 711. The Ostrogoths regained their independence in 454, and under Theodoric conquered Italy in 488–93; they disappeared as a nation after Justinian reconquered Italy in 535–55.

GOTTLAND. Swedish island in the Baltic Sea. Its cap. is Visby. Area 1,220 sq. m. Pop. (1966) 53,738.

GOTTFRIED VON STRASSBURG (fl. c. 1210). German poet, author of *Tristan und Isolde*. Hardly anything is known about his life, but he may have been a member of one of the patrician families of Strassburg. His unfinished *Tristan* epic, which shows a formal refinement and splendour of diction unprecedented in Ger. epic poetry, is a free version of that of the Anglo-Norman Thomas (c. 1170).

process whereby the small farmers were being ruined by the competition of large estates cultivated by slave labour. He introduced an agrarian law for the resumption by the state of public lands in private hands and their redistribution in small lots, but was murdered by a mob of landowners. His brother Gaius, elected tribune in 123 and 122, revived the agrarian law, and introduced a sweeping programme of social and political reforms. Outlawed by the Senate, he committed suicide.

GRACE, William Gilbert (1848–1915). British cricketer and physician. B. at Downend, Glos, he began playing in first-class matches at 15, and was captain of the Gloucester County team, 1870–99, when he became manager of the London County Club. He took several teams to Australia and U.S.A. In 1871 he scored 2,739 runs in the season, and by 1900, when his career as a first-class cricketer ended, he had scored over 54,000 runs. See **CRICKET**.

GRACES. Three goddesses of ancient Greece, who were the personifications of light, joy, and fertility, and the inspirers of the arts, the sciences, and all graceful activities. Their names were Aglaia, Euphrosyne, and Thalia.

GRAEME (grām), Bruce. Pseudonym of the novelist Graham Montague Jeffries, best known as the creator of the adventurous character 'Blackshirt' (1925).

GRAFTON, Augustus Henry, 3rd duke of (1735–1811). British statesman. Grandson of the first duke, who was the son of Charles II and Barbara Villiers, duchess of Cleveland, he became 1st Lord of the Treasury in 1766 and acting Prime Minister 1767–70.

GRAFTON. Town of N.S.W., Australia, on the r. Clarence, 45 m. from its mouth; it is an important dairying and sugar centre, with bacon factories, tanneries, etc. Pop. (1966) 15,944.

GRAHAM, Billy (1918–). American evangelist. Of Scottish-Irish parents, he was brought up in N. Carolina, and at 17 was converted at a revival. He has crusaded, holding emotional mass meetings, throughout the U.S. and in Britain.

GRAHAM, Martha (1894–). American choreographer and dancer. B. in Pittsburgh, she became a Broadway cult in the 'twenties because of her break with tradition and her repertoire incl. *Appalachian Spring* (score by Aaron Copland) and *Clytemnestra* (1958), one of a number of classical theme dances.

GRAHAME (grā'am), Kenneth (1859–1932). British author. B. at Edinburgh, son of an advocate, he worked at the Bank of England 1878–1908. The early vols. of sketches of childhood, *The Golden Age* (1895) and *Dream Days* (1898), were followed by his masterpiece *The Wind in the Willows* (1908), an animal fantasy originally created for his little son. It has been successfully staged in A. A. Milne's dramatization: *Toad of Toad Hall*.

GRAHAME-WHITE, Claude (1879–1959). Pioneer British airman and engineer. Owner of one of the first petrol-driven cars in England, he was in 1909 the first Englishman to be granted an aviator's proficiency certificate.

GRAHAM LAND. Peninsula of the Antarctic continent, formerly a dependency of the Falkland Islands and from 1962 part of the British Antarctic Territory (q.v.). Discovered by John Biscoe in 1832, it was thought to be an archipelago until 1934; it is mountainous and covered with ice and snow.

GRAHAMSTOWN. Town in Cape Prov., S. Africa, 85 m. W.S.W. of East London. It has 2 bishops, Anglican and Roman Catholic, and is the seat of Rhodes University (1951; founded 1904 as Rhodes Univ. College). Pop. (1960) 32,195 (10,500 white).

GRAIL, Holy. The dish or cup used by Christ at the Last Supper, which, together with the spear with which He was wounded at the Crucifixion,

appears as an object of quest by King Arthur's knights in certain stories incorporated in the Arthurian legend. According to one story, the Blood of Christ was collected in it by Joseph of Arimathea at the Crucifixion, and he brought it to Britain.

GRAINGER, Percy Aldridge (1882–1961). Australo-American composer. B. in Melbourne, he was a sensitive and technically brilliant concert pianist. His interest in folk music led to his making many popular settings, e.g. *Molly on the Shore* and *Shepherd's Hey*.

GRAM/GRAMME. In the metric system the unit of mass, i.e. the thousandth part of the standard kilogram mass.

GRAMPIANS. Mountain mass separating the Scottish Highlands from the Lowlands; it contains the highest peaks in Scotland, e.g. Ben Nevis.

GRAMPUS. A cetacean (*Grampus orca*) of the Delphinidae or dolphin family. It breeds in Arctic regions and preys on other members of the same family – dolphin, seal, porpoise, and whale – and is 20 to 30 ft. long. It is black above and white beneath.

GRANADA (granah'da). Ancient kingdom and modern prov. of S.E. Spain and their capital. G. was the last territory in Spain held by the Moors, and did not surrender until 1492. The prov. includes mts. in the Sierra Nevada rising to over 11,000 ft. The dry summers make artificial irrigation necessary; sheep and goats are reared, and sugar refining is the principal industry. Area 4,838 sq. m.; pop. (1960) 769,408.

The city is famous for its Moorish buildings, among them the Alhambra; it also has a cathedral, built 1523–1703, and a university. Pop. (1960) 157,178.

GRANADA. A city of Nicaragua, cap. of G. dept. Founded in 1524, it has shipyards, sugar refineries, clothing, soap, and furniture factories; and a cathedral. The univ. founded here in 1846 was moved to León in 1951. Pop. (1963) 40,092.

GRANADOS, Enrique (1867–1916). Spanish composer. A brilliant pianist, he was inspired by the work of Goya to write his important piano work *Goyescas* (1911), converted to an opera in 1916. He d. when the liner in which he travelled back from its performance in N.Y. was torpedoed by a German submarine.

GRANBY, John Manners, marquess of (1721–70). British soldier. His head appears on many inn-signs in England as a result of his popularity as a commander of the British forces fighting on the Continent in the Seven Years War.

GRAN CHACO. See **CHACO**.

GRAND CANAL. Waterway in China connecting the Hwai Ho and Hai Ho river systems. It runs from Hangchow to Tientsin. The middle section was already in use in 480 B.C.; the S. section was built in the 7th cent. A.D., the N. in the 13th. It is silted up between Lintsing and Tsining.

The chief canal in Venice is also called the **GRAND CANAL**.

GRAND CANYON. Great, many-coloured gorge through which flows the Colorado r., in Arizona, U.S.A. It is 4–18 m. in width, reaches depths of more than a mile, and is 217 m. long; made a national park 1919.

GRAND COULEE. Dam on the Columbia river, Washington state, U.S.A. Completed 1942, 550 ft. high and 4,173 ft. long; powerplants will eventually produce some 10,000,000 kilowatts.

GRAND DESIGN. Plan attributed by Sully to Henry IV of France, and rendered abortive by his assassination, for a great Protestant Union against the Holy Roman Empire; the term is also applied to Pres. de Gaulle's vision of France's place in a united Europe.

GRAND FALLS. Town of Newfoundland, Canada, site of large paper and pulp mills. Pop. (1966) 7,451.

GRAND NATIONAL. A steeplechase (1839) run at Aintree during the Liverpool Spring meeting in March or April: the course of about 4 m. 856 yd. has 30

usually with strongly developed hind legs which enable them to leap. The short-horned Gs. (Acrididae) incl. the locust (q.v.), and all members of the family feed voraciously on vegetation. The femur of each hind leg in the male usually has a row of protruding joints which produce the characteristic chirping when rubbed against the hind wing veins. Eggs are laid in a small hole in the ground, and the unwinged larvae become adult after about 6 moults. There are several sober-coloured, small and harmless species in Britain.

LONG-HORNED GRASSHOPPER

The long-horned Gs. (Tettigoniidae) have a similar life-history, but differ from the Acrididae in having long antennae, etc., and in producing their chirping by the friction of the wing covers over one another. The large green G. (*Phasgonura viridissima*), 1½ in. long, is a British species of this family, which also comprises the N. American katydids (Phanopterinae), notable stridulators.

GRASS SNAKE. Harmless reptile (*Tropidonotus natrix*), commonly found in wet districts of England and Scotland. Attaining 3–6 ft., it is olive-brown or grey with black spots above and mottled white below, with a yellow and black collar. It feeds on frogs or fish, one meal often sufficing 1–2 months, and the soft oval eggs – about an inch long and numbering 1–4 dozen – are laid in July/August.

GRATTAN, Henry (1746–1820). Irish statesman. B. in Dublin, he entered the Irish parliament in 1775. As leader of the opposition he secured the abolition of all claims by the British parliament to legislate for Ireland in 1782. Although he strongly opposed the Act of Union, he sat in the British parliament from 1805.

GRAUBUNDEN. German name of GRISONS.

's GRAVENHAGE. Formal Dutch name of THE HAGUE.

GRAVES, Robert Ranke (1895–). English poet and author. B. in London, he was the son of the Irish writer Alfred Perceval G. (1846–1931) whose songs and poetry contributed largely to the Celtic revival. He was severely wounded on the Somme in the F.W.W. and his frank autobiography *Goodbye to All That* (1929) is one of the outstanding war books. In 1927 he

joined Laura Riding (q.v.) in directing the Seizin Press and collaborated with her in several books. His first book of verse was *Over the Brazier* (1916) and other vols. followed incl. *Collected Poems* (1959). Particularly striking are his novels of Imperial Rome, *I Claudius* and *Claudius the God* (1934) and *They Hanged My Saintry Billy*. (1957), a defence of William Palmer, a forger and supposed poisoner of 14 people, hanged in 1856. He is an avid student of myth and

GRASS SNAKE

has published notable volumes of literary criticism: he was prof. of poetry at Oxford 1961–6.

GRAVESEND. English river port and market town (bor.) in Kent, on the Thames estuary. It is the Thames Pilot Station, and has a ferry service to Tilbury. Pop. (1961) 51,388.

GRAY, Thomas (1716–71). English poet. B. in London, he formed at Eton a close friendship with Horace Walpole, with whom in 1739 he started on a tour of France and Italy, vividly described in his letters. In 1741 he returned to London, where he lived for a

year, making occasional visits to his mother and sister at Stoke Poges; to this period belong the 'Ode on a Distant Prospect of Eton College' and the 'Hymn to Adversity'. In 1748 his first poems appeared anonymously in Dodsley's *Miscellany*, and in 1750 he wrote the 'Elegy written in a Country Churchyard' at Stoke Poges. A vol. of *Poems* was pub. by Dodsley in 1752, and in 1757 Walpole issued G.'s Pindaric Odes, 'The Bard' and 'The Progress of Poesy' from his private press.

GRAYLING. Freshwater fish (*Thymallus thymallus*) of the family Salmonidae. It is found locally in England and has been introduced into Scotland. It exhibits a coloration shading from purple to pink, and may be distinguished by its long dorsal fin.

GRAZ (grahts). Capital of Styria prov., Austria, on the Mur at the foot of the Styrian Alps. It has a 15th cent. cathedral and a univ. founded 1573. Pop. (1961) 237,041.

GRAZIANI (grahtsē-ah'nē), Rodolfo (1882–1955). Italian general. With experience in colonial warfare

GREAT BARRIER REEF. One of Australia's playgrounds, the reef is a paradise for the yachtsman and naturalist. Here are Lindeman Island and, in the background, Royal Seaforth Island. Courtesy of the Agent-General for Queensland.

in Libya, Cyrenaica, and Abyssinia, G. became G.-in-C. of Italian forces in N. Africa in the S.W.W., but was soundly beaten by Wavell (1940), and subsequently superseded. Later, as Defence Min. in the new Mussolini govt. he failed to reorganize a Republican Fascist army, was captured by the Allies (1945), tried by an Italian military court, and finally released in 1950.

GREAT BARRIER REEF. A collection of coral reefs and islands stretching for about 1,200 m. at a distance of 10–30 m. from the E. coast of Queensland, Australia, and forming an immense natural breakwater.

GREAT BRITAIN. Name used for England, Scotland, and Wales, and the adjacent islands, that came into official use in 1603, when the English and Scottish crowns were united in the person of James VI of Scotland, I of England. With Northern Ireland it forms the United Kingdom.

GREAT CIRCLE. A plane cutting through a sphere, and passing through the centre point of the sphere, cuts the surface along a G.C. Thus, on the earth, all meridians of longitude are half G.C.s.; of the parallels of latitude, only the Equator is a G.C. The shortest route between 2 points on the earth's surface is along a G.C.

GREAT DANE. A large dog popular in Britain. It has a long head, deep-set eyes, and small ears, straight legs and short hair. The average height is 30 in.

GREAT GRIMSBY. See GRIMSBY.

Hellenistic bronze head in the British Museum of an African from Cyrene. It shows excellent balance of elaborate detail-treatment against simple and harmonious general effect.

G. A. can be divided into Archaic (to 530 B.C.), Classical (530–320 B.C.), and Hellenistic (320 B.C.–A.D. 1).

By *Archaic* G.A. is meant the period beginning with the geometric style (900–700 B.C.) in which decoration consists of geometric elements—circles, triangles, etc.—followed by a transition to more naturalistic decoration showing the influence of Oriental, Egyptian, and Cyprian art, and ending with the red-figure style of vase painting (530 B.C.).

The *Classical* period may be subdivided into (a) Post-Persian, a name given to the art of the first half of the 5th cent. B.C. when archaic conventions were abandoned for three-dimensional composition; (b) Periclean art which is sunnier and freer than previous styles—e.g. heavy ornate drapery gives way to more decorative flowing folds; (c) the period of the Sophists when Periclean 'beauty with extravagance' is dissolved into the two extremes of emotional realism and luxurious artificiality; and (d) the mid-4th cent., the period of the great sculptors Praxiteles, Skopas, and Lysippos, and the great painters Pausias, Nikias, and Apelles.

The *Hellenistic* period saw an increase in the variety of types of sculpture, painting, etc. Works produced during the period include the Tanagra terracottas, the Victory from Samothrace, the altar of Zeus (Pergamum), etc.

GREEK HISTORY: Ancient. The first Greek civilization, that known as Mycenaean (fl. c. 1600–1200 B.C.), owed much to the Minoan civilization of Crete, and may have been produced by the intermarriage of Greek-speaking invaders with the original inhabitants. From the 14th cent. B.C. a new wave of invasions began. The Achaeans overran Greece and Crete, destroying the Minoan and Mycenaean civilizations, and penetrated Asia Minor; to this period belongs the siege of Troy (c. 1180). The latest of the invaders were the Dorians (c. 1100), who settled in the Peloponnese and founded Sparta. An obscure period followed (1100–800) during which the great city-states arose. The mountainous geography of Greece pre-

vented the cities from attaining any national unity, and compelled them to take to the sea. During the years 750–550 the Greeks not only became great traders, but founded colonies around the coasts of the Mediterranean and the Black Sea, in Asia Minor, Sicily, S. Italy, S. France, Spain, and N. Africa. The main centres of Greek culture in the 6th cent. were the wealthy Ionian ports of Asia Minor, where Greek philosophy, science, and lyric poetry originated.

Most of the Greek cities passed from monarchy to the rule of a landowning or merchant oligarchy, and thence to democracy; in many states a 'tyranny', or rule of a popular dictator, formed an intermediate stage between oligarchy and democracy. Thus Athens passed through the democratic reforms of Solon (594), the enlightened 'tyranny' of Peisistratus (560–527), and the establishment of democracy by Cleisthenes (c. 507). Sparta remained unique, a state in which a ruling race, organized on military lines, tyrannized over the original population.

After 545 the Ionian cities fell under the suzerainty of the Persian empire. Aid given them by Athens in an unsuccessful revolt in 499–494 provoked Darius of Persia to invade Greece in 490, only to be defeated by the Athenians at Marathon and forced to withdraw.

Another invasion by Xerxes, after being delayed by the heroic defence of Thermopylae by 300 Spartans, was defeated on sea at Salamis in 480, and on land at Plataea in 479. The Ionian cities were liberated, and formed a naval alliance with Athens, the Confederacy of Delos. Pericles, the real ruler of Athens 461–429, attempted to convert this into an Athenian empire, and in addition to form a land empire in Greece.

Mistrust of his ambitions led to the Peloponnesian War (431–404), which destroyed Athens' political power. In 5th cent. Athens, Greek tragedy, comedy, sculpture, and architecture reached their height, and Socrates and Plato founded moral philosophy.

After the Peloponnesian War, Sparta became the leading Greek power, until she in turn was overthrown by Thebes (378–371). The constant wars between the cities gave Philip II of Macedon (358–336) his opportunity gradually to establish his supremacy over Greece. His son Alexander overthrew the decadent Persian empire, conquered Syria and Egypt, and invaded the Punjab. After his death in 323 his empire was divided among his generals, but his conquest had nevertheless spread Greek culture all over the Near East.

During the 3rd cent. B.C. the cities attempted to maintain their independence against Macedon, Egypt, and Rome by forming federations, e.g. the Achaean and Aetolian Leagues. Roman intervention began in 212, and ended in the annexation of Greece in 146 B.C. Under Roman rule Greece remained important mainly as a cultural centre, until Justinian closed the univ. of Athens in A.D. 529.

Medieval and Modern. Medieval Greek history begins with Constantine's grant of toleration to Christianity in 313, and the transference of the capital of the Roman Empire to Constantinople in 330. In 1453 the Turks captured Constantinople, and by 1460 they had conquered all Greece.

Except for the years 1686–1715, when the Morea was occupied by the Venetians, Greece remained

PERICLES

Head of a statue of Hermes by Praxiteles, discovered at Olympia in 1877.

GESTAPO. An abbreviated form of *Geheime Staatspolizei*, the Nazi secret political police, formed in 1933. It was one of the organizations accused at the Nuremberg war-guilt trials (q.v.) in 1946, and was condemned.

GETHSEMANE (geth-sem'an-ee). Site on the Mount of Olives, just E. of Jerusalem, of the garden in which, according to tradition, Judas betrayed Jesus. When Jerusalem was divided in 1948 between Israel and Jordan, G. fell within Jordanian territory.

GETTY, John Paul (1892-). American millionaire, pres. of the G. Oil Co. from 1947, and founder of the J. Paul Getty Museum, California, noted for its 18th cent. French furniture and tapestries and an art collection ranging the 15-17th cents.

GETTYSBURG (get'iz-). Borough of south Pa., U.S.A., where in 1863 the battle of G. was fought. It was a Northern victory, and marked the turning-point of the American Civil War. The site is a national cemetery at the dedication of which Lincoln delivered his famous G. address Nov. 19, 1863. Pop. (1960) 7,960.

GEYSER. Pohutu, the largest geyser in the Whakarewarewa group at Rotorua in New Zealand, dwarfs the spectators. The Maori guide wears the traditional cloak of Kiwi feathers, the *pakahu*, now rare and highly valued. Courtesy of the High Commissioner of New Zealand.

1958, and became a republic in 1960. The cap. is Accra. The name is derived from the ancient Sudanese empire of G. (fl. 4th-10th cent. A.D.), whose capital was Timbuktoo. The chief exports are cocoa, timber, diamonds, manganese, bauxite, and the gold which gave G. its European name; maize, rice, cassava, millet and tobacco are grown for home consumption.

The rule of Pres. Nkrumah (q.v.) was ended by a military coup in 1966, and under a new constitution for promulgation on return to civil rule in 1969, there was provision for a pres. without executive power and an elected nat. assembly.

Area 92,000 sq. m.; pop. (1966) 7,945,000, the great majority fetishists.

GHEENT. Cap. of E. Flanders, Belgium, at the junction of the rivers Scheldt and Lys. G. is connected with the Scheldt estuary by ship canal. It has cotton and linen factories, sugar refineries, tanneries, iron foundries, etc. The university, founded in 1816, became Flemish in 1930. The earliest parts of the cathedral of St. Bavon date from c. 940; and the town hall from the 15th cent. Pop. (1966) 157,048.

GHEETTO. The quarter of a town set aside by law for Jewish residence, and enclosed by gates and walls. The G., the origins of which go back to the Middle Ages, was first enforced by papal bull in Italy in 1555. It was largely swept away at the time of the French Revolution, save in eastern Europe, but was revived by the Germans 1940-5. Also used

SIR FREDERICK GIBBERD. To the left is the Metropolitan Cathedral of Christ the King, Liverpool.

Photos: Lotte Meitner-Graf (portrait) and Henk Snoek.

generally for any minority slum quarter in a city.

GHIBERTI (gēber'tē), Lorenzo (1378-1455). Italian sculptor. A goldsmith by training, he created in the bronze doors for the baptistry of Florence - his native city - one of the most beautiful works of the Italian Renaissance. He also wrote *Commentarii* on art history.

GHIRLANDAIO (gērlandah'yō), Domenico. Name by which the Florentine painter Domenico Bigordi (c. 1449-94) is known. He painted chiefly frescoes in his native city of Florence.

GIANT'S CAUSEWAY. Stretch of columnar basalt on the N. coast of Antrim, N. Ireland, forming a headland jutting out to sea. It was formed by an outflow of lava in Tertiary times which has solidified in polygonal columns.

GIBBERD, Sir Frederick (1908-). British architect and town planner. His works incl. the new town of Santa Teresa, Venezuela, and the R.C. Cathedral, Liverpool. Knighted 1967.

GIBBON, Edward (1737-94). British historian. B. at Putney, he was withdrawn from Oxford owing to his conversion to Roman Catholicism in 1753. Sent to Lausanne by his father, he was reconverted in 1754, met Voltaire in 1757, and fell in love with the future Mme Necker, from whom parental disapproval parted him. Setting out on a tour of Europe in 1763, he conceived the idea of *The History of the Decline and Fall of the Roman Empire*, while in Rome in 1764. The first vol. appeared in 1776, and was immediately successful, although he was compelled

GHEENT. A fine specimen of the small medieval fort, the Rabot narrowly escaped destruction in 1540 when Charles V destroyed the defence system of Ghent. He had not forgotten the defeat of his ancestors, Frederick III and Maximilian of Austria, in 1483 by the men of the city under Philip van Cleef.

Courtesy of Belgian National Tourist Office.

Forced to abandon a clerical career by ill-health in 1869, he devoted himself to a *Short History of the English People* (1874), immediately popular as the earliest complete study from the social viewpoint.

GREEN, Julian (1900–). American author. B. in Paris of American parents, he has written almost all his works in French, but is a U.S. citizen. His novels, which incl. *Le Visionnaire* (1934), and *Le Malfaiteur* (1958), explore the possibilities and dangers of freedom for the human spirit. An R.C., he differs from the 'Catholic novelists' in imposing no artificial conclusions on his plots. He has also pub. his *Journal* (1938–58), and several plays, incl. *Sud* (1953).

GREEN, Thomas Hill (1836–82). British philosopher. B. in Yorks, he was prof. of Moral Philosophy at Oxford from 1878. He gave a new direction to 19th cent. philosophical thought by showing the limitations of Spencer and Mill, and advocated the study of Kant and Hegel. His chief works are *Prolegomena to Ethics* (1883) and *Principles of Political Obligation* (1895).

GREENAWAY, Kate (1846–1901). British artist and illustrator. B. in London, she became famous for her drawings of children, which are full of charm and humour. In 1877 she first exhibited at the R.A., and began her collaboration with the colour printer Edmund Evans, with whom she produced a number of books, incl. the popular *Mother Goose*.

GREENE, Graham (1904–). English author. B. at Berkhamsted, son of a headmaster, he was ed. at Oxon. He was then on the staff of *The Times* 1926–30, literary editor of the *Spectator* 1940–1, and during the S.W.W. served in the Foreign Office. Intensely concerned with religious issues – he is an R.C. convert – he creates characters dominated by the conflict of right and wrong. His novels incl. *Brighton Rock* (1938) depicting race-gang warfare, *The Power and the Glory* (1940), *The Heart of the Matter* (1948), *Our Man in Havana* (1958) and *A Burnt-Out Case* (1961), set in a leper colony in Africa. Rather less effective, but still thought-provoking, are his plays, e.g. *The Living Room* (1953) and *The Potting Shed* (1957). His brother Sir Hugh Carleton G. (1910–) was director-gen. of the B.B.C. 1960–8.

GREENFINCH. Bird (*Ligurinus chloris*), also known as the green linnet, common in Europe and N. Africa. The male is green with a yellow breast and the female a drab greenish-brown.

GREENLAND. Arctic island forming a Danish prov. It lies between the North Atlantic and the Arctic Oceans. The whole of the interior is covered by a vast ice-sheet. Large deposits of lead are known to exist. The Greenlanders are of mixed Eskimo, Danish and other European stocks. Area c. 826,000 sq. m. Pop. (1965) 39,600.

G. was discovered c. 982 by Eric the Red who founded colonies on the W. coast. Christianity was introduced c. 1000. In 1261 the colonies accepted the sovereignty of Norway; but early in the 15th cent. all communication with Europe ceased, and when G. was re-discovered in the 16th the colonies had died out. G. became a Danish colony in the 18th cent. and was made a prov. in 1953. G. has importance in civil aviation and strategically, and defence responsibilities are shared with America. There are deposits of coal, lead and cryolite.

GREENOCK. Scottish seaport (burgh) and industrial centre in Renfrew. Industries incl. shipbuilding, engineering, sugar refining. Pop. (1961) 74,578.

GRAHAM GREENE

GREENSHANK. Greyish bird (*Tringa nebularia*) of the sandpiper group. The name is derived from its long olive-green legs, which distinguish it from the redshank. It breeds in Scotland and N. Europe.

GREENWICH (grin'ij). Inner bor. of Greater London, England. The Blackwall tunnel connects G. to the N. bank of the Thames.

Charles II built *G. Hospital* to designs by Inigo Jones on the site of an earlier palace, where Henry VIII, Mary, and Elizabeth I were born, and Edward VI died. A hospital for superannuated seamen 1705–1869, it became the Royal Naval College 1873. The *Cutty Sark*, most celebrated of the great tea clippers, is preserved as a museum of sail. The Royal Observatory (founded here in 1675), source of British Standard Time, has been moved to Hurstmonceux (q.v.), but the G. meridian (0°) remains unchanged. Part of the buildings have been taken over by the National Maritime Museum, and named Flamsteed House after the first Astronomer Royal. Pop. (1967) 231,150.

GREENWOOD, Arthur (1880–1954). British Labour statesman. He was Min. of Health 1929–31, and while deputy leader of the Labour Party, 1935–9, was an outspoken critic of govt. appeasement policy. During the S.W.W. he was Min. without Portfolio 1940–2, and was chairman of the Labour Party 1952–3.

GREENWOOD, Walter (1903–). British novelist and playwright. B. at Salford, he had repeated experience of unemployment to give authenticity to his novel *Love on the Dole* (1933), later dramatized and filmed.

GREET, Sir Philip Ben (1857–1936). British actor-manager. He was noted for his interpretations of Shakespearian roles, and his 'Players' were a training ground for many British actors, e.g. Harley Granville-Barker (q.v.). He was knighted in 1929.

GREGG, Sir Norman (1892–1966). Australian ophthalmic surgeon. He discovered in 1941 that German measles in a pregnant woman could cause physical defects in her child. Knighted 1953.

GREGORY. Name of 16 popes. **Gregory I** or **St. GREGORY THE GREAT** (c. 540–604), a Roman patrician, was elected pope in 590. He asserted the supremacy of Rome over the other patriarchates of the Church, and within Italy assumed an almost imperial position, making peace and war and negotiating with kings as an equal. In 596 he sent St. Augustine's mission to England. **St. Gregory VII** or **HILDEBRAND** (c. 1023–85) acted as chief minister to several popes before his election in 1073. His claim to a power superior to that of kings, including the right to depose them, and his denial that laymen could make appointments to ecclesiastical offices, involved him in conflicts with many rulers, while his attempts to suppress simony and enforce clerical celibacy raised him enemies within the Church. In 1077 he forced the emperor Henry IV to wait in the snow at Canossa for 4 days, dressed as a penitent, before receiving pardon. G., driven from Rome, d. in exile. **Gregory XIII** (1502–85), who was elected in 1572, introduced in 1582 the reformed calendar known as the Gregorian.

GREGORY, Isabella Augusta, Lady (1852–1932.)

GREENLAND. The men work on their sturdy canoe and a local girl shows off the national costume.

W. E. GLADSTONE

By G. F. Watts

Photo: N.P.G.

the Church of Ireland, the Irish Land Act, the abolition of the purchase of army commissions and of religious tests in the universities, and the introduction of elementary education and of vote by ballot.

During Disraeli's govt. of 1874-80 G. strongly resisted his imperialist and pro-Turkish policy, and by his Midlothian campaign of 1879 helped to overthrow him. G.'s second govt. of 1880-5 was confronted with difficult problems in Ireland, Egypt and

S. Africa, and lost prestige through its failure to relieve Gen. Gordon. Returning to office in 1886, G. introduced his Home Rule Bill, which was defeated by the secession of the Liberal Unionists, and he thereupon resigned. After 6 years' opposition he formed his last govt. in 1892; his 2nd Home Rule Bill was rejected by the Lords, and in 1894 he resigned. He is buried in Westminster Abbey.

GLADWYN, Hubert Miles Gladwyn Jebb, 1st baron G. (1900-). British diplomat. From Eton and Magdalen Coll., Oxford, he went on in 1924 to the diplomatic service, and as counsellor from 1943 attended the conferences of Quebec, Cairo, Tehran, Dunbarton Oaks, Yalta, San Francisco and Potsdam. He was permanent representative at the U.N. 1950-4, then British ambassador to France until his retirement in 1960.

GLAMIS (glahmz). Village in Angus, Scotland, near which is G. castle, seat of the earl of Strathmore and Kinghorne, and birthplace of Princess Margaret.

GLAMO'RGANSHIRE. County of S. Wales lying between Brecknock and the Bristol Channel. The southern part, the Vale of Glamorgan, is a low-lying, fertile area devoted to mixed farming. The northern part is occupied by part of the Welsh mountains, and in the valleys coal is mined. The principal coal-mining towns are Rhondda, Aberdare, and Merthyr Tydfil. Other industries include tin-plating at Swansea and Cardiff; copper at Swansea, Port Talbot, and Neath; shipbuilding and engineering at Cardiff; Margam has the largest steel rolling mills plant in Europe. Cardiff is the chief port and county town. Area 818 sq. m.; pop. (1961) 1,227,828.

GLASER, Donald A. (1926-). American physicist. B. in Cleveland, he was ed. at the Case Inst. of Technology and in 1960 became prof. at the Univ. of California. In 1960 he was awarded a Nobel prize for his invention of the 'bubble chamber' (q.v.) for observing high-energy nuclear phenomena. By using a pressurized liquid medium instead of a gas, it overcomes drawbacks inherent in the earlier 'cloud chamber'.

GLASGOW, Ellen (1874-1945). American novelist. B. in Virginia, in her novels she contrasts the traditional Southern life with the new industrialism; they incl. *Virginia* (1913), and *In this Our Life* (1941).

GLASGOW (glahs'gō). Third city of the United Kingdom; royal burgh (since 1454), city, and port on the Clyde, 22 m. from its mouth in Lanark, Scotland. G. is Scotland's leading commercial centre, and focus of one of the world's greatest industrial areas. The river channel has been blasted and dredged, and can accommodate ships drawing 25 ft. Shipbuilding is one of the most important industries; ships of all classes, incl. the *Queen Mary* and *Qu. Elizabeth* (I and II), come from the Clyde. Other industries incl. iron and steel, engineering, chemicals, leather, tobacco and textiles. G. is the seat of G. univ. (1450),

GLASGOW. Ships, cranes, smoke and cloud formations over the hills on the horizon blend in this view of the city from Meadowside into unexpected harmony.

Photo: George Outram & Co. Ltd.

housed in buildings designed by Sir Gilbert Scott, and of the Univ. of Strathclyde (1963), formerly the Royal Coll. of Science and Technology. The cathedral of St. Mungo (patron saint and founder of the city in the 6th cent.) was built in the 12th-13th cents. The Cross Steeple is all that remains of the old Tolbooth (c. 1628). Other buildings incl. the Royal Exchange, the Stock Exchange, the County Buildings, and many museums, galleries, theatres, etc. The Clyde is crossed by several wide bridges for road and rail; Glasgow has a local airport at Renfrew, 5 m. W.N.W.; Prestwick international airport is 28 m. S.S.W. The city is administered by a Lord Provost and corporation. Progress has been made in slum clearance, notably in the Gorbals district.

Little is known of the history of the early settlement until the 12th cent. About 1180 it was made a burgh of barony and granted a market. In 1300 Wallace defeated the English there. In 1893 G. was made a co. of a city with the Lord Provost acting as Lord Lieutenant. Area 62 sq. m.; pop. (1961) 1,054,913.

GLASS. An inorganic substance in a condition which is continuous with its liquid state, but which, as the result of having been cooled from a fused condition, has become for all practical purposes rigid. As such, it is transparent or translucent and may become to some extent opaque. It is a mixture of

GLASS. In a special clay furnace the ingredients of crystal glass — sand, potash, lead oxide and powdered glass — are first melted down. The 'gatherer' then takes just the right quantity of molten glass on the tip of his blowing iron, and starts to blow the form.

slate-grey hair, and weighs 50–60 lb. Other varieties incl. the delicate Italian G., Borzoi, and Afghan hound. See WHIPPET.

GREYHOUND RACING. A sport held on circular enclosed tracks where Gs. pursue a mechanically propelled hare. It attained popularity in England and U.S.A. after the F.W.W.

GREYHOUND

GREY OF FALLODON, Edward Grey, 1st visct. (1862–1933). British Liberal statesman. For. Sec. in Campbell Bannerman's govt. in 1905, he followed up Lord Lansdowne's entente with France and concluded an entente with Russia in 1907. Despite worsening relations with Germany after Agadir in 1911 he tried to secure a settlement, and in 1914 commented: 'The lamps are going out all over Europe; we shall not see them lit again in our lifetime.' Eye trouble forced his retirement in 1916, when he accepted a peerage.

GRIEG (grēg), Edvard Hagerup (1843–1907). Norwegian composer. B. at Bergen he studied at Leipzig Conservatoire and in Copenhagen, and settled as a teacher and conductor at Christiania in 1867. He won success with his incidental music for *Peer Gynt* (1876). His works, often inspired by the folk tunes of his country, include a piano concerto, the *Holberg Suite* for strings, songs, etc.

GRIERSON, Sir Herbert (1866–1960). British scholar. Prof. of English at Aberdeen 1894–1915 and Edinburgh 1915–35, he was noted as an expert on the 17th cent. and his edition of *Donne* (1912) helped to estab. the poet's modern reputation.

GRIERSON, John (1898–). British film producer. B. in Perthshire, he was a sociologist who pioneered the documentary film in Britain. Used as a social force, it is 'the creative treatment of actuality'. He directed *Drifters* (1929) and produced (1930–5) *Industrial Britain*, *Song of Ceylon*, *Night Mail*, etc. During the S.W.W. he created the National Film Board of Canada.

GRIFFES, Charles Tomlinson (1884–1920). American composer, remembered for his symphonic poem *The Pleasure Dome of Kubla Khan*.

GRIFFIN, Bernard (1899–1956). British cardinal. He first made his mark as an administrator while auxiliary bp. of his native Birmingham (1938–44), then succeeded Hinsley as abp. of Westminster and was created cardinal in 1944. He encouraged Ronald Knox in his biblical translation.

GRIFFITH, Arthur (1872–1922). Irish statesman. B. in Dublin, he joined the Fenians, and in 1899 founded a nationalist paper, *The United Irishman*. He was a leader of Sinn Féin, and was imprisoned several times. Released in July 1921, he headed the delegation which signed the treaty setting up the Irish Free State in Dec. He was elected pres. of the Dail in 1922, but died soon after.

EDVARD GRIEG

Photo: Elliot & Fry.

GRIFFITH, David Wark (1875–1948). American film director. Son of a Kentucky colonel, he was an actor then a director, making many hundreds of 'one reels' (12 min.) 1908–13, in which he introduced the now current techniques of the flash-back, cross-cut, close-up and longshot, completely breaking with theatrical tradition. His masterpiece *Birth of a Nation* (1915) estab. the film as a work of art and entertain-

ment, and was followed by the mammoth *Intolerance* (1916), and *Broken Blossoms* (1919). In decline, from the advent of 'talkies', he d. in poverty.

GRILLPARZER (gril'pahrtser), Franz (1791–1872). Austrian poet and dramatist. B. in Vienna, he followed his sensational tragedy *Die Ahnfrau* (1817) with the classical *Sappho* (1818) and the trilogy *Das goldene Vlies* (1821). His historical tragedies *König Ottokars Glück und Ende* and *Ein treuer Diener seines Herrn* (1826) both involved him with the censor. Two of his greatest dramas followed, *Des Meeres und der Liebe Wellen* (1831), returning to the Hellenic world, and *Der Traum, ein Leben* (1834). The bitter cycle of poems *Tristia ex Ponto* (1835) followed an unhappy love-affair. G. is Austria's finest dramatic poet.

GRIMALDI, Joseph (1779–1837). British clown. B. in London, the son of an Italian actor, he appeared on the stage when 2 years old, and since his day the clown has been called 'Joey'. His best part was in *Mother Goose* at Covent Garden in 1806.

GRIMM, Jacob Ludwig Carl (1785–1863) and **Wilhelm Carl** (1786–1859). German philologists and folklorists. Brothers, they collaborated in the world-famous *Fairy Tales*, ed. medieval texts, and collected the historical legends *Deutsche Sagen* (1816–18). Jacob's chief work was his *Deutsche Grammatik* which gave the first historical treatment of the Germanic languages (q.v.).

GRIMMELSHAUSEN (-howzen), Hans Jacob Christoffel von (c. 1625–76). German author of the great realistic picaresque novel *Der Abenteuerliche Simplicissimus* (*The Adventurous Simplicissimus*: 1669), whose hero shares his own experiences as a soldier in the Thirty Years War.

GRIMOND, Joseph (1913–). British Liberal politician. Ed. at Eton and Balliol Coll., Oxford, he was called to the Bar in 1937 and became M.P. for Orkney and Shetland in 1950. Succeeding C. Davies (q.v.) as leader of the party 1956–67, he aimed at making it 'a new Radical Party to take the place of the Socialist Party as an alternative to Conservatism', and in the 1959/64 general elections the no. of Lib. votes increased, falling a little 1966. In 1938 he m. Laura, dau. of Lady Asquith of Yarnbury (q.v.).

GRIMSBY. English port (co. bor.) in Lindsey, Lincs, at the mouth of the Humber, 15 m. S.E. of Hull. It is the most important fishing port in the British Isles, and its fleets sail as far afield as the Arctic Ocean and the Mediterranean. Pop. (1961) 96,665.

GRIQUALAND (grē'kwa-) **EAST** and **WEST.** Two districts of Cape Prov., South Africa. *G. East*, part of the Transkeian Territories (q.v.), lies S. of Natal and Lesotho, and Kokstad is the chief town. *G. West* is to the W. of the Transvaal and Orange Free State, the chief town being Kimberley. Both were named after their Griqua inhabitants, of mixed Hottentot and Dutch descent.

GRIS (grē), **Juan.** Pseudonym of the Spanish-born artist José González (1887–1927), who settled in Paris at 19 and became the exponent of analytical Cubism. His dissertation *Les Possibilités de la Peinture* (1924) was influential.

GRISEWOOD, Frederick (1888–). British broadcaster. Attached to the B.B.C. as announcer and commentator 1929–48 – being associated particularly with the 'Scrapbook' series, 'The World Goes By', and 'Our Bill' – he later became a freelance.

GRISI (grē'sē), **Giulia** (1811–69). Italian opera singer. B. in Milan, she gained world-wide recognition as a brilliant soprano, and m. the Italian tenor Mario (q.v.). Her cousin Carlotta G. (1819–99) was a celebrated dancer.

GRISONS (grē'zōn'). Largest of the cantons of Switzerland. There are many tourist resorts, such as Davos, St. Moritz, and villages in the Engadine. The capital is Chur. Area 2,746 sq. m.; pop. (1960) 147,458.

GRIVAS (grē'vahs), **George** (1898–). Greek

1945-7. He has represented George VI and Elizabeth II on many official occasions. In 1935 he m. Lady Alice Montagu-Douglas-Scott, dau. of the 7th duke of Buccleuch, by whom he has 2 sons, Prince William (1941-) and Prince Richard (1944-).

GLOUCESTER. City, port, co. borough and co. town of Glos, England, on the Severn. Industries incl. aircraft works, carriage and wagon works, making of agricultural machinery, etc. The cathedral, founded 1022 as the church of a Benedictine abbey, has many later additions. Other notable buildings include the 'New Inn' (1450). Robert Raikes founded the first Sunday school in G. in 1780. Pop. (1961) 69,687.

GLOUCESTERSHIRE. English county in the W. Midlands. The Cotswolds run across it from S.W. to N.E.; the highest point is Cleve Cloud (1,070 ft.). To the W. and N. of the Cotswolds is the broad, fertile Vale of Gloucester, drained by the Severn and its tributaries, and extending to the S.W. into the Vale of Berkeley. Coal is mined in the Forest of Dean, but G. is primarily an agricultural co. The chief industrial centre is Bristol, with its outport Avonmouth; other towns include Gloucester (the co. town), Stroud, Cheltenham, Tewkesbury, and Cirencester. Area 1,259 sq. m.; pop. (1967) 1,062,260.

GLOVE-BOX. Aseptic manipulation in the preparation at the Radiochemical Centre, Amersham, of iodinated human serum albumin, an isotopically labelled compound used in medical diagnosis.

maintaining a slight vacuum inside the box, so that any air flow is inwards.

GLOW-WORM. The wingless female of various luminous beetles in the family Lampyridae. The luminous organs are situated under the abdomen, and seem to have a sexual significance. The species are distributed throughout Europe and Siberia. Other species in the family are found in the western hemisphere, notably *Luciola italica*, both sexes of which are winged and give light. See **FIREFLY**.

GLUBB, Sir John Bagot (1897-). British soldier, known until the General abolition of the title

GLOUCESTER. The earlier parts of the cathedral are Norman, but there are later additions in a variety of Gothic styles. The monks of the abbey used to wash in this lavatorium in the cathedral cloisters, while above them rose the splendour of some of the earliest fan tracery known.

Photo: A. W. Kerr

in 1952 as G. Pasha. As O.C. the Arab Legion 1939-56 he was its creator in its modern form. He was dismissed in 1956 as a result of anti-British sentiment in Jordan, and created K.C.B.

GLUCK (glook), Christoph Willibald (1714-87). German composer. B. at Weidenwang, nr. Neumarkt, Bavaria, he studied music at Prague, Vienna, and Milan, came to London in 1745 to compose operas for the Haymarket, but returned to Vienna in 1746. He was knighted by the Pope, and in 1756 settled at Vienna as Kapellmeister to Maria Theresa. In 1762 his *Orfeo ed Euridice* revolutionized the whole 18th cent. conception of opera. G. threw overboard the traditional operatic conventions and restrictions and gave free scope to dramatic effects of a serene and classic beauty. *Orfeo* was followed by *Alceste* (1767) and *Paris ed Elena* (1769). *Iphigénie en Aulide* (1774), produced in Paris, gave rise to furious controversies in which G. had the support of Marie Antoinette, whilst his Italian rival Piccini was patronized by Mme Du Barry. With *Armide* (1777) and *Iphigénie en Tauride* (1779) G. won a complete victory over Piccini. He d. at Vienna.

GLUCOSE (C₆H₁₂O₆). Form of sugar, also known as grape-sugar or dextrose. It is present in the blood, and in honey and fruit juices. In more complex formations it occurs as cellulose, starch, and glycogen,

GLOUCESTERSHIRE. Stone-built houses and a clear village stream make Upper Slaughter a place of quiet beauty in spring. Photo: Roy J. Westlake.

and it is usually prepared by hydrolysis from cane sugar or starch. Generally a yellowish syrup, it may be purified to a white crystalline powder.

GLUE. Gelatine in its crude, commercial, and industrial form, employed as an adhesive, made from bones, fragments of hide, and fish offal. Modern developments in adhesives incl. the thermo-setting synthetic rubber and plastic compounds used to replace welding in bonding various car components, etc.

GLYCERINE (glis'erin), **GLYCEROL** (CH₂OH. CHOH. CH₂OH). Colourless, viscous, odourless, sweetish liquid b.p. 290°C., m.p. 18°C., miscible with water and alcohol, insoluble in ether. Obtained from vegetable and animal oils and fats (by treatment with acid, alkali, superheated steam or an enzyme, or by fermentation of glucose), it is used in the manufacture of high explosives, in antifreeze solutions, to maintain moist conditions in fruits and tobacco, in cosmetics, etc.

GLYCOL (gli'kol) (CH₂OH. CH₂OH). Colourless, odourless, viscous liquid with a sweetish taste; b.p. 197°C.; m.p. -17°C.; miscible with water and alcohol; density 1.115 g/ml. It is used in antifreeze solutions, in the preparation of ethers and esters, especially for explosives, and as a solvent; a substitute for glycerol.

GLYN (glin), Elinor (1865-1943) British writer. Her novel of an exotic love-affair, *Three Weeks* (1907)

GLOW-WORM. Female (left) and male.

capercailzie (*Tetrao urogallus*) and the blackcock (*T. tetrix*), both known in Britain. G. are shot over dogs or by driving in Britain 12 Aug.-10 Dec.

GROZNY. Russian industrial town, cap. of Chechen-Ingush A.S.S.R., on the r. Assa, a trib. of the Terek. It is about 90 m. W. of the Caspian Sea, and is the centre of an important petroleum field; pipelines link it to Mahachkala on the Caspian Sea and Tuapse on the Black Sea. Pop. (1967) 331,000.

GRUNDY. Mrs. The personification of British respectability. She is first mentioned in Thomas Martin's play *Speed the Plough* (1798), when though she does not actually appear she is constantly appealed to as one who knows the proprieties.

GRÜNEWALD (grün'evált). German artist identified in 1938 as Mathis Gothardt Neithardt (c. 1460-1528). Little is known of his life, but his work shows extremes of emotion with terrible religious intensity. Last and most important of the Gothic painters in

Terre, separated by the narrow Rivière Salée channel. With 5 other small islands the area is 688 sq. m. The cap. is Basse-Terre, on Guadeloupe proper, and the pop. (1965) 316,000.

GUAM (gwahm). American island in the W. Pacific, the largest of the Mariana group. Agaña is the cap., Piti the port of entry. A naval station and radio centre, G. was ceded to U.S.A. by Spain in 1898, and occupied by Japan 1941-4. Area 206 sq. m.; pop. (1966) 79,000.

GUARDI (gwahr'dē), Francesco (1712-93). Italian artist. He was once regarded merely as a follower of Canaletto, but his brilliant evocations of his native Venice, using an almost impressionist technique, are now highly valued.

GUARESCHI (gwahres'ki), Giovanni (1909-68). Italian author. B. at Parma, he studied law, but after the S.W.W. became editor of the magazine *Candido*. In this his short stories of the friendly feud between

parish priest Don Camillo and the Communist mayor, originally written in haste as space-fillers, first appeared. Collected vols. incl. *The Little World of Don Camillo* (1951).

GUARNIERI (gwahrnyā're). Celebrated family of violin-makers at Cremona, of whom Giuseppe Antonio G. (1687-1745) produced the finest models.

GUATEMALA (gwah'tē-mäl-ä). A republic of C. America, bordered by British Honduras, H.

bordered into the great plain of Petén to the N., the Pacific and Caribbean lowlands, and the central region of volcanic mountains and high valleys. Coffee, cotton, bananas, and sugar are the chief products. Of the pop. (est. at 4,575,000 in 1966) over half are pure Indians, the rest, mixed Indian and Spanish (*ladinos*), providing the ruling classes. The cap. and commercial centre is G. city (pop. 580,000), which is 4,880 ft. above sea-level in a wide plateau traversed by the Rio de las Vacas.

The republic was founded in 1839, and its boundaries were not settled until 1936. Vague claims are maintained over British Honduras. Under the constitution of 1965, govt. is by a pres. (elected for 4 yrs.) council of state with the vice-pres. as chairman, and a congress. Voting is compulsory for all literate men

GUATEMALA. The villagers of San Antonio Palopo, 70 m. from Guatemala City, fill their water jars beside beautiful volcano-ringed Lake Atitlan. Pan American Photograph.

GRUNEWALD. The 'Mocking of Christ' (1503) in the Alte Pinakothek, Munich, showing the keen sensitivity of the artist.

Germany, he achieved his masterpiece in the expressive Isenheim altar-piece now in the Colmar Museum.

GRUYÈRE (grü-yär'). District in Fribourg canton, Switzerland, famous for its cheese.

GUADALAJARA (gwah'dalakah'ra). Mexican city, capital of the state of Jalisco; 300 m. W.N.W. of Mexico City. Pop. (1967) 1,183,000.

GUADALCANAL (gwah'-). British protected island, largest in the Solomons, S.W. Pacific. Invaded by the Japanese in Jan. 1942, it was the scene of bitter fighting between them and U.S. forces, which landed in Aug., eventually annihilating the Japanese, Feb. 1943. Area c. 2,500 sq. m.; pop. (est.) 15,000.

GADELOUPE (gwahd-loop'). French West Indian overseas dept. in the Lesser Antilles, consisting of the islands of Guadeloupe proper and Grande-

who founded a Benedictine monastery at Coventry during the 11th cent., where she was buried. According to legend, the earl promised to remit a heavy tax imposed upon the people of the town if his wife rode naked through the streets at noonday. This she did, but by arrangement the people remained indoors; with the exception of 'Peeping Tom', who bored a hole in his shutters, and was struck blind.

GOD SAVE THE KING/QUEEN. The British national anthem. The origin of both tune and words is obscure; the former resembles a composition by John Bull (1563–1628) and a number of other 16th cent. works. The words can also be traced in various forms back to the 16th cent. The song assumed substantially its present form during the 1745 rebellion, when it was used as an anti-Jacobite Party song. The tune has been used for patriotic songs in the U.S.A. ('My country, 'tis of thee') and Germany.

GODWIN (d. 1053). Earl of Wessex from 1020. Secured succession to throne in 1042 of Edward the Confessor, to whom he m. his dau. Edith, and whose chief minister he became. King Harold was his son.

GODWIN, William (1756–1836). British philosopher and novelist. At first a Nonconformist minister, he later became an atheist and a philosopher, achieving fame in 1793 through his *Enquiry concerning Political Justice*, which advocated an anarchic society based on a faith in man's essential rationality. He subsequently pub. *Caleb Williams* (1794), a story written in illustration of his theories, and many other works. His first wife, the feminist Mary Wollstonecraft (1759–97), whose *Vindication of the Rights of Women* (1792) demanded equal educational opportunities for men and women, d. in giving birth to a dau., later Mary Shelley.

GOEBBELS, Paul Josef (1897–1945). German Nazi leader. B. in the Rhineland, he became a journalist, joined the Nazi Party in its early days, and was given control of its propaganda in 1929. On becoming Minister of Propaganda in 1933, he brought all cultural and educational activities completely under Nazi control, and built up sympathetic movements abroad to carry on the 'war of nerves' against Hitler's intended victims. On the capture of Berlin by the Allies he poisoned himself.

GOERING, Hermann Wilhelm (1893–1946). German Nazi leader. B. in Bavaria, he served in the F.W.V. as an ace flyer. He joined the Nazi Party in 1922, and organized and commanded the S.A. (Storm Troops). Appointed P.M. of Prussia and Min. of the Interior in 1933, he arranged the Reichstag fire, and directed the reign of terror which followed. As Commissioner for Aviation he built up the Luftwaffe, and in 1936 he became director of the four-year plan for war preparations. He later lost favour with Hitler, and was expelled from the Nazi Party in 1945. He was tried at Nuremberg as a war criminal in 1945–6 and condemned to death, but poisoned himself shortly before the execution was due.

GOES (gōös), Hugo van der (c. 1440–82). Flemish artist. B. probably in Ter Goes, he spent his later years in a monastery subject to fits of insanity. His works, e.g. the Portinari altar-piece now in the Uffizi and the 'Death of the Virgin' at Bruges, have great emotional impact.

GOETHE (gō'te), Johann Wolfgang von (1749–1832). German poet and man-of-letters, statesman and natural philosopher. B. in Frankfurt-am-Main, he first discovered his poetic vocation while studying law at Leipzig; to this period belong the *Laune des Verliebten*, *Die Mischuldigen* and the book of lyrics *Annette*. After meeting Herder at Strassbourg (1770–1) he shook off the influence of French rococo and became the leader of the 'Storm and Stress' movement, writing the dramas *Götz von Berlichingen*, *Faust* (not completed until 60 years later), *Clavigo*, *Stella*; and the novel *Die Leiden des*

Van GOGH
Self-portrait.

Galleries, London.

Jungen Werthers (1774). In 1775 G. moved to Weimar, entering the service of the Duke Karl August, and his administrative duties there helped him to discipline his genius. A visit to Italy (1786–8) inspired *Römische Elegien* (1795), which was followed by the classical dramas *Iphigenie* (1787) and *Tasso* (1790), and by the novel *Wilhelm Meister* (1794). The 1st part of *Faust* was pub. in 1808, but the 2nd did not appear until 1831.

Among G.'s later works were the poetic *West-östlicher Divan* (1819), the novel *Die Wahlverwandtschaften* (1809), and the autobiographical *Dichtung und Wahrheit* (1811–33).

GÖ'GARTY, Oliver St. John (1878–1957). Irish writer. An ear, nose, and throat specialist with a large Dublin practice, G. was a member of the literary circle which incl. Yeats, George Moore, and Joyce, and figures in *Ulysses* as Buck Mulligan. A wit and a poet, he wrote several books incl. the autobiographical *As I was going down Sackville Street* (1937). He took an active interest in Irish politics, being a senator of the Irish Free State 1922–36.

GOGH (khokh), Vincent Van (1853–90). Dutch painter. B. at Zundert, he tried various vocations, working for a time as a schoolmaster in England, before he took up painting. He studied under Van Mauve at The Hague. In 1886 he went to Paris where he became a friend of Gauguin, and the two painters worked together for a short time in Arles. Provence. One of the leaders of the Post-Impressionist painters, he executed still-lives, portraits, and landscapes, some of the best-known being 'Landscape with Cypress Trees', 'The Yellow Chair', and 'Sunflowers', all of which are in the Tate Gallery. He spent the last years of his life in asylums, and committed suicide. Our illus. shows him in 1889 bandaged and convalescent after a violent scene with Gauguin – with whom he had been living – in which he cut off a piece of his own ear.

GÖ'GOL, Nicolai Vasilyevich (1809–52). Russian writer. B. nr. Poltava, he tried several careers before entering the St. Petersburg Civil Service. His first collection of stories, *Evenings on a Farm near Dikanka* (1831–2), had an immediate success, and his second, *Mirgorod*, was warmly praised by Pushkin. Later were *Arabesques* (1835), one of the world's great short stories, 'The Cloak', and his great comedy *The Inspector General* (1836), an attack on bureaucracy. From 1835 he had been a restless traveller in Europe, and it was in Rome that he completed the earlier part of his masterpiece, the picaresque novel *Dead Souls* (1842), depicting Russian provincial society.

GOITRE. Name applied to a swelling on the front of the neck caused by an enlargement of the thyroid gland. Simple G., or Derbyshire Neck, occurs in certain hilly regions and has been attributed to a deficiency of iodine in the soil, a micro-organism infesting the drinking water, or lack of sunlight. In Exophthalmic G., also known as Graves's disease, the enlargement of the

GOGOL By the Ukrainian poet-artist T. G. Shevchenko. Photo: Novosti Press Agency.

GUINEA (gin'i). English gold coin, not minted since 1817, when it was superseded by the gold sovereign. The term continued in use—signifying 21s—for professional fees and for limited commercial purposes.

GUINEA. Rep. of W. Africa. Formerly a French colony, it left the French Community after a referendum in 1958, but the official language is still French and there is co-operation in other fields. There is a pres. (Sékou Touré 1961, re-elected 1968), and a single-party Nat. Assembly. In 1966 the deposed pres. Nkrumah of Ghana was declared joint head of state.

The chief products incl. rice, palm kernels, coffee and pineapples; and the chief minerals are bauxite, iron ore, and diamonds. The cap. is Conakry. Area 95,000 sq. m.: pop. (1965) 3,500,000.

GUINEA, Equatorial. The 2 overseas provs. of Spanish Guinea achieved independence in 1968 as Equatorial Guinea, which comprises the mainland terr. of Rio Muni (area 10,040 sq. m.; pop. 183,000, chief town Bata) and the is. of Fernando Po (area 779 sq. m.; pop. 61,000) together with the 4 smaller is. of Annabon, Corisco, Elobey Grande and Elobey Chico. The port and cap. is Santa Isabel on Fernando Po. Products are cocoa, coffee, bananas and high-grade timber. Under the constitution of 1968 E.G. is a unitary state. Total area 10,852 sq. m.; pop. (1968) 245,000.

GUINEA COAST. Geographical name for the coast of W. Africa from Gambia to Cape Lopez.

GUINEA-FOWL. Gallinaceous bird (*Numida*), of the family Phasianidae. The plumage is slate-grey with white spots, and the head is crowned with a bony crest or tuft of feathers. The commonest variety is the African *N. meleagris*, introduced to poultry farms.

GUINEA PIG. Small vegetarian rodent in the family Caviidae. The domestic species is probably derived from the Peruvian cavy (*Cavia cutleri*), and may be black, white, or brown. They breed readily and are extensively used in laboratory experiments.

GUINNESS (gin'es), Sir Alec (1914–). British actor. A Londoner, he joined the Old Vic in 1936, played Hamlet in modern dress in 1938 and gave another unorthodox portrayal in 1951. He is celebrated for the humorous versatility of his characterizations, e.g. *Kind Hearts and Coronets* (a film in which he played a number of related characters); and his subtlety, as in the film *The Bridge on the River Kwai* (1957), and his interpretation on stage of Lawrence of Arabia in *Ross* (1960). He was knighted in 1959.

GUISE (gü-ëz). French noble family, prominent in the period of religious wars in the 16th cent. Francis (1519–63), the second duke, commanded against the Huguenots, and was assassinated by a fanatic. His son, Henry (1550–88), 3rd duke, was largely responsible for the massacre of St. Bartholomew. He, too, was assassinated.

GUITAR (gitahr'). A musical instrument, resembling the violin in appearance, but the playing is effected by plucking the six strings. Of great antiquity, it is traditionally the instrument of Italy and Spain, but since the S.W.W. has been revived as a concert instrument, e.g. by the British guitarist Julian Bream, who has done so much to encourage contemporary compositions for it. The comparative ease with which it can be used to provide a strumming accompaniment has also led in the 1960s to its great vogue with 'pop' groups who use 'electric' Gs. to obtain a harsh, amplified sound.

GUIZOT (gëzō'), François Pierre Guillaume (1787–1874). French statesman and historian. B. at Nîmes, he was a Protestant, and 1812–30 was prof. of modern

history at the Sorbonne. He wrote on the history of civilization, and became P.M. in 1847. His resistance to all reforms led up to the Revolution of 1848.

GUJARAT (gooljraht'). State of the rep. of India, formed in 1960 on a linguistic basis (the majority of the inhabitants speaking Gujarati) from the northern part of former Bombay state. It covers the Kathiawar peninsula, Kutch, Baroda, Surat, and neighbouring territory. The cap. is Ahmedabad, to be replaced by Gandhinagar, 13 m. to the N. Area 72,154 sq. m.; pop. (1961) 20,633,350.

GUJRANWALA. City of W. Pakistan, 40 m. N. of Lahore. Industries incl. textiles, metallurgy, brassware, etc. Pop. (1961) 196,154.

GULF STREAM. The most pronounced element in the circulation of the upper waters of the North Atlantic, and the most widely known of the permanent ocean currents. The name is often applied to the whole of the surface-current which issues from the Gulf of Mexico through the Strait of Florida, flows northwards off the E. coast of the U.S.A., and crosses the Atlantic in several branches, one of which skirts the British Isles to enter Norwegian waters and so on to the Arctic Ocean, but should properly be restricted to that part of the current between Cape Hatteras, U.S.A., and the Grand Banks of Newfoundland. The average width of the stream is about 130 miles, and the annual mean temperature of the surface-water in its central part is about 78° F. The continuation of the G.S. in the G.S. Drift is a prime cause of the mild winter climate of N.W. Europe.

GULL. Seabird of the Laridae family. A typical G. of the genus *Larus* is the black-headed G. (*L. ridibundus*), common in Britain, which is grey and white with (in summer) dark brown head and red beak; it breeds in large colonies on marshland, making a nest of dead rushes, averaging 3 eggs. Allied are the larger laughing G. of America, and the great black-headed G. (*L. ichthyaetus*) of Asia. Other notable Gs. are the herring G. (*L. argentatus*), often known in the U.S. as the harbour G., which has white and pearl-grey adult plumage and yellow beak; and the oceanic great black-backed G. (*L. marinus*), found in the Atlantic and upwards of 2½ ft. long.

GUMS. The soft tissues surrounding the bases of the teeth. They are liable to inflammation due to prolonged use of medicines containing mercury, bismuth, etc., or to infection by microbes from food deposits and tartar, or by Vincent's angina. Pyorrhoea is a general infection of the margins extending down the walls of the teeth. Gumboil is a local infection of one gum.

GUMS. Complex hydrocarbons formed by many plants and trees, particularly by those from dry regions. Tasteless odourless substances, insoluble in alcohol and ether but generally soluble in water, Gs. are used for adhesives, sizing fabrics, in confectionery, medicine and calico printing.

There are 5 main groups: (1) plant and tree exudates such as acacia (G. arabic, one of the most common), ghatti (British Indian G.), tragacanth (Bassorin); (2) marine plant extracts such as agar-agar, Irish moss, algin; (3) seed extracts such as guar, locust kernel, locust bean, quince seed; (4) fruit and vegetable extracts such as the pectins and (5) processed gums such as dextrins and cellulose ethers.

GUN. See ARTILLERY, SMALL ARMS PISTOL, MACHINE G.

GUNMETAL. An alloy of copper and tin, usually in the proportions of about 90 and 10 per cent respectively, with small quantities of zinc or lead. A tough metal, it is used in castings, etc.

the value of gold. Before the F.W.W. a number of countries were on the G.S.; in Britain, e.g., gold sovereigns and half-sovereigns worth their face value were in circulation, and banknotes were freely convertible into gold coin. Gold coin was called in at the beginning of the F.W.W. and was not re-issued. Under the gold bullion standard (in operation in Britain 1925–31) notes were convertible at the central bank (in Britain, the Bank of England) into gold bullion, and gold bullion could be freely imported and exported. Neither of these forms exists any longer; but the par values of the currency units of the member countries of the International Monetary Fund (which incl. nearly all members of the U.N. not in the Communist bloc) are fixed in terms of gold and of the U.S. dollar, so that they are also related to the price of \$35 per oz. at which the U.S.A. has dealt (since 1934) in gold with central banks and official monetary authorities. This fixed price is maintained to encourage stability, but the internat. gold crisis of 1968 led to a two-tiered price system, that of the official and free markets. During the crisis the statutory requirement that the U.S. govt. hold a 25% gold backing for the money supply was abolished. From 1965 Gen. de Gaulle made repeated demand, for return to the G.S.

GOLDSTONE. Village in Calif., U.S.A., 100 m. N.E. of Los Angeles, site of a satellite tracking station.

GOLDWATER, Barry (1909–). American Republican politician. Senator for his native Arizona 1953–64, he supported McCarthy, holding strong anti-labour views and opposing foreign aid. As presidential candidate in 1964, he was badly defeated by Johnson.

GOLDWYN, Samuel (1882–). American film producer. B. in Warsaw, he emigrated to the U.S.A. in 1896 and became a pioneer film-maker. He is famed for his 'goldwynisms', e.g. 'Anyone who visits a psychiatrist should have his head examined.'

GOLF. A game consisting of hitting a ball from a starting tee into a standard-sized hole (4½ in. diam. and at least 4 in. deep) by means of various clubs; 18 such holes played constitute a round. In 'medal-play' the competitive object is to take fewer strokes than an opponent, but in match-play the result depends on the winner of individual holes. The ball, which must weigh not more than 1.62 oz. and not be smaller than 1.62 in. diam., is now composed of elastic thread

wound round a soft core, with a vulcanized rubber outer covering. The clubs, 14 in a full set, are of 2 types. The woods, driver, brassie, spoon and No. 4 wood, now mostly with steel shafts, are the most powerful and are used for initial tee drives and long 'fairway' play; they are capable of 300 yd. shots. The irons, with steel heads and shafts, are numbered 1 to 9 according to the shape of the blade. No. 1 is set upright and is most powerful; No. 9 is set back the farthest. High-numbered irons are used for gaining

height rather than distance. The putter is reserved for shots when the ball is on the green – the small area surrounding each hole. After raising the ball for play from each tee it may not again be touched by hand but must be played as it lies.

Holes vary from 100–500 yds., the majority being nearer 300 yds. They consist of a platform tee, a main fairway, where grass is cut short and which is bounded by rough grass, and the green. Sand bunkers are laid at vulnerable points, often ringing the green. A course now measures about 6,000 yds. for which leading players return scores of under 70. For average players, handicaps are employed as a method of matching unequal opponents.

Originally an ancient game of Scotland, G. has spread during the last century to all parts of the world. The Royal and Ancient Club at St. Andrews was founded in 1754. Open and Amateur championships for men and a Women's Championship attract many foreign entrants, the U.S.A. now dominating the standard. Famous winners of the 'Open' have been W. Hagen, R. T. Jones (U.S.A.), and T. H. Cotton (Britain). G. is very popular in Japan.

GOLIATH. The giant champion of the Philistines, who, according to I Sam., xvii, was slain with a stone from a sling by David in single combat before the opposing armies of Israelites and Philistines.

GOLLANCZ, Sir Victor (1893–1967). British left-wing writer and publisher. Founder in 1936 of the influential Left Book Club.

GÓMEZ (gō'meth), Juan Vicente (1857–1935). Venezuelan statesman. Elected president in 1910, he remained virtual dictator until his death.

GOMUŁKA, Władysław (1905–). Polish politician. Several times imprisoned for revolutionary activities in the inter-war years, he was a resistance leader during the S.W.W. A leading member of the United Workers Party from 1945, he was expelled in 1949 for anti-Stalinist deviationism and imprisoned without trial 1951–6. He was then elected 1st sec. of the U.W.P., an appointment heralding the change towards 'an independent road to socialism', incl. a general rise in wages and the dissolution of most collectives: re-elected 1959, 1964.

GONADOTROPIN. See FERTILITY DRUGS.

GOŃCHAROV, Ivan Alexandrovitch (1812–91). Russian novelist. B. at Simbirsk, he became a civil servant. His first novel, *A Common Story* (1847), was followed in 1858 by his humorous masterpiece, *Oblomov*, which summarized the indolent and impotent determinism of Russian landed gentry.

GONCOURT (gonkoor'), de, the brothers Edmond (1822–96) and Jules (1830–70). French writers. They collaborated in producing a compendium, *L'Art du XVIIIe Siècle* (1859–75), and various historical studies which like their *Journal* (1887–96), obtained their effect by cumulative detail. Their joint novels include *Renée Maupérin*, *Germinie Lacerteux*, and *Madame Gervaisais* (1869). Edmond continued to write after his brother's death, e.g. *Chérie* (1884).

Edmond de G. founded the *Académie Goncourt*, opened in 1903, which awards an annual prize to the author of the best novel of the year.

GO'NDAR. City of Ethiopia situated c. 7,500 ft. above sea-level, 24 m. N. of Lake Tana. It is capital of the prov. of Begemdir. Pop. (1965) 29,600

GONDWA'NALAND. See WEGENER.

GONORRHOEA (gonoré'a). Infection by the gonococcus, the commonest form of venereal disease. It is usually transmitted by sexual intercourse, but sometimes, especially in children, by contact with an infected person. A copious opaque discharge from the infected part appears in a few days and infection of the eyes must be guarded against. G. is increasingly resistant to penicillin and streptomycin, but in 1963 a new antibiotic actinospectacin effected cures by a single injection.

section and world championships every 4 yrs, 2 yrs after the Olympics. See **PHYSIOTHERAPY**.

GYMNOSPERMS. Plants whose seeds are not borne within a fruit. They form one of the major divisions of the flowering plants, the other being the Angiosperms, in which the ovules are enclosed in an ovary which ripens to form the fruit. Pollen is carried directly on to the gymnospermous ovule on the scale of the cone; after pollination the cone scales close until the seed is ripe. There are 3 orders: Coniferales (the pines), Cycadales, and Gnetales.

GYÖRGY (jör'j), Paul (1893-). American doctor. B. in Hungary, he was director of pediatrics at Philadelphia General Hospital 1957-63 and was discoverer and co-discoverer of Riboflavin, Pyridoxine and Vitamin H (Biotin).

GYPSIES. A wandering folk, scattered over most parts of the world, whose name is a corruption of 'Egyptian'. The name they apply to themselves is Rom, which may be derived from Romano, the name assumed by the inhabitants of the Byzantine Empire in which the Gs. are believed to have originated. In the 14th cent. they crossed the Bosphorus into Europe and settled in the Balkan peninsula. During the next cent. they spread over Germany, Italy, and France, and they arrived in England about 1500. A long period of persecution followed, including accusations of cannibalism and child-stealing, and they are still suspected of petty thefts in country districts. Their customs and faiths are a medley of beliefs and superstitions gathered from different countries. Gs. are small, dark, and are associated with many crafts; often they are hawkers of their own wares. G. women are renowned for fortune-telling. They live nomadically, nurture an inherent gift of music, and favour gay attire.

The G. language, known as Romany, has relations with the Indo-Aryan group, and some of its words correspond with words in Hindustani. All the countries through which the Gs. have passed have added to their word-stock, Greek and Slavonic being the chief.

GYPSUM (jip'sum). Mineral of common occurrence, composed of hydrated calcium sulphate, $\text{CaSO}_4 \cdot 2\text{H}_2\text{O}$. It has a number of commercial uses. A fine-grained G., called alabaster, is used for ornamental work, and burnt G. is known as plaster of Paris, since it was obtained for a long time from the G. quarries of the Montmartre district.

GYROSCOPE (jir'o-o). In its simplest form, a

GYROSCOPE. The familiar model (top), and a huge gyroscopic ship's stabilizer.

mechanical instrument consisting of a heavy wheel mounted on an axis which is fixed in a ring, which ring in turn is capable of rotation about another axis, fixed in another ring capable of rotation about a third axis. The whole is arranged so that the 3 axes of rotation in any position pass through the wheel's centre of gravity. The wheel is thus capable of rotation about 3 mutually perpendicular axes, and its axis may take up any direction. The G. is used as a stabilizing device. If the axis of the spinning wheel is displaced a restoring movement is developed which returns it to its initial direction. Important practical applications of the G. are seen in the gyro-compass, the gyropilot for automatic steering, gyro-directed torpedoes.

GYULA FEHÉRVAR. Magyar name of ALBA IULIA.

H Eighth letter of the Roman alphabet, representing an aspirate in all modern alphabets derived from the Latin except in those languages, especially the Romance languages, where the aspirate is lost. The 'dropping of initial h', often regarded as a corruption in modern dialects, is a phenomenon traceable at least as far back as Tudor times.

HAARLEM (hahr'lem). Town in the Netherlands, in N. Holland prov., 12 m. W. of Amsterdam, with which it is connected by canal and railway. At Velsen to the N. a 2 m. road-rail tunnel runs under the North Sea Canal and is an important link between N. and S. Holland. H., a famous centre for bulbs, has also textile factories and printing works. The Frans Hals Museum is at H. Pop. (1967) 172,268.

possible, carried on the struggle from Britain until his triumphant return in 1945.

HABEAS CORPUS (hā'bēas kōr'pus) (Lat. 'have the body'). In England a writ directed to a person who has custody of a prisoner, ordering him to produce the prisoner before the court issuing the writ, and to explain why the prisoner is detained in custody. H.C. may be claimed by any prisoner except those charged with treason or felony, to whom certain

HAAKON (haw'kon) VII (1872-1957). King of Norway. B. Prince Charles, the 2nd son of Frederick VIII of Denmark, he m. in 1896 Princess Maud (1869-1938), youngest dau. of Edward VII of the U.K. He was elected king of Norway in 1905 on the separation of that country from Sweden, and at his coronation in 1906 he took the name of H. When the Germans invaded Norway in 1940 he refused to surrender; and, when armed resistance in Norway was no longer

scandal of 1890 when he was accused of cheating in a game which included the Prince of Wales (Edward VII), who gave evidence in the subsequent court case.

GORE, Charles (1853–1932). Anglo-Catholic churchman. The first head of Pusey House, Oxford, he edited the volume of theological essays *Lux Mundi* (1890), founded in 1892 the Community of the

GORILLA. A study at the Crystal Palace grounds in Belgian fossil marble by sculptor David Wynne (q.v.). Weighing two and a half tons, it shows the knuckle-walking stance usually adopted. Courtesy of David Wynne.

Resurrection that was est. at Mirfield in 1898, and was successively bishop of Worcester (1902), the new diocese of Birmingham (1905), and Oxford (1911–19). His many books include the trilogy, *Belief in God, Belief in Christ, and The Holy Spirit and the Church*.

GORE, Frederick Spencer (1878–1914). British artist. He studied at the Slade, and his paintings show the influence of Sickert, and of the Post-impressionists Cézanne and Gauguin. In 1911 he became the 1st Pres. of the Camden Town Group.

GORGAS, William Crawford (1854–1920). American military doctor, who cleared the Panama Canal Zone of malaria and yellow fever, and discovered that the latter is transmitted by the mosquito.

GO'RGON. In Greek mythology, Stheno, Euryale, and Medusa, the 3 daus. of Phorcy and Ceto, who were possessed of wings, claws, enormous teeth, and snakes in place of hair. So terrible was the face of Medusa (the only one who was mortal) that the sight of it, even after her death at the hands of Perseus, turned the gazer to stone.

GORILLA. The erect, breast-beating position, usually denoting excitement rather than rage.

GORGONZOLA. Town in Lombardy, Italy, 12 m. N.E. of Milan, famous for its cheeses. Pop. (1960) 8,750.

GORILLA. Largest of the anthropoid apes (*Gorilla gorilla*) found in the dense forests of W. Africa. The mountain species (*G. berengei*) is slightly larger and heavier.

The G. stands about 5½ ft. high, the female being smaller, and the body is covered with blackish hair, silvered on the back. The family unit is a male with several females and their young ones: the males are said to sleep on the ground and the females and young

in stoutly built nests in trees, used only for a nights. The G. is chiefly vegetarian and will not attack man except in self-defence, but is rapidly dwindling in numbers despite stringent protection.

GORIZIA (gōrēt'sē-ah). Town in Friuli-Venezia-Giulia region, N. Italy, cap. of G. prov., 20 m. E.S.E. of Udine. During the F.W.W. a number of battles were fought round it. Pop. (1961) 41,854.

GORKY, Arshile (1904–48). American artist. B. in Armenia, he went to the U.S.A. in 1920 and was an initiator of Abstract Impressionism, his work having a broodingly introspective quality.

GORKY, Maxim. Pseudonym of the Russian writer Alexei Peshkov (1868–1936). B. at Nijni-Novgorod, now renamed G. in his honour, he is unique in playing an equally important part in his country before and after the Revolution, which he strongly supported, enduring exile 1906–13 for his revolutionary principles. Intimate contact with men and life during his restless wanderings in search of work in S.E. Russia gave G. a strong sense of reality, coupled with a romantic dream of a different world and a better life. This duality pervades such a play as *Na dne* (1902: *The Lower Depths*). Despite the terrible pressure of events, G. never lost his faith in the human race, e.g. *Chelovek* (1903: *Man*), a prose poem; *Mat* (1907: *Mother*), a novel celebrating the potential power of the industrial proletariat; the recollections *Detstvo* (1913: *My Childhood*), and *Yegor Bulychov* (1932), a play forming part of an unfinished trilogy. He suffered from tuberculosis and stayed in S. Italy in 1922–8, but then returned to a hero's welcome.

MAXIM GORKY
Photo: Novosti Press Agency.

GORKY. Town in the R.S.F.S.R., cap. of G. region, situated at the junction of the Oka and Volga. An ancient city with a kremlin or castle, it was, as Nijni-Novgorod, long famous for its great annual fair. It remains a great trade centre, making also motor-cars, locomotives, aeroplanes, etc. It has a univ. Its name was changed in 1932 in honour of Maxim Gorky who was b. there. Pop. (1967) 1,100,000.

GÖRLITZ. Manufacturing town in E. Germany, 55 m. E. of Dresden. Pop. (1960) 90,800.

GORLOVKA. Industrial town and railway junction in the Ukrainian S.S.R. Pop. (1967) 348,000.

GORSE, Furze, or Whin. Genus of plants (*Ulex*) of the Leguminosae family, consisting of thorny shrubs with spine-shaped leaves densely clustered along the stems, and bright yellow flowers. The gorse bush (*U. europaeus*) is an evergreen, and grows on heaths and sandy areas throughout western Europe, and abundantly in Britain.

GORST, Sir John Eldon (1835–1916). British statesman. In New Zealand 1860–5, he was influential in negotiations with the Maoris, and returning to England reorganized the Conservative Party for Disraeli's victory in 1874. He was a member of Randolph Churchill's Fourth Party 1880–4, but later became a Liberal.

GORT, John Vereker, 1st visct. G. (1886–1946). British soldier. He succeeded his father as 6th visct. G. in the peerage of Ireland in 1902, won the V.C. in the F.W.W., and as C.I.G.S. from 1937 commanded the B.E.F. 1939–40, conducting a fighting retreat to the Channel and Dunkirk. He was Gov. of Gibraltar in 1941, of Malta 1942–4, and High Commissioner for Palestine 1944–5. He was created field marshal (1943) and a visct. in the British peerage in 1945.

section and world championships every 4 yrs, 2 yrs after the Olympics. See **PHYSIOTHERAPY**.

GYÖRGY (jör'j), Paul (1893-). American doctor. B. in Hungary, he was director of pediatrics at Philadelphia General Hospital 1957-63 and was discoverer and co-discoverer of Riboflavin, Pyridoxine and Vitamin H (Biotin).

GYPSIES. A wandering folk, scattered over most parts of the world, whose name is a corruption of 'Egyptian'. The name they apply to themselves is Rom, which may be derived from Romano, the name assumed by the inhabitants of the Byzantine Empire in which the Gs. are believed to have originated. In the 14th cent. they crossed the Bosphorus into Europe and settled in the Balkan peninsula. During the next cent. they spread over Germany, Italy, and France, and they arrived in England about 1500. A long period of persecution followed, including accusations of cannibalism and child-stealing, and they are, still suspected of petty thefts in country districts.

HAGGARD and faiths are a medley of beliefs etc.) devoted to promoting the redoubtable count's temple.

HA'GGARD, Sir Henry Rider (1856-1925). British novelist. B. in Norfolk, he held colonial service posts in Natal and the Transvaal 1875-9, then returned to England to read for the Bar. He turned his S. African experience to good use in his romantic adventure tales *King Solomon's Mines* (1885), *She* (1887) and many others; he also wrote on agricultural questions.

HAGGIS. Popular Scottish dish, of ancient origin, consisting of a sheep's or calf's heart, liver, and lungs, etc., minced up with onion, oatmeal, suet, spice, pepper and salt, and boiled in the animal's stomach.

HAGUE, La. Cape at the N.W. of Manche dept., France.

HAGUE (häg), The. Seat of Govt. of the Netherlands, and cap. of S. Holland prov.; situated 2½ m.

HAGUE CONFERENCES. Two international conferences held at The Hague in 1899 and 1907 to discuss means for the prevention of war or the mitigation of its horrors. The first resulted in the setting up of The Hague Tribunal for the settlement by arbitration of international disputes; this body was absorbed, 1946, by the International Court of Justice set up by the United Nations.

HAHN, Kurt (1886-). German educationist. Founder and headmaster (1920-33) of Salem School in Germany, after his expulsion from Germany by Hitler he founded Gordonstoun (q.v.) and was headmaster 1934-53. He returned to Salem 1953, and was co-founder of the Atlantic College project (q.v.) in 1960. He is also assoc. with the Outward Bound schools, whose mountain rescue teams, etc., incorporate his educational theories on training.

HAHN, Otto (1879-1968). W. German physical chemist. B. at Frankfurt-am-Main, he worked with Rutherford and Ramsay, becoming director of the Kaiser-Wilhelm Inst. for Chemistry in 1928. With Strassmann (1938) he discovered nuclear fission of uranium when bombarded with neutrons, which led to the A-bomb, first used in 1945, when he received the Nobel prize for chemistry. In 1957 he was among the W. German scientists who refused to co-operate in the development of nuclear weapons.

HAIFA (hi'fa). Principal port of Israel, on the S. shore of the Bay of Acre, at the foot of Mt. Carmel. It has a fine harbour and an institute of technology, and is the terminus of a 600 m.-long pipeline from Iraq, which fell into disuse in 1948 owing to Arab-Israeli hostility. Pop. (1967) 207,500.

HAIG, Douglas, 1st earl (1861-1928). British soldier. B. at Edinburgh, he served in the Omdurman and S. African campaigns, and in the F.W.W. commanded the 1st Army Corps 1914-15, and the 1st Army in 1915 until he succeeded French as C-in-C. the same year. His Somme offensive in the summer of 1916 made considerable advances only at heavy cost, and his Passchendaele offensive (July-Nov. 1917) achieved little at huge loss. He then loyally supported Foch in his appointment as supreme commander and in his victorious 1918 offensive, and it was his foresight which persuaded Foch to extend his attack N., so breaking the Hindenburg Line. Created field marshal in 1917, and awarded the O.M., an earldom, and £100,000 in 1919, he retired in 1921 and devoted himself to ex-service interests as 1st pres. of the British Legion. He has been stringently criticized, however, for the appalling losses on the Somme and at Passchendaele by modern historians, even though allowance be made for the unprecedented circumstances.

HAILE SELASSIE (hi'lē sela'sē) (1891-). Emperor of Ethiopia. The son of Ras Makonnen, nephew of the emperor Menelik, he was appointed heir to the empress Zauditu in 1916 and undertook a programme of reforms, among them the abolition of the slave trade in 1923. His proclamation as king in 1928 placed all power in his hands, and on Zauditu's death in 1930 he became emperor. He made a noble but unavailing plea to the League of Nations against Italian aggression, and after the conquest of his country 1935-6 lived in England until his restoration in 1941. In 1952 he ratified the re-integration with Ethiopia of Eritrea.

HAILSHAM, Douglas McGarel Hogg, 1st visct H. (1872-1950). British lawyer and Cons. politician, son of Quintin Hogg and father of Quintin McGarel Hogg (qq.v.). Entering parliament in 1922, he was Attorney-General 1922-4 and 1924-8. Created a baron (1928) and visct. (1929), he was Lord Chancellor 1928-9 and 1935-8, and Sec. of State for War 1931-5.

HAILSHAM. Market town of Sussex, England, in the Cuckmere valley, 7 m. N. of Eastbourne. St.

THE HAGUE. Once surrounded by a moat and access still gained through medieval gateways, the government buildings of the Binnenhof (or 'inner court') are the heart of The Hague. Glimpsed to the right is the Ridderzaal (Knight's Hall) built in 1252 and scene of the opening of Parliament. Here the states of the Netherlands abjured their allegiance to Philip II of Spain.

from the North Sea, and linked by canal and railway with Rotterdam and Amsterdam. The H. is reputed to be the richest of Dutch cities, and has many fine buildings. The H. is the seat of the U.N. International Court of Justice. Pop. (1968) 576,200.

GOTTHELF, Jeremias. Pseudonym of the Swiss novelist Albert Bitzius (1797–1854). B. at Murten, he became in 1832 pastor of Lützelflüh. His masterpiece is considered to be *Uli der Knecht* (1841).

GÖTTINGEN. W. German univ. town in Lower Saxony on the Leine, 26 m. N.E. of Kassel. The univ. was founded in 1734 by George II of England, elector of Hanover, and became a famous seat of learning. The main industry is printing and publishing; scientific instruments and chemicals are made. Pop. (1966) 112,172.

GOTTSCHED (got'shed), Johann Christoph (1700–66). German author and critic. B. in east Prussia, he taught philosophical subjects and poetry at Leipzig from 1725, and for nearly 20 years exercised almost dictatorial powers as a literary critic.

GOTTWALD (got'vahl), Klement (1896–1953). Czechoslovak Communist. B. of a peasant family in Moravia, he joined the Czechoslovak Army on its formation in 1918, and became gen. sec. of the Communist Party in 1929. In the same year he was elected to parliament. In 1938 he went to Moscow, but returned to Czechoslovakia in 1945, and in 1946 became P.M. of a coalition govt., and in 1948 succeeded Beneš as President. He estab. a dictatorship.

GOUDA (gow'da). Dutch town in S. Holland prov., 12 m. N.E. of Rotterdam; it is famous for its round flat cheeses. Pop. (1967) 46,823.

GOUDY, Frederic William (1865–1947). American type-designer and printer. B. in Illinois, he designed over a hundred type faces which profoundly influenced magazine advertising in the U.S.

GOUGH (gof), Sir Hubert (1870–1963). British general. As commander of the 5th Army (1916–18), he was blamed for the German break-through on the Somme and superseded, but it was subsequently admitted that the number of his troops was far from sufficient to hold such a length of front: he was created G.C.B. in 1937.

GOUJON (goozhon'), Jean (1515–66). Considered to be the finest French sculptor of the 16th cent., he executed work in Rouen cathedral and the Louvre.

GOULBURN. Australian town, in N.S.W., 137 m. S.W. of Sydney. A railway junction, it is an agricultural centre with brick and tile factories, pottery works, boot factories, etc. Pop. (1966) 20,849.

GOULD (goold), Sir Francis Carruthers (1844–1925). British artist, known as F.C.G. B. at Barnstaple, he was the first English caricaturist to contribute a daily cartoon to a newspaper, *The Westminster Gazette*, and became famous for his cartoons of political subjects.

GOULD, Jay (1836–92). American financier. B. in New York, he set up as a stockbroker in 1859, and in 1868 was elected president of the Erie rly. In 1872 he was compelled to resign following the discovery that he had issued large amounts of fraudulent stock. Some years earlier his speculations in gold had caused a financial panic on 'Black Friday', Sept. 24, 1869. Subsequently he developed a large railway system in the S.W. states.

GOULD, Nathaniel (1857–1919). British novelist, famous as 'Nat' G. *The Double Event* (1891), pub. during a 10-year stay in Australia as a journalist, was an immediate success. He wrote some 130 popular novels of the Turf.

GOUNOD (poonoh'), Charles François (1818–93). French composer. B. in Paris, he studied at the Conservatoire and in Rome. His first opera, *Sapho*, was produced in Paris in 1851, and was followed by an operatic version of Molière's *Le Médecin malgré lui*, *Faust* (1859), *Philémon et Baucis* (1860), and *Roméo et Juliette* (1867). He also wrote sacred songs, masses, and an oratorio, *The Redemption*.

GOURD (görd). Name applied to various members of the plant family Cucurbitaceae, including the melon, pumpkin, etc. In a narrower sense, the name

applies only to the genus *Lagenaria*, of which the bottle G. (*L. vulgaris*) is best known.

GOURMONT (goormon'), Rémy de (1858–1915). French writer. B. in Orne dept., he was one of the founders in 1890 of the *Mercure de France*, of which he eventually became editor. His literary criticism was reprinted in *Promenades Littéraires* (1904–28) and other vols., and he also wrote *La Culture des Idées* (1900) and novels.

GOUT. Disease due to excess of uric acid in the blood, and almost entirely confined to men. The tendency to it may be inherited. It usually appears between 30 and 50. Attacks are brought on especially by sweet wines, beer, and meat. A typical attack comes suddenly in the night with inflammation of a big toe joint and fever. The disease may become chronic and shorten life by affecting the kidneys. Commonly there is a generalized inflammation of the joints. Treatment aims at removing, more recently at preventing, the deposits of urate of soda in the system by diet and drugs.

GOW, Niel (1727–1807). Scottish violinist. B. near Dundeld, he was famed as a player and composer of

GOYA. Detail of the Wellington portrait stolen in 1961 and recovered in 1965. Courtesy of the National Gallery

reels; nearly 100 tunes are attributed to him. His 4 sons were also musicians, and 1784–1822 the family pub. the Gow collection of Scottish airs.

GOWER, John (c. 1330–1408). British poet. B. in Kent, he was a friend of Chaucer and wrote in English a long poem, *Confessio Amantis*, and other poems in French and Latin. He was buried in Southwark cathedral.

GOYA Y LUCIENTES (gō'yah ē loothē-en'tes), Francisco José de (1746–1828). Spanish painter and etcher. B. in Aragon, of humble parentage, he lived a wild and dissolute life in Madrid, and for a time joined a troupe of bull-fighters, thus obtaining a knowledge of the bull-ring that he employed in some of his finest etchings. After studying art in Italy he returned to Spain, was employed on a number of paintings for the royal tapestry manufactory, and in 1786 became court painter to Charles IV. He is famous for his portraits of 4 successive kings of Spain and of many other great personages, and for his etchings, 'The Disasters of War', depicting the horrors of the French invasion of Spain, 1808–14.

GOZZI (got'sē), Carlo, Count (1720–1806). Italian dramatist. B. at Venice, he wrote plays based on fairy tales, among them *Re Turandote*, basis of operas by Busoni and Puccini.

GPU. See M.V.D.

GRAAF, Regnier de (1641–73). Dutch physician at Delft, who wrote a treatise in 1663 on the pancreatic secretions, and in 1672 discovered the follicles of the female ovary that are named after him.

GRACCHUS, Tiberius (163–133 B.C.) and Gaius (153–121 B.C.). Roman agrarian reformers. Tiberius, when elected tribune in 133, attempted to end the

surrendered to the British 2nd Army, nearly half the city's buildings were in ruins. There is a univ. (1919) and the H. Schauspielhaus is one of the rep.'s leading theatres. Shipyards demolished by the Allies in 1946 were re-equipped in 1953.

The *hamburger* (chopped beef and seasoning fried as a flattened round) is said to have been invented by the medieval Tartar invaders of the Baltic area. Sailors from H. took the idea home, but although naturalized in the 19th cent. in the U.S.A. by German immigrants, the H. dropped out of use in Germany until reintroduced in the 1960s via England.

The LAND OF HAMBURG consists of the city and surrounding districts. Area 288 sq. m.; pop. (1966) 1,847,300.

HAMELN (hah'meln). Town on the Weser, W. Germany, 25 m. S.W. of Hanover. Buildings of interest include the Rattenfängerhaus (rat-catcher's house) and the minster. The town is famous for the Pied Piper legend. Pop. (1960) 52,000.

HAMILCAR BARCA (c. 270–228 B.C.). Carthaginian general, father of Hannibal. From 247 to 241 he harassed the Romans in Italy, and then led an expedition to Spain where he d. in battle.

HAMILTON, Alexander (1757–1804). American statesman. B. in the W. Indies, he served during the War of Independence as captain and from 1777 to 1781 was Washington's secretary and aide-de-camp. After the war he practised as a lawyer. He was a member of the Constitutional Convention of 1787, and in the *Federalist* influenced public opinion in favour of the ratification of the constitution. H. was Sec. of the Treasury, 1789–95, and proved an able controller of the national finances. He led the Federal Party, and incurred the bitter hatred of Aaron Burr when he cast the deciding vote against Burr and in favour of Jefferson for the presidency in 1801. Eventually fought a duel with Burr, was wounded, and died the next day.

HAMILTON, Lady Emma (c. 1765–1815). British courtesan. *Née* Lyon or Hart, the dau. of a Cheshire blacksmith, she obtained employment in London, and in 1782 became the mistress of Charles Greville, and in 1786 of his uncle Sir William Hamilton (1730–1803), the British envoy at Naples. She at once became a leading figure in the society of Naples, and Hamilton married her in 1791. After Nelson's return from the Nile in 1798 she became well known as his mistress and her dau. by him, Horatia, was b. in 1801. After

the death of Hamilton and Nelson, Lady H. was imprisoned for debt, but later escaped to Calais where she d. in poor circumstances.

HAMILTON, Iain Ellis (1922–). Scottish composer. Glasgow-born. He worked as an aircraft engineer 1939–46, and studied at the R.A.M. 1947–51. Intensely emotional and harmonically rich, his works incl. the striking viola and 'cello sonatas, a ballet (*Clerk Saunders*), the *Pharsalia* cantata, and symphonies.

HAMILTON, Sir Ian (Standish Monteith) (1853–1947). Scottish soldier. He was chief-of-staff and deputy to Lord Kitchener, C.-in-C., in the S. African War. In 1914 he was C.-in-C. of the Home Defence Army and in 1915 he led the land operations in Gallipoli. He had become a full general in 1914.

HAMILTON, James Hamilton, 1st duke of (1606–49). Scottish royalist. He acted as Charles I's adviser on Scottish affairs and in 1639 commanded an army against the Covenanters. Subsequently he took part in the negotiations between Charles and the Scots. During the 2nd Civil War he led the Scottish invasion of England, but was captured at Preston and executed.

HAMILTON, Patrick (1904–62). British novelist and dramatist. He specialized in suspense, notably in the plays *Rope* (1929), based on the classic murder case of Loeb and Leopold (see DARROW, CLARENCE), and the Victorian *Gaslight* (1933); and the radio dramas *To the Public Danger* and *Money with Menaces* (1939).

HAMILTON, Sir William (1788–1856). British philosopher. Prof. of history (from 1821) and of logic and metaphysics (1836–56) at Edinburgh, he greatly influenced the 19th cent. Scottish school. His chief work was the *Philosophy of the Unconditioned* (1829).

HAMILTON, Sir William Rowan. See QUATERNIONS.

HAMILTON. Town (burgh) in Lanark, Scotland, nr. the Clyde, 10 m. S.E. of Glasgow. Among its industries are textiles, engineering, etc. Pop. (1961) 41,968.

HAMILTON. Chief city of Wentworth co., Ontario, Canada. It lies nr. Lake Ontario, 40 m. to the W. of the Niagara Falls, possesses a large hydro-electric plant, and manufactures agricultural implements. It is the seat of a univ. Pop. (1966) 449,116.

HAMILTON. Town on the Waikato river, North Island, New Zealand. Waikato Univ. was estab. here 1964. Pop. (1967) 65,800.

HAMILTON. Cap. of Bermuda, on Bermuda Island. Pop. (1966) 3,000.

HAMM (hahm). Town on the river Lippe, North Rhine-Westphalia, W. Germany, 19 m. N.E. of Dortmund. H. has wire and machine factories, railway repair shops, and the rly. marshalling yards are among the largest in Europe; during the S.W.W. they were frequently bombed. Pop. (1960) 68,000.

HAMMARSKJÖLD (ha'mershold), Dag (1905–61). 'World civil servant.' Son of a Swedish P.M., he taught economics at Stockholm univ. and, although an Independent became Assist. For. Sec. in 1949 and Min. of State in 1951. In 1953 H. was elected Sec.-Gen. of U.N. and unanimously re-elected in 1958. He dealt with the Suez Crisis (1956) in which he opposed Britain, and his attempts to solve the problem of the Congo, where he was killed in a plane crash, were strongly attacked by the Soviet Union.

HAMMERFEST. Town on Kvaløya island off the N.W. coast of Norway; the northernmost town of Europe. Whaling is carried on. Pop. (1960) 5,600.

HAMMERHEAD. Several species of shark in the genus *Sphyrna*, characterized by a hammer-shaped head, and found in tropical seas.

HAMMERSMITH. Bor. of Greater London, England, lying between Kensington and the Thames on the S. The H. suspension bridge was completed

LADY HAMILTON by George Romney

formidable jumps and casualties are not infrequent.

GRAND PRIX DE PARIS (gron' prē de pah'rē). The Continental horse-race which most nearly approximates to the English Derby. It is run on the Paris racecourse in June over a distance of 1 m. 7 furlongs, and is for 3-year-old colts and fillies.

GRAND RAPIDS. City in Michigan, U.S.A., on the Grand r., noted for furniture; makes also motor bodies, plumbing fixtures, paints, etc. Pop. (1960) 177,313.

GRAND TOUR. In the 17–18th cents. the tour of Europe which finished the education of wealthy young men. A *G.T. of Space* was planned 1968 by Wernher von Braun (q.v.) for 1977, when it should be possible to send a spacecraft to the outer edges of the solar system, and when the planets would be in a favourable relative position reached once every 175 years.

GRAND UNION CANAL. The longest artificial inland waterway system in Britain, running from London to Birmingham, Leicester, Loughborough, etc.; total length with branches 240 m.

GRANITE (gra'nit). An acidic igneous rock, of plutonic origin, occurring in intrusions in many parts of the British Isles. The rock is coarse-grained, the characteristic minerals being quartz, feldspars, particularly orthoclase, and mica. It often comprises the core of a range of mountains, the surrounding rocks having been metamorphosed by the heat of the intrusion. Granitic areas produce a very characteristic scenery type, e.g. in the Grampians and Scottish Highlands, the Lake District, Dartmoor, Bodmin Moor in Cornwall, the Mourne mountains, etc. See **FELDSPAR**.

GRANT, Cary. Stage-name of American actor Archibald Leach (1904–). B. in Bristol, England, he went to the U.S. in 1921, becoming a citizen in 1942. Since entering films in 1932 he has estab. himself as the most skilled of light-comedy actors, e.g. *Notorious* (1946 with Bergman) and *A Touch of Mink* (1962).

GRANT, Duncan (1885–). Scottish painter. A member of the 'Bloomsbury' group which incl. Roger Fry and Virginia Woolf, he shows in later work, e.g. 'Snow Scene' (1921), the influence of the Post-impressionists, esp. Cézanne. He also designed carpets, pottery, etc.

GRANT, Ulysses Simpson (1822–85). American general and 18th President of the U.S.A. The son of an Ohio farmer, he had an unsuccessful career in the army 1839–54 and in business, and on the outbreak of the Civil War received a commission on the Mississippi front. He took command there in 1862, and by his capture of Vicksburg in 1863 brought the whole Mississippi under Northern control. Appointed commander-in-chief in 1864, he slowly wore down Lee's resistance, and in 1865 received his surrender at Appomattox. He was elected Pres. in 1868 and 1872, and carried through a liberal reconstruction policy in the S., although he failed in his attempts to suppress political corruption.

GRANTHAM (grant'-am). Market town (bor.) on the river Witham, Kesteven, Lincs, England. It was founded in Saxon times, and has always been the market centre for the surrounding agricultural area. Pop. (1961) 25,030.

GRANVILLE, Granville George Leveson-Gower, 2nd earl G. (1815–91). British Liberal statesman. Son of the 1st earl, whom he succeeded in 1846, he was For. Sec. in 1851, 1870–4, and 1880–5.

GRANVILLE-BARKER, Harley (1877–1946). British theatre director and dramatist. During 1904–18 he produced, with J. E. Vedrenne, plays of Shaw, and introduced works of Galsworthy, Housman, and Massfield with simple provocative productions and new scenic and lighting principles. His own plays incl. *The Voysey Inheritance* (1905), *The Madras House* (1907) and *Waste* (1909). A scholarly work, *Prefaces to Shakespeare*, was pub. 1927–45.

GRAPE. See **VINE**.

GRAPEFRUIT. Common name for the large yellow fruit of *Citrus paradisi*, grown chiefly in Florida, California, S. Africa, and the W. Indies.

GRAPHITE, Plumbago or Black Lead. Crystalline form of carbon. Iron-grey to black, with a metallic lustre, it splits up easily into flakes, each flake breaking into smaller flakes – the property which is responsible for its wide use as a lubricant. G. occurs in veins in gneiss, crystalline limestone, and metamorphic rocks. So far it has proved an essential element for the moderator in certain types of nuclear power reactors and will be so used in the new nuclear power stations coming into use in Britain. For this application it is

essential that impurities are present to less than a few parts per million. The powdered carbon is compressed and heated several times in a coke furnace. It is then cleaned up and accurately machined.

GRASMERE (gras'mēr). English lake and village in the Lake District, Westmorland. Wordsworth lived near and is buried in the churchyard. With Ambleside and some smaller areas, G. village was in 1955 formed into the Lakes U.D.; pop. (1961) 6,061.

GRASS (grahs), Günter (1927–). German sculptor and writer. B. in Danzig, he studied at the art academies of Düsseldorf and Berlin, worked as a writer and sculptor, first in Paris and later in Berlin, and in 1958 won the coveted 'Group 47' prize. The grotesque humour of his novel *Die Blechtrommel* (*The Tin Drum*: 1963) is again shown in many of his poems. G. has also written plays, incl. *Onkel, Onkel* (1958).

GRASSE (grahs). Town in Alpes-Maritimes dept., S. France, 8 m. N.N.W. of Cannes. Around the town, orange blossom and roses are grown for the production of perfumes. Pop. (1962) 27,226.

GRASSES. Plants belonging to the Gramineae family; the most important and one of the largest of the families of monocotyledonous plants. They are distributed throughout the world, and include all the cereals, the grasses of meadows and pastures, and other plants of economic importance, including sugar cane, the bamboo, the reed, etc. The leaves of G. are long and narrow, with parallel veins, the lower part enclosing the stem in a sheath. The stem is mainly hollow, and the flowers are borne in one or more spikelets, terminating the stem. The fruit is single seeded, and is known as a caryopsis. It contains a small embryo set at the base of a hard, albuminous endosperm. When the flower is ready for pollination, the large stamens break through to the outside of the spike and shed their pollen outside.

GRASSHOPPERS. Insects of the order Orthoptera.

GÜNTER GRASS

Courtesy of Secker and Warburg Ltd.

GRASSES. 1. Cock's-foot; 2. Yorkshire fog; 3. perennial rye; 4. rough-stalked meadow.

Saul and Israel in Egypt (both 1739) were unsuccessful, but his masterpiece *Messiah* was acclaimed on its first performance in Dublin in 1742 and maintains unrivalled popularity. His great contribution is to choral music, later oratorios incl. *Samson* (1744), *Belshazzar* (1745), *Judas Maccabaeus* (1747) and *Jephtha* (1752). From 1751 he became totally blind, and throughout his career suffered financial difficulty.

HANDLEY, Tommy (1896–1949). British comedian. B. in Liverpool, he became famous for his immensely popular radio programme 'ITMA' (It's That Man Again) with its catch-phrases, e.g. 'After you, Claud', and such characters as 'Mrs. Mop' and 'Mona Lot': it ran from 1939 till his death.

HANGCHOW. Chinese port at the mouth of the Tsientang, at the head of H. Bay. The capital of Chekiang prov., it lies 110 m. S.W. of Shanghai at the S. end of the Grand Canal. It is a tourist centre with silk, jute, and tea industries; trade is mainly inland. Pop. (1957) 784,000.

HANGING. Suspension by the neck usually with a noose. The base of the tongue is forced into the back of the throat and blocks the air passages; the large blood-vessels supplying the brain are shut off and the vagus nerve and carotid arteries are compressed, causing the heart to stop. Unconsciousness and death therefore follow very quickly. In judicial hanging the condemned person is allowed to drop about six feet so that the powerful jerk of the tightened rope breaks his neck.

HANKEY, Maurice Pascal Alers, 1st baron (1877–1963). British administrator, 'the man with a million state secrets'. Son of a British emigrant to Australia, he was in 1916 appointed Sec. of the Cabinet by Lloyd George, the 1st 'outsider' regularly to attend its meetings. For assistance in organizing Allied victory in the F.W.W. he was awarded £25,000, the only civilian officer to be so recognized. He was knighted in 1919, and raised to the peerage in 1938.

HANKO (hahnk'ō). Port at the end of H. peninsula on the S.W. coast of Finland. It is kept ice-free all the year. Finland leased H. to Russia 1940–4. Pop. (est.) 7,000.

HANKOW. See **WUHAN**.

HANLEY. See **STOKE-ON-TRENT**.

HANNAY, James Owen. See **BIRMINGHAM, G. A.**

HANNIBAL (247–182 B.C.). Carthaginian general, the son of Hamilcar Barca (q.v.). Chosen as general by the army in 221 he besieged Saguntum (in Spain) in 219, whereupon the Romans declared war on Carthage. H. then fought a brilliant campaign in Italy, culminating in his victory at Cannae (216). However, he failed to capture Rome, and after spending some years in S. Italy was recalled to Carthage in 203 to meet a Roman invasion which culminated in H.'s defeat at Zama (202). He then became head of the Carthaginian government, but was exiled in 196 at the wish of the Romans, fleeing to the court of Antiochus in Asia Minor. He poisoned himself in Bithynia to avoid extradition to Rome.

HANOI (hanō'i). Capital of N. Vietnam, on the Song-ka, c. 100 m. from its mouth. It is a trade and communications centre with an airport; is the seat of a univ.; and produces textiles and beer. It was the cap. of French Indo-China, 1902–45. Pop. (1967) 850,000.

HANOVER. W. German city, at the junction of the Leine and Ihme, capital of the Land of Lower Saxony. It is an important river and canal port with a noted institute of technology and many industries, incl. the making of machinery, vehicles, electrical equipment, rubber, textiles, chocolate, biscuits, tobacco; and petroleum refining. The seat of a Lutheran bp., it is first mentioned in 1163, was chartered 1241, passed to Brunswick 1369, joined the Hanseatic League 1386. Pop. (1966) 540,723.

From 1692 H. was the cap. of the former electorate (after 1815, kingdom) of H. George Louis, elector of

H., great-grandson of James I, became king of the U.K. in 1714, and the ruler of the 2 countries was the same person until Victoria's accession in 1837 when H., where a woman could not hold the throne, passed to her uncle Ernest Augustus, duke of Cumberland. His son, George V of H., was forced by Bismarck to abdicate in 1866, H. becoming a prov. of Prussia. In 1946 H. was merged with Brunswick and Oldenburg to form the Land of Lower Saxony.

HANSARD. Name given to the official report of the proceedings of the British parliament. Luke H. commenced printing the *House of Commons Journal* in 1774, but the first 'official' reports were pub. from 1803 by Cobbett, who during his imprisonment of 1810–12 sold the business to his printer, Thomas Curson H., son of Luke H. The publication of the debates remained in the hands of the family until 1889, and is now the responsibility of the Stationery Office. The name H. was officially adopted 1943.

HANSEATIC (hansēat'ik) **LEAGUE**. A medieval confederation of N. German trading cities. The earliest association had its headquarters at Wisby; it included over 30 cities, but was gradually supplanted by that headed by Lübeck. Hamburg and Lübeck estab. their own trading-stations in London in 1266 and 1267 respectively, which coalesced in 1282 with that of Cologne to form the so-called Steelyard. There were 3 other such stations: Bruges, Bergen, and Novgorod. At its height in the later 14th cent. the H.L. included over 70 towns, among them Lübeck, Hamburg, Cologne, Breslau, and Cracow. The basis of its power was its monopoly of the Baltic trade and its relations with Flanders and England.

The decline of the H.L. from the 15th cent. onwards was due to the movement of trade routes, and to the development of national states. The last general assembly (1669) marks the end of the League.

HANSOM, Joseph Aloysius (1803–82). British architect. His works incl. the town hall of Birmingham (1831), but he is remembered as the introducer of the H. cab in 1834.

HANUMAN (ha'noo-mahn). The monkey god and king of Hindustan. He assisted Rama to recover his wife Sita, abducted by Ravana of Lanka (Ceylon).

HANWAY, Jonas (1712–86). British traveller – he wrote of his experiences in Persia – and advocate of prison reform. He is believed to have been the first Englishman to carry an umbrella.

HANYANG. See **WUHAN**.

HAPSBURG. See **HAESBURG**.

HARA-KIRI (harahkir'i). Form of suicide by disembowelment prevalent in Japan, usually to avoid capture or other ignominy. It dates back to the Middle Ages and was widely practised by the Japanese forces during the S.W.W.

HARAPPA. Archaeological site in W. Pakistan with remains of the Indus Valley Civilization (q.v.). Of the series of great mounds, the most important is the Citadel – the ramparts still rising 50 ft. above the level of the plain – which Sir Mortimer Wheeler identified in 1946.

HARAR (hahrahr'). Chief town of H. prov. in E. Ethiopia. The city stands 220 m. E. of Addis Ababa, and is a caravan centre; coffee is the chief product of the area. An ancient walled city, it is the Moslem centre of Ethiopia. Pop. (1960) 40,000.

HARBIN. Chinese city, cap. of Heilungkiang prov., on the Sungari. A railway and river centre, it makes

HANSOM CAB

GREATHEAD, James Henry (1844–96). British engineer. B. in Cape Colony, he came to England and developed the Greathead shield system of tunnelling, which he used in constructing the London 'tubes'.

GREAT LAKES. Series of 5 freshwater lakes along the U.S.-Canadian border, comprising Lakes Superior, Michigan, Huron, Erie, and Ontario. All are connected and inter-connected by rivers and canals. The

GREAT WALL OF CHINA. The square watch towers built at intervals served as signal-fire stations, and the whole was carefully sited to follow the contours of the landscape. It has been well restored under the Communist régime.

Photo: Camera Press.

lakes, lying in a plain, are invisible from a few miles' distance; they are drained by the St. Lawrence.

GREAT RIFT VALLEY. Geological feature whose eastern arm stretches from the Sea of Galilee on the Israel-Jordan frontier (historically Palestine), through the Red Sea to near Kilimanjaro in E. Africa, and the W. from L. Albert to the mouth of the Zambezi. Total length about 5,000 m.

GREAT WALL OF CHINA. System of frontier defences in N. China consolidated to a continuous wall c. 450 m. in length under the Ch'in dynasty in 214 B.C. It consists of a brick-faced wall of earth and stone c. 25 ft. high and interspersed with square watch towers, eventually extended to c. 1,400 m., and intended to prevent incursions by Turkish and Mongol tribesmen.

GREAT YARMOUTH. See YARMOUTH.

GREBES. Aquatic birds of the family Podicipedidae. The legs are placed far back on the body, causing the birds to stand upright like penguins. There are 5 European species, the best-known being the Little G. or Dabchick (*Podiceps fluitans*).

GREAT CRESTED GREBE

GRECO (gre'kō), El. Name given to the Spanish immigrant artist Doménico Theotocopuli (1541–1614) because of his birth in Crete. Some time before 1570 he travelled to Venice, where he studied under Titian, and while visiting Rome was influenced by the works of Michelangelo. In 1575 he first went to Spain, where he found the spiritual atmosphere suited his deeply religious temperament, and settled in Toledo. His works have a fanatic intensity, an almost lurid sense of colour, and exaggeratedly elongated forms, e.g.

GREECE. A steep grey-blue rock rising abruptly from the green Saronic Sea, the island of Hydra produced from such fishing villages as Vlychos the patriots and sea captains who bore the brunt of the Greek War of Independence.

Courtesy of the National Tourist Organization of Greece.

'The Burial of Count Orgaz' and 'The Agony in the Garden'.

GRECO, Emilio (1913–). Italian sculptor. B. in Sicily, he became prof. at the Naples Academy of Fine Arts, and from 1943 has worked in Rome. His works incl. the Pinocchio monument at Collodi and bronze doors for Orvieto cathedral.

GREECE. Independent kingdom of Europe in the southern Balkans. The country is mainly composed of the complicated series of mountain ridges and enclosed valleys forming the Pindus mountains. The coastline is very broken, and is lined with scores of islands. Although winters are cold in the N., southern G. has a typical Mediterranean climate. G. is mainly an agricultural country, growing, chiefly for export, tobacco, olives, and fruits, particularly currants. Meat, wheat, and flour have to be imported. Wine and olive oil are produced; and there are textile and chemical factories; smelting and shipbuilding are carried on.

The capital is Athens, of which Piraeus, its port (formerly distinct), forms part; other towns are Corinth, Thessaloniki, Kavalla, Kalamai, Trikkala, Larissa, and Patras. Area 51,182 sq. m.; pop. (1966) 8,614,000, some 95 per cent of whom belonged to the Eastern (Greek) Orthodox Church. Under the constitution overwhelmingly approved by referendum in 1968, G. is a crowned democracy with a unicameral legislature of 150 elected by universal suffrage, voting being obligatory. See GREEK ART, HISTORY, etc.

GREEK ARCHITECTURE. The architecture of Greece stands foremost among the arts of the world as the most perfect. It is divided into 3 styles, viz. Doric, Ionic, and Corinthian. Of these the Doric is the oldest; it is said to have evolved from a former timber prototype. The finest example of a Doric temple is the Parthenon at Athens (447–438 B.C.). The origin of the Ionic is uncertain. The earliest building in which the Ionic capital appears is the temple of

The Acropolis of Athens restored as a citizen would have seen it on emerging from the great entranceway, the Propylaea. Centre, the great statue of Athena Promachus (the Champ on), behind it the Erechtheum, and to the right, the Parthenon.

jaw. The cleft may extend back into the palate. Surgery and re-education can often provide a remedy.

HAREWOOD (har'wood), George Henry Hubert Lascelles, 7th earl of H. (1923-). The elder son of the 6th earl and H.R.H. Princess Mary, the Princess Royal, he served in the Grenadier Guards in the S.W.W. and was a P.O.W. 1944-5. A patron of music, he ed. the magazine *Opera* 1950-3 and was in 1961-5 artistic director of the Edinburgh Festival. His brother, Gerald David Lascelles (1924-), is an ardent supporter of jazz.

HARFLEUR (ahr'flör). Port on the N. side of the Seine estuary, Seine-Maritime dept., France. During the Middle Ages it was leading port of N.W. France. Pop. (1962) 10,514.

HARGEISA (hahrgäs'a). Second-largest town of the Somali Rep., connected by air service to Aden and Asmara and by highway to Berbera and Addis Ababa. Pop. (est.) 50,000.

HARGRAVES, Edmund Hammond (1815-91). British discoverer of the Australian goldfields. B. in Hants, he found gold in the Blue Hills of N.S.W. in 1851, was made temporary Commissioner of Crown Lands and given a govt. award of £10,000.

HARGREAVES, James (d. 1778). British inventor. B. nr. Blackburn, he became a weaver, and in 1760 was co-inventor of a carding machine. About 1764 he invented his 'spinning-jenny', which enabled a number of threads to be spun simultaneously by one person.

HARIANA. See PUNJAB.

HARKNESS, Edward (1874-1940). American railway magnate and philanthropist, who in England founded the Pilgrim Trust (£2,000,000, of which both capital and income may be used to promote the well-being of the U.K.) in 1930.

HARLECH. Town in Merionethshire, Wales, 10 m. N.N.W. of Barmouth. On a rock are the ruins of the castle, built in Edward I's reign. Pop. 1,096.

HARLEM (hahr'lem). District of Manhattan, New York City, with a large Negro population.

HARLEY, Robert, 1st earl of Oxford (1661-1724). British Tory statesman. He was Speaker of the Commons from 1701 to 1705 and entered the govt. in 1704 as Sec. of State. In 1708 the Whigs procured his dismissal, but in 1710 he returned to power as Chancellor of the Exchequer, and became subsequently a peer, received the Garter, and occupied the office of Lord Treasurer. In 1714, however, he was dismissed. After the accession of George I he was accused of treason, and imprisoned until 1717.

HARLOW. English market town (U.D.) in Essex, 5 m. N. of Epping. It was chosen in 1946 for development as a new town. Pop. (1961) 53,475 (5,771 in 1951).

HARMONICA. Name given to a variety of musical instruments of varying periods, incl. sets of musical glasses (graded in size or containing varying quantities of water) played with wetted fingers or small hammers - both Mozart and Beethoven composed for these; and the mouth organ. The latter, said to have been invented by Wheatstone (q.v.) in 1829, consists of a narrow box containing a metal plate in which there are a number of slots, each having a small metal reed affixed - the size of the reed is varied according to the note to be produced. Easily mastered by the amateur, it can be by a few be used at the level of a concert instrument, e.g. Larry Adler.

HARMONIUM. Musical instrument: a pipeless, reed-vibrated organ, worked by air compression with a 5-octave keyboard and an air chamber filled by the action of foot-worked pedals.

HARMONY. The art of combining musical sounds into chords, and the moving from one chord to another. It is distinguished from counterpoint (q.v.), the combination of harmonic textures. H. first took the form of added parts moving parallel to a plain-song. New chord forms appeared in the 16th cent., when the shortcomings of the ecclesiastical modes

became more and more apparent, resulting in the evolution of modern major and minor scales. J. S. Bach advanced consonance and dissonance, while chromatic notes began to appear. The practical advancement of H., by Beethoven, Wagner, Stravinsky, etc., has frequently aroused the hostility of academic critics, as it still does in the case of the atonality, abandonment of a fixed key note, and double and treble tonality of Bartók and Holst. Our universal diatonic scale was nearly attained by Pythagoras and perfected by Zarlino.

HARMSWORTH, Alfred. See LORD NORTHCLIFFE.

HARNACK (hahr'nahk), Adolf von (1851-1930). German Protestant theologian. B. at Dorpat, he held chairs of ecclesiastical history at Leipzig, Marburg, and Berlin. His main work is a history of Dogma (1886-90), and his approach to Christian history and dogma was realistic and critical.

HARNESS RACING. Sport popular in the U.S. and Canada, originating in the 18th cent., in which standardbred horses (rather sturdier than thoroughbreds) pull two-wheeled sulkies on which the driver sits. They compete in trotting (in which the diagonally opposite legs move forward simultaneously) and pacing (in which the 2 right legs, then the 2 left legs, are alternately moved forward) races and the winner may be decided by the best 2 out of 3 heats. The most famous race (trotting) is the Hambletonian at Goshen, N.Y., named after the mid-19th cent. horse Hambletonian, from which 90 per cent of modern standardbreds are said to descend in the male line. Attempts to popularize H.R. in Britain have failed, but it flourishes in Australia, France, Italy and Sweden.

HARNETT, William Michael (1841-92), American artist, celebrated for his trompe-l'oeil still-lives.

HARNEY, William (1895-1962). Australian authority on the aborigines. B. in Queensland, he spent many years among the tribes, accepted as one of themselves. In 1940 he became patrol officer and Protector of Aborigines in the Northern Territory.

HAROLD I (d. 1040). King of England, known as 'Harefoot'. The illegitimate son of Canute, he claimed the throne on his father's death in 1035, and in 1037 was elected king.

HAROLD II (c. 1022-66). King of England. The son of Earl Godwin, he was early appointed earl of E. Anglia. He succeeded his father in 1033 in the earldom of Wessex and became the most powerful man in England. Soon after 1063 William of Normandy tricked him into swearing to support his claim to the English throne. In Jan. 1066 H. was elected king by the Witan; William began to prepare an invasion

HAROLD II. Shipwrecked on the Norman coast, Harold had little option but to take an oath dictated by Duke William (left) which would assure his rival the English throne. Only later did he discover the sacredness of the relics in the caskets on which he had sworn.

Turkish until the outbreak of the War of Independence in 1821. British, French, and Russian intervention in 1827, which brought about the destruction of the Turkish fleet at Navarino, led to the establishment of Greek independence in 1829. Prince Otto of Bavaria was placed on the throne in 1832; his despotic rule provoked a revolution in 1843, which set up parliamentary government, and another in 1862, when he was deposed and replaced by Prince George of Denmark. Relations with Turkey were embittered by the Greeks' desire to recover Macedonia, Crete, and other Turkish territories with Greek populations; a war in 1897 ended in disaster, but the Balkan Wars (q.v.) of 1912–13 won for Greece most of the disputed areas.

In a period of internal conflict from 1914, two monarchs were deposed, and there was a republic 1923–35, when a military coup restored George II (q.v.), who estab. in the following year a dictatorship under Metaxas.

An Italian invasion in 1940 was successfully resisted, but a German *blitzkrieg* in 1941 overwhelmed the Greeks, despite British assistance. On the German withdrawal in 1944, British troops occupied the country and assisted the royalists against the left-wing groups in the civil war which had broken out. A plebiscite in 1946 led to the return of George II, succeeded on his death in 1947 by his brother Paul. The Cyprus dispute (q.v.) and economic problems meant that Constantine XII succeeded to a troubled situation in 1964. In 1967 a bloodless army coup led to the formation of a National Govt., and the eventual flight of the King, after failing in a counter-coup. A regent (Gen. Zoiakis) was appointed, and a new constitution was approved by referendum under martial law in 1968, which curtailed civil liberties.

GREEK LANGUAGE. A member of the Indo-European family of languages. Of the ancient Gk. dialects, the Attic form of Ionic had won the supremacy over the other dialects (Aeolic, Arcadian, Doric) by the 4th cent. B.C. and a common tongue, based on Attic, spread to the colonies, to Mesopotamia, Syria, Egypt, etc. Modern Gk. uses the ancient Gk. alphabet, but the language has undergone decisive changes in phonetics and grammar. There is a 'purist' movement which aims at a return to the classical standard, but the vigorous and freely developed 'popular' language of everyday speech holds the field in poetry and fiction.

GREEK LITERATURE. Ancient. The three greatest names of early G.L. are those of Homer (fl. c. 950 B.C.), author of the epic *Iliad* and *Odyssey*; Hesiod (fl. 800 B.C.), whose *Works and Days* deals with agricultural life; and the lyric poet Pindar (b. 522 B.C.). Prose came to perfection with the historians Herodotus (b. 485 B.C.) and Thucydides (460–400 B.C.). The 5th cent. also saw the development of the Athenian drama through the works of the tragic dramatists Aeschylus (b. 524 B.C.), Sophocles (b. 495 B.C.), and Euripides (480–406 B.C.), and the comic genius of Aristophanes (c. 445–385 B.C.). After the fall of Athens came a period of

SOPHOCLES. An imaginary portrait of the Hellenistic period in the B.M.

prose with the historian Xenophon (434–355 B.C.), the idealist philosopher Plato (b. 427 B.C.), the orators Isocrates (436–338 B.C.) and Demosthenes (c. 383–322 B.C.), and the scientific teacher Aristotle (b. 384 B.C.). After 323 B.C. Athens lost her political importance, but was still a university town with teachers such as Epicurus (341–270 B.C.), Zeno, and Theophrastus.

STRATIS MYRIVILIS
Portrait by Paul Bret, 1938.

and the comic dramatist Menander (342–291 B.C.). Meanwhile Alexandria was becoming the centre of Greek culture: the court of Philadelphus was graced by scientists such as Euclid, and the poets Callimachus, Apollonius, and Theocritus. During the 2nd cent. B.C. Rome became the new centre for G.L., and Polybius, the historian, spent most of his life there; in the 1st cent. B.C. Rome also sheltered the poets Archias, Antipater of Sidon, Philodemus the Epicurean, and Meleager of Gadara, who compiled the first *Greek Anthology*. In the 1st cent. A.D. Latin writers overshadowed the Greek, but there are still the geographer Strabo (63 B.C.–A.D. 21), the critic Dionysius of Halicarnassus (fl. 10 B.C.), the Jewish writers Philo Judaeus and Josephus, the N.T. writers, and the biographer Plutarch (A.D. 45–125). A revival came in the 2nd cent. with Lucian (A.D. 125–95). To the 3rd cent. belong the historians Cassius Dio and Herodian, the Christian fathers Clement and Origen, and the neo-Platonists. For Medieval G.L., see **BYZANTINE LITERATURE**.

Modern. After the fall of Constantinople, the Byzantine tradition was perpetuated in the classical Gk. writing of e.g. the 15th cent. chronicles of Cyprus, various historical works in the 16th and 17th cents., and educational and theological works in the 18th cent. The 17th and 18th cents. saw much controversy over the various merits of the Gk. vernacular ('demotic'), the classical language ('katharevousa'), and the language of the Church, as a literary medium. Adamantios Korais (1748–1833), the first great modern, produced a compromise language, and was followed by the prose and drama writer, and poet, Alexandros Rhangavis ('Rangabe') (1810–92), and many others. The 10th cent. epic of *Digenis Akritas* is usually considered to mark the beginnings of modern Gk. vernacular literature, and the demotic was kept alive in the flourishing Cretan lit. of the 16th and 17th cents., in numerous popular songs, and in the Klephtic ballads of the 18th cent. With independence in the 19th cent. the popular movement became prominent with the Ionian poet Dionysios Solomos (1798–1857), Andreas Kalvos (1796–1869), and others, and later with Iannis Psichari (1854–1929), short-story writer and dramatist, and the prose writer Alexandros Papadiamandis (1851–1911), who influenced many younger writers, e.g. Konstantinos Hatzopoulos (1868–1921), poet and essayist. After the 1920s, the novel began to emerge with Stratis Myrivilis (q.v.) and others. Truly national drama in the demotic, apart from that in 17th cent. Crete, only appeared in the late 19th and early 20th cents., with Iannis Kambissis (1872–1902), Spyros Melas (1880–), and Gregorios Xenopoulos (1867–1951). Vernacular poetry, esp. the lyric, flourished in the 20th cent., espec. in the group incl. the popular poet Georgios Drosinis (1859–1951), and Kostis Palamas (1859–1943), poet and prose writer, Angelos Sikelianos (1884–1951), and Georgios Seferis (q.v.); the modern generation of poets incl. Odysseus Elytis (1912–). Other notable 20th cent. writers are Nikos Kazantzakis (1883–1957), and Konstantinos Kavafis (1868–1933).

GREELEY, Horace (1811–72). American journalist. B. in New Hampshire, he became founder and editor of the *New York Tribune* (1841), helped to found the Republican Party, supported Lincoln, and advocated a vigorous conduct of the Civil War.

GREEN, John Richard (1837–83). English historian

HARRISON, William (1773–1841). 9th Pres. of the U.S.A. B. in Virginia, he entered the army, became gov. of the newly formed Indiana Territory, and was elected Pres. in 1840, but d. a month after taking office. His grandson, **Benjamin H.** (1833–1901), a Republican, served as 23rd Pres. of the U.S.A. from 1889 to 1893.

HARRISSON, Tom (1911–). British biologist and sociologist. He took part in various scientific expeditions, living for a year among the cannibal mountain tribes of Malekula, New Hebrides, and in 1937 he founded with Charles Madge (1912–) Mass Observation, a statistical study of the British.

HARROGATE. English town (bor.) and spa in the W. Riding of Yorks, 14 m. N. of Leeds. H. is a tourist resort and holiday centre. Pop. (1961) 56,332.

HARROW. Bor. of Greater London, England. The parish church was founded by Lanfranc in the 11th cent. H. school was founded by John Lyon in 1571, and opened in 1611; it became a leading public school during the 18th cent.; among its former scholars are Byron, Sheridan, Peel, Palmerston, and Sir Winston Churchill. Pop. (1967) 208,200.

HARSCH, Joseph Close (1905–). American journalist. He worked with the N.B.C. 1953–67, and then became commentator for the American Broadcasting Company. His incisive interpretation of events has also earned him a reputation in Britain, where he received part of his education at Cambridge.

HART, Basil Henry Liddell. See **LIDDELL-HART**.

HART, Judith (1924–). British Labour politician and sociologist. She became M.P. for Lanark 1959, was Min. of Social Security 1967–8, and then became Paymaster-General with Cabinet rank, her assignment incl. decentralization of govt. and devolution of powers to Scotland and Wales.

HARTE, Francis Bret (1839–1902). American author. B. in Albany, N.Y., he became a gold-miner in California at the age of 18. While secretary of the California Mint (1864–70) he founded the *Overland Monthly* (1868), in which he pub. short stories of the pioneer West, e.g. 'The Luck of Roaring Camp', and poems, e.g. the 'Heathen Chinese'. In 1878 he entered the consular service, and after his retirement in 1885 settled in England, where he d.

HARTEBEEST. Name given to various species of African antelope, particularly the Caama (*Bubalis caama*). It is a brownish-red, and about 4 ft. high.

HARTFORD. Capital of Connecticut, U.S.A., on Connecticut r. It is a centre of the insurance business and of various manufactures, e.g. aircraft engines, typewriters and tools. Pop. (1960) 162,178.

HARTLEPOOL (hart'li-). English port (bor.) on the N. side of H. Bay, Durham. The old town, dating from 640, is built on a promontory. H.'s industries include shipbuilding and engineering, and fishing. Pop. (1961) 17,674.

WEST HARTLEPOOL is a seaport (co. bor.) which developed with the development of the Durham coalfield. It lies S.W. of Hartlepool and has shipbuilding yards, paper factories, breweries, etc. Pop. (1961) 77,073. Called the Hartlepoons, H. and W. H. together form a bor. constituency.

HARTMANN, Karl Robert Eduard von (1842–1906). German philosopher. His *Philosophy of the Unconscious* (1897) derived its pessimistic idealism from Hegel and Schopenhauer; and in it he maintains that the unconscious, composed of will and reason, is the absolute of existence.

HARTMANN, Nicolai (1882–1950). German philosopher, noted for his *Ethics* (1925) and his exposition of essentially insoluble metaphysical problems, e.g. free will, regarded as implied in any system of morality.

HARTY, Sir Hamilton (1880–1941). Irish conductor and composer. He settled in London in 1900 as an accompanist and, later, as a conductor, becoming conductor to the Hallé Orchestra, Manchester, 1920–33. His works include the tone poem 'With the Wild

Geese'; 'Irish Symphony'; and the choral work 'The Mystic Trumpeter' (Whitman).

HARUNAL-RASHID (ha-roon'ahl-rah'shēd) (763–809). Caliph of Baghdad. B. near Teheran, he succeeded his brother in 786, and was a lavish patron of music, poetry, and letters.

HARVARD. Senior univ. and oldest educational institution in the U.S.A., founded in 1636 at New Towne (later Cambridge), Mass., and named after John Harvard (1607–38), who bequeathed half his estate (valued at £799 17s. 2d.) and his library to it.

HARVEST-BUG or **Harvest-mite**. Scarlet or rusty brown mites belonging to the Trombididae family of the Acari order of the Arachnida. Common in summer and autumn, they are parasitic, and their bites are intensely irritating to humans.

HARVESTMEN. An order (Opiliones) of the Arachnida; found in late summer and early autumn, they may be distinguished from true spiders by the absence of a waist or constriction in the oval body. They are carnivorous, and are found from the Arctic to the tropics; the long-legged H. (*Phalangium*) is often found in Britain.

HARVEY, William (1578–1657). English physician who discovered the circulation of blood. In 1609 he became physician to St. Bartholomew's hospital in London, and in 1615 lecturer at the College of Physicians. His theory of circulation was pub. in 1628. He was physician to James I and Charles I. and was in attendance on the latter at the battle of Edgehill.

HARWELL. Main research establishment of the United Kingdom Atomic Energy Authority (q.v.), close to the village of H. in Berkshire, after which it is often called. It has many reactors, chemical and metallurgical laboratories, workshops and the reactor school. The main objectives are basic research, provision of technological information to produce isotopes, and investigation of the possibilities of nuclear energy as a source of power.

HARWICH (ha'rij). English seaport (bor.) on the Essex coast, occupying a peninsula at the E. end of the Stour and Orwell estuary. Ferry services run to ports in the Netherlands, Belgium, and Denmark. Pop. (1961) 13,569.

HA'SDRUBAL (d. 207 B.C.). Carthaginian general, the brother of Hannibal (q.v.). He remained in command in Spain in 218 when Hannibal invaded Italy, and, after fighting there against the Scipios until 208, marched to Hannibal's relief. He was defeated and killed on the Metaurus.

HASEK (ha'sek), **Jaroslav** (1883–1923). Czech writer. B. in Prague, he became a bank clerk, and in 1909 the facetious editor of the entirely serious journal *The Animal World*. In 1915 he was called up, deserted to the Russians at the battle of Chorupan, later fighting in the Czech legion and eventually joining the Bolsheviks. His comic masterpiece is the unfinished *The Good Soldier Schweik*, based on his earlier experiences, which was condemned by authority as detrimental to discipline.

HASHISH. See **HEMP**.

HASKELL, Arnold Lionel (1903–). British balletomane, joint founder in 1930 with Philip Richardson of the Camargo Society. His books incl. *Ballet*.

HASLEMERE. English town (U.D.) in Surrey, between Blackdown (918 ft.) and Hindhead (854 ft.), two barren heaths. The Dolmetsch family, musicians and instrument-makers, estab. their workshops at H. and have held an annual music festival from 1925. Pop. (1961) 12,528.

HA'SSALL, John (1868–1948). British artist. B. at Deal, he farmed in Manitoba, studied art at Antwerp and Paris, and in London became the 'king of poster artists', e.g. the 'So bracing' poster of Skegness.

The author **Christopher V. H.** (1912–63) and **Joan H.** (1906–), the wood engraver, are his son and dau.

HASSAN II (1930–). King of Morocco, 17th

HAWAII. Waikiki beach with Diamond Head in the background. Pan American photograph.

occupying a peninsula W. of the excellent harbour. Ancient buildings incl. the palace of the Spanish governors, and the stronghold of La Fuerza (1583). H. was founded on the S. coast in 1515, transferred to present site 1519. The Univ. of H. was founded in 1728. In 1898 the blowing up of the U.S. battleship *Maine* in the harbour precipitated the Spanish-American war. Chief manufactures are cigars and tobacco. Pop. (1960) 787,765.

HAVANT. English town of pre-Roman origin in Hants, 1 m. N. of Hayling Is. With Waterloo it forms an U.D. Pop. (1961) 74,564.

HA'VELOCK, Sir Henry (1795–1857). British soldier. He saw service in Burma 1824–6 and in the Afghan War of 1839. On the outbreak of the Indian Mutiny in 1857 he was engaged in Persia, but returning to India he retook Cawnpore and relieved Lucknow, but d. of dysentery soon after.

HAVERFORDWEST. Co. town (bor.) of Pembrokeshire, 7 m. N.N.E. of Milford Haven, Wales, founded by Flemings in the 12th cent. Pop. (1961) 8,872.

HAVERGAL, Frances Ridley (1836–79). British hymn-writer. B. in Worces, dau. of the composer the Rev. William Henry H. (1793–1870). She pub. *Ministry of Song* (1870) and many other vols.

HAVRE (ahvr), Le. French port on the N. bank of the Seine estuary in the dept. of Seine-Maritime. During the S.W.W. it was taken by the Germans 14 June 1940; retaken by the Allies 12 Sept. 1944. By 1957 it had been reconstructed. Noted for its docks and shipbuilding yards, H. has regular sea communications with British ports. Pop. (1962) 184,133.

HAWAII (hawi-i). 50th state of the U.S.A. It consists of a chain of islands in the N. Pacific of which the chief are H., Maui, Oahu, Kauai, Molokai, Lanai, Niihau, and Kahoolawa. They are volcanic, and H. itself contains Mauna Kea (13,784 ft.), one of the world's highest island mountains, and Mauna Loa (13,680 ft.), the world's largest active crater. Lake Waiau on Mauna Kea is the highest lake in the U.S.A. (13,020 ft.), and Ka Lae (South Cape) on H. is the southernmost point of the U.S.A. In Oahu are the cap., Honolulu, and the naval base Pearl Harbor, the Japanese attack on which, 7 Dec. 1941, brought the U.S.A. into the S.W.W. The climate is tropical and the flora rich and varied. The chief products are sugar and pineapples. The chief industry is tourism, but fishing, handicrafts, etc., are carried on.

Capt. Cook landed in the islands (which he named Sandwich Islands) in 1778, but navigators from Europe are thought to have visited them in the 16th cent. The original population, estimated at 300,000 in

1778, was Polynesian; the number of people with aboriginal blood was about 105,000 in 1960, including those (the majority) of only partly Hawaiian ancestry. After 1852 immigration was encouraged, and the population is now heterogeneous, Japanese blood predominating. H. was a kingdom until 1893, became a rep. 1894, which ceded itself to the U.S.A. in 1898 and was admitted to the Union in 1959. Area 6,439 sq. m.; pop. (1960) 632,772.

HAWARDEN (har'den). Town 6 m. W.S.W. of Chester, on a tributary of the Dee, Flintshire, N. Wales. For many years H. Castle (1752) was the home of W. E. Gladstone. St. Deiniol's theological library, founded by Gladstone, is at H. Pop. (est.) 8,000.

HAWFINCH (*Coccothraustes coccothraustes*). Bird of the family Fringillidae of the order Passeriformes. Its plumage is brown and grey with a steel-blue patch on the wing and a white-tipped tail. It is found throughout central and S. Europe and Asia Minor, and in Britain.

HAW-HAW, Lord. See JOYCE, WILLIAM.

HAWICK. Burgh in Roxburgh, Scotland, on the r. Teviot, 10 m. S.W. of Jedburgh. It makes woollens. Pop. (1961) 16,204.

HAWK. Name of various birds of prey in the family Falconidae, excluding eagles and vultures. They have an untoothed bill and short wings.

HAWKE, Edward, 1st baron (1705–81). British admiral. In 1759 he destroyed in Quiberon Bay the French fleet which had been intended to cover an invasion of Britain. He was 1st Lord of the Admiralty 1766–71, and in 1776 was created a baron.

HAWKER, Robert Stephen (1803–75). British poet. B. in Devon, he became vicar of Morwenstow, Cornwall, in 1834, and introduced the harvest festival now generally adopted. His *Cornish Ballads* (1869) contains the 'Song of the Western Men'.

HAWKES, Jacquetta (1910–). British author. Dau. of Sir F. G. Hopkins (q.v.), she m. in 1933 Prof. Christopher H., with whom she collaborated in *Prehistoric Britain* (1944), and is a keen anthropologist and archaeologist. Following the dissolution of this marriage, she became the wife of J. B. Priestley (q.v.) in 1953, with whom she has also collaborated.

HAWKINS, Sir Anthony Hope. See HOPE, A.

HAWKINS, Henry, baron Brampton (1817–1907).

HAWK. At rest, but still alert, a pair of N. American red-tailed hawks (*Buteo borealis*), so known because of their rich-brown unbarred tails, visible even at a great distance as they wheel in flight. Photo: G. Ronald Austing.

a British subject in 1938, and was prof. of social and moral science at the Univ. of Chicago 1950–62. His *The Road to Serfdom* (1944) was a critical study of socialistic trends in Britain.

HAYES, Evelyn. Pseudonym of the New Zealand poet Mary Ursula Bethell (1874–1945). Though b. in England, she went out to N.Z. while still a child and pub. 3 vols. of verse *From a Garden in the Antipodes* (1929) and *Day and Night* (1939).

HAYES, Helen (1900–). American actress. Her stage successes include *Mary of Scotland*, *Victoria Regina*, and Harriet Beecher Stowe in *Harriet* (1943–5); her films incl. *Farewell to Arms* and *Anastasia*.

HAYES, Rutherford Birchard (1822–93). 19th President of the U.S.A. B. in Ohio, he was a major-general in the Civil War and prominent Republican politician. During his presidency (1877–81), the army of occupation was withdrawn from the southern states and the Civil Service reformed.

HAY-FEVER. An acute watery catarrh produced by pollen, etc., in the specially sensitive. As in asthma, nettle-rash and other allergic diseases, large quantities of fluid are released from the blood at the place where the foreign protein (in this case the pollen) enters. Remedies are detection and avoidance of the offending pollen, antiseptic sprays, zinc ionization, ephehrine, and desensitization by vaccine.

HAZEL. Popular name for shrubs or trees of the *Corylus* genus, Betulaceae family, also called filbert (the official U.S. name) and cobnut. The nuts are enclosed by a husk.

HAZLITT, William (1778–1830). British writer. B. at Maidstone, son of a Unitarian minister, he himself thought of entering the ministry and dabbled in portrait painting, but ultimately settled to writing in which he had been encouraged by Coleridge. Going to London in 1812 he worked for the daily press and magazines, incl. the *Edinburgh Review*, writing from the liberal viewpoint. He was a superb controversialist, with a unique, clear, hard-hitting prose style which served him equally well in his critical essays: *Characters of Shakespeare's Plays* (1817–18), *Lectures on the English Poets* (1818–19), *English Comic Writers* (1819) and *Dramatic Literature of the Age of Elizabeth* (1820). Other notable works are his *Table Talk* (1821–2); *The Spirit of the Age* (1825), perceptive appreciations of his contemporaries; and the curious *Liber Amoris* (1823) record of his infatuation with the dau. of a tailor with whom he lodged. The latter affair was sandwiched between his 2 marriages: 1st to a friend of Mary Lamb in 1808 (divorce 1822) and 2nd to a widow in 1824, who left him on the return from their honeymoon trip to Italy. His invective, scathing irony and gift for epigram were symptomatic of a temperament which, though sincere, was ill-fitted to cope with ordinary people and ordinary life.

HEADACHE. Discomfort in the head. It is due to irritation of different nerves by a variety of possible agents. The cause may be quite trivial; otherwise anxiety causes a more constant headache, migraine, severe periodical one-sided attacks. Other causes are disease of the sinuses, rheumatism, irritation of the brain linings (meninges), injury, tumour of the brain, kidney disease, hardening of the arteries, malaria, gout, diabetes, poisoning by alcohol, lead, etc., eye trouble, heart disease, digestive disorder, etc.

HEALEY, Denis (1917–). British Labour politician. He was sec. of the International Dept. of the Labour Party from 1946 until he entered Parliament in 1952, and in 1964 succeeded Thorneycroft as Min. for Defence. He was in charge of the reduction of British forces under the policy of concentration on Europe and withdrawal E. of Suez.

HEALTH INSURANCE. See INSURANCE.

HEALY, Timothy Michael (1855–1931). Irish

nationalist. B. at Bantry, he entered parliament in 1880, and after 1890 became prominent as an opponent of Parnell: He was first Gov. Gen. of the Irish Free State, 1922–7.

HEARD, (Henry Fitz) Gerald (1889–). British author. He began his career as a journalist, frequently broadcast 1930–4, and later settled in California. His books incl. *The Social Substance of Religion*, *Emergence of Man*, and *Science in the Making*; in writings such as *Desert Dialogue* he preached a mystical creed of oriental origin.

HEARD, William Theodore (1884–). British cardinal. Ordained 1918 he worked in Bermondsey, London, 1921–7 when he became auditor of the Sacred Rota (dean 1958) in Rome. In 1959 H. became the first Scottish cardinal for nearly 150 years.

HEARD and McDONALD ISLANDS. Group of is. in the southern Indian Ocean, c. 2,500 m. S.W. of Fremantle, discovered 1833, annexed by Britain 1910 and transferred to Australia 1947. Heard Is. (c. 26 m. by 12 m.) is glacier-covered, although the volcanic mtn. Big Ben (9,000 ft.) is still active: there is a weather station (1947). Shag Is. is 5 m. to the N. and the craggy McDonalds are 26 m. to the W.

HEARING AIDS AND CORRECTORS (Electrical). Devices for increasing the sound pressure over that normally received by the ear. They consist of a complete reproducing system of microphone, amplifier and loudspeaker. With the development of transistors, miniature components, and batteries, these can now be made very small and cordless. They may be worn in the ear, under the hair or incorporated in spectacles, hairslides, earrings, etc. There are 2 main types, in which either the receiver fits directly into the outer cavity of the ear and actuates the ear-drum by air conduction, or it fits behind the ear and transmits sound vibrations through the mastoid bone.

HEARN, Lafcadio (1850–1904). British-Japanese writer. Son of an Irish regimental surgeon and a Greek, he was b. in the Ionian Is. After working in the U.S. as a newspaperman, he settled in Japan, lectured at the Imperial Univ., Tokyo, 1896–1903, m. a Japanese and became a Japanese subject. He pub. *Glimpses of Unfamiliar Japan* (1904).

HEARST, William Randolph (1863–1951). American newspaper proprietor, celebrated for his introduction of banner headlines, lavish illustration, and the sensational approach known as 'yellow journalism'. A campaigner in numerous controversies, and a strong isolationist, he is the reputed original of *Citizen Kane* (see WELLES, ORSON). He collected art treasures, antiques, and castles – one of which, San Simeon in California, is a state museum.

EDWARD HEATH
Photo: Vivienne

HEART. The muscular organ which supplies blood to all parts of the body. Hollow and pear-shaped, it contains two pairs of chambers divided by a vertical muscular wall. The upper pair, the auricles, are smaller and communicate through valves with the lower and larger pair, the ventricles. When the heart beats its muscle contracts strongly (systole) and the following actions occur. The auricles feed blood to the ventricles, which contract an instant later, and the left ventricle pumps blood into the aorta – the main artery through which the whole of the body except the lungs is supplied. The heart muscle itself is supplied with blood through the coronary arteries, leading from the aorta. Valves prevent the

and women over 18; optional for the illiterate (more than 70 per cent). There is extreme political instability, and from 1960 right and left-wing guerrillas were in competition. Political assassination, e.g. the U.S. ambassador 1968, is commonplace.

GUAYAQUIL. The Malecón 'Simón Bolívar', a broad boulevard extending along the Guayas River.
Courtesy of the Ecuador Govt.

GUAYAQUIL (gwi-ahkē'). City and chief port of Ecuador nr. the mouth of the Guayas. Pop. (1966) 680,000.

GUBEN (gōō'ben). Town in Polish-administered Germany, 28 m. S. of Frankfurt-an-der-Oder. Pop. (est.) 45,000.

GUDGEON (guj'en). Freshwater cyprinid fish (*Gobio gobio*) found in Europe and N. Asia on the gravel bottoms of streams. Olive-brown, spotted with black and attaining c. 8 in., it has a distinctive barbel at each side of the mouth.

GUELDER ROSE or Gelder Rose. Flowering shrub (*Viburnum opulus*) of the Caprifoliaceae (honeysuckle) family. The wild variety bears its flowers in a head, followed by a cluster of blackish-red berries. The flowers of the garden shrub are enlarged and grouped into a heavy globular head.

GUELTERS. See GILDERLAND.

GUELPH (gwelf). River port of Ontario, Canada, 43 m. W.S.W. of Toronto. It is an agricultural centre, exporting fruit, grain, and livestock, with textile, furniture, soap, etc., factories. Pop. (1966) 51,377.

GUELPHS AND Ghibellines (gib-). Names of rival parties, originally in 12th cent. Germany, and later in medieval Italy. They were the partisans of the rival German houses of Welf, dukes of Bavaria and later of Saxony, and of the lords of Hohenstaufen and Waiblingen, who struggled for the imperial crown after the death of Henry VI in 1197, until the Hohenstaufen died out in 1268. In Italy, the papalists were known as Guelphs and the imperialists as Ghibellines.

GUERNICA (gerne'ka). Spanish town, in Biscay prov. Under its famous oak the Castilian kings formerly swore to respect the rights of the Basques. G. was destroyed in 1937 by German bombers fighting for Franco, an event which inspired a famous painting by Picasso. Rebuilding was completed in 1946. Pop. (1965) 7,000.

GUERNSEY (gern'zi). One of the Channel Islands, second in area to Jersey. The island specializes in the cultivation of grapes and tomatoes under glass, and also produces flowers and vegetables, as well as its own breed of cattle. G., which has belonged to the English Crown since 1066, was occupied by German forces 1940-5. Pop. (1961) 45,028; area 25 sq. m. St. Peter Port is the cap. and chief harbour, there is an airport at La Villazee.

GUEVARA (gevah'rah). Ernesto 'Che' (1928-67). Argentine revolutionary. B. in the Argentine, he was trained as a doctor, but in 1953 left the country because of his opposition to Peron. In effecting the Cuban revolution of 1959, he was second only to Castro and his brother, but in 1965 moved on to fight against white mercenaries in the Congo, and then to Bolivia, where he was killed in an unsuccessful attempt to lead a peasant rising. His revolutionary technique using minimum resources has been influential, but his orthodox Marxism has been obscured by romanticising disciples.

GUIANA (gē-ah'nah). See FRENCH G., GUYANA, and SURINAM.

GUIDO. See RENI.

GUIENNE (gē-en'). Old prov. of S.W. France that formed with Gascony the duchy of Aquitaine. Its cap. was Bordeaux. It became English in 1154 and passed to France in 1451.

GUILDFORD (gil'ford). Historic co. town (bor.) of Surrey, England, on the river Wey, where it cuts through the N. Downs, to the E. of the Hog's Back, 29 m. S.W. of London. It has 16th and 17th cent. buildings, and ruins of a Norman castle. The cathedral, started in 1936, was consecrated in 1961: grouped below are the buildings of the Univ. of Surrey (1966), specializing in technology. Yvonne Arnaud (1895-1958), the sophisticated comedy actress, was b. in G. and a theatre (1964) is named after her. There is a cattle market and industries include flour-milling. Pop. (1961) 53,977.

GUILDS, or Gilds. Medieval associations, particularly of craftsmen or merchants, formed for mutual aid and protection and the pursuit of a common purpose, religious or economic. Gs. fulfilling charitable or religious functions, such as the maintenance of schools, roads, or bridges, the assistance of members in misfortune, or the provision of masses for the souls of dead members, flourished in England from the 9th cent. down to 1547, when they were suppressed.

The earliest form of economic G., the *G. Merchant*, arose in the 11th-12th cents.; this was an organization of the traders of a town, who had been granted by charter a practical monopoly of its trade. As the merchants often strove to exclude craftsmen from the G., and to monopolize control of local government, the *Craft Gs.* came into existence in the 12th-13th cents. These, which included journeymen and apprentices as well as employers, regulated prices, wages, working conditions and apprenticeship, prevented unfair practices, and maintained high standards of craftsmanship; they also fulfilled many social, religious and charitable functions. By the 14th cent. they had taken control of local government, ousting the *G. Merchant*.

After the 16th cent. the position of the Gs. was undermined by the growth of the domestic system, which removed industry into the country where G. regulations had no force, and of the factory system.

GUILLEMOT (gil'emot). Diving sea-fowl of the auk family, which breeds in large numbers on the rocky N. Atlantic coasts. The common G. (*Uria aalae*) has a sharp bill and short tail, and sooty-brown and white plumage. Gs. build no nest, but lay one large, almost conical, egg on the rock.

GUILLEN (gē'en'). Jorge (1893-). Spanish poet, who has lived in the U.S.A. since 1938 as a teacher of Spanish. His single vol. of verse was *Cántico* (1928) progressively enlarged to 1950.

GUILLOTINE (gilōtē'n). A beheading instrument, introduced in France during the Revolution, and named after Joseph Ignace Guillotin (1734-1814), a physician, who in 1789 advocated the adoption of such a machine; it was first used 25 April 1792. It consists of an oblique-edged knife which falls between two grooved posts on to the victim's neck. It is still used in France and other countries.

HEBRIDES. The scattered houses of Digg Village in the north of the Isle of Skye. In the background is Quiraing, rising to 1,779 ft. Photo: George Outram & Co. Ltd.

Zionism gave it great impetus, and it is the national language of Israel.

HEBRIDES. Group of over 500 islands off the W. coast of Scotland. They are divided into the *Inner H.*, including Skye, Mull, Jura, and Islay, and the *Outer H.* (separated from Inner H. by the Little Minch) incl. Lewis-with-Harris and N. and S. Uist. They are administratively divided between the cos. of Inverness, Argyll, and Ross and Cromarty. Fewer than 100 of the H. are inhabited. The principal industries are cattle and sheep raising, distilling, and the production of Harris Tweed. Measures to stem depopulation incl. a fisheries scheme for Lewis-with-Harris, and the estab. of the main site for testing British guided missiles at Geirnish on S. Uist. The H. were settled by Scandinavians in the 6th–9th cents., and passed under Norwegian rule from c. 890 till 1266. Area c. 2,800 sq. m. Pop. (1961) 48,113.

HEBRON. City of Jordan, 20 m. S.S.W. of Jerusalem. The traditional sites of the tombs of Abraham, Isaac, Jacob, and their wives are shown within the mosque. Pop. (1966) 43,000.

HEB-SED. Festival celebrated by the kings of ancient Egypt, apparently commemorating Menes' union of Upper and Lower Egypt.

HE'CATE. Greek goddess of witchcraft and magic, sometimes identified with Artemis and the moon.

HE'CATOMB. Originally the sacrifice of 100 oxen (Gk. *hekatōn* 100), but later any large sacrifice by the Greeks and Romans.

HE'CTARE. Unit of area in the metric system (Gk. *hekatōn* 100) equalling 100 ares or 10,000 sq. metres or 2.471 acres. Trafalgar Square was laid out as one H., the only square in London conforming to metric.

HECTOR. Legendary Trojan prince, the son of Priam, who during the siege of Troy was the foremost warrior on the Trojan side until he was killed by Achilles.

HE'CUBA. Legendary Trojan queen, the wife of Priam and mother of Hector and Paris. After the fall of Troy she was carried off by the Greeks.

HEDGEHOG. Mammal (*Erinaceus europaeus*) common in Europe, western Asia, Africa, and India. The body is about 10 in. long and the tail 1½ in. It is speckled-brown in colour, has a pig-like snout, and is covered with sharp spines. When alarmed it can roll the body into a ball.

HEDGE SPARROW. European bird (*Prunella modularis*) similar in size and colouring to the sparrow, but with slate-grey head and breast, and more slender bill. It nests in bushes and hedges.

HEDIN (hedén'), Sven Anders (1865–1952). Swedish explorer. B. in Stockholm, he travelled through Persia and Mesopotamia in 1885–6, and conducted three expeditions during 1893–1908 to Central Asia and Tibet, during which he explored the sources of the Brahmaputra and Sutlej and made many valuable geographical and geological discoveries. His books incl. *Through Asia* (1898); *Transhimalaya* (1909–12); and *Southern Tibet* (1917–22).

HE'DONISM (Gk. *hēdonē*, pleasure). The ethical theory that pleasure or happiness is, or should be, the chief end of life. Hedonist sects in Greece were the Cyrenaics, who held that the sentient pleasure of the moment is man's only good, and the Epicureans, who advocated the pursuit of pleasure under the direction of reason. Modern hedonistic philosophies, such as those of Bentham and Mill, regard the happiness of society as the aim, and not that of the single individual.

HEEM (hām), Jan Davidsz van (1600–83/4). Dutch painter. He worked in Utrecht, his birthplace, and at Leyden, where he was influenced by Rembrandt. He was a master of still-life, and formed its tradition. His son Cornelius (fl. 1658–71) was a flower painter.

HEE'NAN, John Carmel (1905–). R.C. abp. of Westminster. B. at Ilford, Essex, he was ordained in 1930 and spent 17 years in London's East End, becoming superior of the Catholic Missionary Soc. in 1947. He became bishop of Leeds in 1951 and succeeded Godfrey as abp. of Liverpool (1957) and Westminster (1963). Created cardinal 1965.

HEGEL (heh'gel), Georg Wilhelm Friedrich (1770–1831). German philosopher. B. at Stuttgart, he lectured at Jena and Nuremberg, and was prof. of philosophy at Heidelberg 1817–18, and at Berlin 1818–31. His writings incl. *The Phenomenology of Spirit*, *Logic*, *Encyclopaedia of the Philosophical Sciences* (1817), and *Philosophy of Right*. His German disciples split into 'Right Hegelians', who like H. himself championed religion, the Prussian State and the existing order, and 'Left Hegelians', among them Marx, who used H.'s dialectic to show the inevitability of radical change and criticized both religion and society.

H. conceived of consciousness and the external object as forming a unity, in which neither factor can exist independently. Mind and nature are two abstractions of one indivisible whole. Thus the world is the unfolding and expression of one all-embracing absolute idea, an organism constantly developing by its own internal necessity so as to become the gradual embodiment of reason. The laws of thinking are in principle the laws of reality, e.g. logic must reflect the contradictions within nature, whereby everything not only is something, but is striving to become something else. The whole of history is realization of the Absolute through phases of culture, each of which is embodied in a great nation. Each system by its own development brings about its opposite (antithesis), and finally a higher synthesis unifies and embodies both.

HE'GIRA or **HEJIRA** (Arabic, 'flight'). Name given to the Mohammedan era. The word denotes the escape of Mohammed from Mecca to Medina on 16 July, A.D. 622, the date when the era begins. The Mohammedan year is indicated by the letters A.H. *anno hegirae* (Latin, in the year of the H.).

HEIDEGGER (hi'deger), Martin (1889–). German philosopher. A student of Husserl, he pub. his influential *Sein und Zeit* (*Being and Time*) in 1927, but his arguments tend to be illogical. Often regarded as the chief exponent of existentialism, he denies ever having been an existentialist.

HEIDELBERG (hid'el-). W. German town on the

GUNN, Sir James (1893–1964). British artist. A skilled interpreter of likenesses, he produced many royal portraits (see illus. pp. 124, 333, 468). He was knighted in 1963.

GUNPOWDER. Oldest known explosive, a mixture of sulphur, saltpetre, and charcoal. Though no longer used as a propellant, it is in wide use for blasting and fireworks.

GUNPOWDER PLOT. The Catholic conspiracy to blow up James I and his parliament on 5 November 1605. It was discovered through an anonymous letter sent to Lord Monteagle, and Guy Fawkes was found in the cellar beneath the House, ready to fire a store of combustibles. Several of the conspirators were slain, and Guy Fawkes and 7 others were executed. The searching of the vaults of parliament before the opening of each new session, however, was not instituted until the 'Popish Plot' of 1678.

GUNTHER, John (1901–). American journalist. Overseas correspondent for leading journals, covering events such as the London Blitz, he became famous for his vols. of reportage, e.g. *Inside Europe* (1936).

GUREV (gōō'yef). Port in Kazakh S.S.R., cap. of G. region, on the Ural r. near its mouth on the Caspian Sea. Founded in 1640, it has become an important petroleum-refining centre linked by pipeline with oil-fields to the E.N.E. on the Emba r. and with Orsk. Fishing and fish-curing are other industries. Pop. (est.) 70,000.

GURKHAS (goor'kahz). The ruling Hindu caste in Nepal. In the military sense soldiers recruited since 1815 from Nepal for service in British India and also overseas (e.g. in France in the F.W.W.) and officered only by British or Nepalese. After Indian independence in 1947 a depot was still maintained in Nepal for recruiting to the *Brigade of G.* in the British Army. Their bravery is legendary.

GURNARD. Genus of coastal fish (*Trigla*) in the family Triglidae, which creep along the sea bottom by means of 3 finger-like appendages detached from the pectoral fins. They are both tropic and temperate zone fish, half a dozen species being found in British waters, where they are trawled for food.

GUSTAVUS V (1858–1950). King of Sweden. Son of Oscar II, he m. Princess Victoria (1862–1930), dau. of the Grand Duke of Baden, in 1881, thus uniting the reigning Bernadotte dynasty with the former royal house of Vasa. He succeeded his father in 1907, and thus had one of the longest reigns in modern history. His son Gustavus VI (1882–) is an eminent archaeologist and expert on Chinese art. His first wife was Princess Margaret of Connaught (1882–1920), and in 1923 he m. Lady Louise Mountbatten (1889–1965), sister of Earl Mountbatten of Burma. His heir is his grandson, Crown Prince Carl Gustaf (1946–).

GUSTAVUS ADOLPHUS (1594–1632). King of Sweden. Son of Charles IX, whom he succeeded in 1611, he waged successful wars with Denmark, Russia, and Poland, and in the Thirty Years War became a champion of the Protestant cause. Landing in Germany in 1630, he defeated Wallenstein at Lützen on 6 Nov. 1632, but was killed in the battle. He was known as the 'Lion of the North'.

GUSTAVUS VASA (1496–1560). Son of a nobleman, he led the Swedish movement of independence against the Danes, and in 1523 was elected king of Sweden. Under him Lutheranism was established as the State religion.

GUTENBERG (goot'en-), Johann (c. 1400–68). German printer, considered the inventor of printing from metal movable types. B. at Mainz, he lived at Strasbourg, and about 1448 was in Mainz where, with Johann Fust as a partner, he carried on a printing business. The partnership was dissolved through monetary difficulties, but G. set up another printing press. He is believed to have printed the *Mazarin* and the *Bamberg Bible*. See COSTER, LAURENS JANZOOM.

GUTHRIE, Sir Tyrone (1900–). British man-of-the-theatre. Administrator of the Old Vic and Sadler's Wells 1939–45, he was associated with the founding of the Shakespeare Festival at Stratford, Ontario, in 1953, and is noted for such experiments as *Hamlet* in modern dress in 1936.

GUTTA-PERCHA. The coagulated juice of various tropical trees belonging to the Sapotaceae family. G.P. is similar to rubber, but is thermoplastic and when stretched will not spring back to its original shape. Its chief use is in insulating cables.

GUY, Thomas (1644–1724). British philanthropist. Son of a lighterman, he began business in 1668 as a bookseller in the City, dealing mostly in Bibles which he imported from Holland. He built and endowed G.'s Hospital, London, from his profits.

GUYANA (gē-ah'nah). Country of S. America between Surinam and Venezuela, formerly known as Brit. Guiana. Most of the crops (sugar, rice, coconuts, coffee and fruits) are grown in the low coastal region; gold, diamonds, and bauxite are worked in an intermediate area; and the hinterland is mountain and savannah. The chief rivers—Demerara, Essequibo, and Berbice—give their names to the 3 counties into which G. is divided; chief towns are Georgetown, the cap., New Amsterdam, Springlands, and Bartica. First settled about 1620 by the Dutch West Indian Co., G. was captured by the British 1796 (formally ceded 1814), and in 1966 became independent within the Commonwealth as Guyana. Area c. 83,000 sq. m. pop. (est. 1966) 674,680: 50% are East Indians brought in to run the sugar estates after abolition of slavery; some 30% Negroes concentrated in the towns; 5% Amerindians of the interior; and the rest Portuguese and of mixed blood. Under the constitution of 1966 there is a unicameral Nat. Assembly, elected by a system of proportional representation. Party divisions tend to be racial: the predominantly Negro *People's Nat. Congress* led by Forbes Burnham (P.M. from 1966; re-elected 1968) and Indian *People's Progressive Party* (see JAGAN, CHEDDI).

GUYS (gēs), Constantin (1805–92). French artist. He was with Byron at Missolonghi and during the Crimean War sent sketches to the *Illustrated London News*. His delicately realistic drawings of Parisian life, ranging from high society to the street corner, were not fully appreciated until the mid-20th cent.

GWALIOR (gwah'lior). Indian city in Madhya Pradesh, 215 m. N. of Bhopal. It contains Jain and Hindu monuments and was formerly in the princely state of G. Pop. (1961) 300,513.

GWYN, Nell (Eleanor) (1651–87). English actress. As a girl she was an orange-seller at Drury Lane Theatre, but became an actress in 1665. Her dramatic gifts tended to low comedy, and Dryden was particularly appreciative of her talent, and wrote her suitable parts. She became the mistress of Charles II in 1669, and had 2 sons by him, the elder of whom was created duke of St. Albans in 1684. The relationship continued until Charles's death, and almost his last wish, made to the duke of York, was 'Let not poor Nellie starve'. She outlived Charles by 2 years only, and was buried at St. Martin-in-the-Fields, London. She was largely instrumental in the establishment of the Royal Hospital for old soldiers at Chelsea.

GYMNASTICS. Performance of physical exercises to promote health, so named from Gk. *gymnas*, 'naked', all ancient Greek athletics having been performed stripped and the *gymnasia* being schools for training competitors for public games. In the 19th cent. the cult was first revived since ancient times in Germany as an aid to military strength, and was also taken up by educationists incl. Froebel and Pestalozzi, becoming a recognised part of the school curriculum in the present century. International competition is governed by the rules of the *Fédération Internationale de Gymnastique* (1923) which organizes the Olympic G.

The Germans strongly fortified it, and used it as a naval base in both world wars. The fortifications were destroyed in 1947. Area 150 acres; pop. (est.) 3,000.

HELIOPOLIS. Chief centre of the worship of the sun-god Ra in ancient Egypt, near the modern village of Matariyah, c. 6 m. N.E. of Cairo: it appears in the Bible as On.

HELIOS. The Greek sun-god, who was thought to make his daily journey across the sky in a chariot.

HELIOTROPE. Genus of plants of the Boraginaceae family (*Heliotropium*), a few of which are found in Europe. The forked spikes of blue, lilac, or white flowers, and also the leaves, alter their position constantly so as to face the sun. The garden H. (*H. arborescens*) was introduced into Europe from Peru.

HELIUM (Gk. *helios*, the sun). Symbol He, at. wt. 4.003, at. no. 2. Evidence of its existence in the sun was first obtained by Janssen in 1868 from a line in the solar spectrum and Ramsay isolated it in 1895. H. is a colourless, odourless, inert, non-inflammable and very light gas. It is present in natural gases issuing from the earth in Kansas and other parts of N. America, in radioactive minerals and in small quantities in the atmosphere, and is obtained by compression and fractionation of the natural gas. When ionized, by losing its two electrons in a high electric field, H. becomes identified with the alpha-particles ejected by many natural and man-made isotopes. Because of its short de-ionization time it is used in thyratrons. H.-oxygen atmospheres are used in high-pressure breathing work, as required by divers. H. being less soluble than nitrogen in blood it does not give rise to the 'bends'. Liquid H. is very important in cryogenics (q.v.). It is of value in nuclear work on account of its very low cross-section for absorbing neutrons, and because it is a good heat-transfer medium.

HELL. In the Bible, the word is used to translate Hebrew and Greek words all meaning the place of departed spirits, the abode of the dead. In popular speech, however, H. is the place in which unrepentant sinners suffer the eternal torments of the damned. Vivid descriptions of the physical and spiritual pains of H. have been frequently given by theologians, but during the last century the tendency, save among Roman Catholics, has been to regard H. as a legendary conception, or at least as a state rather than a place. The idea of H. is also contained in Islam and most of the other great religions.

HELL. Tourist resort in Michigan (q.v.).

HELLEBORE. Plants of the genus *Helleborus*, Ranunculaceae family. The green H., or bear's-foot, flowers in early spring, and has pale yellowish-green flowers. Stinking H. produces a flower stem up to a foot tall, with drooping pale green flowers.

HELLEBORINE. Name applied to several British wild flowers, principally of the *Epipactis* genus of the Orchidaceae. Broad H. bears greenish-purple flowers. Marsh H. grows in moist places, producing pink or white flowers. The white H., red H., and narrow H. (with white flowers) belong to the genus *Cephalanthera*, and are less common in Britain.

HELLENES (hel'énz). The name by which the ancient Greeks knew themselves, and which is still used by the modern Greeks. Their country is called Hellas.

HELLESPONT. The ancient name for the Dardanelles (q.v.).

MARSH
HELLEBORINE

HELSINKI. The cathedral (built 1838-52) forms part of the Great Square designed as an architectural whole by the Finnish architect Engel. Originally called the Great Church it became a cathedral in 1959 after a redistribution of bishoprics. Courtesy of the Finnish Travel Information Centre.

HELLMAN, Lillian (1905-). American playwright. B. in New Orleans, she worked as a journalist in New York before achieving fame as a dramatist. Her plays, which are largely concerned with contemporary political and social issues, incl. *The Children's Hour* (1934), *The Little Foxes* (1939), *Watch on the Rhine* (1941), and *Toys in the Attic* (1960).

HELMHOLTZ, Hermann Ludwig Ferdinand von (1821-94). German scientist. B. at Potsdam, he became prof. of physics at Berlin. In 1847 he pub. an epoch-making treatise on the conservation of energy. He investigated the mechanics of vision, wrote a *Manual of Physiological Optics* (1856-66), invented the ophthalmoscope, and in his *Doctrine of the Sensations of Tone* (1862) gave a complete study of sound.

HELMONT, Jean Baptiste van (1577-1644). Belgian scientist. B. in Brussels, he studied at Louvain, and practised medicine at Vilvorde, near Brussels. He was the first to realize that gases exist apart from the atmosphere, and claimed to have invented the word 'gas'. He was a pioneer experimental biologist, and his carefully controlled 5-year experiment on tree growth was a model of sound scientific method.

HELOTS. The class of slaves in ancient Sparta, who probably represented the aboriginal inhabitants. Their cruel treatment by the Spartans became proverbial.

HELPMANN, Sir Robert (1909-). Australian dancer, choreographer and actor. B. in Adelaide, he was the leading male dancer with the Sadler's Wells Ballet 1933-50, successfully partnering Margot Fonteyn (q.v.) in the war years. He has made many stage and screen appearances as actor and dancer and since 1950 has also worked as a producer; he is noted for his gift for mime and for his dramatic sense, also apparent in his choreographic work, e.g. *Miracle in the Gorbals* (1944). Knighted 1968.

HELSINGBORG. Port on the S.W. coast of Sweden, facing Helsingör across the Sound. Industries incl. copper-smelting, rubber and chemical manufacture, and sugar refining. Pop. (1966) 79,460.

HELSINGFORS. Swedish name of HELSINKI.

HELSINGÖR. Port on the N.E. coast of Denmark, linked by a ferry with Helsingborg across the Sound, here only 3 m. wide. It has shipbuilding yards. Shakespeare made it the scene of *Hamlet*. Pop. 25,000.

HELSINKI. Capital city and port on the S. coast of Finland. Its natural harbour has to be kept open by ice-breakers in winter. There are many fine modern buildings, among them the parliament house. Older buildings incl. the cathedral and the univ. Pop. (1967) 679 337.

reservations apply. The H.C. Act of 1679, mainly due to Lord Shaftesbury, clarified and helped to enforce traditional rights with regard to detention by public authorities, and the Act of 1816 dealt with the detention by private authorities. The H.C. Act of 1679 is valid in Wales and the Channel Is., and that of 1816 also in the I. of Man; the main principles of H.C. were adopted in the U.S.; and there are equivalents in Ireland, and in the Scottish Writ of Habeas Corpus Act, 1701. A writ of H.C. cannot, since 1862, run from England to any English colony or dominion which has its own courts with authority to grant H.C. In a national emergency the H.C. Act can be suspended.

HABER (hah'ber), Fritz (1868-1934). German chemist. He was known for his work on gases, the preparation of synthetic ammonia, nitro-benzene, etc., and in the F.W.W. he devised gas masks.

HABSBURG or Hapsburg. European royal family, to which the former imperial house of Austria-Hungary belongs. The name comes from the family castle in Switzerland. The Hs. held the title of Holy Roman Emperor 1273-91, 1298-1308, 1438-1740, and 1745-1806. They ruled Austria from 1278, and in 1806 adopted the title of emperor of Austria, which they held until 1918. The archduke Otto, son of the last emperor, Charles, is the present H. pretender.

HACHETTE (ahshet'), Louis Christophe François (1800-64). French publisher and bookseller, who founded in Paris in 1826 the business known by his name. The London branch dates from 1859.

HACKNEY. Inner bor. of Greater London. In the E. lie the H. marshes bordering the river-Lea, and to the W. are H. downs. Pop. (1967) 249,140.

HADDINGTON. County town of E. Lothian, Scotland, on the Tyne, 10 m. W.S.W. of Dunbar, birthplace of John Knox. It is an agricultural centre. Pop. (1961) 5,506.

HADDINGTONSHIRE. Name until 1921 of EAST Lothian.

HADDOCK. Important food fish (*Gadus aeglefinus*), one of the Gadidae family of marine carnivorous fish, found off the N. Atlantic coasts. H. may be eaten fresh, but split and smoked H., especially from Finnan, near Aberdeen, is a delicacy.

HA'DES. In Greek mythology the underworld where the spirits of the departed went after death, usually depicted as a cavern or pit underneath the earth. It was presided over by Pluto, and its entrance was guarded by the three-headed dog Cerberus.

HADHRAUT (hahdrahmawt'). District in S. Arabia, forming part of the Protectorate of South Arabia, and ruled by Arab leaders maintaining protective treaty relations with Britain. Parts of the interior are still relatively unknown except to Arab traders; British explorers who have penetrated it incl. H. St. John Philby, Bertram Thomas and Freya Stark.

HADRIAN (A.D. 76-138). Roman emperor. B. in Spain, he was adopted by his kinsman, the emperor Trajan, whom he succeeded in 117. He abandoned Trajan's conquests in Mesopotamia, and adopted a defensive policy which included the building of H.'s Wall in Britain.

HADRIAN'S WALL. Roman fortification built in A.D. 122-6 to mark the northern boundary of Britain, and abandoned c. 383. The wall, of which major sections still exist, was formerly thought to be only

longing to the Blues (Lycaenidea), and represented in both temperate and tropical regions. Most of them are brownish in their adult form, and they are nearly all tailed. They incl. the purple H. (*Thecla quercus*) in which the usual brownish-black colouring is shot with purple, and which is found throughout Europe.

HAECKEL (hah'kel), Ernst Heinrich (1834-1919). German scientist and philosopher. B. at Potsdam, he became in 1865 prof. of zoology at Jena, and for more than 50 years laboured to propagate his recapitulation theory of evolution.

HAEMATITE or **HEMATITE** (hem'atit). Ferric oxide, Fe_2O_3 , a valuable iron ore, containing 70 per cent of iron and a low proportion of phosphorus.

HAEMOGLOBIN (hêmoglo'bîn). The colouring matter of the red blood cells, which makes the blood red. As it carries oxygen to all the cells of the body, it is necessary to life.

HAEMOPHILIA (hêmofil'ia). A tendency to uncontrollable bleeding through deficiency in the blood of the normal clotting substances. It is hereditary, occurs only in males, and is transmitted through the mother. In 1957 the Lister Inst. for Preventive Medicine developed an effective antidote - an injectable solution containing 10 times the anti-haemophilic factor of healthy blood.

HAEMORRHAGE (hem'orij). Loss of blood from the circulation. It is 'manifest' when the blood can be seen, as when it flows from a wound, the female genital tract, or piles, or is vomited, spat out or passed in the urine. Haemorrhage is 'occult' when the blood is lost internally, as from an ulcer or cancer of the stomach or an internal injury. The condition produced by severe haemorrhage is shock, by slow haemorrhage anaemia. The chief remedies are blood transfusion and the administration of iron.

HAEMORRHOIDS (hem'oroids). See PILES.

HAFFKINE (-kin), Waldemar Mordecai Wolff (1860-1930). Russian bacteriologist. B. in Odessa, he assisted Pasteur in Paris 1889-93, and was director of the British govt. laboratory in Bombay 1893-1915, where he produced a vaccine (1893) offering temporary immunity against cholera.

HAFI'Z (c. 1300-88). Persian poet. B. in Shiraz, he became prof. in a Derivish college there. His fame rests on his *Divan*, a collection of short odes, some extolling the pleasures of life, others satirizing his fellow Derivishes.

HAFNium. Metallic element; symbol Hf, atomic number 72, atomic weight 178.6. It was discovered by the Danish chemists D. Coster and G. von Hevesy. It occurs in zircon, and its properties and compounds resemble closely those of zirconium. It is

HADRIAN. Bronze recovered from the Thames at London, now in the British Museum.

experiments in *Hospital Sketches* are of much interest. He was closely associated with Stevenson, with whom he wrote *Deacon Brodie* (1892) and other plays.

HENLEY-ON-THAMES. English town (bor.) in Oxon, 6 m. N.N.E. of Reading. It stands at the foot of the Chilterns on the left bank of the Thames, which is crossed by a fine stone bridge. It is famous for its annual regatta, held first in 1839, and taking place usually in July. Pop. (1961) 9,131.

HENNA. Small shrub (*Lawsonia inermis*) found in Persia, India, Egypt and N. Africa. The leaves and young twigs are ground to powder, mixed with hot water to a paste and applied to the fingernails and hair of women, and beards of men, giving an orange-red hue. The colour may then be changed to black by applying a preparation of indigo.

HENRIETTA MARIA (1609–69). Queen of England. The daughter of Henry IV of France, she m. Charles I in 1625. As she used her influence to encourage him to make himself absolute, she became highly unpopular, and had to go into exile 1644–60. She returned to England at the Restoration, but retired in 1665 to France.

HENRY I (1068–1135). King of England. The youngest son of William I, he succeeded his brother William II in 1100, and won the support of the Saxons by granting them a charter and marrying a Saxon princess. He was an able administrator, who built up a professional bureaucracy and estab. the system of sending out itinerant justices.

HENRY II (1133–89). King of England. The son of Matilda, daughter of Henry I, and of Geoffrey of Anjou, he inherited Normandy and Anjou, and acquired Poitou, Guienne, and Gascony by marriage. He succeeded Stephen as king in 1154, and successfully restored order and curbed the power of the barons. His attempt to bring the Church courts under royal control led to a long struggle with Becket, after whose murder it had to be abandoned. During his reign the English conquest of Ireland began.

HENRY III (1207–72). King of England. He succeeded his father John in 1216, and assumed royal power in 1227. His subservience to the papacy and generosity to foreign favourites provoked many protests from the barons, who in 1264 rebelled under de Montfort's leadership, defeated H. at Lewes, and held him a prisoner. After the royalist victory at Evesham in 1265 H. was restored to the throne.

HENRY IV (1367–1413). King of England. The son of John of Gaunt, he took an active part in politics under Richard II, and was banished in 1398. He returned in 1399, headed a revolt, and was accepted as king by parliament. His reign was troubled by baronial rebellions and Glendower's rising in Wales, and in order to win support he had to conciliate the Church by a law for the burning of heretics, and to make many concessions to parliament.

HENRY V (1387–1422). King of England. The son of Henry IV, he devoted his life after 1400 to war and statecraft, and succeeded to the throne in 1413. He invaded Normandy in 1415, captured Harfleur, and defeated the French at Agincourt. In 1417–19 he overran Normandy and captured Rouen, and in 1420 he was recognized as his heir by the French king.

HENRY VI (1421–71). King of England. He succeeded his father Henry V in infancy, and came of age in 1442. He identified himself completely with the party opposed to the continuation of the French war, and after his marriage in 1445 was dominated by his wife, Margaret of Anjou. The unpopularity of the government, especially after the loss of the English conquests in France, encouraged the duke of York to claim the crown, and although York was killed in 1460 his son Edward proclaimed himself king in 1461. H. was captured in 1465, and although temporarily restored to the throne in 1470 was again imprisoned in 1471 and soon murdered.

HENRY VII

Photo: N.P.G.

the confiscation of rebels' property, heavy fines, and forced loans he accumulated a large fortune, which rendered him practically independent of parliament.

HENRY VIII (1491–1547). King of England. He succeeded his father Henry VII in 1509, and m. Catherine of Aragon, the widow of his brother Arthur. During the period 1511–29 he pursued an active foreign policy, largely under the guidance of Wolsey. In 1529, as Wolsey had failed to persuade the Pope to grant H. a divorce, he was disgraced. With parliament's approval H. renounced the papal supremacy, proclaimed himself Head of the Church, and dissolved the monasteries; in this policy his chief assistant was Thomas Cromwell. H. nevertheless remained orthodox in theology, and while executing as traitors R.C.s. who denied the royal supremacy he also burned Protestants for heresy. Catherine was divorced in 1533, and H. m. Anne Boleyn, who in 1536 was beheaded for adultery. H.'s 3rd wife, Jane Seymour, d. in 1537. Anne of Cleves he m. in 1540 in pursuance of Cromwell's policy of allying with the German Protestants, but rapidly abandoned this policy, divorced Anne, and beheaded Cromwell. His 5th wife, Catherine Howard, was beheaded in 1542, and the following year he m. Catherine Parr, who survived him.

HENRY I (1008–60), who succeeded in 1031, spent much of his reign in a struggle with William the Conqueror, duke of Normandy. **HENRY II** (1519–59), who succeeded his father Francis I in 1547, captured Metz and Verdun from the emperor, and Calais from the English. He was killed in a tournament. **HENRY III** (1551–89), who succeeded his brother Charles IX in 1574, became involved in a struggle both with the Huguenots, headed by Henry of Navarre, and the Catholic League, headed by the duke of Guise. Expelled from Paris by the League in 1588, H. allied with the Huguenots, but was assassinated by a monk while besieging Paris. **HENRY IV** (1553–1610), the son of Antoine de Bourbon and Jeanne, queen of Navarre, was brought up as a Protestant, and from 1576 led the Huguenots in the wars of religion. Having succeeded Henry III in 1589, he settled the religious question by himself accepting Catholicism, while granting toleration to Protestants. He restored peace and strong government to France, and brought back prosperity by measures for the promotion of industry and agriculture and the improvement of communications. He was assassinated in 1610 by an R.C. fanatic.

HENRY VIII

Photo: N.P.G.

HENRY VII (1457–1509). King of England. The son of Edmund Tudor, earl of Richmond, he was descended through his mother Margaret Beaufort from John of Gaunt. He spent his early life in Brittany, until in 1485 he landed in England, raised a rebellion, and defeated and killed Richard III at Bosworth. He was recognized as king by parliament, although Yorkist rebellions continued until 1497, and by means of the Star Chamber restored order after the Wars of the Roses. By

Mar.'s church (Perpendicular) and Michelham Priory (13th cent.) 2 m. to the W. are notable. Pop. of R.D. (1961) 42,372.

HAINAN (hā'nahn'). Large island off the Luichow peninsula, China, in the prov. of Kwangtung. The N. is low-lying, the centre and S. are mountainous. The rainfall is high and the valleys and coastal areas are productive, the principal crop being rice. The farmers are principally Chinese settlers, but aboriginal tribes survive in the mountains which have valuable timber resources. Kiungshan is the cap. and port. Area 13,000 sq. m.; pop. (1967) 3,000,000.

HAINAUT (hā'nō'). Province of S.W. Belgium, adjoining France. It is low-lying, drained by the Scheldt and Sambre, and crossed by several canals. There are important coalfields and much iron and steel is produced. Mons is the capital; Charleroi, Tournai, and Soignies are industrial centres. Area 1,436 sq. m.; pop. (1966) 1,331,953.

HAIPHONG (hifong'). Chief port of N. Vietnam, on an arm of the Thaibinh r. delta, near the Gulf of Tonkin, 60 m. E.S.E. of Hanoi. It has shipyards and cement and textile factories. When Indo-China was French it was a naval station. Pop. (1960) 369,248.

HAIRDRESSING. The latest style in Carthage in the 2nd cent. A.D.

The care and arrangement of the H. has been of social importance from the most ancient times, cf. the elaborate hairstyles of ancient Egypt and Assyria, and among the most primitive tribes. The H. may indicate age-group (the Victorian girl was adult once her hair was 'up'), marital status (African tribes), political allegiance (Roundheads and Cavaliers), rank (the styles, sometimes 2 ft. high, developed among the 18th cent. aristocracy of France, and imported to England), mourning (the shaven heads of ancient Greeks and Hebrews), disgrace (women collaborators in the S.W.W. were often shaven by their compatriots), and religious vocation (the tonsure of the R.C. and E. Orthodox Churches). The modern western styles for women, increasingly adopted throughout the world, tend to daytime simplicity, with avoidance of any 'crimping' in the permanent waving (often replaced by special methods of cutting), and more elaborate evening creations made feasible by 'lacquers' or sprays, and often supplemented by nylon or real hair 'switches', etc. Besides semi-permanent and permanent 'rinses', there are hair dyes of every colour - blue, pink, and green not excepted - and, for complete transformation, full wigs. Similar tendencies, usually at a discreet level, are seen among men. See **BEAUTY CULTURE**.

HAIRE, Norman (1892-1952). Australian gynaecologist, obstetrician, and sexologist. He settled in England in 1919, and in 1921 helped to found the Walworth Welfare Centre, the first in Britain to give advice on contraception.

HAIRSTREAKS. Group of butterflies (q.v.). be-

longing to the Blues (Lycaenidea), and represented in both temperate and tropical regions. Most of them are brownish in their adult form, and they are nearly all tailed. They incl. the purple H. (*Thecla quercus*) in which the usual brownish-black colouring is shot with purple, and which is found throughout Europe.

RIDER HAGGARD relaxing in his garden.

HAITI (hā'ti). Republic in the western part of the West Indian island of Hispaniola. Ceded to France by Spain in 1697, it gained independence in 1804 under Dessalines (q.v.), who was followed by a colourful series of 'monarchs', until H. became a republic in 1859: H. embraced the whole island 1821-44 (see **DOMINICAN REPUBLIC**). H. was occupied by the U.S.A. 1915-34.

H. is mountainous, but well-wooded with fertile plains, and under French rule was prosperous, although subject to hurricanes. Subsequent mismanagement and the falling value of its chief products (coffee, sisal, sugar, and bauxite) make it a poor country, but indications suggesting varied mineral resources are being followed up. The cap. is Port au Prince. Under the revised constitution of 1964 there is a pres. and single-chamber legislative elected for 6 years, and candidates may be re-elected indefinitely. Pres. François Duvalier came to power in 1957 and was created Life Pres. in 1964. The official language is French, but the majority speak the Créole dialect. There is acute racial tension between this predominantly Negro majority and the mulatto bourgeoisie, and political plots are frequent. Area 10,710 sq. m.; pop. (1966) 4,500,000.

HAKE. Important food fish (*Merluccius vulgaris*) of the Gadidae family, found in N. European and N. American waters. Its silvery, elongated body attains 3-4 ft., and it consumes quantities of herring.

HAK

HAKLUYT (hak'loot), Richard (c. 1553-1616). English geographer. B. in London, he entered the Church and became archdeacon of Westminster in 1603. H. lectured on cartography at Oxford, became geographical adviser to the I. India Co., and was an original member of the Virginia Co. His chief work is his great compilation, *The Principal Navigations, Voyages and*

Mary in 1555. There are 3 Kings of Arms, 6 Heralds, and 4 Pursuivants, who specialize in genealogical and heraldic work. The College establishes the right to bear Arms, and the Kings of Arms grant Arms by letters patent. In Ireland the office of Ulster King of Arms was transferred in 1943 to the College of Arms in London and placed with that of Norroy King of Arms, who now has jurisdiction in Northern Ireland as well as in the north of England.

HERAT (herah't). Cap. of H. province, Afghanistan, on the N. banks of the Hari Rud. A principal road junction, it was a great city in ancient and medieval times. Pop. (1965) 62,000.

HERAULT (ärö'). River in S. France, 78 m. long, rising in the Cévennes and flowing into the Gulf of Lyons near Agde. It gives its name to a dept.

HERB. A plant which does not possess a permanent woody stem, the parts above ground dying every winter. Also a plant with a sweet, bitter, aromatic, or pungent taste, used in cookery, medicine, or perfumery.

HERBART, Johann Friedrich (1776–1841). German philosopher and educationist. B. at Oldenburg, he became professor at Königsberg in 1809 and at Göttingen in 1833, founded a school of philosophy specializing in psychology, and was interested in educational theory by contact with Pestalozzi.

HERBERT, Sir Alan Patrick (1890–). British author. A contributor to *Punch* from 1924 as A.P.H., he is noted for his satiric wit and humorous verse, and the variety of his talents, e.g. the amusing novel *The Water Gypsies* (1930), the comic opera *Tantivy Towers* (1931), and the revue *Big Ben* (1946). On a more serious plane, he is a campaigner for marriage-law reform, and as an Independent M.P. (1935–50) introd. the Matrimonial Causes Bill. See **DIVORCE**. He was knighted in 1945.

HERBERT, George (1593–1633). English poet. He became in 1619 orator to Cambridge university, and in 1625 a prebendary in Hunts, where his friends incl. Donne, Walton, and Bacon. After ordination in 1630 he became vicar of Bemerton, Wilts, and d. of consumption. His vol. of religious poems, *The Temple*, appeared in 1633. His brother, Lord Edward H. of Cherbury (1583–1648), was also a poet and religious philosopher and in his *De veritate* (1624) propounded a theory of natural religion, which makes him the founder of English Deism.

HERBERT OF LEA, Sidney Herbert, 1st baron (1810–61). British statesman. He was Sec. for War in Aberdeen's Liberal-Peelite coalition of 1852–5, and during the Crimean War was responsible for sending Florence Nightingale to the front. After the war he supported army reforms and became a peer in 1861.

HERB ROBERT

HERB ROBERT. Common wild flower of the Geraniaceae family (genus *Geranium*), found throughout Europe, central Asia, and N. America. About 12 in. high, it bears hairy leaves and small purplish flowers, and has a reddish hairy stem. When rubbed, the leaves have an unpleasant smell.

HERCEGOVINA, HERZEGOVINA. See **BOSNIA-HERCEGOVINA**.

HERCULANEUM. Ancient city of Italy between Naples and Pompeii. H. was overwhelmed during the eruption of Vesuvius (A.D. 79), which also destroyed Pompeii. It was excavated from the 18th cent. onward.

HERCULES (Gk. Heracles). Greek hero, the son of Zeus and Alcmena, famed for his strength. While serving Eurystheus, king of Argos, he performed the

celebrated 12 Labours which included the cleansing of the Augean stables. The *Pillars of H.* are the great rocks guarding the entrance to the Mediterranean—Gibraltar and Ceuta.

HERDER, Johann Gottfried von (1744–1803). German poet, critic, and philosopher. B. in E. Prussia, he studied at Königsberg, where he was influenced by Kant, became pastor at Riga, met Goethe in Strasbourg (1770), and in 1776 was called to Weimar as court preacher. H.'s critical writings indicate his intuitive rather than reasoning trend of thought. He gave considerable impulse to the Storm and Stress movement in Ger. literature. He collected folk songs of all nations (1778) and in the *Ideen zur Philosophie*

HEREFORD. The cathedral of St. Ethelbert illustrates every style from Norman to Perpendicular. The library contains rare manuscripts and set in the wall of the south choir aisle is a Mappa Mundi (Map of the World) made in the 14th century. *British Travel and Holidays Association.*

der Geschichte der Menschheit (1784–91) he outlined the stages of cultural development of mankind.

HEREDIA (chrehd'eh'), José Maria de (1842–1905). French poet. B. in the W. Indies, he came to France in 1850 and became one of the 'Parnassien' school of poets, led by Leconte de Lisle. His *Les Trophées* (1893) is mainly a series of sonnets.

HEREFORD (her'e-). English city (bor.), co. town of Herefordshire, on the Wye, 24 m. N.W. of Gloucester. The present cathedral was begun in 1079. The cathedral school was founded in the 14th cent. Pop. (1961) 40,431.

HEREFORDSHIRE. County of England adjacent to the Welsh border. It consists of broken hilly country, drained by the picturesque Wye and its tributaries. On the E. border the Malvern hills rise to Worcestershire Beacon, 1,395 ft. Pears, apples, and hops are grown, but most of the land is under pasture on which are reared the famous Hereford cattle. The co. town is Hereford; other towns incl. Leominster, Ross, and Ledbury. Area 842 sq. m.; pop. (1967) 140,760.

HERERO (her'äröz). A nomadic Bantu-speaking people living in S.W. Africa.

HERESY. A doctrine or system of thought opposed to orthodox belief, especially in religion, e.g. those held by the Gnostics, Arians, Pelagians, Montanists, Albigenes, Waldenses, Lollards, Anabaptists, Unitarians, Quakers, etc.

HEREWARD (her'e-), called the Wake (fl. 1070). English patriot. A small Lincs. landowner, he led a rebellion against Norman rule in 1070. William the Conqueror captured his stronghold in the Isle of Ely in 1071. H. escaped with a few companions, and his fate is obscure. See **CHARLES KINGSLEY**.

HERFORD. W. German town in North Rhine-Westphalia. Industries include textiles, machinery, foodstuffs and furniture. Pop. (1960) 55,500.

1887. St. Paul's School at H. from 1883 was moved to Barnes 1968, also in the bor. are the Lyric theatre, Olympia, and the White City Stadium. Pop. (1967) 211,720.

HAMMERSTEIN, Oscar. See RODGERS, RICHARD. **HAMMETT**, Dashiell (1894–1961). American crime-novelist, a pioneer of the tough-guy school, who had himself been a 'private eye'. His best books were *The Maltese Falcon* (1930) and *The Thin Man* (1932).

HAMMOND, Joan (1912–). Australian soprano. As a violinist she played with the Sydney Philharmonic Orchestra for 3 yrs., made her concert début as a singer in London with the *Messiah* in 1938, and in 1939 made her début in opera in Vienna.

HAMMOND, John Lawrence (1872–1949). British historian of the Industrial Revolution, on which he wrote jointly with his wife Barbara H. (1873–1961), whom he m. in 1901. Their works incl. *The Village Labourer, 1760–1832* (1911), *The Rise of Modern Industry* (1925) and *The Bleak Age* (1934).

HAMMOND, Walter R. (1903–65). British cricketer. Capt. of Gloucestershire 1939–47, he became the English cricket capt. in 1938, leading the team in the 1946–7 test series in Australia. A great batsman, his most famous feat was the scoring of over 1,000 runs in 3 weeks in 1927.

HAMMURABI (hamōōrah'be). King of Babylon (reigned c. 1792–50 B.C.) of the 1st or Amorite dynasty. He expelled the Elamites and united the country, but is best remembered for his legal code, a consolidation of material already traditional, which survives in several copies: the punishments are bloodthirsty.

HAMPDEN, John (c. 1594–1643). English statesman. The son of a wealthy landowner, he was b. at Great Hampden, Bucks, sat in the parliaments of 1621, 1625, and 1626, and became conspicuous when in 1627 he was imprisoned for refusing to pay a forced loan. His refusal in 1636 to pay Ship Money made him a national figure. In the Short and Long parliaments he proved himself a skilful debater and parliamentary strategist. Charles's attempt to arrest him and four other leading M.Ps. made war inevitable. He raised his own regiment on the outbreak of hostilities, and on 18 June 1643 was mortally wounded at the skirmish of Chalgrove Field.

HAMPSHIRE. Co. of southern England lying west of Sussex and Surrey and with a coast on the English Channel. The geographical county includes the Isle of Wight (q.v.). H. is crossed by the downs, while in the S.W. is the New Forest. Sheep are reared on the downs. In the lower parts, wheat, hay, and fodder crops, fruit, etc., are grown and cattle are pastured. The chief rivers are the Test, Itchen, Avon and Stour. The co. town is Winchester; Southampton is a great maritime centre, Portsmouth and Gosport are naval ports, at Fawley is a large petroleum refinery and Bournemouth is a holiday centre. Area 1,503 sq. m.; pop. (1967) 1,511,250.

HAMPSTEAD. Locality in the bor. of Camden, Greater London. Famous for its picturesque village atmosphere, it is fashionable and expensive, and reaches 443 ft. a.s.l. in parts. H. Heath is an open space of c. 250 acres; H. Garden Suburb originated 1907.

HAMPTON. City of S.E. Virginia, U.S.A., estab. 1610, lying on H. Roads, the lower James river estuary. H. Institute (1868) is a famous Indian and Negro educational institute. Pop. (1960) 89,259.

HAMPTON COURT PALACE. Palace erected in H.C. Park, on the N. bank of the Thames, in the Greater London bor. of Richmond-upon-Thames, England, by Cardinal Wolsey in the early 16th cent. In 1526 he presented it to Henry VIII, who added the chapel and the Great Hall. The later additions made by Wren for William III included the Fountain Court, and the E. and S. fronts.

HAMSTER. The H. (*Cricetus frumentarius*) of Europe and N. Asia is the typical member of the

cricetine group of rodents. The thickset body is about 10 in. long, and the tail c. 2 in., and the fur usually golden-brown above and darker below. It excavates cleanly kept and complex chambered

HAMSTER

burrows 1–2 ft. deep in summer, and 3–6 ft. deep in winter, when it hibernates. It is prolific.

HAMSUN (hahm'soon), Knut (1859–1952). Norwegian novelist. The son of a farmer, he suffered from poverty, twice emigrating to the U.S., and his novel *Sult* (1890: *Hunger*) had a terrible truth which at

once made him famous. Of his later books *Growth of the Soil* (1917), after which he received a Nobel prize, in 1920, was the best. His ideas were in sympathy with Nazism in some respects and in 1946 he was fined for collaboration.

HANCOCK, Tony (1924–68). British radio and television comedian. In 'Hancock's Half Hour', etc., he was the little man whose romantic ideas and schemes were always at odds with everyday life.

HÄNDEL, George Frederick (1685–1759). German-born composer, who became a British subject in 1726. B. at Halle, he abandoned the study of law at the univ. in 1703, to become a violinist at Keiser's Opera House in Hamburg, where his first opera *Almira* was performed in 1705. Visits to Italy (1706–10) inspired a number of operas and oratorios, and in 1711 his opera *Rinaldo* was performed in London. Appointed Kapellmeister to the elector of Hanover in 1709, he took French leave in 1712 to settle in England, and was for a time in disgrace when the elector succeeded as George I in 1714. However, he wrote for him in 1715 the 'Water Music' and from 1720 directed the opera at the King's Theatre, Haymarket. The rivalry of the fashionable Italian composer Bononcini, and Gay's ridicule in *The Beggar's Opera* (1728), led him to abandon Italianate opera for English oratorio.

HANDEL. Portrait by Thomas Hudson, 1734. Photo, National Portrait Gallery.

In 1629 he became vicar of Dean Prior, near Totnes. He pub. *Hesperides* (1648), a collection of sacred and pastoral poetry unrivalled in lyric quality.

HERRING, John Frederick (1795–1865). British sporting artist. B. in Surrey, he is famous for his paintings of the winners of the St. Leger at Doncaster.

HERRING. One of the most important food fish (*Clupea harengus*), the leading member of the Clupeidae. A salt-water fish, it swims close to the surface and may be 10–18 in. long. A silvery greenish-blue, it has only one dorsal fin and one short ventral, and there are no spines on the fins. Young Hs. c. 2 in. long largely composed of the delicacy known as 'whitebait'.

The H. is found in large quantities off the shores of Britain, Scandinavia, the E. coast of N. America, the White Sea, and in the Sea of Japan, but not in the Mediterranean.

HERRIOT (âr-ô'), Édouard (1872–1957). French Radical statesman. An opponent of Poincaré, especially his advocacy of French occupation of the Ruhr, he was briefly P.M. in 1924–5, 1926, and 1932. As Pres. of the Chamber in 1940 he opposed the policies of the Vichy govt., was arrested and later taken to Germany until released in 1945 by the Russians. He was Pres. of the Natl. Assembly 1947–53, and France's rejection of the E.D.C. treaty was attributed to a speech of his in 1954.

HERSCHEL, Sir William (1738–1822). British astronomer. B. at Hanover, he went to England in 1757, earning his living as a musician, whilst instructing himself in mathematics and astronomy. In 1781 he discovered Uranus, and later several of its satellites. During his appointment as astronomer to George III from 1782 he discovered the motion of the double stars round one another, and recorded it in his *Motion of the Solar System in Space* (1783). He

SIR W. HERSCHEL

constructed a 4ft. telescope, of 40 ft. focal length, at Slough, in 1789, and discovered infra-red solar rays in 1800. His son Sir John Frederick William H. (1792–1871) was also an astronomer and estab. an observatory near Capetown in 1834, where he discovered thousands of close double stars, clusters and nebulae, reported in 1847. His inventions incl. astronomical instruments, sensitized photographic paper, and the use of sodium hyposulphite for fixing it.

HERSEY, John (1914–). American writer. B. in China, he joined the staff of *Time*, and during the S.W.W. was on Bataan (*Men on Bataan*, 1942), with the American troops in Africa and Italy (*A Bell for Adano*, 1944), and investigated the effects of the Hiroshima atom bomb (*Hiroshima*, 1946).

HERTER, Christian Archibald (1895–1966). American statesman. Following a diplomatic career after the F.W.W., he became assistant to Sec. of Commerce H. Hoover 1921–4, and was elected to the Mass. House of Representatives (1931–43), when he became a Congressman (1943–53). He was Under Sec. (1957–9), then Sec. of State (1959–61), and became Chairman of the Atlantic Council of the U.S. in 1961, and Special Representative for Trade Negotiations in 1962.

HERTFORD (harf'). Co. town (bor.) of Herts, England, on the Lea; 2 m. S.E. of the town is Hailey-

bury Coll. H. has brewing and brick industries. Pop. (1961) 15,734.

HERTFORDSHIRE. County of S.E. England, lying N. of Greater London. Across the co. from S.W. to N.E. run the Chiltern Hills. H. is drained by the Colne, Lea, and Stort, and is predominantly an agricultural county. On the chalk uplands sheep are grazed, while elsewhere the principal crops are wheat, oats, roots, beans, and potatoes. In the S.W. fruit is grown; other specialized products include flowers, early vegetables, and watercress. Dairy cattle are pastured by the Stort and Colne. The co. town is Hertford; other towns include St. Albans, Watford, Bishop's Stortford, Letchworth, and Hemel Hempstead. Area 632 sq. m.; pop. (1967) 881,870.

***HERTOGENBOSCH** (s-her'tōgenbosh) (Fr., *Bois-le-Duc*). Capital of N. Brabant, Netherlands, 28 m. S.S.E. of Utrecht. There is a 14–15th cent. cathedral. Pop. (1967) 79,151.

HERTZ (her'ts), Heinrich (1857–94). German physicist. Continuing the work of Clerk Maxwell (q.v.) in electromagnetic (*Hertzian*) waves, he prepared the way for radio communication, and showed that their behaviour resembled that of light and heat waves.

HERTZOG (her'tsōg), James Barry Munnik (1866–1942). South African statesman. B. in Cape Colony, of Boer stock, he was a general in the S. African War, and in 1910 became Min. of Justice under Botha. In 1913 he formed the Nationalist Party, and in 1914 opposed S. African participation in the F.W.W. After the 1924 elections H. became P.M., and in 1933 his party and General Smuts's S. African Party were merged as the United S. African National Party. In Sept. 1939 his motion against participation in the S.W.W. was rejected, and he resigned.

HERZEN (her'tsen), Alexander Ivanovich (1812–70). Russian revolutionary writer. Persecuted for his opinions, he left Russia in 1847, and in 1852 settled in London. His *Memoirs* are valuable. He d. in Paris.

HERZL (herts), Theodor (1860–1904). Founder of the Zionist movement. B. at Budapest, he became a successful playwright and journalist, but the Dreyfus case convinced him that the only solution to the problem of the Jews was their resettlement in a state of their own in Palestine. His *Jewish State* (1896) launched political Zionism.

HE'SIOD (c. 700 B.C.). One of the earliest of the poets of ancient Greece. He is supposed to have lived a little later than Homer, and according to his own account he was b. in Boeotia. He is the author of *Works and Days*, a poem that tells of the country life, and the *Theogony*, an account of the origin of the world and of the gods.

HESPERIDES. In Gk. mythology, the maidens who, far away in the west, guard the tree that produces golden apples.

HESS, Dame Myra (1890–1965). British pianist. A pupil of Tobias Matthay, she organized the popular National Gallery concerts in London in the S.W.W., and was created D.B.E. in 1941. She was well known for her interpretations of Beethoven, and for her piano transcription of the Bach chorale 'Jesu, joy of man's desiring'.

HESS, Walter Richard Rudolf (1894–). German Nazi leader. He fought in the F.W.W. and joined the Nazi Party in 1920. Imprisoned with Hitler 1923–5, he became his private sec., taking down *Mein Kampf* from his dictation. In 1932 he was appointed deputy to the Fuehrer, and in 1939 was nominated as Hitler's successor after Goering. He was head of the *Ausland* organization responsible for fifth-column activities abroad. On 10 May 1941 he landed by air in Britain with compromise peace proposals, and was held a prisoner-of-war till 1945, when he was tried at Nuremberg and was sentenced to life imprisonment.

HESSE, Hermann (1877–1962). German-born

HARBIN. A skilled worker at the Sputnik Bearings Plant passes on her experience to others. Photo: Camera Press.

machinery, linen, etc. Its growth began with the opening of the Chinese Eastern Railway in 1897. Pop. (1965) 1,600,000.

HARCOURT, Sir William Vernon (1827–1904). British Lib. statesman. A barrister, he first made a name by his opposition to recognition of the Southern States as belligerents in the Civil War, entered parliament in 1868, and was appointed Solicitor-General and knighted in 1873. Under Gladstone he was Home Sec. 1880–5, and Chancellor of the Exchequer 1886 and 1892–5. He was disappointed in his hopes to succeed him as P.M. His son Lewis Vernon H., 1st visc. (1863–1922), was Colonial Sec. 1910–15.

HARDICANUTE (hahr'dikanút') (c. 1019–42). King of England. The son of Canute, he ascended the throne in 1040 and was a harsh ruler.

HARDIE, James Keir (1856–1915). British socialist. B. in Lanarks, he worked in the mines as a boy, and in 1886 became Sec. of the Scottish Miners' Federation. In 1888 he was the 1st Labour candidate to stand for Parliament and was a chief founder of the I.L.P. in 1893. A pacifist, he desperately opposed the Boer War, and the flame of his idealism in his work for socialism and the unemployed made his name a legend: he was M.P. for West Ham 1892–5 and for Merthyr Tydfil from 1900.

HARDING, William Gamaliel (1865–1923). 29th President of the U.S.A. B. in Ohio, he entered the U.S. Senate in 1914 as a Republican, and opposed the Peace Treaty of 1919. In 1920 he was elected President of the U.S.A. He concluded the peace treaties of 1921 with Germany, Austria, and Hungary, and in the same year called the Washington Conference. After the conference there were charges of corruption among members of his Cabinet.

HARDING OF PETHERTON, John, 1st baron (1896–). British field marshal. Chief-of-staff to Alexander in Italy in the S.W.W., he was C. in C. B.A.O.R. 1951–2, and C.I.G.S. 1952–5. As Gov. of Cyprus 1955–7, during part of the period of terrorism and political agitation prior to independence (1960) he was responsible for the controversial deportation of Makarios (q.v.) from Cyprus in 1955, and for the reorganization of the security forces to combat the Eoka terrorists.

HARDINGE (hahr'ding), Henry, 1st visct. (1785–1856). British soldier and administrator. He was Sec. for War 1828 and 1841–4; Chief Sec. for Ireland 1830 and 1834–5; introduced many reforms as Gov.-Gen. of India 1844–8; and was C. in C. of the British Army 1852–6. He was created a visct. in 1846 and a field marshal in 1855. His grandson, Charles H., 1st baron H. of Pethurst (1858–1944), was ambassador to Petrograd 1904–6 and Paris 1920–3, and Viceroy of India 1910–16. The latter's son, Alexander H., 2nd

baron (1894–1960), was private sec. to Edward VIII, his warning letter to the King during the Abdication Crisis causing much subsequent controversy, and to George VI 1936–43.

HARDWAR (hurdwahr'). Indian town in Uttar Pradesh, on the right bank of the Ganges, one of the holy places of the Hindu religion and a pilgrimage centre. The Kumbhmela festival, held every twelfth year in honour of Siva, is the most important and attracts some million pilgrims. The name means door of Hari (or Vishnu). Pop. (1961) 58,513.

HARDWICKE, Sir Cedric Webster (1893–1964). British actor. Possessed of caustic wit and impressively sardonic appearance, he excelled in such roles as the father in *The Barretts of Wimpole Street* (1930–1) and King Magnus in *The Apple Cart* (1931); his films incl. *Nell Gwynn* and *Richard III*. He was knighted in 1934.

HARDY, Thomas (1840–1928). British poet and novelist. B. nr. Dorchester in the heart of the 'Wessex' which was to form the background of his novels, he was trained as an architect. His first success was *Far From the Madding Crowd* (1874), followed among others by *The Return of the Native* (1878), *The Mayor of Casterbridge* (1886) and *The Woodlanders* (1887) – all remarkable for the background contrast of richly humorous rustic characters, for the brooding intensity of human loves and hates played out before the onrush of the harshly indifferent force that H. believed governs the world. *Tess of the D'Urbervilles* (1891) – subtitled 'A Pure Woman' – outraged public opinion by portraying as its heroine a woman who had been seduced, and the even greater outcry which followed *Jude the Obscure* (1895) helped reinforce H.'s decision to confine himself to verse. Beginning with *Wessex Poems* (1898), he pub. several vols. of lyrics and a gigantic blank-verse panorama of the Napoleonic wars, *The Dynasts* (1904–8). In 1910 he was awarded the O.M.

HARDY, Sir Thomas Masterman (1769–1839). British sailor. He entered the navy in 1781, and at Trafalgar was Nelson's flag-captain in the *Victory*, attending him during his dying moments. He was promoted rear-admiral in 1825, and became 1st Sea Lord in 1830.

HARE, Robertson (1891–). British actor, celebrated for his lugubriously comic roles in such Aldwych farces as *Rookery Nook* and *Cuckoo in the Nest* and typified by his catch-phrase 'Oh calamity!' He excels as the henpecked husband or the prim cleric.

HARE. Rodent of the family Leporidae, incl. the species not classified as rabbits. The common H. (*Lepus europaeus*) is found in England, and southern and central Europe and the smaller blue or mountain H. (*L. timidus*) in Scotland and Scandinavia. The H. is found in most parts of the world and those of the very north, the polar (*L. arcticus*) and Greenland (*L. groenlandicus*) Hs., turn white in winter.

HAREBELL. Wild flower (*Campanula rotundifolia*), sometimes called the bluebell of Scotland. It bears a group of blue bell-shaped flowers on a stem, with heart-shaped leaves at the base, and is found in the N. of the northern hemisphere, the Rockies, and Sierra Nevada.

HARE-LIP. A deformity of the face consisting of a cleft in the upper lip and jaw. The cause is failure of union between the right and left sections of the

THOMAS HARDY

WILLIAM HICKEY

Courtesy of the National Gallery of Ireland.

pecan (*C. illinoensis*) is widely cultivated in the S., and the shagbark (*C. ovata*) in the N.

HICKS, Edward (1780-1849). American self-taught artist, remembered for his numerous versions of a picture based on Isaiah 11, 6-9, 'The Peaceable Kingdom': from 1810 he was an itinerant Quaker preacher.

HIEROGLYPHIC (hi-eroglif'ik). One of the most important ancient systems of writing, originating in

'Cleopatra' in hieroglyphic characters.

Egypt. It was in existence about the middle of the 4th millennium B.C., and did not develop into a proper 'alphabet'. On the whole, picture-signs, trilateral, bilateral, and uniliteral signs and determinatives were combined into a complicated script, and this was maintained during 3,500 years. The latest H. inscriptions belong to the 3rd cent. A.D. The direction of writing is normally from right to left, the signs facing the beginning of the line. The 'Rosetta Stone' of 197 B.C., carved in H., Demotic, and Greek, furnished the key to decipherment, which was mainly due to J. F. Champollion in 1822.

HIGH COMMISSIONER. The representative of one independent Commonwealth country in the cap. of another. Equal in rank to ambassadors (q.v.), they have the same duties and powers.

HIGHGATE. District of N. London, England. It has associations with Dick Whittington. Andrew Marvell, Nell Gwynn, and others; George Eliot and Karl Marx are among the many famous buried in H. cemetery. The highest part, H. Village, is 426 ft. a.s.l. It is mainly in the bor. of Haringey.

HIGHLANDS. A broken plateau of ancient rocks occupying all Scotland N. of the boundary Helensburgh to Stonehaven, except Buchan, Caithness, and the Moray Firth plains. Ben Nevis (4,406 ft.) is the highest of many peaks. Glaciation has straightened and deepened the valleys, where lie many lochs. Their primitive scenery has made the H. famous for

holidays, fishing, and shooting. Habitation is limited mainly to crofters farming impoverished land. Throughout history, H. language and race have been distinguished from that of the Lowlands. See SCOT-TISH GAELIC. The traditional *H. Games* incl. athletic events, e.g. tossing the caber (a tree trunk), dancing, and bagpipe playing.

The problem of depopulation and general decline has been tackled by the Highland Development Board (1965). The tourist and fishing industries are being promoted, and in the longer term the Moray Firth area is planned for development as a linear city by the controlled expansion of a dozen towns from Tain to Inverness, with an eventual pop. of 300,000. Cheap hydroelectric power would serve aluminium smelting, petrochemical works, etc.

HIGHLANDS. Celebrated by Sir Walter Scott in *The Lady of the Lake*; the Trossachs and Loch Ard.

Photo: George Outram & Co. Ltd.

HIGHWAY. In British law, any road over which an inalienable right of way has been estab., as by 21 years' uninterrupted use. In American usage, any one of the national trunk roads, controlled and partly sponsored by the Federal Govt. After the Roman exodus English roads were sadly neglected until the 16th cent. when parishes were made responsible in their localities, and in the 18th and 19th cents. when turnpike trusts maintained Hs. outside towns, and charged tolls. Development was delayed because of competition from water and rail transport, but from 1888, when County Councils took over, using the methods of Telford and McAdam, communications improved, particularly between towns. The Central

HIGHWAY. Britain's first national highway exclusively for motor traffic, the London-Birmingham M1, of which the main section was opened in 1959.

British Travel and Holidays Association

With the assistance of Tostig, H.'s brother, the king of Norway, Harald Hardrada, invaded Northumbria; H. marched north, and routed the invaders at Stamford Bridge on 25 Sept. Three days later William landed at Pevensey; H. took up his position at Battle. The battle of Hastings (14 Oct. 1066) ended with the death of H.

HARP. Musical instrument, the largest to be plucked by hand. It consists of 46 strings, stretched between an upright triangular frame, and is provided with several pedals at the base. These are used to alter the pitch of the instrument.

HARPENDEN. English town (U.D.) in Herts, 25 m. N.N.W. of London. Nearby is the Rothamsted agricultural experimental station, founded 1843. Pop. (1961) 18,218.

HARPIES. In classical mythology originally feminine wind-spirits. In later legend they became rapacious monsters who retained their human heads but possessed the bodies of vultures.

HARPSICORD. Keyboard musical instrument popular in the 16–18th cents., until its supersession by the piano. The strings were plucked by quills, not struck by hammers.

HARPUR, Charles (1817–68). Australian poet. B. in N.S.W., he was brought up in the bush, and became a sheep farmer. He pub. *Thoughts: a Series of Sonnets* (1845), but displayed a more native talent in the later collections. His most famous poem is the 'Creek of the Four Graves'.

HARRER, Heinrich (1912–). Austrian author and explorer. His books incl. *Seven Years in Tibet* (1953) and *The White Spider* (1958), a history of the north face of the Eiger, which he was the 1st to climb in 1938.

HARRIER. Genus (*Circus*) of birds of prey in the family Accipitridae. They are found throughout the world, and 3 species occur in Britain: the moorland hen H. (*C. cyaneus*), Montagu's H. (*C. cinereus*), and the marsh H. (*C. aeruginosus*).

HARRIER. A dog hunting the hare by scent. It resembles a foxhound, though smaller and slower.

HARRIMAN, (William) Averell (1891–). American administrator. S. of Edward H., founder of the Union Pacific Railroad, of which H. became chairman in 1932, he was ed. at Yale. Originally a Republican he became a Democrat in 1927, and was apt. by Roosevelt State Director of the National Recovery Administration in 1933. During the S.W.W. he was active in the admin. of Lease-Lend (q.v.) and was present at the Atlantic Charter (q.v.) meetings in 1941. Ambassador to the U.S.S.R. 1943–6 and to Great Britain for a few months, in 1946, he headed the European division of E.C.A. 1948–50 (M.S.A. 1951–3), and was Gov. of New York 1955–8. He was Asst. Sec. of State for Far Eastern Affairs 1961–3, Under-Sec. for Political Affairs 1963–4, and ambassador-at-large 1961 and 1965–9.

HARRINGTON, James (1611–77). English political philosopher, author of *Oceana*, describing an ideal republican commonwealth.

HARRINGTON, Sir John (1561–1612). English courtier, who translated Ariosto's *Orlando Furioso* (1591) at the command of Queen Elizabeth.

HARRIS, Sir Arthur Travers (1892–). British air marshal. He served with the R.F.C. during the F.W.W. and in the S.W.W. was deputy chief of the air staff 1940–1 and C.-in.-C. of Bomber Command 1942–5, becoming known as 'Bomber H.'. Since 1945 he has been Marshal of the R.A.F. and in 1953 he received a baronetcy.

HARRIS, Frank (1856–1931). Irish journalist. B. in

HARRIS. Woven by the island crofters on traditional looms, Harris tweed is in modern times in demand throughout the world.
Photo: George Outram & Co. Ltd.

Galway, he was active both in New York and London and wrote ephemeral fiction. He is best remembered for his highly coloured biographies of Wilde and Shaw, and his sensational autobiography, *My Life* (1926), banned in the U.K. and U.S.

HARRIS, Joel Chandler (1848–1908). American writer. B. in Georgia, he first pub. his 'Uncle Remus' stories in the *Atlanta Constitution*, which he edited 1890–1905; these tales were written in Negro dialect and gained worldwide popularity. His autobiography, *On the Plantation*, appeared in 1892.

HARRIS, Paul P. (1868–1947). American lawyer, founder of Rotary. B. in Wisconsin, he became a lawyer in Chicago in 1896, where he founded the first Rotary Club in 1905, and the International Association in 1912.

HARRIS, Roy (1898–). American composer. B. in Oklahoma, son of a farmer and an English-born mother, he served in the F.W.W., was then a truck-driver until 1921, when he studied music at the Univ. of California. Notable among his symphonies are the Third, Fifth and Sixth ('Lincoln'), and among other works his cantata *Abraham Lincoln walks at Midnight* and the orchestral piece *When Johnny Comes Marching Home*.

HARRIS. Southern part of Lewis-with-Harris Island, in the Outer Hebrides, in Inverness co., Scotland. It is a barren stretch, cultivated by crofters; sheep are reared on the rough upland pastures. *Harris tweed* is made from the hand-woven wool of the black-face or Cheviot sheep. Tarbet is the chief town. Area 176 sq. m.; pop. (1961) 3,285.

HARRISMITH. Town in the Orange Free State, S. Africa, 45 m. N.W. of Ladysmith: it is a market centre and a health resort, and is named after Sir Harry Smith (1787–1860), Governor of the Cape 1847–52. Pop. (1960) 12,786 (3,200 white).

HARRISON, George Bagshawe (1894–). British scholar. Prof. of Michigan univ., U.S.A., 1949–64, he has pub. many studies on Shakespeare and other Elizabethan subjects, incl. *A Companion to Shakespeare* (with Harley Granville-Barker: 1934), and three Elizabethan Journals.

HARRISON, Rex Carey (1908–). British actor. Lancashire-born, he had his first big success in *French Without Tears* (1936), and subsequently often appeared in London and New York, notably as Prof. Higgins in the musical *My Fair Lady* (1956). His films incl. *Blithe Spirit* (1944), and the role of Caesar in *Cleopatra* (1962). He was formerly m. to actress Lilli Palmer (1943–57) and Kay Kendall (1957 until her d. in 1959), and in 1962 m. Rachel Roberts.

not to Russia, which was rejected. He was captured in May, and committed suicide.

HINCHINGBROOKE, Victor Montagu, Visct. See SANDWICH, 10th earl of.

HINCKLEY. English market town (U.D.) in Leicestershire, 12 m. S.W. of Leicester. It manufactures boots, shoes, and hosiery. Pop. (1961) 41,573.

HINDEMITH (-mit), Paul (1895–1963). German composer. A fine viola player, he led the Frankfurt Opera Orchestra at 20, and taught composition at the Berlin Hochschule for music 1927–33, when the modernity of his work, e.g. the *Philharmonic Concerto*, led to a Nazi ban. In 1939 he went to the U.S., where he taught at Yale, and in 1952 became prof. of musical theory at Zürich. His works incl. many for chamber ensemble and orchestra, and the operas *Cardillac* (1926, revised 1952) and *Mathis der Maler* (1938).

HINDENBURG, Paul Ludwig Hans von Beneckendorff und von (1847–1934). German soldier and statesman. B. at Posen of a Prussian junker family, he was commissioned in 1866, served in the Austro-Prussian and Franco-German wars, and retired in 1911. Given the command in E. Prussia in Aug. 1914, he received the credit for the defeat of the Russians at Tannenberg, and was promoted to supreme commander and made a field marshal. Henceforward he and Ludendorff practically directed Germany's policy until the end of the war. He was elected Pres. of the German rep. in 1925, and re-elected in 1932. He invited Hitler to assume the Chancellorship in Jan. 1933, and his last public act was to congratulate him on the 'blood-bath' of June 1934. He d. on his Prussian estate, and was buried at Tannenberg.

HINDENBURG. Name given in 1915 to ZABRZE in honour of General H. H.: reverted to its old name in 1945.

HINDI. An Indian language, comprising an Eastern and a Western variety, ultimately derivable from Sanskrit, but descended from different Prakrit dialects. From Western H. Hindustani (q.v.) was derived; it is the official language of the Rep. of India.

HINDUISM. The religion of the Hindus; but the term includes the religious beliefs and also the system of caste and other social customs which have been inherited through the ages. Brahma, the Supreme Spirit, always existing and eternal, the original cause and the final home of everything that is, is envisaged as existing in and working through a triad of gods (the Trimurti), known as Brahma the creator, Vishnu the preserver, and Siva the destroyer and also the generator of new life. Vishnu and Siva are the principal objects of popular adoration, and the Vaishnavas and Saivas are the chief religious sects. Vishnu is considered to have been incarnated in a number of *avatars*, one of whom, Krishna, is perhaps the most popular deity. In addition to these principal gods, there is a vast host of minor divinities, demons, ghosts, and spirits, etc., who are popularly worshipped. But educated Hindus regard these and the Trimurti as expressions of the one great, all-comprehending Supreme Spirit.

The basic theological beliefs are the transmigration of souls, and *Karma* (deed), according to which a man's position in this life is affected by what he has done in an immensely long succession of past existences, and will affect his position in countless lives to come. The practice of H. is a complex of rites and ceremonies performed within the framework of the caste system under the supervision of the Brahman priests and teachers. Temple worship is almost universally performed, and there are many festivals. Benares is the principal of the holy cities, and the Ganges is the holiest river. In India and the rest of Asia there are over 400 million Hindus.

HINDU KUSH (hin'doo koosh). Range of mountains in central Asia running W.S.W. from the Pamir region to the Koh-i-Baba. a distance of about 500 m.

HINDU KUSH. Once one of the loneliest places in the world, it was a major obstacle to trade and communications between central and southern Asia until the completion in 1964 of the Salang Tunnel and a new highway system from Kabul to the Oxus valley via Doshli.

Courtesy of the Afghan Publicity Bureau.

The highest summit is Tirich Mir, 25,260 ft., in W. Pakistan.

HINDU MAHASABHA. Hindu communal organization. Founded in 1908, it supported the movement for national independence, but differed from the Congress Party in its more conservative political and social policy, and in its emphasis on purely Hindu communal claims, as opposed to the Congress policy of Hindu-Moslem co-operation. The H.M. opposed the partition of India in 1947, and one of its members assassinated Gandhi.

HINDUSTANI. An Indian language, called by Indians Urdu. Originally the language of the bazaars of Delhi, and a local variety of Western Hindi, it was adopted by the troops of the Mogul Empire, and rapidly became a *lingua franca* throughout India.

HINKLER, Herbert John Louis (1892–1933). Australian pilot who in 1928 made the first solo flight from England to Australia. He was killed while making another attempt to fly to Australia.

HINSHELWOOD, Sir Cyril (1897–1967). British chemist. Dr. Lee's prof. of chemistry at Oxford 1937–64, he was awarded a Nobel prize in 1956 (jointly with Nikolai Semenov of Russia) for discoveries in the field of chemical kinetics, and was pres. of the Royal Society 1955–60. His works incl. *The Chemical Kinetics of the Bacterial Cell* (1946).

HINTON, Christopher, baron H. of Bankside (1901–). British nuclear industrialist. An apprentice in a railway workshop, he won a scholarship to Cambridge, and was prominent in the British development of commercial power. From 1957–64 he was first chairman of the C.E.G.B. He was created a life peer 1965.

HIPPARCHUS (hipahr'kus) (c. 555–514 B.C.). Greek tyrant. Son of Pisistratus (q.v.), he was assoc. with his elder brother Hippas as ruler of Athens 527–14. His affection being spurned by Harmodius, he insulted the latter's sister, and was assassinated by Harmodius and Aristogiton.

HIPPARCHUS (fl. 160–145 B.C.). Gk. astronomer, a native of Nicaea in Bithynia. He invented trigonometry, calculated the lengths of the solar year and the lunar month, discovered the precession of the equinoxes, made a catalogue of 800 fixed stars, and advanced Eratosthenes's method of determining the situation of places on the earth's surface by lines of latitude and longitude.

WARREN HASTINGS. By Tilly Kettle. Photo: N.P.G.

monarch of the Alouite dynasty. He personally suppressed the Rif revolt of 1958-9 and directed rescue operations in the Agadir earthquake 1960, and succeeded to the throne on the death of his father Mohammed V in 1961, also taking over the premiership. In 1962 he introduced his country's first constitution and in 1965 became P.M.

HASTINGS, Francis Rawdon-Hastings, 1st marquess of (1754-1826). British soldier and statesman. He was Gov.-Gen. of Bengal 1813-21, and received in 1816 his marquissate for his successful war against the Gurkhas of Nepal. By his victory in 1817-18 over the Mahrattas he estab. British supremacy in C. India, and secured Singapore in 1819.

HASTINGS, James (1852-1922). Scottish biblical scholar. A minister of the Scottish Free Church 1884-1911, he compiled a *Dictionary of the Bible* (1898-1904), *Encyclopaedia of Religion and Ethics* (1908-22), etc.

HASTINGS, Sir Patrick (1880-1952). British barrister. Becoming a K.C. in 1919, he appeared in the Vaquier (1924) and Rouse (1931) trials and was knighted in 1924. A Labour M.P. 1922-6, he was Attorney-General in the first Labour govt., and achieved success as a playwright with *The Blind Goddess* (1947).

HASTINGS, Warren (1732-1818). British administrator. B. in Oxon, he went to India in 1750 as a clerk in the E. India Co.'s service. His services during the war in Bengal attracted Clive's attention, and in 1761 he was promoted to the council at Calcutta. After leave in England 1764-9 he received an appointment at Madras, and in 1772 was appointed Gov. of Bengal; this title was exchanged in 1774 for that of Gov.-Gen. of India. His aggressive war against the Rohillas, and the hanging of a Brahman who had accused H. of forgery, aroused a strong opposition against him. When in 1780 the Indian empire was threatened by the French and their ally Hyder Ali of Mysore, H. saved the situation by prompt action. He resigned and returned to England in 1785. He was impeached in 1788 for corruption and cruelty, but acquitted in 1795. His remaining years were spent at his seat at Daylesford, Wores.

HASTINGS. English holiday resort (co. bor.) and one of the Cinque Ports, in Sussex. The battle of H. on 14 October 1066 took place on the hill of Senlac, 6 m. inland. Ruins of the Norman castle stand on the West Cliff. St. Leonards, formerly a separate resort, is within the bor. of H. It is scheduled for major redevelopment. Pop. (1961) 66,346.

HATAY (hat'i). Turkish il on the E. Mediterranean coast. Its cap. is Antioch, chief port Iskenderun (q.v.). It was included in French-mandated Syria in 1919,

made an autonomous sanjak in 1937, -restored to Turkey 1939. Area 2,200 sq. m.; pop. (1965) 482,936.

HATFIELD. Town in Herts, England, 5 m. E. of St. Albans, formerly Bishop's H., after a palace for the bishops of Ely erected there in the 12th cent. This residence passed to the Crown in 1538, and was given to Robert Cecil, earl of Salisbury, in exchange for Theobalds in 1607. The present mansion, seat of the marquess of Salisbury, but partly a museum and art gallery, was completed in 1611, and is a fine specimen of Jacobean architecture. The Coll. of Technology became a polytechnic (q.v.) in 1969. Pop. (1961) 20,504.

HA THAWAY, Ann (1556-1623). Englishwoman, dau. of a yeoman farmer, who m. Shakespeare in 1582. Her cottage at Shottery was bought and restored by the trustees of Shakespeare's birthplace in 1892.

HATHOR. Sky goddess worshipped in ancient Egypt. On her head she usually wears a cow's horns with the solar disc.

HATTERAS. U.S. cape on the Atlantic coast, N. Carolina, site of many shipwrecks. H. Inlet is a noted fishing ground.

HAUPTMANN (howpt'mahn), Gerhart (1862-1946). German dramatist and novelist. B. in Silesia, he turned from sculpture to literature, and in 1889 pub. the first of his naturalistic dramas, *Vor Sonnenaufgang*; the greatest and most powerful of the works that followed is *Die Weber* (1892). His comedy, *Der Biberpelz* (1893), has retained its place on the German stage. Subsequently H. turned to historical, mystical and allegorical, and legendary subjects, and besides many more plays wrote the novels *Der Narr in Christo Emanuel Quint* (1910), *Atlantis* (1912), and *Der Ketzer von Soana* (1918), and an epic poem *Till Eulenspiegel* (1927). Later he treated autobiographical themes (*Die Finsternisse*, 1937), and themes of classical antiquity. He was awarded a Nobel Prize in 1912.

HAUSAS (how'saz). Mohammedan Negro people of W. Africa, chiefly inhabiting N. Nigeria. The H. language is accepted as a *lingua franca* over much of W. Africa; it is assigned to the Hamitic family.

HAUSHOFER (hows'höfer), Karl (1869-1946). German originator of the science of geopolitics. B. in Munich, he became a major-gen. in the Bavarian Army, and from 1921 was prof. of geography at Munich, providing Nazi ideology with the theory of *Lebensraum* (living space). He committed suicide.

HAUSSMANN (ösmahn'), Georges Eugène, baron (1809-91). French administrator, chiefly famous for his re-planning of Paris. He became a prefect of the Seine in 1853, and widened streets, laid out boulevards and parks, and improved the water supply.

HAUTES-ALPES. Dept. of FRANCE.

HAVA'NA. Capital, commercial centre, and chief port of Cuba, situated on the N. coast of the island,

HAVANA. In the 17th century the Spanish gold fleets made their rendezvous here, but in the lay-out of the magnificent modern city it is the influence of the U.S.A. which is predominant in its planning. Courtesy of the Cuban Embassy.

later forms of social organization and belief. The changes brought about by the Industrial Revolution, and the accompanying rise of political economy to the status of a science, forced the historian to turn his attention to economic questions. Marx's attempt to find in economic development the most important, though by no means the only, determining factor in social change, an argument partly paralleled in Buckle's *History of Civilization* (1857), has influenced all serious historians since. A comparative study of civilizations is offered in A. J. Toynbee's *Study of History* (1934–54).

HITCHCOCK, Alfred (1899–). British film director. Experienced in many branches of the film industry, he is a master of suspense and film technique, and his films incl. *Thirty-nine Steps* (1935), *Rebecca* (1940), *Rope* (1948), *Strangers on a Train* (1951), *Rear Window* (1954), *Vertigo* (1958), *Psycho* (1960), *The Birds* (1963).

HITCHENS, Ivon (1893–). British artist. B. in London, the son of a painter, he held his 1st one-man exhibition in 1925. Remarkable for his sensuous use of paint, he is equally successful in the flower study or landscape as in murals for the English Folk Dance Society (1954) or the Univ. of Sussex (1963).

HITCHIN, English market town (U.D.) in Herts, 30 m. N.N.W. of London, with a Perpendicular style parish church. Eugene Aram (q.v.) at one time lived in Golden Square. The cultivation and distillation of lavender, introduced here from Naples in the 16th cent., still continues. Pop. (1961) 24,243.

HITLER, Adolf (1889–1945). German dictator. B. at Braunau-am-Inn, in Austria, the son of a customs official, he spent his early years in poverty in Vienna and Munich. After serving as a volunteer in the German army during the F.W.W., he was employed as a spy by the military authorities in Munich, and in 1919 joined in this capacity the German Workers' Party, founded by Anton Drexler. By 1921 he had assumed its leadership, renamed it the National Socialist German Workers' Party, provided it with a programme, and rallied a following. Having led an unsuccessful rising at Munich in 1923, he was sentenced to 9 months' imprisonment, during which he wrote his political testament, *Mein Kampf* (*My Struggle*). The party achieved national importance only in 1930, when the big industrialists began to support it; by 1932, although Hindenburg defeated H. in the presidential elections, it formed the largest group in the Reichstag. As the result of an intrigue directed by von Papen, H. became Chancellor in a Nazi-Nazi coalition on 30 Jan. 1933.

The opposition were rapidly suppressed, the Nationalists removed from the govt., and the Nazis declared the only legal party. In 1934 H. succeeded Hindenburg as Head of the State, with the title of Fuehrer. Meanwhile, the drive to war began; Germany left the League of Nations, conscription was reintroduced, and in 1936 the Rhineland was occupied. H. and Mussolini, who were already co-operating in Spain, formed an alliance in 1937. The new year saw the annexation of Austria, and the cession of Sudetenland under the Munich agreement. The rest of Czechoslovakia was annexed in March 1939. The non-aggression pact with Russia in Aug. was followed in Sept. by the invasion of Poland and the declaration of war by Britain and France. (See SECOND WORLD WAR.) H. narrowly escaped death in 1944 from a bomb explosion prepared by high-ranking officers. On 29 April 1945, when Berlin was largely in Russian hands, he m. Eva Braun in the Reichschancellery, and on the following day committed suicide with her, both bodies afterwards being destroyed by burning.

HITTITES (hit'tits). A group of peoples who inhabited Asia Minor and N. Syria from the 3rd to the 1st millennium B.C. The original Hs., a people of Armenoid type, inhabited a number of city-states in

E. Asia Minor, one of which, Hatti, gained supremacy over the others. An Indo-European people invaded the country c. 2000 B.C., made themselves the ruling class, and intermarried with the original inhabitants. Hatti, then known as Hattushash, became the capital of a strong kingdom, which overthrew the Babylonian empire. After a period of eclipse the H. New Empire became a great power (c. 1400–1200 B.C.) which successfully waged war with Egypt, until it was overthrown by the so-called Sea Peoples. Small H. states then arose in N. Syria, the most important of which was Carchemish; these were conquered by the Assyrians in the 8th cent. B.C., Carchemish in 717.

The Hs. used a cuneiform script, modelled on the Babylonian for ordinary purposes, and a 'hieroglyphic' script for monumental inscriptions. The H. royal archives were discovered at Hattushash in 1906–7, and deciphered in 1915 by Hrozný.

HOANG-HO. Another form of HWANG-HO.

HOARE, Sir Samuel. See TEMPLEWOOD.

HOATZIN (hō-at'sin). Tropical S. American bird (*Opisthocomus hoatzin*), the only representative of its family and resembling a small pheasant in size and appearance: adults are olive with white markings above and red-brown below. The young are hatched naked, and have well-developed claws on the 'thumb and index fingers' of the wing, so that they can crawl reptilian-fashion about the tree – a reminder of their ancestry. On account of its strong musky smell, the H. is known in British Guiana as the 'stink-bird'.

HOBART. Capital of Tasmania, Australia, situated on the estuary of the river Derwent, on the S. coast.

HOBART. From Mount Wellington the bright lights of the port area can be seen to the far right, and the circle to the left is the Tasmanian Cricket Association Ground. The Floating Bridge over the Derwent leads to the spreading residential suburbs, and in the distance beyond Mount Rumney are the lights of the airport. Courtesy of the Mercury, Hobart.

Founded in 1804, the city was called after Lord H., who was Secretary of State for the Colonies at the time. It has a fine harbour. Pop. (1959) 109,200.

HOB'EMA, Meindert (1638–1709). Dutch landscape painter. B. at Amsterdam, he came under the influence of Ruysdael, and his pictures show the peace and charm of the Dutch countryside. Most of his best works, incl. his masterpiece, 'Avenue at Middelhamis' (National Gallery, see illus. p. 535) are in English galleries.

HOBBS, Thomas (1588–1679). English political philosopher. B. near Malmesbury, he was ed. at Oxford, and as a strong royalist withdrew to Paris in 1640, and was tutor to the exiled Prince Charles 1646–8. He pub. mathematical and scientific works and classical translations, but his most important work was his *Leviathan* (1651), an exposition of the totalitarian state.

HOBBS, Sir John ('Jack') (1882–1963). British cricketer. A most accomplished batsman, he achieved

British lawyer. He became a barrister in 1843, a judge of the Queen's Bench Division in 1876, and in the same year was knighted. He appeared for the defence against Arthur Orton (q.v.).

HAWKINS, Jack (1910–). British actor-producer. A student of Italia Conti, he estab. a reputation in courageous, masculine, 'British' roles e.g. the film *The Cruel Sea*; later films incl. *Ben Hur* and *Lawrence of Arabia* (1962).

HAWKINS, Sir John (1532–95). English navigator. B. in Plymouth, he made 2 successful voyages to the Guinea coast, but a 3rd in 1567, in which he was accompanied by his cousin Francis Drake, ended in the almost complete destruction of his fleet. In 1573 he became treasurer (later comptroller) of the navy, and in 1588 was knighted for his services against the Armada. He d. while on an expedition to the W. Indies.

HAWKINS, Sir Richard (c. 1562–1622). English navigator. The son of Sir John H., he sailed to the W. Indies with his uncle, William H., in 1582, and in 1588 was given a command against the Armada. In 1593 he set out on an expedition against Spanish possessions, was captured in 1594, and not released until 1602. In 1603 he was knighted, and in 1604 became M.P. for Plymouth and vice-admiral of Devon.

HAWK-MOTH. Family of moths (Sphingidae) incl. some 1,000 species distributed throughout the world, but mainly tropical. The death's head H. (q.v.) is the largest of British moths; and the eyed H. (*Smerinthus ocellatus*), with a purplish spot on the hind wings, is another British species. The European pine H. (*Sphinx pinastri*) has larvae which may devastate

Continental forests. Some S. American Hs. closely resemble humming birds and the humming bird H. (*Macroglossa stellatarum*) is found in southern England.

HAWKSMOOR, Nicholas (1661–1736). English architect. He entered Wren's office at 18, and assisted him at the City churches, Greenwich Hospital and St. Paul's. Later he was joint architect with Vanbrugh of Castle Howard and Blenheim. Until recently the originality of his work has been undervalued, but in 1962 the H. Society was founded to promote its study. His dramatic style can be seen in our illus. of Christchurch, Spitalfields, London, built 1723–9.

HAWORTH (how'orth), Sir Walter Norman (1883–1950). British chemist. He was Director of Chemistry at Birmingham univ. (1925–48). His success in synthesizing Vitamin C. gained him a Nobel prize in 1937.

HAWORTH. Small English town in Yorkshire (W.R.), 4 m. S. of Keighley of which it forms part. The parsonage that was the home of the Brontës is a museum. Pop. (est.) 6,000.

HAWTHORN. Common name for shrubs and trees of the *Crataegus* genus, of the Rosaceae family. The common H., may or whitethorn (*C. oxyacantha*), a thorny shrub or small tree growing 10–12 ft. in height, bears clusters of white or pink flowers followed by groups of red berries. It is indigenous to Britain and much of Europe, N. Africa and W. Asia, and has been naturalized in N. America and Australia.

HAWTHORNE, Nathaniel (1804–64). American author. B. at Salem, Mass., he was strongly impressed in boyhood with the Puritan tradition of the area. His early attempts at writing stories and sketches were

HAWTHORN

financially unrewarding, but he won immediate success with *The Scarlet Letter* (1850), a story of the retribution overtaking the parents of an illegitimate child, written while working as a customs official (surveyor of the Port of Salem 1846–9). Later were *The House of the Seven Gables* (1851), *The Blithedale Romance* (1852) and such vols. of tales for children as the classic legends of *Tanglewood Tales* (1853).

HAWTREY, Sir Charles (1858–1923). British actor-manager, famous for his comedy role of Douglas Cattermole in *The Private Secretary* (1883).

HAY, Ian. Pseudonym of British novelist and playwright Maj.-Gen. John Hay Beith (1876–1952). He wrote the light comedies *Tilly of Bloomsbury* (1919), *Housemaster* (1936) and *The White Sheep of the Family* (1951; with L. Du Garde Peach); and the non-fiction war book *The First Hundred Thousand* (1915).

HAY, Will (1888–1949). British comedian, celebrated as the incompetent schoolmaster of St. Michael's on music-hall and screen: he was also a notable amateur astronomer.

HAYDN (hidn), Franz Joseph (1732–1809). Austrian composer. B. in Lower Austria, he was Kapellmeister 1761–90 to Prince Esterházy at Eisenstadt and Esterházy, where he had ample opportunity to develop his native originality. He visited London in 1791–2 and again 1794–5, and to these visits we owe the 'Surprise', 'Military', 'Clock', 'Drum-roll', 'London', and 'Oxford' symphonies. For the Eng. public also were written the still popular oratorios *The Creation* and *The Seasons*.

H. established the regular symphonic form and the composition of the orchestra which were to be used by Mozart and Beethoven. He was the first great master of the quartet. He wrote operas, church music, pieces for various instruments, and songs, and composed the 'Emperor's Hymn', subsequently adopted as the Ger. national anthem.

HAYDON, Benjamin Robert (1786–1846). British

artist. B. at Plymouth, he settled in London and became celebrated for his gigantic canvases, attempts at 'high art', incl. 'Christ's Entry into Jerusalem' (1820, now in Philadelphia). He is now better appreciated in genre pictures, e.g. 'The Mock Election' and 'Chairing the Member'; and for his lively autobiography and journals. Perpetually harassed financially, he shot himself.

HAYEK (hi-ek), Friedrich August von (1889–). Austrian economist. B. in Vienna. He taught at the L.S.E. 1931–50, becoming

Courtesy of the Warburg Institute.

NATHANIEL HAWTHORNE by Charles Osgood.
Courtesy of the Essex Institute.

HOFMANN, Josef Casimir (1876–1957). Polish pianist, a U.S. citizen from 1926. A student of Rubinstein, and a brilliant executant, he also wrote a symphony and 5 concertos.

HOFMANNSTHAL (hōf'mahnstahl), Hugo von (1874–1929). Austrian poet. B. in Vienna, he reflects in his lyrics and lyrical plays (*Der Tor und der Tod*, 1893, etc.) the melancholy of a waning culture. His dramas deal with themes of classical antiquity or of the Middle Ages (*Jedermann*). He also wrote librettos for a number of operas by Richard Strauss.

HOGARTH, William (1697–1764). British artist and engraver. B. in London, he was apprenticed to an

The artist at work in his studio, a self-portrait. Photo: N.P.G.

engraver, and from 1720 studied painting with Sir James Thornhill whose daughter he clandestinely married in 1729. His *A Harlot's Progress* (1731), a series of 6 pictures, engraved in 1732, estab. his fame and was followed by *A Rake's Progress* (1735); his masterpiece *Marriage à la Mode* (1745); *Industry and Idleness* (1749) and *The Four Stages of Cruelty* (1751). His penetrating satire of the follies and vices of his age, command of group composition and skill in genre painting are uniquely English in tone. In portraiture he has a sympathetic directness that did not appeal to the fashionable world of his time. Paul H. (1917–), British artist-reporter, is his descendant. He has pub. vols. of drawings of people and landscapes in 3 continents, and has made a name as a book illustrator for Dickens, O. Henry, Brendan Behan (q.v.), etc.

HOBGEN, Lancelot (1895–). British scientist. Prof. of social biology at London 1930–7, natural history at Aberdeen, and zoology (1941–7) and medical statistics (1947–61) at Birmingham, he is skilled in popularization, e.g. *Mathematics for the Million* (1936); other books incl. *Chance and Choice* (1950–5) and *Mathematics in the Making* (1960).

HOGG, James (1770–1835). Scottish poet, known as the 'Ettrick Shepherd'. B. in Ettrick Forest, Selkirkshire, he worked as a shepherd at Yarrow (1790–9), and until 30 was illiterate. His *Scottish Pastorals* (1801) are now forgotten, but his novel *Confessions of a Justified Sinner* (1824) is a masterly portrayal of personified evil.

HOGG, Quintin McGarel (1907–). British Cons. politician, son of Lord Hailsham (q.v.) and grandson of Quintin H. (1845–1903), the merchant philanthropist who in 1882 estab. in Regent Street, London, a Youths' Christian Institute from which the Regent Street Polytechnic, and similar institutions for technical education, developed.

A fellow of All Souls Coll., Oxford, 1931–8, H. was then an M.P. until he succeeded his father as 2nd visct. Hailsham in 1950,

renouncing the title in 1963 to re-enter the Commons. He was First Lord of the Admiralty 1956–7 and Min. of Education from 1957 until his appointment to the newly created post of Min. of Science and Technology 1959–64. A member of the Tory Reform Committee, he in 1947 pub. *The Case for Conservatism* and is remembered for his rallying the party conference at Blackpool in 1958 by ringing a handbell. In the Heath shadow cabinet he assumed responsibility for Home Affairs.

HOGGAR, Another form of AHAGGAR.

HOGMANAY (hog'manā). Scottish name for the last day of the year and also for the oatmeal cakes given to the children as they go from house to house singing carols.

HOHENSTAUFEN (hō'enstowfen). Name of a German princely family, members of which held the title of Holy Roman Emperor 1138–1208 and 1214–54. The most notable of the H. emperors were Frederick I, Henry VI, and Frederick II (qq.v.).

HOHENZOLLERN (hō'entsollern). Name of a German family, originating in Württemberg, the main branch of which held the titles of elector of Brandenburg from 1415, king of Prussia from 1701, and German Emperor from 1871. The last emperor, William II, was dethroned in 1918. Another branch of the family were kings of Rumania 1881–1947.

HOKKAIDO (hoki'dō). Most northerly of the 4 main islands of Japan, separated from Honshu on the S. by Tsugaru Strait and from Sakhalin on the N. by Soya Strait. Snow-covered for 6 months of the year, H. was little developed until the Meiji Restoration of 1868 when disbanded Samurai were settled. Natural resources incl. coal, mercury, manganese, oil and natural gas, timber and rich fisheries. Intensive exploitation followed the S.W.W. incl. heavy and chemical industrial plants, development of electric power, and dairy farming. The cap. is Sapporo, founded 1871, which is the centre of the road system and site of H. Univ. (1918): pop. (1965) 821,000. An artificial harbour has been constructed at Tomakomai, and an undersea rail tunnel is planned to link Hakodate with Aomori (Honshu) by 1975. Area c. 30,300 sq. m.; pop. (1968) 5,000,000 incl. 16,000 Ainu (q.v.).

HOKUSAI (hō'kōōsahi) (1760–1849). Japanese artist. B. at Yedo, he was originally a student of engraving. Very prolific, he produced vital interpretations of everyday Japanese life in prints, water-colours and book illustrations, and was equally at home with a picture on a grain of rice or more than life-size figures.

HOLBACH (ōlbakh'), Paul Heinrich Dietrich, baron d' (1723–89). French materialist philosopher. B. in the Palatinate, he settled in Paris and became a naturalized Frenchman. He contributed articles on scientific subjects to the *Encyclopédie*, and pub. the *Système de la Nature* (1770).

HOLBEIN (hol'bin), Hans, the Younger (1497–1543). German painter. B. at Augsburg, he was the son and pupil of Hans H., the Elder (c. 1460–1524), who was also b. at Augsburg, and whose masterpiece is the altar-piece of St. Sebastian (1515) in the Munich

HOLBEIN THE YOUNGER

A study of Christina of Denmark (1523–90) who married in 1534 the duke of Milan. Courtesy of the National Gallery.

QUINTIN HOGG

Photo: Bassano and Vandyk Studios.

blood from returning after the impulse. At the same time the right ventricle pumps used blood to the lungs through the pulmonary artery to be aerated. After the heart's contraction it dilates (diastole) and refills, used blood from the veins entering the right auricle and aerated blood from the lungs entering the left auricle. The timing of the heart's beat is regulated by its own local nervous system. Heart disease is due chiefly to disease or overwork of its muscle, defects of its valves, or disorder of its nervous system.

The first transplant of a human H. was carried out 3rd Dec. 1967 at Groote Schuur Hospital, Cape Town, by Christiaan N. Barnard, when Louis Washkansky received the H. of a woman, but d. 18 days later of pneumonia.

HEARTBURN. Irritation of the gullet by excessively acid stomach contents. The acid may be the hydrochloric acid which is a normal part of the digestive fluid, but present in excess. This is often associated with duodenal ulcer, and the pain is worst when the stomach is empty, and is relieved by eating. The acid may, on the other hand, be one of the organic acids produced by fermentation when the hydrochloric acid is deficient, e.g. lactic, acetic, and butyric acids. This is common in pregnancy.

HEAT. A form of energy which by its addition to or abstraction from a body causes a rise or fall in its temperature. It always tends to flow from a region of higher temperature to one of lower temperature. The effect of heat on a substance may be simply to raise its temperature, to cause it to expand, to melt it if it is a solid, to vaporize it if it is liquid, or to increase its pressure if it is a gas.

The quantity of heat is measured by the extent to which it will raise the temperature of a standard substance. See **BRITISH THERMAL UNIT**.

The name *specific heat* is given to the ratio between the heat required to raise the temperature of a given mass of a substance through a given range of temperature, to the heat required to raise the temperature of an equal mass of water through the same range. For example, the specific heat of copper is 0.095, i.e. it requires 0.095 Btu to heat 1 lb. of copper through 1 deg F. The *mechanical equivalent of heat* is the ratio of the amount of work done to the quantity of heat produced.

There are three ways by which heat may be transferred from one place to another, viz. (a) *convection* - transmission through a fluid or a gas by currents, as when the air in a room is warmed by a fire or radiator, or the water is heated in a domestic hot-water system; (b) *conduction* - when the heat passes from one part of a medium to neighbouring parts with no visible motion of the medium accompanying the transfer of heat, as when the whole length of a metal rod is heated when one end is held in a fire; (c) *radiation*. Radiant heat is of the same nature as light. It can pass through a vacuum, travels at the same speed as light, can be reflected and refracted, and does not affect the medium through which it passes.

HEATH, Edward Richard George (1916-). British Cons. politician. In the Administrative Civil Service 1946-7, he entered parliament in 1950, becoming Parl. Sec. to the Treasury and Govt. Chief Whip (1955-9), Min. of Labour (1959-60), and, as

HEART. A, vena cava; B, aorta; C, pulmonary artery; D, pulmonary vein; E, right auricle; F, left auricle; G, right ventricle; H, left ventricle.

Lord Privy Seal (1960-3), was responsible for the negotiations concerning Britain's projected membership of the E.E.C., winning the Charlemagne prize in 1963. He was Sec. for Industry, Trade and Regional Development, and Pres. of the Board of Trade 1963-4, and succeeded Home as Cons. leader 1965.

HEATH and HEATHER. Popular names for plants of the *Erica* genus, Ericaceae family; also used for the common ling (*Calluna vulgaris*). In Britain the most common species is the bell heather, *E. cinerea*.

HEATHROW (hêth'rô). Location in the Greater London bor. of Hounslow, England, site of Heathrow Airport, London, opened 1946.

HEAT-STROKE. An acute seizure resulting from paralysis of the heat-regulating mechanism. The most usual cause is hard work in a hot, wet, still atmosphere. Drinkers and sufferers from malaria and other fevers are especially liable. The patient feels ill with headache, weakness and giddiness, and falls unconscious. The skin feels hot and very dry, and the temp. may rise to 112°F (44.4°C). Life may be saved by prompt spraying with cold water in a cool draught, blood-letting, saline injections, and heart stimulants.

HEAVEN. In the theology of Christianity and most of the other world religions, the place of the blessed in the next world. Many attempts have been made, particularly by Christian and Moslem writers, to describe its joys, but modern theologians usually prefer to describe it as a place or state in which the soul sees God as He really is - enjoys the Beatific vision.

HEAVISIDE, Oliver (1850-1925). British physicist. His theoretical studies of electricity pub. in *Electrical Papers* (1892) had considerable influence on long-distance telephony. In 1902 he predicted the existence of an ionized layer of air in the upper atmosphere which was verified by Kennelly (q.v.) and was later known as the Kennelly-H. or H. layer but is now called the E layer. Deflection from it makes possible the transmission of radio signals round the world, which would otherwise be lost in outer space, and its presence is connected with the phenomenon of radio fading. See **IONOSPHERE**.

HEAVY WATER. Deuterium oxide (D₂O), i.e. water containing deuterium (q.v.) instead of hydrogen (mol. wt. 20 against 18 for ordinary water). Its chemical properties are identical with those of ordinary water, its physical properties differ slightly, density at 25°C, 1.1056; m.p. 3.8°C; b.p. 101.42°C; temperature of maximum density 11.6°C. It occurs in ordinary water in the ratio of about one part by weight of deuterium to 5,000 parts by weight of ordinary hydrogen and can be concentrated by electrolysis, the ordinary water being more readily decomposed by this means than the H.W.

HÊ'BÊ. In Greek mythology, the goddess of youth, dau. of Zeus and Hera, and handmaiden of the gods.

HEBER, Reginald (1783-1826). British churchman and hymn writer. He took orders in the C. of E. in 1807, and in 1823 became bp. of Calcutta. Most famous of his hymns is 'From Greenland's Icy Mountains'.

HEBREW. The language of the O.T.; a branch of the Semitic languages, and closely related to Aramaic. By the 1st cent. A.D. it had become the language of the schools, being supplanted by Aramaic as the language of the people. The majority of the roots are tri-consonantal, and the modifications of the sense are effected by changing the vowels, or adding prefixes or affixes. The script, written from right to left, originally represented only the consonants; in the 7th and 8th cents. systems of vocalization by means of adding points and strokes were devised.

During the 18th and 19th cents. an improved Hebrew, based on classical models, was evolved and adapted to a mod. literature of Jewry. The rise of

HOLYROOD, and on the floodlit balcony the Queen.

Photo: George Outram & Co.

for blasphemy in a public lecture. He invented the term 'secularism' as a definition of his views, was largely responsible for the abolition of the newspaper tax in 1855, and supported the co-operative movement.

HOLYOAKE, Keith Jacka (1904–). New Zealand National Party statesman. Great-grandson of an English settler of 1842, he worked at 12 on his father's farm and became a successful sheep farmer. Entering parliament in 1932, he was deputy P.M. and Min. for Agriculture 1949–57, and succeeded Sir Sidney Holland (q.v.) as P.M. for 2 months in 1957. Favouring a property-owning democracy, he was returned to power in 1960, 1963 and 1966.

HOLY OFFICE. The Inquisition (q.v.).

HOLY ORDERS. The estate or condition of Christian priests, conferred by the laying on of hands of a bishop. In the C. of E. there are three orders – bishop, priest, and deacon; but in the R.C. Church H.O. include, in addition, sub-deacons, acolytes, exorcists, readers, and door-keepers.

HOLY ROMAN EMPIRE. Name applied to the empire of Charlemagne and his successors, and to the German Empire 962–1806, both being regarded as a revival of the Roman Empire. See GERMAN HISTORY; CHARLEMAGNE; HABSBURGs; etc.

HOLYROOD HOUSE. Royal residence in Edinburgh, Scotland. The palace was built (1498–1503) on the site of a 12th cent. abbey by James IV. It has associations with Mary Queen of Scots and Charles Edward, the Young Pretender.

HOLY SHROUD. See TURIN.

HOMBURG. Town and spa at the foot of the Taunus mts., W. Germany; has given its name to a soft felt hat, made fashionable at H. by Edward VII. Pop. (est.) 25,000.

HOME (hūm), Sir Alec (Alexander) Frederick Douglas- (1903–). British Cons. politician. Ed. at Eton and Christ Church, Oxford, he was M.P. for Lanark 1931–45 (being P.P.S. to Neville Chamberlain 1937–9), and from 1950 until he succeeded his father as 14th earl of H. in 1951: he had previously been known by the courtesy title Lord Dunglass. After being Min. of State for Scotland 1951–5, he was Sec. of State for Commonwealth Relations 1955–60, and Foreign Affairs 1960–3. He was chosen to succeed Macmillan as P.M. 1963, when he renounced his peerages, failed to win the 1964 general election, and resigned as Cons. leader

SIR ALEC DOUGLAS-HOME

Photo: Photo Centre Ltd.

1965. His younger brother

William Douglas-Home (1912–) has stood several times unsuccessfully for Parliament, and has written a number of plays, e.g. *The Chiltern Hundreds*, *The Reluctant Debutante*, and *The Reluctant Peer*.

HOME. Daniel Dunglas (1833–86). British spiritualist medium: related to the earls of H. Evidence of his levitation was attested to in U.S.; and in England, by Lord Lindsay, Lord Adare and Sir William Crookes. He held *séances* before sovereigns of France, Prussia and Holland (1857–8), and while in Italy became a Roman Catholic, but in 1864 was expelled from Rome as a sorcerer.

HOME COUNTIES. Name given to the counties in close proximity to London, viz. Herts, Essex, Kent, Surrey, and formerly Middlesex.

HOME GUARD. Unpaid force formed in Britain in May 1940 to repel the expected German invasion, and known until July 1940 as the Local Defence Volunteers. It consisted of men of 17–65 who had not been called up, formed part of the armed forces of the Crown, and was subject to military law. Over 2,000,000 strong in 1944, it was disbanded 31 Dec. 1945, but revived in 1951, then placed on a reserve basis in 1955, and ceased activities in 1957.

HOME OFFICE. Govt. Dept. estab. in 1782; it deals with all the internal affairs of England and Wales except those specifically assigned to other Depts. The Home Secretary, the head of the Dept., holds cabinet rank, and is the channel of communication between the sovereign and his subjects. The chief matters with which the H.O. is concerned are advising on the exercise of certain prerogative powers of the Crown, the administration of justice (including supervision of the Borsal system), prisons, police administration, the Fire Service, Civil Defence, the care of children deprived of normal home life, the control and naturalization of aliens, duties in relation to Parliament and local govt. (elections and bye-laws) and the Race Relations Board. There is a separate Sec. of State for Scotland, and, since 1964, for Wales. The Home Sec. has certain duties in respect of N. Ireland, the Channel Islands, and the Isle of Man.

HOMER. Legendary Greek epic poet, the traditional author of the *Iliad* and the *Odyssey*. According to tradition he was a blind wandering minstrel; seven cities claimed to be his birthplace, while he has been given dates ranging 11th to 7th cent. B.C.

The *Iliad* tells of an incident of the siege of Troy, the wrath of Achilles and the death of Hector; the *Odyssey* of the wanderings of Odysseus after the siege, and his return to Ithaca. Both formed part of a cycle of epics on the siege of Troy, the remainder of which has been lost. The capture of Troy c. 1200 B.C. was an episode in the Achaean invasions of Asia Minor. Songs glorifying princely houses, combining historical elements with myth and folklore, arose at the courts of Achaean chieftains, and assumed artistic form at the hands of professional bards in the Ionian trading cities. In the course of transmission they were greatly modified, e.g. only slight traces of human sacrifice remain. Peisistratus, tyrant of Athens, is said to have first collected the complete texts from reciters at the Panathenaian festival c. 550 B.C. and committed them to writing. Early quotations show many variations from the received texts, which may have been produced by Alexandrian editors in the 3rd–2nd cents. B.C.

Modern Homeric criticism began in 1795 with

HOMER. A bust in the Louvre.

S. bank of the Neckar, 12 m. S.E. of Mannheim. H. univ., the oldest in Germany, was estab. in 1386. The town is overlooked by its ruined castle, built in the 13th-17th cents., 330 ft. above the river. Pop. (1960 est.) 127,595.

HEIFETZ (hi'fets), Jascha (1901-). Violinist. B. at Vilna, he first performed at the age of 5, and before he was 17 had played in most European capitals, and in America, where he settled.

HEILBRONN (hil-). W. German town on the r. Neckar, in Baden-Württemberg. Pop. (est.) 66,000.

HEILUNGKIANG (hiloongkëang). Most northerly Chinese prov. which takes its name from the Amur r. (in Chinese Heilungkiang, black dragon r.) on its N. border. Wheat, oats, soya beans, sugar beet, flax are grown; gold and coal mined; there is also a lumber industry. Harbin is the cap. Area 179,000 sq. m.: pop. (1957) 14,860,000.

HEINE (hi'ne), Heinrich (1797-1856). German poet. B. at Düsseldorf, of Jewish parents, he pub. his

HEIDELBERG. Built round a central courtyard - seen here - the residence of the Prince-Electors, 13th-17th cents., is a mixture of Gothic, Renaissance (the Ottheinrich building on the left) and Baroque architecture. Partially destroyed by the French in 1689, it was finally reduced to a ruin by lightning in 1768, but has since been partly restored. A great wine-cask in the cellars holds 58,118 gallons.

Courtesy of the German Tourist Information Bureau.

first book of poems in 1821. His *Reisebilder*, which announced his revolutionary sympathies, appeared in 1826, and the *Buch der Lieder* in 1827. After 1831 he lived mainly in Paris, as a correspondent for German papers, but the publication of his writings was forbidden on political grounds in 1835. Later poems include the satire *Atta Troll* (1847), and *Romanzero* (1851). From 1848 he was confined to his bed by spinal paralysis. Much of his prose is topical journalism, but displays his characteristic gifts of fancy, irony, and satirical humour.

HEINKEL (hin'kel), Ernst (1888-1958). German aircraft designer. He founded his firm in 1922, and was credited with the first aircraft catapult and the first jet aircraft 1939 (developed independently of the Whittle jet of 1941). During the S.W.W. he was Germany's biggest producer of warplanes.

HEISENBERG (hi'sen-), Werner Carl (1901-). German physicist. B. at Würzburg, he was director of the Max-Planck Institute for Physics at Göttingen 1946-58 and at Munich from 1958. The originator of quantum mechanics and of the principle of indeterminacy in physics, he was awarded a Nobel prize in 1932. In 1958, in conjunction with W. Pauli of Zürich, he announced a theory which helps to resolve the contradictions hindering understanding of the atomic particles discovered since the S.W.W., and leads towards the discovery of a single natural law accounting for the existence of all known particles as

well as those which may yet be discovered. The theory is expressed in the formula:

$$\gamma_r \frac{1}{d} x r \psi + l^2 \gamma_r \gamma_s \psi \\ (\psi^+ \gamma_r \gamma_s \psi) = 0$$

HEJAZ (hejahz'). Part of Saudi Arabia, lying along the shores of the Red Sea. It consists of a coastal plain rising sharply to a line of mountains parallel to the coast, and in the E. a desert plateau. Where water is available for irrigation wheat, barley, fruit, and date palms flourish. The chief towns are the holy cities of Mecca (the cap.) and Medina, and the port of Jeddah. The desert areas are inhabited by wandering Bedouin. H. was under Turkish rule from 1517 until 1916, when Hussein revolted and made himself king of H. He was forced to abdicate in 1924 by Ibn Saud, sultan of Nejd, who in 1925 proclaimed himself king of H., and in 1932 changed the name of his united dominions to the kingdom of Saudi Arabia. Area c. 150,000 sq. m.; pop. c. 2,000,000.

HEL or **HELA**. Norse goddess of the underworld.

HELEN. In Greek mythology the dau. of Zeus and Leda, and the most beautiful of women. She m. Menelaus, king of Sparta, but during his absence eloped with Paris, prince of Troy, whereupon the Greek princes sent their expedition against Troy to recover her. After the Trojan war H. returned to Sparta with Menelaus.

HELENA, St. (c. 247-327). Mother of the emperor Constantine the Great, and according to legend the discoverer at Jerusalem of the True Cross of Christ.

HELENSBURGH (hel'enzburu). Scottish seaside resort (burgh) in Dunbartonshire on the N. shore of the Firth of Clyde, 7 m. N.W. of Dumbarton. Pop. (1961) 9,605.

HELICOPTER. An aircraft with one or more power-driven horizontal rotors that enable it to take off and land vertically, to move in any direction or to remain stationary in the air. If power fails during flight the rotor will continue to turn freely, if disengaged from the engine, providing lift as the H. descends, so permitting a safe emergency landing. Hs. are useful for lifesaving during floods, medical evacuation, communications, firefighting, etc.

HELIGOLAND. Small island in the North Sea off the mouth of the Elbe. It was taken from the Danes in 1807 by the British, who ceded it to Germany in 1890.

HELICOPTER. Its manoeuvrability fits the helicopter for myriad tasks from sea rescue to crop spraying. Here one is being used to control potato blight in Shropshire, since the chemical solution can be applied more evenly and speedily in this way than by any other method.

Courtesy of Fisons Pest Control Ltd.

HONG KONG. More than 140,000 of the colony's population lives aboard junks and sampans, a big junk carrying up to 40 people - plus cats, dogs, and chicken - a complete floating home and family.

Courtesy of Gov. Information Services, Hong Kong.

British Crown colony on the S.E. coast of Kwantung prov., China. The colony incl. Hong Kong Is., Stonecutters' Is., the ceded territory of Kowloon and the New Territories. H.K. is, was ceded to Britain in 1841 (confirmed by treaty 1842). Kowloon peninsula was added in 1860, and in 1898 Britain obtained a 99 years' lease of the New Territories, which incl. Mirs Bay, Deep Bay, the remainder of the Kowloon peninsula, and numerous islands. The harbour is one of the finest in the world. The cap. is Victoria on the N. coast of the island. Local industries incl. shipbuilding, but most important is textiles, followed by plastics. It is one of the greatest ports in the world, and a large proportion of the imports and exports of S. China are here transhipped. Govt. is by a Governor, with Executive and Legislative Councils. From 1941 until 1945 it was occupied by the Japanese. There were severe Communist-inspired riots 1967. Area 391 sq. m.; pop. (1966) 3,834,000.

HONITON. English market town (bor.) on the Otter, Devon, 16 m. E.N.E. of Exeter, famous for its pillow lace. Pop. (1961) 4,724.

HONOLULU (honōlō'loo). Capital city and port of Hawaii, U.S.A., on the S. coast of Oahu. Noted for its beauty and tropical vegetation, it is a holiday resort, with some industry. 7 m. S.W. is Pearl Harbor with naval and military installations. Pop. (1960) 294,179.

HONOURS LIST. In the U.K. the military and civil awards approved by the Sovereign at the New Year, on her official birthday (celebrated on some selected date in June), and also on other special occasions.

HONSHU (Mainland). Principal is. of Japan. It lies between Hokkaido on the N. and Kyushu on the S. A chain of volcanic mts. extends the length of the is., which is subject to frequent earthquakes. Tokyo and Yokohama stand on a triangular plain. On the Inland Sea in the S. are the ports of Osaka, Kobe, Kure, and Hiroshima. Honshu is linked with Kyushu by the 2 m. Shimonoseki Tunnel and in 1963 work began on the Seikan Tunnel, 23 m. long (14 m. under the sea), to create a similar link with Hokkaido. Area

88,919 sq. m., incl. 382 smaller islands. Pop. (est.) 65,000,000.

HONTHORST, Gerard van (1590-1656). Dutch artist, especially noted for his portraits.

HOOCH (hōkh), Pieter de (1629-after 1683). Dutch painter. B. in Rotterdam, he came under the influence of Jacob Le Duck, Kick, and Vermeer. He is famous for courtyard and garden scenes and interiors.

HOOD, Samuel, 1st visct. (1724-1816). British admiral. B. in Dorset, he distinguished himself at Dominica in 1782, being created a baron, and was created visct. after his brilliant handling of the Mediterranean command 1793-4. He was a masterly tactician.

HOOD, Thomas (1799-1845). British poet. B. in London, he entered journalism, and edited periodicals, e.g. *Hood's Magazine* (1843). Although best known by his comic verse, e.g. 'Miss Kilmansegg', he also wrote such universally known serious poems as 'Song of the Shirt' and 'Bridge of Sighs'.

HOOGHLI. Indian r. and town, in West Bengal. The r. is the western stream of the Ganges delta. The town is on the site of a factory set up by the E. India Co. in 1640 which was moved to Calcutta, 25 m. downstream, 1686-90. Pop. (1961), with Chinsurah, 83,103.

HOOKE, Robert (1635-1703). British experimental physicist, elected to the Royal Society in 1663, becoming also its curator for the rest of his life. His inventions incl. a double-barrelled air-pump, the spirit-level, marine barometer, and sea gauge.

HOOKE, Richard (1554-1600). English theologian. B. nr. Exeter, in 1585 he became Master of the Temple and in 1591 rector of Boscombe, near Salisbury, where he commenced *The Laws of Ecclesiastical Polity*, a defence of the episcopalian system of the C. of E. He became rector of Bishopsbourne, near Canterbury, in 1595, and d. there.

HOOKE, Sir William Jackson (1785-1865). British botanist. As 1st director of Kew Gardens from 1841, he estab. its reputation and stimulated botanical exploration overseas: Mount H. in the Rockies was named after him. He was succeeded in the directorship (until 1855) by his son Sir Joseph Dalton H. (1817-1911) who consolidated his work, and pub. such works as *Genera Plantarum* (1862-83 with George Bentham). Notable among his expeditions was that to the Himalayas (1846-9) from which he brought back many rhododendrons, etc. He was awarded the O.M. in 1907.

HOOK OF HOLLAND. Small peninsula and village in S. Holland, Netherlands, important as the terminus for a sea service with England (Harwich, Parkeston Quay); in Dutch, Hoek van Holland, meaning corner of Holland.

HOOPER, John (c. 1495-1555). English Protestant reformer and martyr. B. in Somerset, he adopted Zwinglian views, he was appointed in 1550 bishop of Gloucester, and in 1555 was burnt for heresy.

HOOPOE (hōō'pōō). Bird (*Upupa epops*) in the order Coraciiformes. About the size of a missel thrush, it has a long thin bill and a bright buff-coloured crest which expands into a fan shape as the bird alights. The wings are banded with black and white and the rest of the plumage is black, white, and buff.

HOOVER, Herbert Clark (1874-1964). 31st President of the U.S.A. As a mining engineer he travelled widely before the F.W.W., during which he organized relief work in occupied Europe; a talented

HOOPOE

HELVE'LLYN. Peak of the English Lake District (3,118 ft.) between Thirlmere and Ullswater.

HELVETIA (həlvē'sh'ə). Region, corresponding to W. Switzerland, occupied by the Celtic *Helvetii* in the 1st cent. B.C.—5th cent. A.D. In 58 B.C. Caesar repulsed their invasion of southern Gaul at Bibracte (nr. Autun) and H. became subject to Rome.

HELVETIUS (elveh'sē-us'), Claude Adrien (1715–71). French philosopher. B. in Paris, he became a farmer-general of taxes in 1738. In *De l'Esprit* (1758) he maintained that self-interest, however disguised, is the mainspring of all human action, and that since conceptions of good and evil vary according to period and locality there is no absolute good or evil.

HELY-HUTCHINSON, Victor (1901–47). British composer. He was prof. at Birmingham 1934–44, when he succeeded Bliss as B.B.C. director of music, and his light-heartedly witty compositions incl. settings of Lear's nonsense rhymes.

HEMANS (hem'anz), Felicia Dorothea (1793–1835). British poetess, née Browne. B. in Liverpool, she pub. many vols. of sentimental verse which attained great popularity. Her best-known poem is 'Casabianca'.

HEMEL HEMPSTEAD (hem'el hemp'sted). English town (bor.) in Herts, 25 m. N.W. of London, on the r. Gade. Dating back to Norman times, H.H., with a pop. of 20,000, was chosen for development under the New Towns Act, 1946. Paper, clothing, brushes, etc. are made, and there are breweries and tanneries. Pop. (1961) 55,164.

HEMINGWAY, Ernest (1898–1961). American novelist. B. in Illinois, the son of a doctor, he became a newspaper correspondent

ERNEST HEMINGWAY
Photo: John Antill.

in Kansas City. Wounded while serving as a volunteer ambulance man in Italy during the F.W.W., he used these experiences for his war book *Farewell to Arms* (1929). He was much influenced by Gertrude Stein (q.v.) who introduced him to bull-fighting, the theme of his first novel *Fiesta* (1926; U.S. *The Sun Also Rises*) and of *Death in the Afternoon* (1932). For *Whom the Bell Tolls* (1940), has a Spanish Civil War setting, and he served as a correspondent both in this conflict and in the S.W.W. His passion for big-game hunting emerges in short stories, such as 'The Snows of Kilimanjaro' and 'The Short Happy Life of Francis Macomber', and *The Old Man and the Sea* (1952), telling of the duel between a Cuban fisherman and an enormous fish. In 1954 he was awarded a Nobel prize for his 'forceful mastery, which has created a new style in the contemporary art of narration'. His simple, curt sentences attracted imitation. He d. in a gun accident.

HEMIPTERA (or Rhynchota). Order of insects with mouth-parts adapted for feeding by puncture and suction. There are 2 sub-orders, the Homoptera (q.v.) and the Heteroptera (including the bedbug, cotton stainer and chinch bug).

HEMLOCK. Genus of plants (*Conium*) of the Umbelliferae, the only important species being common H. (*C. maculatum*), found in Britain and Europe, and naturalized in the Americas. Reaching 3–5 ft., it bears umbels of small white flowers, and the whole plant, but especially the root and fruit, is poisonous, causing paralysis of the nervous system. The ancient Greeks used it as a mode of capital punishment (see SOCRATES).

HEMP. Annual plant (*Cannabis sativa*) of the Urticaceae family cultivated in most temperate countries for its fibres, produced in the outer layer of

HEMLOCK with seed pod
and enlarged flower.

memory. Long-term effects have yet to be fully studied, but it soon creates great psychological dependence. H. is also known as bhang (India), dagga (S. Africa), hashish (Arabia), kif (N. Africa), and pot or marijuana (in W. hemisphere).

The name H. is extended to similar types of fibre, e.g. sisal H. or henequen (obtained from the leaves of *Agave rigida* and other species native to Yucatan and cultivated in many tropical countries) and manila H. (from a plant native to the Philippines and Moluccas).

HENBANE. Wild plant (*Hyoscyamus niger*) common on waste ground in Britain, central and S. Europe, and W. Asia. A branching plant, 1–4 ft. high, it has hairy leaves and a nauseous smell. The yellow flowers are bell-shaped. It is sometimes grown for medicinal purposes, but its use is dangerous.

HENDERSON, Arthur (1863–1935). British Lab. statesman. B. in Glasgow, he worked 20 yrs. as an iron-moulder in Newcastle, entered parliament in 1903 and did much for Lab.'s political organization. He was Home Sec. in the first Lab. govt. in 1924, and was For. Sec. 1929–31, when he accorded the Soviet govt. full recognition. For his constant endeavour to secure international limitation of arms he was awarded a Nobel peace prize in 1934.

HENDERSON, Sir Neville Meyrick (1882–1942). British diplomat, ambassador to Germany from 1937, who delivered Chamberlain's ultimatum to Hitler in 1939: a supporter of 'appeasement', he was bitterly disillusioned, cf. his *Failure of a Mission* (1940).

HENDON. English residential district on the r. Brent, in the bor. of Barnet, Greater London. Its aerodrome, opened 1910, closed 1957, was the scene of the annual R.A.F. display 1920–37. The Metropolitan Police Coll. was opened in 1934.

HENDY, Sir Philip (1900–). British art historian. He was curator of paintings, Museum of Fine Arts, Boston, Mass., 1930–3; Slade professor of Fine Art at Oxford 1936–46; and in 1946–68 was director of the National Gallery.

HENIE (hen'i), Sonja (1913–). Norwegian skater. Norwegian champion at 11, she won 10 world championships and 3 Olympic titles, turning professional in 1936 and making numerous films.

HENLEIN (-lin), Konrad (1898–1945). Sudeten-German Nazi leader. He led from 1923 the Sudeten-German athletic movement, which in 1933 emerged openly as the Nazis' agent inside Czechoslovakia. Condemned to death in 1938 for ordering an armed revolt, he fled to Germany, but after Munich returned as gauleiter of Sudetenland. He became commissioner for Bohemia 1939–45. Captured by the Allies in 1945, he committed suicide.

HENLEY, William Ernest (1849–1903). British poet and journalist. B. at Gloucester, he was early crippled by the amputation of one foot owing to tuberculosis. He was a voluminous writer of verse, besides criticism and miscellaneous journalism, but only his *vers libre*

the stem (c. 3–15 ft. high), and used in ropes, twines and, occasionally, in a type of linen or even lace. Russia is the largest producer, Italy has the finest quality, and it is important in N. India and the U.S.A. Dried leaves or resin form a hallucinogen which may be smoked, made into a drink, or eaten. Use of the drug results in loss of inhibitions, uncontrolled giggling and talking, distortion of perception of space and time, and impairment of judgment and

the thyroid secretion determines the rate at which the organism shall live; the suprarenal secretion prepares the organism for 'fight or flight'; and the sexual secretions govern the reproductive functions. Most hormones are complex chemical substances, and many diseases due to deficiency of one or other of them can be relieved with hormone preparations

HORMUZ. Another form of ORMUZ.

HORN, Philip de Montmorency, count of (1518-68). Flemish statesman. He held high offices under Charles V and Philip II, and from 1563 he was one of the leaders of the opposition to the rule of Cardinal Granvella and to the introduction of the Inquisition. In 1567 he was arrested together with Egmont, and both were beheaded in Brussels.

HORN. A family of musical instruments. They originated from animal horns, and are divided into the modern French H., hunting H., and natural H. They are circular in shape, and generally over 11 ft. long, with a narrow mouthpiece ($\frac{1}{4}$ in.) widening to a 12-14 in. bell. The natural H. is now replaced by the more varied valve or French H.

HORN, Cape. Most southerly point of the American continent, in the Chilean part of the archipelago of Tierra del Fuego. It was named in 1616 by its Dutch discoverer Willem Schouten (1580-1625) after his birthplace (Hoorn).

HORNBEE. Genus of trees (*Carpinus*) of the Betulaceae division of the Amentaceae (catkin) family. The common H. (*C. betulus*) is found in woods and hedges throughout the temperate parts of Europe and Asia, and is planted in Britain. It is a small tree with a twisted stem and smooth grey bark. The leaves are oval and hairy on the undersurface. The flowers are borne in catkins, and the fruits are small nuts borne in groups.

HORNBILL. Birds of the family of Bucerotidae, found in Africa, India and Malaya, and so called from the powerful bill surmounted by a bony growth or casque. The H. nests in holes in trees where the female is voluntarily immured, herself assisting in the plastering over of most of the entrance, and fed by her mate throughout incubation.

HORNBLÉNDE. Mineral of the Amphibole group. It is greenish black, with a glassy, translucent appearance, and is found in the Scottish Highlands, the Alps, N. America, etc.

HORNER, Arthur (1894-1968). British trade union leader. B. in S. Wales, he became a miner, joined the I.L.P. in 1912, and was imprisoned during the F.W.W. as a conscientious objector. In 1923 he became a Communist. He was pres. of the S. Wales Miners' Federation 1936-46, and gen. sec. of the National Union of Mineworkers 1946-59.

HORNET. See WASP.

HORNIMAN, Annie Elizabeth Fredericka (1860-1937). British repertory-theatre pioneer. The dau. of Frederick John H. (1835-1906) founder in 1897 of the H. Museum at Forest Hill, London, she subsidized the Abbey Theatre, Dublin, and founded the Manchester repertory (1907-21). Her brother, Roy H. (1872-1909), was an actor and author of *Israel Rank* (1907), in which the hero gains a coronet by poisoning relatives standing between himself and a title (filmed as *Kind Hearts and Coronets*).

HORNET

HORNUNG, Ernest William (1866-1921). British novelist, creator of Raffles, the gentleman-burglar, and his assistant Bunny in *The Amateur Cracksmen* (1899). The idea originated with Conan Doyle, H.'s brother-in-law, who suggested counterparts of Holmes and Watson on the wrong side of the law.

HO'ROSCOPE. The relative position of the stars

HORSE, and, drawn to the same scale, Eohippus (Dawn Horse).

and planets at the moment of birth, used by astrologists to forecast the future of the subject. See ASTROLOGY. To cope with increased demand in the 20th cent. the casting of Hs. has been computerized in the U.S.A.

HO'ROWITZ (-vits), Vladimir (1904-). American pianist. B. in Kiev, he made his début in the U.S. in 1928 with the N.Y. Philharmonic Orchestra. He is a masterful technician. In 1933 he m. Wanda, dau. of Toscanini.

HORROCKS, Sir Brian Gwynne (1895-). British soldier. He served in the F.W.W., and in the S.W.W. was a Corps Commander under Montgomery at Alamein and with the British Liberation Army in Europe, reaching the rank of lieut.gen. His TV programmes on military history, etc., have been popular.

HORROCKS, Jeremiah (1619-41). English astronomer who first made observations of the transit of Venus.

HORSE. Ungulate mammal (*Equus caballus*) of the family Equidae. The evolution of the H. has been traced from the Eocene age; it is thought to have originated in Asia or Africa, and it was early domesticated as a beast of burden. The teeth became adapted to cropping close grass, and the feet to swift running. The horse now stands on one toe (the hoof), the other toes having been reduced to small digits or splints. The Equidae also includes the zebra, ass, and quagga. The wild horse (*Equus przewalskii*) is now found only in Mongolia. Domesticated breeds are divided into 3 groups—riding, carriage, and cart-horses. Riding Hs. incl. the thoroughbred and hunter, which are derived from the Arab H. Carriage Hs. incl. the Hackney, Cleveland Bay, and Coachhorses; the Shire H., Clydesdale, and Suffolk Punch are incl. in the category of cart-horses. See PONY.

The young male H. is called a colt, and the female a filly; the adult male is called a stallion and the female a mare. There is a large vocabulary covering the coloration, peculiarities of shape, and measurement of Hs. The unit of height, termed a hand, is 4 in. London's 1st annual International H. Show was held in 1907, but the American National H. Show, held annually in N.Y., dates from 1883.

HORSE, Master of the. In England an official responsible for the royal stables, and head of one of the departments of the royal household.

HORSE CHESTNUT. Tree common throughout Britain and the temperate regions. The generic name is *Aesculus*. The common H.C. (*A. hippocastanum*) is a fast-growing tree reaching a height of 60 ft. or more. The scented, white or pink flowers are borne in May and June in spikes. The fruits, known to schoolboys as 'conkers', are hard, brown and shiny, and are borne in green spiky cases. See CHESTNUT.

HENRY. Name of 7 Holy Roman Emperors. **HENRY I**, called **THE FOWLER** (c. 876–936), became duke of Saxony in 912, and German king in 919. **HENRY III** (1017–56), who succeeded in 1039, raised the Empire to the height of its power, and extended its authority over Poland, Bohemia and Hungary. **HENRY IV** (1050–1106), who succeeded in 1056, was involved from 1075 in a struggle with the papacy under Gregory VII. **HENRY V** (1081–1125), son of Henry IV, continued the struggle with the Church until a settlement on the investitures question was reached in 1122. **HENRY VI** (1165–97) inherited Sicily by marriage in 1189, and the Empire from his father Frederick I in 1190. As part of his plan for making the Empire universal he captured and imprisoned Richard I of England, and compelled him to do homage. **HENRY VII** (c. 1269–1313), originally count of Luxemburg, was elected emperor in 1308, and attempted unsuccessfully to revive the imperial supremacy in Italy.

HENRY, Joseph (1797–1878). American scientist. B. at Albany, N.Y., he became prof. of natural philosophy at Princeton 1832–46, and secretary of the Smithsonian Institution in 1846. He invented the first electromagnetic motor in 1829, and a telegraphic apparatus; he also discovered the principle of electromagnetic induction, simultaneously with Faraday, and the phenomenon of self-induction. He later estab. a nation-wide meteorological service, investigated the properties of sound-waves in fog, and perfected a system of fog signals. His name is given to the unit of electrical induction.

HENRY, O. Pseudonym of the American short-story writer William Sydney Porter (1862–1910). B. in N. Carolina, he worked in Texas as a bank clerk and a journalist, and was imprisoned for 3 years on a charge of embezzlement. After his release he lived in New York, devoting himself entirely to the short story, and pub. several collections, beginning with *Cabbages and Kings* (1904) and *The Four Million* (1906). His stories, which deal mainly with New York or southern and western life, are marked by a brilliant colloquial style, skilled construction with 'twist' endings, and a deep sense of pity.

HENRY, Patrick (1736–99). American statesman. He is remembered as an orator, espec. his speeches against the Stamp Act 1765 telling George III 'If this be treason, make the most of it!' and supporting the arming of the Virginia militia 1775 'Give me liberty or give me death!' He was governor of the state 1776–9 and 1784–6.

HENRY, William (1774–1836). British chemist. In 1803 he formulated *Henry's law*: when a gas is dissolved in a liquid at a given temperature, its weight is in direct proportion to the gas pressure.

HENRYSON, Robert (c. 1430–c. 1505). Scottish poet. His works incl. lively versions of Aesop and the *Testament of Cresseid*, a continuation of Chaucer.

HENRY THE NAVIGATOR (1394–1460). Portuguese prince. The son of John I, he devoted himself largely to the promotion of exploration and colonization. Under his patronage Portuguese seamen explored and colonized Madeira and the Azores, and sailed down the African coast almost to Sierra Leone.

HENSCHÉL (hen'shel), Sir George (1850–1934). British conductor and baritone singer of Polish descent. He became the first conductor of the Boston Symphony Orchestra in 1881, founded the London Symphony Orchestra, and composed a Requiem Mass, songs, an opera, etc.

HENSON, Herbert Hensley (1863–1947). British churchman. An Anglican of the Broad Church school, he was bishop of Durham 1920–39. A masterly preacher, he published an unusual autobiography, *Retrospect of an Unimportant Life* (1942–3).

HENZE (hen'tse), Hans Werner (1926–). German composer. Well known for his operas *Boulevard Solitude* (1952: based on *Manon Lescaut*) and *King*

Stag (1956), and for his ballet *Ondine* (1958), he shows in his music the influence of Schoenberg, and he often uses a modified 12-note technique (dodecaphony). He became prof. of composition at Academy Mozarteum, Salzburg, 1961.

HEPBURN, Audrey (1929–). American actress B. in Brussels, she was originally a student of ballet, a training which emphasized her gamine grace in films such as *Roman Holiday* (1952) and *My Fair Lady* (1964). She m. in 1954 the actor Mel Ferrer.

HEPBURN, Katharine (1909–). American actress. B. in Connecticut, her gangly grace and husky voice brought stardom in such films as *Morning Glory* (1933), *Philadelphia Story* (1940), *African Queen* (1952).

HEPHAESTUS (hif'est'us). Greek god of fire and metal craftsmanship, identified with the Roman Vulcan. The son of Zeus and Hera, he was lame and was m. to Aphrodite.

HEPPLEWHITE, George (d. 1786). British craftsman. In his furniture workshop at St. Giles, Cripplegate, in London, he developed a simple elegant style, especially in his chairs, often with shield- or heart-

HEPWORTH. Seen here at her studio home at St. Ives, Cornwall, the artist looks at a favourite item of her collection, an oval sculpture in stone, which with its title 'Delos' recalls the island birthplace of Apollo. Courtesy of Barbara Hepworth.

shaped backs. He worked mainly in mahogany or satinwood, and his characteristic decorations of feathers, shells, or wheat-ears were inlaid or painted, rather than carved. See *illus.* p. 455.

HEPTARCHY (hept'arki). Term coined by 16th cent. historians to denote the 7 Saxon kingdoms supposed to exist prior to A.D. 800: Northumbria, Mercia, E. Anglia, Essex, Kent, Sussex, and Wessex.

HEPWORTH, Dame Barbara (1903–). British sculptor. B. at Wakefield, she studied at Leeds School of Art and the Royal College of Art, and since 1939 has lived in Cornwall. Although she has worked in such media as reinforced concrete, bronze, wood and aluminium, her favourite is stone. She was m. 1st to sculptor John Skeaping and 2nd to Ben Nicholson (q.v.): both marriages were dissolved.

HE'RA. Greek goddess. The sister and consort of Zeus, she was the mother of Hephaestus, Hebe, and Ares. The protectress of women and marriage, she was identified with the Roman Juno.

HERACLITUS (c. 540–475 B.C.). Greek philosopher. B. at Ephesus, he maintained in his chief work, *On Nature*, that the ultimate principle is fire, and that everything is in a state of eternal flux, producing a notably coherent system.

HERAKLION. Greek name of CANDIA.
HERALDS' COLLEGE or College of Arms. English heraldic body formed in 1484 by Richard III incorporating the heralds attached to the Royal Household; reincorporated by Royal Charter of Philip and

and there are a number of private nursing homes and clinics. In the U.S.A. the Hs. may be public (federal or state) or private (voluntary, i.e. non-profitmaking, and proprietary, i.e. profitmaking. Patients usually pay for treatment, but from 1966 the over-65s have come under the state Medicare H. insurance scheme, to which workers and employers contribute. Most other Americans belong to voluntary H. insurance schemes, e.g. the non-profitmaking Blue Cross (1929) and the Blue Shield (1917).

HOTEL. A house providing for the lodging and refreshment of travellers. European Hs. tend to be smaller (up to 500 rooms), and have more personal service, whereas the American (up to 3,000 rooms)

rely much more on mechanization. In the absence of an international rating system, guides are pub. on a national basis, and incl. R.A.C. and A.A. (Britain), Michelin (France), Warter (Germany), and A.A.A. tour book (U.S.A.). See **MOTEL**.

HOT'TENTOTS. S. African people inhabiting the S.W. corner of the continent when Europeans first settled there. They were a pastoral race, composed of Bushmen and Bantu, who have now largely mixed with Dutch and other blood; the Namaqua tribe approximates nearest to the original H. The language bears a resemblance to Bushman, and has mainly monosyllabic roots with explosive consonants which produce peculiar clicking sounds.

HOTTER, Hans (1909–). German bass singer, noted for his Wagnerian roles.

HOUDIN (ooda'ñ), Robert. Name assumed by the French conjuror Jean Eugène Robert (1805–71). B. at Blois, he opened a miniature Theatre of Magic in Paris in 1845, and obtained celebrity by his use of electromagnetism, and by many ingenious tricks.

HOUDINI (hoodē'nē), Harry (1874–1926). American escapologist and conjuror. B. in Wisconsin, he attained fame by his escapes from ropes and handcuffs. He also reproduced some of the phenomena of spiritualist séances by purely mechanical means.

HOUDON (oodoñ'), Jean Antoine (1741–1828). French sculptor. His works include busts of Lafayette, Napoleon, and Rousseau.

HOUGHTON (how'ton), William Stanley (1881–1913). British playwright. He wrote a number of plays with a Lancashire setting, notably *Hindle Wakes* (1912), whose theme, novel at the time, concerns a girl who refuses to marry the man who has seduced her.

HOUGHTON-LE-SPRING (hō'ton-). English market town (U.D.) and coal-mining centre in Durham, 6 m. N.E. of city of Durham. Pop. (1961) 31,049.

HOULT (hōlt), Norah. Irish novelist. B. in Dublin, she was orphaned at 10 and became a journalist, working first for the *Sheffield Telegraph*. Her vol. of grimly realistic short stories, *Poor Women* (1928), and her several novels, incl. *Father and Daughter* (1957) and *Husband and Wife* (1959), strike the same note.

HOUSLOW. English garrison town and borough of Greater London, England. Situated at the junction of the Bath and Exeter roads, it was an important coaching station, and H. Heath was a resort of highwaymen. Pop. (1967) 206,870.

HOUSE, Edward Mandell (1858–1938). American Democrat politician, friend and adviser of President Wilson. In 1917 he represented the U.S.A. in the Supreme War Council at Versailles, and subsequently played an important part in the Peace Conference. His *Intimate Papers of Col. House* – the 'Col.' was an honorary title – appeared 1926–8.

HOUSE FLY and larva.

HOUSE FLY. Insect (*Musca domestica*) belonging to the order Diptera. It breeds in stables, garbage dumps, etc., and is most abundant in summer. The female lays about 150 eggs at a time, and may produce 1,000 in a lifetime. It has a dark grey, hairy body, with

compound eyes, and feeds through a proboscis. The H. is responsible for carrying a number of diseases, notably typhoid fever.

HOUSEHOLD, Royal. See **ROYAL HOUSEHOLD**.

HOUSEMAID'S KNEE. Inflammation and enlargement of the prepatellar bursa, a small fluid cushion beneath the skin in front of the kneecap.

HOUSING. It is only in the last 100 years that H. has become a matter of state concern, legislation in Britain beginning with measures passed from 1851 and first consolidated in the H. of the Working Classes Act (1890). Private enterprise still provides a proportion of British H., but flats and houses to rent – intended for lower-income groups – are built on a large scale by local authorities under the direction of the Min. of H. and Local Govt. Local authorities also have wide powers to ensure that all existing houses are well maintained, to clear and redevelop unhealthy or congested areas, to abate overcrowding, and to assist private owners and landlords to improve and convert their property.

Whether operating on a free-enterprise or Communist basis, all modern states have found some

HOUSING. Side by side on the Loughborough Estate at Lambeth, London, are traditional two-storey houses and tall blocks of flats designed by the council architect's department. Courtesy of Greater London Council.

degree of state provision or subsidy essential, as in the U.S. through the Housing and Home Finance Agency, with special consideration for 'senior citizens', etc. Nevertheless, growth of population tends always to outstrip any provision made, especially at the income level where it is most needed, and increasing attention is being given to replacing traditional methods

HERGESHEIMER, Joseph (1880–1954). American novelist. B. at Philadelphia, he is best remembered for his picturesque interpretation of the American past in *The Three Black Pennys* (1917) and *Head Java* (1919).

HERIOT, George (1563–1624). Scottish goldsmith. In 1597 he was appointed goldsmith to Anne of Denmark, consort of James VI, and in 1601 became jeweller to the king. His fortune founded the Heriot Trust which helped endow Heriot-Watt Univ., Edinburgh.

HERKOMER, Sir Hubert von (1849–1914). British artist. B. in S. Bavaria, he went to England in 1857, established his reputation with 'The Last Muster', exhibited at the R.A. in 1875, and was elected R.A. in 1890. He was Slade prof. at Oxford 1885–94. His portraits are considered his best works.

HERMAPHRODITUS. In Gk. mythology, the son of Hermes and Aphrodite. He was beloved by a nymph whose prayer to the gods for perpetual union with him was answered in that she and H. became one body, but possessed of the characteristics of both sexes. Hence the modern 'hermaphrodite'.

HERMES. In Gk. mythology, the son of Zeus and Maia and messenger of the gods, usually appearing with winged sandals and bearing a staff around which serpents are coiled. He is identified with the Roman Mercury. He was also the god of thieves, travellers, and merchants.

HERMIT CRAB. Genus of crustaceans (Paguridea). The abdominal segments are not encased as in true crabs, but the H.C. lives in the shell of a gastropod. They are found on the coasts of Europe, America, and the West Indies, usually in close association with sea-anemones and sponges.

HERMON (Arab. Jebel esh-Sheikh). Snow-topped mtn. (9,232 ft.), the highest in Syria. It is the traditional scene of the transfiguration of Jesus.

HERNÁNDEZ (árnahn'dáth), José (1834–86). Argentine poet. B. near Buenos Aires, he lived among the gauchos on the pampas in his youth, and his epic *Martín Fierro* (1872–8) is the greatest example of *gauchesque* literature.

HERNE (her'ne). Industrial town of the Ruhr, North Rhine-Westphalia, W. Germany. Pop. (1960 est.) 113,252.

HERNE BAY. English seaside resort (U.D.) in Kent, on the estuary of the Thames. Three m. to the E. is Reculver, site of a Roman station. Pop. (1961) 21,273.

HERNIA. Protrusion of a part of the bowel through a weak spot in the abdominal wall, usually in the groin or navel. The appearance is that of a rounded, soft tumour.

HERO and LEANDER. In ancient Gk. story, H. was the priestess of Aphrodite at Sestos on the Hellespont. She was loved by Leander, who visited her nightly by swimming across the strait from Abydos on the opposite shore. One stormy night he was drowned; and H. cast herself into the sea out of grief.

HERO of Alexandria. A Greek mathematician and writer, probably of the 2nd cent. A.D., who invented an automatic fountain, and perhaps a kind of stationary steam-engine.

HEROD (74–4 B.C.). King of the Jews; known as **HEROD THE GREAT**. The son of Antipater, he was declared king of Judea by the Romans in 40 B.C., and with Antony's assistance estab. his government in Jerusalem in 37 B.C. He rebuilt the Temple at Jerusalem, but his Hellenizing tendencies made him suspect to orthodox Jewry. His last years were akin to a reign of terror, and St. Matthew alleges that he ordered the slaughter of all the infants in Bethlehem

to ensure the death of Christ, whom he visualized as a rival. His son Herod Antipas was tetrarch of Galilee and Peraea, 4 B.C.–A.D. 39. He m. Herodias, the divorced wife of his half-brother Herod Philip, and ordered the execution of John the Baptist. Christ was brought before him on Pontius Pilate's discovery that He was a Galilean and hence of Herod's jurisdiction. In A.D. 38 H.A. went to Rome to solicit the title of king, but Caligula was prejudiced against him, and he was banished. The rock citadel of Massada, built by Herod 37–31 B.C., was excavated 1963–4: there were important finds of ancient texts; mosaic floors and decorated walls of the royal palace; reservoirs, etc.

HEROD AGRIPPA I (d. A.D. 44). Jewish ruler of Palestine under the Romans. A grandson of Herod the Great, Caligula made him a tetrarch in Palestine, and Claudius gave him the title of king. He put St. James to death and imprisoned St. Peter. His son **HEROD AGRIPPA II** (d. A.D. 100) as king of Chalcis assisted Titus in his siege of Jerusalem, and on the fall of the city in A.D. 70 went to Rome, where he d. St. Paul defended himself before him in A.D. 60.

HERODOTUS (c. 484–c. 424 B.C.) Greek historian and prose writer, who travelled widely, recording in his history observations of habits and creeds of many races. After 4 years in Athens, he settled in S. Italy in 443 at Thurii, apparently staying there the rest of his life. His history, written lucidly and with charm, deals with the Greek-Persian struggle which culminated in the defeat of the Persian invasion attempts in 490 and 480 B.C. The majority of the work is devoted to an early perspective history of the states involved. H. was the first historian to apply a critical sense.

HEROIN (her'ō-in). Diamorphine hydrochloride, an alkaloid obtained from morphine. A white crystalline powder, it depresses the nerve centres controlling breathing and is valuable as a sedative in conditions producing a cough, but the danger of addiction has led to its being banned for medical use in most countries, incl. the U.S., though not in the U.K. See **DRUGS**, Misuse of.

HEROLD (ärol'd), Louis Joseph Ferdinand (1791–1833). French operatic composer. His fame chiefly rests on the opera *Zampa* (1831).

HERON. Large bird in the group Ardeidae, which also includes bitterns, egrets, night-herons, and boat-

birds. The Common H. (*Ardea cinerea*) nests in Europe and Asia in large colonies at the tops of trees. The bird has a long neck and long legs. The plumage is chiefly grey, but there are black patches on the sides and a black crest. The legs are olive-green, and the beak yellow, except during the breeding season when it is pink. It is a wading bird, but is rarely seen to

swim or walk. It feeds on fish, frogs, rats, and other small animals.

HERPES (her'pēz). Shingles; a disease in which red spots and small blisters appear on the skin over a set of nerve endings, accompanied by much neuralgic pain and irritation. The most usual positions are over the ribs like a girdle, the forehead and the limbs. Some authorities think that it is caused by the same virus as chickenpox.

HERRERA (errā'ra), Francisco (1576–1656). Spanish artist, surnamed *El Viejo* (the Old). B. in Seville, he is remarkable for his realism, and skilled use of light and shade. His son Francisco H. (1622–85), called *El Mozo* (the Young), also b. in Seville, was remarkable for his still-lives.

HERRICK, Robert (1591–1674). English poet. B. in Cheapside, London, he was a friend of Ben Jonson.

HOYLAKE, English resort (U.D.) at the N.W. end of the Wirral peninsula, Cheshire, famous for its golfing facilities. Pop. (1961) 32,268.

HOYLE, Edmund (1672–1769). British authority on card games, his *Short Treatise on Whist* (1742) being the first standard account.

HOYLE, Fred (1915–). British astronomer. Ed. at Cambridge, he became Plumian prof. of astronomy and experimental philosophy there in 1958. His radio talks and such science fiction as *The Black Cloud* (1957) and *Ossian's Ride* (1959) have estab. his popular reputation, and he is noted for his contribution to cosmological theory (continuous creation) and such books as *Nuclei and Quasars* (1966).

HROTSVITHA (hrotsvëta) (c. 935–c. 1002). German nun, Latin poet, chronicler, and the first dramatist of the Middle Ages. B. of a noble Saxon family, she belonged to the convent of Gandersheim.

HSINGKING. Japanese name of CHANGCHUN.

HSIUNG, Shih I (1902–). Chinese dramatist. B. at Nanchang, he worked in theatre management at Peking and Shanghai, and subsequently lectured at Peking Univ. He achieved a great success in London, in 1934, with *Lady Precious Stream*, an English adaptation of an ancient Chinese comedy.

HSUAN CHUANG (or Yüan Chuang) (c. 600–64). Chinese Buddhist monk, traveller, and scholar. B. near Honan, he walked to India in 629, and in 631–3 he was in Kashmir. In 645 he returned to China with numerous religious relics and works of art, and wrote an account of his travels.

HUAMBO. See NOVA LISBOA.

HUANG-HO. Another form of HWANG-HO.

HUASCARAN (ōō-ahskahrān'). Extinct volcano in the Andes, highest mountain in Peru (22,000 ft.). An avalanche of ice, snow, and rocks in 1962 overwhelmed the village of Ranrahirca and killed some 2,500 there and in the surrounding countryside.

HUBBARD, Elbert (1856–1915). American writer and publisher. B. in Illinois, he is remembered for the essay 'A Message to Garcia' (1899) dealing with an heroic incident of the Spanish-American War.

HUBBARD, Hesketh (1892–1957). British artist, best known for his oil paintings of architectural subjects which recall Canaletto.

HUBBLE, Edwin Powell (1889–1953). American astronomer. His researches with the Mount Palomar telescope confirmed the theory, enunciated by de Sitter c. 1917, that the universe is expanding. He postulated that the outward velocity of a receding stellar system is proportional to its distance – H's law – accepted as valid until the mid-1960s. See ASTRONOMY. He was astronomer at the Mount Wilson Observatory, California, 1919–53.

HUCH (hookh), Ricarda (1864–1947). German poet and novelist. Her novels (*Erinnerungen von Ludolf Ursleu dem Jüngeren*, *Aus der Triumphgasse*, *Vita somnium breve*, etc.) show great narrative power and mastery of diction. She developed a new form of historical novel in a Garibaldi cycle (1906–7), etc., pub. works on Luther and Bakunin, and studies of the romantic movement.

HUCHOW. Name until 1912 of WUHING.

HUDDERSFIELD. English industrial town (co. bor.) in the W. Riding of Yorkshire on the r. Colne. It has canal connections with Manchester and other N. of England centres. An Anglo-Saxon village, by the end of the 18th cent. H. was a thriving centre of the woollen manufacture and trade to which is now added engineering and numerous other industries. Pop. (1961) 130,302.

HUDDLESTON, Trevor (1913–). British churchman. As provincial of the Community of the Resurrection in S. Africa 1949–56, he strongly opposed apartheid and expressed his views in *Naught for Your Comfort* (1956). He was bp. of Masasi 1960–8, when he became bp. of Stepney.

HUDSON, Henry (d. 1611). English explorer. Under the auspices of the Muscovy Company in 1607 and 1608 he made unsuccessful attempts to reach China by way of the N.E. passage along the N. of Asia. In 1609 he was commissioned by the Dutch East India Co., and in Sept. reached New York Bay and sailed 150 m. up the river which now bears his name. In 1610 he sailed from London in the *Discovery* and entered what is now the Hudson Strait. The ship was icebound for the winter in the present Hudson Bay. Next spring some of the crew mutinied, and H. and 8 others were turned adrift.

HUDSON, William Henry (1841–1922). Anglo-American author. B. at Florencio near Buenos Aires, of American parents, he was inspired by recollections of early days in Argentina to write his romances *The Purple Land* (1885) and *Green Mansions* (1904), with

W. H. HUDSON

its bird-like heroine 'Rima', and his autobiographical *Far Away and Long Ago* (1918). His middle and later years were spent in England, and in 1900 he became British by naturalization. He wrote several books on birds, and was a sympathetic interpreter of the English countryside, e.g. *Nature in Down-Land* (1900) and *A Shepherd's Life* (1910). His birthplace has been preserved as a museum since 1956.

HUDSON. River of the U.S.A. at whose mouth New York City stands. It rises in the Adirondacks, and flows almost due S. for 300 m. to the Atlantic. Discovered in 1524, it was explored in 1609 by Henry Hudson (q.v.), in whose honour it was named.

HUDSON BAY. Extensive inland sea of N.E. Canada, connected to the Atlantic by Hudson Strait, and to the Arctic by Foxe Channel. Its area is c. 476,000 sq. m., its length from N. to S. 850 m., width 600 m.

HUDSON'S BAY COMPANY. A chartered company founded by Prince Rupert in 1670 to trade in furs with the Red Indians. In 1783 the rival North-West Fur Company was formed, but in 1851 this became amalgamated with the H.B.C. which lost its

HUDSON'S BAY COMPANY. At Spence Bay on Boothia Peninsula in the North-west Territories the treeless desolation of the Arctic is relieved by the traditional red and white of the Company buildings – the manager's house, the store and the warehouse.

Courtesy of George Hunter for Hudson's Bay Company.

writer who became a Swiss citizen in 1923. A conscientious objector in the F.W.W. and a pacifist opponent of Hitler, he pub. short stories, poetry and novels, e.g. *Peter Camenzind* (1904) and *Unterm Rad* (1906). Later works, such as *Das Glasperlenspiel* (1943), tend towards the occult. He received a Nobel prize in 1946.

HESSEN. State (Land) of W. Germany, estab. in 1946. The cap. is Wiesbaden. About a quarter of the working pop. is engaged in agriculture, chief products being wheat, rye, oats, and potatoes, with dairying important; chemicals, motor-cars, and machines are made, and there are electrical engineering works. Area 8,145 sq. m.; pop. (1966) 5,239,700.

The Land of Hessen occupies generally the area of 2 former territories: (1) Hesse, a state divided into 2 separate parts by a strip of Prussian territory, the S. portion consisting chiefly of the valleys of the Rhine and Main, the N. being dominated by the volcanic Vogelsberg (2,532 ft.). Darmstadt, the cap., Giessen, Mainz, and Worms were among its towns. (2) Hesse-Nassau, a prov. of Prussia, a hilly region with rich timber, metal, and vine resources. Kassel, Fulda, Frankfurt, and Wiesbaden were the main towns.

HES'TIA. In Gk. mythology, the goddess of the hearth. She was a daughter of Cronos (Saturn) and Rhea, and the Romans identified her with Vesta.

HEUSS (hois), Theodor (1884–1963). W. German statesman. A member of the Reichstag from 1924 until in 1933 the Nazi régime forced him to withdraw from public life, he led the Free Democratic Party 1948–9 and was elected Federal President in 1949.

HEWLETT, Maurice Henry (1861–1923). British writer. He gained success as a novelist with the medieval romance *The Forest Lovers* in 1898. His later works incl. *Richard Yea-and-Nay* (1900), *The Queen's Quair* (1904), and a vol. of verse, *Song of the Flow*.

HEXHAM. English town (U.D.), on the S. bank of the Tyne, Northumberland, 20 m. W. of Newcastle. St. Wilfrid founded a church and monastery here in 674. The present church is an excellent example of Early English. Pop. (1961) 9,897.

HEYDRICH (hid'rikh), Reinhard (1904–42). German Nazi terrorist. Whilst deputy 'protector' of Bohemia and Moravia from 1941, he was ambushed and killed by 3 members of the Czech forces in Britain, who had landed by parachute. Reprisals followed incl. several hundred executions and the massacre of Lidice.

HEYER (hi'er), Georgette (1902–). British novelist. Well known for her historical novels, e.g. *The Spanish Bride*, and for her light-hearted Regency romances, e.g. *Faro's Daughter*, she also writes contemporary detective stories.

HEYERDAHL (hi'-), Thor (1914–). Norwegian ethnologist. Ed. at the Univ. of Oslo, he was a paratrooper with the Free Norwegian forces in the S.W.W., and achieved world fame with the Kon-Tiki Expedition of 1947. With 5 companions he built a balsawood raft and sailed from Peru to the Pacific Is. along the Humboldt Current, proving it feasible that the light-skinned Polynesians, whose origin is disputed, could have been migrants from S. America. He wrote a celebrated account of the voyage and also *Aku-aku* (1957), a study of the mysterious history of Easter Is.

HEYSE (hi'se), Paul Johann Ludwig (1830–1914). German poet, novelist, and dramatist. B. at Berlin, he was called to Munich by Maximilian II in 1854. He translated Italian poets, but ranks foremost as a writer of short stories (*L'Arrabbiata*, 1855, etc.).

HEYSHAM. See MORECAMBE AND HEYSHAM.

HEYWOOD, Thomas (c. 1570–c. 1650). English dramatist. B. in Lincs, he became an actor in London, and wrote or adapted over 220 plays. Among them are the *Four Prentises of London* (1615), the chronicle *Edward IV* (1599), *The English Traveller* (1633), and his masterly domestic tragedy, *A Woman kille with kinnesse* (1607).

HEZEKIAH (hezëki'ah). King of Judah 719–699 B.C.: son of Ahaz, and father of Manassch. Against the advice of Isaiah he rebelled against Assyrian suzerainty in alliance with Egypt, but was defeated by Sennacherib. He carried out religious reforms.

HIAWATHA (hiawaw'tha). North American Indian teacher and Onondaga chieftain of the 15th or 16th cents. who welded the Six Nations of the Iroquois into the league of the Long House. Longfellow's epic *Hiawatha* (1855) was based on the data collected by Henry R. Schoolcraft (1793–1864).

HIBBERT, Robert (1770–1849). British merchant. B. in Jamaica, in 1847 he founded the Hibbert Trust, the funds of which were to be applied to the propagation of Christianity in its broadest and simplest form. The Hibbert Lectures and the *Hibbert Journal*, founded in 1902, are financed by the Trust.

HIBISCUS. Genus of the Malvaceae (mallow) family, ranging from large herbaceous plants to trees. Favourite ornamental plants because of their brilliantly coloured (red through to white) bell-shaped flowers, they incl. the rose of Sharon (*H. Syriacus*) and the rose of China (*H. rosa-sinensis*). Some tropical

HEYERDAHL. Named after the legendary Kon-Tiki (q.v.) the raft was modelled on a design in use by the Indians when Europeans first reached Peru. She was built of nine 2 ft. thick balsawood logs, each 30 to 45 ft. long, and lashed to balsawood crossbeams supporting a plaited bamboo deck and an open bamboo hut.

Courtesy of Kon-Tiki Huset, Oslo.

species are also useful, e.g. *H. esculentus*, of which the edible fruit is known in the W. Indies as the gombo; *H. tiliaceus*, which supplies timber and fibrous bark to S. Sea islanders; and *H. sabdariffa*, cultivated in the W. Indies and elsewhere for its fruit.

HICCUP, or Hiccough. Sharp noise caused by a sudden spasm of or irritation to the diaphragm with closing of the windpipe, commonly due to digestive disorder, etc. The remedy for ordinary H. is to cause a feeling of suffocation by breathing into a paper bag.

HICHENS, Robert Smythe (1864–1950). British novelist. He travelled widely in the Middle East, as reflected in the best-seller *The Garden of Allah* (1905): other books incl. *Bella Donna* (1909).

HICKEY, William (1749–1830?). British writer. Ed. at Westminster School, he was intended to follow his father as an attorney in England but dissipation led to his being packed off first to the East Indies and then to Jamaica, before he finally made good at the Indian Bar. His *Me oirs*, written in retirement, give one of the raciest accounts of the age. See illus. p. 530.

HICKOK, James Butler 'Wild Bill' (1837–76) American frontiersman. In the Civil War he was a sharpshooter and scout for the Union army, and then served as marshal in Kansas, killing many desperadoes. A legendary figure, he was shot from behind in Deadwood, S. Dakota.

HICKORY. Common genus (*Carya*) of trees native to N. America. It provides a valuable timber, and all species bear nuts, although some are inedible. The

(1887–1932). British author. B. in Tottenham, London, where he was ed. at the grammar school, he was briefly a clerk before taking up a commercial career. He wrote a series of plays, performed in the puppet theatre he made and operated himself with beautiful hand-carved puppets, which were set in 'Toytown', and incl. such characters as Larry the Lamb, Ernest the Policeman and His Worship the Mayor.

HUMAN BODY. The physical vehicle of human consciousness. It develops for nine months in the womb from the single cell of the fertilized ovum, through all the stages of human evolution, and reaches maturity between 18 and 24 years of age.

Structure. The bony framework (*skeleton*) consists of 200 bones, over half of which are in the hands and feet. The skull is mounted on the spinal column,

HUMAN BODY. The drawing on the left shows the principal physiological features. A, brain; B, lungs; C, heart; D, diaphragm; E, gall bladder; F, liver; G, stomach; H, pancreas; I, kidneys; J, large intestine (partly cut away); K, great vein; L, small intestine (partly cut away); M, large artery; N, bladder; O, femoral vein; P, femoral artery. The drawing on the right shows the skeleton. 1, skull; 2, collar-bone or clavicle; 3, breast-bone or sternum; 4, humerus; 5, ribs; 6, spine or vertebral column; 7, pelvis; 8, radius; 9, ulna; 10, femur; 11, kneecap; 12, tibia; 13, fibula; 14, shoulder blade.

a slightly undulant chain of 24 vertebrae. The ribs, 12 on each side, are articulated (jointed) to the spinal column behind, and the upper 7 meet the breast-bone (sternum) in front. The lower end of the spine rests on the triangular sacrum, to which are attached the two hip-bones (ilia), which are fused in front (symphysis pubis). Below the sacrum is the tail-bone (coccyx). These last 4 bones constitute the pelvis. The shoulder blades (scapulae) are held in place behind the upper ribs by muscles, and connected in front to the breast-bone by the two collar-bones (clavicles). Each carries a cup (glenoid cavity) into which fits the upper end of the arm-bone (humerus). This articulates below with the two forearm-bones, the radius and the ulna. The radius is articulated at the wrist to the bones of the hand. The upper end of each thigh-bone (femur) fits into a depression in the hip-bone; its lower end is articulated at the knee to both the leg-bones (tibia and fibula), which are articulated at the angle to the bones of the foot.

Bones are held together by joints (articulations). Some, but not all, of these allow movement of one bone on the other. At a moving joint the end of each bone is formed of tough, smooth cartilage, lubricated by synovial fluid. Points of special stress are reinforced by bands of fibrous tissue (ligaments).

Muscles (flesh) are bundles of fibres which have the power of contracting and relaxing. They perform all the movements of the body, whether of bones or of organs. Muscles under voluntary control are attached to bones (skeletal or voluntary muscles). Those not under voluntary control (involuntary muscles) are found in internal organs and the walls of blood vessels. Muscle bundles are wrapped in thin, tough layers of connective tissue (fascia); these are usually prolonged at the ends into strong, white cords (tendons, sinews) or sheets (aponeuroses), which connect the muscles to bones and organs and through which the muscles do their work. Membranes of connective tissue also wrap the organs and line the interior cavities of the body, and secrete lubricating fluid (serum). Blood vessels, branching into multitudes of very fine tubes (capillaries), supply all parts of the muscles and organs with blood, which carries the oxygen and food necessary to their life. The food passes out of the blood to the cells in a clear fluid (lymph); this returns with waste matter through a system of lymphatic vessels to the large veins below the collar-bones (subclavian), and thence to the heart. A finely branching system of nerves regulates the function of the muscles and organs, and makes their needs known to the controlling centres.

The skull contains the brain, which with the spinal cord comprises the *central nervous system*. This governs the voluntary processes of the body. The spinal cord runs down within the vertebrae of the spinal column for about 17 inches, after which a fine terminal filament continues through the rest of the spine. The central nervous system is composed of nerve cells, the bodies of which form the grey matter and the fibres the white. The cell bodies are disposed over the surface of the brain and the interior of the spinal cord; the fibres run together into nerve trunks, which extend all over the body. The inner spaces of the brain and the cord contain cerebro-spinal fluid. On the sides of the spinal column are situated about 22 pairs of nerve junctions (sympathetic ganglia); these, with certain other nerves, make up the *autonomic nervous system*, which governs the involuntary processes of the body. These processes are further regulated by the hormones secreted by the endocrine glands.

The upper part of the trunk, enclosed by the ribs (thorax), contains the *lungs* and the *heart* lying between them. The thorax has a stout muscular floor, the diaphragm, which with the rib muscles expands and contracts the lungs in the act of breathing. The part of the trunk below the diaphragm, the abdomen, contains the *digestive organs* (stomach and intestines), the liver, spleen and pancreas, the urinary organs (kidneys, ureters and bladder), and, in the woman, the *reproductive organs* (ovaries, uterus, and vagina). In the man the prostate gland and seminal vesicles only of the reproductive system are situated in the abdomen, the testicles being housed in the scrotum, which, with the penis, is suspended in front of and below the abdomen. The bladder empties through a small channel (urethra); this in the female opens in the upper end of the vulval cleft, which also contains the opening of the vagina, or birth canal. In the male the urethra is continued into the penis. In both sexes the lower bowel terminates in the anus, a ring of strong muscle situated between the buttocks.

Cavities of the body opening on to the surface are coated with *mucous membrane*, which secretes a lubricating fluid (mucus). The exterior surface of the body is coated with *skin*. Within the skin grow the

Govt. assumed entire responsibility for trunk roads in 1946. In America early European settlement was along the seaboard, and the sea provided the means of communication. With migration inland, development in 18th and 19th cents. was similar to that in England. The first real impetus to improved Hs. came with the bicycle and was strengthened by the increasing use of motor-cars. They were built by the State Govts. rather than the towns (1891–1913), but intracontinental Hs. were undertaken under the Federal Aid bills of 1916–21. Recognition of the need for rapid, efficient Hs. in Europe came between the wars – the *autostrada* in Italy and the *autobahn* in Germany; but belatedly in Britain, with the *motorway*, constructed after the S.W.W.

HIGHWAY CODE. A code of rules for the guidance of pedestrians, motorists and others using the roads, pub. by H.M.S.O. for the Min. of Transport.

HIGHWAYMEN. Term applied to thieves on horseback who robbed travellers on the highway, those who did so on foot being known as footpads. With the development of regular coach services in the 17th and 18th cents. their activities became notorious, and the Bow Street Runners were organized to suppress them. Favourite haunts were Hounslow and Bagshot heaths, and Epping Forest, and they continued to flourish well into the 19th cent. Among the best-known H. were Jonathan Wild, Claude Duval (1643–70), John Nevison (1639–84), the original hero of the 'ride to York', Dick Turpin (1706–39), and his partner Tom King, and Jerry Abershaw (c. 1773–95).

HIGH WYCOMBE (wɪ'kɒm). English market town (bor.) in a valley in the Chilterns, 9 m. N.E. of Henley, in S.W. Bucks. Famous for the manufacture of furniture, particularly chairs. H.W. is also an agricultural centre. Pop. (1961) 50,301. Near H.W. is West W., a small village owned by the National Trust.

HILDEBRAND. See GREGORY VII.

HILDESHEIM (hɪl'des-him). Town of Lower Saxony, W. Germany, at the foot of the Harz mts. A bishopric from the 9th cent., H. became a free city of the Holy Roman Empire in the 13th cent. It was under Prussia 1866–1945. Until devastated in the S.W.W., it contained many fine medieval buildings. Pop. (est.) 75,000.

HILL, Adrian Keith Graham (1895–). British painter and etcher. During the F.W.W. he was an official artist on the Western Front.

HILL, Archibald Vivian (1886–). British physiologist. He was prof. at Manchester 1920–3, London 1923–5, research prof. at Cambridge 1926–51, and has served on many governmental and scientific committees. For his work on the mechanism of muscle contraction he was awarded a Nobel prize in 1922.

HILL, Charles, baron H. of Luton (1904–). British doctor and Cons. politician. Wartime 'radio doctor', he was Postmaster Gen. 1955–7, Min. of Housing 1961–2, Chairman I.T.A. 1963–7, and Chairman of Govs. of B.B.C. from 1967; life peer 1963.

HILL, Edward (Ted), baron H. of Wivenhoe (1899–). British trade unionist. He was pres. Amalgamated Society of Boilermakers, Shipwrights, Blacksmiths and Structural Workers 1963–5 – one of the most disciplined of British unions; life peer 1967.

HILL, Octavia (1838–1912). British housing reformer. Influenced by the Christian Socialist movement, and shocked by slum conditions, she bought houses in Marylebone, which she let in good condition and at moderate rents to working-class tenants; she was also joint founder of the National Trust (q.v.).

HILL, Sir Roderic Maxwell (1894–1954). British airman. He served with the R.F.C. in the F.W.W., and took charge of the Experimental Flying Dept. at Farnborough (1917–23). In the S.W.W. he was director-gen. of aircraft research and development 1940–1, commanded the Air Defence of Great Britain 1943–4 and was A.O.C. Fighter Command 1944–5.

Knighted in 1944, he became air chief marshal in 1947.

HILL, Sir Rowland (1795–1879). British reformer. In a pamphlet 'Post Office Reform' he proposed the introduction of the penny pre-paid post (letters had previously been paid for by the recipient on a rate varied according to distance) initiated in Jan. 1840. He was sec. to the Post Office 1854–64.

HILLARY, Sir Edmund (1919–). New Zealand mountaineer and apiarist. B. in Auckland, he served in the R.N.Z.A.F. during the S.W.W. Gaining his first mountaineering experience in New Zealand, he was one of the reconnaissance party to Everest in 1951, and in 1953, together with the Sherpa Tensing, conquered the summit. As leader of the N.Z. section at Scott Base of the Commonwealth Transantarctic Expedition 1957–8, he was the first man to reach the South Pole overland since Scott (q.v.) on 3 Jan. 1958: on the way he was laying depots for Fuchs's (q.v.) completion of the crossing of the continent.

HILLER, Wendy (1912–). British actress. An excellent character actress, she has played successfully parts as varied as Sally Hardcastle in *Love on the Dole* (1935), Catherine Sloper in *The Heiress* (1947), and Eliza in the film of *Pygmalion* (1938).

HILLIARD, Nicholas (c. 1547–1619). The earliest English miniaturist, and the first great painter of the English school. B. in Exeter, he became miniaturist and goldsmith to Queen Elizabeth.

HILLIER, Tristram (1905–). British painter. B. in Peking, he lived and worked in England; and France, at Dieppe. His landscapes and Surrealist pictures are remarkable for the careful rendering of detail.

HILLMAN, Sidney (1887–1946). American trade unionist. Emigrating to the U.S. from Lithuania at 20, he built up the powerful Amalgamated Clothing Workers of America and in 1935 helped found the C.I.O. He was closely associated with F.D.R. in drafting much New Deal labour legislation.

HILTON, Conrad Nicholson (1888–). American hotelier. From 1919 he estab. numerous luxury hotels in the U.S., and after the S.W.W. built up a world chain, the largest in existence. See *illus.* p. 544.

HILTON, James (1900–54). British novelist. Lancashire-born, he was to settle in Hollywood as one of its most successful script writers, e.g. *Mrs. Miniver*. His books incl. *Lost Horizon* (1933), envisaging Shangri-la, a remote district of Tibet where time stands still; *Mr. Chips* (1934), a portrait of an old schoolmaster, and *Random Harvest* (1941).

HILVERSUM. Town in N. Holland prov. of the Netherlands, 17 m. S.E. of Amsterdam. Besides being a summer resort, H. is the chief centre of Dutch broadcasting. Pop. (1961) 101,985.

HIMACHAL PRADESH. Union territory of India, created 1948, between Punjab and Tibet. The cap. is Simla in Punjab. Area 10,879 sq. m.; pop. (1961) 1,348,982. In 1966 certain additional hill areas were transferred from the Punjab to H.P.

HIMALĀYA (abode of snow). System of mountain ranges of central Asia, lying along the S. edge of the Tibetan plateau in an E.–W. arc convex to the S. In the most northerly range, average alt. 20,000 ft., a number of peaks exceed 25,000 ft. including Everest (29,028 ft.), the highest mountain in the world; K.2 or Godwin-Austen (28,278 ft.), the highest mountain within the British Commonwealth; and Kanchenjunga (28,146 ft.). The local pron. is himah'la.

HIMMLER, Heinrich (1900–45). German Nazi leader. B. at Munich, he joined the Nazi Party in its early days, and became leader of the S.S. in 1929, and chief of the Bavarian police in 1933. His promotion in 1936 to the command of all German police forces, including the Gestapo, made him one of the most powerful men in Germany, and during the S.W.W. he replaced Goering as Hitler's second-in-command. In April 1945 he made a proposal to the Allies that Germany should surrender to Britain and the U.S.A. but

natural overflow reservoir of the Yangtze. Changsha is the capital; other cities are Siangtan and Hengyang. Rice, coffee, sweet potatoes, bamboo, etc., are grown; and there are non-ferrous metals, especially antimony and mercury. Area 81,100 sq. m.; pop. (1957) 36,220,000.

HUNDRED YEARS WAR. Name given to the struggle between England and France that was carried on from 1337 to 1453. It began with the claim of Edward III, through his mother, to the crown of France, and at the outset the English were victorious at the naval battle of Sluys in 1340 and on land at Crécy in 1346 and Poitiers in 1356. After 1369 the tide turned in favour of the French, and when Edward III d. in 1377 only Calais, Bordeaux, and Bayonne were in English hands. A state of half-war continued for many years until Henry V invaded France in 1415 and won a victory at Agincourt. After his death his brother Bedford was generally successful until Joan of Arc raised the siege of Orléans in 1429. Even after her capture and death the French continued their successful counter-offensive, and in 1453 only Calais was left in English hands.

HUNGARIAN or Magyar. One of the few languages spoken in Europe that are not of Indo-European stock; with Finnish and Estonian it belongs to the Finno-Ugrian family. Its vocabulary is basically Finno-Ugrian, although many words are importations from Iranian, Slavonic, Turkish, and modern European languages.

HUNGARY. Republic of central Europe, bordering on Czechoslovakia in the N., Rumania in the E., Yugoslavia in the S., and Austria in the W. Area 35,902 sq. m.; pop. (1967) 10,197,000, of whom more than 90 per cent were Magyar-speaking. H. consists mainly of the plains of the middle Danube; the river forms the N.W. boundary with Czechoslovakia, then turns S. and, through Budapest, the cap., flows right across the country in a southerly direction. The Great Hungarian Plain, watered by the r. Tisza and its tributaries, lies E. of the Danube. Once almost exclusively vast pastures, it is now for the most part under cultivation. For part of its course the Drava forms the southern boundary with Yugoslavia. N. of Lake Balaton, the largest of

Wine comes from N. of Lake Balaton and from the N.E. hills (Tokay). Horses, cattle, sheep, and pigs are reared. Fishing is important in the Danube and Tisza and Lake Balaton. Minerals incl. oil and natural gas,

coal, iron, and bauxite; the chemical, machine- and electric power industries are being rapidly expanded and textiles, cement, sugar, etc., are produced. The chief univs. are at Budapest, Debrecen, Szeged, and Pécs.

History. Originally inhabited by Celtic and Slavonic tribes, H. was partly occupied by the Romans and after their withdrawal was overrun by Germanic tribes, by the Huns, and by the Avars. The Hungarian state was founded in the 9th cent. by the Magyars, a federation of Finno-Ugrian tribes under a chieftain named Árpád. St. Stephen (997-1038) adopted the

HUNGARY. Stove tile of the early 15th century, decorated with openwork tracery.

Courtesy of Corvina Press.

title of king, and estab. Latin Christianity. After the house of Árpád died out in 1301, H. came under the rule of foreign princes. The Turks were held at bay by John Hunyadi and his son, Matthias Corvinus (1458-90), but in 1526 the Turks annihilated the Hungarian army at Mohács, King Louis II being accidentally drowned as he fled, and secured the centre and S. of the country. The Habsburgs estab. themselves in the N. and W., while semi-independent princes under Turkish suzerainty ruled Transylvania, which had been part of Hungary since its conquest by St. Stephen in 1000 (it became part of Rumania in 1920). Habsburg attempts to suppress Protestantism and the privileges of the nobles led in the 17th cent. to several revolts, ruthlessly put down. By 1697 the Habsburgs had driven out the Turks and secured the whole of H., confirmed by the peace of Karlowitz, 1699. A peasant rising under Rakoczi led to the granting of a constitution in 1711 by Charles III of H. (VI of Austria).

After 1815 a national renaissance began, under the leadership of Kossuth. The revolution of 1848-9 proclaimed a republic and abolished serfdom, but with the help of Russia Austria suppressed the revolt. Francis Joseph in 1867 gave H. autonomy within the Dual Monarchy (see AUSTRIA; AUSTRIA-HUNGARY). In 1918, in the last days of the F.W.W., H. was proclaimed a republic, and for a few weeks in 1919 was ruled by a Bolshevik govt. under Bela Kun, who, following a coup d'état, escaped to Russia. A popularly elected assembly in 1920 chose Admiral Horthy (q.v.) as regent for an unnamed king; he remained in power until 1944. After 1933 H. fell more and more under German influence and, having joined Hitler in the invasion of Russia in 1941, was overrun by the Red Army 1944-5. Horthy fled, and a provisional govt. distributed land to the peasants, later reclaimed for collectivisation. An elected assembly inaugurated a rep. in 1946; it soon fell under Russian Communist domination, although only 70 Communists had been returned out of a total of 409. A popular rising in 1956 was harshly suppressed by Russian forces. Slightly more widely-based elections were held 1967 and far-reaching economic reforms were launched 1968.

Literature. After the H. state was estab. in 895, and Christianity adopted in c. 1000, Latin chronicles and devotional works dominated the lit. until c. 1500. The political upheavals which followed the battle of Mohács (1526), inspired the 16th, 17th, and early 18th cent. chronicle songs and folk poetry which helped preserve the national identity; notable writers in the

HUNGARY. The Fisherman's Bastion gives a fine view over Budapest. Built in the Romanesque style at the end of the 19th century, it was so named because it was the duty of the fishermen's guild to man it in time of war.

the central European lakes, in the S.W. of the country, stretches the mountainous Bákony forest, between which and the Danube lies the Little Hungarian Plain. There is a large timber industry.

H. is still largely agricultural; main crops incl. wheat, maize, rye, barley, potatoes, and sugar beet.

HIPPOCRATES (c. 460–c. 357 B.C.). Gk. physician commonly styled the Father of Medicine. B. in the island of Cos, he practised and taught medicine in his native place, travelled in the mainland of Greece, and d. in Thessaly. He was the author of a number of medical works, and set a high standard of professional ethics. For more than 2,000 years the Hippocratic Oath has been taken by physicians.

HIPPOLYTUS. In Gk. mythology, son of Theseus. He was accused by his step-mother Phaedra of dishonourable advances, and Theseus placed a curse on him. By the agency of the god Poseidon he was killed while riding in his chariot near the sea. Later he was proved innocent and restored to life.

HIPPOPO TAMUS (Gk., river-horse). Large mammal of the family Hippopotamidae. The common H. (*H. amphibius*) is found in Central Africa. It is 14 ft. long, 4 ft. high, weighs between 3 and 4 tons, and has a slate-grey skin. The pygmy H. (*H. liberiensis*) inhabits W. Africa. Hs. are good swimmers, but leave the water at night to graze.

HIRE PURCHASE. The system of retail trading whereby the purchaser contracts to make partial payments at fixed intervals over a certain period, and the way in which most durable consumer goods are paid for. Increasing rapidly after the F.W.W., the H.P. debt outstanding in U.S.A. rose from \$3,000 million in 1929 to \$95,000 million in 1969, at annual interest rates of 15–18 per cent. The amount owing in Britain in 1969 was nearly £1,000 million, comparable with the cost of the entire National Health Service. H.P. is still expanding and covers an increasingly wide range of goods and services, from cradle to grave.

HIROHITO (hērōhētō) (1901–). Emperor of Japan. In 1921 he was the 1st Japanese crown prince to visit Europe, and in 1926 succeeded his father Yoshihito. After the defeat of Japan in 1945 he

HIPPOPOTAMUS. Keeping a moist skin is essential for the health of the hippopotamus, but this family party in the Kruger National Park make a pleasure of necessity, although keeping a wary eye for intruders. Courtesy of Satour.

formally rejected belief in the divinity of the emperor and Japanese racial superiority, and accepted the 1946 constitution greatly curtailing his powers. The Imperial Palace, destroyed by fire in air raids 1945, was rebuilt within the same spacious wooded compound at a cost of £13,000,000; completed 1969. Distinguished as a botanist and zoologist, H. has pub. several books.

HIROSHIMA (hērō'shima). City and port on the S. coast of Honshu, Japan; during the S.W.W. H. was utterly devastated on 6 Aug. 1945 by the first atomic bomb to be used in war-time. The bomb, dropped by parachute from an American Super-Fortress flying at 30,000 ft., exploded 1,000 ft. above the city. Over 4 sq. m. was obliterated, with very heavy damage outside that area. Casualties totalled 136,989 out of a pop. of 343,000; 78,150 were found dead and others died later.

By 1947 many temporary buildings on the site were inhabited; by 1955 substantial reconstruction had made H. once more a prosperous port and commercial centre with by 1965 a pop. of 504,000.

HISPANIOLA. W. Indian is., the 1st landing place in the New World of Columbus, 6 Dec. 1492. It is divided into Haiti and the Dominican Rep. (qq.v.).

HISPANO-SUIZA. Motor-car designed by a Swiss engineer Marc Birkigt (1878–1947), who emigrated to Barcelona where he founded a factory which produced cars c. 1900–38, which were popular among the cognoscenti, incl. Alphonso XIII of Spain, after whom the 1911 sports model was named. During the F.W.W. a Paris factory produced the famous light-alloy aero-engine used by the 'stork' squadron of the French air force, whose emblem, a flying stork, became the mascot of later cars, which incorporated improvements based on war-time experience and incl. the '37-2' and 9 litre V12, still of legendary fame for their handling, elegance and speed.

HISS, Alger (1904–). American politician. B. in Baltimore, he was one of the bright young men recruited under Roosevelt's New Deal. While pres. of the Carnegie Endowment for International Peace 1946–9, he denied before a federal grand jury having in 1938 passed secret State Dept. papers to Whittaker Chambers (an editor of *Time* and a self-confessed Communist). An inconclusive trial for perjury in 1949 was followed by his conviction in 1950: he was released from prison in 1954. His actual guilt is still hotly disputed.

HISTORY. The written record of the development of human societies. The earliest surviving historical records are the inscriptions denoting the achievements of Egyptian and Babylonian kings. As a literary form H. begins with Herodotus (c. 484–425 B.C.), who first passed beyond the limits of a purely national outlook. Thucydides (c. 471–401 B.C.) brought to H. not only literary gifts but the interests of a scientific investigator and political philosopher. Later Greek H. degenerated into rhetoric, nor was Roman H. free from this vice: Sallust (86–35 B.C.) preserved the scientific spirit of Thucydides, but Livy (59–17 B.C.) and Tacitus (c. A.D. 54–118), in spite of their great powers, tended to subordinate truth to patriotic or party considerations. Medieval H. suffered from its domination by a ready-made religious philosophy imposed by the Church. English chroniclers of this period are Bede (673–735), William of Malmesbury (d. 1143), and Matthew Paris (d. 1259). France produced great chroniclers of contemporary events in Froissart (1337–1401) and Comines (1447–1511).

The Renaissance revived H. both by restoring classical models and by creating the science of textual criticism. A product of the new secular spirit is Machiavelli's *History of Florence* (1520–3). The Reformation, especially in Germany, furthered the cause of scientific H. by sending controversialists back to the original documents, while in England the constitutional controversies of the 17th cent. performed a similar service. The 18th cent. 'enlightenment' finally disposed of the attempt to explain H. in theological terms, but it made little progress in the search for an alternative philosophy, although it produced one masterpiece in Gibbon's *Decline and Fall of the Roman Empire* (1776–88). The most remarkable attempt to formulate a philosophy of H., that of Vico (1668–1744), remained almost unknown until the 19th cent. Romanticism left its mark on H. in the tendency to exalt the contribution of the individual 'hero', and in the introduction of a more colourful and dramatic style and treatment, variously illustrated in the works of Michelet, Carlyle, and Macaulay.
